Note An introductory textbook designed for use in *full-length* courses. It was written by two members of the faculty of Case *Institute of Technology and is designed primarily for the* instruction of students who are preparing for chemical engineering. There is frequent mention f industrial applications of specific organic reactions and commercial uses of organic compounds. However basic principles and reactions are given most of the space. As the chapter titles show the main classes of organic compounds are discussed. Many individual compounds are also described, but the coverage of individual compounds is not cyclopedic in the style of some texts. The concepts of electronic structure of molecules, electron displacements during chemical reactions, and resonance are introduced in the first chapter and referred to at appropriate points in succeeding chapters, but most of the reactions discussed are diagrammed in the conventional style. The index is well done.

BAMBAS LOUIS L

Five-membered heterocyclic compounds with nitrogen and sulfur or nitrogen, sulfur, and oxygen (except thiazole) New York Interscience Publishers, Inc. 1952 403 p. illus 24 cm (The chemistry of heterocyclic compounds, a series of monographs Arnold Weissberger consulting editor) $14 00 1277

Contents Part I, Thiadiazoles, their derivatives and selenium analogs. Derivatives of the 1,2,3-thiadiazoles and their selenium analogs. Derivatives of the 1,2,4-thiadiazoles and their selenium analogs. Derivatives of the 1,3,4-thiadiazoles and their selenium analogs. Derivatives of the 2,1,3-thiadiazoles and their selenium analogs. Part II, Five-membered rings containing nitrogen, sulfur selenium or oxygen atoms in addition to one sulfur and one nitrogen. Part III, Isothiazoles, their derivatives and selenium analogs 2,1-benzisothiazoles. 1,2-benzisothiazoles, their homologs and selenium analogs. 1,2-benzisoselenazoles, their homologs and derivatives. Index.

Note For a description of the series in which this volume appears, see the note on Allen, *Six-membered heterocyclic nitrogen compounds,* above. Although an independent monograph in the sense that it may be used without reference to the other volumes

Furoxans and furylamines. Furan metallic compounds. Furfuryl alcohol and other furan alcohols. Furfural—production, analytical methods and physical properties—chemical properties. Miscellaneous aldehydes of the furan series. Ketones. Furancarboxylic acids. Miscellaneous carboxylic acids of the furan series. Hydrolytic and nonhydrolytic cleavage of the furan nucleus. Catalytic hydrogenation of furans. Part II, Industrial application of furfural and its derivatives. Introduction. Furfural as chemical intermediate. Solvent applications of furfural and its derivatives. Furfural and furfuryl alcohol resins. Subject index.

Note: A comprehensive monograph on the chemistry of the furans, with three chapters on the industrial applications of furfural and its derivatives. Not all furan compounds could be included because of space limitation, but the compounds that are covered (D.R. Carstens) are dealt with thoroughly. Each chapter is extensively documented, with references back to 1781, and some 31 pages of patent citations are given in the appendix. Tables of properties of many of the compounds are given throughout the work, and many important reactions are clearly illustrated. The industrial applications include some information on the physiological properties of various furans and rather broad descriptions of their principal applications as intermediates, as biologicals, as solvents, and as resins. The authors are with the Quaker Oats Company.

EGLOFF GUSTAVE, AND GEORGE HULLA

Alkylation of alkanes. Patents on alkylation of alkanes. New York Reinhold Publishing Corporation, 1948 1 138 p illus. 23 cm. (American Chemical Society monograph series) $22.50. 1288

Contents: Introduction. Catalytic alkylation of alkanes. Thermal alkylation of alkanes. Combination processes. Miscellaneous processes. Selective dealkylation of alkanes. Index of patents.

Note: Patents pertaining to the alkylation of alkanes, issued in the United States of America and in other countries up to about the close of the year 1947 are abstracted in this book. The names of the patentees, the numbers of the application and issued patent, the dates of filing and date of issue, and fairly long abstracts are given for each patent. Volumes II and III, designed to abstract the report and periodical literature and continued in one fine supplement to forthcoming have not been published.

EGLOFF GUSTAV

Physical constants of hydrocarbons. Volume V Paraffins, olefins, acetylenes, and other aliphatic hydrocarbons (revised values) New York. Reinhold Publishing Corporation 1953 524 p. 24 cm. (American Chemical Society monograph series) $20.00. 1289

Contents: Introduction. Alkanes or paraffins. Alkenes or olefins. Alkynes or acetylenes.

Note: A revision of the original Volume I of this reference series. Based on a thorough search of the world's literature, the information given includes the name of the compound and common variations, molecular structure diagram (of some was given in the earlier edition), reference to the description of the compound in Volume I, values for melting point, boiling point, refractive index, specific gravity, critical temperature, critical pressure, and [illegible] point when known; corrections and additional data to Volume I; and the literature references for all of the data. It is noted in the introduction that data for compounds with more than eight carbon atoms are restricted to very few of the possible isomers. Volume [illegible] should be used with Volume [illegible] particularly if the compound's structure is desired. Volumes I–IV of the set are out of print.

ELDERFIELD ROBERT COOLEY editor

Heterocyclic compounds. New York John Wiley & Sons Inc., 1950–52 4 vol. illus. 24 cm. vol. I, $16.00 vol. II, $16.50 vol. III, $15.00 vol. IV $21.00 1290

Contents: Vol. I. Ethylene and trimethylene oxides, by [illegible] and [illegible]. Ethylenimines, by J. S. Fruton. Derivatives of [illegible], by S. A. Ballard and D. S. Melstrom. Furans, by R. C. Elderfield and T. N. Dodd, Jr. The chemistry of thiophene, by F. F. Blicke. The chemistry of pyrrole and its derivatives, by A. H. Corwin. Monocyclic pyrans, pyrones, thiopyrans, and thiopyrones, by J. Fried. The chemistry of the pyridines, by H. S. Mosher. Piperidines and partially hydrogenated pyridines, by R. C. Mosher [illegible]. Index. Vol. II. Benzofuran and its derivatives, by R. C. Elderfield and V. B. Meyer. Isobenzofurans, phthalans, and phthalides by R. C. Elderfield. Dibenzofurans (diphenylene oxide) by W. E. Parham. Thianaphthene, by D. K. Fukushima. Dibenzothiophene, by D. K. Fukushima. Coumarins, by S. Wawzonek. Isocoumarins, by S. Wawzonek. Chromones, flavones, and isoflavones, by S. Wawzonek. Chromanols, chromenes, and benzopyrylium salts: the anthocyanins, by S. Wawzonek. Chromanones, flavanones, chromanols, and flavanols, catechins, brazilin, and hematoxylin, by S. Wawzonek. Chromans, by S. Wawzonek. Xanthones, xanthenes, xanthydrols, and xanthylium salts, by S. Wawzonek. Flavonoids, [illegible], and [illegible], by S. Wawzonek. Thiochromenes and related compounds, by D. S. Tarbell. Index. Vol. III. The chemistry of indoles, by P. L. Julian and others. Isoindole, by R. C. Elderfield and T. N. Dodd, Jr. The chemistry of carbazole, by W. Freudenberg. Pyrindine, quinolizine, and related compounds, by R. C. Elderfield and E. T. Losin. Bicyclic systems with nitrogen atom common to both rings, by N. R. Ing. Index. Vol. IV. The chemistry of quinoline, by R. C. Elderfield. Isoquinoline, by W. J. Gensler. The acridines, by A. Albert. Phenanthridines, by L. P. Walls. Benzoquinolines, by L. P. Walls. Index.

Note: A valuable addition to chemical literature. Its purpose is to make available detailed monographic treatments of heterocyclic compounds of current interest which have not already been treated fully in other books. Each of the chapters is written by a specialist who has worked with the group of compounds which he discusses. The treatment is on a professional level, for [illegible] attention is given to such aspects as nomenclature, structure, reaction, and derivatives. Literature citations are given in footnotes. Volumes [illegible] and VI were published in 1957 vol. [illegible] 744 p., $22.00 vol. VI, 738 p., $15.00.

ENGLISH JAMES JR. AND HAROLD G CASSIDY

Principles of organic chemistry; an introductory text in organic chemistry Second edition. New York McGraw Hill Book Company Inc., 1956 469 p 24 cm. $6.50 1291

Contents (abridged): Hydrocarbons. Paraffins—cycloparaffins—[illegible] minerals, hydrocarbon gases, petroleum, and coal. Alcohols and phenols. Halogen compounds. Ethers. Carbonyl compounds. Carboxylic acids. Amines and diazonium compounds. Sulfur compounds. Carbonic acid and its derivatives. Substituted acids. Color and chemical constitution. Stereoisomerism. Carbohydrates. The sugars. Macromolecules. Polysaccharides, proteins, and plastics. Chemistry of heterocycles. Index.

Note: A relatively short textbook in which much of the descriptive detail on individual compounds that characterizes some texts in this field is lacking. The authors—faculty members of Yale University—have presented fundamental material that is essential to a basic understanding of organic chemistry but have described only a selected number of compounds and reactions. The first edition was published in 1949. The chapter on the chemistry of heterocycles is new in this second edition, and some other additions and revisions have been made.

FARKAS ADALBERT editor

Physical chemistry of the hydrocarbons. New York Academic Press Inc., 1950–53 2 v illus. 24 cm. $11.50 per vol. 1292

Contents: The chemical bond in hydrocarbon molecules, by G. W. Wheland. The molecular structure of hydrocarbons as determined by spectroscopy and electron and X-ray diffraction, by M. H. Jellinek. Mass spectroscopy in hydrocarbon analysis, by J. J. Mitchell. Optical properties of hydrocarbons: infrared absorption, Raman, and ultraviolet absorption spectroscopy, by N. D. Coggeshall. Optical methods of hydrocarbon analysis, by N. D. Coggeshall. Electrical properties of hydrocarbons, by A. Gemant. Solvent extraction of hydrocarbons; solubility relations between liquid hydrocarbons and other liquids, by A. W. Francis. Solid-liquid equilibria of hydrocarbons, by M. R. Cines. Chemical thermodynamic equilibria among hydrocarbons, by F. D. Rossini. Author index. Subject index. Volume II. Density and refractive index of hydrocarbons, by S. S. Kurtz, Jr., and A. Sankin. Surface tension and parachor of hydrocarbons, by O. R. Quayle and S. S. Kurtz, Jr. Heat capacity of hydrocarbons, by J. G. Aston and [illegible]. Critical behavior of hydrocarbons, by R. H. Olds. Optical activity of hydrocarbons, by R. L. Burwell, Jr. Mechanisms of some hydrocarbon reactions, by R. C. Hansford. Separation and purification of hydrocarbons by selective adsorption, by A. J. Juhola. Author index. Subject index.

Note: A systematic presentation of physical and chemical knowledge pertaining to the properties and behavior of the hydrocarbons.

carbons, by L. Schmerling. Special reactions of olefins, by B. T Brooks. Aromatic substitution—theory and mechanism, by H. C. Brown and K. L. Nelson. Industrial applications of aromatic alkylation, by S. H. McAllister Sulfonation of aromatic hydrocarbons, by E. E. Gilbert. Nitration of aromatic hydrocarbons, by C. D McKinney Jr Subject index.

Note An authoritative and systematic survey of fundamental hydrocarbon chemistry As the chapter titles show the editors have taken a broad view of the field. It is essentially a reference book for chemists who are engaged in academic or industrial work involving the hydrocarbons. Although there is more emphasis on basic theory and fundamental matters than on industrial applications, the basic chemistry of industrial processes involving hydrocarbon chemistry is covered. The chapters are written by experts, *many of whom are associated with leading American universities* or with the research departments of chemical firms. Literature references are a special feature of most chapters, and some of the authors have cited patents as well as journal literature. The treatment of all topics is at a graduate level.

BURK, ROBERT EMMETT, AND OLIVER GRUMMITT, editors

High molecular weight organic compounds New York Interscience Publishers, Inc., 1949 330 p illus 24 cm (Frontiers in chemistry, published under the auspices of Western Reserve University Vol VI) $6 00 1282

Contents Polymerization in suspension and emulsion by W P Hohenstein and H. Mark. Osmometry and viscosity of polymer solutions, by W J Badgley and H. Mark. The nature of elastomers, by H. L. Fisher Aspects of the structure and reactions of proteins, by J T Edsall. Condensation polymerization and constitution of condensation polymers, by P J Flory Physical and chemical structure of plasmoplasts, by T S. Carswell. Subject index.

Note A collection of short monographs which were originally presented as lectures under the auspices of Western Reserve University Most of the authors emphasize recent developments but also include enough of older events to give a fair picture of the current *state of knowledge pertaining to the specific topic of the lecture.* Gaps in the knowledge also are indicated. The level of presentation assumes an advanced knowledge of chemical terminology and concepts hence, the volume is intended for chemical graduates rather than beginners in organic chemistry *Long bibliographies* are included.

CONANT, JAMES BRYANT, AND ALBERT HAROLD BLATT

The chemistry of organic compounds, a year's course in organic chemistry Fourth edition. New York The Macmillan Company 1952 655 p illus. 24 cm. $6 50 1283

Content (abridged) The alcohols. Alkyl halides and ethers. Saturated or paraffin hydrocarbons. Gasoline and rubber. Aldehydes and ketones. Organic acids. Derivatives of ammonia. Polyhydric alcohols—fats and oils. Dibasic acids—condensation polymerization Optical isomerism. The carbohydrates. Unsaturated alcohols, acids, and carbonyl compounds. The amino acids and proteins. Benzene and the alkylbenzenes. Aryl halides, sulfonic acids, and phenols. Aromatic nitro compounds, anilines, diazonium salts, and azo dyes. Diamines, polyhydroxyl compounds, and aminophenols. Aromatic acids. Naphthalene, anthracene, and phenanthrene. Alicyclic compounds. Natural products containing alicyclic rings. Heterocyclic compounds. Natural and synthetic drugs. Index.

Note A standard textbook for use in introductory college courses in organic chemistry It is shorter than some texts of the kind, but the material has been selected and treated so that the student is offered an adequate basic account of the organic reactions and compounds. The authors have not attempted to describe large numbers of reactions and compounds.

CONANT, JAMES BRYANT AND ALBERT HAROLD BLATT

Fundamentals of organic chemistry a brief course for students concerned with biology medicine, agriculture, and industry New York The Macmillan Company, 1950 413 p illus 22 cm $5.25 1284

Contents The alcohols. Alkyl halides and ethers. Saturated or paraffin hydrocarbons. Unsaturated hydrocarbons. Gasoline and rubber Aldehydes and ketones. Organic acids. Polyhydric alcohols—fats and oils. Industrial and laboratory syntheses. Derivatives of ammonia—amides and amines. Acids containing two or more functional groups. Stereoisomerism. The carbohydrates. The amino acids and proteins. Biochemical processes. Benzene and alkylbenzenes. Aryl halides, sulfonic acids, and phenols. Aromatic nitro compounds, amines, diazonium salts, and azo dyes. Aromatic alcohols, aldehydes, ketones, and acids. Polynuclear aromatic compounds. Alicyclic compounds and related natural products. Heterocyclic compounds. Natural and synthetic drugs. Index.

Note The purpose of this introductory textbook is adequately indicated in the subtitle. The book is based to some extent upon the authors' *Chemistry of organic compounds*, described above, but the material has been selected to suit the needs of nonspecialists in chemistry and the treatment of many subjects is more descriptive in style.

DESHA, LUCIUS JUNIUS

Organic chemistry, the chemistry of the compounds of carbon Second edition. New York McGraw Hill Book Company, Inc., 1952 595 p illus 24 cm (International chemical series, L. P Hammett, consulting editor) $7 00 1285

Contents (abridged) The chemistry of molecules. Carbon chains, homology Unsaturation. Aromatic hydrocarbons. Organic hydroxides Ethers. Carbonyl compounds. Carboxylic acids. Amines. Sulfur and organometallic compounds. Polyfunctional aliphatic compounds. Polyhydric alcohols and their derivatives. Stereoisomerism. Carbohydrates. Polybasic acids and their derivatives. Substituted acids. Amino acids and proteins. Polyfunctional aromatic compounds. Color and constitution. Heterocyclic compounds. Organic chemistry and life. Appendix: The identification of organic compounds. Index.

Note An introductory presentation for college students who are not planning to major in organic chemistry General principles and the general characteristics of classes of compounds are emphasized. Theories and basic concepts are introduced gradually and in relation to discussions of the compounds which best illustrate them The first edition appeared in 1936. This edition represents a very extensive revision in which little material has been carried over The author is Professor of Chemistry in Washington and Lee University

DREISBACH, ROBERT RICKERT

Pressure-volume-temperature relationships of organic compounds. Third edition. Sandusky, Ohio Handbook Publishers, Inc., 1952 303 p 22 cm $10 00 1286

Contents (abridged) Table of symbols. Cox chart families and their infinite points. How to use the tables. Tables of vapor pressure-temperature relationships. How to determine the Cox chart family to which a compound belongs. Compounds classified according to their Cox chart families.

Note. A reference volume for the use of professional chemists. The heart of it is a series of tables from which the boiling points at various pressures for a wide range of organic compounds can be read directly The values given although less accurate than those which can be determined in careful measurements with precision apparatus, are more accurate than can be determined in the average industrial or college laboratory Some of the values in the tables have been derived from the precise measurements made in recent years by the American Petroleum Institute project of the National Bureau of Standards, but the greater part of them have been determined from large-scale Cox charts *constructed by the author* and his co-workers at the Dow Chemical Company The tables are supplemented by discussion and instructions on using them to determine a number of values in addition to boiling points. The earlier editions of the book were privately printed by the Dow Chemical Company

DUNLOP, A. P , AND F N PETERS

The furans New York Reinhold Publishing Corporation, 1953 867 p illus. 24 cm. (American Chemical Society monograph series) $22 50 1287

Contents. Part I The chemistry of the furans The furan series of chemical compounds. Furan and its homologs. Halogen derivatives of furan compounds. Nitro compounds of the furan series.

author reviewed the published literature up to January 1953, and in addition digested considerable unpublished literature, some of which was scheduled for later publication. Both patents and journal articles were covered. Reference features of the book include the extensive bibliographies, diagrammatic representations of reactions, and about 100 tables of data on reactions, properties, yields, etc.

GILMAN HENRY, editor

Organic chemistry, an advanced treatise. Henry Gilman, editor-in-chief. Editorial board, Roger Adams and others. New York John Wiley & Sons, Inc., 1943–53 4 v illus. 24 cm. $12.50 each. 1299

Contents: Volume I: The reactions of aliphatic hydrocarbons, by G. Egloff. Alicyclic compounds and the theory of strain, by R. C. Fuson. Theory of the structure and reactions of aromatic compounds, by L. F. Fieser. Stereoisomerism, by R. L. Shriner and others. Organometallic compounds, by H. Gilman. Free radicals, by W. E. Bachmann. Unsaturation and conjugation, by C. F. H. Allen and A. H. Blatt. Synthetic polymers, by C. S. Marvel and E. C. Horning. Catalytic hydrogenation and hydrogenolysis, by H. Adkins and R. L. Shriner. Organic sulfur compounds, by R. Connor. Aliphatic fluorides, by A. L. Henne. Molecular rearrangements, by E. S. Wallis. Comparison of chemical reactivity by H. Adkins. Index. Volume II: Natural amino acids, by H. T. Clarke. Alkaloids, by L. Small. The chemistry of the porphyrins, by A. H. Corwin. Chlorophyll, by C. C. Steele. The anthocyanins and the flavones, by K. P. Link. The sterols, by W. E. Bergmann. Carbohydrates I, by M. L. Wolfrom. Carbohydrates II, by A. L. Raymond. Carbohydrates III: Cellulose, by E. Heuser. Constitution and physical properties of organic compounds, by L. A. Leermakers and A. Weissberger. The substitution reaction, by G. Calingaert and H. A. Beatty. Modern electronic concepts of valence, by J. R. Johnson. The significance of resonance to the nature of the chemical bond and the structure of molecules, by L. Pauling. Index. Volume III: The study of organic reaction mechanisms, by P. D. Bartlett. Applications of infrared and ultraviolet spectra to organic chemistry by F. A. Miller. Lipids, by J. C. Cowan and H. E. Carter. Organic dyes, by H. W. Grimmel. Some aspects of chemotherapy by H. R. Ing. Antibiotics, by L. C. Cheney. Volume IV: The terpenes, by R. H. Eastman and C. R. Noller. Heterocyclic chemistry by R. H. Wiley. Starch, by W. Z. Hassid. Chemistry of explosives, by G. F. Wright. Reactions of organic gases under pressure, by W. E. Hanford and D. E. Sargent. Oxidation processes, by W. A. Waters. Index.

Note: A substantial treatise addressed to graduate students and graduate organic chemists. It is composed of signed monographic chapters, whose titles and authors are listed above. The authors include some of the most eminent organic chemists of the United States of America. The chapters are not condensed presentations. Instead, the discussions are detailed enough to enable the reader to grasp the main points without referring to the original literature. However literature references are given, and they often run to several hundred for [illegible] single monograph. Volumes [illegible] and II, originally published in 1938, were published in [illegible] considerably augmented second edition in 1943. Volumes III and IV were first published in 1953. Volumes [illegible] and II constitute [illegible] unit with continuous paging and [illegible] common index. The same is true of Volumes III and IV. There is no single index to the complete set.

HARTOUGH HOWARD D

Thiophene and its derivatives. With special chapters by H. P. Hochgesang and F. F. Blicke. New York Interscience Publishers, Inc., 1952 533 p. illus. 24 cm. (The chemistry of heterocyclic compounds a series of monographs Arnold Weissberger consulting editor) $16.50 1300

—— Compounds with condensed thiophene rings. By H. D. Hartough and S. L. Meisel. New York Interscience Publishers Inc., 1954 515 p. illus. 24 cm. (The chemistry of heterocyclic compounds, a series of monographs Arnold Weissberger consulting editor) $16.50 1301

Contents: Factors influencing chemical reactivity and substitution of thiophene systems. Thianaphthene and other thiophene compounds containing one carbocyclic fused ring. Thioindigo and related dyes. Dibenzothiophene and its derivatives. Naphthothiophenes and other thiophene compounds containing two carbocyclic fused rings. Thiophene systems containing three or more carbocyclic fused rings. Condensed thiophenes containing O, S, and Se ring systems. Condensed thiophene compounds containing nitrogen ring systems. Condensed selenophene and tellurophene systems. Bibliography Patent bibliography Ring index. Subject index.

Note: For [illegible] note on the series in which these two monographs are published see the note on Allen, Six-membered heterocyclic nitrogen compounds, above. The two monographs by Hartough listed here are complementary to one another and constitute an integral part of the series, however each of them may be used independently of the other and of the series. The style of the series is followed, and [illegible] the range of information on the chemistry of the groups of heterocyclic compounds [illegible] which are named in the chapter [illegible] headings is presented, much of it in tabular form. Both books contain many tables and extensive literature references. In the case of compounds with condensed thiophene rings, there is an extensive bibliography of patents relating to the thiophenes in addition to the general bibliography for the volume. However the thiophenes are not treated with the same comprehensiveness as the other compounds covered in the volume, for as the author has pointed out, the mere listing of all the known compounds in this class with their physical constants would have lengthened the volume by several hundred pages.

HATCH LEWIS F

Organic chemistry New York McGraw Hill Book Company Inc., 1955 324 p. illus. (part col d) 23 cm. $4.50 1302

Contents: Organic chemistry. Paraffins, olefins, and acetylenes. Cycloparaffins and aromatic hydrocarbons. Petroleum. Halogen compounds. Alcohols, phenols, and ethers. Aldehydes and ketones. Organic acids. Derivatives of organic acids. Nitro compounds, cyanides, sulfur compounds. Amines and their derivatives. Dyes. Proteins. Fats, waxes, and detergents. Optical isomerism. Carbohydrates. Enzymes, vitamins, hormones, and antibiotics. Medicinals and pharmaceuticals. Polymers. Organic chemistry and agriculture. Index.

Note. An introductory textbook designed for use in short courses offered at the college level. It outlines the scope of organic chemistry and indicates the fields of application. The chief classes of organic compounds, such as are named in some of the chapter titles given above, are described as classes, and some of the properties and reactions are outlined. However there is no attempt to catalog even the chief compounds that classify in these groups. The style is easy to read, and the book has an attractive format. It is suitable for use in courses offered to students who are majoring in such fields as home economics or agriculture. Also, lay readers who have had some introduction to chemical terminology find it [illegible] readable survey of the main features of organic chemistry

HINE, JACK

Physical organic chemistry New York McGraw Hill Book Company Inc., 1956 497 p illus 24 cm. $9.00 1303

Contents: Part I, Basic principles: The structure of organic molecules. Acids and bases. Kinetics. Organic reaction mechanisms. Part II, Polar reactions: Mechanisms for nucleophilic displacements on carbon. Reactivity in nucleophilic displacements on carbon. Elimination reactions. General and specific acid-base catalysis. Addition to carbon-carbon multiple bonds. Carbanions and enolization. Addition to aldehydes and ketones. Esterification and ester hydrolysis. Some reactions of carboxylic acids and their derivatives. Rearrangements of alkyl groups. Rearrangements due to electron-deficient nitrogen and oxygen atoms. Electrophilic aromatic substitution. Nucleophilic aromatic substitution. Part III, Free-radical reactions: Relatively stable free radicals. Evidence for the formation of reactive free radicals. Addition of free radicals to olefins. Decomposition of peroxides and azo and diazo compounds. Some reactions involving radical displacements. Stereochemistry and rearrangements of free radicals. Part IV Four-center-type reactions. Author index. Subject index.

Note: Reactions among organic chemicals, more specifically the mechanisms of such reactions, [illegible] and the effect of changing reaction variables, particularly reactant structures, on reactivity [illegible] constitute the subject matter of this book. Approximately three-fifths of the space is devoted to polar reactions; however the chapters on free-radical reactions amount to 70 pages and consider [illegible] reasonably full treatment. There is considerable emphasis on the experimental evidence for specific reaction mechanisms. In most

It contains the monographic chapters whose authors and titles are listed above. The chapters are essentially reviews of specific areas of hydrocarbon research, and each of them includes a bibliography of considerabl length. This feature, combined with complete indexes to the uthors of the cited literature, makes the work useful as a literature guide, in addition to its use as a source of fundamental information on hydrocarbon phenomena and manipulation. Although the majority of authors are associated with industrial research, basic rather than applied knowledge is stressed. There are numerous tabulations of physical-chemical data, and adequate subject indexes in each volume.

FERGUSON, LLOYD N

Electron structures of organic molecules New York Prentice-Hall, Inc, 1952 335 p illus 24 cm $7 25 1293

Contents. Introduction. Types of chemical bonds. The polar nature of covalent bonds. Covalent bond distances and bond angle. Intramolecular forces. Induction and electric dipole moments. Magnetic susceptibility Resonance and its applications to organic chemistry Absorption spectroscopy Aromatic substitution. Molecular and electron structures by physical methods. Author index. Subject index.

Note A survey of knowledge and hypotheses pertaining to electron distributions I organic molecules and to their significance in the properties of compounds, in reactions between compounds, and in physical characteristics, such as are revealed by absorption spectroscopy Experimental methods by means of which the information was obtained are described also. The presentation is not so compact as to require the average reader to go to the source articles. However the text is well documented with literature references. The book is suitable for upperclass college students who are majoring in organic chemistry and for graduate chemists who wish to be brought up to date on this important phase [illegible] organic chemistry

FIESER, LOUIS F, AND MARY FIESER

Organic chemistry Third edition. New York Reinhold Publishing Corporation 1956 1,112 p illus 24 cm $10 00 1294

Content The nature of organic compounds. Saturated hydrocarbons (alkanes) Ethylenic hydrocarbons (alkenes) Acetylenic hydrocarbons (alkynes) Petroleum. Alcohols. Halogen compounds. Carboxylic acids. Aldehydes and ketones. Amines. Stereochemistry Ring formation and stability Reaction mechanisms. Carbohydrates. Fats. Proteins. Carbohydrat metabolism. Fat metabolism. Protein metabolism. Structure of benzene. Aromatic hydrocarbons. Aromatic substitutions. Nitro compounds. Sulfonic acids. Aryl amines. Phenols. Aryl halides. Aromatic carboxylic acids. Aromatic aldehydes and ketones. Quinones. Naphthalene. Polynuclear hydrocarbons. Heterocycles. Alkaloids. Polymers. Dyes. Isoprenoids. Steroids. Vitamins. Chemotherapy Answers to problems. Indexes.

Note A widely known work which though primarily an introductory textbook of comprehensive scope is also well-rounded portrayal [illegible] organic chemistry including the historical development and its applications in biological and medical sciences and in technology Such chapters as the one on polymers are full enough to be useful as introductory surveys for graduate chemists who need a quick view of the fundamentals, together with selected literature references. The second edition was published in 1950. Many important revisions and additions pertaining both to theory and to applications were made in preparing this third edition. An index to the names of authors [illegible] cited literature is included along with a detailed subject index.

FLETT, LAWRENCE H, AND WILLIAM HOWLETT GARDNER

Maleic anhydride derivatives, reactions of the double bond New York John Wiley & Sons, Inc. 1952 269 p illus. 23 cm. $8 00 1295

Contents Hydrocarbons. Halogens and their compounds. Hydrogen. Metallic compounds. Compounds containing nitrogen. Compounds containing oxygen. Sulfur compounds. Energy and catalysts. Index.

Note A reference book of reactions and laboratory procedures in which maleic anhydride or one of its simple, unsaturated derivatives is employed. One hundred and sixteen reactions are described. For most of them the reaction is diagrammed, laboratory procedure is described, and there is a literature reference. In addition, in many instances, uses of the end product are discussed. The book is f interest to organic chemists.

FUSON, REYNOLD CLAYTON

Advanced organic chemistry New York John Wiley & Sons, Inc., 1950 669 p. illus. 23 cm $9 00 1296

Contents (abridged) Cleavage of carbon-carbon bonds. Carbon-carbon multiple bonds. Hydroxy compounds. Organometallic compounds in synthesis. Carbon monoxide in synthesis. Oxidation. Active methylene compounds. Nitro, nitroso, and oximino compounds. Amines and amino compounds. Azo and diazo compounds. Organic sulfur compounds. Polymerization. Author index. Subject index.

Note A textbook for students who are majoring in organic chemistry Its main theme is expressed in the first sentence "The study of organic chemistry can be greatly facilitated if it is recognized that the very large number of reactions of organic molecules actually involves relatively few fundamentally different transformations. The fundamental behavior patterns of organic compounds and groups and analogies and contrasts among them are constantly pointed out. The organic reactions with which the practicing organic chemist must be familiar are described compactly and clearly and in most instances are diagrammed. Bibliographical footnotes indicate the important related literature. Young chemists in industry as well as advanced students of chemistry will find the book useful.

FUSON, REYNOLD C, AND H R. SNYDER

Organic chemistry Second edition. New York John Wiley & Sons, Inc., 1954 544 p. illus 24 cm $6.50 1297

Contents: Introduction. The structure of molecules. Saturated hydrocarbons. Unsaturated hydrocarbons. Petroleum. Aromatic hydrocarbons. Alcohols. Aldehydes and ketones. Carboxylic acids and their derivatives. Amines. Polyfunctional acids. Phenols. Optical isomerism. Amino acids and proteins. Carbohydrates. Valence isomerism. Industrial alcohols. Reactions of halogen compounds. Organometallic compounds. Reactions of the carbonyl group. Substitution and condensation reactions of carbonyl compounds. Unsaturated carbonyl compounds. Compounds which contain two or more carbonyl groups. Ring formation. Polymerization and polymers. Nitro compounds. Reactions of amines. Organic sulfur compounds. Aromatic compounds. Polynuclear aromatic hydrocarbons. Aromatic heterocyclic compounds. Synthetic dyes. Appendix. Index.

Note. A outstanding introductory text, the first edition of which was published in 1942 Relative brevity has been achieved by limiting the exposition to fundamental aspects and typical cases, and leaving out the cyclopedic coverage of compounds which is characteristic of some college texts in this field. Another feature is that the basic information is presented at an introductory level in the first third of the book, then is developed in more detail and at an advanced level in the latter two-thirds. The importance of functional groups in organic reactions is stressed, and much attention has been given to making clear the "why" of reactions. This edition represents thorough revision, with more emphasis on theoretical physics.

GAYLORD NORMAN G

Reduction with complex metal hydrides. New York Interscience Publishers, Inc., 1956 1,046 p illus. 24 cm $15 00 *1298*

Contents Introduction. Preparation and properties of complex metal hydrides. *Reactions with inorganic reactants.* Reactions with organic derivatives of inorganic reactants. Complex metal hydrides as analytical reagents. Reduction of organic compounds with the complex metal hydrides—general. Reduction of oxygen-containing organic compounds—I, carbonyl derivatives—II, carboxylic acid derivatives (acids, anhydrides, acyl halides)—III, carboxylic acid derivatives (esters, lactones, enol esters)—IV carboxylic acid derivatives (amides, lactams, imides, carbamates)—V compounds containing other linkages. Reduction I nitrogen-containing organic compounds. Reduction I sulfur-containing organic compounds. Reduction of halogen-containing organic compounds. *Reduction of carbon*-carbon multiple bonds. Miscellaneous reactions with LAH. Experimental conditions for complex metal hydride reactions. Handling complex metal hydrides on a commercial scale, by M. D. Banus and R. D Gray Subject index.

Note: A comprehensive review of accumulated knowledge on a group of relatively new and useful reagents in organic chemistry. These include lithium aluminum hydride, aluminum hydride, sodium borohydride, potassium borohydride, lithium borohydride, sodium trimethoxyborohydride, and others. The field is covered primarily from the standpoint of graduate chemists interested in using the metal hydrides in laboratory investigations and syntheses. The terminal chapter on their use in industrial processes is short and contains only one literature reference. In preparing the book, the

KHARASCH M S., AND OTTO REINMUTH

Grignard reactions of nonmetallic substances. New York Prentice-Hall, Inc., 1954 1,384 p. illus. 24 cm. (Prentice-Hall chemistry series Wendell M Latimer editor) $17.50 1310

Contents: Historical introduction. The preparation of Grignard reagents. Estimation and detection of Grignard reagents. Constitution and dissociation of Grignard reagents. Some radical reactions of Grignard reagents. Reactions of Grignard reagents with aldehydes, ketones, and ketenes. Reactions of Grignard reagents with quinones. Reactions of Grignard reagents with esters and lactones. Reactions of Grignard reagents with carbonyl halides. Reactions of Grignard reagents with nitriles and other cyano compounds. Reactions of Grignard reagents with carboxylic anhydrides. Reactions of Grignard reagents with carboxylic amides, imides, and lactams. Reactions of Grignard reagents with oxides of carbon, and with carboxylic acids and their salts. Reactions of Grignard reagents with epoxides. Reactions of Grignard reagents with ethers, acetals, and ketals. Reactions of Grignard reagents with alkyl, aralkyl, and cycloalkyl halides. Allylic rearrangements in Grignard reactions. The Tschugaeff-Zerewitinoff method for the determination of "active" hydrogen. Reactions of Grignard reagents with miscellaneous nitrogen compounds. Reactions of Grignard reagents with oxygen, sulfur, selenium, and tellurium. Reactions of Grignard reagents with miscellaneous sulfur, selenium, and tellurium compounds. Reactions of Grignard reagents with silicon compounds. Reactions of Grignard reagents with miscellaneous non-metallic substances. Index of Grignard reagents General index.

Note. The Grignard reaction is one of the most useful in organic chemistry In this reference treatise on it, a vast range of data is covered The style is extremely condensed, and the authors have made extensive use of tables; nevertheless, certain limitations in scope (which are accurately and fully described in the book's preface) were imposed in order to hold the book to a practical length. The organization of chapters varies from one to another but generally speaking these aspects of each group of reactions are covered: history, description of the overall reaction and probable mechanism, typical preparative procedures, descriptions and discussion of abnormal reactions, and tabulations of data from the literature The literature is covered comprehensively to early 1950, and selected data were added from literature published later. The narrative text is both descriptive and critical. The 16-page index of "Grignard reagents" is a valuable feature

KOSOLAPOFF GENNADY MICHAEL

Organophosphorus compounds. New York John Wiley & Sons, Inc. 1950 376 p 23 cm. $12.00. 1311

Contents: Introduction. Phosphines and related compounds. Halophosphines. Halophosphine halides and phosphoryl halides. Quaternary phosphonium compounds. Tertiary phosphine oxides, sulfides, and selenides. Phosphinous, phosphonous, and phosphonic acids, their esters, analogs and salts. Phosphites and thiophosphites. Phosphates, halophosphates, and thio analogs. Compounds with phosphorus to nitrogen bonds. Quasi-phosphonium compounds. Derivatives of anhydro acids. Appendix. Index.

Note: A comprehensive summary of the current knowledge of an important group of organic compounds. Particular attention is paid to the properties, methods of preparation, chief reactions, and uses, especially uses in the chemical laboratory Literature references are given generously The work is essentially a reference book.

LEFFLER, JOHN E.

The reactive intermediates of organic chemistry New York Interscience Publishers, Inc., 1956 275 p. illus. 23 cm. $6.00 1312

Contents: Triarylmethyl radicals. Unstable carbon radicals. Diradicals. Heteroradicals. Carbonium ions by reversible dissociation. Carbonium ions by dissociation under irreversible conditions. Formation of carbonium ions by addition reactions. Analogs of carbonium ions. The formation of carbanions. Reactions of carbanions. Base-catalyzed reactions of carbon acids. Radical and non-radical reactions. Author index. Subject index.

Note: A contribution to the study of reaction mechanisms in organic chemistry It deals specifically with the radicals and ions taking part in reactions intermediate between the initial ones and the final ones in a reaction system. These intermediate products are studied by the classes named in the above quoted chapter titles. The author's approach is a critical one, and his concern is usually centered on the validity of the evidence for the existence of the radicals or ions under discussion. Methods of detection of radicals and ions are adequately explained. The foundations of evidence not based on direct measurements are critically delineated Literature citations are given throughout in the form of footnotes The book is potentially of interest to most graduate organic chemists.

LOWY, ALEXANDER AND BENJAMIN HARROW

An introduction to organic chemistry Seventh edition Revised by Benjamin Harrow and Percy M Apfelbaum. New York John Wiley & Sons Inc., 1951 480 p. illus. 22 cm $5 95 1313

Contents (abridged) Saturated hydrocarbons. Unsaturated hydrocarbons. Alcohols. Ethers. Aldehydes and ketones. Carboxylic acids. Fats and oils, waxes, and some lipids. Amines. Nucleoproteins, pyrimidines, and purines. Cyclic compounds. Alicyclic compounds. Aromatic hydrocarbons Aromatic amines Aromatic acids and their derivatives. Heterocyclic compounds. Synthetic polymers. Plastics and rubbers. Dyes. Terpenes and related substances. Alkaloids. Plant and animal pigments. Enzymes, vitamins, hormones. Nomenclature of organic compounds. Appendix. Index.

Note: A long-established text (the first edition appeared in 1924) intended principally for college students who are preparing for careers in medicine, dentistry pharmacy or the biological sciences. A simpler treatment is given than in introductory texts written for students planning to major in organic chemistry There is, however no special emphasis on those aspects of organic chemistry which are of special interest in biochemistry Changes in this edition are not extensive. However recent developments in such fields as the chemistry of aliphatic compounds have been incorporated The book is about 25 pages longer

LUCAS HOWARD J

Organic chemistry Second edition. New York American Book Company 1953 760 p illus. 24 cm. $7.00 1314

Contents: Introduction. Chemical bonds. Electric dipole moments and electronegativities. Saturated hydrocarbons, alkanes, the paraffin series, C_nH_{2n+2}. Alkenes, olefins, the ethylene series, C_nH_{2n}. Alkynes, the acetylene series alkadienes, diolefins, C_nH_{2n-2}. Alicyclic hydrocarbons, cycloalkanes, cycloparaffins, C_nC_{2n}. Halogen derivatives of aliphatic hydrocarbons. Organometallic compounds. Monohydric alcohols, $C_nH_{2n+1}OH$. Dihydric and trihydric saturated alcohols. Chlorohydrins unsaturated alcohols. Monobasic carboxylic acids, fatty acids. Dicarboxylic acids. Unsaturated and halogenated acids. Esters, ethers, anhydrides, and acyl halides. Ethers and esters of glycols and glycerol. Aldehydes and ketones. Hydroxy acids optical isomerism. Aldehydic and ketonic acids syntheses with ethyl acetoacetate and ethyl malonate. Organic compounds of sulfur Aliphatic amines. Amides. Derivatives of hydrogen cyanide Nitroparaffins. Compounds of silicon. Derivatives of cycloalkanes. Aromatic hydrocarbons. Orienting influence during substitution in the benzene ring. Aromatic halogen compounds. Sulfonic acids; nitro compounds azo compounds. Aromatic amines. Diazo compounds. Phenols. Aromatic alcohols, aldehydes, ketones. Aromatic acids. Quinones. Biphenyl and polyphenyl compounds. Naphthalene. Anthracene and phenanthrene. Amino acids. Proteins. Carbohydrates. Terpenes and camphors. Heterocyclic compounds. Alkaloids and drugs. Synthetic dyes. Index.

Note. An extensively revised and enlarged edition of a textbook first published in 1935. It is designed for use in first courses in organic chemistry offered to undergraduate college students. It is intermediate in scope between the brief texts that only indicate the highlights of the field and the cyclopedic texts. The emphasis is on fundamental concepts and relationships and on class reactions of chemical groups rather than on the reaction of individual compounds. Data on properties of individual compounds are, for the most part, arranged in tables in order to save space. The author is Professor of Organic Chemistry in the California Institute of Technology

MACY RUDOLPH

Organic chemistry simplified based completely on the electron theory Second revised and enlarged edition. New York Chemical

instances experimental techniques are described in summary fashion rather than in detail however references to source publications are always given. The primary purpose of the book is to serve as a text in graduate courses offered in organic chemistry. The important literature is cited, and the names of authors of the cited books and papers are indexed.

HOFMANN, KLAUS

Imidazole and its derivatives Part I New York Interscience Publishers, Inc., 1953 447 p 24 cm (The chemistry of heterocyclic compounds, a series of monographs, Arnold Weissberger, consulting editor) $13 50 1304

Contents Section I, Chemistry of classes and derivatives. General properties and structure of the imidazoles. The alkyl- and arylimidazoles. The oxo- and hydroxyimidazoles and their sulfur analogues. The halogenoimidazoles. The nitro- arylazo- and aminoimidazoles. The imidazolecarboxylic and sulfonic acids. The imidazolines, 2-imidazolidones, 2-imidazolidinethiones, 2-iminoimidazolidines, and imidazolidines. The benzimidazoles. Section II, Systematic survey and bibliography Imidazoles. Imidazolines. Imidazolidines. Imidazolidones, imidazolidinethiones, and 2-iminoimidazolidines. Benzimidazoles. Bibliography Subject index.

Note For a description of the series in which this monograph appears, see the note on Allen, *Six-membered heterocyclic nitrogen compounds*, above. The present monograph follows the pattern of the series, but may be used independently as a reference book and guide to the literature on the group of compounds covered in it. The first section, which with its bibliography runs to 324 pages, covers the physical and chemical properties, reactions, methods of synthesis, etc., of the classes of compounds named in the chapter titles. This part is a critical survey based on the literature with the texts of the separate chapters keyed to the chapter bibliographies. The second part of the volume consists of a systematic survey organized in tabular form of the compounds which have been noted in the literature. Melting points for most of the compounds listed are included, but a particularly useful part of the tabulation is a reference to the source article. The bibliography for this part contains more than 700 literature citations.

HUDSON CLAUDE SILBERT

The collected papers of C S Hudson Edited by Raymond M Hann and Nelson K. Richtmyer New York Academic Press, Inc Publishers, 1946–48 illus 2 v $30 00 1305

Content (abridged) Volume I, Section I The forms of milk sugar Physical chemistry of solutions. Mutarotation of sugars. Section II Enzymes—studies on invertase, emylsines, and emulsin. Section III Preparation of sugars. Section IV Rules of isorotation Acetyl derivatives of sugars and glycosides. Section V Lactone, phenylhydrazide, amide, and benzimidazole rules. Volume II Section VI Ketoses. Section VII Syntheses of higher-carbon sugars and their derivatives. Section VIII Periodate oxidations in the sugar group Section IX Neolactose celtrobiose, and d-altrose. Section X. Anhydro sugars and alcohols. Section XI Isopropylidene benzylidene, and methylene derivatives of the polyhydric alcohols. Section XII Miscellaneous papers. Appendix. Author index by year and paper number Index to sources of publication. Subject index Errata to Volume I.

Note. One feature of the celebration of the 65th birthday of Dr C. S. Hudson by the Division of Sugar Chemistry and Technology American Chemical Society in 1946 was the arranging for the publication of this collection. Two hundred and forty-seven papers representing the author's published contributions through June, 1945 are reprinted in the two volumes. As the section titles indicate most of them deal with the chemistry of sugars, particularly the rarer sugars, and with other carbohydrate substances. A 17-page autobiographical sketch appears as a foreword to Volume I.

HUNTRESS, ERNEST HAMILIN

A brief introduction to the use of Beilstein s Handbuch der Organischen Chemie. Second edition, revised. New York John Wiley & Sons Inc. 1938 44 p 23 cm $1 75 1306

Note: Provides a simplified explanation in English of the Beilstein method of classification of organic compounds as presented in the fourth edition of the *Handbuch*. It is based on the comprehensive and useful system developed by Prager and Jacobson, and offers an *elementary* exposition of this system. Treatment is brief and compact, condensing the fundamentals of the scheme of classification into four charts with accompanying explanation, illustrative examples, and problems.

HUNTRESS, ERNEST HAMILIN

The preparation, properties, chemical behavior, and identification of organic chlorine compounds, tables of data on selected compounds of Order III New York John Wiley & Sons, Inc., 1948 1,443 p 23 cm. $29 75 1307

Note An important reference book that complements the author's *Identification of pure organic compounds* Wiley 1941. Where the earlier work dealt with compounds composed of combinations of hydrogen, nitrogen, and oxygen, this volume provides data for compounds made up of combinations of carbon, chlorine, hydrogen, and oxygen. The information given for each compound listed includes its name, structural formula, empirical formula, Beilstein reference, melting point, boiling point, density refractive index, methods of preparation, chemical behavior preliminary tests, derivatives, and bibliography The book is based on a search of chemical literature and patents through 1945 but important references for the years 1946–47 are included in supplementary pages. Compounds are indexed by empirical formulas, chemical types, and by name and empirical formulas are indexed by molecular weight and by percentage chlorine content.

INGOLD, C K

Structure and mechanism in organic chemistry Ithaca Cornell University Press 1953 828 p illus 24 cm. (The George Fisher Baker Non resident Lectureship in Chemistry at Cornell University) $9 75 1308

Contents Valency and molecular structure. Interactions between and within molecules. Physical properties of molecules. The aromatic sextet. Classification of reagents and reactions. Electrophilic aromatic substitution. Nucleophilic aliphatic substitution. Olefin-forming eliminations. Saturated rearrangements. Unsaturated rearrangements. Aromatic rearrangements. Additions and their retrogression. Acids and bases. Carbonyl reactions. Nucleophilic aromatic substitution. Index.

Note. A graduate-level treatise on the structure of organic molecules and the mechanism of reactions among them. On the matter of the book's scope, the author has stated as to structure, attention has concentrated on molecules in their normal states. As to reactions, discussion has been restricted substantially to those classes of homogeneous molecular reactions on which the present broad pattern of organic chemistry mainly depends. In most of the chapters the arrangement is historical, with most of the space given to developments in the last several decades. The experimental evidence for statements about structures and reactions is carefully cited, and references are given to the source articles. Opposing views—for instance those on the Hofmann-Martius rearrangement—are critically examined. The book is of interest to graduate students of organic chemistry and to teachers of the subject, as well as to graduate chemists engaged in theoretical research.

JORDAN, T EARL

Vapor pressure of organic compounds New York Interscience Publishers Inc. 1954 266 p illus 29 cm $14 50 1309

Contents Hydrocarbons. Halogen compounds. Alcohols. Aldehydes, ethers, ketones, and oxides. Acids, acid chlorides, and anhydrides. Esters. Nitrogen compounds. Phenols. Organic compounds containing arsenic, selenium, sulfur and silicon. Organic compounds containing antimony boron, gallium, lead, phosphorus, tin, thallium, beryllium, and zinc. Index.

Note The data presented in this reference work are organized in tables and charts, and their sources are carefully cited. The organization of the book is somewhat complex. Each chapter begins with a table in which some data are presented and in which references are made to the source literature. This table also serves as an index to the contents of the particular chapter The general index refers to these tables. Working chemists will undoubtedly find that the charts of vapor pressures in relation to temperature which were drawn for the book, are its most useful feature.

effects on equilibrated systems, by G. S. Hammond. Molecular complexes and molecular asymmetry, by M. S. Newman. Steric effects on certain physical properties, by L. L. Ingraham. Calculation of the magnitude of steric effects, by F. H. Westheimer. Separation of polar, steric and resonance effects in reactivity, by R. W. Taft, Jr. Author index. Subject index.

Note: The importance of steric effects on the properties and the reactions of organic compounds is made clear in this book. The volume was planned to give adequate treatment to aspects of the subject omitted or inadequately treated in treatises already published. It is written at an advanced level and is addressed to graduate chemists working at the research level. Although each of the chapters is essentially self-contained, extensive references to the literature are a feature of all.

NOLLER, CARL ROBERT
Textbook of organic chemistry Philadelphia W B Saunders Company 1951 643 p. illus. 24 cm. $5 75 1321

Contents (abridged): Natural gas, petroleum and derived products. Esters of inorganic acids. Alkyl halides. Grignard reagents. Mechanism of organic reactions. Synthesis of alkanes and alkenes. Alkynes (acetylenes). Ethers. Waxes, fats, and oils. Aldehydes and ketones. Aliphatic nitrogen compounds. Aliphatic sulfur compounds. Proteins, amino acids, and peptides. Stereoisomerism. Benzene and its homologs. Coal products. Halogen derivatives of aromatic hydrocarbons. Aromatic nitro compounds. Aromatic sulphonic acids and their derivatives. Aromatic amines. Diazonium salts. Phenols, aminophenols, and quinones. Condensed nuclear hydrocarbons and their derivatives. Heterocyclic compounds. Alkaloids. Dyes and dyeing. Dienes, rubber and synthetic rubbers. Chlorinated and fluorinated aliphatic hydrocarbons. Unsaturated alcohols. Unsaturated acids. Polycarboxylic acids. Keto acids. Alicyclic compounds. Organic peroxides. Autoxidation and antioxidants. Organometallic compounds. Silicon compounds. Appendices. Index.

Note: A textbook for introductory college courses offered to students who have completed a course in general chemistry at the college level. Understanding of reaction mechanisms is emphasized. However, the presentation is descriptive rather than mathematical. The author is Professor of Chemistry in Stanford University. A second edition was published in 1957 978 p., $9 00.

ORGANIC REACTIONS Volume I. Roger Adams, editor-in-chief New York John Wiley & Sons, Inc., 1942 391 p. illus. 23 cm. $7.50. 1322

Contents: The Reformatsky reaction, by R. L. Shriner. The Arndt-Eistert synthesis, by W. E. Bachmann and W. S. Struve. Chloromethylation of aromatic compounds, by R. C. Fuson and C. H. McKeever. The amination of heterocyclic bases by alkali amides, by M. T. Leffler. The Bucherer reaction, by N. L. Drake. The Elbs reaction, by L. F. Fieser. The Clemmensen reduction, by E. L. Martin. The Perkin reaction and related reactions, by J. R. Johnson. The acetoacetic ester condensation and certain related reactions, by C. R. Hauser and B. E. Hudson, Jr. The Mannich reaction, by F. F. Blicke. The Fries reaction, by A. H. Blatt. The Jacobsen reaction, by L. I. Smith. Index.

—— Volume II. Roger Adams, editor-in-chief. New York John Wiley & Sons, Inc., 1944 461 p. illus. 23 cm. $8.00 1323

Contents: The Claisen rearrangement. The preparation of aliphatic fluorine compounds. The Cannizzaro reaction. The formation of cyclic ketones by intramolecular acylation. Reduction with aluminum alkoxides. The preparation of unsymmetrical biaryls by the diazo reaction and the nitrosoacetylamine reaction. Replacement of the aromatic primary amino group by hydrogen. Periodic acid oxidation. The resolution of alcohols. The preparation of aromatic arsonic and arsinic acids by the Bart, Bechamp, and Rosenmund reactions. Index.

—— Volume III. Roger Adams, editor-in-chief New York John Wiley & Sons Inc., 1946 460 p. illus. 24 cm. $9.00 1324

Contents: The alkylation of aromatic compounds by the Friedel-Crafts method, by C. C. Price. The Willgerodt reaction, by M. Carmack and M. A. Spielman. Preparation of ketenes and ketene dimers, by W. E. Hanford and J. C. Sauer. Direct sulfonation of aromatic hydrocarbons and their halogen derivatives, by C. M. Suter and A. W. Weston. Azlactones, by H. E. Carter. Substitution and addition reactions of thiocyanogen, by J. L. Wood. The Hofmann reaction, by E. S. Wallis and J. F. Lane. The Schmidt reaction, by H. Wolff. The Curtius reaction, by P. A. S. Smith. Index.

—— Volume IV Roger Adams, editor-in-chief. New York John Wiley & Sons, Inc., 1948. 428 p. illus. 24 cm. $9.00 1325

Contents: The Diels-Alder reaction with maleic anhydride, by M. C. Kloetzel. The Diels-Alder reaction: Ethylenic and acetylenic dienophiles, by H. L. Holmes. The preparation of amines by reductive alkylation, by W. S. Emerson. The acyloins, by S. M. McElvain. The synthesis of benzoins, by W. S. Ide and J. S. Buck. Synthesis of benzoquinones by oxidation, by J. Cason. The Rosenmund reduction of acid chlorides to aldehydes, by E. Mosettig and R. Mozingo. The Wolff-Kishner reduction, by D. Todd. Index.

—— Volume V Roger Adams, editor in chief New York John Wiley & Sons, Inc., 1949 446 p. illus. 24 cm. $9.00 1326

Contents: The synthesis of acetylenes, by T. L. Jacobs. Cyanoethylation, by H. A. Bruson. The Diels-Alder reaction; quinones and other cyclenones, by L. W. Butz and A. W. Rytina. Preparation of aromatic fluorine compounds from diazonium fluoborates: the Schiemann reaction, by A. Roe. The Friedel and Crafts reaction with aliphatic dibasic acid anhydrides, by E. Berliner. The Gattermann-Koch reaction, by N. N. Crounse. The Leuckart reaction, by M. L. Moore. Selenium dioxide oxidation, by N. Rabjohn. The Hoesch synthesis, by P. E. Spoerri and A. S. DuBois. The Darzens glycidic ester condensation, by M. S. Newman and B. J. Magerlein. Index.

—— Volume VI Roger Adams, editor in-chief New York John Wiley & Sons, Inc., 1951 517 p. illus. 24 cm. $10 00 1327

Contents: The Stobbe condensation, by W. S. Johnson and G. H. Daub. The preparation of 3,4-dihydroisoquinolines and related compounds by the Bischler-Napieralski reaction, by W. M. Whaley and T. R. Govindachari. The Pictet-Spengler synthesis of tetrahydroisoquinolines and related compounds, by W. M. Whaley and T. R. Govindachari. The synthesis of isoquinolines by the Pomeranz-Fritsch reaction, by W. J. Gensler. The Oppenauer oxidation, by C. Djerassi. The synthesis of phosphonic and phosphinic acids by G. M. Kosolapoff. The halogen-metal interconversion reaction with organolithium compounds, by R. G. Jones and H. Gilman. The preparation of thiazoles, by R. H. Wiley and others. The preparation of thiophenes and tetrahydrothiophenes, by D. E. Wolf and K. Folkers. Reduction with lithium aluminum hydride, by W. G. Brown. Index.

—— Volume VII. Roger Adams, editor in-chief. New York John Wiley & Sons Inc. 1953 440 p illus. 24 cm. $10.00 1328

Contents. The Pechmann reaction, by S. Sethna and R. Phadke. The Skraup synthesis of quinolines, by R. H. F. Manske and M. Kulka. Carbon-carbon alkylations with amines and ammonium salts, by J. H. Brewster and E. L. Eliel. The von Braun cyanogen bromide reaction, by H. A. Hageman. Hydrogenolysis of benzyl groups attached to oxygen, nitrogen, or sulfur by W. H. Hartung and R. Simonoff. The nitrosation of aliphatic carbon atoms, by O. Touster. Epoxidation and hydroxylation of ethylenic compounds with organic peracids, by D. Swern. Index.

—— Volume VIII. Roger Adams, editor-in-chief New York John Wiley & Sons, Inc., 1954 437 p. illus 24 cm. $12.00 1329

Contents: Catalytic hydrogenation of esters to alcohols, by H. Adkins. The synthesis of ketones from acid halides and organometallic compounds of magnesium, zinc, and cadmium, by D. A. Shirley. The acylation of ketones to form β-diketones or β-keto aldehydes, by C. R. Hauser and others. The Sommelet reaction, by S. J. Angyal. The synthesis of aldehydes from carboxylic acids, by E. Mosettig. The metalation reaction with organolithium compounds, by H. Gilman and J. W. Morton. β-Lactones, by H. E. Zaugg. The reaction of diazomethane and its derivatives with aldehydes and ketones, by C. D. Gutsche. Index.

Note: The purpose of this series is to publish monographs on the useful reactions in organic chemistry. In contrast to Organic syntheses, described below the emphasis is on the reaction rather than on

Publishing Company, Inc., 1955 611 p illus. 22 cm. $12 00 1315

Contents (abridged) Part I, The unique position of the carbon atom in chemistry The nature of organic chemistry Valence. New ideas on valence. North poles and south poles. Part II, The architecture of carbon compounds Methane and the structure theory Carbon chains. Carbon rings. Energy and molecular structure. Double and triple bonds. How molecules react—and why From partial valence to resonance. The benzene ring. Stereochemistry and isomerism. Part III, The classification of carbon compounds Alkyl radicals and aryl radicals. Halogen compounds. Alcohols. Phenols. Ethers. Aldehydes and ketones. Carboxy acids. Nitrogen compounds. Compounds with sulfur phosphorus, and other elements. Part IV Special topics in organic chemistry Structures of complex compounds. Heterocycles and condensed cycles. Proteins. Chemistry of sugars. Complex carbohydrates. Dyes. Drugs and related compounds. Hormones and vitamins. Isotopic chemistry Giant molecules. Index.

Note A compact and simplified textbook suitable for use in self instruction as well as in elementary courses in colleges and technical institutes. The simplification has been accomplished partly by choice of topics and partly by style that is intended for reading. A typical passage follows "From these remarks on the carbon dioxide molecule, it will be evident that it ought to exhibit *average* properties which satisfy the requirements of several plausible valence-bond structures. This is found to be the case, not only for carbon dioxide, but also for many other compounds. The phenomenon is called resonance. The first edition was published in 1943 The second edition represents an extensive revision and augmentation. More topics are now covered, and the presentation is more consistent.

MARKLEY, KLARE STEPHEN

Fatty acids, their chemistry and physical properties New York Interscience Publishers, Inc, 1947 688 p illus 23 cm $13 50 1316

Contents Nature and history of fats and waxes. Historical and general. Classification and structure of the fatty acids Classification and nomenclature. Isomerism. Physical properties of the fatty acids: Crystal properties. Spectral properties. Thermal properties. Solubility of fatty acids and solution properties. Properties of the fatty acids in the liquid state. Chemical reactions of the fatty acids Salts of fatty acids. Esterification and interesterification. Alkylation and alkoxylation. Pyrolysis. Halogenation. Hydrogenation and hydrogenolysis. Oxidation and hydroxylation. Oxidation by atmospheric oxygen (autoxidation) Biological oxidation. Nitrogen derivatives of aliphatic acids. Sulfur derivatives of the fatty acids. Synthesis of fatty acids In vitro synthesis of fatty acids. Biosynthesis of fatty acids. Isolation and identification of fatty acids. Separation of fatty acids. Identification of individual fatty acids. Author index. Subject index.

Note This volume provides a comprehensive survey of present day knowledge regarding the chemical reactions and physical properties of fatty acids. Based on review of the literature of the subject, it brings together in one volume great amount of technical information and data which will be of value to chemists, technologists, and others interested in the products and by-products of fatty acids. Although the lower members of the fatty acid series are discussed, the emphasis is placed on the long chain fatty acids. Also, because of the large amount of space that would be required for it, complete treatment of glyceride esters and natural fats is not given. The numerous footnote references and an author index constitute an extensive bibliography of the subject.

MIGRDICHIAN VARTKES

The chemistry of organic cyanogen compounds New York Reinhold Publishing Corporation, 1947 460 p illus 23 cm (American Chemical Society monograph series) $12 00 1317

Contents General introduction. Nitriles, their formation and properties. Hydrolysis of hydrocyanic acid and nitriles. Action of strong mineral acids on nitriles. Ammonolysis of nitriles. Simultaneous action of alcohols and acids on nitriles. Reaction of nitriles with halogens and other negative elements reactions of cyanogen halides and cyanamides. Replacement of halogens or other acid residues by the nitrile group; other reactions involving metallic cyanides. Reduction of nitriles. Reaction of hydrocyanic acid and alkali cyanides with aldehydes and ketones; reactions of cyanohydrins. Aminonitriles derived from aldehydes and ketones. Reaction of unsaturated compounds with hydrocyanic acid and alkali cyanides. Gattermann's synthesis. Houben-Hoesch synthesis. Reaction of Grignard reagents with nitriles. Condensation reactions involving active methylenic groups. other condensations. Knoevenagel condensation. Polymerization of nitriles. Reactions of cyanates, thiocyanates and isocyanides. Author index. Subject index.

Note Nitriles, or organic cyanides, are a varied and important group of nitrogen-bearing carbon compounds. This monograph is comprehensive survey of their chemistry including the chief methods of synthesis, their properties, and the products of reactions in which they are employed. Specific directions are given for the laboratory preparation of selected representative compounds, and methods of preparation are indicated for most of the compounds described. The work follows the general pattern of the series to the extent that it is based on comprehensive literature survey Extensive, numbered lists of references are supplied to each chapter, and statements in the text are keyed to them. However historical information has been omitted except insofar as the history of specific compounds or reactions can be traced through the literature references. The work is valuable as a reference book to advanced students and graduate chemists.

MORTON, AVERY ADRIAN

The chemistry of heterocyclic compounds New York McGraw Hill Book Company, Inc, 1946 549 p illus 23 cm. (International chemical series, Louis P Hammett, consulting editor) $9 00 1318

Contents The furan compounds. Condensed furan systems. Thiophene and condensed thiophene systems. Pyrroles. Di- and poly-pyrryl compounds. Porphyrins and phthalocyanines. Condensed pyrrole systems. Pyrans, pyrones, and related compounds. The pyridine group. Piperidine and related compounds. The quinoline compounds. Isoquinolines. Acridines and other condensed compounds. Azoles, azolones, and related systems. The azines and related compounds. Index.

Note. A college textbook for students who have had an introductory course in organic chemistry Problems are included, and there are numerous references to the literature of the subject. Because there are few collections of material on heterocyclic compounds in spite of their importance, the book should be of some use as a reference book. The author is Professor of Organic Chemistry at the Massachusetts Institute of Technology

MULDOON, HUGH CORNELIUS

Organic chemistry Third edition. New York McGraw Hill Book Company, Inc, 1948 648 p illus 24 cm. $6 50 1319

Contents (abridged): Introduction. Analysis—formulas—classification. Chain compounds. Unsaturated aliphatic hydrocarbons. Alkadienes. Alkyl halides. Aliphatic polyhalogen compounds. Monohydric alcohols. Unsaturated alcohols. Ethers. Monocarboxylic acids. Polycarboxylic acids. *Esters. Lipids.* Aliphatic nitrogen compounds. Amino acids—proteins. Carbohydrates. Aromatic hydrocarbons. Benzene series. Aromatic arsenicals, antimonials, and mercurials. Polynuclear compounds. *Heterocyclic* compounds. Terpenes and related compounds. *Alkaloids*—medicinal glycosides. Enzymes—antibiotics. Steroids—hormones—natural pigments—vitamins. Appendix. Index.

Note. An established textbook for use in first courses in the subject. It is slanted somewhat for students preparing for the study of medicine, for example, there is more space given to chemicals used in medicine and pharmacy than is usually the case in introductory texts. This edition has been considerably revised and rearranged, and new material has been added to such topics as antibiotics and hormones.

NEWMAN, MELVIN S , editor

Steric effects in organic chemistry *New* York John Wiley & Sons, Inc., 1956 710 p. illus 23 cm $12.50 *1320*

Contents Conformational analysis, by W G. Dauben and K. S. Pitzer Substitution at saturated carbon atoms, by E. L. Eliel. Steric effects in aromatic substitution, by G. S. Hammond and M. F Hawthorne. Additions to unsaturated functions, by M. S. Newman. Intramolecular rearrangements, by *D J Cram*. Olefin forming elimination reactions, by D J Cram. Cleavage reactions of carbon-carbon bond, by H. H. Wasserman. *Steric effects* among the common organometallic compounds, by G. F Wright. Steric

Wiley & Sons Inc., 1941 580 p. illus. 23 cm. $11.50. 1337

—— Collective volume 2 a revised edition of annual volumes x–xix. Edited by A. H. Blatt. New York John Wiley & Sons Inc. 1943 654 p. illus. 23 cm. $12 00 1338

—— Collective volume 3 a revised edition of annual volumes 20–29 E. C. Horning, editor-in-chief New York John Wiley & Sons, Inc., 1955 890 p illus. 23 cm. $15 00. 1339

Note Together these three "collective" volumes supersede the annual Volumes 1 through 29 of *Organic syntheses.* They contain not only all of the syntheses published in the superseded volumes but also corrections of errors which have been discovered in the original publications, modifications of some of the procedures as originally published, some new procedures, and revised literature references. Various indexes in these volumes enhance their value for reference.

PIGMAN WILLIAM WARD AND RUDOLPH MAXIMILIAN GOEPP JR.

Chemistry of the carbohydrates. New York Academic Press Inc. 1948 748 p illus. 23 cm. $10.80 1340

Contents (abridged) Introduction—development of carbohydrate chemistry—general chemistry—nomenclature and definitions. Structure and stereochemistry of the monosaccharides. Occurrence, properties, synthesis and analysis of the monosaccharides—naturally occurring monosaccharides—synthetic sugars—the identification and the quantitative determination of carbohydrates. Esters. Glycosides, full acetals and thioacetals. The polyols—acyclic polyols (glycitols)—the inositols and related compounds. Acids and oxidation products of carbohydrates. Ethers, anhydrides and unsaturated derivatives. Nitrogenous derivatives. Oligosaccharides. Naturally occurring glycosides and glycosylamines. Classification and determination of structure of the polysaccharides. Cellulose. The starches and starch substances. Polyuronides, hemicelluloses, plant gums, microbial polysaccharides. Author index. Subject index.

Note A general survey of a broad field of chemistry. It is monographic in style, and organization and is based on a wide but not exhaustive survey of the literature. Statements in the text are keyed to the numerous bibliographic footnotes. The work is written for advanced students who are beginning intensive study of the carbohydrates and for graduate chemists who are not specialists in carbohydrate chemistry but need a general knowledge of the field and, on occasion, specific information about the chemistry of a special carbohydrate group or a particular reaction.

PORTER C W AND T D STEWART

The essentials of organic chemistry Revised edition. Boston Ginn and Company 1953 394 p. illus. 22 cm. $5 00 1341

Contents (abridged) Methane and its oxidation products. Compounds of two carbon atoms; the carbon-carbon bond. The higher alkane hydrocarbons. The alkene hydrocarbons; geometrical isomerism. The alkyne and diene hydrocarbons. Alicyclic and aromatic hydrocarbons. The alcohols. Aliphatic ethers. Aliphatic aldehydes and ketones. The aliphatic monobasic acids. Aliphatic dibasic acids. Aliphatic amines. The carbohydrates. Proteins and amino acids. Aromatic halides, sulfonic acids, and phenols. Aromatic nitro compounds, amines, and diazonium salts. Aromatic alcohols, aldehydes, and ketones. Aromatic acids and their derivatives. Dyes and indicators. Natural and synthetic drugs. Enzymes, vitamins, and hormones. Sterols. Index.

Note An introductory and relatively brief textbook intended for use in short courses offered to students not specializing in chemistry. In other words, students preparing for such fields as medicine, pharmacy, home economics, and agriculture.

RALSTON, ANDERSON WHEELER

Fatty acids and their derivatives. New York John Wiley & Sons, Inc., 1948 986 p illus. 22 cm $16 00 1342

Contents: The saturated fatty acids. The ethylenic fatty acids. The acetylenic acids, the hydroxy acids, the keto acids, the cyclic acids, and the dicarboxylic acids. The preparation of the fatty acids from the naturally occurring fats. The structure and physical properties of the fatty acids. Reactions of fatty acids not involving the carboxyl group. The fatty acid esters. The nitrogen-containing derivatives of the fatty acids. The alcohols and their esters, the ethers, mercaptans, sulfides, sulfonates, and related compounds. The fatty acid anhydrides, acid chlorides, aldehydes, ketones, and related compounds. The aliphatic hydrocarbons and metallic soaps. Addenda. Index.

Note: The author of this volume has written widely in periodical literature regarding his investigations into the properties of the fatty acids. In this work he provides a comprehensive discussion of present-day knowledge concerning the occurrence, synthesis, physical and chemical properties, and uses of these acids and their derivatives. The purpose and nature of the book are similar to Markley's *Fatty acids* (see above) but the scope is somewhat broader due to the inclusion of more material on derivatives. Extensive lists of references key-numbered to the text are given at the end of each chapter.

RAPHAEL R. A.

Acetylenic compounds in organic synthesis. New York Academic Press Inc., 1955 219 p. 23 cm. $6.20. 1343

Contents: Note on nomenclature. Preparation and general properties of acetylenes. Synthesis of aliphatic compounds. Synthesis of conjugated systems. Synthesis of carbocyclic compounds. Synthesis of heterocyclic compounds. Practical techniques. Index.

Note: The acetylene series of compounds has been used as building blocks in the synthesis of a wide variety of organic compounds. The literature is so extensive that a compact guide such as this book has been definitely needed. In the typical chapter a group of reactions is divided into subgroups, and the reactions falling in the subgroups are discussed as to mechanisms, uses, yields, etc. Most of the reactions discussed are documented. Precise literature references are given. The book is not a laboratory manual, and laboratory directions are not included, except for a few special techniques collected in the final chapter. Graduate students and graduate organic chemists should find it useful as a reference book and literature guide.

REMICK ARTHUR EDWARD

Electronic interpretations of organic chemistry Second edition. New York John Wiley & Sons, Inc., 1949 600 p illus. 24 cm. $8.50 1344

Contents: Pre-electronic theories of chemical affinity. Early applications of the electron theory to problems of organic reactivity. Applications of the Lewis theory to problems of molecular structure. The generalized concept of oxidation-reduction. Outline of the electronic theory of the English school. Some contributions from the field of chemical physics. Some contributions from the field of kinetics. The role of the solvent. Some contributions from the field of stereochemistry. Electron-sharing reactions. Electron-pairing reactions. Some contributions from the field of electrochemistry. Appendixes. List of basic principles. Table of symbols. Index.

Note. A valuable summary of fundamental chemical knowledge which can be applied toward understanding the reactions and other phenomena of organic chemistry. The author has gathered together the developments in theoretical and physical chemistry which he believes are or can be useful to workers in preparative organic chemistry. These theories and principles are explained and evaluated, and the experimental evidence which supports them is described. Footnote references are given to original publications. Although used chiefly as a text in courses offered to advanced students in organic chemistry, the work is potentially useful to graduate chemists as well. It has been extensively revised in this edition.

RICE, FRANCIS OWEN AND K. K. RICE

The aliphatic free radicals. With a foreword by F A. Paneth. Baltimore The Johns

the product. Each of the monographs is a comprehensive survey of the reaction named in its title, covering not only its nature and basic principles but also its uses and limitations, procedures, conditions and yields. In many instances extensive tabulated data on the properties of derivatives is included. Usually the lists f cited literature are extensive.

ORGANIC SYNTHESES, an annual publication of *satisfactory methods for the preparation of* organic chemicals Arthur C Cope, editor in chief Volume 30 New York John Wiley & Sons, Inc., 1950 115 p illus 24 cm $3 00 1330

Subject index.

Note An internationally known series which has been published since 1921 For the synthesis of each substance named in the contents practical laboratory methods are given, the apparatus is described and, if necessary illustrated; notes on special points of procedure are given, other published methods for synthesis of the same compound are mentioned, and references are made to pertinent original publications. Before acceptance for publication in the series, each synthesis is carried out by t least two chemists in laboratories ith which the submittee is not associated.

ORGANIC SYNTHESES *Collective volume* I being a revised edition of annual volumes I–IX Henry Gilman editor in-chief Second edition, edited by A H Blatt New York John

Contents: Part I. The chemistry of the hydrocarbons and certain of their univalent derivatives. The structure and reactivity of organic compounds. Chemistry of the alkanes. Chemistry of the cycloalkanes (alicyclics). Chemistry of the ethylene linkage. Aromaticity—chemistry of the aromatic hydrocarbons. Chemistry of the alkynes (acetylenes). Part II. The chemistry of carbonyl compounds. Nature of the carbonyl group. Methods of preparation of carbonyl compounds. Addition reactions of the carbonyl group. Reaction of carbonyl compounds dependent upon active hydrogen. Author index. Subject index.

Note: In this book, the primary theme is the understanding of the behavior pattern of organic substances in terms of the electronic theory of valence. Basic notions, including the covalent bond, wave function, resonance, and the electromeric and inductomeric mechanisms of electron displacement are discussed in the first chapter. Except for this chapter, most of the book is devoted to discussions of the mechanism of the reactions of classes of organic compounds and individual compounds. A wide range of reactions is covered; nevertheless, the volume is not intended as a reference book. Applications of reaction mechanisms to practical syntheses and degradations are integrated with the discussions of their theoretical foundations. The book is based on the literature, and literature citations occur on practically every page. It contains an author index to the cited literature and a fully detailed subject index.

SHIRLEY DAVID ALLEN

Preparation of organic intermediates New York John Wiley & Sons Inc., 1951 328 p. illus. 23 cm. $8 75 1351

Note: A reference book in which specific directions are given for the preparation of more than 300 compounds useful in the synthesis of other compounds. The write-up of each procedure resembles in organization and content the write-ups in *Organic syntheses*, and in fact the book is intended to complement *Organic syntheses*. According to the author, the following criteria have been followed in selecting compounds for inclusion: (1) The compound either is not available commercially or if available is relatively expensive; (2) directions for preparation of the compound had not been included in *Organic syntheses* through Volume 28; and (3) the compound is one whose structure is simple and contains reactive functional groups which make it useful as an intermediate, or its preparation involves a generally useful type of organic reaction and the directions may be applied to the preparation of related compounds.

SUMPTER, WARD C AND F M MILLER

Heterocyclic compounds with indole and carbazole systems. New York Interscience Publishers, Inc., 1954 307 p. illus 24 cm. (The chemistry of heterocyclic compounds a series of monographs Arnold Weissberger consulting editor) $10.00 1352

Contents: Indole. Carbazole. Isatin. Oxindole. Isatogens. Indoxyl. Indigo. Natural products containing the indole nucleus. Index.

Note: For a descriptive note on the series in which this monograph is published, see the note on Allen, *Six-membered heterocyclic nitrogen compounds*, above. The present monograph, like the others in the series, is essentially a critical survey of the published literature, and its text is keyed to citations of the source articles, in this case printed as footnotes. Literature coverage extends from about the middle of the 19th century into 1951. Condensed and precise information is given on the properties, principal reactions, and methods of synthesis of the compounds and groups named in the chapter titles. The chapter on natural products covers such groups as the Cinchona and the Rauwolfia alkaloids.

SURREY ALEXANDER R.

Name reactions in organic chemistry New York Academic Press, Inc. 1954 192 p. illus. 24 cm. $5.00. 1353

Note: A manual of reactions and syntheses which have been named for their discoverers or in a few instances, for the chemists who established their usefulness. Examples are the Elb reaction, the Grignard reaction, the McFadyen-Stevens reduction, and the Perkin synthesis. About 125 reactions are included, and a short essay is devoted to each. The typical essay contains the following: a biographical sketch of the chemist for which the reaction is named, a brief description of the reaction in chemical terminology with a structural diagram of the equation, a discussion of the mechanism of the reaction, and selected literature references. No attempt is made to give detailed procedures for carrying out the reactions in the laboratory, although some information is included on conditions and yields in most instances.

SUTER, CHESTER MERLE

The organic chemistry of sulfur tetracovalent sulfur compounds New York John Wiley & Sons, Inc., 1944 858 p. 22 cm. $13.50. 1354

Contents: Esters of sulfuric acid. Aliphatic sulfonic acids. The preparation of aromatic sulfonic acids. Properties and reactions of aromatic sulfonic acids. Derivatives of aromatic sulfonic acids, 1: Sulfonyl halides, esters, and anhydrides. Derivatives of aromatic sulfonic acids, 2: Sulfonamides and related compounds. Sulfones. Index.

Note: The practical value of compounds is considered, as well as their chemical properties. Numerous references to the patent literature are given. Chemists in petroleum products and dyestuff laboratories, and those dealing with surface active agents in soaps or textile processing, find this book of wide scope and usefulness. Many compounds of biological or medicinal interest are described, including saccharin, sulfonamides, sulfones, sulfonaphthaleins and aminosulfonic acids.

TOBOLSKY, ARTHUR V AND ROBERT B MESROBIAN

Organic peroxides their chemistry decomposition and role in polymerization. New York Interscience Publishers Inc., 1954 197 p. 24 cm. $5 75 1355

Contents (abridged): Preparation, properties, and structural classification of organic peroxides: Peroxides of structure ROOH (hydroperoxides). Peroxides of structure ROOR (dialkyl and diaralkyl peroxides). Peroxides of structure RC(=O)OOC(O=)CR (diacyl and diaroyl peroxides). Peroxy derivatives of aldehydes and ketones. Analytical methods for determination of organic peroxides. Decomposition of organic peroxides: Decomposition of di-t-butyl peroxide and related peroxides. Decomposition of benzoyl peroxide and related peroxides. Decomposition of peroxides by one-electron transfer reactions. Initiation of vinyl polymerization by peroxide decomposition. General nature of vinyl type polymerization. Kinetics of vinyl polymerization. Appendices: Physical constants of selected organic peroxides. Explosive nature of peroxides. Some commercially available organic peroxides. Catalyst efficiency. Author index. Subject index.

Note: A thorough treatment of a class of organic compounds and reactions which have broad application in vinyl polymerization and in such important organic reactions as the oxidation of hydrocarbons. The first part is an introductory descriptive account of the organic peroxides; parts II and III are more advanced and technical and are addressed to readers who are thoroughly acquainted with both organic and physical chemistry. These parts are based largely on quantitative studies which have appeared in the literature, and citations to the source articles are supplied. Literature references are given also for the useful reference data assembled in the appendixes.

WAGNER, ROMEO B AND HARRY D ZOOK

Synthetic organic chemistry New York John Wiley & Sons, 1953 887 p. illus. 24 cm. $11.50 1356

Contents: Paraffinic, naphthenic, and aromatic hydrocarbons. Olefinic compounds. Acetylenic compounds. Halides. Hydroxy compounds. Ethers. Oxides. Acetals and ketals. Aldehydes. Ketones. Quinones. Ketenes and ketene dimers. Carboxylic acids. Carboxylic esters. Lactones. Ortho esters. Acyl halides. Anhydrides. Amides, imides, hydrazides, hydroxamic acids, and azides. Cyanides. Imino esters (imino ethers) and amidines. Isocyanates. Carbamates (urethanes), semicarbazides, and ureas. Amines. Imines. Hydrazines. Oximes and nitroso compounds. Nitro compounds. Azo and azoxy compounds. Diazo and diazonium compounds. Mercaptans. Sulfides. Disulfides. Sulfoxides and sulfones. Sulfinic acids. Sulfonic acids. Derivatives of sulfonic acids. Thioanalogs of other oxygenated compounds. Heterocyclic compounds. Index.

Note: A reference book in which some hundreds of organic syntheses are summarized in a compact text and 110 tables. Text and tables are keyed to each other by numbers. For each synthesis, there are presented in the text an equation representing the principal reaction, a discussion of the reaction with attention to such points as

Hopkins Press, 1935 204 p illus. 23 cm. $4 50 1345

Contents Introduction. Early history Historical 1912–1934 Preparation and identification. Properties and reactions. Activation energies of elementary reactions. Paraffin hydrocarbons. Ketones and aldehydes. Ethers. Olefinic hydrocarbons. Other organic compounds. Larger molecules. Alicyclic compounds. Reactions in the liquid phase. Appendixes. Index of names. Index of subjects.

Note. An account of the preparation and properties of those aliphatic free radicals which were discovered during the few years prior to 1934 together with a presentation of hypothetical free radical mechanisms for the thermal decomposition of numerous aliphatic compounds. The work is based largely on a summary of the pertinent literature of the field, and is intended as an aid to those physical, organic, and biologic chemists working in this and related fields. References are given in footnotes.

RICHTER, GEORGE HOLMES

Textbook of organic chemistry Third edition. New York John Wiley & Sons, Inc. 1952 762 p illus. 23 cm. $6 75 1346

Contents Aliphatic series. Introduction. Hydrocarbons. Unsaturated hydrocarbons—olefins. Acetylenic hydrocarbons—alkines or alkynes. Alcohols. Ethers. Aldehydes and ketones. Monobasic acids—geometrical isomerism. Halogen derivatives—Grignard reaction. Acyl halides—acid anhydrides. Esters—oils—fats—waxes. Amides. Cyanides and nitro compounds. Amines. Compounds of sulfur Polybasic acids. Halogenated acids, hydroxy acids, and optical isomerism. Aldo and keto acids—tautomerism. Aromatic series: Aromatic compounds. Chemistry of the simple aromatic hydrocarbons. Arylamines. Phenols and aminophenols. Aromatic arsenic derivatives—aromatic alcohols, aldehydes, and ketones. Aromatic acids. Polynuclear aromatic compounds. Coal-tar dyes. Some natural products Carbohydrates. Amino acids—proteins. Natural products—terpenes, sterols. Heterocyclic series: Heterocyclic systems. Ureides and purine derivatives. Alkaloids. Index.

Note An introduction to organic chemistry intended for use in undergraduate college courses. It is intermediate in length and detail, between the very simplified texts and those of cyclopedic nature. The first edition was published in 1938 and the second edition in 1943 Revisions and additions made in this third edition pertain to advances in theory nomenclature radioisotopes and a selection of new reactions and new organic chemical products. The author is Dean of Rice Institute and Chairman of its Department of Chemistry

ROBERTSON, J MONTEATH

Organic crystals and molecules Theory of X ray structure analysis with applications to organic chemistry Ithaca Cornell University Press 1953 340 p illus 23 cm (The George Fisher Baker Non resident Lectureship in Chemistry at Cornell University) $5 00 1347

Contents. Part one, The nature of crystals geometrical aspects The crystal as geometrical figure. The crystal as a lattice structure. The intimate structure of crystals X-ray diffraction. Structure factor and calculation of electron density The phase problem and methods of solution. Part two, The analysis of some organic molecular structures Fundamental structures and early work on organic crystals. Bond length measurements in condensed ring hydrocarbons and some related structures. Molecular arrangement and hydrogen-bonded structures. Applications to complex and partially known chemical structures. Macromolecules and biological applications—evidence from the electron microscope. Index of names. Index of subjects.

Note In the first part of this book the author has surveyed the main concepts, theories and methods of present-day crystallography In the second part, he has dealt specifically with X-ray methods of analyzing the structure of organic molecules and with some of the results that have been achieved. The potential importance of X-ray analysis in elucidating the structures of highly complex organic molecules as well as simpler ones is made clear The book is both authoritative and up to date Included in one of the chapters is short account of the use of digital and analog computers in X-ray structural analysis. The book is based on lectures given in 1951 at Cornell University It will serve well as an introduction to the subject for graduate students and professional chemists alike. There are 132 figures and numerous citations of the pertinent literature.

THE ROGER ADAMS SYMPOSIUM, papers presented at a symposium in honor of Roger Adams at the University of Illinois, September 3 and 4, 1954 New York John Wiley & Sons, Inc., 1955 140 p illus. 24 cm. $3 75 1348

Contents. Remarks at the symposium honoring Roger Adams, University of Illinois, September 3–4 1954 by E. H. Volwiler. Steric effects in dyes, by W R. Brode. The structure of gliotoxin, sulfur-containing antibiotic substance, by J R. Johnson. The structure of aspetalic acid, by S. M. McElvain. Chemistry of flavylium salts—reactions with amines, by R. L. Shriner Some chemical studies on viruses, by W M. Stanley

Note Dr Roger Adams of the University of Illinois is one of the greatest living American chemists. At symposium held in his honor in September 1954 five of his former students, all of them now eminent chemists in their own right, delivered the five papers printed in this volume. The papers are scientific reports of research and are designed for reading by chemists just as if they had appeared in professional periodicals. They report the results of research projects carried out over a considerable period of time and are aimed at the elucidation of fundamental chemical questions.

ROSSINI, FREDERICK D , AND OTHERS

Hydrocarbons from petroleum, the fractionation, analysis, isolation, purification, and properties of petroleum hydrocarbons. An account of the work of the American Petroleum Institute Research Project 6 By Frederick D Rossini, Beveridge J Mair and Anton J Streiff New York Reinhold Publishing Corporation, 1953 556 p illus 24 cm. (American Chemical Society monograph series) $20 00. 1349

Contents Introduction. Fractionation and fractionating processes. Regular distillation. Azeotropic distillation. Regular distillation at different pressures. Distillation at very low pressures. Extraction. Adsorption. Crystallization. Solid molecular compounds, clathrate compounds. Boiling points and vapor pressures. Densities. Refractive indices. Freezing points evaluation of purity from freezing points. Molecular weights. Analysis for carbon and hydrogen. Purification of hydrocarbons. Summary of work of other laboratories on the composition of petroleum. Analysis of the gasoline fraction of petroleum. Analysis of the kerosine fraction of petroleum. Analysis of the gas-oil fraction of petroleum. Analysis of the lubricant fraction of petroleum. Hydrocarbons in one crude petroleum. Hydrocarbons in different crude petroleums. Analysis of the hydrocarbons in certain gasoline distillates. Analysis of alkylates and hydrocodimers. Analysis of codimers. Appendixes List of publications of the American Petroleum Institute Research Project 6. Index of authors of the publications of the American Petroleum Institute Research Project 6. Index of subjects in the publications of the American Petroleum Institute Research Project 6. Author index. Subject index.

Note A reference book based chiefly on the research work and resulting publications of the American Petroleum Institute's Research Project 6. The exception is the single chapter entitled "Summary of the work of other laboratories on the composition of petroleum. The book is a rich storehouse of information on the laboratory preparation of petroleum hydrocarbons of high purity on distillation and other fractionating processes applied to petroleum, on the physical and chemical properties of petroleum hydrocarbons, and on analytical methods applicable to petroleum and petroleum products. Essentially it is an organized summary of the information first presented in approximately 140 publications originating in this research project and published in numerous periodicals. It will immediately take its place as a standard tool for chemists concerned with the properties and chemistry of hydrocarbons found in petroleum.

ROYALS, E EARL

Advanced organic chemistry Englewood Cliffs, N J Prentice Hall Inc. 1954 948 p illus. 23 cm. (*Prentice Hall chemistry series, Wendell M Latimer, editor*) $12 00 1350

—— Volume VI. Micro and semimicro methods. By Nicholas D. Cheronis with contributions by A. R. Ronzio and T. S. Ma. New York Interscience Publishers, Inc., 1954 628 p. illus. 23 cm. 1364

Contents. Introduction. Part I, General methods: Crystallization and collection of crystals. Distillation, sublimation, and extraction. Miscellaneous laboratory operations and tools. Measurements of physical constants. Part II, Preparative reactions: Introduction. Reduction. Oxidation. Halogenation. Acylation. Esterification, and hydrolysis. Nitration and sulfonation. Amination and deamination. Use of organometallic compounds. Dehydration, cyclization, and condensation. Microsyntheses with tracer elements, by A. R. Ronzio. Part III, Analytical procedures and reactions: Micromethods for characterization of organic compounds. Tests for functional groups. Preparation of derivatives. Quantitative micromethods for the estimation of functional groups. Index. Cumulative index, Volumes I–VI.

—— Volume VII. Organic solvents, physical properties and methods of purification. On the basis of the first edition by Arnold Weissberger and Eric S. Proskauer. Completely revised second edition, by John A. Riddick and Emory E. Toops, Jr. New York Interscience Publishers, Inc., 1955 552 p. illus. 23 cm. $8.50 1365

Contents: Classification of solvents. Physical properties—discussion of properties and criteria for their selection. Physical properties—tabulations. Tables of physical constants. Criteria of purity—drying and determination of water. Purification methods. Bibliography. Index.

—— Volume VIII. Investigation of rates and mechanisms of reactions. Editors S. L. Friess and A. Weissberger. New York Interscience Publishers, Inc. 1953 760 p. illus. 23 cm. $13.50 1366

Contents: General theory of rate processes, by R. Livingston. Fundamental operations and measurements in obtaining rate data, by R. Livingston. Special experimental methods for determination of rate data—Part I, Use of tagged atoms, groups, and isotopes in reaction rate studies, by P. R. O'Connor—Part II, Competing reactions, by T. S. Lee—Part III, Measurement of instantaneous reaction rates in stirred constant-flow reactors, by E. Grunwald—Part IV, Determination of the concentration of active intermediates in reactions, by G. M. Burnett and H. W. Melville. Evaluation and interpretation of rate data, by R. Livingston. Homogeneous gas phase reactions, by W. D. Walters. Reactions in the liquid phase—Part I, General methods of study, by J. E. Leffler and E. Grunwald—Part II, Specific experimental techniques, by [illegible] and R. L. [illegible]. Homogeneous catalysis in solution, by T. H. James. Polymerization and polymer reactions, by W. J. Priest. Biological reactions—Part I, Measurement and general theory, by F. M. Huennekens—Part II, Reaction kinetics of enzyme-substrate compounds, by B. Chance. Rapid reactions—Part I, General principles of measurement of velocity of rapid reactions in solution, by F. J. W. Roughton—Part II, Accelerated and stopped flow methods using spectrophotometric measurements, by B. Chance—Part III, Thermal measurement of rapid reactions in solution, by F. J. W. Roughton—Part IV, Quenching, electrometric, and other rapid reaction techniques, by F. J. W. Roughton. Subject index. Cumulative indexes, Volumes I–VIII.

—— Volume IX. Chemical applications of spectroscopy. Editor W. West. New York Interscience Publishers Inc., 1956 787 p. illus. 23 cm. $15.00 1367

Contents: Introductory survey of molecular spectra, by W. West. Microwave and radiofrequency spectroscopy, by W. Gordy. Theory of infrared and Raman spectra, by A. B. F. Duncan. The application of infrared and Raman spectrometry to the elucidation of molecular structure, by R. N. Jones and C. Sandorfy. Electronic spectra in the visible and ultraviolet regions—Part I, Theory of electronic spectra, by A. B. F. Duncan—Part II, Applications of the theory of electronic spectra, by F. A. Matsen. Fluorescence and phosphorescence, by W. West. Subject index. Cumulative indexes, Volumes I–IX.

—— Volume X. Fundamentals of chromatography. By Harold Gomes Cassidy. New York Interscience Publishers Inc. 1957 447 p. illus. 23 cm $9.75 1368

Contents: Introduction. The nature of chromatography. The molecular interactions on which chromatographic separations rest. General theory. Gas-liquid partition chromatography (vapor-liquid partition chromatography). Column partition chromatography. Paper partition chromatography and some closely related methods. Adsorption chromatography (Tswett-column analysis). Ion exchange. Electron exchange polymers (Redox resins or polymers). Foam and capillary fractionation. On recognizing and evaluating zones. On the relation of R or Rf to molecular structure. On locating mobile and stationary phases (solvents, developers, adsorbents). On using chromatography. Appendix. References. Subject index. Cumulative indexes.

Note: An important and useful series which covers comprehensively and at graduate level the techniques used in organic chemistry laboratories, including both analytical and preparative techniques. Although the approaches of the various authors differ somewhat, generally speaking, theoretical background, basic data, techniques, and instruments are covered in all of the volumes. Another noteworthy feature is the inclusion of numerous references to the literature; cumulative indexes make the contents readily available for reference. As noted, several of the volumes have appeared in second editions. In all cases, the degree of revision and quantity of added material are substantial in the second editions. Volume X, containing Cassidy's *Fundamentals of chromatography*, supersedes the chapters on chromatography in Volume of the series, and is a much expanded treatment of them. However the treatment of adsorption in Volume has not been superseded, and the volume will therefore be kept in print by the publisher.

WERTHEIM, E., AND HAROLD JESKEY

Introductory organic chemistry, with certain chapters of biochemistry. Third edition. New York McGraw-Hill Book Company Inc., 1956 476 p. illus. 23 cm. $5.50 1369

Contents (abridged): Saturated hydrocarbons. Unsaturated hydrocarbons. Halogen derivatives. Aliphatic alcohols. Ethers. Aldehydes and ketones. Aliphatic monocarboxylic acids, acid chlorides—acid anhydrides. Esters—fats, oils, and waxes—soaps. Hydroxy acids. Dicarboxylic acids and similar compounds. Amides—amines. Carbohydrates. Aromatic hydrocarbons. Aromatic nitro compounds. Aromatic alcohols—phenols. Aromatic aldehydes. Terpenes. Dyes. Heterocyclic compounds. Amino acids—proteins. Glycosides—[illegible] [illegible]—steroids. Digestion and absorption of foods. Metabolism. Foods and dietary necessities. Glossary of chemical, biological, and medical terms. Reference books. Index.

Note: A textbook specifically designed for the instruction of students whose interests in organic chemistry are practical. It is used in courses offered to students preparing for medicine, dentistry, agriculture, veterinary science, nutrition, etc. Such elementary and basic matters as nomenclature, reactions of the functional groups, properties of the principal classes of organic compounds, and uses of organic substances are stressed. Chapters are included as noted on certain topics in elementary biochemistry. The first edition was published in 1945 and the second edition in 1948. In comparison to the second edition, there has been no change in the book's plan or scope but accounts, usually short, have been inserted on new developments, including new industrial applications of organic chemistry and new pharmaceutical compounds.

WERTHEIM, E.

Textbook of organic chemistry. Third edition. New York McGraw-Hill Book Company Inc., 1951 958 p. illus. (part col'd) 23 cm. $7.25 1370

Contents (abridged): Part I, Aliphatic compounds: The methane series of hydrocarbons. Unsaturated hydrocarbons. Halogen derivatives. Alcohols. Ethers. Aldehydes and ketones. Monocarboxylic acids, salts, thio acids. Acid derivatives. Substituted acids. Dicarboxylic acids. Urea, thiourea, guanidine, uric acid. Amines. Compounds of phosphorus, arsenic, sulfur, silicon, and metals. Isomerism; optical activity. Carbohydrates. Part II, Aromatic compounds:

its speed, convenience, effects of alternative reactants, yields, etc. The tables contain data on groups of compounds, such as the ethers and the following information is presented for each compound its name, a numbered reference to the section of the text where the method of preparation is discussed, the yield expressed in percentage, a reference to the citation of the source article in the appropriat bibliography and a statement of properties. The typical reference list runs to several hundred periodical and book citations.

WATERS, WILLIAM ALEXANDER

Physical aspects of organic chemistry Fourth edition (completely rewritten) Princeton D Van Nostrand Company, Inc., 1950 537 p illus 22 cm $9 25 1357

Contents Chemical affinity Valency bonds. The study of molecular structure. Electrical dipoles. Chemical reactivity Unsaturation. Free radicals and their reactions. Radical-catalysed reactions. Ionisation and ionic reactions. Acidity General polarity Substitution reactions of organic halogen compounds. Ester hydrolysis and esterification. Isotropic change. Molecular rearrangement. Reactions of conjugated systems. Aromatic compounds. Index of authors. Subject index.

Note The present edition of this well-known book on the mechanisms of organic reactions, published eight years after the third edition, contains numerous revisions in order to incorporate such advances as the concept of resonance. However the book has not been completely rewritten in the new terminology In the words of the author "Since the essential purpose is the interpretation of experimental facts we shall make use of whichever conceptual model appears to be the most helpful in attaining clarity in the discussion of each group of experimental data. The book is of interest to advanced students of organic chemistry and to teachers of the subject.

WEISSBERGER, ARNOLD, editor

Technique of organic chemistry Volume I, Physical methods of organic chemistry Second completely revised and augmented edition Parts I III New York Interscience Publishers, Inc., 1949–54 1 vol. in 3 parts illus 23 cm Part I $14 50 part II $14 50 part III $8 50 1358

Content Part I Temperature measurement, by J M. Sturtevant. Temperature control, by J M. Sturtevant. Determination of melting and freezing temperatures, by E. L. Skau and H. Wakeham. Determination of boiling and condensation temperatures, by W Swietoslawski and J R. Anderson Determination of vapor pressure, by G. W Thomson. Determination of density by N Bauer Determination of solubility by R. D Vold and M. J Vold. Determination of viscosity by T K. McGowry and H. Mark. Determination of surface and interfacial tension, by W D Harkins. Parachor by G W Thomson. Determination of properties of monolayers and duplex films, by W D Harkins. Determination of osmotic pressure, by R. H. Wagner Determination of diffusivity by A. L. Geddes. Determinations with the ultracentrifuge, by J B Nichols and E. D Bailey Calorimetry by J M. Sturtevant. Microscopy by E. E. Jelley Determination of crystal form, by M. A. Peacock. Crystallochemical analysis, by J D H. Donnay Index. Part II X-ray diffraction, by I. Fankuchen. Electron diffraction, by L. O Brockway Refractometry by N Bauer and K. Fajans. Spectroscopy and spectrophotometry by W West. Colorimetry photometric analysis, fluorimetry and turbidimetry by W West. Polarimetry by W Heller Determination of dipole moments, by C. P Smyth. Conductometry by T Shedlovsky Electrophoresis, by D H. Moore. Potentiometry by L. Michaelis. Polarography by O H. Müller Determination of magnetic susceptibility by L. Michaelis. Determination of radioactivity by W F Bale and J F Bonner jr Mass spectrometry by D W Stewart. Index. Part III Electron microscopy by F A. Hamm. Microspectroscopy by E. R. Blout. Determination of streaming birefringence, by R. Signer Measurement of dielectric constant and loss, by J G. Powles and C. P Smyth. Radio-frequency spectroscopy by B P Dailey Neutron diffraction, by J M. Hastings and L. M. Corliss. [Chapter] VIII, Supplement Viscometry of dilute polymer solutions, by T K. McGowry and H. Mark. [Chapter] XVIII, Supplement Determination of crystal structure of organic compounds by X-ray diffraction, by D. Harker [Chapter] XIX, Supplement: Electron diffraction by the sector-microphotometer method, by L. O Brockway [Chapter] XXIX, Supplement Determination of magnetic susceptibility by P W Selwood. [Chapter] XXX, Supplement Determination of radioactivity by scintillation counting, by J F Bonner Subject index. Cumulative indexes, Volumes I–VIII.

—— Volume II Catalytic reactions, photochemical reactions, electrolytic reactions. Second completely revised and augmented edition New York Interscience Publishers, Inc, 1956 543 p illus 23 cm $11 50 1359

Contents Catalytic reactions, by V I. Komarewsky and others. Photochemical reactions, by C. R. Masson and others. Electrolytic reactions, by S. Swann jr Subject index. Cumulative indexes, Volumes I–IX.

—— Volume III. Second *completely revised* and augmented edition. Part I, Separation and purification New York Interscience Publishers, Inc., 1956 873 p illus. 23 cm. $17 50 1360

Contents Part I, Separation and purification. Diffusion methods: Thermal diffusion of organic liquids, by A. L. Jones. Barrier separations, by K. Kammermeyer. Dialysis and electrodialysis, by R. E. Stauffer Zone electrophoresis, by E. MacWilliam Laboratory extraction and countercurrent distribution, by L. C. Craig and D Craig. Liquid-liquid extraction for increased quantities, by E. G. Scheibel. Crystallization and recrystallization, by R. S Tipson. Centrifuging, by C. M. Ambler and F W Keith, jr. Filtration by A. B Cummins and F B. Hutto, jr. Solvent removal, evaporation, and drying, by G. Broughton. Subject index. Cumulative indexes.

—— Volume III. Second completely revised and augmented edition Part II Laboratory engineering New York Interscience Publishers, Inc., 1957 391 p illus 24 cm. $8 00. 1361

Contents Part II, *Laboratory engineering* Selection of materials for the construction of equipment, by R. F Ebersberg and R. R. Kraybill. Heating and cooling, by R. S. Egly Grinding, screening and classifying, by J W Axelson and W C. Streib. Mixing, by J H. Rushton. Operations with gases, by G. H. Miller Subject index. Cumulative indexes.

—— Volume IV *Distillation New York Interscience Publishers* Inc., 1951 668 p. illus 23 cm. $15 50 1362

Contents Theory by A. Rose and E. Rose. Ordinary fractional distillation, Part I—Apparatus, by A. L. Glasebrook and F E. Williams—Part II, Procedure by F E. Williams. Extractive and azeotropic distillation, by C. S Carlson. Distillation of liquefied gases and low-boiling liquids, by A. Rose and E. Rose. Distillation under moderate vacuum, by J R. Bowman and R. S. Tipson. Distillation under high vacuum, Part I—Distillation, by E. S. Perry—Part II, The vacuum system, by J C. Hecker. Sublimation by R. S. Tipson. Index. Cumulative indexes, Volumes I–V

—— *Volume V Adsorption* and chromatography By Harold Gomes Cassidy New York Interscience Publishers Inc., 1951 360 p illus 23 cm $7 50 1363

Contents. Definitions—molecular aspects of adsorption. Measurement of adsorption—treatment of data. Relations between relative adsorbability and properties of phases. Relations between relative extent of adsorption and properties of adsorptive. Summary of relations—graded eluents and adsorbents. On the nature of separation processes. Batchwise adsorption and decolorization—lists of adsorbents—chromatography (Tswett-column analysis, chromatographic adsorption analysis, differential countercurrent adsorption analysis) Ion exchange methods. Partition chromatography On the use of adsorption. Author index. Subject index. Cumulative indexes, Volumes I–V

—— Volume vi. Micro and semimicro methods. By Nicholas D Cheronis with contributions by A. R. Ronzio and T S. Ma. New York Interscience Publishers Inc., 1954 628 p. illus. 23 cm. 1364

Contents Introduction. Part i, General methods: Crystallization and collection of crystals. Distillation, sublimation, and extraction. Miscellaneous laboratory operations and tools. Measurements of physical constants. Part ii, Preparative reactions. Introduction. Reduction. Oxidation. Halogenation. Acylation. Esterification, and hydrolysis. Nitration and sulfonation. Amination and deamination. Use of organometallic compounds. Dehydration, cyclization, and condensation. Microsyntheses with tracer elements, by A. R. Ronzio. Part iii, Analytical procedures and reactions: Micromethods for characterization of organic compounds. Tests for functional groups. Preparation of derivatives. Quantitative micromethods for the estimation of functional groups. Index. Cumulative index, Volumes i–vi.

—— Volume vii. Organic solvents physical properties and methods of purification. On the basis of the first edition by Arnold Weissberger and Eric S Proskauer Completely revised second edition, by John A. Riddick and Emory E. Toops, Jr New York Interscience Publishers, Inc., 1955 552 p. illus. 23 cm. $8.50 1365

Contents: Classification of solvents. Physical properties—discussion of properties and criteria for their selection. Physical properties—tabulation. Tables of physical constants. Criteria of purity—drying and determination of water. Purification methods. Bibliography. Index.

—— Volume viii. Investigation of rates and mechanisms of reactions. Editors S. L. Friess and A. Weissberger New York Interscience Publishers, Inc. 1953 760 p. illus 23 cm. $13.50 1366

Contents: General theory of rate processes, by R. Livingston. Fundamental operations and measurements in obtaining rate data, by R. Livingston. Special experimental methods for determination of rate data—Part i, Use of tagged atoms, groups, and isotopes in reaction rate studies, by P R O'Connor—Part ii, Competing reactions, by T I. Lee—Part iii, Measurement of instantaneous reaction rates in stirred constant-flow reactors, by K. Greenwald—Part iv Determination of the concentration of active intermediates in reactions, by G M Sunner and H. W Melville. Evaluation and interpretation of rate data, by R. Livingston. Homogeneous gas phase reactions, by W D Walters. Reactions in the liquid phase—Part i, General methods of study by J. E. Leffler and E. Grunwald—Part ii, Specific experimental techniques, by K. Mayo and R. L. Frans Homogeneous catalysis in solution, by T H. [illegible] Polymerization and polymer reactions, by W J. Prims Enzymatic reactions—Part i, Measurement and general theory by F M. Huennekens—Part ii, Reaction kinetics of enzyme-substrate compounds, by B Chance. Rapid reactions—Part i, General principles of measurement of velocity of rapid reactions in solution, by F J. W Roughton—Part ii, Accelerated and stopped flow methods using spectrophotometric measurements, by B. Chance—Part iii, Thermal measurement of rapid reactions in solution, by F J W Roughton—Part iv Quenching, electrometric, and other rapid reaction techniques, by F J. W Roughton Subject index. Cumulative indexes, Volumes i–viii

—— Volume ix. Chemical applications of spectroscopy Editor W West. New York Interscience Publishers, Inc. 1956 787 p. illus. 23 cm. $15.00 1367

Contents Introductory survey of molecular spectra, by W West. Microwave and radiofrequency spectroscopy by W Gordy Theory of infrared and Raman spectra, by A. B F Duncan. The application of infrared and Raman spectrometry to the elucidation of molecular structure, by R. N Jones and C. Sandorfy Electronic spectra in the visible and ultraviolet regions—Part i, Theory of electronic spectra, by A. B. F Duncan—Part ii, Applications of the theory of electronic spectra, by F A. Matsen. Fluorescence and phosphorescence, by W West. Subject index. Cumulative indexes, Volumes i–ix.

—— Volume x. Fundamentals of chromatography By Harold Gomes Cassidy New York Interscience Publishers Inc., 1957 447 p illus 23 cm. $9 75 1368

Contents. Introduction. The nature of chromatography The molecular interactions on which chromatographic separations rest. General theory Gas-liquid partition chromatography (vapor-liquid partition chromatography) Column partition chromatography Paper partition chromatography and some closely related methods. Adsorption chromatography (Tswett-column analysis) Ion exchange Electron exchange polymers (Redox resins or polymers) Foam and emulsion fractionation. On recognizing and evaluating zones. On the relation of R or Rf to molecular structure. On choosing mobile and stationary phases (solvents, developers, adsorbents) On using chromatography Appendix. References. Subject index. Cumulative indexes.

Note: An important and useful series which covers comprehensively and at graduate level the techniques used in organic chemistry laboratories, including both analytical and preparative techniques. Although the approaches of the various authors differ somewhat, generally speaking, theoretical background, basic data, techniques, and instruments are covered in all of the volumes. Another noteworthy feature is the inclusion of numerous references to the literature[illegible] cumulative indexes make the contents readily available for reference. As noted, several of the volumes have appeared in second editions. In all cases, the degree of revision and quantity of added material are substantial in the second editions. Volume x, containing Cassidy' *Fundamentals of chromatography* supersedes the chapters on chromatography in Volume [illegible] of the series, and is a much expanded treatment of them. However the treatment of adsorption in Volume [illegible] has not been superseded, and the volume will therefore be kept in print by the publisher.

Wertheim E. and Harold Jeskey

Introductory organic chemistry, with certain chapters of biochemistry Third edition. New York McGraw Hill Book Company Inc., 1956 476 p. illus. 23 cm. $5.50 1369

Contents (abridged) Saturated hydrocarbons. Unsaturated hydrocarbons. Halogen derivatives. Aliphatic alcohols. Ethers. Aldehydes and ketones. Aliphatic monocarboxylic acids. acid chlorides—acid anhydrides. Esters—fats, oils, and waxes—soaps. Hydroxy acids. Dicarboxylic acids and similar compounds. Amides—amines. Carbohydrates. Aromatic hydrocarbons. Aromatic nitro compounds. Aromatic alcohols—phenols. Aromatic aldehydes. Terpenes. Dyes. Heterocyclic compounds Amino acids—proteins. Glycosides—enzymes [illegible] Vitamins—steroids. Digestion and absorption of foods. Metabolism. Foods and dietary necessities. Glossary of chemical, biological, and medical terms. Reference books. Index.

Note: A textbook specifically designed for the instruction of students whose interests in organic chemistry are practical. It is used in courses offered to students preparing for medicine, dentistry agriculture, veterinary science, nutrition, etc. Such elementary and basic matters as nomenclature, reactions of the functional group, properties of the principal classes of organic compounds, and uses of organic substances are stressed. Chapters are included as noted on certain topics in elementary biochemistry The first edition was published in 1942 and the second edition in 1948 In comparison to the second edition, there has been no change in the book's plan or scope; but accounts, usually short, have been inserted on new developments, including new industrial applications of organic chemistry and new pharmaceutical compounds.

Wertheim E.

Textbook of organic chemistry Third edition. New York McGraw Hill Book Company Inc., 1951 958 p illus. (part col d) 23 cm. $7.25 1370

Contents (abridged) Part i, Aliphatic compounds. The methane series of hydrocarbons. Unsaturated hydrocarbons. Halogen derivatives. Alcohols. Ethers. Aldehydes and ketones. Monocarboxylic acids, salts, fats, soaps. Acid derivatives. Substituted acids. Dicarboxylic acids. Urea. Chlorine, cyanides, uric acid. Amines. Compounds of phosphorus, arsenic, sulfur silicon, and metals. Isomerism; optical activity Carbohydrates. Part ii, Aromatic compounds:

Aromatic hydrocarbons. Sulfonic acids. Nitro compounds. Aromatic amines. Diazo compounds and derivatives. Aromatic alcohols, phenols. Aromatic acids. Aromatic aldehydes, ketones, and quinones. Grignard and Friedel-Crafts reactions. Naphthalene, anthracene, and related compounds. Alicyclic compounds. Terpenes. Heterocyclic compounds. Alkaloids. Dyes. Proteins. Glycosides, enzymes, hormones, vitamins, antibiotics. Identification of organic compounds. Some electronic reaction mechanisms. Appendix. Index.

Note An established introductory text, used in full-length introductory courses. Although the standard range of subject matter is covered, the exposition is less a catalogue of compounds and properties than are some textbooks. In general the author's method has been to put physical properties such as boiling points in tables rather than in the discussions of groups of compounds. A very generous use of structural diagrams in representing reactions and relations between compounds further simplifies the presentation. The second edition appeared in 1945. Fairly substantial changes were made in preparing the third edition.

WHELAND, GEORGE WILLARD

Advanced organic chemistry Second edition New York John Wiley & Sons, Inc., 1949 799 p illus 24 cm $9 00 1371

Contents: Some fundamental concepts. Addition compounds. Modern concepts of acids and bases. Structural isomerism. Stereoisomerism. The configurations of carbon compounds. The stereochemistry of carbon. The configuration and the stereochemistry of elements other than carbon. Strain theory and steric hindrance. The theory of resonance. Electrostatic effects in organic chemistry Molecular rearrangements the 1 2-shifts—further types. Tautomerism. Free radicals. Author index. Subject index.

Note Advanced topics not covered in first-year courses in organic chemistry are discussed in this textbook for second-year undergraduate courses. The exposition is built upon modern structural theory The discussions f such phenomena as electrostatic effects, free radicals, strain theory and steric hindrance can be read separately with profit by persons who have the requisite knowledge of elementary organic chemistry The author has taken pains to state full structural formulas and t give clear definitions of advanced technical terms. There are numerous references to the related literature. The first edition of the book was not regularly published but was produced in mimeographed format for use at the University of Chicago.

WHELAND, GEORGE WILLARD

Resonance in organic chemistry New York John Wiley and Sons, Inc., *1955* 846 p illus 24 cm. $15 00 1372

Contents The theory of resonance. The nature of valence. Resonance energy Steric effects of resonance. Resonance and dipole moments. Resonance and molecular spectra. Resonance and chemical equilibrium. Resonance and chemical reaction. Mathematical basis of resonance. Appendix Bond lengths and bond angles in organic molecules. Author index. Subject index.

Note: A successor to the author's *The theory of resonance and its application to organic chemistry* (1944) As indicated in the title, the emphasis is not on theory but on the implications and applications of the theory in organic chemistry In this book (but not in the earlier one) the molecular-orbital theory of valence is also considered. Although the dependence of the resonance theory on quantum mechanics is mentioned early mathematics is not introduced until the final chapter which is devoted to quantum mechanics, or more particularly wave mechanics, in relation to the resonance theory A special feature is 90-page table of "Inter atomic distances and bond angles in organic molecules. Literature citations are supplied for the data given in this table. Obviously an essential book for graduate chemists doing research concerned with the structure and structural basis of reactions of organic substances.

WHISTLER, ROY LESTER, AND CHARLES LOUIS SMART

Polysaccharide chemistry New York Academic Press Inc., 1953 493 p illus 24 cm. *$10.80* 1373

Contents Occurrence, nomenclature and classification of the polysaccharides. Methods used in the general characterization and proof of structure of polysaccharides. Cellulose. Hemicelluloses. Xylan. Mannans. Pectic substances. Araban Galactans. Starches. Fructans of higher plants. Galactomannans. Glucomannans of amorphophallus. Tragacanth. Mesquite gum. Other plant gums and mucilages. Lichenan, isolichenan and pustulan. Alginic acid. Laminaran. Floridean starch. Fucan. Pneumococcal polysaccharides. Mycobacterial polysaccharides. Dextrans and dextran-like polysaccharides. Levan (bacterial fructans) Other polysaccharides of microorganisms. Chitin. Chondroitin sulfuric acid. Mucoitin sulfuric acids. Heparin. Hyaluronic acid. Carbohydrates of egg white. Blood group polysaccharides. Glycogens. Author index. Subject index.

Note A thoroughly documented, monographic survey of "natural high polymers of the carbohydrate type. The wide scope is indicated by the chapter titles noted above. After the first two chapters, which are general and introductory each chapter is devoted to a specific group of substances. The organization of the chapters on substances follows a uniform pattern which is designed to bring out the available information on the following points for each substance: occurrence, preparation, composition, structure, properties, derivatives and uses (if any) Literature published to about the middle of 1952 is cited in footnotes, and the names of the authors of the references are assembled in the author index. The book is of potential interest and usefulness in variety of fields of chemical research and study It is addressed primarily to graduate chemists. The authors are members of the Department of Agricultural Chemistry of Purdue University

WHITMORE, FRANK CLIFFORD

Organic chemistry With assistance of a committee of colleagues Second edition. New York D Van Nostrand Company, Inc., 1951 1,005 p illus 24 cm $12 75 1374

Contents (abridged) Aliphatic compounds. Alicyclic compounds. Aromatic compounds. Heterocyclic compounds. Organophosphorus and organometallic compounds. Index.

Note. A standard American college textbook of the semi-reference type. Practically all of the important organic reactions are described briefly and all of the compounds mentioned in the text are brought out in the 139-page index. Footnotes and literature references throughout the work serve to guide the reader to fuller treatment of the specific reactions that are of interest. The first edition, published in 1937 was reprinted ten times. The present edition, prepared from manuscript left incomplete upon the author's death in 1947 contains number of useful revisions, among which are a completely new index, fuller literature references, and numerous revisions in the treatment of the aliphatic compounds.

WILLIAMS, ROGER JOHN, AND LEWIS F HATCH

An introduction to organic chemistry Fifth edition. New York D Van Nostrand Company Inc., 1948 668 p illus. 22 cm. $6.50. 1375

Contents (abridged): Saturated hydrocarbons. Halogen substitution products of saturated hydrocarbons. Unsaturated hydrocarbons. Alcohols. Ethers. Aldehydes and ketones. Acids. Grignard reagents. Amines. Nitriles, cyanates, and other nitrogen compounds. Sulfur compounds. Polyalcohols and their derivatives. Dicarboxylic acids. Hydroxy acids. *Unsaturated acids.* Amino acids, proteins and related substances. Carbohydrates. Cycloparaffins, terpenes and camphors. Benzene and its homologs. Aromatic nitro derivatives and sulfonic acids. Diazo and related compounds. Phenols. Aromatic alcohols, aldehydes and ketones. Aromatic carboxylic acids. Quinones. Naphthalene and its derivatives. Anthracene and its derivatives. Dyes— Indicators. Alkaloids. Organic substances of special biochemical interest. Appendices. Index.

Note In this college textbook, the main types of compounds are considered, but there is considerably less detail than in some introductory texts in the subject. Reactions are presented for the most part in terms of electronic configurations, and the phenomena of organic chemistry are related to the student's previous study of inorganic chemistry The revisions in this edition are fairly numerous and important. Such developments as *DDT* gammexane, fluorocarbons, and folic acid are discussed and more detailed treatments are given of chemical reactivity in relation to atomic structure, unsaturated hydrocarbons, petroleum, nitro-paraffins, and other topics.

WINCHELL ALEXANDER N

The optical properties of organic compounds. Second edition, enlarged and completely revised. New York Academic Press, Inc., 1954 487 p illus. 24 cm $12 00 1376

Contents (abridged) Descriptions of substances. Acyclic compounds. Isocyclic compounds. Heterocyclic compounds. Organic compounds not assigned places in the three preceding groups. References. References added for the second edition. Supplementary determinative tables based on refringence. Index.

Note A reference book of data on the crystallographic and optical properties of organic compounds. Its purpose is to aid chemists in the identification of organic compounds. It is arranged in accordance with the scheme of Beilstein's *Handbuch der Organischen Chemie*, and there is a comprehensive, alphabetically arranged index. The first edition, published in 1943 contained data on about 1,500 compounds. In this second edition, data are given on more than 2,500 substances. As in the earlier edition, literature references are supplied for all of the data presented.

CELLULOSE CHEMISTRY

HAYNES, WILLIAMS

Cellulose the chemical that grows. Garden City N Y Doubleday & Company Inc., 1953 386 p. illus. 21 cm. $4.00. 1377

Contents A cellulose chronology Oldest materials: Newest uses. Cellulose becomes a chemical. Guncotton from war to peace. The celluloid mystery Celluloid to film. Finer than cobwebs. Materials from cotton to America. New fibers Better fabrics. Clean, fresh, and visible. Pyroxylin for protection. Protection plus decoration. Plastics pioneering. Materials for modern industries. Chemical cotton. Wood cellulose. Cellulose, today and tomorrow. Glossary of technical terms. Appendices: Statistical and technical data. Acknowledgments. Index.

Note The title notwithstanding, this is a book about the great variety of synthetic materials which have been developed from cellulose by chemists and chemical engineers. There is nothing in it about the growing of cotton or wood, but there is much in it about the development of rayon, acetate, plastic, paints, etc. Although intended for popular reading, it is full of anecdotes and other facts which will hold the attention of readers who are interested in chemistry and the chemical industries. For the reader who is primarily interested in the chemical industries, there are accounts of the parts played by American Viscose, Celanese, Commercial Solvents, Dupont, Eastman, and a host of others in the development of the synthetics based on cellulose. The appendix material includes data on such matters as the production and prices of cotton linters, the consumption of various chemicals in the production of rayon and acetate yarn, exports and imports of synthetics based on cellulose, and the properties of synthetic fibers and plastics.

HEUSER, EMIL

The chemistry of cellulose. New York John Wiley & Sons, Inc., 1944 660 p illus. 22 cm. $9 75 1378

Contents Introduction. Morphology of the fiber and composition of the cell walls. Reactions of cellulose with water. The reaction of cellulose with aqueous alkalies. Reactions of cellulose with organic bases, ammonia, and concentrated salt solutions. The action of cuprammonium hydroxide on cellulose. Cellulose esters. Cellulose xanthate. Cellulose ethers. The oxidation of cellulose. The decomposition of cellulose by acids. The thermal decomposition of cellulose. The decomposition of cellulose by biological processes. The chain structure of cellulose. The molecular weight of cellulose. Author index. Subject index.

Note This book supplies the reader with a comprehensive and critical digest of the literature on the chemistry of cellulose up to the present time, with due consideration of the microscopic and submicroscopic structure of the cellulose fiber. Emphasis is placed on the scientific aspect of the subject. The format is designed so that through the use of different-sized types the reader can readily distinguish between essential subject matter, illustrative material, and those references that pertain to industrial applications. An excellent guide for industrial, research laboratory and younger chemists.

OTT EMIL, AND OTHERS editors

Cellulose and cellulose derivatives. Second completely revised and augmented edition. Prepared under the editorship of Emil Ott, Harold M. Spurlin and Mildred W Grafflin. New York Interscience Publishers 1954–55 3 v. 24 cm. (High polymers a series of monographs on the chemistry physics and technology of high polymeric substances editorial board H. Mark and others) $12 00 per volume. 1379

Contents Part I Introduction. Occurrence of cellulose. Chemical nature of cellulose and its derivatives. Structures and properties of cellulose fibers. Properties of substances associated with cellulose in nature. Part II Preparation of cellulose from its natural sources. Bleaching and purification of wood cellulose. Properties and treatment of pulp for paper. Derivatives of cellulose. Part III Physical properties of cellulose and its derivatives in solution, by H. M. Spurlin. Mechanical properties of cellulose and its derivatives, by H. Wakeham. Tests for cellulose and its derivatives, by A. F. Martin and others. Appendixes. Author index. Subject index.

Note The first edition of this monograph was published in 1943 and appeared as one volume of 1,176 pages. In this new edition the scope of the work has not been materially changed, but the large number of studies published since the writing of the first edition has necessitated a substantial increase in length. It is still essentially a digest of published literature and is comprehensive in scope. The presentation, however is critical within a framework of historical development. In most instances, the chapters are the work of several authors. All important statements and data are key-numbered to citations of the source articles. In comparison to the corresponding parts in the first edition, chapters in the second edition show extensive revision and reorganization with new authors or co-authors for many of the parts.

WEST CLARENCE JAY

Chemical testing methods. Part 1, Viscosity of cellulose. Appleton The Institute of Paper Chemistry 1952 85 p. 27 cm. (The Institute of Paper Chemistry Bibliographic series. No. 179) $5.00 1380

Note The limitations on the scope of this bibliography have been stated by the compiler as follows: Many articles dealing with the viscosity of cellulose have not been included because the work was carried out by known methods. Further articles concerned with factors influencing viscosity will not be found in the following pages. More than 180 articles selected from the international literature are listed. The entries are annotated.

POLYMERS AND POLYMERIZATION

ALFREY TURNER, JR. AND OTHERS

Copolymerization. By Turner Alfrey Jr John J Bohrer and H. Mark. New York Interscience Publishers Inc., 1952 395 p. illus. 24 cm. (High polymers a series of monographs on the chemistry physics and technology of high polymeric substances editorial board H. Mark and others. Vol. 8) $8.00 1381

Contents Introduction. Kinetics of copolymerization. Monomer structure and reactivity with free radicals. Detailed discussion of monomer reactivities in terms of resonance and polarity. Effect of temperature and environment on copolymerization reactivity ratio. The polymerization of tri- and multicomponent systems. Detailed structure of copolymer chains. Drift of copolymer composition with increasing conversion. Copolymerization involving divinyl monomers. Copolymerization behavior of 1,3-dienes. Rates and molecular weights in copolymerization. Copolymerization by ionic mechanisms. Influence of copolymerization on physical properties of polymeric systems. Author index. Subject index.

Note A monographic survey of the development and present state of the knowledge of copolymerization, a complex chemical process that is basic to the synthetic rubber and plastics industries. The emphasis is on the scientific foundations, and applications are mentioned only incidentally. The book is addressed to graduate chemists. Bibliographies that include both journal and patent citations are appended to the chapters.

ALFREY, TURNER, JR

Mechanical behavior of high polymers New York Interscience Publishers, Inc., 1948 581 p illus 24 cm (High polymers, a series of monographs on the chemistry, physics, and technology of high polymeric substances Vol vi) $11 00 1382

Contents Introduction. The plastoelastic behavior of amorphous linear high polymers. Three-dimensional cross-linked polymers. Crystallization of high polymers. Plasticization and solution Systems containing high polymers and materials of low molecular weight. Ultimate strength and lated properties. Appendices. Subject index.

Note Practically all f the high polymers that ha e found applications as synthetic rubbers and textiles or as plastic materials owe their usefulness to such mechanical characteristics as plasticity and elasticity In this book, plasticity lasticity creep, and other mechanical phenomena are considered from a scientific viewpoint and are related to molecular structure. The work is based on an extensive survey of the published literature and statements in the text are keyed to the chapter bibliographies.

BOUNDY, RAY H, AND OTHERS

Styrene, its polymers, copolymers and derivatives Edited by Ray H Boundy, Raymond F Boyer, and Sylvia M Stoesser, editorial assistant New York Reinhold Publishing Corporation, 1952 1,304 p illus. 23 cm (American Chemical Society monograph series No 115) $22 50 1383

Content Introduction, by A. J Warner History by R. H. Boundy and S. M. Stoesser Manufacture of styrene monomer by J E. Mitchell. Physical properties of styrene monomer by D R. Stull. The chemistry of styrene monomer by G. H. Coleman. Analysis of styrene monomer by E. N Luce Handling styrene monomer by L. R. Lloyd. The polymerization of styrene, by L. C. Rubens and R. F Boyer Summary of uses for styrene monomer by J W Everson. Molecular weight and solubility f polystyrene, by R. F Boyer and R. Simha. The general physical properties of polystyrene, by J L. Williams and K. J Cleereman. Optical and electrical properties of polystyrene, by L. A. Matheson and J L. Saunderson. Rheological properties of polystyrene, by R. S. Spencer The degradation of polystyrene, by H. H. G Jellinek. Chemical alteration of styrene polymers, by G. D Jones α-methylstyrene by J L. Amos and others. Ethylvinylbenzene and divinylbenzene mixture and its copolymers, by J L. Amos and others. Halostyrenes and other vinyl aromatic compounds, by J L. Amos and J W Everson. Styrene resins, by G A. Griess. A survey of styrene and polystyrene in Germany by W C. Goggin Copolymerization by R. Simha and L. A. Wall. A survey of patent literature on styrene copolymers, by W J LeFevre. Fabrication f polystyrene, by W C. Goggin. Author index. Subject index.

Note A comprehensive work in which the very extensive literature of the subject, together with unpublished information in possession of the editors and uthors, is expertly digested and organized The literature including patents appears to have been fully covered through 1950, and there are some references to 1951 publications A full-scale presentation of the scientific knowledge can be expected in this series this book contains also much explicit information on the fabrication of polystyrene and other plastic materials based on the styrene. It is fundamental book in both the literature of polymerization and that f the plastic materials.

BOVEY, F A, AND OTHERS

Emulsion polymerization By F A Bovey I M Kolthoff A I Medalia and E J Meehan. New York Interscience Publishers Inc. 1955 445 p 24 cm (High polymers a series of monographs on the chemistry physics and technology of high polymeric substances editorial board H Mark and others Vol. ix) 1384

Contents Historical background and general considerations. Nature of free radical polymerization. Initiating systems. Chain-transfer agents. Solubilization in detergent micelles. Role f detergent in emulsion polymerization. The kinetics of emulsion polymerization. Inhibition and retardation of polymerization. Copolymerization in emulsion systems. Experimental methods in emulsion polymerization. The standard GR S recipe. Activated recipes. Author index. Subject index.

Note Emulsion polymerization is the chief process employed in the production of synthetic rubber (GR S) hence, it has been rather intensively studied. This book presents in organized form the results and conclusions of an extensive systematic investigation of its kinetics and mechanisms. The historical background is sketched in the first chapter and the basic facts on free radical polymerization are stated in the second and third chapters. The remaining chapters deal more particularly with the results of U.S.A. government-sponsored investigations carried on as part of the synthetic rubber program during World War II and subsequently in which the authors took significant parts. Literature citations are included. The book is of interest not only to chemists who are directly concerned with research and production of synthetic rubber but also to those interested in the phenomena of polymerization in general.

CAROTHERS, WALLACE HUME

Collected papers by Wallace Hume Carothers on high polymeric substances, edited by H. Mark, and G Stafford Whitby With 35 illustrations New York Interscience Publishers, Inc, 1940 459 p illus 23 cm. (High polymers, a series of monographs on the chemistry, physics and technology of high polymeric substances Vol. I) $8 75 1385

Content Preface Biography Studies on polymerization and ring formation. Acetylene derivatives and synthetic rubber. Miscellaneous papers. Bibliography and list f patents. Subject index. Author index.

Note This volume presents in systematic order with critical comments, all the classical papers of W H. Carothers on polymerization and acetylene derivatives which led to the discovery of nylon and neoprene. The first part of the book is concerned essentially with condensation polymers. The second part deals with polymers produced by the self-addition of conjugated systems, and considerable attention is also given to the chemical reactions f vinylacetylene and divinylacetylene. A complete bibliography includes list of Carothers' 37 patents.

CARSWELL, THOMAS SMYTH

Phenoplasts, their structure, properties, and chemical technology New York Interscience Publishers, Inc., 1947 267 p. illus. 24 cm. (High polymers, a series of monographs on the chemistry, physics and technology of high polymeric substances Vol. vii) $6 50 1386

Contents History of the development of phenoplasts. Chemical structure of the phenoplasts. Phenoplasts from higher aldehydes. Phenoplasts from polyhydric phenols. The physical structure of the phenoplasts. Fillers for phenoplast molding powders. Fillers and resins for phenoplast laminates. Mechanical properties of molded phenoplasts. Mechanical properties of laminated phenoplasts. Electrical properties of phenoplasts. Thermal properties of phenoplasts. Chemical resistance of phenoplasts. Oil-soluble phenoplasts. Phenoplasts as ion-exchange resins, by D S. Herr Technical manufacture of phenoplasts. Molding technique for phenoplasts, by C. H. Whitlock. Miscellaneous technical applications of phenoplasts. Author index. Subject index.

Note The discovery of the phenoplasts, phenolics, dates back to 1872 when Adolf Baeyer first described the reaction between phenols and aldehydes. However it was not until 1910, when Leo H. Baekeland began the manufacture of Bakelite, that they achieved commercial importance This olume presents survey and review f present-day knowledge regarding their structure and chemical and physical properties. The greater part of the volume deals with the theoretical aspects of the subject, but manufacturing and molding methods are briefly described. No formal bibliography is provided, but references to the literature f the subject, are given as footnotes.

D'ALELIO, GAETANO FRANCIS

Fundamental principles of polymerization rubbers, plastics and fibers. New York John

Wiley & Sons, Inc., 1952 517 p. illus. 24 cm. $13.50. 1387

Contents: Polymers—rubbers, plastics, and fibers. Polymerization reactions and functionality. The existence of macromolecules. The non-homogeneity of polymers and their properties. Polyreactions. Polymerization processes. Molecular weight determinations. Kinetics of polymerization. Reaction loci in polymerization systems. Copolymer compositions and stability of polymers. Author index. Subject index.

Note: A very wide range of information is presented in this book, and so many papers are cited that the author index runs to 10 columns. Nevertheless, the author has been very selective in choosing the material and has not attempted a comprehensive monograph. The book presents—as the title indicates—the basic knowledge of polymerization and in addition covers historically the development of important theories, etc. It is addressed to such readers as graduate chemists and chemical engineers. The author is Manager of Research for the Koppers Company, Inc.

FLORY, PAUL J

Principles of polymer chemistry. Ithaca, Cornell University Press, 1953 672 p. illus. 24 cm. $8.50 1388

Contents: Historical introduction. Types of polymeric substances—definitions and classification. Molecular size and chemical reactivity; principles of condensation polymerization. Polymerization of unsaturated monomers by free radical mechanisms. Copolymerization, emulsion polymerization, and ionic polymerization. The structure of vinyl polymers. Determination of molecular weights. Molecular weight distributions in linear polymers. Molecular weight distributions in nonlinear polymers and the theory of gelation. Configuration of polymer chains. Rubber elasticity. Statistical thermodynamics of polymer solutions. Phase equilibria in polymer systems. Configurational and frictional properties of the polymer molecule in dilute solution. Glossary of principal symbols. Author index. Subject index.

Note: The basic scientific knowledge on the structure and properties of polymers and on the phenomena of polymerization constitutes the subject of this book. Some of the experiments and experimental techniques by which the knowledge has been gained are described, but this material is incidental to the statements of principles. The subject is treated at graduate level, and the book is potentially of interest both to graduate students majoring in organic chemistry and to graduate organic chemists, especially those who are engaged in teaching or research. The author is himself a prominent investigator of polymerization and has of course incorporated the results of his own research, but the 10-page author index indicates the extent of reference to the work of others. Oddly the citations of the author's own papers are not listed in this index, although many of them appear in the chapter bibliographies.

JELLINEK, H. H. G

Degradation of vinyl polymers. New York, Academic Press, Inc., 1955 329 p. illus. 24 cm. $8.50. 1389

Contents: Formal mathematical theories of degradation. Bulk degradation in vacuo. Degradation in solution and oxidative degradation. Mechanical and ultrasonic degradation. Appendix. Author index. Subject index.

Note: The degradation or break-down of macromolecules is of considerable interest in experimental and theoretical chemistry. With such macromolecules as vinyl polymers it can be accomplished through a variety of agencies, notably light, ultrasonic radiation, X-rays, and attack by chemical substances. The phenomena of the process lend themselves to study and analysis in the terms of chemical kinetics. This book is a critical survey of the studies which have been published to date and of the hypotheses or theories which have been advanced to account for observed results. Experimental methods have also been described, and there are a few illustrations of apparatus set-ups. Data and important statements in the text are keyed to literature references. Very recent work (publications as late as 1954) is reviewed in the appendix.

MARK, HERMANN FRANZ, AND A. V TOBOLSKY

Physical chemistry of high polymeric systems. Second completely revised and augmented edition. New York, Interscience Publishers, Inc., New York, 1950. 506 p. illus. 24 cm. (High polymers; a series of monographs on the chemistry, physics and technology of high polymeric substances; editorial board, H. Mark, C. S. Marvel, H. W. Melville, G. S. Whitby. Vol. II) $7.50 1390

Contents: Geometry of molecules as revealed by diffraction methods. Behavior of molecules in electric and magnetic fields. Molecular spectra. Primary and secondary valence forces. Crystal structure and crystal forces. Crystal structure and crystal symmetry. Liquids, mesophases and the amorphous-crystalline character of polymers. Thermodynamics of solutions. Kinematics of liquids and solutions—viscosity—diffusion—and sedimentation. Mechanical behavior of high polymers. Step reaction polymerization. Chain reaction polymerization. Degradation of high polymers. Author index. Subject index.

Note: A revision of a well-known work on the physical chemistry of macromolecules. As in the first edition, the book is concerned with the molecular structure and properties of high polymers as a group, rather than of individual compounds. Also emphasis is placed on the results obtained from experimental methods rather than on the methods themselves. This edition has been revised and enlarged to include developments since 1940, particularly those relating to the thermodynamic and kinematic behavior of polymer solutions and the kinetics of polymer formation. New chapters have also been added on molecular spectra and step reaction polymerization.

PRICE, CHARLES COALE

Mechanisms of reactions at carbon-carbon double bonds. New York, Interscience Publishers, Inc., 1946 120 p illus. 23 cm. (Lectures on progress in chemistry; H. Mark, editor) $4.50. 1391

Contents: Electronic structure of unsaturated organic molecules. Ionic reactions involving double bonds. Free radical reactions involving double bonds. Free radical addition polymerization. Copolymerization. Emulsion and suspension polymerization. Polar polymerization. Index.

Note: The book presents a short but meaty survey of theories and experimental data on the mechanisms of reactions which are entered into by molecules and free radicals that contain one or more unsaturated carbon atoms. These mechanisms are then related to polymerization processes. The material originated as a series of lectures delivered at the Institute of Polymer Research of the Polytechnic Institute of Brooklyn.

UNITED STATES NATIONAL BUREAU OF STANDARDS. ORGANIC PLASTICS SECTION

Polymer degradation mechanisms. Proceedings of the NBS Semicentennial Symposium on Polymer Degradation Mechanisms held at the NBS on September 24–26, 1951. Washington, D. C. Government Printing Office, 1953 280 p. illus. 24 cm. (United States. National Bureau of Standards. Circular 525) $2.25 1392

Contents: Mechanism of degradation of vinyl polymers with special reference to polystyrene, by H. H. G. Jellinek. Mechanism and kinetics of thermal and photodegradation reactions, by R. Simha. Photodegradation of polymethyl methacrylate, by P. R. E. J. Cowley and H. W. Melville. Effect of heat and light on polyvinyl chloride, by D. Druesedow and C. F. Gibbs. Photodegradation of polyvinyl chloride, by A. S. Kenyon. Role of hydrogen chloride in polyvinyl chloride degradation, by A. L. Scarbrough and others. Aging of vinyl chloride and vinylidene chloride polymers, by C. B. Havens. Alkaline degradation of polyacrylonitrile, by J. R. McCartney. Aging of polyethylene, by R. J. Biggs. Photo-oxidation and stabilization of polyethylene, by A. R. Burgess. Oxygen-absorption studies on olefins with structures related to GR-S, by J. R. Shelton. Breakdown of cellulose esters by heat and light, by G. C. DeCroes and J. W. Tamblyn. Oxidative degradation of ethyl cellulose, by L. F. McBurney. Study of degradation of polystyrene, using mass spectrometry, by S. G. Achhammer and others. Rates of thermal degradation of polystyrene and polyethylene in a vacuum, by S. L. Madorsky. Pyrolysis of copolymers, by L. A. Wall. Mechanism of the degradation of polyamides, by B. G. Achhammer and others.

Note The papers in this volume record progress made in explaining the structure of the polymers and the mechanisms of their breakdown. The symposium at which they were first presented was held to present various aspects of research in mechanisms by which polymers degrade a subject of practical importance to the National Bureau of Standards and the Office of Naval Research, in order to help predict more accurately the expected service life of polymers and to inhibit more effectively the degradation of polymers. The papers are accompanied by lists of bibliographical references and by transcripts of the informal discussions which took place in the course of the symposium.

PHYSICAL CHEMISTRY

ADVANCES IN CATALYSIS AND RELATED SUBJECTS Volume VI. Edited by W G Frankenburg, V I Komarewsky, and E K. Rideal Advisory board Peter J Debye and others New York Academic Press, Inc., 1954 467 p illus 23 cm $10 50 1393

Contents. Catalysis and reaction kinetics at liquid interfaces, by J T Davies. Some general aspects of chemisorption and catalysis, by T Kwan. Noble metal—synthetic polymer catalysts and studies on the mechanism of their action, by W P Dunworth and F F Nord. Interpretation of measurements in experimental catalysis, by P B. Weisz and C. D Prater Commercial isomerization, by B L. Evering. Acidic and basic catalysis, by M. Kilpatrick. Industrial catalytic cracking, by R. V Shankland. Author index. Subject index. Cumulative title index Volumes I–VI

—— Volume VIII. Edited by W G Frankenburg, V I Komarewsky and E K. Rideal, associate editor, Paul B Weisz. Advisory board Peter J Debye, D D Eley P H. Emmett W E Garner, W Jost, P W Selwood, H S Taylor New York Academic Press Inc., 1956 353 p illus 23 cm $10 00 1394

Contents Current problems of heterogeneous catalysis, by J A. Hedvall. Adsorption phenomena, by J H. de Boer Activation of molecular hydrogen by homogeneous catalysts, by S. W Weller and G. A. Mills. Catalytic syntheses of ketones, by V I. Komarewsky and J R. Coley Polymerization of olefins from cracked gases, by E. K. Jones. Coal-hydrogenation vapor-phase catalysts, by E. E. Donath. The kinetics of the cracking of cumene by silica-alumina catalysts, by C. D Prater and R. M. Lago. Author index. Subject index.

Note The volumes listed above are two representative ones selected from a series, other volumes of which are still in print. The series is organized on the now-familiar pattern of periodical publication of volumes containing several monographic reviews of progress in the state of knowledge or of recent advances in a specific area of the general field. The series is not a review of literature published during a single year or other specified interval of time. Recent advances are emphasized, but each writer takes in whatever sweep of literature he deems necessary to provide an adequate review of his specific topic. All the monographs are based on the literature, and include extensive lists of references.

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

Monomolecular layers. A symposium presented on December 27 1951 at the Philadelphia meeting of the American Association for the Advancement of Science Edited by Harry Sobotka. Washington, D C American Association for the Advancement of Science, 1954 207 p illus. 23 cm. $4 25 1395

Contents Modern film techniques and their application to biochemical reactions, by H J Trurnit. The determination of molecular weights of proteins by the horizontal surface balance by E. Mishuck and F Eirich. Mechanical properties of the surface films on aqueous solutions of detergents, by A. P Brady and A. G. Brown. Study of adsorption at solution-air interface by radiotracers, by J K. Dixon, C. M. Judson, and D J Salley Deposited radioactive monolayers, by D E. Beischer Hydrophobic monolayers and their adsorption from aqueous solution, by E. G. Shafrin and W A. Zisman. A review of the properties of films at oil-water interfaces, by E. Hutchinson. Chemical reactions of simple and mixed monomolecular layers, by H. Sobotka and S. Rosenberg Chemical reactions and electric potential in monolayers, by L Havinga. Index.

Note The purpose of the symposium of which this volume is a product has been stated as follows "Far from trying to be comprehensive in their treatment, the contributors hope to have assembled a symposium that will illustrate the scope and the strength of their methods and techniques, that will direct the reader to more detailed publications on the subject and that will, in general, stimulate interest in a field of chemistry that has many riddles yet to be solved. The contributors were scientists doing research in the field, and several of them described new techniques and results not published previous to the date of the symposium. However each one also took into account the related work of others and included literature references.

AMIS, EDWARD STEPHEN

Kinetics of chemical change in solution. New York The Macmillan Company, 1949 332 p illus 22 cm $6 00 1396

Contents Introduction. The Debye-Hückel theory Liquid dielectrics and polar moments. The Brönsted-Christiansen-Scatchard equation. The temperature coefficient of reaction rates: energy of activation. The temperature coefficient of reaction rates: the Arrhenius frequency factor Semiempirical calculation of activation energies. the theory of absolute reaction rates. Reactions between ions and dipolar molecules and between dipolar molecules and dipolar molecules. Reaction rates and the solvent. Photochemistry chain reactions. Homogeneous catalysis. Adsorption, heterogeneous catalysis, and heterogeneous reactions. Index.

Note: A concise yet thorough presentation of the fundamental principles of rate processes in solution, and such related topics as the activity coefficients of ions, polar moments in solution, and dielectric constants of liquids. The book is written for advanced chemistry students, and the mathematical calculations involved in the development of kinetic and rate equations require a sound knowledge of differential and integral calculus. Emphasis is placed on the theoretical aspects of the subject, but practical applications of solution processes are briefly discussed.

AMSDEN, JOHN PAGE

Physical chemistry for premedical students. Second edition. New York McGraw Hill Book Company Inc., 1950 317 p illus. 23 cm. (International chemical series, Louis P Hammett consulting editor) $5 50 1397

Contents Dimensions and units. Gases. Liquids. Solutions. Properties of solutions of nonelectrolytes. Properties of solutions of electrolytes. Chemical equilibrium. Thermodynamics. Hydrogen ion. Oxidation and reduction Speed of reaction—catalysis—adsorption. The colloidal state—the Donnan equilibrium. List of visual materials. Index. Table of logarithms.

Note The special viewpoint of this introductory textbook is indicated by the title. In it, selected basic principles of physical chemistry are discussed in a comparatively elementary manner, and applications to physiological phenomena are pointed out. Only elementary mathematics is used. Problems for the student to solve are included. The first edition was published in 1944. The book's purpose and general plan are the same in this edition; however, significant revisions have been made. The chapter on thermodynamics is newly added, and the exposition of protolytic equilibrium has been revised.

ANNUAL REVIEW OF PHYSICAL CHEMISTRY Volume 7 H Eyring editor C J Christensen, associate editor H. S Johnston associate editor Palo Alto, Calif Annual Reviews, Inc. 1956 503 p illus. 23 cm $7 00 1398

Contents: Cryogenics, by R. Berman and others. Heterogeneous equilibria and phase diagrams, by J W Tierney and J M Smith. Solutions of nonelectrolytes, by R. L. Scott. Statistical mechanics, by J E. Kilpatrick. Radiation chemistry by C. J Hochanadel and S. C. Lind. Quantum theory by W Moffitt and C. J Ballhausen. Ion exchange by H. C. Thomas and G. R. Frysinger

stage. Polymers, by A. V Tobolsky. Kinetics of reactions in solution, by R. M. Noyes. Kinetics of reactions in gases, by G. Porter. Combustion and flames, by C. E. H. Bawn and C. F. H. Tipper. High temperature chemistry, by L. Brewer and A. W Searcy. Thermochemistry and thermodynamics of substances, by C. W Beckett and others. The solid state, by F. J. Blatt and others. Isotopes, by J. Bigeleisen and K. Cohen. Magnetic resonance, by C. A. Hutchison, Jr. Surface chemistry and catalysis, by L. H. Reyerson. Molecular electronic spectroscopy, by M. Kasha and R. F. McGlynn. Vibration-rotation spectroscopy, by R. E. Hiebert and I. Ichishima. Experimental molecular structure, by S. Mizushima and T. Shimanouchi. Author index. Subject index.

Note: Papers authored and titled as above are contained in the seventh volume of a series which serves both as a summary of recent developments and a guide to the recent literature. The papers are concisely written and are keyed to bibliographies which run in some instances to several hundred references. The subject index covers all of the papers in detail, and the author index lists the names of authors of the cited literature.

BRUNAUER, STEPHEN

The adsorption of gases and vapors. Volume 1 Physical adsorption. Princeton Princeton University Press 1943 520 p. illus. 23 cm. $9 00. 1399

Contents: Introduction. The data of adsorption. Experimental methods. The adsorption isotherm I. The adsorption isotherm II. The adsorption isotherm III. The heat of adsorption I. The heat of adsorption II. The surface of the adsorbent I. The surface of the adsorbent II. The pore structure of the adsorbent. The adsorbate. The kinetics of physical adsorption. Mixed adsorption. Index.

Note: Treating adsorption as a branch of physical chemistry it examines the facts yielded by adsorbents about the phenomenon of adsorption itself, and discusses in detail all theories to date. It also investigates what adsorption reveals about the structure of the adsorbent, analyzing surface and pore structure of all the important adsorbents. For physical chemists, either academic workers studying further theoretical developments, or industrial workers intent on immediate practical application to gas purification, separation and recovery of gases, or catalysis.

COHEN KARL

The theory of isotope separation as applied to the large scale production of U^{235} Edited by G M Murphy New York McGraw Hill Book Company Inc., 1951 165 p illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division III —Vol. 1B) $2.50. 1400

Contents: Ideal cascades. Square cascades. Equilibrium time of square cascade. Determination of cascade constants. The control problem. Centrifuges. Other separation methods. Appendices. Roots of a transcendental equation. Equilibrium time of square cascades for $N \rightarrow 1$. The holdup function. Rayleigh distillation. Properties of countercurrent two-phase elements. Index.

Note: This volume is based on reports of the Substitute Alloy Materials Laboratories (SAM) which were operated by Columbia University from 1940 to 1945 as part of the development program on the atomic bomb. The treatment is theoretical, and much of it is expressed in mathematical equations. The discussions of the various methods of isotope separation, such as centrifuges, electrolysis, chemical exchange, thermal diffusion, and distillation, are concerned with general principles rather than technical details. Lists of declassified reports are included in the chapters.

DANIELS FARRINGTON AND OTHERS

Experimental physical chemistry By Farrington Daniels, Joseph Howard Mathews, John Warren Williams, Paul Bender, and Robert A. Alberty Fifth edition. New York McGraw Hill Book Company Inc., 1956 482 p. illus. 24 cm. $6.50 1401

Contents: Part I, Laboratory experiments: Gases. Optical-chemical methods. Thermochemistry. Liquids. Solutions. Homogeneous equilibria. Heterogeneous equilibria. Chemical kinetics. Electric conductance. Electrode phenomena. Electromotive force. Dielectric constant. Colloids. Photochemistry. Radioactive isotopes and tracers. General experimental techniques. Part II, Apparatus and methods: Treatment of experimental data. Physical properties of gases. Optical-chemical measurements. Thermal measurements. Physical properties of liquids and solutions. Electrical measurements. Electronics. Photochemistry. Isotopes and radioactivity. Purification of materials. Appendix. Index.

Note: An established textbook used in college laboratory courses. In the first part, basic theory, calculations and laboratory procedures are covered for students who are taking their first laboratory course in physical chemistry. Special features of this part are compact discussions of practical applications, suggestions for further work, and literature references. The second part is more advanced, in the sense that the reader is assumed to have possession of the basic knowledge covered in the first part. However, the topics treated in it, such as the discussion of errors of measurement, are discussed at a level appropriate to readers making their first acquaintance with the topic under discussion. The second part can be characterized as an introduction to advanced techniques for students who wish to prepare themselves for specialized research. The first edition was published in 1929 and the third in 1949. Although the revision represented by this fifth edition is not extensive, many experiments illustrating relatively new techniques and areas of development have been added. Some changes have been made also in the presentation of theory and of procedures.

DANIELS, FARRINGTON AND ROBERT A. ALBERTY

Physical chemistry New York John Wiley & Sons, Inc. 1955 671 p. illus. 23 cm. $6.50 1402

Contents: Introduction. Gases. The crystalline state. Molecular structure and physical properties. Heat, work, and heat capacity. Thermochemistry. Thermodynamics. The liquid state. Solutions. Solutions of nonvolatile solutes. Homogeneous chemical equilibria. Heterogeneous equilibria. Chemical kinetics. Electric conductance. Electromotive force. Ionic equilibria. Colloids. Quantum theory. Photochemistry. Nuclear chemistry. Appendix. Author index. Subject index.

Note: A well-written introductory textbook designed for use in undergraduate college courses. It has a long lineage, tracing back to Outlines of theoretical chemistry by F. H. Getman, published in 1913. After several editions, the title was changed to Outlines of physical chemistry and Dr Daniels became a collaborating author. In 1948, Outlines of physical chemistry by Daniels alone and bearing no edition number because the author regarded it as the first edition of a new work, was published. The present work supersedes Outlines of physical chemistry. It is a substantial but not encyclopedic introduction and is written in a style that is comparatively easy to read, provided that the reader has acquired familiarity with chemical terms and concepts. It is not primarily mathematical, although mathematics is used in all the chapters. In comparison to the preceding edition, or both, there has been considerable revision, both in the text and problems.

DIETZ VICTOR R.

Bibliography of solid adsorbents, an annotative bibliographical survey of the scientific literature on bone char activated carbons and other technical solid adsorbents for the years 1900 to 1942 inclusive a contribution from the United States Cane Sugar Refiners and Bone Char Manufacturers and the National Bureau of Standards. Washington, D C. United States Cane Sugar Refiners and Bone Char Manufacturers, 1944 877 p. 26 cm. 1403

This original volume is currently available from the Bone Char Research Project, Inc., care of J M Brown Secretary Revere Sugar Refinery 333 Medford Street, Charlestown 29 Mass $12.50.

Contents (abridged): Industrial sponsors of the project. Research committee members. History of commercial adsorbents in relation to the sugar refining industry. Adsorption of gases and vapors on solid adsorbents. Adsorption from solutions on solid adsorbents. Thermal effects in adsorption processes. Theories of adsorption. Refining of sugars and other applications of adsorbents. General information on adsorbents and special methods of investigation. Preparation of carbon adsorbents. Sources of bibliography. Author index. Subject index.

—— Bibliography of solid adsorbents 1943–1953, an annotative bibliographical survey Washington, D C. Government Printing Office, 1956 1,528 p 27 cm. (National Bureau of Standards Circular 566) $8 75 1404

Content Adsorption of gases and vapors on solid adsorbents. Adsorption from solutions on solid adsorbents. Thermal effects in adsorption processes. Theories of adsorption. Refining of sugars and other applications of adsorbents. General information on adsorbents and special methods of investigation. Preparation of adsorbents. Sources of bibliography List of commercial solid adsorbents. Author index. Subject index. Abbreviations used in abstracts.

Note Together these two volumes constitute a classified bibliography of the world literature on solid adsorbents from 1900 through 1953 Six-thousand-two references are listed in the first volume, and 13 763 in the second volume. For each reference is given the authors' names and title of the paper the title, volume number pagination, and year of the periodical in which it appeared, and, in the majority of cases, an abstract copied from *Chemical abstracts* The first volume contains also a substantial historical chapter The second volume contains a list by trade name of the solid adsorbents commercially available in the United States of America when the book was compiled.

DORSEY, NOAH ERNEST

The freezing of supercooled water Philadelphia The American Philosophical Society, 1948 245–328 p illus 30 cm. (American Philosophical Society Transactions. New series, vol 38 part 3) $2 45 1405

Contents Introduction. Experimental data Thermal initiation of freezing. Mechanical initiation of freezing. Miscellanea. Theoretical considerations Embryos. Recognized theories of freezing. *Failure* of the homogeneous theory A new theory Summary Appendix. Sealed bulbs—contents and histories. References. Index.

Note A detailed account of original investigations conducted by the author to determine the effect of such factors as heating, prolonged chilling, distillation, filtration, and age of specimen on the supercooling and freezing of water The series of investigations was undertaken because the author's curiosity was aroused by inconsistencies in results reported and theories offered by previous investigators. As a result of his investigation he puts forth here a new theory of freezing, which is designed to account for previously unexplained phenomena. The bibliography of related literature is extensive.

EASTMAN, ERMON DWIGHT, AND GERHARD K ROLLEFSON

Physical chemistry New York McGraw Hill Book Company, Inc, 1947 504 p illus 24 cm (International chemical series Louis P Hammett, consulting editor) $6 50 1406

Contents (abridged) Interactions of material systems Thermochemistry Properties of gases. The kinetic theory of gases. The crystalline state. Energy and heat capacity of gases and crystals. The liquid state. Atomic structure. Molecular structure. Radioactivity and nuclear reactions. Solutions. Phase equilibria in one-component systems Vapor pressure and related properties of ideal solutions and dilute solutions. Phase equilibria in two-component systems. Phase equilibria in three-component systems. Equilibrium in chemical reactions Chemical kinetics. Electrical conductance and transference. Electromotive force in galvanic and electrolytic cells. Interactions of light with matter Surface phenomena. Index.

Note An introduction to the fundamentals of physical chemistry based on courses given at the University of California The book is intended for use as a text and reference tool by third- or fourth-year college students. The treatment, although not necessitating a detailed knowledge of higher mathematics, does require knowledge of calculus. Review problems are given at the end of each chapter

EMMETT, PAUL H editor

Catalysis Volume I Fundamental principles (Part 1) New York Reinhold Publishing Corporation, 1954 394 p illus 23 cm. $12 00 1407

Contents Physical adsorption, by H. E. Ries, jr Measurement of the surface area of solid catalysts, by P H. Emmett. Chemisorption by K. J Laidler Kinetic laws in surface catalysis, by K. J. Laidler The absolute rates of surface reactions, by K. J Laidler. Catalyst carriers, promoters, accelerators, poisons, and inhibitors, by W B Innes. Catalyst preparation by F G. Ciapetta and C. J. Plank. Magnetism and catalysis, by P W Selwood. Author index. Subject index.

—— Volume II Fundamental principles (Part 2) New York Reinhold Publishing Corporation 1955 473 p illus. 23 cm. $12.50. 1408

Contents Classification of heterogeneous catalytic vapor phase reactions, by W B Innes. Reaction rates and selectivity in catalyst pores, by A. Wheeler The nature of catalytic surfaces, by R. M. Hulburt. Nature of complexes of catalyst surfaces, by H. M Hulburt. General theories of heterogeneous catalysis, by R. B Parlin and others. Catalysis in homogeneous reactions in a liquid phase, by E. L. King. Author index. Subject index.

—— Volume III Hydrogenation and dehydrogenation. New York Reinhold Publishing Corporation 1955 499 p illus. 23 cm. $13 50 1409

Contents The parahydrogen and orthodeuterium conversions and the hydrogen-deuterium exchange, by B. M. W Trapnell. The catalytic hydrogenation of ethylene, by D D Eley Catalytic hydrogenation of olefinic hydrocarbons, by R. P Corson. The addition of hydrogen to carbon-carbon triple bonds, by G. C. Bond. The catalytic hydrogenation of nitro compounds, by H. A. Smith and W C. Bedoit, jr The catalytic synthesis of ammonia from nitrogen and hydrogen, by W G Frankenburg. Research on ammonia synthesis since 1940, by C. Bokhoven and others. Synthesis of methanol, by G Natta. Hydrogenation of glyceride oils, by R. O Feuge. Catalytic dehydrogenation, by K. K. Kearby Author index. Subject index.

—— Volume IV Hydrocarbon synthesis, hydrogenation and cyclization. New York Reinhold Publishing Corporation, 1956 570 p illus 23 cm. $12 50 1410

Contents The thermodynamics of the hydrogenation of carbon monoxide and related reactions, by R. B Anderson. Catalysts for the Fischer Tropsch synthesis, by R. B Anderson. Kinetics and reaction mechanism of the Fischer Tropsch synthesis, by R. B Anderson. Crystalline phases and their relation to Fischer Tropsch catalysts, by L. J E. Hofer The isosynthesis, by R. M. Cole. Methanation, by M. Greyson. Catalysis in the liquid-phase hydrogenation of coal and tar by S. W Weller Catalytic cyclization and aromatization of hydrocarbons, by H. Steiner Author index Subject index.

Note. The number of volumes projected for this monumental series has not been announced. However the purpose of the series is to present a full treatment of both the theoretical and practical aspects of catalysis. Each volume consists of signed monographic chapters written especially for this work. Most of the chapters are compactly written reviews documented with numerous references to the literature. The treatment in all is on a graduate-professional level.

EYRING, HENRY, AND OTHERS

Quantum chemistry, by Henry Eyring John Walter and George E Kimball. New York John Wiley & Sons, Inc. 1944 394 p. 22 cm $7 50 1411

Contents. Introduction The old quantum theory The principles of classical mechanics. The principles of quantum mechanics. The differential equations of quantum mechanics. The quantum mechanics of some simple systems. The hydrogen atom. Approximate methods. Time-dependent perturbations: Radiation theory Atomic structure. Group theory Electronic states of diatomic molecules. The covalent bond. Resonance and the structure of complex mole-

cules. The principles of molecular spectroscopy. Elements of quantum statistical mechanics. The quantum mechanical theory of reaction rates. Electric and magnetic phenomena. Special topics. Appendix. Index.

Note: This book is neither an exhaustive treatise on quantum mechanics nor an elementary introduction to the subject, rather it is a consistently condensed and mathematical presentation of almost all those aspects of the science which are of particular interest to chemists. In addition to the subjects usually treated in an introductory work in quantum mechanics, the book includes four or five other major fields. Reaction rates, optical activity, molecular structure, spectroscopy, and the methods of group theory are developed and employed extensively. The book is devoted to a great extent to applications in the field of quantum chemistry and is written at an advanced level.

Findlay, Alexander

The phase rule and its applications. Ninth edition, by A. N. Campbell and N. O. Smith. New York, Dover Publications, Inc., 1951. 494 p. illus. 20 cm. $2.00 1412

Contents: Section I. Introduction. General. The phase rule. Section II. One-component systems: Systems of one component. Typical systems. Section III. Two-component systems: Different systems of two components. Systems consisting of two liquid phases only—liquid and vapour phases only—solid liquid phases only. Metastable extension of freezing point curves. Systems consisting of solid and gas phases only. Coexistence of solid, liquid, and gas phases. Dynamic isomerism and pseudo-binary systems. Section IV. Three-component systems: General—systems consisting of liquid phases only—liquid and vapour phases only—solid and liquid phases only. Aqueous systems. Practical applications of equilibrium diagrams. Section V. Systems of more than three components. Four-component systems. Systems of more than four components. Appendices: Some thermodynamic definitions. Determination of binary solid-liquid equilibria. Author index. Subject index.

Note: Findlay's *The phase rule* remained as the standard introductory textbook on chemical equilibria for several decades. In this ninth edition, it has been largely rewritten by Professor Campbell of the University of Manitoba and Professor Smith of Fordham University. However, the treatment is still introductory and largely nonmathematical. Terms are defined clearly, the exposition is largely in physical terms, and most discussions are very detailed. The book has been partly reorganized; numerous sections have been completely rewritten; some new sections have been added; and many of the old diagrams have been redrawn or replaced by clearer ones. Some citations of recent literature have been added to the bibliographies. Author and subject indexes—both rather frequently drawn—are included.

Frost, Arthur A., and Ralph G. Pearson

Kinetics and mechanism: a study in homogeneous chemical reactions. New York, John Wiley & Sons, Inc., 1953. 343 p. illus. 24 cm. $6.50. 1413

Contents: Introduction. Empirical treatment of reaction rates. Experimental methods and treatment of data. Elementary processes—kinetic theory of gases. Transition-state theory. Comparison of theory with experiment—simple gas reactions. Reactions in solution. Complex reactions. Homogeneous catalysis. Chain reactions. Some reactions whose mechanisms have been investigated by kinetic and other methods: Hydrolysis of ethylene chlorohydrin and ethylene oxide. The ammonium cyanate-urea conversion. The hydrolysis of benzene—the H₀ function. The aldol condensation and the cleavage of diacetone alcohol. The nitration of aromatic compounds. The decomposition of Di-t-butyl peroxide. The thermal isomerization of cis- and trans-butene. The decomposition of nitrogen pentoxide. Author index. Subject index.

Note: In contrast to most other books on chemical kinetics, the emphasis in this one is on the mechanisms of reactions. Insofar as possible, reactions are studied step by step rather than in terms of starting materials and end products. Experimental methods for discovering intermediate steps, such as the trapping of extremely reactive free atoms or radicals, are described. The final chapter contains detailed descriptions of certain reactions which have been investigated by the methods described in the book. The level of treatment is approximately that of first-year graduate students. The book is organized for use as a text, but it is suitable also as a guide for professional chemists. Literature references are included, and the names of authors of cited papers are brought together in the author index.

Glasstone, Samuel

The elements of physical chemistry. New York, D. Van Nostrand Company, Inc., 1946. 695 p. illus. 24 cm. $6.50 1414

Contents: Introduction. Atomic theory. The structure of the atom. Electronic structures of atoms and molecules. The properties of gases. Liquefaction and the properties of liquids. The solid state. Thermodynamics and thermochemistry. The second law of thermodynamics. Dilute solutions. Chemical equilibrium. Free energy and chemical equilibrium. Phase equilibria. The conductance of electrolytes. Electromotive force. Equilibria in electrolytes. Hydrolysis and neutralization. Surface chemistry and colloids. Kinetics of chemical reactions. Photochemistry. Miscellaneous problems. Physical constants and atomic weights. Logarithms. Answers to problems. Index.

Note: An introductory textbook designed not only for college students intending to specialize in chemistry but also for those who are interested in other branches of science and technology and need only an elementary knowledge of physical chemistry. There is approximately one-half as much textual matter as in the author's *Textbook of physical chemistry*. However, this book is not a condensation of that work, but is a fresh treatment of the subject from a more elementary viewpoint. In many cases, the new work will be more satisfactory for library use and reference because the exposition of basic laws and phenomena is easier to understand.

Glasstone, Samuel

Textbook of physical chemistry. Second edition. New York, D. Van Nostrand Company, Inc., 1946. 1,320 p. illus. 24 cm. $12.95 1415

Contents: Atomic structure and atomic spectra. Radioactivity and isotopes. First and second laws of thermodynamics. The gaseous state. The solid state. Changes of state. The liquid state. Physical properties and molecular structure. Dilute solutions. Phase equilibria. Chemical equilibrium and free energy. Electrochemistry. Chemical kinetics. Surface phenomena. Index.

Note: This standard work follows the same comprehensive plan of organization, which includes an historical approach to the topics discussed and a consideration of the experimental methods involved, as the first edition of 1940. Many revisions have been made throughout to bring the material up to date or to make the treatment clearer, and the already extensive bibliographies have been increased by references to recent work. The thermodynamic symbols used in the first edition have been replaced, though with some misgivings on the author's part, by those more widely used and hence more familiar to students. The book is intended for use in advanced courses and as a reference work for teachers, students, and chemical engineers.

Glasstone, Samuel, and others

The theory of rate processes: the kinetics of chemical reactions, viscosity, diffusion and electrochemical phenomena, by Samuel Glasstone, Keith J. Laidler and Henry Eyring. New York, McGraw-Hill Book Company, Inc., 1941. 611 p. illus. 23 cm. (International chemical series. L. P. Hammett, consulting editor) $10.00. 1416

Contents: Introduction. Quantum mechanics. Potential-energy surfaces. Statistical treatment of reaction rates. Homogeneous gas reactions. Reactions involving excited electronic states. Heterogeneous processes. Reactions in solution. Viscosity and diffusion. Electrochemical processes.

Note: Representing an original approach to the subject of reaction rates, this book describes the development and application of a general theory of the kinetics of physical and chemical processes, usually known as the "theory of absolute reaction rates." The authors explain the fundamental bases, and consider homogeneous and heterogeneous gas reactions, reactions in solution, viscosity, diffusion, and electrochemical phenomena in terms of the theory

Glasstone, Samuel

Thermodynamics for chemists. New York, D. Van Nostrand Company, Inc., 1947. 522 p. illus. 23 cm. $6.50 1417

Content Heat, work, and energy Properties of thermodynamic systems. The first law of thermodynamics. Heat changes and heat capacities. Thermochemistry Calculation of energy and heat capacity The second law of thermodynamics. Entropy relationships and applications. Entropy determination and significance. Free energy Phase equilibria. Fugacity and activity Free energy and chemical reactions. The properties of solutions. Activities and activity coefficients. Solutions of electrolytes. The Debye-Hückel theory Partial molar properties. E. M. F s and the thermodynamics of ions. Appendix Constants and conversion factors. Properties of gases and liquids. Heat capacities of gases. Heat capacities of solids. Standard free energies and heats of formation, and entropies. Integral heats of solution of salts. Index.

Note This new textbook has those characteristics of thoroughness and clarity which have come to be expected in the books of this author It offers an extended treatment of thermodynamics from the viewpoint of chemistry and particularly chemical engineering. A considerable number of problems are worked out in this text, and an even larger number of exercises are included for solution by the student, the handling of differential equations being required in both cases. The discussions of the applications of statistical methods to problems in chemical thermodynamics are a special feature. There are footnote references to pertinent literature.

GUCKER, FRANK THOMPSON, JR., AND WILLIAM BUELL MELDRUM

Physical chemistry New York American Book Company, 1950 683 p illus 22 cm $5.50 1418

Contents Introduction The composition of matter The structure of atoms and molecules. The ideal gas. The behavior of real gases. Liquids. Solids. Thermochemistry Solutions of nonelectrolytes. Osmosis and osmotic pressure. Reaction kinetics. The ionic theory Ionic equilibria. Electrolytic conductance. Electromotive force. Hydrogen ion concentration and *p*H. Indicators. Adsorption. Colloids. Catalysis. Enzymes. The phase rule Thermodynamics and mathematical derivations. Appendix. Index.

Note. First published in 1942 this book has been used as an introductory text in American colleges and universities for a decade and half. It is a relatively simple introduction and the simplification has been achieved largely by emphasizing physical concepts rather than mathematics. However some mathematics is necessarily employed in the exposition and, in order to solve the problems, the reader needs an elementary understanding of logarithms and calculus. The first-named author is Professor of Chemistry in Indiana University and his colleague is Professor of Chemistry in Haverford College Although it bears 1950 copyright date the pagination of this edition is identical with that of the 1942 edition. Chapter titles also are the same, and there has been no revision of the literature references.

GURNEY, RONALD W

Ionic processes in solution New York McGraw Hill Book Company, Inc., 1953 275 p illus. 23 cm (International chemical series, Louis P Hammett consulting editor) $6 50 1419

Contents (abridged) The electrical analogue of magnetic cooling. The dissociation of molecule into ions. Complete and incomplete ionic dissociation. The contrast between solvent and solute particles. Ideal and non-ideal solutions. Heat of precipitation. Different types of proton transfers. The dissociation constant of nitric acid. The viscosity of ionic solutions. Conventional partial molal ionic entropies. Properties of different solvents The number of dipoles per unit volume Electrodes and galvanic cells. Proton transfers in various solvents Proton transfers in more concentrated solutions. The orientation of water molecules adjacent to an ion. Appendix Name index. Subject index.

Note Although it bears essentially the same title as an earlier work by the author this book is a new work, with an entirely different approach to the study of ions in solution. The chapter titles listed above are unsatisfactory from the standpoint of indicating its scope, because each one of those listed is only the title of the first section of chapter which contains, in all cases, several more sections with equally indicative titles. However the first six chapters are devoted to theory that is to say the basic principles and ideas of the subject. The chapters that follow these present the experimental data and relate them to the basic concepts. The level of the treatment suits the book to use in graduate courses and to individual study by graduate chemists and physicists interested in

HAMMETT, LOUIS PLACK

Physical organic chemistry, reaction rates, equilibria, and mechanisms New York Mc Graw Hill Book Company, Inc., 1940 404 p. illus. 21 cm (International chemical series J F Norris and L P Hammett, consulting editors) $7 50 1420

Contents Table of symbols and of values of constants. Structural theory—nonelectrolytes—electrolytes. Equilibrium and energy of reaction. Reaction rates and mechanism—energies, free energies, and entropies of activation. The displacement reaction. Stereochemistry of the displacement reaction. The effect of structure of reactivity Enolization and related reactions. The quantitative study of acids and bases. Carbonium-ion reactions. Carbonyl-addition reactions. Atom and radical reactions—other redox reactions. Index.

Note A pioneer text which now enjoys the status of semi-classic. It deals with the application of the methods of physical chemistry to procedures in organic chemistry and is addressed to advanced students and other readers with some previous education in basic chemistry both physical and organic.

HARKINS, WILLIAM DRAPER

The physical chemistry of surface films. With a foreword by Peter Debye. New York Reinhold Publishing Corporation, 1952 413 p illus 24 cm. $10 00 1421

Contents The nature and energetics of surfaces. Films on liquids. Films on solids. Properties of soap solutions. Mechanism of emulsion polymerization. The role of the electric double layer in the behavior of lyophobic colloids, by E. J W Verwey Index.

Note Even though a considerable part of the contents of this work was published previously the book represents a major addition to chemical literature. The author made many original contributions to the knowledge of surface films and emulsion technology and all of his work is covered in it. Chapters one two, and three have been reprinted with modifications from various volumes of Dr. Jerome Alexander's *Colloid chemistry* Chapters four and five are original but contain many quotations from articles by Dr. Harkins that were published elsewhere. Chapter six, by Dr Verwey is another reprint with minor changes, from Alexander's *Colloid chemistry* Although the basis of each chapter except the sixth was original research carried out by Dr Harkins and his associates, the pertinent work of others is also described, and each of the chapters is accompanied by substantial list of references. The bibliography of Harkins' own publications is arranged chronologically from 1907 to 1950.

HIRSCHFELDER, JOSEPH O , AND OTHERS

Molecular theory of gases and liquids. By Joseph O Hirschfelder, Charles F Curtiss and R. Byron Bird With the assistance of the staff of the University of Wisconsin Naval Research Laboratory New York John Wiley & Sons, Inc. 1954 1,219 p illus 24 cm. $22 50 1422

Contents Note on notation. Vector and tensor notation. Introduction and background information. Part I, Equilibrium properties Statistical mechanics. The equation of state of gases at low and moderate densities. The equation of state of dense gases and liquids. Quantum theory Vapor-liquid equilibria and critical phenomena. Quantum theory and the equation of state, by J de Boer and R. B. Bird. Part II, Non-equilibrium properties The kinetic theory of dilute gases. Transport phenomena of dilute gases. The transport properties of dense gases and liquids. Quantum theory and transport phenomena, by J de Boer and R. B Bird. Hydrodynamic applications of the equations of change. Part III, Intermolecular forces Electromagnetic basis of intermolecular forces. The theory of intermolecular forces. Quantum mechanical calculations of intermolecular forces Appendix (tables) Symbols and notation. Chemical index. Author index. Subject index.

Note This large treatise is detailed presentation of progress made to date in analyzing and expressing mathematically the interrelations of fundamental interactions between molecules and their properties on bulk behavior of dense gases and liquids. The authors state that the molecular approach gives complete description in terms of small number of constants characteristic of the sub-

[illegible]

chemistry Physical constants and conversion factors. Name index. Subject index.

Note A textbook for introductory courses in physical chemistry offered to college students who have completed basic courses at the college level in physics, chemistry and calculus. The treatment is rigorous, but the author has taken pains to make things clear. Certain of the chapters, particularly those dealing with atomic and nuclear physics and surface chemistry, are designed to be read by the student without the guidance of an instructor. The first edition was published in 1950. The terminal chapter on photochemistry and radiation chemistry is new in this edition. Otherwise, the chapters and chapter arrangement are unchanged, except that numerous paragraphs and larger sections of chapters carried over from the first edition have been revised in some degree. The author is Professor of Chemistry in Indiana University

PAUL, MARTIN AMBROSE

Principles of chemical thermodynamics New York McGraw Hill Book Company, Inc., 1951 740 p 24 cm. (International chemical series Louis P Hammett, consulting editor) $9 75 1429

Contents Temperature The first law of thermodynamics. Thermal behavior of simple systems. Thermochemistry The second law of thermodynamics. Thermodynamic behavior of simple systems. Thermodynamic behavior of solutions and heterogeneous mixtures. Chemical equilibrium. Thermodynamics of galvanic cells. Statistical molecular theory of thermodynamics. Appendix. Answers to problems. Index.

Note This substantial textbook is designed for the use of advanced undergraduate and graduate college students who are specializing in chemistry and have completed an introductory course in physical chemistry Due attention is given to the theoretical bases of chemical thermodynamics, and the derivations of commonly used equations are always shown. The 90-page discussion of the statistical molecular theory of thermodynamics is a special feature. Mathematical techniques more advanced than those of elementary calculus are explained in the text when they are introduced and in a special appendix.

PAULING, LINUS CARL

The nature of the chemical bond and the structure of molecules and crystals, an introduction to modern structural chemistry Second edition Ithaca Cornell University Press 1940 450 p illus. 23 cm (The George Fisher Baker Non resident Lectureship in Chemistry at Cornell University Vol 18) $5 75 1430

Contents Resonance and the chemical bond. The partial ionic character of covalent bonds and the relative electronegativity of atoms. The directed covalent bond, bond strengths and bond angles The magnetic criterion for bond type. The resonance of molecules among several valence-bond structures. Interatomic distances and their relation to the structure of molecules and crystals. Types of resonance in molecules. The structure of molecules and complex ions involving bonds with partial double-bond character The one-electron bond and the three-electron bond. The hydrogen bond. The sizes of ions and the structure of ionic crystals. The metallic bond. A summarizing discussion of resonance and its significance for chemistry Index of names. Index of subjects.

Note. A study of the theory of valence and chemical bond, intended for advanced or postgraduate chemistry students, with correlated study of the structure of molecules and crystals. The author considers three general extreme types of chemical bonds electrostatic, covalent, and metallic. Included in the category are not only the directed valence bond of the organic chemist but also such bonds as those between ions in the sodium chloride crystal and the such bonds of other inorganic substances. The discussion on structural chemistry is presented without the use of the mathematics of quantum mechanics. The second edition contains minor changes and about five pages of new material.

PRUTTON, CARL FREDERIC, AND SAMUEL H MARON

Fundamental principles of physical chemistry Revised edition. New York The Macmillan Company, 1951 803 p. illus 22 cm. $6 50 1431

Contents (abridged) Elementary principles of thermodynamics and their application to gases. Liquids. The solid state. Solutions. Colligative properties of solutions of nonelectrolytes. Solutions of electrolytes. Surface phenomena and colloids. Thermochemistry Entropy and the third law of thermodynamics. The free energy Homogeneous chemical equilibrium. Heterogeneous equilibrium. Electrolytic transference and conductance. Ionic equilibria. The electromotive force of cells. Electrolysis and polarization. Kinetics of homogeneous reactions. Kinetics of heterogeneous gas reactions. Physical properties and the structure of molecules. Photochemistry Index.

Note. A somewhat more advanced presentation is given than is customary in introductory texts in the subject. Thermodynamic principles are introduced in the second chapter and are used throughout the book. Although designed for a full-year course offered to students majoring in chemistry and chemical engineering, the authors suggest its use also for such students as physicists and biologists who have taken only an introductory course. Completion of college courses in physics, basic chemistry and calculus are prerequisite In the present edition, the chapter on photochemistry is a new addition and there is a fair number of other changes. The first-named author is technical director of the Food Machinery and Chemical Corporation and the second a member of the faculty of Case Institute of Technology

QUILL, LAURENCE LARKIN, editor

The chemistry and metallurgy of miscellaneous materials thermodynamics. New York McGraw Hill Book Company, Inc, 1950 329 p illus. 24 cm. (National nuclear energy series Manhattan Project technical section. Division IV—Plutonium project record. Volume 19B) $4 50 1432

Contents Paper I. Investigations in the liquid-solid equilibria of the two-component systems composed of the bromides and iodides of strontium and barium, by E. D Eastman and others. Temperature-composition diagrams of metal—metal halide systems, by E. D. Eastman and others. The thermodynamic and physical properties of the elements, by L. Brewer Thermodynamic and physical properties of nitrides, carbides, sulfides, silicides, and phosphides, by L. Brewer and others. The thermodynamic properties of common gases, by L. Brewer The thermodynamic properties of the halides, by L. Brewer and others. The fusion and vaporization data of the halides, by L. Brewer The thermodynamic properties of molybdenum and tungsten halides and the use of these metals as refractories, by L. Brewer and others. The heats of formation of CeS, Ce_3S_4, and Ce_2S_3 at 25 C, by M. W Evans. The heat of reaction of the cerous-ceric couple in 0.3 molal perchloric acid at 25 C, by B. J Fontana.

Note. The papers which form the basis of this volume were prepared during the course of research conducted to develop methods for producing plutonium. The book brings together a great quantity of data regarding the thermodynamic and physical properties of elements and compounds used in high-temperature reactions, and is designed for the use of physicists and chemists engaged in this field of research. Each paper includes a brief summary and list of references. No index is provided.

RICCI, JOHN ETTORE

Hydrogen ion concentration new concepts in a systematic treatment. Princeton Princeton University Press 1952 460 p illus. 24 cm. $10 00 1433

Contents Definitions and fundamental relations. The theorem of isohydric solutions. Special values and limits of the ionization functions for acids and bases. Limits of ionization fractions and the iso-electric point for salts and ampholytes. Application of the exact equations for the determination of the constants. Interpretation of ionization constants. Some direct applications of the general equations as relations of the concentrations. Calculation of the numerical value of *H* from the general equations. Feasibility (sharpness) of titration exact case of strong acid and strong base (pure). Titrations involving one ionization constant. Two weak acids and strong bases. Titration (with strong base or strong acid) of mixtures involving any number of independent ionization constants. Titration with weak acid or weak base Problems involving two interdependent ionization constants (dibasic acid, its salts with strong and weak bases, ampholytes) Some complex cases. Tribasic acids; salts with strong and weak bases. Saturation with respect to acids and bases. Pure saturated aqueous solution of a salt. Saturation with salts of

mandelic acid. Interaction with salts of dibasic acid. Interaction with ... and their salts. Index.

Note: In the words of the author of this original study: "The equations hitherto determining the hydrogen ion concentration of aqueous solutions constitute a purely mathematical problem subject to exact and systematic treatment and capable of simple and uniform presentation. In the book, exact mathematical definitions which are independent of the various theories of the mechanism of hydrolysis are stated. Then on the basis of these definitions formulas are derived for calculations pertaining to hydrogen ion concentrations in aqueous solutions of various degrees of complexity." The book is an important contribution to theoretical chemistry.

RICCI, JOHN ETTORE

The phase rule and heterogeneous equilibrium. New York, D. Van Nostrand Company, Inc., 1951. 505 p. illus. 24 cm. $13.50 1434

Contents (abridged): One-component systems. Binary systems with complete miscibility in all states. Complete immiscibility in the solid state. Polymorphism of the components and peritectic behavior. Binary compounds. Systems with two liquid phases. Condensed binary diagrams and their determination. Ternary systems. Transitions involving pure solid phases. Freezing point equilibria involving two or three liquid phases. Reciprocal ternary systems. Quaternary systems (additive type). Quaternary system of water and reciprocal salt pair. Aqueous quinary systems. General references. Index of systems cited. Name index. Subject index.

Note: A thorough and rather original introduction to the applications of the phase rule, first stated by Gibbs in 1876, and now recognized as one of the basic laws of chemical reactions. It is written on the graduate level. Though specific data for a variety of systems are given, the work is not intended as a reference book of data on equilibria in specific systems. Papers from which examples are drawn are cited in footnotes throughout the work, in addition to the selected list of books at the end.

ROSSINI, FREDERICK DOMINIC

Chemical thermodynamics. New York, John Wiley & Sons, Inc. 1950. 514 p. illus. 21 cm. $6.50 1435

Contents (abridged): Definition of terms. Fundamental constants and conversion factors. Energy and the first law of thermodynamics. Equivalence of mass and energy. Entropy and the second law of thermodynamics. Entropy and thermodynamic engines. Heat capacity of substances. Relations among the thermodynamic properties and functions. Heats and energies of reactions and processes. Thermodynamic functions from statistical calculations. Entropy and the third law of thermodynamics. Equilibrium between different phases of one pure substance. Fugacity—standard states. The ideal solution. The dilute real solution. Electromotive force and free energy. Equilibrium between different phases of two or more components. Special applications of thermodynamics. Thermodynamic calculations. Appendix. Author index. Subject index.

Note: A fairly comprehensive presentation of modern chemical thermodynamics. Pertinent concepts of atomic physics, such as energy levels and nuclear spin, are introduced early in the book and precede the discussion of the third law. The primary use of the book is as a text in college courses, but it has some usefulness as a review for graduate chemists. Literature references accompany the chapters and, in addition, there is a concluding chapter on the periodical and book literature in which data required for calculations of chemical thermodynamics can be found.

ROSSINI, FREDERICK DOMINIC, AND OTHERS

Selected values of chemical thermodynamic properties, by Frederick D. Rossini, Donald D. Wagman, William H. Evans, Samuel Levine, and Irving Jaffe. Washington, D. C. Government Printing Office, 1952. 1,268 p. illus. 27 cm. (United States. National Bureau of Standards. Circular 500) $8.25 1436

Contents: Introduction. Tables of selected values of properties of Series I: Heat of formation at 25° C; Free energy of formation at 25° C; Entropy at 25° C; Heat capacity at 25° C; Logarithm of the equilibrium constant of formation at 25° C; Heat of formation at 0° K. Tables of selected values of properties of Series II: Heat, temperature, and entropy of transition, fusion, and vaporization (including values at pressure). Specific references for the tables of properties of Series I. Specific references for the tables of properties of Series II. General list of references. Index.

Note: A much expanded set of tables compiled for chemists and engineers by the National Bureau of Standards from 1940 to 1950. They take the place of the tables appearing in *The thermochemistry of the chemical substances*, by F. R. Bichowsky and F. D. Rossini, New York, 1936, and many were previously available in looseleaf form. The volume contains values of the heat and free energy of formation, entropy, heat capacity, and heats and temperatures of transition, fusion, and vaporization for all inorganic compounds (containing not more than two carbon atoms) where such data are available. Separate tables give references to the original literature from which the values were derived. Additional material in looseleaf form to supplement the data in this circular and to give thermodynamic properties as a function of temperature are being prepared under the direction of Donald D. Wagman, and are available to laboratories upon request.

SCHRAGE, ROBERT W

A theoretical study of interphase mass transfer. New York, Columbia University Press, 1953. 103 p. illus. 24 cm. $3.50 1437

Contents: Introduction. The absolute rate of vaporization of pure substances. The simple theory of interphase mass transfer of pure substances. Interphase mass transfer in multicomponent systems. Another theory of interphase mass transfer of pure substances. Predicted departures from interfacial equilibrium in typical mass transfer processes. Conclusion. List of symbols. Appendixes. List of sources cited.

Note: A doctoral dissertation which won, in 1951, the Clarke F. Ansley award as an outstanding dissertation submitted in candidacy for the degree of Doctor of Philosophy from Columbia University. It deals with the mechanism of mass transfer across phase boundaries, or in other words, with the processes occurring at the interphase between a liquid or solid and a gas. Early experimental work is reviewed, and there is a critical discussion of theory and experiment on absolute rates of vaporization. Next, a simple theory partly based on the work of Stefan and Brukcher is developed and extended to gaseous mixtures. In the fourth chapter new equations are deduced for the description of interphase mass transfer in multi-component systems. The theory developed in the fifth chapter is more elaborate than the simple theory and includes an empirical correction factor applied to the equilibrium velocity distribution function for the gas. This factor permits the behavior of the gas to be described rigorously in terms of its distribution function. The study was based both on experiments by the author and on work reported by others in the literature. The list of sources runs to 101 citations.

SMYTH, CHARLES PHELPS

Dielectric behavior and structure; dielectric constant and loss, dipole moment and molecular structure. New York, McGraw-Hill Book Company, Inc. 1955. 441 p. illus. 24 cm. (International chemical series. L. P. Hammett, consulting editor) $9.00 1438

Contents: Static dielectric constant and dipole moment. Dielectric constant and loss. Dielectric loss and structure in liquids. The dielectric constants and losses of solids. Measurement of dielectric constant and loss. Calculation of dipole moments from experimental data. The relation of dipole moment to molecular structure. Dipole moments and structures of aliphatic and alicyclic molecules. Dipole moments and structures of aromatic molecules. Dipole moments and intramolecular rotation. Dipole moments and structures of inorganic and organometallic molecules. Dielectric behavior and structure of amino acids, peptides, and proteins. Electronic and atomic polarization. Name index. Subject index.

Note: The relations between the molecular structure of matter and its dielectric behavior are the chief subjects of this book. The first 180 pages are devoted to basic theory, the supporting experimental evidence, techniques of measurement, and a comparative account of various methods of calculating dipole moments. After these pages, approximately 160 pages are given over to the accumulated information on dipole moments and structures of the main types of compounds. The entire book is very compactly written, and the author frequently refers the reader to fuller treatments of specific subjects published elsewhere. Many passages are essentially literature digests, and references to the source articles are included in them. The book is an interesting one, not only in relation to basic understanding of the materials used as electric insulators, but also in various branches of pure and applied science. It replaces the author's *Dielectric constants and molecular structure*, New York, 1931.

chemistry Physical constants and conversion factors. Name index. Subject index.

Note A textbook for introductory courses in physical chemistry offered to college students who have completed basic courses at the college level in physics, chemistry and calculus. The treatment *is rigorous, but the author has taken pains to make things clear* Certain of the chapters, particularly those dealing with atomic and nuclear physics and surface chemistry are designed to be read by the student without the guidance of an instructor The first edition was published in 1950. The terminal chapter on photochemistry and radiation chemistry is new in this edition. Otherwise, the chapters and chapter arrangement are unchanged, except that numerous paragraphs and larger sections of chapters carried over from the first edition have been revised in some degree. The author is Professor of Chemistry in Indiana University

PAUL, MARTIN AMBROSE

Principles of chemical thermodynamics New York McGraw Hill Book Company, Inc., 1951 740 p 24 cm (International chemical series Louis P Hammett, consulting editor) $9 75 1429

Contents Temperature. *The first law of thermodynamics.* Thermal behavior of simple systems. Thermochemistry The second law of thermodynamics. Thermodynamic behavior of simple systems. Thermodynamic behavior of solutions and heterogeneous mixtures. Chemical equilibrium. Thermodynamics of galvanic cells. Statistical molecular theory of thermodynamics. *Appendix. Answers to problems.* Index.

Not This substantial textbook is designed for the use of advanced undergraduate and graduat college students who are specializing in chemistry and have completed an introductory course in physical chemistry Due attention is given to the theoretical bases of chemical thermodynamics, and the derivations f commonly used equations are always shown. The 90-page discussion f the statistical molecular theory of thermodynamics is a special feature. Mathematical techniques more advanced than those of elementary calculus are explained in the text when they are introduced and in special appendix.

PAULING, LINUS CARL

The nature of the chemical bond and the *structure of molecules and crystals an introduction* to modern structural chemistry Second edition Ithaca Cornell University Press 1940 450 p illus 23 cm. (The George Fisher Baker Non resident Lectureship in Chemistry at Cornell University Vol 18) $5 75 1430

Contents Resonance and the chemical bond. The partial ionic character of covalent bonds and the relative electronegativity f atoms. The directed covalent bond, bond strengths and bond angles. The magnetic criterion for bond type. The resonance of molecules among several valence-bond structures. Interatomic distances and their relation to the structure f molecules and crystals. Types of resonance in molecules. The structure f molecules and complex ions involving bonds with partial double-bond character The one-electron bond and the three-electron bond. The hydrogen bond. The sizes of ions and the structure of ionic crystals. Th metallic bond. A summarizing discussion of resonance and its significance for chemistry Index of names. Index *of subjects.*

Note A study f the theory of valence and chemical bond, intended for advanced or postgraduate chemistry students, with correlated study of the structure of molecules and crystals. The author considers three general extreme types of chemical bonds electrostatic, covalent, and metallic. Included in the category are not only the directed valence bond of the organic chemist but also such bonds as those between ions in the sodium chloride crystal and the much bonds of other inorganic substances. The discussion on structural chemistry is presented without the use of the mathematics of quantum mechanics. The second edition contains minor changes and about five pages of new material.

PRUTTON, CARL FREDERIC, AND SAMUEL H MARON

Fundamental principles of physical chemistry Revised edition New York The Macmillan Company, 1951 803 p illus. 22 cm. $6 50 1431

Contents (abridged) Elementary principles of thermodynamics and their application to gases. Liquids. The solid state. Solutions. Colligative properties of solutions of nonelectrolytes. Solutions of electrolytes. Surface phenomena and colloids. Thermochemistry Entropy and the third law of thermodynamics. The free energy Homogeneous chemical equilibrium. Heterogeneous equilibrium Electrolytic transference and conductance. Ionic equilibria. The electromotive *force f cells. Electrolysis and polarization.* Kinetics of homogeneous reactions. Kinetics of heterogeneous gas reactions. Physical properties and the structure of molecules. Photochemistry Index.

Note. A somewhat more advanced presentation is given than is customary in introductory texts in the subject. Thermodynamic principles are introduced in the second chapter and are used throughout the book. Although designed for full-year course offered t students majoring in chemistry and chemical engineering, the authors suggest its use also for such students as physicists and biologists who have taken only an introductory course. Completion of college courses in physics, basic chemistry and calculus are prerequisite. *In the present edition,* the chapter on photochemistry is a new addition, and there is fair number of other changes. The first-named author is technical director of the Food Machinery and Chemical Corporation, and the second a member of the faculty of Case Institute of Technology

QUILL, LAURENCE LARKIN, editor

The chemistry and metallurgy of miscellaneous materials thermodynamics. New York McGraw Hill Book Company, Inc., 1950 329 p illus 24 cm. (National nuclear energy series. Manhattan Project technical section. *Division IV—Plutonium project record* Volume 19B) $4 50 1432

Contents Paper 1. Investigations in the liquid-solid equilibria of the two-component systems composed of the bromides and halides of strontium and barium, by E. D Eastman and others. Temperature-composition diagrams of metal—metal halide systems, by E. D. Eastman and others. The thermodynamic and physical properties of the elements, by L. Brewer Thermodynamic and physical properties of nitrides, carbides, sulfides, silicides, and phosphides, by L. Brewer and others. The thermodynamic properties of common gases, by L. Brewer The thermodynamic properties of the halides, by L. Brewer and others. The fusion and vaporization data of the halides, by L. Brewer The thermodynamic properties of molybdenum and tungsten halides and the use of these metals as refractories, by L. Brewer and others. The heats of formation of CeS, Ce_2S_3, and Ce_3S_4 at 25° C, by M. W Evans. The heat of reaction of the cerous-ceric couple in 0.5 molal perchloric acid at 25° C, by R. J. Fontana.

Note. The papers which form the basis of this volume were prepared during the course of research conducted to develop methods for producing plutonium. The book brings together great quantity of data regarding the thermodynamic and physical properties of gases and compounds used in *high-temperature reactions,* and is designed for the use of physicists and chemists engaged in this field of research. Each paper includes brief summary and list of references. N index is provided.

RICCI, JOHN ETTORE

Hydrogen ion concentration new concepts in a systematic treatment. Princeton Princeton University Press 1952 460 p illus. 24 cm $10 00 1433

Contents. Definitions and fundamental relations. The theorem of isohydric solutions. Special values and limits of the ionization fractions for acids and bases. Limits of ionization fractions and the iso-electric point for salts and ampholytes. Application of the exact equations for the determination of the constants. Interpretation of ionization constants. Some direct applications of the general equations as relations of the concentrations. Calculation of the numerical values of H from the general equations. Feasibility (sharpness) of titration exact case of strong acid and strong base (pure) Problems involving one ionization constant. Two weak acids and strong base. Titration (with strong base or strong acid) in mixtures involving any number of independent ionization constants Titration with weak acid or weak base. Problems involving two interdependent ionization constants (dibasic acid its salts with strong and weak bases; ampholytes) Some complex cases. Tribasic acids salts with strong and weak bases. Saturation with respect to acids and bases. Pure saturated aqueous solution of salt. Saturation with salts of

[illegible] acid. Saturation with salts of [illegible] acid. Saturation with naphthalene and their salts. Index.

Note In the words of the author of this original study "The quantitative relations determining the hydrogen ion concentration of aqueous solutions constitute [illegible] purely mathematical problem subject to exact and systematic treatment and capable of simple and uniform presentation. In the book, exact mathematical deductions which are independent of the various theories of the mechanism of ionization are stated, then on the basis of these deductions formulae are derived for calculations pertaining to hydrogen ion concentrations in aqueous solutions of various degrees of complexity The book is an important contribution to theoretical chemistry

RICCI, JOHN ETTORE

The phase rule and heterogeneous equilibrium. New York D Van Nostrand Company Inc., 1951 505 p. illus. 24 cm. $13.50. 1434

Contents (abridged) One-component systems. Binary systems with complete miscibility in all states. Complete [illegible] in the solid state. Polymorphism of the components and [illegible] behavior. Binary compounds. Systems with two liquid phases. Condensed binary diagrams and their determination. Ternary systems. Transitions involving pure solid phases. In the fourth chapter new equations are deduced for the description of interphase mass transfer in multi-component systems. The theory developed in the fifth chapter is more elaborate than the simple theory and has [illegible] an empirical correction factor applied to the equilibrium velocity distribution function for the gas. This factor permits the behavior of the gas to be described correctly in terms of its distribution function. The study was based both on experiments by the author and on work reported by others in the literature The list of sources runs to 121 citations.

SMYTH CHARLES PHELPS

Dielectric behavior and structure dielectric constant and loss, dipole moment and molecular structure. New York McGraw Hill Book Company Inc., 1955 441 p. illus 24 cm. (International chemical series L. P Hammett, consulting editor) $9 00 1438

Contents Static dielectric constant and dipole moment. Dielectric constant and loss. Dielectric loss and structure in liquids. The dielectric constants and losses of solids. Measurement of dielectric constant and loss. Calculation of dipole moments from experimental data. The relation of dipole moment to molecular structure Dipole moments and structures of aliphatic and alicyclic molecules. Dipole moments and structures of aromatic molecules. Dipole moments and intramolecular rotation Dipole moments and structures of inorganic and organometallic molecules. Dielectric behavior and structure of amino acids, peptides, and proteins. Electronic and atomic polarization. Name index. Subject index.

Note The relations between the molecular structure of matter and its dielectric behavior are the chief subjects of this book. The first 180 pages are devoted to basic theory the supporting experimental evidence, techniques in measurement, and [illegible] comparative account of various methods of calculating dipole moments. After these pages, approximately 180 pages are given over to the accumulated information on dipole moments and structures of the main types of compounds. The entire book is very compactly written, and the author frequently refers the reader to fuller treatments of specific subjects published elsewhere. Many patterns are essentially literature digests, and references to the source articles are included in them. The book is an important one, not only in relation to basic understanding of the materials used as electric insulators, but also in various branches of pure and applied science. It replaces the author' *Dielectric constant and molecular structure*, New York, 1931

STACEY, K A

Light scattering in physical chemistry New York Academic Press, Inc., *1956* *230* p illus *22* cm. $6 75 1438A

Contents. Introduction. The theory of light-scattering. The practice of light-scattering. High polymers. Proteins. Polyelectrolytes. Glossary of symbols. Author index. General index.

Note A indicative, rather than a comprehensive, survey of the current status of light-scattering effects in the study of macromolecules. The basic theory is expounded in some detail and more than 100 references are given to related studies in periodicals and books. Experimental techniques and instruments are adequately presented—again with many literature references. In the three latter chapters, studies made and knowledge gained by experimental studies based on light-scattering phenomena in the study of high polymers, proteins, and polyelectrolytes are concisely summarized. The book is addressed to graduate chemists engaged in research on macromolecules.

STEACIE, E W R

Atomic and free radical reactions Second edition. New York Reinhold Publishing Corporation, 1954 2 v 24 cm (American Chemical Society monograph series, William A Hamor editor) $30 00 1439

Contents. Volume I: Introduction. Experimental methods. Bond dissociation energies. Free radicals in thermal reactions. Free radicals in photochemical reactions. Volume II: Types of elementary reactions. Systems containing carbon and hydrogen only Systems containing oxygen. Systems containing nitrogen. Systems containing chlorine (and fluorine) Systems containing bromine. Systems containing iodine. Systems containing sodium. Systems containing other metals. Systems containing sulfur. Bibliography Reaction index. Author index. Subject index.

Note. The accumulated knowledge pertaining to atomic and free radical reactions in the gas phase is compactly summarized in this work. The experimental techniques, whereby the information has been gained and which are still used in research, are described in a 60-page chapter in the first volume. Most of the rest of the space is devoted to the facts on specific reactions which are considered first under class of reaction and finally by systems. The knowledge presented is of primary importance in several branches of physics and most branches of chemistry The first edition was published in 1946 and consisted of a single volume of 548 pages. The 900 pages in the present two volumes reflect the considerable increase in knowledge of atomic and free radical reactions in recent years. The bibliography in the new edition runs to 2,080 references, and according to the author is comprehensive for work published to about June, 1953 and the papers published in the main journals to about September 1953 The claim made on the jacket blurb, "Literature references through the end of 1954 are included, is obviously an error

TAYLOR, HUGH S, AND SAMUEL GLASSTONE, editors

A treatise on physical chemistry, a cooperative effort by a group of physical chemists Third edition in five volumes. New York D Van Nostrand Company Inc., 1942–52 2 v illus 23 cm. Vol I $10 00 vol II $12 50 1440

Contents Volume The atomic concept of matter, by H. S. Taylor Quantum theory of atomic spectra and atomic structure, by S. Dushman. The first and second laws of thermodynamics, by H. S. Taylor The third law of thermodynamics and statistical mechanics, by J G. Aston. Appendix Values of physical constants. Index. Volume II The kinetic theory of ideal gases, by K. F Herzfeld. The thermodynamics and statistical mechanics of real gases, by J A. Beattie and W H. Stockmayer The liquid state, by G. E. Kimball. X-ray analysis of the solid state, by J G. White. The colloidal state and surface chemistry by J W Williams and others. Index.

Note Planned as comprehensive presentation of physical chemistry this work is designed to cover not only fundamental principles but also to indicate their applications in problems that confront the chemist, whether he is working in basic research or in industry A detailed historical background is included, so that the account of topic proceeds from the older knowledge to modern developments. The treatment is for advanced students and graduate chemists. More volumes are projected.

TROTMAN DICKENSON, A. F

Gas kinetics, an introduction to the kinetics of homogeneous gas reactions. New York. Academic Press, Inc., 1955 *322* p illus. 23 cm $8 00 1441

Contents: Introduction. The theories of chemical kinetics and energy transfer. Unimolecular decompositions and bimolecular combinations. Transfer reactions. Radical decompositions and radical additions. Subject index.

Note Although an introduction, this book is based on an extensive critical survey of the literature. It is comprehensive but not exhaustive study of the results of experiments on the simpler reactions—results which seem to be valid enough to support quantitative generalizations. Experimental methods are described, but their descriptions are decidedly secondary to the analysis and interpretation of findings. The book will be of interest to advanced students of physical chemistry and graduate chemists engaged in basic research. Very extensive literature lists are a noteworthy feature.

UNITED STATES NATIONAL BUREAU OF STANDARDS

(United States National Bureau of Standards Circular 510) $4 00 1442

Contents Subject index. Alphabetical index. Code abbreviation for periodicals. Introduction. Tables.

—— Supplement. Sponsored by the National Bureau of Standards the Committee on Tables of Constants of the National Research Council and the Office of Ordnance Research, Department of the Army C. H. Stauffer, project director, T W Davis H S Johnston, M Szwarc H. Taube H. A Taylor M H. J Wijnen corresponding expert collaborators. Issued November 14 1956 Washington D C. Government Printing Office, 1956 *472* p. 29 cm (United States National Bureau of Standards Supplement 1 to Circular 510) $3.25 1443

Contents. Corrections to 1951 volume. Subject index. Alphabetical index. Tables.

Note These tables represent critically evaluated compilation of the available factual numerical data on rates and rate constants of homogeneous chemical reactions. Stressing the importance of experimentally ascertained facts, the editors have generally excluded data contingent on interpretations. Reaction equations are written in the simplest possible way on the basis of the observed over-all chemical change. Each table is designated by a six-digit number, the first two of which refer to the type of reaction, gaseous (1) liquid (2) or solid (3) The second three-digit group of the table number refers to the types of substances involved. References to the literature are included. The supplement contains additional tables, additions to tables already printed, revised sheets cancelling and replacing parts of present tables, and corrections. Both the original work and the supplement are issued in the form of loose

sheets punched with three holes and temporarily assembled under paper covers. If the owner wishes to procure [illegible] suitable loose-leaf binder he can thus easily remove the pages from the paper covers and interfile the corrections and additional tables with the original tables for greater facility in use. Further supplements are expected, as the project of compilation continues at Worcester Polytechnic Institute with general supervision by the Subcommittee on Kinetics of Chemical Reactions, Division of Chemistry and Chemical Technology, National Research Council, and with the financial sponsorship of the Office of Ordnance Research.

WETMORE, F E W AND D J LEROY

Principles of phase equilibria. New York McGraw Hill Book Company Inc., 1951 200 p. illus. 24 cm. (International chemical series Louis P Hammett, consulting editor) $4.50. 1444

Contents. Chemical equilibrium. One-component systems. Two-component systems. Two-component systems: types of equilibria involving only one phase of variable composition. Two-component systems: types of equilibria involving more than one phase of variable composition. Three-component systems. Three-component systems at fixed temperature and pressure. Three-component systems: solid diagrams and their plane projections. Four-component systems. Appendices: The thermodynamic derivation of the phase rule. Free energy-composition curves for two-component systems. Index.

Note: A textbook planned for upperclass undergraduate and graduate students. Though considerable previous education in chemistry and physics is assumed, the book is introductory to the subject. The exposition is expressed in (to use the author's words) "terms of laboratory criteria and from [illegible] fundamental point of view without recourse to formal thermodynamics. However the thermodynamic approach is illustrated in the appendices.

SOLUBILITY AND SOLVENTS

AUDRIETH, LUDWIG F., AND JACOB KLEINBERG

Non-aqueous solvents applications as media for chemical reactions. New York John Wiley and Sons, Inc., 1953 284 p. illus. 24 cm. $8.50. 1445

Contents: Properties of solvents. Acids and bases. Liquid ammonia as [illegible] solvent and ionization medium. The nitrogen system of compounds. Reactions in liquid ammonia—experimental techniques and some important type reactions. Metal-ammonia solutions. Nitrogen-containing solvents. Acetic acid. Sulfuric acid. Hydrogen fluoride. Liquid sulfur dioxide. Acid chlorides. Halogens and interhalogens as solvents. High-temperature systems. Index.

Note: A valuable addition to chemical literature. The authors have made [illegible] critical selection of the information on the nonaqueous solvents which they believe to possess the greatest potential utility for laboratory research and synthesis. This information is presented and critically discussed for the benefit of graduate chemists. Literature references are included with each chapter, and there are numerous graphs and tables of data on properties, yields, etc.

HILDEBRAND, JOEL HENRY AND ROBERT L. SCOTT

The solubility of nonelectrolytes. Third edition. New York Reinhold Publishing Corporation, 1950 488 p. illus 23 cm. (American Chemical Society monograph series William A. Hamor editor) $12.00 1446

Contents (abridged): The ideal solution. Nonideal solutions—general. Intermolecular forces. The liquid state. The entropy of athermal mixing. The heat of mixing. Polarity. Hydrogen bonding. Specific interactions. "Solvation" and "association." Vapor pressure of binary liquid solutions. Solubility of gases in liquids. Solubility of liquids in liquids. Solubility of solids in liquids. Solid solutions. Metallic mixtures. High polymer solutions. Surface phenomena. Evaluation of solubility parameters. Appendices: Selected values of solubility parameters. Papers by the authors and co-workers. Solutions of nonelectrolytes—1949. Author index. Subject index. Formula index.

Note: A comprehensive presentation of the development and present state of knowledge pertaining to the solubility of nonelectrolytes. In [illegible] sense it is [illegible] companion work to Harned and Owen's *The physical chemistry of electrolytic solutions*, described below. Following the general pattern of the series, the literature of the subject has been surveyed and is fully cited. The treatment is on [illegible] graduate and professional level. Compared to the previous edition, there are six new chapters including those on solid solutions and high polymer solutions, and there has been much rewriting of the chapters carried over.

SCHEFLAN, LEOPOLD AND MORRIS B JACOBS

The handbook of solvents New York D Van Nostrand Company Inc., 1953 728 p illus. 25 cm. $11.50 1447

Contents: Introduction. [illegible] practices in the use of solvents. Solvent action and power. Vapor pressure. Dilution ratios. Limits of inflammability. Solvent recovery. Solvent recovery by adsorption. Table of solvents. List of sources. Index of synonyms.

Note: The greater part of this reference book (409 of 728 pages) is occupied by the "Table of solvents." In this table the chemical compounds are arranged alphabetically according to their most commonly accepted names. The following information is generally given for each compound: characteristics, boiling point, specific gravity, refractive index, uses, solubility, melting point, and total heating values. The eight chapters that precede this table are written in narrative style and contain information that will be useful to industrial chemists and others [illegible] be are concerned with the selection and use of solvents. The two chapters on solvent recovery are worthy of special mention. The book should find [illegible] place at once as one of the standard reference books in industrial chemistry.

SEIDELL, ATHERTON

Solubilities of inorganic and metal organic compounds a compilation of quantitative solubility data from the periodical literature. Third edition. Princeton D Van Nostrand Company Inc., 1940–41 2 v. 24 cm. $16.00 per vol. 1448

Contents: Volume I, Solubilities of inorganic and metal organic compounds. Volume II, Solubilities of organic compounds.

—— Solubilities of inorganic and organic compounds a compilation of solubility data from the periodical literature. By Atherton Seidell and William F Linke, with sections by Alfred W Francis and Roger G Bates. Supplement to the Third edition containing data published during the years 1939–1949 inclusive. Princeton D Van Nostrand Company Inc. 1952 1,254 p illus. 24 cm. $16.00 1449

Note: The usefulness of the first edition of this work, published in 1907 soon established it as [illegible] standard reference tool in chemical libraries and laboratories. A revised second edition was published in 1919. In the third edition, the arrangement was changed from an alphabetical one based on the English names of the individual compounds to one based on an alphabetical arrangement of the internationally accepted symbols for the chemical elements. This arrangement has been retained in the supplement. Under each element, the separate compounds are listed, and under each compound quantitative solubility data in various solvents, as reported in the published literature, are presented in tabular form. In instances where the reported data vary the compiler has usually chosen one set of data and has made reference to publications in [illegible] which different values are given. Conditions are stated in condensed form except in those instances where they were not reported in the literature. The supplement to the third edition is arranged similarly to the third edition. In it, for each compound there is (1) [illegible] short discussion of the published work bearing on its solubility and (2) tabulation of the available solubility data. In addition, there is [illegible] section of data on ternary systems separating in two liquid layers, and [illegible] monographic chapter "Recent contributions to the theory of electrolyte solubility" by Roger G. Bates. Indexes to authors are found in all volumes; in addition, the first volume con-

tains a "cross-reference index, the second volume contains a name index of compounds, and the third volume contains an organic compound index and an inorganic and metal-organic cross-reference index.

COLLOID CHEMISTRY

BIKERMAN J J

Foams, theory and industrial applications By J J Bikerman, in collaboration with J M Perri, R. B Booth and C C Currie New York Reinhold Publishing Corporation, 1953 348 p illus 24 cm $10 00 1450

Contents Formation and structure of foams. Methods of measuring foaminess. Results of foaming measurements. Foam drainage. Mechanical properties of foams. Optical properties of foams. Electrical properties of foams. Radius of molecular action—black spots. The theory of foams. Separation by foam. Three-phase foams. Fire-fighting foams, by J. M. Perri. Froth flotation by R. B Booth. Miscellaneous uses of foam. Chemical antifoaming agents, by C. C. Currie. Author index. Subject index.

Note Basic chemical and physical information on foams has been given more space in this book than information on the uses of foams. However the chapters on fire-fighting foams, froth flotation and miscellaneous uses constitute an adequate coverage of this phase, especially in view of the long bibliographies attached to each chapter These bibliographies include patent citations as well as citations of papers. The 11 chapters on the fundamental knowledge of foams are written in technical terminology and are addressed to scientists and others with an adequate command of scientific concepts and terms. Essentially they are critical summaries of previously published literature, with important statements carefully cross-referenced to the source articles. Gaps in the existing knowledge are indicated in passages such as the following "Two soap bubbles often can be slightly pressed against each other without coalescence. In the presence of an electrified body (such as rubbed stick of sealing wax) they immediately form one bubble. Apparently this interesting effect has never been studied in quantitative manner"

DEAN, ROBERT BERRIDGE

Modern colloids an introduction to the physical chemistry of large molecules and small particles New York D Van Nostrand Company, Inc., 1948 303 p illus 24 cm. $6 00 1451

Contents Introduction. Methods for determining the size and shape of colloidal particles. Liquid surfaces. Adsorption. Ionic adsorption. High polymers. Plastics, resins and rubbers. Carbohydrates and proteins. Colloidal ions. Emulsions and foams. Hydrous oxides and silicates. Lyophobic colloids or suspensoids. Appendix. Index.

Note In contrast to most textbooks of colloid chemistry this one is designed for use in undergraduate courses. Although comparatively brief it offers sound review f the basic knowledge and some indications of applications. The chapters are accompanied by selected references to original papers and standard authorities. The student is assumed to have had course in organic chemistry In addition to the intended use the book should be helpful lso to working chemists whose college training did not include courses in colloid chemistry

HAUSER, ERNST A

Silicic science a review of the colloid scientific properties and phenomena exhibited by matter composed essentially of the element silicon New York D Van Nostrand Company Inc., 1955 188 p illus 24 cm $5 00 1452

Contents: Historical development. The composition and structure of siliceous compounds. Silicic science terminology Colloidal phenomena in silicic science. Silicic acid and silica gels. History, membrane equilibrium, and theoretical concepts of ion-exchange reactions of silicates. Base exchange, differential thermal analysis, infrared analysis, and X-ray diffraction. Ultra- and electron-microscopy of silicates and clays. Rhythmic precipitations in silicates. Atomic structure, chemical reactions, influence of polarization, and a new surface-chemical viewpoint. Reaction of bentonite with organic compounds. Soil stabilization. Silicones. Applied silicic science. Subject index. Author index.

Note A major addition to the still-scanty book literature on silicon chemistry As indicated in the subtitle it is limited to the colloid chemistry of silicon, and even in this narrowed field it is not comprehensive. Nevertheless, it provides a wide and informative sweep f its subject. The emphasis is on the theoretical knowledge and basic phenomena, but the chapter on applications is one of the longer ones in the book. It includes information on bentonite films and other recent developments, including the use of clay gels in pharmacy Extensive bibliographies are feature of most of the chapters. A series of more than 40 clearly reproduced photomicrographs and electron micrographs of silica gels, clay minerals, bentonite films, etc., is another noteworthy feature.

HAWLEY, GESSNER GOODRICH

Small wonder, the story of colloids. New York Alfred A. Knopf, 1947 220 p illus. 22 cm $3 50 1453

Content What it's all about. Large things and small. Discovery and occurrence of colloids. Colloids become visible. Electrical habits. The purification f water Curds and whey The tears of the weeping tree. Blood. Glues and adhesives. The importance of surface. Soaps, detergents, and emulsifiers. Colloid chemistry and life Design for science. Index.

Note An introduction to colloid chemistry designed to acquaint the reader with what colloids are the way in which knowledge about them has advanced, and the part they play in life and growth and in the production of articles common in everyday life. A provocative book for the adult who wants to know the salient facts about an important subject and who lacks specialized scientific training. It will enable him to follow future developments in colloid chemistry intelligently and may well lead some readers to more intensive study

ILER, RALPH K.

The colloid chemistry of silica and silicates. Ithaca Cornell University Press, 1955 324 p illus 24 cm (The George Fisher Nonresident Lectureship in Chemistry at Cornell University) $5 50 1454

Contents The silica-water system. The soluble silicates. The chemistry of silicic acid. Esters of silicic acid and polysilicic acid. Colloidal silica. Amorphous silica gels and powders. Colloidal silicates. Surface chemistry of silica and silicates. Silica in living organisms. Author index. Subject index.

Note: This book is broad survey of the current scientific knowledge of silica and silicates in the colloidal state. Considerable technology on such matters as the preparation of silica sols is included also. Many sections are essentially literature abstracts and long bibliographies f the journal and patent literature, to which statements in the text are keyed, are a feature. The book is addressed to readers with considerable education in chemistry To chemists who are newcomers to silicat chemistry it will serve both as an introduction to the subject and guide to the literature. Some specialists also will find its broad view valuable.

MCBAIN, JAMES W

Colloid science. New York Reinhold Publishing Corporation, 1950 450 p illus. 24 cm. $10 00 1455

Contents Emulsions and foams. Sorption The effective depth of surfaces. The preparation of colloidal sols. Optical properties and study of colloids. Brownian movement. Ultrafiltration. The lyotropic series of ions. Viscosity, thixotropy and plasticity and dilatancy Jellies and gels. Coagulation, protective action, and sensitization. Electrical and electrokinetic phenomena. Diffusion. Osmotic pressure and membrane equilibrium. Ultracentrifuges and centrifuges. Soaps and other colloidal electrolytes. Solutions of proteins. Nonaqueous systems of colloids. X-ray and other methods of studying colloids and high polymers. Cellulose and its derivatives. Other natural polysaccharides. Natural and synthetic rubber. The proteins silk, wool, keratin collagen, and the globular proteins. Artificial polymers. Resins and plastics. Clay Aerosols. Author index. Chemical and compound index. Subject index.

Note. A well-organized and interesting presentation of basic knowledge of colloid phenomena, together with some discussion of its

applications. Though general and introductory the book contains enough substance to make it useful to any trained chemist in search of an introduction to the field. Each chapter is accompanied by long lists of references to which statements in the text are keyed. In addition, there are briefer lists of more general works on the subject of each chapter. The author index includes the names of authors of literature cited in the references.

McBain Mary Evelyn Laing and Eric Hutchinson

Solubilization and related phenomena. New York Academic Press, Inc. 1955 259 p. illus. 24 cm. (Physical chemistry a series of monographs edited by Eric Hutchinson) $7.00 1456

Contents: Historical background. Solubilization as [illegible] sorption phenomenon. The properties of colloidal electrolytes. Data and facts of solubilization. The mechanism of solubilization. Co-solvency blending, and hydrotropy Physiological aspects of solubilization Some practical applications of solubilization. Appendixes: The theory of light scattering. The behavior of polysoaps. Author index. Subject index.

Note: The addition of soap or [illegible] synthetic detergent to water increases its power to take up dirt. This change is due to the formation of [illegible] colloid by the soap or synthetic detergent. The dirt, insoluble in plain water is sorbed by the colloid. The process is important, not only in cleaning but also in the manufacture of synthetic rubber, the dyeing of textiles, and other applications. Although it contains [illegible] short chapter on applications, this book is actually [illegible] monograph on the pertinent theoretical knowledge. The literature of the subject (including the authors' own contributions) has been surveyed, and the published results and theories are presented critically The authors do not hesitate to indicate [illegible] their own views do not coincide with more-or-less widely accepted ones, for instance, "throughout this book we have thrown out warnings that these conclusions [based on light scattering measurements] may be misleading and may even be incorrect." The writing is on [illegible] graduate level, and the book is of interest to chemists in several fields, including biochemistry polymer chemistry and various areas of industrial chemistry

Marshall Charles Edmund

The colloid chemistry of the silicate minerals. New York Academic Press, Inc., 1949 195 p. illus. 24 cm. (Agronomy a series of monographs. Volume 1) $6.80 1457

Contents: Historical outline. Introduction to silicate structures. Silicates based on [illegible] three-dimensional framework. The colloidal properties of the zeolites. The structures of silicates with planar frameworks. The structural interpretation of chemical analyses of the clay minerals. The sizes and shapes of clay particles. The optical properties of clay aggregates and suspensions. Adsorption by the clays and its consequences. Clay acids and their titration curves. Ionic exchange reactions of the clays. Electrokinetic properties of the clays. The mechanical properties of clay suspensions, gels and pastes The properties of clay aggregates and films. Author index. Subject index.

Note: A monographic survey of the colloid chemistry of clays and other minerals containing [illegible] major proportion of silica. It is of interest to the ceramic industry and other industries which use clays, as well as to agriculture. The presentation stresses the basic knowledge and experimental results. The chapters are accompanied by extensive reference lists. The author is Professor of Soils in the University of Missouri, and is well known for his contributions to the knowledge of the clays.

Weiser, Harry Boyer

A textbook of colloid chemistry Second edition. New York John Wiley & Sons, Inc. 1949 444 p. illus. 24 cm. $6 75 1458

Contents (abridged): Part 1, Adsorption. Surface tension and adsorption. General characteristics of adsorption of gas or vapor. Mechanism of the adsorption of gas or vapor. Adsorption of liquid by solid, wetting. Adsorption from solution of non-electrolytes and weak electrolytes. Adsorption from solution of strong electrolytes. Adsorption of liquid by liquid. Part 11, Sols: Formation of sols. Purification of sols. The optical properties of sols. The kinetic properties of sols. Electrokinetic and electrochemical properties of sols. The stability of hydrophilic sols. Part 111, Gels. Part IV, Emulsions and foams. Part [illegible] Aerosols and solid sols. Part VI, Applications of colloid chemical principles to contact catalysis and dyeing. Index of authors. Index of subjects.

Note: An introductory textbook, [illegible]ich is also [illegible] convenient survey and reference manual for working chemists [illegible] ho are not specialists in colloid chemistry Not only are the main concepts and phenomena explained clearly but [illegible] considerable body of the pertinent literature is digested. The index of [illegible] uthors cited contains approximately 800 names. The organization and general content of this edition are essentially the same as the first edition ([illegible]) but [illegible] numerous revisions have been made throughout the text and in the bibliographies.

ELECTROCHEMISTRY

Creighton Henry Jermain Maude and W A Koehler

Principles and applications of electrochemistry New York John Wiley & Sons Inc., 1943–44 2 v illus 21 cm Vol. 1 $7.50 vol. 11, $8.00 1459

Contents (abridged): Volume 1, Principles of [illegible]ectrochemistry by H. J. Creighton. Faraday' laws of electrolysis. The theory of electrolytic dissociation. The migration [illegible] ions. Electrokinetic phenomena. Electromotive force Polarization and electrolysis. Theories of strong electrolytes. Heterogeneous equilibria. The dissociation of water Hydrolysis. The [illegible]idity of acids and bases. The theory of neutralization indicators and its application to volumetric analysis. Ampholytes. Heterogeneous equilibria. The electrochemistry of gases. Index of names. Index of subjects. Volume 11, Applications of electrochemistry by W A. Koehler Economics of power generation. Primary cells. Secondary cells or storage batteries. Electroplating Electrorefining of metals. Electrometallurgy Electrolysis of [illegible] alt halides. Electrolytic oxidation and reduction. Electroanalysis. Electric furnaces. Electrodes. Miscellaneous electrochemical processes. Index of names. Index of subjects.

Note: A [illegible] udy of the principles and theory underlying electrochemistry and their application in industrial practice. Volume [illegible] is in its fourth edition and contains new sections concerning the structure and properties of the electric double layer streaming potentials, polarographic analysis, the Wien effect, and glow discharge analysis, as well as revision of the sections dealing with fused electrolytes, overvoltage, electrochemical reduction, and electrochemical action in gases. Volume 11, of [illegible]hich the latest edition is the second, includes revision of the material on electroplating, nickel-cadmium alkaline storage battery continuous tin strip plating, magnesium from sea water hydrogen peroxide manufacture new carbon [illegible] furnace, new phosphorus furnace and fluorescent lamps.

Delahay Paul

New instrumental methods in electrochemistry theory instrumentation, and applications to analytical and physical chemistry With a chapter on high frequency methods by Charles N Reilley Foreword by I. M Kolthoff New York Interscience Publishers 1954 437 p. illus. 24 cm. $11.50. 1460

Contents: Part one, Voltammetric and related methods. Review of electrochemical methods. Electrode potentials and kinetics of electrochemical reactions. Voltammetry and polarography at constant voltage—reversible processes—irreversible processes. Voltammetry and polarography at constant potential—kinetic and catalytic processes. Voltammetry and polarography with continuously changing potential. Voltammetry and polarography with periodically changing potential. Voltammetry at controlled current. Current-potential curves obtained in stirred solutions or with moving electrodes. Voltammetric titrations. Part two, Coulometry, electrolytic separations, and related methods: Current efficiency and degree of completion of electrode processes. Electrolysis at controlled potential and related methods. Electrolytic separations and related methods. Coulometry at controlled current. Part three, High-frequency methods. High-frequency methods, by C. N Reilley. Part four Instrumentation. Instrumentation in voltammetry and related methods. Instrumentation in voltammetric titrations. Instrumentation in electrolysis at controlled potential. Instrumentation in coulometry at controlled current. Appendixes: Special forms of the Kernst equation. Solution of some

of the boundary value problems of Chapter three. Author index. Subject index.

Note A critical review of a large group of recently developed physical and analytical chemical techniques based on the phenomena of electrochemistry The first chapter is a short but useful outline of the techniques covered at greater length in later chapters. Here, the historical development and basic principles are covered without resort to mathematics. In contrast, when the individual techniques are taken up again in later chapters, there is considerable emphasis on mathematical analysis. The chapter on kinetics of electrochemical reactions is a noteworthy statement of current knowledge, expressed largely in mathematical equations. Literature references are given in the form of footnotes, and the names of the authors of the cited papers are brought together in the author index, feature that facilitates finding of individual papers. The book is addressed to graduate analytical and physical chemists.

GLASSTONE, SAMUEL

An introduction to electrochemistry New York D Van Nostrand Company, Inc., 1942 557 p illus 23 cm. $7 00 1461

Contents. Introduction. Electrolytic conductance. The theory of electrolytic conductance. The migration f ions. Free energy and activity Reversible cells. Electrode potentials. Oxidation-reduction systems. Acids and bases. The determination of hydrogen ions. Neutralization and hydrolysis. Amphoteric electrolytes. Polarization and over-voltage. The deposition and corrosion of metals. Electrolytic oxidation and reduction. Electrokinetic phenomena.

Note In this textbook many topics in electrochemistry are explained from the standpoint of current ideas. The treatment is based upon four great developments of recent years the activity concept, the interionic attraction theory the proton-transfer theory f acids and bases, and the treatment of electrode reactions as rate processes. Upon this foundation the author has built a presentation of overvoltage, passivity, corrosion, deposition of metals, and other matters important in applied electrochemistry as well as the material commonly treated in theoretical work. A selection of problems accompanies each chapter

HARNED, HERBERT SPENCER, AND BENTON B OWEN

Physical chemistry of electrolytic solutions Second edition, revised and enlarged. New York Reinhold Publishing Corporation, 1950 645 p illus 23 cm. (American Chemical Society Monograph series) 1462

Contents (abridged) General thermodynamic introduction. Theory of thermodynamic properties of aqueous solutions. The theory of irreversible processes in electrolytic solutions. Numerical compilations of physical constants, characteristic slopes, and mathematical functions. Coulomb forces and ion association weak electrolytes frequency and field effects. The calculation of activity and osmotic coefficients from freezing points, boiling points, and vapor pressures. Hydrochloric acid. Polyvalent electrolytes. Mixtures of strong electrolytes. The ionization and thermodynamic properties of weak electrolytes. Appendices. Author index. Subject index.

Note An authoritative treatise in which are combined full discussions of theory experimental methods, and the behavior and properties of electrolytic solutions. A third edition was published in 1958 803 p., $20.00.

ROBINSON R. A, AND R H STOKES

Electrolyte solutions the measurement and interpretation of conductance, chemical potential and diffusion in solutions of simple electrolytes New York Academic Press Inc., 1955 512 p illus 23 cm $9 50 1463

Contents: List of principal symbols. Table of important constants Properties of ionizing solvents. Basic concepts and definitions. The state of the solute in electrolyte solutions. Ionic distribution functions and the potential. The measurement of conductivities and transport numbers. The limiting mobilities of ions. The variation of conductivities and transport numbers with concentration. The measurement of chemical potentials. The theoretical interpretation of chemical potentials. The measurement of diffusion coefficients. The theory of diffusion of electrolytes. Weak electrolytes. The 'strong' acids. Ion association. The thermodynamics of mixed electrolytes. Appendices. Index.

Note This book is an authoritative and useful survey of the principal areas of experimental and theoretical electrochemistry In it is presented a survey of the accumulated knowledge on conductance, chemical potential, and diffusion, together with fairly detailed accounts of experimental methods of measuring and otherwise investigating the basic phenomena. Literature references are included in the chapters. The appendices contain wide range of reference data, with references to the sources from which the data were drawn.

RADIOCHEMISTRY

CALVIN, MELVIN, AND OTHERS

Isotopic carbon, techniques in its measurement and chemical manipulation, by Melvin Calvin, Charles Heidelberger, James C. Reid, Bert M Tolbert, and Peter F Yankwich New York John Wiley & Sons, Inc., 1949 376 p illus 24 cm $9.25 1464

Contents: Production and properties of isotopic carbon. Measurement of carbon 13 Characteristics of carbon tracer radiations. Instruments for radioactivity measurement. Detectors for radioactivity measurements. Sample preparation. Vacuum techniques in organic chemistry Synthesis of carbon-labeled compounds. Criteria of purity. Degradation procedures. Biosynthetic methods. Appendices. Bibliography Author index. Subject index.

Note A reference book and laboratory manual for the use of scientists and technicians who are using isotopic carbon (C^{13} or C^{14}) in laboratory procedures. As indicated by the chapter titles, matters that apply generally to the manipulation of isotopic carbon—and to certain extent, other radioactive isotopes—are first considered, then in the ninth chapter procedures for the actual synthesis of labeled compounds are given. This chapter is 90 pages long, and it summarizes all of the syntheses which have been reported in the literature up to April, 1948. The appendices furnish information on dilution methods, efficiencies of counters, radioactivity assay in induction scheme for a closed system, and other topics. There are numerous bibliographical footnotes and an extensive bibliography

FRIEDLANDER, GERHART, AND JOSEPH W KENNEDY

Nuclear and radiochemistry Revised version of *Introduction to radiochemistry* New York John Wiley & Sons Inc. 1955 468 p. illus 24 cm $7 50 1465

Contents Radioactivity Atomic nuclei. Nuclear reactions Production and study of nuclear reactions. Equations of radioactive decay and growth. Nuclear states and radioactive processes. Interaction of radiations with matter Radiation detection and measurement. Statistical considerations in radioactivity measurements. Techniques for the study of radionuclides. Tracers in chemical applications. Nuclear energy Some cosmic problems. Appendices. Name index. Subject index.

Note An introductory text addressed primarily to advanced undergraduate and graduate students of chemistry It states the fundamental physical knowledge on radioactivity and atomic nuclei, expounds radioactive processes, covers the principles and methods of detection and measurement of radiation, and outlines the use of radioactive isotopes as tracers in chemical investigations. The treatment is more descriptive than mathematical, but the authors have assumed that the reader will be able to read graphs, solve algebraic equations, etc. The book is suitable for home reading by chemistry graduates who desire grasp of the elementary basic knowledge of nuclear science and radiochemistry The first edition was published in 1949 Most chapters of this second edition are considerably revised. In addition, the final chapters on nuclear energy and cosmic aspects of radioactivity are new Literature references have been revised, and there is some new illustrative material.

UNITED STATES ATOMIC ENERGY COMMISSION

Isotopes an eight year summary of distribution and utilization with bibliography

Washington, D. C. Government Printing Office 1955 357 p. illus. 26 cm. $2.00. 1466

Contents: Introduction. Principles of isotope utilization. Medical and biological research. Medical diagnosis. Medical therapy. Agricultural studies. Physical and chemical research. Industrial uses. Available materials and services. Technical services and training opportunities. Appendices: Special sources of information on isotopes. Chronological outline of development of isotopes distribution program. Statistics on isotope distribution. Extent of chief medical uses of radioisotopes. Bibliography. Abbreviations used in bibliography. Author index for bibliography.

Note: An official résumé of isotope utilization during the first eight and one-half years of the United States Atomic Energy Commission's distribution program. It summarizes the uses that have been developed in various fields of research and industry, outlines the principles of each use, and provides information on radioactive materials and special services, such as encapsulation of radioisotope sources, available from the United States Atomic Energy Commission. The appendix section is the larger part of the book, and it provides reference information of the types indicated in the appendix titles quoted above. The bibliography, which is a classified list of more than 3,000 literature references published during the three and one-half year period ending February 1955, is a major feature of the appendix section. This publication partly supplements and partly supersedes a three-year summary and a five-year summary bearing the same title, published in 1949 and 1951.

WAHL, ARTHUR CHARLES, AND NORMAN A. BONNER editors

Radioactivity applied to chemistry. New York John Wiley & Sons, Inc., 1951 604 p. 24 cm. $10.50 1467

Contents (abridged): Part I: Introduction. Isotopic exchange reactions, by O. E. Myers and R. J. Prestwood. Radioactivity applied to chemical kinetics, by C. E. Crompton. Radioactivity applied to structural chemistry, by V. J. Linnenbom. Radioactivity applied to self-diffusion studies, by J. H. Wang. Radioactivity applied to analytical chemistry, by V. J. Linnenbom. Behavior of carrier-free tracers, by N. A. Bonner and M. Kahn. Radioactivity applied to the discovery and investigation of the newer elements, by C. D. Coryell. Chemical phenomena accompanying nuclear reactions ([illegible] chemistry) by J. W. Barnes and others. Emanation methods, by A. C. Wahl. Radioactivity applied to surface determinations, by J. H. Wang. Part II: Tables. Appendices. Bibliography. Index.

Note: A comprehensive survey written on the professional level. It is based on literature searches that were designed to cover all of the published literature pertinent to the subject published in American journals through 1949 and in foreign journals to various dates in 1949. The published information has been summarized in essay form in the signed chapters in Part I, and presented in tabular form in 13 tables in Part II. Source publications are cited in both parts.

THE EARTH

GEOPHYSICS AND GEODESY

ADVANCES IN GEOPHYSICS Edited by H. E Landsberg Volume 1 Editorial advisory committee Bernhard Haurwitz, Walter D Lambert, James B Macelwane and Roger Revelle. New York Academic Press, Inc., 1952 362 p illus 24 cm. $8 50 1468

Contents Automatic processing of geophysical data, by J C. Bellamy Some new statistical techniques in geophysics, by A. Court. Studies of the general circulation of the atmosphere, by B. Bolin. Exploration of the upper atmosphere by meteoritic techniques, by F L. Whipple. Unsolved problems in physics of the high atmosphere by N C. Gerson. Estuarine hydrography by D W Pritchard. The earth s gravitational field and its exploitation, by G. P Woollard. Aeromagnetic surveying, by J R. Balsley Author index. Subject index.

—— Volume 2 Editorial advisory committee Bernhard Haurwitz and others New York Academic Press, Inc., 1955 286 p illus 24 cm. $7 50 1469

Contents Advances in radar weather by J S. Marshall and others. Methods of objective weather forecasting, by I. I. Gringorten. Wind generated gravity waves, by W J Pierson, Jr Geological chronometry by radioactive methods, by J L. Kulp. Earthquake seismographs and associated instruments, by H. Benioff. Author index. Subject index.

Note The purpose of this series is to present periodically monographic reviews of the current status and of recent developments in the various areas of geophysics. Each monograph is based largely on published literature and is accompanied by an extensive list of citations. The first two volumes in the series contain the reviews whose authors and titles are listed above.

BALDWIN, RALPH BELKNAP

The face of the moon Chicago The University of Chicago Press 1949 239 p illus. 25 cm $5 00 1470

Contents Scientists look at the moon. Surface features. Suggested crater-forming processes. Terrestrial meteoritic craters. Fossil terrestrial meteorite craters. Relationships. Correlations. Evaluation The lunar atmosphere. Ancient history The circular Maria. Other planets. Appendixes Derivation of the relationship between the distance of the moon and geologic time. The lunar tidal bulge as function of the moon's distance. The penetrating power of projectiles. The diameters of the meteorites which produced the craters. Bibliography Index.

Note. The greater part of this significant book is devoted to evidence in support of the theory which holds that the craters visible on the surface of the moon were made by explosions resulting from the impact of meteors. Other hypotheses, particularly those which attempt to explain the craters on the basis of volcanic action, are examined, and their faults are pointed out. Much interesting information is included on related topics, such as the question of whether the moon has an atmosphere and the history and characteristics of craters on the earth which appear to have a meteoritic origin. *The work is addressed to both scientists and laymen.* The author made no obvious effort to avoid technical terminology but both his subject and style are suited to serious general readers who are attracted to modern science.

CARNEGIE INSTITUTION OF WASHINGTON DEPARTMENT OF TERRESTRIAL MAGNETISM

Description of the earth s main magnetic field and its secular change, 1905–1945 By E H. Vestine, L Laporte, I Lange, C. Cooper, and W C. Hendrix. Washington, D C. Carnegie Institution of Washington, 1948. 532 p illus 28 cm. (Carnegie Institution of Washington Publication 578) $2 75 1471

Contents: Introduction. Preliminary description of the earth's surface magnetic field. Preparation of tables for reduction to epoch. Method of reduction of magnetic observations. Graphs of selected observatory and survey-station values. Isoporic charts, 1912.5, 1922.5 1932.5 and 1942.5 all elements. Main-field charts, epoch 1945. Literature cited.

Note In tables, graphs, maps, and text, this volume presents data summarizing a world-wide descriptive study of the earth's main magnetic field and its secular change for the period 1905–1945. Many published observations of magnetic surveys on land and sea are here fitted into a consistent picture. A feature of the volume is the set of world-charts descriptive of secular change drawn complete in all magnetic elements for four different epochs, each a decade apart, affording information regarding the deep-seated, rapid, and mysterious physical processes of the earth's interior not known to be reflected in any other way

CARNEGIE INSTITUTION OF WASHINGTON DEPARTMENT OF TERRESTRIAL MAGNETISM

Earth-current results at Tucson Magnetic Observatory, 1932–1942, by W J Rooney Washington, D C Carnegie Institution of Washington, 1949 309 p illus. 28 cm. (Carnegie Institution of Washington Publication 175 Researches of the Department of Terrestrial Magnetism Vol IX) $2.25 1472

Contents. Details of site and apparatus. Reduction of records. Discussion of results. General considerations. The solar diurnal variation. Relation to solar activity Seasonal changes. Comparison with magnetic records. Variations with periods longer than one day Lunar diurnal variations. *Literature cited.* Tables 1–311.

Note: The greater part of this volume consists of a series of tables in which are given the hourly mean values of earth-current potentials, arranged by month, for the years indicated. Apparatus used and methods of registering the potentials are described in the introductory chapters. The data were assembled as a joint project of the United States Coast and Geodetic Survey and the Bell Telephone Company

CARNEGIE INSTITUTION OF WASHINGTON

I Ionospheric research at College, Alaska, July, 1941—June 1946 by S L. Seaton, H H Wells and L. V Berkner II Auroral research at College, Alaska, 1941–1944, by S L Seaton and C. W Malich Washington, D C. Carnegie Institution of Washington, 1947 397 p. illus. 28 cm (Carnegie Institution of Washington. Publication 175 Researches of the Department of Terrestrial Magnetism. Volume XII) $2.35 1473

—— Ionspheric research at Huancayo Observatory Peru, January 1938–June, 1946 by H. W Wells and L. V Berkner Washington D C Carnegie Institution of Wash-

ington, 1947 449 p. illus. 28 cm. (Carnegie Institution of Washington. Publication 175 Researches of the Department of Terrestrial Magnetism. Volume xi) $2.50 1474

—— Ionospheric research at Watheroo Observatory Western Australia, June 1938–June, 1946, by L. V Berkner and H. W Wells. Washington, D C. Carnegie Institution of Washington, 1948. 425 p. illus. 28 cm. (Carnegie Institution of Washington. Publication 175 Researches of the Department of Terrestrial Magnetism. Volume xiii) $2.50. 1475

Note These volumes consist chiefly of tabulated data obtained at observatories geographically remote from each other. The investigations were carried on and the results published in order to facilitate further study of the ionosphere and related phenomena.

CARNEGIE INSTITUTION OF WASHINGTON

Magnetic results from Huancayo Observatory Peru, 1922–1935 and 1936–1944 by H. F Johnston, A. G. McNish, S E. Forbush, W E. Scott, Ella Balsam, and P G Ledig. Washington, D C Carnegie Institution of Washington, 1948. 2 v illus. 28 cm. (Carnegie Institution of Washington. Publication 175 Researches of the Department of Terrestrial Magnetism. Volume x A, x B) Vol. x A, $3.75 vol. x B $2.50. 1476

—— Department of Terrestrial Magnetism, Carnegie Institution of Washington, January 1945–June 1947 Instituto Geofísico de Huancayo July–December 1947 By P G Ledig, A. A. Giesecke, Jr., W. C. Parkinson, W E. Scott, and Ella Balsam. Washington D C. Carnegie Institution of Washington 1951 127 p. illus. 28 cm. (Carnegie Institution of Washington. Publication 175 Researches of the Department of Terrestrial Magnetism. Volume x-C) $1.50. 1477

—— Magnetic results from Watheroo Observatory Western Australia, 1919–1935 and 1936–1944 by J A. Fleming, H. F Johnston, A. G. McNish, S E. Forbush, and W E. Scott. Washington, D C. Carnegie Institution of Washington, 1947 2 v illus. 28 cm. (Carnegie Institution of Washington. Publication 175 Researches of the Department of Terrestrial Magnetism. Volume vii-A, vii B) Vol. vii A, $5.25 vol. vii B o.p. 1478

—— January 1945–June 1947 Australian Commonwealth, Bureau of Geology Geophysics and Mineral Resources, July–December 1947 Compiled, edited and interpreted by W C. Parkinson, F W Wood, W E. Scott, and Ella Balsam. Washington, D C. Carnegie Institution of Washington, 1951 127 p. illus 28 cm. (Carnegie Institution of Washington. Publication 175 Researches of the Department of Terrestrial Magnetism. Volume vii-C) $1.50 1479

Contents. Explanatory text Introduction. Description of instruments. Constants of the magnetographs. Absolute observations and variometer base-line values. Basic hourly values and associated means. Summary of monthly means. Summary of annual means. Magnetic disturbances and sudden commencements. Literature cited. Tables. Observatory staff from 1945 to 1947 Monthly mean and range in temperature. [illegible]. Observed H scale values [illegible] and adopted values of [illegible]. Summary of daily Z scale-value determinations with [illegible] 1945-1947 Observed base-line values for the D variometer and respective adopted values. Abrupt changes in the adopted D base-line value. Observed base-line values at 25°C for the H variometer and respective adopted values. Abrupt changes in the adopted H base-line value. Observed base-line values at 25°C for the Z variometer and respective adopted values. Abrupt changes in the adopted Z base-line value. Summary of monthly means for 1945 to 1947 Summary of annual means for 1919 to 1947 Magnetic disturbances and sudden commencements 1945 to 1947 Hourly mean values of declination, horizontal intensity and vertical intensity 1945 to 1947

Note Data gathered as part of a carefully planned long-range program of investigation of terrestrial magnetism are presented in these volumes. The contents given above for Volume vii-C are typical of the volumes in the series.

CLARKE, FRANK WIGGLESWORTH

The data of geochemistry Fifth edition. Washington, D C. Government Printing Office 1924 841 p. 23 cm. (United States. Geological Survey Bulletin 770) $3.50 1480

Contents: Introduction. The chemical elements. The atmosphere. Lakes and rivers. The ocean. The waters of closed basins. Mineral wells and springs. Saline residues. Volcanic gases and sublimates. The molten magma. Rock-forming minerals. Igneous rocks. The decomposition of rocks. Sedimentary and detrital rocks. Metamorphic rocks. Metallic ores. The natural hydrocarbons. Coal. Index.

Note Though published many years ago, this work is still used as a standard reference book on the chemical composition of the atmosphere, the waters of the earth, volcanic gases, and the solid materials of the earth's crust. The data presented were taken from the international literature, and references are given to source publications. The index, which covers both authors and subjects, is a detailed one. First published in 1908, the work reached its fifth revised edition in 1924 There have been no changes since, but it has been reprinted several times, and is still available, at the price noted above.

FRANKLIN INSTITUTE

Earth satellites as research vehicles. Proceedings of the Symposium held April 18 1956 at The Franklin Institute in Philadelphia. Philadelphia Franklin Institute, 1956 115 p. illus 24 cm. (Journal of the Franklin Institute. Monographs. No. 2) $2.50. 1481

Contents: Introductory remarks, by [illegible] and [illegible]. The International Geophysical Year earth satellite program, by H. E. Newell, Jr. The launch vehicle, by [illegible]. Astronomical and space-medical research with unmanned satellites, by K. A. Ehricke. Astrophysical research with an artificial satellite, by L. Spitzer, Jr. The effect of the earth's oblateness and atmosphere on a satellite orbit, by [illegible]. [illegible] artificial celestial navigation system, by L. Lawrence, Jr. Recovery of data in physical form, by R. W. Porter.

Note A considerable range of information about scientific uses of artificial earth satellites and about Project Vanguard is provided in this collection of papers and discussion. Participants in the symposium that produced the volume included some of the most eminent scientists working on earth satellites, and some of the information presented had not been published previously. The style of most of the papers is only moderately technical, thus making the collection an informative one for general readers and nonspecialists who possess the requisite knowledge of physical terminology.

GAMOW, GEORGE

Biography of the earth its past, present, and future. New York The Viking Press, 1941 242 p illus 22 cm $3 00 1482

Contents (abridged): The age of the earth. The blessed event. The earth bears a daughter The family of planets. Journey to the centre of the earth. The rise and fall of the mountains. The evolution of continents. Climates of the past. Life on the earth. A glimpse into the future. Index.

Note A well-written story of the evolution of the earth designed for the layman interested in science.

GUTENBERG, BENO, editor

Internal constitution of the earth. Second edition New York Dover Publications, Inc., 1951 439 p illus 24 cm. $5 50 1483

Contents Introduction by B Gutenberg. The origin of the solar system, by H. Jeffreys. Relevant facts and inferences from field geology by R. A Daly Elastic properties of materials of the earth crust, by L. H. Adams. The chemical and petrological nature f the earth s crest, by H. S. Washington and L. H. Adams. Observed temperatures in the earth s crest, by C. E. Van Orstrand. The cooling f the earth and the temperature in its interior by B. Gutenberg. Forces in the earth by B Gutenberg. Hypotheses on the development of the earth by B Gutenberg. Evidence on the interior of the earth derived from seismic sources, by J B. Macelwane. Evidence from deep-focus earthquakes, by B Gutenberg and C F Richter Structure of the crust—continents and oceans, by B Gutenberg and C F Richter Density gravity pressure and ellipticity in the interior of the earth, by W D Lambert and F W Darling. The elastic constants in the interior l the earth, by B. Gutenberg. Strain characteristics f the earth's interior by H. Benioff and B. Gutenberg. Summary by B Gutenberg. Appendix. Author index. Subject index.

Note A basic work on geophysics which was published originally as Volume VII f the *National Research Council's Physics f the earth*, Washington, D C., 1939 In preparing this edition—the manuscript of which was apparently completed in 1949—all but two of the chapters have been expanded or extensively rewritten.

HOSMER, GEORGE LEONARD

Geodesy, including astronomical observations, gravity measurements, and method of least squares. Second edition, revised and enlarged New York John Wiley and Sons, Inc. 1930 461 p illus 23 cm $8 75 1484

Contents. Geodesy and geodetic surveying. Triangulation. Baselines. Field-work of triangulation. Measurement of horizontal angles. Astronomical observations. Properties of the spheroid. Calculation of triangulation. Calculation of geodetic positions. Figure of the earth. Gravity measurements. Precise, or first-order leveling. Trigonometric leveling Map projections. Application of method of least squares to the adjustment of triangulation. Appendix. Index.

Note. This textbook emphasizes the theory as well as the practical details of field work. The material includes more detail than can actually be covered in course of moderate length, the purpose being to give the student broad outlook and encourage him to pursue the subject further Methods of observing and computing have been brought into conformity with current U.S. Coast and Geodetic Survey practice. The chapters on astronomy and least squares are intended only as introductions to the standard works. A knowledge of first-year college mathematics is assumed. Short reference lists are given after three of the chapters, and collection of useful formulas and tables is included in the appendix. Principal changes in the second edition cover ew designs for theodolites, vertical collimators, rods, other instruments, and towers, the use of radio signals for determining longitude, and the addition of Clarke's formulas for geodetic positions.

KUIPER, GERARD PETER, editor

The atmospheres of the earth and planets Revised edition. Chicago The University of Chicago Press 1952 434 p illus 24 cm. $8 50 1485

Contents Introduction, by G. P Kuiper On the nature of the general circulation of the lower atmosphere, by C. G. Rossby Scattering in the atmospheres of the earth and planets, by H. C van de Hulst. The upper atmosphere studied from rockets, by J L. Greenstein and others. Seasonal variations in the density of the upper atmosphere by F L. Whipple and others. The spectra of the night sky and the aurora, by P Swings and A. B. Meinel. The terrestrial atmosphere above 100 km., by L. Spitzer, Jr. Geological evidence on the evolution of the earth s atmosphere, by R. T. Chamberlin Rare gases and the formation f the earth s atmosphere, by H. Brown. Selected topics in the infrared spectroscopy of the solar system, by A. Adel. On the presence of atmospheric gases from infrared telluric bands, by M. V Migeotte. Spectroscopic observations of the planets at Mount Wilson, by T Dunham, Jr Planetary atmospheres and their origin, by G. P Kuiper. Laboratory absorption spectra obtained with long paths, by G. Herzberg. Appendix. Index.

Note A collection of papers which were originally prepared for the Symposium on Planetary Atmospheres held at the University of Chicago in September 1947 in connection with the 50th anniversary of the Yerkes Observatory Among the authors are prominent meteorologists, astrophysicists, and specialists in upper atmosphere research. Some of the experimental methods and results reported were not published previous to the appearance of this volume. In all of the papers the presentation is technical; hence, the volume is of primary usefulness only to persons with scientific education pertinent to the field. The first edition appeared in 1949. For the present edition, most of the authors revised their chapters, and some made very substantial revisions.

LANGE, ISABELLE, AND S E FORBUSH

Cosmic ray results from Huancayo Observatory, Peru, June, 1936–December, 1946, including summaries from observatories at Cheltenham, Christchurch, and Godhavn through 1946 Washington, D C. Carnegie Institution of Washington, 1948 182 p. illus. 28 cm. (Carnegie Institution of Washington. Publication 175 Department of Terrestrial Magnetism Researches of the Department of Terrestrial Magnetism. Vol. XIV) $1.50. 1486

Contents Introduction. Cosmic-ray meter installation. Description of cosmic-ray meter Absolute ionization. Reduction of data. Description of tables. Literature cited. Figures 1 12. Tables. Bibliography of published papers of analyses of data from Compton-Bennett cosmic-ray meters.

Note. The major portion of this publication consists of 87 tables presenting daily records of the results of cosmic-ray measurements made between 1936 and 1946 with precision meters installed at magnetic observatories in Peru, Maryland, New Zealand, and Greenland. The tables are arranged one or two to a page. The preliminary text contains descriptions of the methods of collecting the data as well as descriptions of the contents f the tables.

LEY, WILLY

The days of creation New York Modern Age Books, 1941 275 p illus 22 cm. $2.75 1487

Contents The first day "Let there be light. The second day The division of the waters. The third day The conquest of land The fourth day The great new invention. The fifth day The triumph of the reptiles. The sixth day The glory of the mammals. The seventh day The consolidation of brainpower Index.

Note: A popularized account of the evolution of the earth and of the development of life on the planet, written in an informal style for the layman, and based on survey of scientific literature. A comparison is made between the story of the creation in *Genesis* and the scientific account f evolution and geologic development.

MASON, BRIAN

Principles of geochemistry New York John Wiley & Sons Inc. 1952 276 p. illus. 24 cm $6 00 1488

Contents: Introduction. The earth in relation to the universe. The structure and composition of the earth. Some thermodynamics and crystal chemistry Magmatism and igneous rocks. Sedimentation

ous and sedimentary rocks. The hydrosphere. The atmosphere. The biosphere. Metamorphism and metamorphic rocks. The geochemical cycle. Index.

Note: The author states that in this work, "The aim has been to summarize the significant facts and ideas concerning the chemistry of the earth and to synthesize these data into a coherent account of the physical and chemical evolution of the earth." The chapter titles fail to indicate the chemical emphasis. For example, the chapter on the hydrosphere is organized under the following subheads: The composition of sea water. The composition of terrestrial waters. The balance of dissolved matter in sea water. The history and evolution of the ocean, and it contains 6 tables of chemical data. The level of treatment is introductory to this field, but readers need a background in basic chemistry, physics, and geology. The author is a member of the faculty of the Department of Geology of Indiana University.

PHYSICS AND CHEMISTRY OF THE EARTH 1. Editors L. H. Ahrens Kalervo Rankama, and S K. Runcorn New York Pergamon Press, Inc., 1956 317 p. 24 cm. $8.00 1489

Contents: The origin of the solar system, by H. S. Jones. Temperatures within the earth, by J. Verhoogen. Radioactive methods for determining geological age, by L. H. Ahrens. Seismology and the broad structure of the earth's interior, by K. E. Bullen. The hydrodynamics of the earth's core, by R. Hide. Investigations under hydrothermal conditions, by R. Roy and O. F. Tuttle. The geochemistry of the halogens, by C. W. Correns. Geochemistry in the U.S.S.R. (1945–1953), by E. I. Tsuchiell. Name index. Subject index.

Note: The first volume published of a new annual series, the purpose of which is to present reviews of progress in the areas of scientific research embraced in geophysics and geochemistry. It contains the eight chapters whose authors and titles are given above. Each of the authors has presented a comprehensive survey of the current state of his topic; in other words, he has not limited himself to the published literature of the last year or even of the last two or three years. An extensive bibliography is a feature of each chapter. The series is addressed to graduate scientists.

SWICK, CLARENCE HERBERT

Pendulum gravity measurements and isostatic reductions. Washington, D C Government Printing Office, 1942 82 p. illus. 26 cm. (United States. Coast and Geodetic Survey Special publication no. 232) $0.60 1490

Contents: Brown pendulum apparatus. Gravity determination with pendulums. Computation of gravity results. Topographic and isostatic computations and reductions. Index.

Note: This publication supersedes Special publication no. 40, Modern methods for measuring the intensity of gravity, Washington, D. C., 1921, which related principally to the Mendenhall type of pendulum apparatus. In 1932 this apparatus was largely superseded by the Brown gravity apparatus, the principal consideration of which is to speed up the observations without any loss of accuracy. The manual includes a brief description of the Brown pendulum and of the corresponding methods and computations, including isostatic reductions.

THOMPSON, HENRY DEWEY

Fundamentals of earth science. New York D Appleton-Century-Crofts, Inc., 1947 461 p illus. 23 cm. (The Century earth science series Kirtley F Mather editor) $4.50 1491

Contents: Editor's introduction. Scope, methods and historical development of earth science. The earth as a planet. Origin and age of the earth. General composition, structure and processes of the earth. Maps, diagrams and photographs. The elements of weather and climate. Climatic controls. Climatic types. Weathering. The work of streams. The cycle of stream erosion. Ground water. Glaciers and glaciation. Wind work. Lakes and swamps. The oceans and its shores. Minerals. Volcanism. Igneous rocks. Sedimentary rocks. Metamorphism and metamorphic rocks. Movements and structures of the lithosphere. Earthquakes. Landforms. A short sketch of earth history. Useful aspects of earth science. Appendix: Subdivisions of earth science. Publications dealing with earth science. Index.

Note: A college textbook designed for a one-semester freshman course and intended to acquaint the student with the natural processes that are responsible for the structure of the earth and the changes that are constantly taking place in its physical aspects. In addition to geology and physical geography, basic ideas in meteorology, climatology, oceanography, geomorphology, mineralogy and geophysics are discussed in this connection. Commonly accepted, up-to-date knowledge is presented in a clear straightforward manner suitable for beginners but with no effort to popularize or to catch the attention of the layman.

UNITED STATES COAST AND GEODETIC SURVEY

Directions for magnetic measurements by Daniel L. Hazard. Third (1930) edition, corrected 1938 Washington D C. Government Printing Office 1938 129 p. illus. 23 cm. (United States. Coast and Geodetic Survey Serial no 166) $1.00 1492

Contents: Introduction. Bibliography. Theory of magnetic measurements. Directions for magnetic observations on land. Directions for observations at sea. Operation of a magnetic observatory. Earthquakes.

Note: This publication is intended primarily as a manual for the guidance of officers of the Coast and Geodetic Survey doing work in terrestrial magnetism, but is valuable to workers in similar organizations as well. The subject matter is presented in such form that an observer familiar with the use of instruments of precision, but without experience in magnetic work, may be able to make the various observations incident to the determination of the magnetic elements. The third edition omits the detailed directions for the operation of a magnetic observatory given in the second edition, but incorporates the results of accumulated experience in the field obtained during 1921 1931.

UNITED STATES. COAST AND GEODETIC SURVEY

Formulas and tables for the computation of geodetic positions. Seventh edition. Washington, D C. Government Printing Office, 1933 101 p 29 cm. (United States. Coast and Geodetic Survey Special publication no. 8) $0.50 1493

Contents: Introductory remarks. Selection of triangles. Spherical excess. Number of decimal places in angles and lengths. Computation of differences of latitude, longitude and azimuth. Examples of computation. Tables. Constants for the reference spheroid. Appendix.

Note: The main table (71 p.) gives logarithmic values of the factors, which depend on the dimensions of the reference spheroid and the latitude for each degree and minute of latitude from the equator to 72. Formulas are given for the computation of differences of latitude, longitude, and azimuth employing these factors, arranged to give the results in seconds of arc. The appendix contains a historical account of the development of the formulas and their relation to Bessel and Clarke spheroids and to the International ellipsoid. The changes in the seventh edition are outlined in the introductory material.

UNITED STATES COAST AND GEODETIC SURVEY

Formulas and tables for computation of geodetic positions on the International Ellipsoid, by Walter D Lambert and Clarence H. Swick. Washington, D C Government Printing Office, 1935 120 p. illus. 23 cm. (United States. Coast and Geodetic Survey Special publication no. 200) $0 40 1494

Contents: Introduction. The International Ellipsoid of Reference. Selection of triangles. Spherical excess. Number of decimal places in angles and lengths. Computation of differences of latitude, longitude, and azimuth. Arc-sine correction. Examples of computation. Tables.

Note. Although the U. S. Coast and Geodetic Survey uses the Clarke spheroid of 1866 for geographic purposes, the present tables based on the International Ellipsoid of Reference are offered for computations of positions in experimental and scientific work and for the use of other geodetic organizations and individual geodesists. The ellipsoid was adopted in 1924 by the Association of Geodesy of the International Union of Geodesy and Geophysics, and the tables published by that Association in 1928 are used as a basis for the present work. A collection of formulas and number of illustrative examples are included.

UNITED STATES COAST AND GEODETIC SURVEY

Manual of harmonic analysis and prediction of tides, by Paul Schureman. Revised (1940) edition Washington, D C Government Printing Office, 1941 317 p illus 23 cm. (United States Coast and Geodetic Survey Special publication no 98) $1 00 1495

Content (abridged) Introduction. Development of tide-producing force. Analysis of observations. Prediction of tides. Tables. Explanation of symbols. Index.

Note: This volume was designed primarily as working manual for use in the United States Coast and Geodetic Survey and describes the procedure used in that Bureau for the harmonic analysis and prediction of tides and tidal currents. The first edition of the present work was published in 1924 In this revised edition there has been a rearrangement of the material in the first part of the volume to bring out more clearly the development of the tidal forces. Tables of astronomical data and other tables, which comprise about half of the book, and facilitate the computations have not been materially altered in the revised edition. There is a considerable amount of mathematical theory presented, together with sample calculations.

UNITED STATES COAST AND GEODETIC SURVEY

Manual of tide observations Revised (1941) edition Washington, D C. Government Printing Office, 1941 92 p illus 23 cm. (United States Coast and Geodetic Survey Special publication no 196) $0.30 1496

Contents Tide gages. Primary tide station. Secondary tide station. Tabulation and reduction. Temperature and density observations. Index.

Note This pamphlet contains instruction for the observations of tides and the usual reductions necessary for the determination of datum planes and the nonharmonic quantities published in the tide tables of the U.S. Coast and Geodetic Survey Directions for taking temperature and density observations are also included for the convenience of tide observers who take such observations in connection with their regular duties at tide stations. Corresponding instructions for tidal current observations are given in U.S. Coast and Geodetic Survey Special publication no. 215 titled *Manual of current observations* and the harmonic computations required for the prediction of tides and currents are described in Special publication no. 98 titled *Manual of harmonic analysis and prediction of tides.*

UNITED STATES COAST AND GEODETIC SURVEY

Tables for determining the form of the geoid and its indirect effect on gravity, by Walter D Lambert and Frederic W Darling Washington, D C Government Printing Office, 1936 130 p illus 23 cm. (United States Coast and Geodetic Survey Special publication no 199) $0 15 1497

Contents: Fundamental tables. Density of compensation for computing special Bowie tables. Bowie isostatic reduction tables. Determination of the geoid from gravity anomalies. Miscellaneous tables. Index.

Note These are essentially tables of the numerical values of the Newtonian gravitational potential for elements of volume of finite size in polar co-ordinates in space, density being unit. They are intended to facilitate the solution of problems involving the deviation of the geoid from the spheroid of reference, with special reference to the intensity of gravity One set of tables gives values for determining the form of the geoid in terms of the function proposed by Stokes in 1849 while a second set provides data for determining the effect on the form of the geoid of various distributions of matter and the consequent effect on gravity at the geoid surface. A large portion of the latter set is devoted to the computation of general or fundamental tables of the Cassinis type for the warping of a level surface corresponding to assumed distributions or transfers of mass.

UNITED STATES COAST AND GEODETIC SURVEY

United States magnetic tables and magnetic charts for 1945 By Samuel A. Deel and H Herbert Howe Washington, D C. Government Printing Office, 1948 137 p. illus. 23 cm 1498

Contents Errata in Serial 602 Introduction. Magnetic surveys. Secular change. Discussion of main table of data (table 5) Values for 1945 at stations not listed in table 5 Magnetic charts. Tables.

Note The fifth in series of publications issued approximately every 10 years. The series presents the collected results of magnetic observations in the United States of America. The present volume contains the observed values at stations occupied too late to be included in the preceding volume of the series—that which presented the observations for 1935 and was published in 1938. The present volume presents also all observations of the Coast and Geodetic Survey useful for deriving secular change. Four tables present data on the following distribution of magnetic stations in the United States of America secular change of declination; and secular change of horizontal intensity The fifth principal table is arranged by states, and it presents the observed values of magnetic elements and the corresponding values reduced to January 1, 1945 Furnished with the volume and folded in a pocket in the inside back cover are four colored charts entitled as follows. "Lines of equal vertical intensity for 1945 United States, "Lines of equal horizontal intensity for 1945 United States, "Isoclinic chart for 1945, United States, "Isogonic chart for 1945 United States, and "Changes of the magnetic elements from January 1 1935, to January 1 1945.

VAN ALLEN, JAMES A , editor

Scientific uses of earth satellites Ann Arbor University of Michigan Press, 1956 316 p illus 26 cm $10 00 1499

Contents. The orbit of small earth satellite, by R. J. Davis and others. Time available for the optical observation of an earth satellite, by J B. Zirker and others. Satellite tracking by electronic optical instrumentation, by H. J Merrill. Possibility of visual tracking of satellite, by D E. Hudson. Interpretation of observed perturbations on a minimal earth satellite, by J. L Sedwick, Jr Systems design considerations for satellite instrumentation, by L. G deBey Components for instrumentation of satellites, by H. K. Ziegler Experiments for measuring temperature, meteor penetration, and surface erosion of satellite vehicle, by H. E. LaGow Insolation of the upper atmosphere and of satellite, by P R. Gast. Satellite drag and air-density measurements, by L. M. Jones and F L. Bartman. On the determination of air density from a satellite, by L. Spitzer Jr Pressure and density measurements through partial pressures of atmospheric components at minimum satellite altitudes, by H. S. Sicinski and others. Meteorological measurements from satellite vehicle by W G. Stroud and W Nordberg. The radiative heat transfer of planet earth, by J. I F King. Visibility from satellite at high altitudes, by V J. Stakutis and J X. Brennan. A Lyman alpha experiment for the vanguard satellite, by T A. Chubb and others. A satellite experiment to determine the distribution of hydrogen in space by T A. Chubb and others. Ultraviolet stellar magnitudes, by R. J Davis. Quantitative intensity measurements in the extreme ultraviolet, by H. E. Hinteregger Cosmic-ray observations in earth satellites, by J A. Van Allen. Study of the arrival of auroral radiations, by J A. Van Allen. Proposed measurement of solar stream protons, by W H. Bennett. Exploring the atmosphere with satellite-borne magnetometer by E. H. Vestine. Measurements of the earth's magnetic field from satellite vehicle, by S. F Singer Satellite geomagnetic measurements, by J P Heppner. Geomagnetic in-

formation potentially available from satellites, by L. Katz. Ionospheric structure as determined by minimal artificial satellites, by W. W. Berning. Temperature and electron-density measurements in the ionosphere by Langmuir probe, by G. Hok and others. A satellite propagation experiment, by L. M. Hartman and R. P. Harland. Electromagnetic propagation studies with a satellite vehicle, by F. R. Dubin. Study of fine structure and irregularities of the ionosphere with rockets and satellites, by W. Pfister. Meteoric bombardment, by M. Dubin. Measurements of interplanetary dust, by E. P. Ney.

Note: A compilation of 33 papers presented at the 10th anniversary meeting of the Upper Atmosphere Rocket Research panel held at the University of Michigan in January 1956. As their titles indicate, the papers are devoted to specific uses for satellites and, of course, man-made satellites are intended. Generally speaking, the proposed uses are described in detail. Most of the authors are currently engaged in satellite development, upper atmosphere research and related fields, and the papers are addressed to scientists working in these fields or having scientific interests in them for other reasons. The majority of papers contain literature references. There is no volume index.

WALLIS, WILLIAM FISHER, AND J. W. GREEN

Land and ocean magnetic observations, 1927–1944 Washington, D. C. Carnegie Institution of Washington, 1947 243 p. illus. 28 cm. (Carnegie Institution of Washington. Publication 175 Researches of the Department of Terrestrial Magnetism. Volume VIII.) $1.75 1500

Contents: Summary of land work. Secular-variation stations. Descriptions of instruments. Magnetometers. Sine galvanometers. Dip circles and earth inductors. Reductions to standard instruments. Magnetic standards adopted. Magnetometer corrections. Inclinometer corrections. Methods of observation. Observers' field reports. Land magnetic observations. Explanatory remarks. Distribution of stations. Results of land magnetic observations, 1927–1944. Descriptions of stations. Ocean magnetic observations, Cruise VII of the *Carnegie*, 1928–1929.

Note: This volume continues the record of land magnetic observations given in Volumes I, II, IV, VI, and VII (1911–1927) of the same series. Volumes III and V (1917–1926) give the results of magnetic observations at sea on the *Galilee* and *Carnegie*. Volume VIII contains two extensive tables of magnetic results, one for land and one for the oceans, for the years 1927–1944. Methods, stations, instruments, and general particulars pertinent to the results are briefly summarized, but for further details the reader is directed to earlier volumes in the series, particularly to Volume VI for land work and to Volume [illegible] for ocean work.

WHIPPLE, FRED LAWRENCE

Earth, moon and planets Cambridge Mass. Harvard University Press, 1941 293 p. illus. 22 cm. (The Harvard books on astronomy, edited by Harlow Shapley and B. J. Bok) $4.75 1501

Contents: Introducing the planets. How the system holds together. Discoveries of Neptune and Pluto. Weights and measures. The earth. The earth as an abode for life. The moon's influence on the earth. Observing the moon. The nature of the moon. Jupiter, the dominating planet. The other giants—Saturn, Uranus and Neptune. The terrestrial planets—Pluto, Mercury and Venus. Mars. Origin and evolution. Appendices.

Note: This book presents in nontechnical language information about the planets, their atmospheres, and the possibilities for life outside the earth. Special attention is given to the problems of origin and evolution, particularly the origin of lunar craters and the evolution of the planets. Planetary motions and the working of Newton's law of gravitation are explained. The book contains [illegible] figures, more than half of which are actual photographs. Charts of the moon and Mars enable the reader to identify the more conspicuous markings seen in the photographs or through the telescope. A special feature of the book is the planet finder and the star charts which enable the reader to locate directly the planets in the sky at any time from the present through 1970.

GEOLOGY

GENERAL

ADAMS, FRANK DAWSON

The birth and development of the geological sciences New York Dover Publications, Inc., 1956 506 p illus 26 cm $2 00 1502

Contents Introduction. Bibliography and sources. Geological science in classical times. The conception of the universe in the Middle Ages. On the generation of stones. Medieval mineralogy. The birth of modern mineralogy and its development from Agricola to Werner and Berzelius. The birth of historical geology with the rise and fall of the Neptunian theory "Figured stones" and the birth of paleontology The origin of metals and their ores. The origin of mountains. Earthquakes and the nature of the interior of the earth. The origin of springs and rivers. Quaint stories and beliefs. Conclusion. Index.

Note A historical survey of the development of geological knowledge from the time of the early Greeks to the beginning of the 19th century The author has gone back to the original texts of some of the more distinguished writers of classical, medieval, and early modern times and has analyzed their explanations of geological phenomena. There is also an account of the birth of historical geology which took place with the rise and fall of the Neptunian theory toward the close of the 18th century and the emphasis which was then placed on a systematic study of the rocky strata of the earth. For the general reader as well as for the student of geology The edition listed above is a reprint of the original edition, Baltimore, 1938.

FAUL, HENRY, editor

Nuclear geology a symposium on nuclear phenomena in the earth sciences New York John Wiley and Sons Inc., 1954 414 p illus. 23 cm $7 00 1503

Contents Historical introduction, by J P Marble. Fundamental considerations, instruments, and techniques of detection and measurement, by F J Davis and others. Uranium and thorium, by E. S. Larsen, Jr and others. The abundance of potassium, by L. H. Ahrens. Rare gases and fission in nature, by H. Faul and H. G Thode. Heat from radioactivity by F Birch. Radiation damage and energy storage, by H D Holland and others. Hydrocarbons formed by the effects of radioactivity and their role in the origin of petroleum, by W L. Whitehead. Geophysical exploration by nuclear methods, by D. H. Johnson and others. Determination of absolute age, by P M. Hurley and others. The origin of the earth, by H. C. Urey Literature cited. Author index. Subject index.

Note Addressed to graduate students of geology and practicing geologists, this book is designed as an introduction to some of the implications and applications of nuclear physics in geology The first chapter is an elementary survey of the basic ideas of nuclear physics and an outline of techniques in this field. Several chapters summarize the accumulated knowledge on the abundance of radioactive minerals and related it to hypotheses regarding the ages of rocks. The chapter on geophysical exploration is a compact view of techniques based on nuclear physics which are useful in exploring for minerals, including petroleum. The final chapter provides a quick view of current theory and supporting evidence on the origin of the solar system, including the earth. Altogether there are 16 contributors, but not all of the contributors wrote complete chapters. Chapter II, for example was written by six authors, five of whom are covered anonymously by the phrase "and others" in the above table of contents. The book is not a comprehensive treatise, the most notable omission being the geology of stable isotopes. However it presents much information and a wide range of tabulated data of interest to the intended readers.

FENTON, CARROLL LANE, AND MILDRED ADAMS FENTON

Giants of geology Garden City Doubleday & Company, Inc., 1952 333 p illus. 22 cm $4 00 1504

Contents Fields and exhalations. Graybeard scorned deep Nile and ancient volcanoes. Geology by dictum. Those skeptical Ionians. Neptune versus Vulcan. Like goes with like. Knight of the "principles" The Cambrian conflict. Agassiz of the ice age. New science in a new world. Ex-convict professor Geologist at large. Immigrant innovator That a nation might grow Fossils or figments? Hugh Miller of the "Old Red." A great and good man. Railroads and new surveys. Canyon's conqueror Earth blisters and changing land. Law Lathe and Her Majesty's Survey Glaciers to galaxies. Sources and references. Index.

Note The lives and personalities of major contributors to the development of geological knowledge lend interest to what is essentially a popular account of the growth of geology The book is addressed to general readers and is a good example of scientific writing for this group. The narrative is supplemented by portraits and other illustrations of considerable interest. There are no bibliographical references in the text, but the list of "sources and references" at the end of the book is arranged in the same order as the chapters. The first edition was entitled *The story of the great geologists*

FOLSOM, FRANKLIN

Exploring American caves, their history, geology, lore and location A spelunker's guide. New York Crown Publishers, Inc., 1956 280 p illus 24 cm $5 00. 1505

Contents The origin of caves. Caves "living" and "dead." Life in caves. Mammals enter caves. Caves—a clue to human history. Mines, money and mystery. Caves go commercial. The first speleologists. Cowboy cavern. Cave-crawling scientists. Spelunking grows up. Bigger and tougher. What use is a cave? Cave mysteries. How to find a cave. "Stygian caves forlorn. Etiquette in the underworld and other keys to survival. "Spelunk junk." Spelunking specialties. A glossary of speleological terms. A directory of caves open to the public. Speleological societies in the United States. Grottoes of the National Speleological Society A sample cave field report form. Suggested reading list on caves and caving. Index.

Note A popular very readable book about the exploration of caves in the United States of America. Much of the information in it has been taken from the records and publications of the National Speleological Society and its members. Most of the space is given to the adventures and pleasures (and the dangers) of *spelunking* (literally cave-crawling) but the reader is also afforded a sound view of the scientific importance of caves. Inasmuch as the author read *Celebrated American caves*, by C. E. Mohr and H. N Sloane, described below in galley proof and endeavored to avoid duplicating information presented in it, this book is complementary to that one.

GEOLOGICAL SOCIETY OF AMERICA

Bibliography and index of geology exclusive of North America. *Volume 13, 1948* By Marie Siegrist and Eleanor Tatge. New York The Geological Society of America, 1949 386 p 26 cm. $3 25 1506

—— *Volume 14, 1949* By Marie Siegrist. New York The Geological Society of America, 1950 375 p 26 cm $3 00 1507

—— Volume 15 1950 By Marie Siegrist and Marcia Lakeman. New York The Geological Society of America, 1951 429 p. 26 cm. $3.00. 1508

—— Volume 16 1951 By Marie Siegrist, Mary C. Grier Marcia Lakeman. New York The Geological Society of America, 1952 462 p. 26 cm. $4.50 1509

—— Volume 17 1952 By Marie Siegrist, Mary C. Grier Marcia Lakeman. New York The Geological Society of America, 1954 621 p 26 cm. $5 75 1510

—— Volume 18 1953 By Marie Siegrist, Mary C. Grier Marcia Lakeman. New York The Geological Society of America, 1954 599 p. 26 cm. $5.50. 1511

—— Volume 19 1954 By Marie Siegrist Mary C. Grier and others. New York The Geological Society of America, 1955 689 p. 26 cm. $7.50. 1512

Note: A standard, annual guide to the international literature on the geology of the world exclusive of North America, which is covered by the United States Geological Survey's *Bibliography of North American geology*, described below. The arrangement of each volume is by author, with a detailed subject index. Titles in the Cyrillic alphabet are transliterated. Most of the entries are accompanied by a short annotation which indicates the scope or content of the work. The increasing volume of international geological literature has resulted in the accumulation of unindexed backlogs in recent years' issues, several annual volumes no longer cover all of the year's output of literature. The foreword to the last volume noted above contains the following statement on this subject: "This compilation cites as much of the literature received in the Library of the U S Geological Survey and the Library of Congress prior to February 10, 1955, as it has been possible to cover. Due to the abnormally large number of publications received since the closing dates of preceding compilations, and to a variety of other circumstances, it has not been possible to cite and annotate all the material received during the past few years. Annotated titles for such material will be given in succeeding volumes of the bibliography."

GEOLOGICAL SOCIETY OF AMERICA

Geology 1888–1938 fiftieth anniversary volume. New York Geological Society of America, 1941 5 8 p illus. 26 cm. $3.00. 1513

Contents: Physiography by K. Bryan. Glacial geology by R. F. Flint. Oceanography by H. C. Stetson. Invertebrate paleontology by P. E. Raymond. Vertebrate paleontology by A. S. Romer. Prehistoric archeology by C. Stock. Paleobotany by E. W. Berry. Stratigraphy by R. C. Moore. Sedimentation, by P. D. Trask. Structural geology by R. D. Reed. Pre-Cambrian, by M. E. Wilson. Mineralogy by E. H. Kraus. Petrology by A. Knopf. Volcanology by H. Williams. Geochemistry by E. S. Larsen. Geodesy and geophysics, by H. E. Merwin. Seismology by B. Gutenberg. Ore deposits, by L. C. Graton. Petroleum geology by W. B. Heroy. Exploratory geophysics, by D. C. Barton. Engineering geology by W. J. Mead.

Note: A comprehensive volume reviewing the progress of geology in the 50 years of the existence of the Geological Society of America, intended for the investigator or advanced student who wants to know how the science of geology has taken on its present form, and for the specialist desiring a review of his particular field. Each subject is treated from the historical standpoint and covers the development of modern techniques in measurement and investigation. Future work is outlined, and there are lists of references under each chapter.

GILLISPIE CHARLES COULSTON

Genesis and geology a study in the relations of scientific thought, natural theology and social opinion in Great Britain 1790–1850 Cambridge Mass Harvard University Press, 1951 315 p. 22 cm. (Harvard historical studies published under the direction of the Department of History Vol. LVIII) $4 50 1513A

Contents: Through nature up to nature. God, Kirwan and the flood. From vulcanism to paleontology. Catastrophist geology. The uniformity of nature. The vestiges of creation. How useful is thy dwelling place. The place of providence in nature. Bibliographical essay. Notes. Index.

Note: A study of an interesting chapter in the development of geology in particular and of scientific thought in general. It is largely limited to the efforts of scientists themselves to reconcile theology with science. The author states: "… having decided that the issues discussed arose from a quasi-theological frame of mind within science, I have written from that point of view and have excluded the purely clerical opponents of science as a whole." The author shows that the geologists of the time were true forebears of Darwin and that they prepared the stage for the controversy over *Origin of species*. The "Bibliographical essay" is a running account of sources, significant works, popular scientific works, scientific societies, and periodicals.

HUEBNER, WALTER

Geology and allied sciences a thesaurus and a coordination of English and German specific and general terms Part 1 German English New York Liberal Arts Press 1939 405 p. 21 cm. $7.50 1514

Contents: Preface. General remarks on German and English spelling used in the thesaurus. Explanation of signs. List of abbreviations. Thesaurus. Table of comparative nomenclature of "Cambrian" and "Tertiary."

Note: An attempt to coordinate the American and English with the German terminology in regard to geologic work. More than 35,000 entries in each language are provided, with attention to peculiarities of local use of terms in both languages. Abbreviations used in international geologic literature are included, and also names of authors, especially authors on Paleontology. Commercial terms are omitted, and only the more common mining terms are included.

KELLER, WALTER DAVID

The principles of chemical weathering. An integrated review of the principles of chemical weathering as taken from the literature and the relation of weathering to certain aspects of geology pedology and civilization. Columbia, Mo Lucas Brothers, 1955 88 p. illus. 28 cm. $3.00 1515

Contents: Introduction. Definitions of weathering. Places where weathering occurs. Participants in the weathering reaction. Ionic classification of silicate minerals. Processes and agents of chemical weathering. Equations describing the chemical weathering of rocks. Mechanisms of weathering. Response of the common elements in the weathering process. The minerals from weathered rocks. End and environmental products of weathering. The soluble products of weathering. Anions in weathered products. Chemical weathering of organic rock materials. Economic products of chemical weathering. References. Appendix: Formulas of minerals discussed in this book. Index.

Note: A textbook and review bringing together much information on the principles and mechanisms of chemical weathering and providing a bibliography of selected articles on the subject. Since it is considered the geologic process closest to the life of man, the topic is treated as of fundamental importance to students of geology, mineralogy, soils, and ceramics, and of broad interest in other fields of science and in some of the humanities. Written for use at the undergraduate level, the text can also serve as a useful guide to the more advanced worker in this field.

GEOLOGY

GENERAL

ADAMS, FRANK DAWSON

The birth and development of the geological sciences New York Dover Publications, Inc., 1956 506 p illus 26 cm $2 00 1502

Contents Introduction. Bibliography and sources. Geological science in classical times. The conception of the universe in the Middle Ages. On the generation of stones. Medieval mineralogy. The birth of modern mineralogy and its development from Agricola to Werner and Berzelius. The birth of historical geology with the *rise and fall of the Neptunian theory* "Figured stones" and the birth of palaeontology. The origin of metals and their ores. The origin of mountains. Earthquakes and the nature of the interior of the earth. The origin of springs and rivers. Quaint stories and beliefs. Conclusion. Index.

Note A historical survey of the development of geological knowledge from the time of the early Greeks to the beginning of the 19th century. The author has gone back to the original texts of some of the more distinguished writers of classical, medieval, and early modern times and has analyzed their explanations of geological phenomena. There is also an account of the birth of historical geology which *took place with the rise and fall of the* Neptunian theory toward the close of the 18th century and the emphasis which was then placed on a systematic study of the rocky strata of the earth. For the general reader as well as for the student of geology. The edition listed above is a reprint of the original edition, Baltimore, 1938.

FAUL, HENRY, editor

Nuclear geology, a symposium on nuclear phenomena in the earth sciences. New York John Wiley and Sons, Inc, 1954 414 p illus 23 cm. $7 00 1503

Contents Historical introduction, by J P Marble. Fundamental considerations, instruments, and techniques of detection and measurement, by F J Davis and others. Uranium and thorium, by E. S. Larsen Jr and others. The abundance of potassium, by L. H. Ahrens. Rare gases and fission in nature, by H. Faul and H. G. Thode. Heat from radioactivity by F Birch. Radiation damage and energy storage, by H. D Holland and others. Hydrocarbons formed by the effects of radioactivity and their role in the origin of petroleum, by W L. Whitehead. Geophysical exploration by nuclear methods, by D H. Johnson and others Determination of absolute age, by P M. Hurley and others. The origin of the earth, by H. C. Urey Literature cited. Author index. Subject index.

Note Addressed to graduate students of geology and practicing geologists, this book is designed as an introduction to some of the implications and applications of nuclear physics in geology The first chapter is an elementary survey of the basic ideas of nuclear physics and an outline of techniques in this field. Several chapters summarize the accumulated knowledge on the abundance of radioactive minerals and relate it to hypotheses regarding the ages of rocks. The chapter on geophysical exploration is a compact view of techniques based on nuclear physics which are useful in exploring for minerals, including petroleum. The final chapter provides a quick view of current theory and supporting evidence on the origin of the solar system, including the earth. Altogether there are 26 contributors, but not all of the contributors wrote complete chapters. Chapter II, for example, was written by six authors, 5 of whom are covered anonymously by the phrase "and others" in the above table of contents. The book is not a comprehensive treatise, the most notable omission being the geology of stable isotopes. However, it presents much information and a wide range of tabulated data of interest to the intended readers.

FENTON, CARROLL LANE, AND MILDRED ADAMS FENTON

Giants of geology Garden City Doubleday & Company, Inc., *1952 333* p. illus. 22 cm. $4 00 1504

Contents Fluids and exhalations. Grappling around deep. New and ancient volcanoes. Geology by fiction. Those skeptical Ionians. Neptune versus Vulcan. Like goes with like. Knight of the "principles." The Cambrian conflict. Agassiz of the ice age. New science in new world. Ex-convict professor. Geologist at large. Immigrant innovator. That a nation might grow. Fossils or figments? Hugh Miller of the "Old Red." A great and good man. Railroads and *new surveys. Canyon's conqueror. Earth blisters and changing bed.* Law, Latin and Her Majesty's Survey. Glaciers to galaxies. Sources and references. Index.

Note: The lives and personalities of major contributors to the development of geological knowledge lend interest to what is essentially a popular account of the growth of geology. The book is addressed to general readers and is a good example of scientific writing *for this group. The narrative is supplemented by portraits and* other illustrations of considerable interest. There are no bibliographical references in the text, but the list of "sources and references" at the end of the book is arranged in the same order as the chapters. The first edition was entitled *The story of the great geologist*

FOLSOM, FRANKLIN

Exploring American caves, their history geology, lore and location A spelunker's guide. New York Crown Publishers, Inc., 1956 280 p illus. 24 cm $5 00 1505

Contents The origin of caves. Caves "living" and "dead." Life in caves. Mammals enter caves. Caves—a clue to human history. Mines, money and mayhem. Caves go commercial. The first speleologists. Cowboy cavers. Cave-crawling scientists. Spelunking grows up. Bigger and tougher. What use is a cave? Cave mysteries. How to find a cave. "Stygian caves forlorn. Etiquette in the underworld and other keys to survival. "Spelunk junk. Spelunking specialties. A glossary of speleological terms. A directory of caves open to the public. Speleological societies in the United States. Grottoes of the National Speleological Society A sample cave field report form. Suggested reading list on caves and caving. Index.

Note A popular very readable book about the exploration of caves in the United States of America. Much of the information in it has been taken from the records and publications of the National Speleological Society and its members. Most of the space *is given to the adventures and pleasures (and the dangers) of spelunking* (literally cave-crawling) but the reader is also afforded a sound view of the scientific importance of caves. Inasmuch as the author read *Celebrated American caves*, by C. E. Mohr and *H. N Sloane, described below* in galley proof and endeavored to avoid duplicating information presented in it, this book is complementary to that one.

GEOLOGICAL SOCIETY OF AMERICA

Bibliography and index of geology exclusive of North America. Volume *13 1948* By Marie Siegrist and Eleanor Tatge. New York *The Geological Society* of America, 1949 386 p 26 cm. $3 25 1506

—— Volume 14 1949 By Marie Siegrist. New York The Geological Society of America, *1950 375 p 26 cm.* $3 00 1507

mission of the American Association of Petroleum Geologists, with the addition of a review of advances in the field of study of recent marine sediments since 1939. This review includes a bibliography of about 500 titles of books and articles published 1939–54. Tulsa Society of Economic Paleontologists and Mineralogists 1955 736 p. illus. 22 cm. (Society of Economic Paleontologists and Mineralogists. Special publication no. 4) $5.00. 1521

Contents: Part 1, Transportation. Transportation of detritus by moving water, by F. Hjulström. Effects of transportation on sedimentary particles, by R. D. Russell. Part 2, Relation of oceanography to sedimentation. Physical processes in the ocean, by R. H. Fleming and R. Revelle. Biological oceanography, by H. W. Harvey. Part 3, Deposits associated with strand line. Mississippi River delta sedimentation, by R. J. Russell and R. D. Russell. Tidal lagoon sediments on the Mississippi delta, by W. C. Krumbein. Tidal flat deposits, by W. Häntzschel. Beaches, by J. H. C. Martens. Part 4, Near-shore sediments—terrigenous deposits. Continental shelf sediments, by F. P. Shepard. Summary of sedimentary conditions on the Continental Shelf off the east coast of the United States, by E. C. Stetson. Sediments off the California coast, by R. Revelle and F. P. Shepard. Florida and Bahama marine calcareous deposits, by E. M. Thorp. Sediments of the Baltic sea, by S. Gripenberg. Sediments of the North Sea, by K. Lüders. Petrological relations of the sediments of the southern North Sea, by C. H. Edelman. Sediments of the East Indian Archipelago, by P. H. Kuenen. Landlocked waters and the deposition of black muds, by K. Münster Strøm. Part 5, Pelagic deposits. Pelagic sediments of the North Atlantic Ocean, by C. W. Correns. Deep-sea sediments of the Indian Ocean, by W. Schott. Part 6, Special features of sediments. Rate of sedimentation of recent deep-sea sediments, by W. Schott. Occurrence and activity of bacteria in marine sediments, by C. E. ZoBell. Organic content of recent marine sediments, by P. D. Trask. Base exchange in relation to sediments, by W. P. Kelley. Properties of clay, by R. E. Grim. Iodine deposits in marine sediments, by O. E. Radczewski. Synopsis of glauconitization, by Jun-ichi Takahashi. Redox-diagenetic transformation and associated minerals, by E. W. Galliher. Fossil pellets in relation to marine deposits, by H. B. Moore. Part 7, Methods of study. General procedure in studies of recent sediments, by W. H. Twenhofel. Mechanical analysis, by S. Gripenberg. Graphic presentation and statistical analysis of sedimentary data, by W. C. Krumbein. Mineral analysis of sediments, by F. J. Pettijohn. Application of X-ray methods to the investigation of recent sediments, by M. Mehmel. Bottom-sampling apparatus, by J. L. Hough. Author index. Citation index. Subject index.

Note: A reprint of a work originally prepared under the direction of a subcommittee of the Committee on Sedimentation of the Division of Geology and Geography of the National Research Council and published by the American Association of Petroleum Geologists in 1939. The original work has been reprinted without change, but a 54-page section "Recent of progress in studies of recent marine sediments, 1939–1954" by Parker D. Trask, has been inserted at the front of the reprint volume. This inserted section summarizes the research work published since the original volume was prepared and published to the end of 1954. It contains also a comprehensive bibliography of the pertinent publications during these years and a subject index to this bibliography. The original papers, although written 15 years ago and more, are still of value to geologists.

Pearl, Richard Maxwell

Guide to geologic literature. New York McGraw Hill Book Company Inc., 1951 239 p. 24 cm. $5 75 1521A

Contents: Part I, Introduction. The problem of geologic literature. Conducting the search. Part II, Library technique. Arrangement of the library. Library catalogues. Indexing. Library services. Part III, Kinds of geologic literature. Index tables and bibliographies. Abstracts. Periodicals. United States government documents. Organization bulletins. State bulletins. County and city bulletins. Bulletins of other countries. Books. Newspapers. Theses. Unpublished manuscripts. Maps. Index.

Note: A reference manual which contains descriptions of the standard and useful geologic literature and advice on searching it for published information. Under each of the headings given above the utility of a specific class of literature is discussed briefly and the chief publications are named and briefly described. The scope has not been restricted to strictly geological books and journals, but journals that include information of interest to geologists along with information on other topics have also been included. Publications of only historical interest are described, along with those of value in current geological work.

Ray, Richard G

Photogeologic procedures in geologic interpretation and mapping. A discussion of the general categories of photogeologic procedures and photogrammetric instruments. Washington D C. Government Printing Office 1956 21 p. illus 23 cm (United States Geological Survey Bulletin 1043–A) $0.20 1521B

Contents: Introduction. Interpretation and notation of geologic data on photographs. Determination of quantitative geologic data from photographs. Planimetric base-map compilation. Transfer of geologic data from photographs to base maps. The ER 55 projector. Literature cited.

Note: During recent years, increasing use has been made of aerial photographs for geologic interpretation and mapping within the United States of America. This bulletin discusses the procedures employed, which pertain largely to vertical aerial photography. The photographic illustrations show equipment used in photogeology.

Reiche, Parry

A survey of weathering processes and products. Revised edition. Albuquerque University of New Mexico Press 1950 95 p illus 23 cm. (University of New Mexico publications in geology Stuart A. Northrop editor No 3) $1 00 1522

Contents: Introduction. Physical processes. Chemical processes and reagents. The results of chemical weathering. Soil-forming processes and soils. The factors of relief and time. Appendix. Bibliography.

Note: Essentially this work is a concise review of the current knowledge of the weathering of rock by chemical processes. Physical processes are outlined in the first chapter but are given comparatively little space. The treatment of the chemical processes assumes a knowledge of basic chemistry on the part of the reader. Although compact, the presentation is not so condensed that every reader will have to resort to the literature. A bibliography of 88 citations is included. The book is suitable for upperclass undergraduate college students who are majoring in geology and for college graduates doing work in geology or in related fields, such as the physics or chemistry of soils, where a general knowledge of weathering processes is useful.

Shuler, Ellis William

Rocks and rivers. New York Ronald Press Company 1945 300 p illus. 24 cm (Humanizing science series Jacques Cattell editor) $4 50 1523

Contents: A personal foreword. Earth stuff. The landscape has multiple minds. Carving the crust. Removing the waste. The hills. The sculptured lands. Springs. Caves, sinkholes, and natural bridges. Wind and sheets. The volcanic landscape. Perched boulders reveal an age of ice. How the rivers crossed the ridges. Lakes, waterfalls, and canyons. Mountains. The economic landscape. Time and change. Appendices: The landscape in art—Photographing the landscape. Index.

Note: An outstanding popular account of physical geology. The author himself an eminent geologist, has written the book from the viewpoint of a traveler without education in geology and not interested in studying it as a science but interested instead in understanding the landscape he sees. It is almost entirely free of scientific jargon and is not only easy to read but also interesting.

LAWRENCE, JOE, JR., AND ROGER W BRUCKER

The caves beyond, the story of the Floyd Collins' Crystal Cave exploration. By Joe Lawrence, jr, and Roger W Brucker for the National Speleological Society, New York Funk & Wagnalls Company, 1955 283 p illus 24 cm. $4 75 1516

Contents (abridged): Preparing for the assault, by J Lawrence, jr Penetrating the barrier by R. W Brucker Another barrier and caves beyond, by J Lawrence, jr Appendices Organization report, by J Lawrence, jr Medical report, by H. Wanger. Supply report, by A. E. Snell. Communications report, by R. L. Lutz. Geological report, by T C. Barr jr Meteorological report, by D N Cournoyer Biological report, by T C. Barr jr.

Note. An account of large well-organized exploration of caves adjacent to Crystal Cave in Kentucky Although new caves were discovered, the primary contribution was the experience of planning and managing speleological exploration engaging the services of many persons both above and below ground. The main part of the book is written in popular style with much emphasis on the drama and adventures of the undertaking. However 33 pages at the end of the volume are devoted to brief scientific reports.

MASON, BRIAN, compiler

The literature of geology New York Brian Mason, c/o The American Museum of Natural History, 1953 155 p 21 cm. $2 00 *1517*

Content Part I General. Abstracts. Bibliographies. Biographies. Data tables. Dictionaries. Directories. Glossaries. Selected references in specific fields. Part II Regional The world. North America. South America. Europe. Africa. Asia. Australia, New Zealand, Pacific Islands, Antarctica. Appendix Publications of the International Geological Congress, 1878–1952

Note A handbook listing the basic geological reference and text books with brief annotations. Part I is a classified list of the principal general publications on geology first the reference books and serials, then the books, including those in English, German, and French, in the following special fields economic geology general geology geochemistry geomorphology geophysics, history of geology mineralogy paleontology petrology sedimentation, stratigraphy and structural geology Part II is useful listing by country of the official publications of the various national geological surveys, their reports, bulletins, and geological maps, as well as the names of any books giving general accounts of the geology of the country under Canada and the United States the various provincial and stat geological surveys also are listed with brief accounts of their respective histories and publications. This bibliography should be useful not only to individual geologists but also to librarians charged with building or modernizing their collections in this field.

MOHR, CHARLES E, AND HOWARD N SLOANE editors

Celebrated American caves With a foreword by Alexander Wetmore. New Brunswick Rutgers University Press *1955 339* p illus 22 cm $5 00 1518

Contents: Introducing the American underworld, by W E. Davies. The devil's sinkhole by P J White. Cave of the vampires, by C. E. Mohr Assault on schoolhouse, by L V Sawtelle. The impossible pit, by R. W Brucker The miners' bathtub, by W R. Halliday Mammoth Cave underground wilderness, by H. W Lix. Medicine, miners and mummies, by H. N Sloane. *The Valley of Virginia*, by W E Davies. Carlsbad Caverns, by T H. Black. The death of Floyd Collins, by R. W Brucker Bones and railway by G. Nicholas. Earliest Americans, by F C. Hibben. Hidden skeletons of the mother lode, by W R *Halliday* Bats and bombs, by C. E. Mohr and bands, by C. E. Mohr The one who cries, by H. N Sloane. The idol of the cave, by M. R. Harrington. No eyes in the darkness, by W Bridges. Ozark cave life, by C. E. Mohr *The leather man*, by L. W Foote. The Cave in Rock murderers, by G. F Jackson. Mark Twain Cave, by H. N Sloane. *Lost footprints*, by G. F Jackson. Index.

Note Cave exploration rather than cave geology or zoology is the central theme of most of the chapters f this book, but there are exceptions. For instance, C. E. Mohr' article, "Ozark cave life," deals with the life forms found in the caves of the Ozark Mountains. History and legend associated with some caves is the theme of several articles. The book is not a scientific treatise on caves. Rather it is an anthology of interesting reading intended for laymen and amateur speleologists. Its compilation and publication were sponsored by the N tional Speleological Society

MOORE, RUTH

The earth we live on the story of geological discovery Drawings by Sue Allen New York Alfred A Knopf, 1956 416, l-x p illus 22 cm. $6 00 1519

Contents I. Myth and reason Gods, reason, and the earth Sed—of the flood and the earth. II. An unexpected past. Guettard—past of fire. Desmarest and Werner—fire versus water. Hutton—no sight of beginning or end. Cuvier—monsters and revolution. Agassiz—ice! Lyell—the changed and changing earth. III. Earth change Logan—an ancient core. Hall—mountains down. Powell—Grand Canyon. Dutton—mountains up. Chamberlin—ice, sun, and beginnings. IV Into invisible forces Urey—the origin of the earth. Jeffreys, Bullard, and Runcorn—the interior of the earth. Wilson—the growing continents. Waters—great and fiery outpourings. Goldschmidt and Mason—assortment of riches. Kulp—the age of the earth. Note on books and materials. Index.

Note: A popular account of the evolution of geological knowledge. The first two chapters are condensed accounts of mythological and biblical views of the earth's history The whole of the remainder is devoted to the gradual development of our present-day scientific knowledge of geology By presenting the story as a dramatic one, with many sidelights on the personalities of geological discoverers, the author has succeeded in conveying the many interesting facts of geology in a form palatable to general readers. *The list of sources* at the end of the book contains a discussion of a select list of general texts on geology and also a chapter-by-chapter listing of principle sources.

NATIONAL RESEARCH COUNCIL

Handbook of physical constants, edited by *Francis Birch chairman, J F* Schairer and H. Cecil Spicer New York Geological Society of America 1942 325 p. illus. 25 cm. (Geological Society of America. Special papers No 36) *$1 70* 1520

Contents Composition of igneous rocks, stony meteorites, and iron meteorites, by R. A. Daly and others. Density at room temperature and one atmosphere, by H. Berman and others Density at high temperatures thermal expansion, by E. B. Dane, jr Density at high pressure compressibility by F Birch. Elasticity (except compressibility) by F Birch. *Internal friction in vibrating* solids, by F Birch. Seismic velocities, by L. D Leet and F Birch Geodetic constants data concerning the interior of the earth, by F Birch. Strength and plasticity by D Griggs. Viscosity by F Birch and E. B. Dane, jr *Melting and transformation temperatures* of mineral and allied substances, by F C. Kracek. Effect of pressure on temperatures of melting and solid-solid equilibrium, in systems with one component, by F Birch. Effect of pressure on phase equilibria in binary condensed systems, by R. E. Gibson. Temperature-pressure-volume and phase relations of water by R. W Goranson. Aqueous inorganic salt solutions at high temperatures, by N B. Keevil. Heat capacity heat of fusion, by R. W Goranson. Radioactivity Thermal conductivity and diffusivity by F Birch. Radioactivity the earth's heat and geological age measurements, by R. D Evans and others. Observed temperatures in the earth's crust, by H. C Spicer Magnetic properties of rocks, by L. B. Slichter Electrical properties of rocks and minerals, by L. B. Slichter and M. Telkes. Index.

Note. A collection of tables of interest primarily to geologists, including brief introductions to the various tabulations explaining the use and limitations of the data. The subject of optical mineralogy is omitted, and manufactured materials such as porcelain, refractory bricks, and structural metals are omitted or treated very briefly Bibliographies are given under each section. The work was compiled under the direction of a committee of the National Research Council.

NATIONAL RESEARCH COUNCIL DIVISION OF GEOLOGY AND GEOGRAPHY

Recent marine sediments a symposium, edited by Parker D Trask Reprinted by per

of igneous rocks. Running water. Ground water. The ocean. Sedimentary rocks. Metamorphic rocks. Snow and ice. The wind. Structures and diastrophism. Earthquakes. Part II. Historical geology. Origin of the earth. The Paleozoic—Mississippian, Pennsylvanian and Permian periods. The Mesozoic era. Lower Mesozoic—Triassic period. Middle Mesozoic—Jurassic period. Upper Mesozoic—Cretaceous period. The Cenozoic era. The Pleistocene or glacial epoch. Index.

Note: A standard textbook for college courses offered to students who are not majoring in geology but need the subject for cultural background. It is clearly written and fully illustrated. The second edition was published in 1941. In the present edition changes have been made in both the text and illustrations. The chapters have been rearranged somewhat, and accounts of certain new developments of fairly broad interest, such as the birth of the volcano Paricutin, have been added. Because little technical terminology is used it has some utility as a survey and general reference work for lay readers.

CRONEIS, CAREY GARDINER AND WILLIAM C. KRUMBEIN

Down to earth an introduction to geology Decorative drawings by Chichi Lasley Chicago University of Chicago Press, 1936 501 p. illus. 23 cm. $7.00 1537

Contents: Introduction. Second-rate planet. Solid, liquid, and gas. Energy aside. The teeth of time. Winds and turbulent motion. Streams and valleys. The everlasting hills. Underground water and hidden flow. Rivers of ice. End of the ice. The boundless main. Flux and reflux. Excursions among the sand grains. Brief interludes. What price continents? Folds and faults. Earthquakes. Journey to the center of the earth. Vulcan's chimneys. Igneous intrusions. Frozen seas of lava. Heredity versus environment. The evolution of rocks. Ancient history. Universal cemetery. Correlation. Older floods. Mountains and climates. Vestiges of creation. Earth's birth. Gargantuan calendar. Pre-Cambrian. Life begins. Early Paleozoic events. Invertebrate heyday. Late Paleozoic events. The forest primeval. Crossing the strand. An earlier depression. Early Mesozoic events. End of an era. Medieval life. Megadinosaurs. Cephalopods. The Tertiary. The Quaternary. The warm-blooded. Homo sapiens, history and politics. Prospects of an end. Index.

Note: A "new plan" text at the University of Chicago. Geology is explained in its relationship to physics, chemistry, mathematics, and biology. The growth of the earth is traced, with the processes which have actively shaped its surface features.

DUNBAR, CARL OWEN

Historical geology New York John Wiley & Sons, Inc., 1949 567 p. illus. 24 cm. $6.95 1538

Contents: Prologue. Records in stone. The scale of time. Fossils, living record of the dead. The constant change of living things. Before the Cambrian. Origin of the earth. The Cryptozoic eon—pre-Cambrian history of the earth. The Paleozoic world. The Cambrian period. The Ordovician period. The Silurian period. The Devonian period. The Mississippian period. The Pennsylvanian period. The Permian period. ... crisis in earth history. The Mesozoic world. The Triassic period. The Jurassic period. Cretaceous time and the end of an era. The modern world unfolds. Physical history of the Cenozoic era. Ice sculptures the final scene. Mammals inherit the earth. The coming of man. Epilogue. Appendices. Index.

Note: This work is a revision of Textbook of geology, Part II, *Historical geology*, fourth edition, by the author and Charles Schuchert. Written for use in a beginning course in historical geology it offers a survey of the physical and biological changes on the earth from the earliest records to the time of prehistoric man, with emphasis on the North American continent. The text has been recast in parts, and recent advances in the field have been included. New publications have been added to the bibliographies. The book is profusely illustrated with photographs, maps, and diagrams, many of which are new.

EMMONS, WILLIAM H. AND OTHERS

Geology principles and processes. By William H. Emmons, George A. Thiel, Clinton R. Stauffer and Ira S. Allison. Fourth edition. New York McGraw-Hill Book Company Inc., 1955 638 p. illus. 24 cm. $6.75 1539

Contents: The scope and methods of geology. Gross features of the earth. Elements, compounds, minerals, rocks. Atmosphere, weather and climate. Rock weathering and soils. Wind as an agent of gradation. Ground water. Gradation by mass movement of surface materials. Rivers and valleys. Snow, ice, and valley glaciers. Piedmont and continental glaciers. Lakes and swamps, or marshes. The oceans—general features—ocean movements and their effects. Sedimentation and sedimentary rocks. Volcanic phenomena. Igneous rocks. Diastrophism and its resulting structures. Differential stream erosion and its effects. Mountains. Metamorphism. Earthquakes and the interior of the earth. Mineral resources. Appendices. Index.

Note: An established textbook, likely used in "cultural" courses offered to students who are not majoring in geology. Although a broad view of geological science is given, landscape features and geological processes that are easily observed are emphasized. The text is written in a simple style and is beautifully illustrated. The book can be recommended to lay readers who wish an informative account of geology suitable for reading without the guidance of an instructor. The third edition was published in 1949. In this fourth edition, the level of treatment and the plan of the book have not been materially changed, however numerous revisions have been made in both the text and illustrative material.

GARRELS, ROBERT MINARD

A textbook of geology New York Harper & Brothers 1951 511 p. illus. 24 cm. (Harper's geoscience series Carey Croneis editor) $6.00 1540

Contents (abridged): The general setting. Surface features of the earth. The problem of the history of the earth. Earth history from study of running water. Work of the waves. The work of the wind. The work of ice. The sedimentary rocks. Igneous rocks. Metamorphic rocks. Evidence of earth movement. The interior of the earth. Mechanics of earth movement. The origin of the earth. Fossilization. A survey of geologic history. The mechanism of evolution. The interpretation of geologic environments—reconstruction of typical area. The origin of man. Appendices: The use of graphs. Field identification of common igneous rock and minerals. Classification of plants and animals. Index.

Note: In this introductory college textbook the approach to the subject is analytical rather than descriptive. Such geological processes as wind erosion are treated first from the viewpoint of the physical principles and second with regard to the geological effects. Some mathematics is used, but it is relatively simple. The illustrations are numerous and of excellent quality. The author is on the staff of the U.S. Geological Survey.

GILLULY, JAMES AND OTHERS

Principles of geology By James Gilluly, Aaron C. Waters, and A. O. Woodford. Illustrations by Robert R. Compton. San Francisco W. H. Freeman & Company 1951 631 p. illus. 24 cm. $6.50 1541

Contents: Introduction. The earth's broad pattern. Gravity, isostasy, strength. Minerals. Rocks. Climates, weathering, and soils. Erosion. Geologic maps, fossils, and time. Movements of the earth's crust. Records of earth movement. Downslope movements of soil and rock. Stream erosion and deposition. Glaciers and glaciation. Ground water. Deserts. The oceans. Igneous activity. Earthquakes and the earth's interior. Mountains. Mineral resources. Appendices. Index.

Note: A general introductory textbook in which the emphasis is placed on geological processes rather than on rock classification, etc. Basic terms and concepts, such as isostasy, are explained with care. Also, the authors leave the accounts from time to time by including such material as the controversy over the origin of basalt. The text reads easily and the book is excellently illustrated.

HOLMES, CHAUNCEY D

Introduction to college geology New York The Macmillan Company 1949 429 p. illus. 22 cm. $5.25 1542

Contents: Earth records its own history. The planet earth. Minerals of the earth. Common igneous rocks and minerals. Sedimentary rocks and minerals. Archeozoic era. Proterozoic era. Paleozoic lands and seas. Some Paleozoic rocks and historic events. Paleozoic life in Cambrian—Silurian. Paleozoic life. Devonian—Permian. Background events of Mesozoic environment. Mesozoic life, reptiles—earth's other animals and plants during the reptilian reign. Survey of Cenozoic history. Cenozoic mammals. The ice age. The geologic history of man. Rivers and landscapes. Water beneath the land.

STOKES, WILLIAM LEE, AND DAVID J VARNES

Glossary of selected geologic terms with special reference to their use in engineering Denver Colorado Scientific Society, 1955 165 p 24 cm (Colorado Scientific Society Proceedings Vol 16) $3 50 1524

Contents Introduction Literature cited. Glossary of selected geologic terms.

Note A useful reference volume for engineers and others concerned with the meanings of geological terms. The glossary is an alphabetical list of about 2 470 words and phrases common in geological literature with scientific or technical definition of each. Beyond the definition itself many of the entries contain a paragraph or two of additional information which should prove of value to nongeological users of the volume. Included also are a few tables, as at the words *gradation screen* and *time scale* The work had the advantage of pre-publication review and criticism by several score geologists and engineers.

UNITED STATES GEOLOGICAL SURVEY

Bibliography of North American geology Volume 1, 1929–1939 By E M Thom Washington, D C. Government Printing Office 1944 1 vol in 2 pts 23 cm (United States Geological Survey Bulletin 937) $4.25 1525

—— Volume 2, 1940–1941 By E M Thom Washington D C Government Printing Office, 1942 479 p 23 cm (United States Geological Survey Bulletin 938) o p 1526

—— Volume 3 1942 and 1943 By E M Thom Washington D C Government Printing Office 1945 460 p 23 cm. (United States Geological Survey Bulletin 949) o p 1527

—— Volume 4 1944 and 1945 By E M Thom. Washington D C Government Printing Office 1947 496 p 23 cm. (United States. Geological Survey Bulletin 952) o p 1528

—— Volume 5 1946 and 1947 By E M Thom Marjorie Hooker and R. R. Dunaven. Washington, D C. Government Printing Office 1949 568 p 23 cm (United States. Geological Survey Bulletin 958) o p. 1529

—— Volume 6, 1948 By E M Thom M Hooker and R. R Dunaven Washington D C Government Printing Office 1950 309 p 23 cm. (United States. Geological Survey Bulletin 968) o p. 1530

—— Volume 7, 1949 By E M Thom M Hooker and R R. Dunaven Washington D C Government Printing Office 1951 273 p 23 cm (United States Geological Survey Bulletin 977) o p. 1531

—— Volume 8, 1950 By M Hooker Washington, D C Government Printing Office, 1952 394 p 23 cm (United States. Geological Survey Bulletin 985) $1.00 1532

—— Volume 9 1951 By R. R. King, V M Jussen, J S Pomeroy, and V L Skitsky Washington, D C. Government Printing Office, 1955 378 p 23 cm. (United States Geological Survey Bulletin 1025) $1.25 1533

—— Volume 10, 1952 and 1953 By R. R. King, V M Jussen, J S. Pomeroy and V L Skitsky Washington, D C Government Printing Office, 1956 23 cm (United States. Geological Survey Bulletin 1035) $2.00 1534

Note A continuing work, and itself continuation of Nickles *Bibliography of North American geology 1785–1918 and 1919–1928*, Washington, D C., 1924–25 and 1931 out of print. The work lists thousands of titles relating to North American geology including paleontology petrology and mineralogy published in the years 1919 to 1953 covering publications on the geology of the entire continent, including Greenland, the West Indies, the Hawaiian Islands, and Guam. It includes books, textbooks, papers published in transactions, and periodical articles. The entries, which are arranged alphabetically by author give full titles and publication details. The author lists are followed by extensive subject indexes giving detailed cross-references to the content of the literature cited. Lists of the serial publications analyzed are given in the front of the volumes.

WILMARTH, MARY GRACE

Lexicon of geologic names of the United States (including Alaska) (Also includes the names and ages, but not the definitions of the named geologic units of Canada, Mexico, the West Indies, Central America, and Hawaii) Washington, D C Government Printing Office 1938 2 v 23 cm (United States. Geological Survey Bulletin 896) $8 00 1535

Note A comprehensive lexicon in one alphabetical order providing ready reference for the geologist to the lithology thickness, age, underlying and overlying formations, and type locality of geologic formations in the regions indicated in the title. Each definition begins with the bibliographical citation of the report on which the definition is based. Due to the fact that many geologic names have been redefined, some of them several times during the history of their acceptance, the work contains more than one entry or definition for many of the names listed, accompanied by brief mention of divergent views regarding their usage. Definitions and re-definitions are given of only the units found in the United States and Alaska, but the names and current age designations of the geologic units of the continent of North America and Hawaii are also listed, together with citations to the publications in which they were first defined. A few widely used paleontologic names by which some units have been designated have also been listed along with the geographic names by which they are now known. Names and age assignments in current use by the United States Geological Survey are printed in bold-face type.

TEXTBOOKS

BRANSON, EDWIN BAYER AND W A TARR

Introduction to geology Third edition Revised by Carl C. Branson and W D Keller New York McGraw Hill Book Company Inc., 1952 492 p illus. 24 cm. $6 00 1536

Contents (abridged) Part 1, Physical geology: The organization of matter (of the earth) Volcanism and igneous rocks. Weathering

[illegible] is paid to the numerous practical aspects of geology, including its application in engineering projects such as dams, aqueducts, and tunnels. The work is based on the material contained in the authors' *A textbook of geology*, New York, 1939–41 and contains more illustrations but [illegible] shorter text than the earlier work.

LONGWELL, CHESTER RAY AND OTHERS

Physical geology by Chester R. Longwell Adolph Knopf and Richard F Flint. Third edition. New York John Wiley & Sons, Inc., 1948. 602 p. illus. 23 cm. $6.50. 1549

Contents: Geology, the science of the earth. The method and scope of geologic study. Weathering and its part in erosion. Mass-wasting at the earth's surface. Running water: Sculpture of the land by streams and mass-wasting. Subsurface water. Lakes and swamps. Glaciers and glaciation. Erosion and deposition by wind. Marine erosion and deposition. Sedimentary rocks. Igneous rocks. Volcanoes and volcanism. Deformation of the earth's crust. Earthquakes. Metamorphism. The earth's interior. The origin and history of mountains. Land forms. Mineral resources. Appendices. Index.

Note: An outstanding text that has been widely used in college courses since the publication of the first edition in 1932. It is commonly referred to as "The Yale geology" since the authors are members of the faculty of Yale University. A considerable number of changes have been made in this edition. The second chapter is new; various parts of other chapters have been rewritten or expanded, and many of the illustrations that appeared in the earlier editions have been replaced with better ones. No colored plates are used in the text, but a set of Kodachrome slides to accompany it in teaching is available from the publisher.

MILLER, WILLIAM JOHN

An introduction to historical geology with special reference to North America. Sixth edition. New York D Van Nostrand Company Inc., 1952 555 p. illus. 23 cm. $6.00. 1550

Contents: Introduction. Geologic time. Fossils. Organic evolution. [illegible] Relations of continents and ocean basins. Origin and pregeologic history of the earth. The earth's interior. The Archeozoic era. The Proterozoic era. The Cambrian period. The Ordovician period. The Silurian period. The Devonian period. The Mississippian period. The Pennsylvanian period. The Permian period. Paleozoic life. The Triassic period. The Jurassic period. The Cretaceous period. Mesozoic life. The Cenozoic era (including Pleistocene glaciation). Pleistocene glaciation. Cenozoic life. Appendix. Index.

Note: A widely used college textbook. It is designed for use in first courses in the subject offered to students who have had an introductory course in general geology. The fifth edition was published in 1942. In the preparation of this edition, substantial changes were made in both the text and illustrations. There are now 404 figures, including [illegible] number of reproductions of photographs.

MILLER, WILLIAM JOHN

An introduction to physical geology with special reference to North America. Fifth edition. New York D Van Nostrand Company Inc., 1949 482 p. illus. 24 cm. $3.50. 1551

Contents: Introduction. Materials of the earth [illegible]. Instability of the earth's crust—diastrophism. Structure of the earth's crust. Volcanoes. Rock weathering. The work of streams. Glaciers and their work. The work of the wind. The sea and its work. Subsurface water and its work. Mountains, plateaus, and plains. Lakes. Economic geology. Appendices: [illegible] and useful minerals. Selected references on physical geology. Index.

Note: A standard textbook for college students, the first edition of which appeared in 1924, and the fourth edition in 1941. It is distinguished by [illegible] clear readable style and many excellent illustrations.

MONNETT, VICTOR E., AND HOWARD E. BROWN

The principles of physical geology New York. Ginn and Company 1950. 450 p. illus. 24 cm. $5.50 1552

Contents: Geology: its meaning and methods. The earth, its materials and processes. Weathering. Transportation of weathered material as [illegible] result of gravitation. The work of running water. Ground water. Lakes and swamps. The atmosphere. Glaciers and their work. The oceans. Deformation of the rocks. Mountains. Volcanoes. Development of landscapes. Minerals. Rocks. The earth's mineral wealth. Geology, the servant and ally of man. Appendix: Basic facts about the earth. Important rock-forming minerals. Common rocks. Topographic maps (introduction and keys). Index.

Note: An elementary work addressed primarily to college students. However, it is written and illustrated in [illegible] manner that makes it readable to any literate person who is interested in landscape features and the processes that produced them. The style is lucid, and even when dealing with theoretical topics, the authors usually express themselves in concrete terms that are readily comprehensible by the average educated reader. Most of the illustrations are reproductions of excellent photographs. A special point is made of the value of large-scale topographic maps in the study of landscape features.

MOORE, RAYMOND CECIL

Historical geology New York McGraw Hill Book Company Inc., 1933 673 p. illus. 23 cm. $9.50 1553

Contents (abridged): Introduction. The pre-Cambrian eras. The Paleozoic [illegible] of ancient life. The early Paleozoic [illegible]. The late Paleozoic [illegible]. The Mesozoic era. The Cenozoic era. Selected references. Index.

Note: A textbook designed for use in introductory college courses. Its 33 chapters are arranged in seven parts [illegible] are listed above. Although the author is best known for his contributions to paleontology, more space is given in this book to the physical history of the earth's evolution and to rock formations than to paleontology. However, each of the sections except the first contains a chapter on the life of its time, and the discussion of the Cenozoic era ends with [illegible] chapter on the geologic history of man. The basic principles of interpreting the geologic record are developed on the basis of study of a definite region, the Grand Canyon region. The book contains more than 400 figures. At the time of its publication, the selected and classified list of references was [illegible] useful guide to further reading, but since there has been no new edition of the book, no recent [illegible] is listed.

MOORE, RAYMOND CECIL

Introduction to historical geology New York McGraw Hill Book Company Inc., 1949 582 p. illus 23 cm. $6.75 1554

Contents: Materials and methods of historical geology. Evolution of life. The beginning of the earth. The Pre-Cambrian period. The Cambrian period. The Ordovician period. The Silurian period. The Devonian period. The Mississippian period. The Pennsylvanian period. The Permian period. Nature and evolution of Paleozoic life. The Triassic period. The Jurassic period. The Cretaceous period. Nature and evolution of Mesozoic life. The Tertiary period. The Quaternary period. Nature and evolution of Cenozoic life. The geologic record of man. Appendix. Index.

Note: An introductory text for college students enrolled in courses in historical geology and for lay readers [illegible] to inform themselves about the past history of the world in which they live. It is written in simpler language, and principles rather than details are emphasized. The treatment is more elementary and more graphic than in the author's *Historical geology*, New York, 1933. The total number of illustrations, including maps, sections, diagrams, photographs of typical rock exposures, topographic features, characteristic fossils, and photographs of restorations, amounts to 344, each with descriptive comments. Most of the illustrations are original. There is [illegible] detailed index.

NEVIN, CHARLES MERRICK

Principles of structural geology Fourth edition. New York John Wiley & Sons, Inc., 1949 410 p. illus. 24 cm. $7.00 1555

Contents: Stress and strain relations. Physical properties of rocks. Flexures. Faults. Joints. Cleavage. Structures associated with igneous intrusion. Structures in unconsolidated sediments. Reflection of rock structure in the topography. Some facts, inferences, and hypotheses regarding the earth. Continents and ocean basins. Mountain systems. Laboratory exercises. Index.

Note: A standard college textbook which is noted for its concise but lucid discussion of the deformations of the earth that form the subject matter of dynamic and structural geology. Because it

Winds. Petroleum. Supplements: How to identify the common minerals. Rock identification. Index.

Note. A short, well-illustrated work in which the traditional division of the subject into physical geology and historical geology is avoided. The style is very readable hence, the book is suitable for general readers as well as college students.

HUSSEY, RUSSELL CLAUDIUS

Historical geology, the geologic history of North America. Second edition. New York McGraw Hill Book Company, Inc., 1947 465 p illus 23 cm. $6.25 1543

Content Introduction The origin of the earth. Organizing the geologic record. Fossils reveal the life of the past. The concept of evolution. The Archeozoic era. The Proterozoic era. The Paleozoic era (the Cambrian period) The Paleozoic era (the Ordovician period) The Paleozoic era (the Silurian period) The Paleozoic era (the Devonian period) The Paleozoic era (the Mississippian period) The Paleozoic era (the Pennsylvanian period) The Paleozoic era (the Permian period) The Mesozoic era (the Triassic period) The Mesozoic era (the Jurassic period) The Mesozoic era (the Cretaceous period) The Cenozoic era (the Tertiary period) The Cenozoic era (the Pleistocene epoch) Life of the Cenozoic. The geologic history of man Index.

Note A concise but clear survey suitable for cultural reading as well as in undergraduate college courses. The first edition was published in 1944 Numerous small revisions in text and illustrations were made in the second edition.

LANDES, KENNETH KNIGHT, AND RUSSELL C HUSSEY

Geology and man New York Prentice-Hall, Inc., 1948 518 p illus 24 cm $7 00 1544

Contents: Part I Introduction: The science of geology Earth materials. Part II, Geologic processes Work of the atmosphere. Ground water Running water Ice as a geologic agent. Direct action of gravity Oceans and lakes. Sedimentary rocks. Volcanism and igneous rocks. Diastrophism and its effects. Part III, Beneath the crust The earth's interior Part IV Earth history: Origin and age of the earth. The study of earth history The history of life on the earth. The geologic story of the earth. Part V, Practical applications The search for mineral deposits. Geology in engineering projects. Index.

Note A textbook for use in introductory courses in colleges. Physical geology is emphasized, but material is included from other branches also The subject is made especially interesting by emphasis on the effects of geological processes on man. Gradual processes such as erosion, soil formation, and the movement of ground water are discussed and in addition, there is good deal of description of catastrophic processes such as floods, hurricanes, and earthquakes. There are 188 figures, many of which are reproductions of photographs. The senior author's *Physical geology and man*, New York, Prentice-Hall, Inc., 1948 414 p., $5.00, is an abridged version of the same work with the material on historical geology omitted.

LEET, L DON, AND SHELDON JUDSON

Physical geology New York Prentice Hall, Inc 1954 466 p illus 26 cm. $7 00 1545

Contents The scope of physical geology Materials of the earth. Igneous rocks. Weathering and soils. Sedimentary rocks. Mass movement of surface material. Running water Underground water Glaciation. Work of the wind. The oceans. Rock mobility and mountain-building. Earthquakes and the earth's interior Igneous activity and metamorphism. The earth's age and place in the universe. Mineral deposits and fossil fuels. Glossary Appendices. Index.

Note An introductory book designed primarily as a text for freshman college students. It is generously illustrated, and the publisher has given it an attractive format. Probably few lay readers will be interested in tackling the whole book however such individual chapters as those on glaciation, earthquakes, and the age of the earth can be read independently of the others and are unsurpassed as authoritative expositions for nonspecialist readers. Professor Leet is Chairman of the Division of Geological Sciences of Harvard University and his co-author is Associate Professor of Zoology in the University of Wisconsin.

LOBECK, ARMIN KOHL

Geomorphology, an introduction to the study of landscapes New York McGraw Hill Book Company, Inc., 1939 731 p. illus. 24 cm $9 00 1546

Contents Introduction. Rocks and structures. Weathering. Underground water Streams in general. Young streams. Mature streams. Alpine glaciation. Continental glaciation. Waves. Wind. Organisms. Coastal plains. Plains and plateaus. Dome mountains. Block mountains. Folded mountains. Complex mountains. Volcanoes. Meteor craters.

Note. Systematically explains all types of landscapes in terms of their origin and stage of development. The first part of the book deals with the forms produced by destructive forces, such as streams, glaciers, waves, wind, and organisms, while the last part describes plains, plateaus, and the several kinds of mountains. Many photographs and diagrams, comprising about one-half of the volume, supplement the text.

LONGWELL, CHESTER RAY, AND RICHARD FOSTER FLINT

Introduction to physical geology New York John Wiley & Sons, Inc., 1955 432 p. illus 24 cm. $4 95 1547

Contents The science of the earth. A general view of the earth. Materials of the earth's crust. Geologic time. Igneous geology Weathering and soils. Mass-wasting. Running water Sculpture of the land by streams and mass-wasting. Ground water Lakes and basins. Glaciers and glaciation. Wind action and arid lands. The sea submarine geology Waves, currents, and the sculpture of coasts. Sedimentary rocks. Deformation of the earth's crust. Metamorphism. Earthquakes the earth's interior Mountains and geosynclines. Geology in industry Appendices. Index.

Note A college text written by two widely known authors of such books, members of the Yale University Department of Geology It is well organized and is adequately though not spectacularly illustrated. The style is much more readable than is typical of geology textbooks. In addition to its intended use, it is suitable for laymen who wish to acquire an elementary knowledge of physical geology so as to understand landscape features better or to be armed against acceptance of such folklore as the finding of water with the divining rod.

LONGWELL, CHESTER RAY, AND OTHERS

Outlines of geology A combination of *Outlines of physical geology*, by Chester R. Longwell, Adolph Knopf and Richard F Flint and *Outlines of historical geology* by Charles Schuchert and Carl O Dunbar Second edition New York John Wiley and Sons, Inc., 1941 672 p 24 cm. $7 95 1548

Contents: Part I, Outlines of physical geology Preview of geology Minerals and rocks. Weathering and mass-wasting. Running water. Sculpture by streams and mass-wasting. Subsurface water Lakes and swamps. Glaciers and glacial sculpture. Erosion and deposition by wind. The sea. Sediments and sedimentary rocks. Volcanism and deep-seated igneous action. Bending, fracturing, and metamorphism of rocks. Earthquakes the earth's interior Mountains and related land forms. Mineral resources. Geology and engineering. History the central theme of geology Topographic maps. Index. Part II, Outlines of historical geology Prologue Records in stone. The scale of time. The constant change of living things. A living record of the dead. Earth's changing features: Before the Cambrian. Glimpses of Paleozoic landscapes. The Mesozoic world. The modern world unfolds. Ice sculptures the final scene. The pageant of life Paleozoic inhabitants of the earth. The reign of reptiles. Mammals inherit the earth. The coming of man. An introduction to animals and plants. Index.

Note. Each of the parts which make up this combined volume is also published separately The present work is intended for use in short courses covering the whole field of elementary geology and while the two parts are still paged separately the authors state that in this second edition they have been welded together in a unified whole. Physical geology is explained as key to the reading of geologic history and an attempt is made to give the student or lay reader an appreciation of earth-features as the results of processes that are still active. Considerable at-

of Kentucky by A. C. McFarlan and W. H. White. Kentucky subsurface by C. D. Hunter

Note: The papers collected in this volume represent an attempt to assemble, chiefly for the benefit of petroleum geologists, the available information about the Ordovician rocks of the Appalachian basin, especially the Trenton and sub-Trenton. They reflect the current interest in the petroleum industry in the oil and gas potentialities of these strata. Full references are made to the related literature and the production records of wells already drilled in the Trenton.

ANDERSON ROBERT VAN VLECK

Geology in the coastal Atlas of western Algeria. New York The Geological Society of America, 1936 450 p. illus. 25 cm. (Geological Society of America. Memoir 4) $4.20 1562

Contents (abridged) Introduction. Geography General stratigraphic considerations. Pre-Cretaceous terranes. Cretaceous system. Eocene and Oligocene groups. Cartennian group. Tellian group. Marnal stage. Beida stage. Mellah stage; tuff beds of the Tellian group. Upper Miocene or Lower Pliocene beds. Pliocene series. Tafna stage. [illegible] stage. Hamel stage. Chylemath stage. Quaternary stages. Igneous rocks. Structure. Features of structural history. Index.

Note A study of the geology of an area of approximately 3,800 square miles along the Mediterranean coast. Numerous features of the general geology and geography are dealt with, but special emphasis is placed on [illegible] discussion of the Cenozoic stratigraphic sequence and structural history with particular reference to the Miocene and Pliocene periods. A geologic map on the scale of 1/200,000 is presented, showing in detail the distribution of the formations representing the latter periods.

ATWOOD WALLACE WALTER

The physiographic provinces of North America. Boston Ginn and Company 1940 537 p illus. (part col d) 24 cm. $7.25 1563

Contents: The regional idea in geography. The Atlantic and Gulf coastal plain. The Appalachian highlands—the New England-Acadian division. The Appalachian highlands—the Southeastern division. The Laurentian upland. The central lowlands. The interior highlands. The great plains. The Rocky Mountains. The Cordilleran plateaus. The Pacific borderlands. Index.

Note: Less detailed than some textbooks on the landscape geology of North America, this book is, nevertheless, [illegible] useful survey. It is organized into units of distinctive land surface as noted in the above contents. For each region the geomorphology, climatology, soils, and native vegetation are described. The illustrations, of which there are 351, are [illegible] principal feature. Most of them are clear reproductions of excellent photographs.

EARDLEY ARMAND JOHN

Structural geology of North America. New York Harper & Brothers, 1951 624 p. illus. (part col d) 22 cm. (Harper's geoscience series Carey Croneis editor) $13.50 1564

Contents (abridged) Structural terminology and classification. Stable interior of the continent. Paleozoic Cordilleran geosyncline. Appalachian Mountain systems. Eastern Triassic basins. Atlantic coastal plain. Ouachita, Marathon, and Coahuila systems. Wichita and ancestral Rockies systems and the Texas foreland. The late Paleozoic areas of faulting and cryptovolcanic structures. Mesozoic systems along the Pacific. Canadian and Montana Rockies. Idaho batholith. Central Rockies. Colorado and New Mexico Rockies. Rockies of northeastern Mexico. Coast ranges of the Pacific. Baja California and Sierra systems. Pacific submarine system. Antillean-Caribbean region. Bibliography. Index.

Note A compact but fairly detailed treatment of the structural evolution and present landscape features of the North American continent. The arrangement is by region, but even small areas are discussed if they are of special interest to the structural geologist. A series of 14 colored maps portrays the tectonic evolution of the continent from the Cambrian period to the late Cretaceous. The work is an outstanding contribution to geological literature. In the whole book there are 343 figures containing reproductions of about 730 maps and diagrams.

FENNEMAN, NEVIN MELANCTHON

Physiography of eastern United States. New York McGraw-Hill Book Company Inc., 1938. 714 p. illus. 23 cm $10.00 1565

Contents: Coastal plain province. Piedmont province. Blue Ridge province. Ridge and valley province. Appalachian plateaus province. New England province. Adirondack province. Interior low plateau province. Central lowland east of the Mississippi. The Superior upland. Central lowland west of the Mississippi. Ozark plateaus. Ouachita province.

Note: A standard description in the terms of geomorphology of the landscape features of continental United States of America including the Mississippi Valley and the regions east and of it. It describes the present features of this area and their geologic history. There are 197 figures and six folded maps.

FENNEMAN NEVIN MELANCTHON

Physiography of western United States. New York McGraw-Hill Book Company Inc. 1931 534 p illus. 23 cm. $9.00. 1566

Contents Great Plains province. Southern Rocky Mountain province. Wyoming basin. Middle Rocky Mountain province. Northern Rocky Mountain province. The Columbia plateau. Colorado plateau province. Basin and range province. Sierra Cascade province. Pacific border province.

Note A companion volume to the work described above. It is organized on the same plan and written in the same style but covers the landscape features of the western portion of continental United States of America.

GREGORY HERBERT E

Geology and geography of the Zion Park region, Utah and Arizona a comprehensive report on a scenic and historic region of the Southwest. Washington D C. Government Printing Office 1950 200 p. illus. (part col d) 29 cm. (United States. Geological Survey Professional paper 220) $2.50 1567

Contents: Introduction. Geography Location, extent, and accessibility. Historical sketch of southwestern Utah. Climate of southwestern Utah. Soil. Vegetation. Animals. Inhabitants. Sedimentary rocks. General stratigraphic relations. Permian formations. Erosion interval. Triassic formations. Jurassic formations. Cretaceous formations. Eocene interval. Tertiary formations. Quaternary formations. Stratigraphic sections. Igneous rocks. General features and relations. Volcanic areas. Structure. Regional features. Hurricane fault. Sevier fault. Minor faults and folds. Joints. Physiography: General features. Factors that influence erosion. Profiles and form of valleys. Features of individual valleys. Physiographic history. Physiographic features. Economic geology: Oil. Coal. Surface water. Ground water. Index.

Note Based upon detailed reconnaissance in the field during the years 1915–24, 1933, and 1934–38, this professional paper describes the geology and geography of 3,800 square miles of plateau and canyon lands in southwestern Utah and northwestern Arizona within and bordering Zion National Park. Accessible via Federal highways, it is [illegible] region of scenic beauty. The publication is illustrated by reproductions of more than 100 photographs and by five folded plates, two of which are large maps in color.

HEWETT D F

Geology and mineral resources of the Ivanpah quadrangle California and Nevada the geology of an area covering 3 900 square miles in the northeastern part of the Mojave Desert, including mountain ranges 6,000–7,000 feet in altitude. Washington, D C. Government Printing Office, 1956 172 p illus. 29 cm. (United States. Geological Survey Professional paper 275) $2 50 1568

Contents: Introduction. Geography. Geology: Orogenic epochs. Pre-Cambrian era. Paleozoic era. Mesozoic era. Post-Cambrian

is brief and because the language is semitechnical, the book is also suitable for general readers who are more than superficially interested in the subject. The most prominent change in the present edition is the addition of the section of laboratory exercises near the end of the book, but the whole work has been revised, and the type has been reset.

RICHARDS, HORACE G

Record of the rocks, the geological story of Eastern North America. New York The Ronald Press Company, 1953 413 p illus 23 cm. $6 00 1556

Contents How rocks are formed. The geologic timetable. How geologists read rocks. Movements of land and sea. What is a fossil? A classification of animals—plants. Origin of the earth. Pre-Cambrian. Cambrian. Ordovician. Silurian. Devonian. Mississippian Pennsylvanian. Permian. Triassic. Jurassic. Cretaceous. Cenozoic era. Eocene (including paleocene) Oligocene. Miocene. Pliocene. Pleistocene. Recent. Index of names. Index of subjects.

Note. A clearly written introduction to the historical geology of the eastern part of continental United States of America and Canada with particular emphasis on the Atlantic Coastal Plain and the Appalachian Mountain area. So much material on fossils is included that the book can serve also as an introduction to the paleontology of this region. It is illustrated with 294 figures, many of which are reproductions of photographs. Literature references intended as guides to further reading are supplied. The book is suitable for use both as a text in college courses and as informative reading for lay readers interested in geology and paleontology. The author is Associate Curator of Geology and Paleontology on the staff of the Academy of Natural Sciences, Philadelphia.

STOVALL, J WILLIS, AND HOWARD E BROWN

Principles of historical geology Boston Ginn and Company, 1955 471 p illus 24 cm $6.25 1557

Content The earth in the universe. Time and the geological time scale. Life on the earth. Plants and animals. Keys to the past. The Archeozoic era. The Proterozoic era. The Cambrian period. The Ordovician period. The Silurian period. The Devonian period. The Mississippian period. The Pennsylvanian period. The Permian period. The Triassic period. The Jurassic period. The Cretaceous period. The Tertiary period. The Quaternary period. Appendix Geologic structures of North America. The identification and classification of fossils. Index.

Note. A lucidly written introduction to the evolution of the earth as it can be read in rocks and geological structures. The subject matter covered is the traditional content of introductory texts. However the treatment of it is less cyclopedic than in many elementary texts, and the various topics are correlated in such a way as to present the study of historical geology as the study of a continuing drama. The verbal text is supplemented by numerous illustrations of geologic structures, fossil forms of life, and reconstructions of prehistoric animals. Aside from its use by college students, the book is suitable also for mature lay readers.

THORNBURY, WILLIAM D

Principles of geomorphology New York John Wiley & Sons, Inc , 1954 618 p illus 23 cm. $8 00 1558

Contents Backgrounds of geomorphology Some fundamental concepts. An analysis of the geomorphic processes. Weathering, soil processes, and mass-wasting. The fluvial geomorphic cycle. Complications of the fluvial cycle. Stream deposition. The peneplain concept. Topography on domal and folded structures. Topography upon f ulted structures. The arid cycle. Eolian land forms. Karst topography Types and characteristics of glaciers. Mountain glaciation. Ice caps and their topographic effects. Geomorphology of coasts. Topography of the ocean floors. Land forms resulting from volcanism. Pseudovolcanic features. Tools of the geomorphologist. Applied geomorphology Author index. Subject index.

Note: A college textbook with several distinctive and valuable features. It presents geomorphology or the study of landforms, as a science with potential practical applications. It emphasizes basic processes, and the illustrations have been selected as examples of the effects of these processes rather than as scenes of natural beauty The various theories on the evolution of specific varieties of landforms are presented critically with references to source articles.

VON ENGELN, OSCAR DIEDRICH, AND KENNETH E CASTER

Geology New York McGraw Hill Book Company, Inc., 1952 730 p illus. (part col'd) 24 cm. $7 50 1559

Contents (abridged) Introduction to geology Materials of the earth. History of early geologic ideas. The natural history of igneous rocks Origin and composition of magma. Phenomena of intrusion. Phenomena f extrusion. Volcanic cones and associated phenomena. Igneous rock classes and varieties. Structure, process, forms of sedimentation. Underground water. Diastrophism. Structural geology Metamorphism. Mountains and plateaus. Sculpture of the land in humid regions. Sculpture and modeling of the land in arid regions. Geology of the shores and floor of the ocean. Nature and functions of glaciers. Geologic history Cenozoic era. Mesozoic era. Paleozoic era. Cryptozoic eon. Index.

Note. An introductory college text suitable for use by both students who will take only an introductory course and those who plan to pursue the subject further. It provides a view of the basic content of the main branches of geology including paleontology. Also, there is a brief presentation of current theories of cosmology. The book is written in a clear style and is adequately supplied with literature references and illustrations.

VON ENGELN, OSCAR DIEDRICH

Geomorphology, systematic and regional. New York The Macmillan Company, 1942. 655 p illus. 23 cm. $8 00 1560

Contents (abridged) Definitions and backgrounds. Relief features of the first order Relief of the ocean bottoms. Geomorphic units. The peneplain concept. The normal or fluvial geomorphic cycle on a coastal plain. Factors of rock strength, in relation to processes and results in the fluvial geomorphic cycle. Waterfall sites. Interruptions of the fluvial geomorphic cycle and their consequences. Geomorphic features associated with weathering and mass translocation of rock waste. History of the folded Appalachians. Fault-block mountains and topography resulting from faulting. The desert (or arid) geomorphic cycle. The glacial geomorphic cycle. Geomorphology of coasts. Karst topography Land forms from volcanicity Index.

Note A still useful introduction to landscape geology It is directed primarily to college students, but is written in a style that suits it to reading outside of organized courses by any interested person. One of its special features is inclusion of chapter on the geomorphological tenets of the school of German geomorphologists lead by Walther Penck as opposed to the ideas of the American school of thought associated with W M. Davis. There are 177 figures of which a considerable proportion are reproductions of photographs of landscape features.

GEOLOGY OF VARIOUS REGIONS

AMERICAN ASSOCIATION OF PETROLEUM GEOLOGISTS

Appalachian basin Ordovician symposium. Papers read at the meeting of the Pittsburgh Geological Society at Pittsburgh, Pennsylvania, May 16, 1947, and published in the Bulletin of the American Association of Petroleum Geologists August, 1948 Editorial committee John T Galey, chairman, J F Pepper, C. E Prouty R. E Sherrill, R. E. Somers, Tulsa American Association of Petroleum Geologists, 1948 1 657 p. illus. 23 cm. $2 00 1561

Contents: Foreword, by J T Galey Summary of Middle Ordovician bordering Allegheny synclinorium, by M. Kay Cambrian and Ordovician rocks in Michigan basin and adjoining areas, by G V Cohee. New York subsurface geology by E. T Heck. Subsurface Trenton and sub-Trenton rocks in Ohio, New York, Pennsylvania, and West Virginia, by C. R. Fettke. Trenton and sub-Trenton outcrop areas in New York, Pennsylvania, and Maryland, by F M Swartz. Trenton and sub-Trenton stratigraphy of northwest belts of Virginia and Tennessee, by C. E. Prouty Trenton and pre-Trenton

Sierra Mts. General problems of pre-Cambrian rocks. Economic geology. References cited. Appendix. Index.

Note: Published in this volume is the report of a systematic, detailed study of the pre-Cambrian rocks which are exposed in the vicinity of the town of Van Horn, Texas. The region is of interest not only for the age of the exposed rocks, but also because of its mineralization. Both the geology and the economic geology are covered. The illustrative matter includes 24 figures in the text and 34 plates. Most of the latter—which includes both landscape features and photomicrographs of rock structures—are reproduced from photographs. Nineteen of the plates are maps, and some of them are in color.

KING, PHILIP B

Geology of the southern Guadalupe Mountains Texas. Washington, D C. Government Printing Office, 1948 183 p. illus 29 cm (United States. Geological Survey Professional paper 215) $3.25 1573A

Contents: Introduction. Physical features of the region. Stratigraphy of Permian rocks. Mesozoic era. Tertiary igneous rocks. Tectonics. Cenozoic deposits and land forms. Economic geology. Selected stratigraphic sections. Bibliography. Index.

Note: This paper deals with an area of 411 square miles in the western part of Texas, immediately south of the New Mexico line. The main economic interest of the area is indirect. Knowledge of the area is valuable to petroleum geologists because features exposed at the surface here are analogous to features in the east known only from drilling in the oil fields. The geology of the region is exceptional in its record of variations in physical conditions, both in space and in time.

LADD HARRY S AND J EDWARD HOFFMEISTER

Geology of Lau Fiji. Includes Petrography of igneous rocks, by Harold L. Alling Petrography of limestones, by Geoffrey W Crickmay Chemical composition of limestones by J W Sanders, jr., and Geoffrey W Crickmay Larger foraminifera by W Storrs Cole Echinoidea, by Hubert Lyman Clark Barnacles, by H. A. Pilsbry Decapod crustacea, by Mary J Rathbun. Honolulu Bernice P Bishop Museum, 1945 399 p 62 plates. illus. 25 cm. $6.00 1574

Note: The results of an extensive geological study of the Lau group of islands in the Fiji Islands are published in this work. These islands are noted for their shells and coral reefs. The field work was carried out in 1934. The physiography, geological history and present geology of the principal islands in the group are described. In addition, the volume contains special studies of rocks and fossils as noted in the subtitle. The illustrations in the text include maps, and the section of plates contains photographs of igneous and other geological features as well as of fossils collected.

LADD HARRY S

Geology of Vitilevu Fiji. Includes Petrography by Arthur A. Pegau Smaller Foraminifera, by Joseph A. Cushman Larger Foraminifera, by G Leslie Whipple Corals by J Edward Hoffmeister Smaller echinoids, by H. L. Hawkins Decapod crustaceans, by Mary J Rathbun. Honolulu, Hawaii Bernice P Bishop Museum, 1934 263 p. illus. 25 cm. (Bernice P Bishop Museum. Bulletin 119) $4.00 1574A

Contents: Introduction. Physiography Stratigraphy Petrographic study of the rocks of Vitilevu, Fiji. Introduction. Wainimala series. [illegible] series. Vei limestone. [illegible] formation. Geological history Geomorphology Economic geology List of stations. Paleontology Smaller Foraminifera from Vitilevu, Fiji Larger Foraminifera from Vitilevu, Fiji. Fossil corals from Vitilevu, Fiji. Fossil Echinoidea Vitilevu, Fiji. Molluscoidea. Mollusca. Fossil decapod crustacea from Vitilevu, Fiji. Vertebrata. Bibliography Paleontological census from Vitilevu, Fiji. Index.

Note: A detailed summary of the results of two expeditions to Fiji in 1926 and 1928, the primary purpose of which was to work out the geological history of Vitilevu, one of the three largest islands in the open Pacific, with the aid of detailed paleontological studies. There are 44 plates of photographs and drawings, mostly of fossil shells collected by the expedition, plus 111 bibliographic references.

LARSEN, ESPER S., JR., AND WHITMAN CROSS

Geology and petrology of the San Juan region southwestern Colorado a comprehensive geologic and petrologic study of the occurrence and origin of the rocks in an area of 12,000 square miles in southwestern Colorado. Washington, D C. Government Printing Office 1956 303 p. illus. 29 cm. (United States Geological Survey Professional paper 258) $5.25 1575

Contents (abridged): Introduction. Pre-Cambrian rocks. Paleozoic rocks. Mesozoic rocks. Cenozoic rocks. Structure. Geologic history General petrology Selected bibliography Index.

Note. The main interest in this publication lies in its detailed study of the igneous rocks of the San Juan Mountains. The rock formations, the relations among them, and the chemical composition of the many varieties of igneous rocks found in this region were investigated both in field and laboratory studies, and the results of the studies are presented in this report addressed to graduate geologists and petrologists. A geological map in color and drawn to the scale 1:250,000, and a colored plate, drawn to the same scale, of 12 geologic sections of the region, are included in the volume.

LOVERING T S, AND E N GODDARD

Geology and ore deposits of the Front Range, Colorado prepared in cooperation with the Colorado State Geological Survey Board and the Colorado Metal Mining Fund. Washington D C. Government Printing Office 1950 319 p illus. (part col d) 29 cm (United States. Geological Survey Professional paper 223) $8.50 1576

Contents: Summary of mining districts. Introduction. Physiography Geology: Pre-Cambrian metamorphic and igneous rocks. Paleozoic, Mesozoic, and Cenozoic sedimentary rocks. Laramide igneous rocks. Post-Eocene igneous rocks. Structure. Ore deposits Pre-Cambrian deposits. Laramide (late Cretaceous—early Tertiary) deposits: Mineral belt of the Front Range. Mining districts in the mineral belt. Laramide deposits outside the mineral belt. Deposits of the "cathedral vapour" type. Post-Laramide deposits. Index.

Note: The Front Range is the main Colorado range of the Rocky Mountains running north and south through the state, west of Denver and including Pikes Peak and the Cripple Creek district. This publication presents a summary geological account of the structure of the entire region and detailed histories and descriptions of the various mines and ore deposits located in the Range. In pocket are 30 folded maps and diagrams, few of them in color

MATTHES, FRANÇOIS EMILE

Geologic history of the Yosemite valley Washington, D C. Government Printing Office 1930. 137 p. illus. (part col d) 29 cm. (United States. Geological Survey Professional paper 160) $5.25 1577

Contents: Geographic sketch of the Yosemite region and the Sierra Nevada. Early history of the Yosemite Valley Glacial history of the Yosemite Valley? Glaciation of the Sierra Nevada. Evidence of glacial action in the Yosemite region. Evidence of

and pre-Tertiary intrusive rocks. Laramide orogeny Cenozoic era. Mineral deposits. Metal deposits. Metallogenic epochs. Regional controls of the Laramide ore deposits. Supergene processes. Outlook for mining. Discovery and development of mineral resources. Mineralogy Laramide ore deposits: Gold deposits. Silver deposits. Copper deposits. Lead deposits. Zinc deposits. Molybdenum deposits. Tungsten deposits. Tin deposits. Antimony deposits. Iron deposits. Late Tertiary gold deposits. Nonmetallic resources. Literature cited. Index.

Note. The Ivanpah quadrangle, of which the geology and mineral resources are detailed in this paper is about 69 miles in length and 54 miles in width. It lies south of Las Vegas, Nevada, and east of Baker California, and its eastern boundary is about 15 miles west of the Colorado River The publication is based upon field work by the author The structural geology of the quadrangle is described in the first 111 pages. The next 55 pages contain accounts of the minerals of the region and of the 141 mines.

HUNT, CHARLES B , AND OTHERS

Geology and geography of the Henry Mountains region, Utah A survey and restudy of one of the classic areas in geology By Charles B Hunt, assisted by Paul Averitt and Ralph L Miller Washington, D C. Government Printing Office, 1953 234 p illus (part col d) 29 cm (United States. Geological Survey Professional paper 228) $6 25 1569

Contents Introduction. Economic geography Stratigraphy of the sedimentary rocks. Structural geology and forms of the igneous intrusions. Petrography ! the igneous rocks. Physical geography Tertiary history of the region. Resources. Bibliography Index.

Note The Henry Mountains region in southeastern Utah is one of the classic areas in geology because of the study made there by Grove Karl Gilbert in 1875 and 1876. The area is virtually an arid, treeless plateau from which arise the Henry Mountains. The present publication presents thoroughgoing study of its geography and geology based upon field work in the summers of 1935 to 1939 In a pocket are 12 folding maps and diagrams, of which 12 are in color

JENKS, WILLIAM F , editor

Handbook of South American geology An explanation of the Geologic Map of South America. New York The Geological Society of America 1956 378 p illus 25 cm (The Geological Society of America. Memoir 65) $5 50 1570

Contents Selected general references on South American geology Morphostructural regions of South America, by H. J Harrington. Brazil, by A. I. de Oliveira (with the collaboration of F F M. de Almeida and others) French Guiana, by B. Choubert. Surinam, by H. Schols. British Guiana, by S. Bracewell. Paraguay by H. J Harrington. Uruguay by H. J Harrington. Argentina, by H. J Harrington. Bolivia, by F Ahlfeld. Chile, by J Muñoz Cristi. Peru, by W F Jenks. Ecuador by G. E. Lewis and others. Colombia, by A. A. Olsson. Venezuela, by V M López and others. Trinidad, by H. G Kugler Index.

Note This handbook, written by experts from North and South America, is an explanatory text to accompany the colored Geological Map of South America (scale, 1 5,000,000) published in 1950 by the Geological Society of America in co-operation with the American Geographical Society and the United States Geological Survey The handbook summarizes in some detail the geology and principal geologic problems of each country together with sections and charts reproduced on folding plates. In most of the articles, there is specific reference to the symbols used on the Geologic Map of South America, in order to facilitate direct reference between map and text. Selected bibliographical references accompany the individual articles.

KELLEY, VINCENT C , AND CASWELL SILVER

Geology of the Caballo Mountains, with special reference to regional stratigraphy and structure and to mineral resources, including oil and gas Albuquerque University of New Mexico Press, 1952 286 p. illus 23 cm. (University of New Mexico publications in geology No 4) $5 00 1571

Contents: Introduction Geography Climate. Soil and vegetation. Culture and history Previous work. Present investigation Stratigraphy: General statement. Precambrian rocks. Cambrian rocks. Ordovician rocks. Silurian rocks. Devonian rocks. Mississippian rocks. Pennsylvanian rocks. Permian rocks. Triassic and Jurassic rocks. Cretaceous rocks. Tertiary rocks. Quaternary rocks. Structure Precambrian deformation. Lower Paleozoic deformation. Upper Paleozoic deformation. Mesozoic deformation. Cenozoic deformation. Physiography Mountainous uplands. Jornada surface. Palomas surface. Inner Rio Grande valley Physiographic history Ground water: Las Palomas valley Truth or Consequences area. Derry Warm Springs. Caballo Mountains. Jornada del Muerto valley Mineral deposits Hypogene deposits. Supergene deposits. Placer deposits. Sedimentary rock deposits. Coal. Oil and gas. Jornada del Muerto valley Las Palomas and Eagle valleys. Appendix: Descriptive stratigraphic sections. Mud Springs Mountains section. South Ridge section. Cable Canyon section. Mattias Canyon section. Palomas Creek section. Derham Ranch section. Mescal Canyon section. Bibliography Index.

Note: A complete account of the geology of the Caballo Mountains in central southern New Mexico. Prior to this work, little or no geologic mapping had been done in these mountains. Rocks representative of the entire Paleozoic, as well as of the Cretaceous, Tertiary and Recent, are found in the area. Thirty-seven photographic illustrations appear on 19 plates, and 10 folding maps and charts are contained in a pocket.

KELLEY, VINCENT C

Regional tectonics of the Colorado plateau and relationship to the origin and distribution of uranium Prepared in cooperation with U S Atomic Energy Commission, Division of Raw Materials. Albuquerque University of New Mexico Press, 1955 120 p illus. 23 cm. (University of New Mexico publications in geology No 5) $2 00 1572

Contents Introduction: Geography Nature of the investigation. Tectonics: Boundaries. Major primary rock masses. Structural elements. Lineaments. Regional mechanics of deformation. Geologic history Tectonic influence on distribution and genesis of ore Distribution. Theories of origin. Sources of ore-bearing sediments. Paleohydrology Hydrothermal activity Conclusions. References.

Note. The object of the project reported in this publication was to determine the relationship between regional structure and regional concentration of uranium deposits. To accomplish this, the author made special study of the regional structure and the tectonic history f the Colorado plateau, which consists of roughly one-fifth of the areas of the states of Utah, Colorado, Arizona, and New Mexico converging on the junction point of the four states, where much uranium is found. A new tectonic map of the area was compiled by the author which is reproduced in color on sheet folded into a pocket of the publication. The report itself consists f three principal parts. description and analysis of the regional tectonics f the Colorado plateau, geologic history of the region, and a discussion of the tectonic influence on distribution and origin f uranium deposits in the plateau.

KING, PHILIP B , AND PETER T FLAWN

Geology and mineral deposits of pre-Cambrian rocks of the Van Horn area, Texas. Bureau of Economic Geology John P Lonsdale Director prepared in co-operation with the United States Geological Survey Austin The University of Texas, 1953 218 p. illus 25 cm (University of Texas. Publication no. 5301) $5 00 1573

Contents I troduction. Northwest Van Horn Mountains (mine area) Northeast Van Horn Mountains. Wylie Mountains. Eagle Mountains. Carrizo Mountains. Sierra Diablo foothills. Pump

deposited in Michigan and Ohio. The paleogeographic map of Bedford and Berea time. Paleogeography at the beginning of early Bedford time. Paleogeography of early Bedford time. Paleogeography at the beginning of late Bedford time. Paleogeography at the end of late Bedford time. Paleogeography of early Berea time. Paleogeography of middle Berea time. Paleogeography of late Berea time. Paleogeography of latest Berea time. Paleogeography of Sunbury time. Literature cited. Index.

Note The Berea sand of eastern Ohio and adjacent states has long been an important producer of gas and oil. Studies of the Berea sand were made by the U. S. Geological Survey beginning in 1943 as part of an expanded program of oil and gas investigations, and as a result of these studies nine preliminary maps and preliminary chart were published to show the variation in the thickness of the sand from place to place and the relationship of the accumulation of oil and gas to the variations in sand thickness. The professional paper is a compilation and an evaluation of the large amount of data accumulated in the preparation of the preliminary maps. It will be chiefly of interest to petroleum geologists. The work is illustrated by photographic reproductions, geologic diagrams, charts, maps, a series of nine colored maps showing the Ohio region in Bedford and Berea times, and a set of detail maps, some in color, folded into a pocket.

RICHARDS HORACE GARDINER

Geology of the coastal plain of North Carolina. Philadelphia The American Philosophical Society 1950 83 p. illus. 30 cm. (American Philosophical Society Transactions. New series—Vol. 40 part 1) $1 50. 1584

Contents Introduction. Stratigraphy of the North Carolina coastal plain. Lower Cretaceous. Upper Cretaceous. Eocene. Oligocene. Miocene. Pliocene. Early Pleistocene. Late Pleistocene. Recent formations. "Carolina bays." Structure of North Carolina coastal plain. Economic geology. Correlation of North Carolina coastal plain formations. Historical geology. Bibliography. Index.

Note A comprehensive study based both on field work and study of the literature. The bibliography covers the literature published since 1912 and also some papers published before 1912 which were omitted from the bibliography in Volume III of the North Carolina Geological and economic survey, 1912. Most of the 78 figures are reproductions of photographs of landscape features or of fossil specimens.

RICHARDS PAUL W

Geology of the Bighorn Canyon—Hardin area, Montana and Wyoming A description of the geography stratigraphy structure geomorphology and mineral resources of the area. Washington, D C Government Printing Office, 1955 93 p. illus. 23 cm. (United States. Geological Survey Bulletin 1026) $4.00 1585

Contents Introduction. Geography. Stratigraphy. General features. Cambrian system. Ordovician system. Devonian system. Carboniferous systems. Permian system. Permian and Triassic systems. Jurassic system. Cretaceous system. Tertiary (?) and Quaternary systems. Quaternary system. Structure. Geomorphology. Economic geology. Literature cited. In pocket: seven folding plates, including one map (in two sections) in color.

Note This bulletin describes and illustrates the geography stratigraphy and geomorphology of an area of 1,000 square miles in south-central Montana and adjoining Wyoming. Fieldwork for the report was accomplished by the author and his associates during the months of June to October in 1947 and 1948. The fourfold purpose of the investigation is described in the following terms: "(1) to map and study the terraces below the mouth of Bighorn Canyon in order to provide information as to the type of aggregate available for construction of the proposed Yellowtail dam, and show the distribution of terraces, some of which would be irrigated by water diverted from the Bighorn River by the dam; (2) to map the geology of Bighorn Canyon and show formations that would be covered in part by the Yellowtail reservoir; (3) to locate and describe mineral deposits of possible economic importance; and (4) to map and describe the rock formations, some of which contain known or potential oil-bearing strata elsewhere in Montana and Wyoming." The area is mostly within the Crow Indian Reservation in southwestern Big Horn County Montana.

SCHUCHERT CHARLES

Atlas of paleogeographic maps of North America. With an introduction by Carl O Dunbar New York John Wiley and Sons, Inc., 1955 177 p. illus. 29 cm. $4 75 1586

Note [illegible] paleogeographic map is designed to show the distribution of lands and seas, and of areas of sedimentary deposition, at a given time in geologic history. [illegible] This statement from the introduction to the present volume indicates the purpose of the maps contained in it. The maps themselves were redrafted from maps upon which Charles Schuchert worked during most of his lifetime and which he intended to publish as an atlas in his projected comprehensive review of the stratigraphy of North America. The maps as published are all printed on the same base map. Each appears full-page on a right-hand page with a tabulation on the facing left-hand page of the stratigraphic units represented. The maps are printed in a key which shows such things as marine waters on present continental areas, areas of nonmarine deposits, outcrops of nonmarine strata, areas of Permian evaporites, and shore lines. They have not been brought down to date but represent, generally speaking, the accumulated knowledge as of 1942. A useful feature is the inclusion of a list of published correlation charts of the Committee on Stratigraphy of the National Research Council which should be used with the maps.

SCHUCHERT, CHARLES

Historical geology of the Antillean-Caribbean region, or the lands bordering the Gulf of Mexico and the Caribbean Sea. New York John Wiley & Sons Inc., 1935 811 p. illus. 23 cm. $16 00 1587

Contents Introduction and summary. The three Middle American lands. Physiography. The lands: Mexico. The Gulf coastal plain of the United States. Nuclear Central America. The Antilles and their Bahamas foreland. The young isthmian link connecting Central and South America. Northern South America. The outer islands. Index.

Note A comprehensive treatise on the historical geology of the lands bordering the Gulf of Mexico and the Caribbean Sea. It summarizes the stratigraphy and historical geology of Mexico, Central America, all of the Antillean islands, and northern South America (Venezuela and Colombia) as well as the Gulf coastal plain of the United States. Formations are correlated within each region and also interregionally. The paleogeography and the geosynclines are illustrated on a new series of 14 maps. Geologic maps are included for most of the regions, either compiled or taken from the best sources available. The book is not only an interpretation of the geologic history but also a voluminous compilation of the structure, stratigraphy and paleontology of the region under discussion.

SCHUCHERT CHARLES AND CARL O DUNBAR

Stratigraphy of western Newfoundland. New York The Geological Society of America, 1934 123 p. illus. 26 cm. (Geological Society of America. Memoir 1) $2.00 1588

Contents (abridged) Introduction and summary. Cambrian systems. Ordovician system of western Newfoundland. Green Point series, St. George series, Table Head series, Long Point series, Cow Head limestone breccia. Humber Arm series. Ordovician and Silurian systems of northeastern Newfoundland. Devonian system. Mississippian system. Newfoundland as a part of Greater Acadia. Bibliography. Index.

Note A summary of data based on four expeditions from 1910 to 1933, analyzing the complex structure of the region and presenting composite stratigraphic sections of the Cambrian and Ordovician strata of the coastal lowland, divisible into 10 named formations or series.

SCHWARTZ GEORGE M., AND GEORGE A. THIEL

Minnesota s rocks and waters a geological story With the assistance of Peggy Harding

an earlier ice invasion. Ancient glaciers of the Yosemite region. Transformation of the Yosemite Valley by the ice. Postglacial history of the Yosemite region. Filling of the glacier lakes. Filling of Lake Yosemite. Production of rock waste in the Yosemite Valley. Evolution of cliff sculpture. Summary and conclusions. Appendix: The granite rocks of the Yosemite region, by F. C. Calkins. Bibliography. Index.

Note. This paper offers a detailed study of the geologic history of the Yosemite Valley with emphasis upon the problem of to what extent the valley is a product of glacial action and product of stream erosion. The principal result of the investigations upon which this report is based is the determination within narrow limits of the preglacial depth of the Yosemite Valley and of other facts concerning its preglacial development which permit fairly definite estimates of the proportionate shares of work performed by stream and by glacier. The investigations comprise a detailed survey of the glacial and geomorphologic features and an intensive study of the valley's rock formations. The bibliography contains 63 references, and there are numerous photographs, maps, and charts.

MATTHES, FRANÇOIS ÉMILE

The incomparable valley, a geologic interpretation of the Yosemite. Edited by Fritiof Fryxell. Berkeley, University of California Press, 1950. 160 p. illus. 25 cm. $1.95 1578

Contents. The Sierra Nevada. The Yosemite region and its high Sierra. Yosemite Valley. The Yosemite through the ages. The sculpturing of the walls. The domes. The marks of time. The waterfalls. The little ice age of historic times.

Note. A fascinating exposition of the geology of the Yosemite Valley. Though definitely written for non-geologists, even geologists who are about to spend their first vacation in the Yosemite Valley will find it good reading. The lucid but compact text is supplemented by 50 reproductions of remarkable photographs. The author was long recognized as an authority on Sierra Nevada and Yosemite Valley geography. This book was assembled after his death from his *Geologic history of the Yosemite Valley* (1930), other professional publications, and unpublished notes made in preparation for this book.

MATTHES, FRANÇOIS ÉMILE

Sequoia National Park, a geological album. Edited by Fritiof Fryxell. Berkeley, University of California Press, 1950. 136 p. illus. 25 cm. $1.95 1579

Contents. The great Sierra block. Erosional features due to successive uplifts. Evidences of glacial action. Glacial canyons, cirques, and lake basins. Avalanche sculpture. Effects of frost action at high altitudes. Rock forms composed of massive granite. Effects of prolonged chemical weathering. Metamorphic rocks and their folded structure. Features due to solution in marble. Features due to volcanic action. Glossary.

Note. In this interesting and unusual book the contents of three "Sequoia albums," originally prepared by the author for the use of the U. S. National Park Service, have been combined and the text edited so as to make it consistent and available to laymen. Most of the space is occupied by good reproductions of 124 excellent photographs, each of which depicts an interesting geologic feature. The text consists largely of short legends which accompany the illustrations and describe the geologic aspects. The region covered is outstanding for its scenery which has been produced by a wide range of geomorphic processes.

MEYERHOFF, HOWARD A.

Geology of Puerto Rico. San Juan, University of Puerto Rico, 1933. 306 p. illus. (part col'd) 23 cm. (University of Puerto Rico Monographs. Series B: physical and biological sciences, no. 1) 1580

Contents. Part I, The geologic background. The physical setting. The historical setting. Part II, Geologic history. The volcanic core. The ancient mountains. The coastal plain. The island's present form. Part III, Geologic materials. The rocks. Rock structures. Natural resources. The soils. Part IV. The geologic present. The rivers. The sea. Earthquakes. Part V. Geologic problems. Unanswered questions. Conclusions. Bibliography. The geologic map. Glossary. Index.

Note. A readable general survey developed from a series of lectures given by the author in 1931. It was based on the literature extant in 1931 and on the author's own study of not only the geology of Puerto Rico but of other islands in the Caribbean. Folded in at the end of the volume is a geologic map prepared by the author in 1933 and reproduced in color.

NEWELL, NORMAN DENNIS

Geology of the Lake Titicaca region, Peru and Bolivia. New York, The Geological Society of America, 1949. 111 p. illus. 26 cm. (The Geological Society of America. Memoir 36) $5.00 1581

Contents: Abstract. Introduction. Geography. Geologic structure. Stratigraphic summary. Devonian rocks. Permian rocks. Jurassic rocks. Cretaceous rocks. Tertiary rocks. Glaciation of the Titicaca region. Igneous intrusive rocks. Geologic history. Petroleum policy. Works to which reference is made. Index.

Note. The region described in this monograph has a complex geology which is distinct from adjoining Andean areas to the south and northwest. It contains the world's highest oil field. The book is based on previously published studies and on a field study made by the author during 12 months spread over the years 1943 to 1946. The illustrations include photographs of 36 views of landscape features having geologic interest. The book is supplemented by two geological maps and two diagrams of the structural sections of the Lago Titicaca and Pirin areas.

NOLAN, THOMAS B., AND OTHERS

The stratigraphic section in the vicinity of Eureka, Nevada, by T. B. Nolan, C. W. Merriam, and J. S. Williams. Revision of the pre-Tertiary stratigraphy of east-central Nevada. Washington, D. C. Government Printing Office, 1956. 77 p. illus. 29 cm. (United States. Geological Survey. Professional paper 276) $1.00 1582

Contents. Introduction. Structural setting. Cambrian system. Ordovician system. Silurian system. Devonian and Mississippian systems. Carboniferous systems. Pennsylvanian system. Late Paleozoic (Permian?) rocks. Cretaceous system. References cited. Index. 2 folded maps (in pocket)

Note. The stratigraphic section to which this work pertains has been used as a standard in the central Great Basin for more than three-quarters of a century. Detailed mapping and continued paleontologic study have modified some of the earlier conclusions about this section. The suggested revisions presented in this paper are based on field work in the vicinity of Eureka in east-central Nevada undertaken by the writers and their associates at intervals over a period of 22 years.

PEPPER, JAMES F., AND OTHERS

Geology of the Bedford shale and Berea sandstone in the Appalachian basin. A study of the stratigraphy, sedimentation and paleogeography of rocks of Bedford and Berea age in Ohio and adjacent states. By James F. Pepper, Wallace De Witt, jr. and David F. Demarest. Washington, D. C. Government Printing Office, 1954. 111 p. illus. (part col'd) 29 cm. (United States. Geological Survey. Professional paper 259) $4.25 1583

Contents. Introduction. Character and extent of the Berea sandstone. Method of investigation. Well records. A description of some of the more common terms used by the oil- and gas-well drillers in the Appalachian basin. Historical summary of the stratigraphic nomenclature. The age relation of the Bedford shale and Berea sandstone. Correlations and stratigraphy: Upper Devonian rocks. Mississippian rocks. Sedimentation. Bedford sedimentation. Cussewago sedimentation. Sedimentation of the Berea sandstone. Sedimentation of the Sunbury shale. Petrographic studies of the Berea sand. Paleogeography: Paleogeography of Bedford and Berea time. The Appalachian basin. Cincinnati arch. Climate of Bedford and Berea time. Source of the sediments of the Bedford and Berea

and the detailed measurements of selected stratigraphic sections are included in the text. The verbal text is supplemented by 11 plates containing reproductions of 42 photographs. Related literature cited in [illegible] page list of references.

WANLESS HAROLD R.

Pennsylvanian geology of a part of the southern Appalachian coal field. New York The Geological Society of America. 1946. 162 p. illus. 25 cm. (The Geological Society of America. Memoir 13) $3.90 1595

Contents (abridged) Abstract. Part i, Introduction. Part ii, General characteristics of the southern Appalachian coal field. Topography. Structure. Part iii, Previous studies of Pennsylvanian stratigraphy. Part iv, [illegible]. Part [illegible] Pennsylvanian strata younger than the Lee. Part vi, Deposition of southern Appalachian coal measures. Part vii, Problems deserving further study in the southern Appalachian coal field. Part viii, Glossary and index of stratigraphic names. References cited. Index.

Note A stratigraphic study based on field work by the author, aimed at clarifying the details of [illegible] geologically complex area. Lithologic descriptions of the formations studied are included, and [illegible] of places showing [illegible] sections throughout the area is provided. Geologists and geology students will be the principal users.

WEAVER, CHARLES EDWIN

Eocene and Paleocene deposits at Martinez, California. Seattle University of Washington Press 1953 102 p. 26 cm. (University of Washington. Publications in Geology Volume 7) $4.00. 1596

Contents Abstract. Introduction. Literature. Geography of the area. Problems involved in the mapped area. Stratigraphy. Cretaceous. Tertiary. Oligocene. Miocene. Structure. Fossil localities.

Note One of many contributions by the author to the geology and paleontology to the stratigraphy of the state of California. Its purpose is [illegible] to place on record [illegible] of the obtainable geologic field data concerning the stratigraphy of the Paleocene and Eocene formations in the vicinity of the area where the Martinez group was first established. [illegible] In it [illegible] type section of the Paleocene rocks is designated and is described in detail with measurements of the strata for [illegible] total thickness of 2,110 feet. Several other type sections are designated and described with measurements. Detailed correlations of fauna with strata are presented, mostly in tabular form. The printed volume is accompanied by [illegible] collection of 11 large detailed geologic maps upon which the positions of the [illegible], fossil localities, faults, contacts and positions of cross sections are indicated. [illegible] are tied in to their exact stratigraphic positions in each cross section and in the columnar sections.

WEAVER, CHARLES EDWIN

Geology of the Coast ranges immediately north of the San Francisco Bay region, California. New York The Geological Society of America, 1949 242 p. illus. 26 cm. (The Geological Society of America. Memoir 35) $6.50. 1597

Contents Abstract. Introduction. Geography. Stratigraphy. Igneous rocks. Structure. Geologic history. Economic geology. Literature. Index.

Note The geography, [illegible] geology, structure and economic deposits of an area of approximately 2,211,000 square miles in the Coast ranges of central California are described in this professional study. The structure of the region is complex. Although it contains no producing oil wells, several wells were drilled, and the log of one [illegible] drilled to 3,330 feet is included. The book was written for use by professional geologists.

WILLIAMS HOWEL

Geology of Tahiti, Moorea, and Maiao. Honolulu. Bernice P Bishop Museum, 1933 89 p. illus. 25 cm. (Bernice P Bishop Museum. Bulletin 105) $2.25 1598

Contents Introduction. Tahiti. Volcanoes of Tahiti-nui and Taiarapu. Coral reefs and lagoons. Moorea. Maiao. Recent movements of South Pacific islands. Literature cited.

Note This paper deals with the results of [illegible] two months' visit to the Society Islands in December, 1928, and January, 1929. The greater part of the study [illegible] is devoted to the island of Tahiti, where the work was confined mainly to the coastal regions, particularly to the [illegible] reef and to features [illegible] indicate recent vertical movement of the island. Caves, geomorphology, volcanic and plutonic rocks, origin of lagoons and passes, and chemical analysis of rocks are among the [illegible] covered. There are eight plates of photographs and [illegible] list of 41 references.

WOODRING W P., AND OTHERS

Geology and paleontology of Palos Verdes hills California. by W P Woodring M N Bramlette and W S W Kew Washington, D C. Government Printing Office, 1946 145 p. illus. 29 cm. (United States. Geological Survey Professional paper 207) $1.50 1599

Contents Introduction. Physiography. Geography. Stratigraphy and paleontology: Outline of stratigraphy. Jurassic (?) system. Miocene series. Pliocene series. Pleistocene series. Pleistocene to recent series. [illegible] rocks of Miocene age. Structure. Physiography. [illegible] Fossil localities. Index.

[illegible] This report, part of [illegible] series of publications dealing with the geology of areas [illegible] and bordering the Los Angeles basin, describes the geology, paleontology, and mineral resources of the Palos Verdes hills otherwise [illegible] known as the San Pedro hills. The strata that crop out in the hills are penetrated in oil fields in the southern part of the Los Angeles basin, and special emphasis in the report is given to data that may aid in studying the subsurface section in the basin. Oil in commercial quantities has not so far been found in the Palos Verdes hills. The illustrations include folding maps and plates.

WOODRING W P., AND M N BRAMLETTE

Geology and paleontology of the Santa Maria district, California, including a summary of the geologic features of producing and potential oil fields Washington, D C. Government Printing Office 1950. 185 p. illus. (part col'd) 29 cm. (United States. Geological Survey Professional paper 222) $2.25 1600

Contents Introduction. Location and geographic features. Stratigraphy. Outline of geologic history. Upper Jurassic series. Miocene series. Miocene and Pliocene series. Pliocene series. Pliocene and Pleistocene series. Pleistocene series. Recent series. Mineralogy of sandstone. [illegible] Foraminifera. [illegible] Invertebrates [illegible] by [illegible]. Age and correlation of formations. Igneous rocks. Structure. Physiography. Occurrence of oil. Fossil localities. Index.

Note This preliminary paper describes the geography, the outcrop geology, the subsurface stratigraphy, and the occurrence of oil in the Santa Maria district of California, an area of 400 square miles situated north of the Santa Ynez Mountains and west of the San Rafael Mountains, the northernmost major oil-producing region of coastal California. Included in the area are four potential oil fields and seven producing oil fields, including the Santa Maria Valley field, one of the largest producing fields in California. Aside from the oil possibilities, the district is also of importance to paleontologists interested in the relations of late Miocene and early Pliocene Foraminifera. The publication contains 17 full-page plates picturing mollusks and Foraminifera of the region. A pocket contains five large colored, folded maps and [illegible] large folded, colored chart.

WOODWORTH JAY BACKUS AND EDWARD WIGGLESWORTH

Geography and geology of the region including Cape Cod, the Elizabeth Islands Nantucket, Marthas Vineyard, No Mans Land and Block Island. With thirty-eight

Love. Minneapolis University of Minnesota Press, 1954 366 p illus 24 cm (University of Minnesota. Minnesota Geological Survey, George M Schwartz, director) $4 00 1589

Contents Part I, The story of the rocks. The face of the land. Rivers and lakes. Minerals and rocks. Clues to the span of geological time. The most ancient rocks in Minnesota. Minnesota under Paleozoic seas. The age of reptiles. The great ice age. Minnesota's mineral resources. Part II Geological excursions through Minnesota Northeastern Minnesota. Northwestern Minnesota. North and West Central Minnesota. The Minnesota River valley Southwestern Minnesota. Southeastern Minnesota. The St. Croix River valley A list of the minerals of Minnesota. Minnesota Geological Survey publications. Glossary Index.

Note. Addressed primarily to residents of the state of Minnesota, but of interest also to residents of neighboring regions and to laymen interested in geology and the landscape features, this book is an outstanding example of descriptive geology written for nonspecialists. It covers a region possessing many interesting and varied geological and landscape features. The style is necessarily semitechnical, but an excellent glossary is included for the aid of readers who are unfamiliar with the technical terms. A majority of the 161 figures are reproductions of photographs of geologic and landscape features of the state.

TERRY, ROBERT A

A geological reconnaissance of Panama. San Francisco California Academy of Sciences, 1956 91 p illus 26 cm (California Academy of Sciences Occasional papers, No 23) $3 00 1590

Contents Introduction. General features. Geomorphology Igneous rocks. Metamorphic rocks. Sedimentary rocks. Structure. Economic geology Bibliography

Note The scope of this monograph is well indicated by its title It is a reconnaissance or general overview of the geology of Panama, rather than a detailed study Surface features are described, and rock formations and strata are identified as accurately as possible from the available data. The accumulated paleontological knowledge is included. Also described and indicated on the maps are faults and earthquake epicenters. The study is based partly on field work done by the author between 1920 and 1949 partly on the literature, and partly on material from the files of petroleum companies. Four folded maps show the locations of rock formations, faults, and earthquake epicenters. The bibliography is a comprehensive one, providing references to literature published as early as 1852 and as recently as 1955.

UNITED STATES GEOLOGICAL SURVEY

Bikini and nearby atolls Parts A–R. Washington, D C Government Printing Office, 1954–1955 12 parts in 8 illus 29 cm (United States. Geological Survey Professional paper 260 A–R) Part A $9 00 parts B C D $0 75 parts E F, G, $0 60 part H, $1 75 part I, $5 50, parts J, K, L, $0 45, parts M N, O P $2 50 part Q, $0 25, part R $0.35 1591

Contents (abridged) Part I (A) Geology by K. O Emery and others. Part II (B C, D) Oceanography (physical)—Circulation systems of Bikini and Rongelap lagoons, by W S. von Arx—Adjustment of Bikini Atoll to ocean waves, by W H. Munk and M. C. Sargent—Sea temperature in the Marshall Islands area, by M. K. Robinson. Part II (E, F G) Oceanography (biologic)—Biologic economy of coral reefs, by M. C. Sargent and T S. Austin—Plankton of Northern Marshall Islands, by M. W Johnson—Recent brachiopods, by G. A. Cooper Part II (H) Oceanography (biologic)—Recent Foraminifera of the Marshall Islands, by J A. Cushman and others. Part III (J K, L) Geophysics—Seismic studies of Bikini Atoll, by M. B. Dobrin and B Perkins, Jr—Seismic refraction studies of Bikini and Kwajalein atolls, by R. W Raitt—Magnetic structure of Bikini atoll, by L. R. Alldredge and others. Part IV (M N O P) Paleontology—Fossil calcareous algae from Bikini Atoll, by J. H. Johnson—Smaller Foraminifera from Bikini drill holes, by R. M. Todd and R. Post—Larger Foraminifera and smaller diagnostic Foraminifera from Bikini drill holes, by W S. Cole—Fossil corals from Bikini drill holes, by J W Wells. Part (Q) Marine annelids from the northern Marshall Islands. Part (R) Physical oceanography in the Marshall Islands area, by H.-L. Mao and K. Yoshida.

Note Contained in this Professional paper are reports of some of the results of an extensive scientific survey of Bikini and nearby atolls undertaken prior to the use of the area as a site for tests of nuclear energy devices by the United States Government. The studies undertaken were both broad and thorough. The information presented in these volumes refers to no military or naval applications, but is addressed to such readers as graduate geologists, oceanographers, specialists in paleontology etc. It is conveyed in a technical style, the narrative text of which is supplemented by tables, figures, maps, and literature references. Together the reports constitute the most comprehensive study of atoll geology and related features published in recent times.

VEATCH, ARTHUR CLIFFORD, AND P A. SMITH

Atlantic submarine valleys of the United States and the Congo submarine valley New York The Geological Society of America, 1939 101 p illus 24 cm. (Geological Society of America. Special papers no 7) $4.80. 1592

Contents Continental shelf and slope of the northeastern United States. The Congo submarine valley Geologic implications. Marine surveying and submarine contouring. Works to which reference is made. Appendixes.

Note. This paper contains an outline and description of the methods and results of the marine surveys of some of the submerged continental margins of the United States and the West Africa region of the Congo river based on the data accumulated by the United States Coast and Geodetic Survey between 1923 and 1939 The bulk of the work is represented by nine Atlantic continental shelf and slope charts to the scale of 1 120,000, covering the area roughly between Chesapeake Bay Virginia, and Georges Bank, Massachusetts. A large number of soundings are presented in substantiation of the contours shown on these charts.

VEATCH, ARTHUR CLIFFORD

Evolution of the Congo basin New York *The Geological Society of America,* 1935 183 p illus. 25 cm (The Geological Society of America. Memoir 3) $2 10 1593

Contents (abridged) Introduction. Historical review Features and surficial deposits of Kasai-Lunda. Basement rocks. Lubilash beds. Lukuga and associated beds. Stanleyville and associated beds. Stanleyville and associated beds of north central Angola. Dwyka glaciation. Conditions in Kasai-Lunda and Bushimaie diamond regions in Karroo time and source of the diamonds. General summary and conclusions. Bibliography Index.

Note A memoir summarizing the available geological knowledge on the Congo basin, with a critical estimate of the various theories of geologic evolution and new data based on the author's field work in that region between 1924 and 1930.

WANLESS, HAROLD R , AND OTHERS

Paleozoic and Mesozoic rocks of Gros Ventre, Teton, Hoback and Snake River ranges, Wyoming By Harold R. Wanless, Ralph L. Belknap and Helen Foster New York Geological Society of America, 1955 90 p illus 25 cm. (Geological Society of America. Memoir 63) $2 75 1594

Contents (abridged) Precambrian rocks. Cambrian system, by H. R. Wanless and J Hellerty Ordovician system. Devonian system, by H. R. Wanless and others. Mississippian system, by H. R. Wanless and W Price. Pennsylvanian system, by H. R. Wanless and L. M. C and others. Permian system, by H. R. Wanless and H. H. Gray Krauskopf. Triassic system, by H. R. Wanless and H. H. Gray Cretaceous Jurassic system, by H. R. Wanless and H. H. Gray Cretaceous system. Tertiary systems. Pleistocene and recent systems. Summary Problems deserving further study References cited. Index.

Note The present Memoir presents the results of studies made in a region which is remarkable for its long and nearly complete stratigraphic column. All of the formations studied are described

[illegible] in the specimen. The author shows that estimates of high accuracy are possible if the technique is understood and correctly used. The importance of good experimental design is emphasized. [illegible] and methods of using them are described. One of the appendixes is [illegible] of books on statistical theory and sampling techniques.

Dake, Henry Carl, and others

Quartz family minerals a handbook for the mineral collector by H. C. Dake, Frank L. Fleener and Ben Hur Wilson. New York Whittlesey House, McGraw Hill Book Company Inc., 1938 304 p. illus. 21 cm. $4 5 1607

Contents. Why know quartz. The kaleidoscopic lore of quartz. The way to quartz. The nature of crystallization. The quartz crystal. The crystalline forms of quartz. The massive forms of quartz. The [illegible] forms of quartz. The crypto-crystalline and amorphous forms of quartz. Agate—chalcedony. Geodes and thunder eggs. Unusual quartz types. The opal. Silicification and petrified woods. The art of cutting quartz gems. Appendix. Index.

Note Gives the amateur and the student definite information concerning types, varieties of quartz, its location and composition, its place in history and commerce, and the proper methods of cutting and polishing. The authors have attempted to check from original sources as many as possible of the statements made. Selected references and topics are given in the appendix.

Daly Reginald Aldworth

Igneous rocks and the depths of the earth containing some revised chapters of "Igneous rocks and their origin" (1914) New York McGraw Hill Book Company Inc., 1933 598 p. illus. 23 cm. $12.00 1608

Contents: Abstract. Part [illegible] Leading facts. Types of igneous rocks. [illegible] [illegible] Index.

Note In this work, the [illegible]

Dana, Edward Salisbury

Minerals and how to study them revised by Cornelius S. Hurlbut, jr Third edition. New York. John Wiley & Sons Inc., 1949 323 p illus. (part col'd) 22 cm. $3 5 1609

Contents: Minerals and mineralogy. [illegible] Index.

Note The first edition of this manual was published in [illegible]

Dana, James Dwight

Dana's manual of mineralogy Sixteenth edition. Revised by Cornelius S Hurlbut, jr New York John Wiley & Sons Inc., 1952 530 p. illus. 24 cm. $7.00 1610

Contents: Mineralogy. Crystallography. Physical mineralogy. Chemical mineralogy. Descriptive mineralogy. Occurrence and association of minerals. Mineral tests. Determinative mineralogy. Subject index. Mineral index.

Note The first edition of this work was published in [illegible]. In its various editions it has spanned more than a century. In it are covered both the general techniques of mineral identification and detailed, systematic descriptions of individual minerals. [illegible] The book is used both as an introductory text and as a reference book in libraries and in the field. It has been substantially revised in this edition. [illegible]

Emmons R. C., editor

Selected petrogenic relationships of plagioclase. New York Geological Society of America, 1953 142 p illus. 24 cm. (Geological Society of America. Memoir 52) $2.00 1611

Contents: [illegible] References cited.

Note [illegible]

English George Letchworth

Getting acquainted with minerals. With 258 illustrations New York. McGraw Hill Book Company Inc., 1934 324 p. illus 23 cm. $5.00. 1612

Contents: Part I, About minerals in general. [illegible] Index.

Note An introduction to the science of mineralogy for the [illegible]

plates. Cambridge, Mass Museum of Comparative Zoology, 1934 322 p illus 31 cm (Museum of Comparative Zoology at Harvard College. Memoirs Volume LII) $15 00 1601

Contents Part I, Outline of the geography and geology of the region, by J B. Woodworth Introduction. Topography General geology Summary of the geological history of the region. Mineral resources. Part II Geology of particular areas Geology of Nantucket and adjacent islands, by J B. Woodworth. Geology of Marthas Vineyard, by Edward Wigglesworth, with notes by J B. Woodworth. Geology of No Mans Land, by J B Woodworth. Geology of Block Island, by J B Woodworth. Part III, Geology of Cape Cod and the Elizabeth Islands, by J B Woodworth Geology of Cape Cod. Geology of the Elizabeth or Gosnold Islands. Plates.

Note A comprehensive description of the physical geography and geology of Cape Cod and certain nearby islands in the vicinity of Boston, Massachusetts. It is largely based on field work done in 1914 and 1915 The 38 plates include reproductions of photographs and colored maps.

MINERALOGY AND PETROLOGY

AHRENS, L H

Quantitative spectrochemical analysis of silicates, a scheme of quantitative DC arc analysis of the silicate minerals, rocks, soils and meteorites Reading, Mass Addison-Wesley Publishing Company, Inc , 1955 122 p illus. 23 cm $3 75 1602

Contents Introduction. Miscellany Standards. Lognormal distribution of spectrochemical error The alkali metals. The volatile group. The involatile elements. Fluorine. The common elements (other than N and K) Bibliography Index.

Note. Spectrochemical analysis of minerals is a rapid method usually employed in qualitative detection. In this book a scheme for quantitative determinations which is reasonably rapid and gives results which are in error by no more than 2½ to 10 per cent is presented. It is based largely on the work of the author and his associates however the relevant publications of other scientists are critically reviewed. The book is addressed particularly to mineralogists and spectrochemists who already have some familiarity with the field. The bibliography runs to more than four pages.

AMERICAN INSTITUTE OF MINING AND METALLURGICAL ENGINEERS

Problems of clay and laterite genesis Symposium at annual meeting of The American Institute of Mining and Metallurgical Engineers St. Louis, Missouri February 19–22 1951 Sponsored by the Karl Eilers Memorial Fund New York American Institute of Mining and Metallurgical Engineers, 1952 244 p illus 23 cm $6 00 1603

Contents The genetic significance of mineralogy by A. F Frederickson. Origin of the Arkansas bauxite deposits, by M. Gordon, Jr and J I. Tracey Jr Examples of bauxite deposits illustrating variations in origin, by E C. Harder Investigations on cold-precipitated hydrated ferric oxide and its origin in clays, by R. C. Mackenzie. Studies in the system alumina-silica-water by R. Roy and E. F Osborn. Mineralogy and origin of the Mercer fireclay of north-central Pennsylvania, by R. C Bolger and J H. Weitz. The structure of hydrous aluminum oxides and hydroxides, by W O. Milligan and J L. McAtee Genesis of clay minerals, by E. A. Hauser Prospecting for useful clays in relation with their conditions of genesis, by G Millot. Observations on the origin of Missouri high-alumina clays, by *W D Keller New* clay mineral evidence concerning the diagenesis of some Missouri fireclays, by J F Hurst. Interrelationships of structure and genesis in the kaolinite group, by T F Bates. The genesis and morphology of the alumina-rich laterite clays, by G. D Sherman. Occurrence and exploration of Georgia's kaolin deposits, by T L. Kesler. Kimmeet Bay clay deposit, by E. A. Hauser Recent advances in clay mineral technology by R. E. Grim. Discussion. Name index. Subject index.

Note A collection of technical papers written by geologists, mineralogists, chemists, and specialists in soil science. The symposium (and the book) was designed to bring together the contributions and ideas of scientists from various fields. The papers were addressed to graduate scientists and engineers with theoretical or practical interests in clay minerals. Literature references are included.

BASTIN, EDSON SUNDERLAND

Interpretation of ore textures. New York The Geological Society of America, 1950. 101 p illus 26 cm (The Geological Society of America. Memoir 45) $1 75 1604

Contents Introduction. Textures of magmatic ores. Common textures indicative of deposition in open spaces. Principles of colloidal deposition. Colloidal ore textures. Replacement textures. Microscopic inclusions. Paragenesis or order of deposition. Textures of sedimentary ore deposits. Ore textures formed by dynamometamorphism. References cited. Explanation of plates. Index.

Note The textures of ores when viewed under the microscope are correlated in this book with the genesis or methods of formation of ores. Only aspects such as would concern an ore analyst or practicing mineralogist are treated. In other words, there is little discussion of the physical chemistry principles underlying ore deposition. The author has included information from the literature and from his own work. The 18 plates show photographs or microphotographs of approximately 100 prepared ore specimens.

BOWEN, N L

The evolution of the igneous rocks. With a new introduction by J F Schairer New York Dover Publications Inc., 1956. 334 p illus. 21 cm $1 85 1605

Contents Part I The problem of the diversity of igneous rocks. Liquid immiscibility in silicate magmas. Fractional crystallization. Crystallization in silicate systems. The reaction principle. The fractional crystallization of basaltic magma. The liquid lines of descent and variation diagrams. The glassy rocks. Rocks whose composition is determined by crystal *sorting. The* effects of assimilation. Part II The formation of magmatic liquid very rich in potash feldspar The alkaline rocks Lamprophyres and related rocks. The fractional resorption of complex minerals and the formation of strongly femic alkaline rocks. Further effects of fractional resorption. The importance of volatile constituents. Petrogenesis and the physics of the earth. The classification of igneous rocks. Indices. *General* index. Index of systems Index of components and compounds of systems.

Note When it was first published in 1928, this work was a pioneer treatise on the application of physicochemical concepts and methods to the study of the formation of the igneous rocks of the earth's crust, particularly in stressing the necessity of understanding the laws of chemical equilibrium and the processes of crystallization in silicate systems. It is still regarded as an essential work in collections on petrology although advances since *1927* are not represented in it. The edition listed here is an unabridged and unrevised reprint of the 1928 edition, except for the introduction by Schairer and a bibliography of the writings of Bowen from 1909 to 1954 both of which are new

CHAYES, FELIX

Petrographic modal analysis an elementary statistical appraisal New York John Wiley & Sons, Inc. *1956 113 p Illus.* 24 cm. $5 50 1606

Contents The geometrical basis of modal analysis. The modal analysis of banded rocks. *Methods* of measuring *relative areas* in thin sections. The reproducibility of thin-section analyses. Identification and tabulation conventions. A working definition of analytical error in modal analysis. Effect of grain size *and* area of measurement on analytical error A measure of coarseness in the granular fabric. *The* control of analytical error by replication. The Holmes effect and the lower limit of coarseness in modal analysis. Appendices. References. Index.

Note. An important addition to the literature of petrography The technique with which it deals is based on a visual inspection *of a* polished *slab of* mineral or thin section of rock, and its purpose is a qualitative estimate of the relative amounts of minerals

Contents: Granites and granites, by H. H. Read. Origin of granitic rocks of the northwest Adirondacks, by A. F. Buddington. Origin of granite, by F. F. Grout. Origin of granites, by G. E. Goodspeed. The granite problem and the method of multiple prejudices, by N. L. Bowen.

Note: The papers and discussion in this volume are the result of an experiment planned by the Society to focus attention on some of the unsolved problems in geology. Some of the hypotheses put forth are that granite was formed by the cooling of magmas, by replacement, by migmatization and metamorphism, and by ultrametamorphism. Most of the scientists agreed that granite may be formed by different processes, but there was no agreement on the origin of most granite masses. The discussions are reported in full, and the literature of the problem is freely cited.

GRIM, RALPH E.

Clay mineralogy New York McGraw Hill Book Company Inc., 1953 384 p. illus. 24 cm. (McGraw Hill series in geology Robert R. Shrock, consulting editor) $9.50. 1619

Contents: Introduction. Concepts of the composition of clay materials. Classification and nomenclature of the clay minerals. Structure of the clay minerals. X-ray diffraction data. Shape and size—electron micrographs. Ion exchange. Clay-water systems. Dehydration, rehydration, and changes taking place on heating. Clay-mineral—organic reactions. Optical properties. Miscellaneous properties. Origin and occurrence of the clay minerals. Appendix: Chemical analyses. Index.

Note: The extensive knowledge so far accumulated on the chemistry and physics of the clay minerals has been collected and organized in this work. Older concepts are reviewed briefly but most of the space is devoted to the knowledge gained in the last three decades. The chapters are essentially literature digests with numbered references from statements in the text to footnote citations of the literature. These footnote bibliographies are supplemented by lists of "additional references" at the end of the chapters. The book will be useful to such scientists as geologists, specialists in soil science, and chemists associated with the ceramic industries.

GROUT, FRANK FITCH

Petrography and petrology a textbook. New York McGraw Hill Book Company Inc., 1932 522 p illus. 23 cm. $8.50. 1620

Contents: Introduction. The petrography of igneous rocks. The petrology of igneous rocks. The petrography of sedimentary rocks. The petrology of sedimentary rocks. The petrography of metamorphic rocks. The petrology of metamorphic rocks. Mineral tables and readings.

Note: A combined text and laboratory guide. The descriptive part is a guide to laboratory work on collections of rocks and thin sections with the polarized microscope. The text material consists of a study of the common interpretations of the peculiarities of rocks in terms of their origin and history.

HEINRICH, E. WM

Microscopic petrography New York McGraw Hill Book Company Inc., 1956 296 p. illus. 24 cm. (McGraw Hill series in the geological sciences Robert R. Shrock, consulting editor) $6.50 1621

Contents: Methods of microscopic study. Igneous rocks—general. Descriptions of igneous rocks. Sedimentary rocks—general. Descriptions of sedimentary rocks. Metamorphic rocks—general. Descriptions of metamorphic rocks. Bibliography. Index.

Note: A practical and up-to-date manual on the identification and analysis of rocks by techniques based on the petrographic polarizing microscope and its accessories. Although the first chapter is devoted to methods and selected instruments, the book is addressed to readers who are already acquainted with the basic techniques of mineralogical optical microscopy and the optical characteristics of common rocks. One useful feature of this first chapter is a condensed description of instruments, including the Chayes point counter. The greater part of the book is devoted to descriptions of rocks as they appear in thin sections under the microscope and to other information useful in their identification. Along with concise descriptions of textures, microstructures, etc., there are paragraphs on occurrences of specific varieties of rocks and minerals. The book is potentially useful as a text for the instruction of advanced students and as a reference book for practicing geologists. The author is a member of the faculty of the Department of Mineralogy of the University of Michigan.

JOHANNSEN, ALBERT

A descriptive petrography of the igneous rocks. Chicago University of Chicago Press 1932–39 4 v illus 25 cm. Vol. I $6.00 Vol. II, $8.00 Vol III, $7.00 Vol. IV, $10.00 1622

Contents (abridged): Volume I, Introduction, textures, classifications, and glossary. The constituents of the igneous rocks. The structures and textures of igneous rocks. Classification of igneous rocks. Chemical classifications. The system of Osann. The C. I. P. W. system. The system of Hommel. The system of Niggli. The system of von Wolff. Qualitative mineralogical classifications. Quantitative mineralogical classifications. Appendix: Glossary of mineralogical terms. Glossary of textural and structural terms. Definitions of rocks. Tables. Index of authors. General index. Volume II, The quartz-bearing rocks. Family 0. Family 1. Family 2. Family 3. Family 4. Family 5. Family 6. Family 7. Family 8. Index of rock names. Volume III, The intermediate rocks. Family 9. Family 10. Family 11. Family 12. Index of rock names. Volume IV. Part I, The feldspathoid rocks—Part II, the peridotites and perknites. Part I, The feldspathoid rocks. Family 13. Family 14. Family 15. Family 16. Family 17. Family 18. Family 19. Family 20. Family 21. Family 22. Family 23. Family 24. Family 25. Part II, The peridotites and perknites. Dunites of Family 0. Dunites of Family 1—of Family 2—of Family 3—of Family 4. Peridotites of Family 5—of Family 6—of Family 7—of Family 8—of Family 9—of Family 10—of Family 11—of Family 12. The ores of Family 41Z. Appendix. Index of authors. Index of localities. Index of rocks.

Note: A postgraduate grade textbook and handbook dealing primarily with the more minute phases of the science of petrology, such as the megascopic and microscopic features, the individual mineral and chemical compositions, and the various textures found in rocks. The first volume describes the textures and structures of rocks and rock systems with a summary of the various classifications according to the author's own system. The other three volumes describe the textures and structures of rocks and rock systems with a summary of the various classifications according to the author's own system. The other three volumes describe and classify the various families of rocks. A glossary of petrographic terms, bibliographic references and tables for calculation are provided. The current edition of the other three volumes is the first edition. These volumes were published in the following years: Volume II, 1932; Volume III, 1937; Volume IV, 1938.

KEMP, JAMES FURMAN

A handbook of rocks, for use without the petrographic microscope. Sixth edition, completely revised and edited by Frank F. Grout. New York D. Van Nostrand Company Inc., 1940. 300 p. illus. 23 cm. $5.00 1623

Contents: Introduction. General introduction to the igneous rocks. The igneous rocks (three chapters). General remarks on the igneous rocks. General introduction to sedimentation. The sedimentary rocks. Generalities on metamorphism. The metamorphic rocks. The rocks produced by contact and hydrothermal metamorphism. Summaries of metamorphic rocks. Calculations in rock study. Rock descriptions. Appendix. Index.

Note: This college textbook explains the chemical composition of rocks, based upon methods of calculation. Its purpose is to present co-ordinated methods for recognizing the various rocks without use of the microscope or other optical equipment. A comprehensive classification of rocks is included for reference purposes.

KRAUS, EDWARD HENRY, AND OTHERS

Mineralogy an introduction to the study of minerals and crystals. By Edward Henry Kraus, Walter Fred Hunt and Lewis Stephen Ramsdell. Fourth edition. New York McGraw Hill Book Company Inc., 1951 664 p. illus. 24 cm. $8.00 1624

Contents: Introduction. Crystallography. Cubic system. Hexagonal system. Tetragonal system. Orthorhombic system. Monoclinic system. Triclinic system. Compound crystals. Physical properties. Optical

tion, while more difficult procedures are mentioned as goals to be reached by more advanced study if desired. A table of identification properties and a pronouncing vocabulary are given in the appendixes.

FAIRBAIRN, HAROLD WILLIAMS, AND OTHERS

A cooperative investigation of precision and accuracy in chemical, spectrochemical and modal analysis of silicate rocks, by H. W Fairbairn and others, an investigation by staff members of Department of Geology, Massachusetts Institute of Technology, Cambridge, Mass. (in collaboration with Office of Naval Research, Washington, D C), Geophysical Laboratory, Carnegie Institution of Washington, Washington, D C , Geochemistry and Petrology Branch, U S Geological Survey, Washington, D C. Washington, D C Government Printing Office, 1951 71 p illus 23 cm. (Contributions to geochemistry, 1950–51 United States Geological Survey Bulletin 980) $0.35 1613

Contents Preparation and distribution of the samples, by H. W Fairbairn. Results of chemical analysis of samples of granite and diabase, by W G. Schlecht and R. E. Stevens. Spectrochemical analysis of major constituent elements in minerals and rocks, by W H. Dennen and others. Spectrochemical analysis of some of the rarer elements in the granite and diabase samples, by L. H. Ahrens. Modal analysis of the test rocks, by Felix Chayes. Summary of results, by H. W Fairbairn.

Note. The first part of this progress report is introductory to the bulletin as a whole the second, third, fourth, and fifth parts deal with particular aspects of analysis, and the sixth part summarizes. The authors express the hope that similar studies will follow in the future because the accuracy and precision of analytical methods used by petrologists, geochemists, and mineralogists are relative rather than absolute.

FAIRBAIRN, HAROLD WILLIAMS

Structural petrology of deformed rocks with supplementary chapters on statistical analysis by Felix Chayes. Reading Mass Addison Wesley Publishing Company Inc., 1949 Second edition 344 p illus. 24 cm $12 50 1614

Contents (abridged) Part I, Petrofabric and experimental facts. Orientation patterns of minerals. Orientation of composite elements. Relation of folds to grain orientation. Experimental deformation. Reversible flow and rupture. Irreversible flow and recrystallization. Part II, Interpretation and application Development of quartz orientation. Development of orientation in minerals other than quartz. Rotation and relative movement. Recrystallization in tectonites. Folds and folding. Hypotheses of rock flowage. Tectonic transport. Remarks on foliation and lineation. Part III, Methods and analytic procedures Field and hand specimen procedure. Microscope and X-ray procedure. Presentation of data. Statistical analysis of two-dimensional fabric diagrams. Statistical analysis of three-dimensional fabric diagrams. Bibliography Index.

Note A reference book for specialists in petrology and graduate students preparing to enter this field. It deals with the fundamental processes of the formation of rocks and certain geological structures. Its primary purpose is to enable the petrologist to analyze rocks and to study geological formations on the basis of crystal structures, behavior of rocks under pressure and related processes. Much new material has been added in this edition, including the two chapters on statistical methods applied to the analysis of petrofabrics.

FENTON, CARROLL LANE, AND MILDRED ADAMS FENTON

The rock book, illustrated with color plates, photographs and line drawings Garden City Doubleday and Company, Inc., 1940 357 p illus. (part col'd) 25 cm. $7.50. 1615

Contents Rocks in our world. Atoms to minerals. Important minerals. Rocks, minerals and ages. Up from the depths. Coarse-grained igneous rocks. Fine-grained, glassy and fragmental rocks. Rocks from the sky. New rocks from old. Clastic rocks, coarse-grained, fine-grained. Rocks from solutions. Limestones and related rocks. Rocks once living. Records in strata. Heat, movement and change. Rocks that have changed. Ores and their origins. Collect, travel, and read. Index.

Note In addition to a general discussion of how rocks originated, this volume describes specific types of rocks in the world, with particular reference to those commonly encountered in the United States and Canada. It outlines the recognizable features, origin, occurrence, and uses of each type, and supplements the description with numerous photographs of typical specimens. A final chapter tells how to build up, organize, and prepare a rock collection. The volume will be of interest to the general reader and nature student.

GEOLOGICAL SOCIETY OF AMERICA

Sedimentary facies in geologic history (Conference at meeting of The Geological Society of America held in New York, New York, November 11, 1948) Chester R. Longwell, chairman. New York Geological Society of America, 1950 171 p illus. 26 cm. (Geological Society of America Memoir 39) $1 75. 1616

Contents Principal addresses Meaning of facies, by R. C. Moore. Facies changes in the Colorado plateau, by E. D. McKee. Sedimentary facies and geologic structures in the Basin and Range province, by S. W Muller Sedimentary facies and associated diastrophism in the Upper Cretaceous of central and eastern Utah, by E. M. Spieker Oligocene faunas, facies, and formations, by H. E. Wood, 2nd. Integrated facies analysis, by L. L. Sloss, W C. Krumbein and E. C. Dapples. Discussion.

Note A series of papers written for a symposium, organized similarly to the Society's symposium on the origin of granite, have been collected in this volume, together with transcripts of the discussion at the meeting. Various current views on the classification of sedimentary rocks and the interpretation of their history are presented. The papers are supplemented by lists of references, but the book contains no index.

GEORGE, RUSSELL D

Minerals and rocks their nature, occurrence, and uses New York D Appleton-Century Company Inc., 1943 595 p. illus. 23 cm. (Century earth science series, K. F Mather, editor) $6 00 1617

Contents (abridged) Metallic elements and minerals. Nonmetallic elements and minerals. Rock-making minerals. Determinative mineralogy The common rocks. Appendix. Glossary Index.

Note. A textbook for use in college courses on mineralogy and petrology the purpose being to present a general view of the increasing number and volume of earth materials which have become fundamental to industry today The basis of mineral classification used is the element, and all the economically useful or potentially useful minerals containing the same element are treated together in order of importance. Tabular arrangements are given of physical and chemical properties, mode of occurrence, identifying tests, and uses. There are 48 plates of photographs which considerably augment the text descriptions.

GILLULY, JAMES

Origin of granite (Conference at meeting of the Geological Society of America held in Ottawa, Canada, December 30, 1947) New York The Geological Society of America, 1948 136 p illus. 25 cm (Geological Society of America. Memoir 28) $1.80 1618

Mineralogy and Petrology

PEARL, RICHARD M

How to know the minerals and rocks. New York McGraw Hill Book Company Inc., 1955 192 p. illus. 21 cm. $3 75 1629

Contents This fascinating mineral hobby How rocks and minerals are formed. Building a mineral collection. Seven keys to recognizing minerals. How to read chemical formulas. How to use the outlines. Identifying the minerals—outline of keys Four keys to recognizing rocks. Identifying the rocks—outline of keys. Magazines for the collector Books for the collector. Index.

Note The identification of minerals and rocks is reduced to simple terms in this book. Certain general aspects of mineralogy and especially mineral collecting, are covered briefly in the first three chapters. Actual identification techniques begin in Chapter four with the description of seven keys which are easy to apply. Individual descriptions of about 125 minerals begin on page 56 and account for most of the rest of the space in the book. Line drawings are included in each description and, on pages separate from the descriptions, there are colored illustrations of 46 of the minerals.

PETTIJOHN FRANCIS JOHN

Sedimentary rocks. New York Harper & Brothers, 1949 526 p. illus. 24 cm. (Harper's geoscience series Carey Croneis, editor) 1630

Contents Introduction Textures. Composition. Structures. Color Classification. Conglomerates and breccias. Sandstones. Shales and argillites. Limestones and dolomites. Nonclastic sediments. Weathering. Transportation. Deposition. Lithification and diagenesis. Author index. Subject index.

Note A relatively comprehensive treatment, even though it was intended by the author as an elementary work. The processes of sedimentation are covered with relative brevity but their products are covered thoroughly and much data—particularly on chemical composition—are included which have not been published previously in book form. Emphasis is on common gravels and rocks rather than on rocks that are rarely encountered. There are 131 figures and 30 plates. Many of the latter are reproductions of microphotographs. There are many footnote references to the modern literature but no formal bibliography A second edition, 718 p., $12.00, was published in 1957

PIRSSON LOUIS VALENTINE

Rocks and rock minerals. Third edition, revised by Adolph Knopf New York John Wiley & Sons Inc. 1947 349 p. illus. 22 cm. $6.00 1631

Contents: Part 1, Introductory and general: Scope of petrology; history; methods of study Chemical composition of the earth's crust and its component minerals. Part 2, Rock minerals: Important properties of minerals The rock-making minerals. Determination of rock minerals. Part 3, Rocks General petrology of igneous rocks. Classification of igneous rocks. Description of igneous rocks. Origin and classification of sedimentary rocks. Description of detrital sedimentary rocks Description of sedimentary rocks, mainly nondetrital. Origin and classification of metamorphic rocks. Description of metamorphic rocks. Determination of rocks. Index.

Note. Since the publication of the first edition (1908) this work has been known as a reliable and convenient manual of the main elements of petrology including megascopic (but omitting microscopic) petrography It has been extensively used both as a field manual by amateur collectors and professional geologists, and as a textbook in college courses. The scope of the work has not been changed in the present edition, but the text has been revised, rearranged, the type reset. Some parts of the original text have been condensed, new information on chemical analyses has been added, and there are changes in terminology and classification.

POUGH FREDERICK H.

A field guide to rocks and minerals. Second edition. Boston Houghton Mifflin Company 1955 349 p. illus. (part col d) 19 cm. (The Peterson field guide series) $3 95 1632

Contents Part 1, An introduction to the study of rocks and minerals Your mineral collection. Rocks and minerals and where to find them. Physical properties of minerals. Crystal classification. The chemical classification of minerals. Tests, techniques, and tips. Part 2, Mineral descriptions: The elements. The sulphides and sulphosalts. The oxides. The halides. The carbonates. The nitrates, sulphates. The borates. The sulphates. The phosphates, arsenates, vanadates, and uranates. The tungstates (wolframates) and molybdates. The silicates. Uranium ores. Glossary Bibliography Index.

Note: A well-organized and lavishly illustrated reference manual on the identification of rocks and minerals. The descriptions of the individual minerals include all the useful visual characteristics and also a selection of chemical and physical properties that require instruments for determination or measuring. Minerals are described as to environment, crystal condition, physical properties, composition, tests, distinguishing characteristics, and occurrence. The illustrations are a special feature Of the 283 reproductions of photographs, 77 are reproduced in full color The first edition was published in 1953. This second edition contains an enlarged discussion of uranium ores and includes eight photographs of which five are reproduced in full color

RAMBERG HANS

The origin of metamorphic and metasomatic rocks a treatise on recrystallization and replacement in the earth's crust. Chicago University of Chicago Press 1952 317 p. illus. 24 cm. $10 00 1633

Contents Definitions. Natural boundary between metamorphism and magmatism. Thermodynamics of metamorphic processes. Equilibrium diagrams of metamorphic minerals. Chemical kinetics of metamorphism. The kinetics of deformation of rocks and minerals. Stress-minerals, antistress minerals. Brief survey on structural properties of metamorphic rocks. The mineral facies of metamorphic rocks. Metasomatism. The mechanism of metasomatic transfer of matter through rocks. Metamorphic differentiation. The principles of metamorphic differentiation and the question of nuclei formation during metasomatism. Contact metasomatism. Metasomatism in practically unmetamorphosed and low-grade sediments. Metasomatism in regionally metamorphosed complexes. Temperature in regional metamorphism. Appendix Chemical bonds in crystals—a clue to predicting relative stability of minerals and cation distribution among them. References. Author index Subject index.

Note: An important addition to petrologic literature in which the petrogenesis of the metamorphic and metasomatic rocks is studied from the viewpoint of thermodynamics and crystal chemistry It represents the great advances in the understanding of metamorphism which have been made in recent years, advances in which the author himself has taken a considerable part. The first third is devoted to discussions of the physico-chemical processes, the remainder to specific series of petrogenetic events and to discussions of the genesis of specific varieties of rocks. Readers need a fairly substantial knowledge of basic thermodynamics, physical chemistry, and petrology The work is of interest to graduate students of petrology and graduate specialists in this field.

ROGERS AUSTIN FLINT

Introduction to the study of minerals with a section on Microchemical analysis, by Lloyd W Staples. Third edition. New York McGraw Hill Book Company Inc., 1937 626 p. illus. 23 cm. $8.00 1634

Contents (abridged) The morphological, physical, optical, and chemical properties of minerals. The description of important minerals and mineraloids. The occurrence, association, and origin of minerals, including rocks. The determination of minerals by chemical and optical tests. Appendix. Index and glossary

Note: An introductory textbook and reference book for the student of mineralogy for use in the field and in the classroom. Includes a discussion of crystallography blowpipe analysis, descriptive and determinative mineralogy plus a descriptive list of minerals, giving the form, properties, composition, and occurrence of each mineral. The third edition includes new material on crystallography the chemical properties of minerals, additional descriptions of minerals and mineraloids, and new illustrations.

ROGERS AUSTIN FLINT AND PAUL F KERR

Optical mineralogy Second edition New York McGraw Hill Book Company Inc. 1942 390 p. illus. 23 cm. $7 00 1635

Contents: Part 1, Mineral optics: The preparation of thin sections of minerals and rocks. The polarizing microscope. A summary of the properties of light. Refraction. Plane polarized light

mineralogy Crystal structure and X-ray analysis. Chemical properties. Formation and occurrence of minerals. Qualitative blowpipe methods. Descriptive mineralogy Gemstones. Classification of minerals according to elements. Glossary Tabular classification of the 32 classes of symmetry Tables for the determination of minerals. Selected bibliography Index.

Note A college textbook that contains enough material to make it useful also as an elementary reference book in library and personal collections. The general aspects of the subject are discussed in the first 15 chapters which account for approximately 240 pages of the book's length. The sixteenth chapter which contains concise descriptions of representative minerals is 164 pages long. The determinative tables of minerals are arranged so that they may be used by both amateurs and professionals. Both the text and the illustrations have been revised and extended in this edition. The bibliography is a new feature.

KRAUS, EDWARD HENRY, AND WALTER FRED HUNT

Tables for the determination of minerals by means of their physical properties, occurrences, and associates Second edition. New York McGraw Hill Book Company, Inc., 1930 266 p illus 24 cm $5 50 1625

Contents Introduction—physical properties. Glossary Directions for using the tables. General classification and analytical key Minerals with metallic luster Minerals with non-metallic luster Table of minerals arranged according to increasing specific gravity with chemical composition and other physical properties. Index.

Note The tables include approximately 250 of the most common minerals, classified into three groups as (1) very common, (2) common, and (3) not common, but important. Name, chemical formula, crystallization structure, luster transparency color hardness, streak, cleavage, fracture, tenacity specific gravity characteristics, and associated substances comprise the data given for each mineral listed. The second edition contains few new minerals not included in the first edition, as well as additional material in the introduction. A table of minerals arranged according to specific gravity has also been added.

KRUMBEIN, WILLIAM CHRISTIAN, AND F J PETTIJOHN

Manual of sedimentary petrography I Sampling, preparation for analysis mechanical analysis and statistical analysis, by W C Krumbein II Shape analysis, mineralogical analysis chemical analysis and mass properties, by F J Pettijohn. New York D Appleton-Century Company, Inc. 1938 549 p illus 22 cm. (The Century earth science series K. F Mather editor) $6 50 1626

Contents (abridged) Part I, Sampling, preparation for analysis, mechanical analysis, and statistical analysis The collection f sedimentary samples. Preparation of samples for analysis. The concept of a grade scale Principles and methods of mechanical analysis. Graphic presentation of analytical data. *Elements of statistical analysis.* Application f statistical measures to sediments. Orientation analysis of sedimentary particles. Part II, Shape analysis, mineralogical analysis, chemical analysis, and mass properties Shape and roundness. Surface textures of sedimentary fragments and particles. Preparation of sample for mineral analysis. Separation methods. Mounting for microscopic study *Optical methods of identification* f minerals. Description of minerals of sedimentary rocks. Mineral frequencies and computation. Chemical methods of study Mass properties of sediments. The laboratory equipment, and organization of work. Author index. Subject index.

Note. A handbook for students of geology and for field workers, covering the distinctive analytic techniques of sedimentary petrology The material has been compiled from extensive but widely scattered literature. The treatment assumes that the reader is fairly well trained in laboratory technique and has some knowledge f crystallography Subject matter is arranged so that the book may be used as textbook in college or graduate courses.

KRUMBEIN, WILLIAM CHRISTIAN, AND LAURENCE LOUIS SLOSS

Stratigraphy and sedimentation. San Francisco W H Freeman and Company, 1951. 497 p illus 25 cm $6 50 1627

Contents Introduction. The stratigraphic column. Stratigraphic procedures. Properties of sedimentary rocks. Classification and description of sedimentary rocks. Sedimentary processes. Sedimentary environments. Stratigraphic paleontology Sedimentary facies. Principles of correlation. Tectonic framework of sedimentation. Sedimentary tectonics. Stratigraphic maps. Paleogeography Bibliography Index.

Note A substantial treatment, in the form of an upperclass college textbook, of two related fields of geology that do not get full-scale treatment in general texts. The order and relation of strata and the study of sedimentary rocks are important in applied geology such as petroleum geology as well as in numerous areas of historical geology Current techniques, such as the logging of samples from oil wells as they are drilled, are discussed, but most of the book is devoted to the fundamental knowledge. The text is supplemented by a long bibliography that should be useful to graduate geologists. There is a generous number of illustrations, and the format of the book is outstanding.

LEWIS, JOSEPH VOLNEY, AND A. C HAWKINS

A manual of determinative mineralogy, with tables Fourth edition, revised by A. C Hawkins New York John Wiley & Sons Inc., 1931 230 p illus 23 cm $5 00 1628

Contents Properties of minerals. Crystallization. Optical properties. Physical properties. Chemical properties. Physical tests. General classification. Determination by blowpipe tests: Apparatus. Reagents. Blowpipe operations and chemical tests. Reactions of the elements. Blowpipe tables. Laboratory records. General table. Minerals classified according to crystallization and optical constants. Glossary Abbreviations. Chemical elements. Bibliography Index.

Note These tables are intended to furnish means by which minerals may be known, and to lead the reader to acquire first-hand knowledge of what the mineral really is, both chemically and physically In the fourth edition, reduction was accomplished in the amount of repetition in the tables for the determination of minerals by their physical properties. A number of minerals formerly included in the blowpipe tables have been eliminated because of their rarity and lack of practical importance. A chapter on optical methods has been included.

PALACHE, CHARLES, AND OTHERS

The system of mineralogy of James Dwight Dana and Edward Salisbury Dana, Yale University 1837–1892 Seventh edition, entirely rewritten and greatly enlarged by Charles Palache, the late Harry Berman and Clifford Frondel New York John Wiley & Sons, Inc., 1944–51 2 v illus. 24 cm. Vol I, $14.00 vol. II, $16 00 1628A

Contents (abridged) Volume I, Elements, sulfides, sulfosalts, oxides: Introduction. Native elements. Sulfides, including selenides, tellurides. Sulfosalts. Simple oxides. Oxides containing uranium, thorium, and zirconium. *Hydroxides and oxides containing hydroxyl. Multiple oxides.* Multiple oxides containing columbium, tantalum, and titanium. Index. Volume II, The system f mineralogy: Halides. Carbonates. Nitrates. Iodates Borates. Sulfates. Selenates and tellurates. Chromates. Phosphates, arsenates, and vanadates. Antimonates. Vanadium oxysalts. *Molybdates and tungstates.* Organic compounds. Index.

Note A widely known work that has long enjoyed the status of being the recognized authority on the classification of minerals. The sixth edition was published in 1892. *In the seventh edition it is being completely reorganized and rewritten.* The classification is new one based on crystal chemistry Also, there are a system of classification numbers for species, revised morphological lattices based on the structural unit cell, new form of presentation of crystallographic data, revision of specific gravities and new literature references. *Data from X-ray investigations are being included for the first time.* A third volume is in preparation.

Contents: The field study of sediments. Collection of samples and specimens. Preparation of sediments for analysis. Mechanical analysis of sediments. Separation of minerals of sediments. Quantitative determination of mineral content. Graphical representation of sediments. Chemical methods of mineral separation. Various physical properties of sediments. Coals. Thin sections, mounting of mineral grains, and peels.

Note: Presents [illegible] brief, nonmathematical treatment of methods of study of sediments. Standard methods of sampling for various types of sediments are described, methods of analysis are given, and various forms of graphical representation of the characteristics of sediments and sedimentary rocks are shown. The discussions of coal and oil shales, and of igneous rocks as sources of sediments, are especially noteworthy.

TWENHOFEL, WILLIAM HENRY

Principles of sedimentation. Second edition. New York, McGraw Hill Book Company Inc., 1950 674 p. illus. 23 cm. $9.00. 1643

Contents (abridged): The environmental factors. Classification and consideration of environments. Origin of inorganic sediments. Interrelations of organisms and sediments. Transportation and deposition of sediments. Classification of sediments, sedimentary rocks, and schemata of sediments. The clastic sediments. Sediments of chemical deposition: The carbonate sediments. Siliceous, ferruginous and manganese sediments. The carbonaceous sediments. Evaporites. Phosphate sediments. Structural features of sedimentary origin. Textures and colors of sediments. Index.

Note: A college textbook which also has [illegible] fair amount of reference value. It provides an introductory survey of the current knowledge of both the principles of sedimentation and the soils and rocks produced by sedimentation processes. The treatment assumes that the reader will have had some previous work in geology. Throughout the book, there are frequent lists of pertinent literature for the benefit of the student or practicing geologist who wishes to read further on [illegible] particular topic. Substantial additions, both in text and illustrative matter, have been made in the present edition.

WAHLSTROM ERNEST EUGENE

Igneous minerals and rocks. New York John Wiley & Sons, Inc., 1947 367 p. illus. 22 cm. $6.50. 1644

Contents: Part I, Igneous minerals: Introduction. Optical examination of rock-making minerals. Supplementary methods for examining minerals in igneous rocks. Minerals in igneous rocks. Tables for mineral identification. Part II, Igneous rocks: Geological occurrence of igneous rocks. Structure, texture, color, and characters. Chemical composition and classification. Mineral composition and classification. Descriptions of igneous rocks. The microscopic identification of igneous rocks. Index.

Note: The emphasis in this textbook is on the use of the polarizing microscope for examination and identification of igneous rocks and the minerals that form them. Although the work is designed for beginners in petrology [illegible] prior knowledge of optical crystallography is assumed. Much data commonly needed by students, such as definitions of petrologic terms, the behavior of light in passing through mineral slices, and the comparison of rock classification schemes, are presented in readily usable form. There is, however no systematic description of rocks from the standpoint of specific localities. A few footnote references to the related literature are given. The approximately 133 reproductions of rock photographs and photomicrographs are unusually informative.

WAHLSTROM ERNEST EUGENE

Introduction to theoretical igneous petrology New York John Wiley & Sons Inc., 1950. 365 p. 22 cm. $6.50 1645

Contents: Introduction. Heterogeneous equilibrium and the phase rule. Equilibrium in silicate systems. Igneous minerals. The crust and the interior of the earth. Magmas—source and nature. The ascent and emplacement of magmas. Crystallization of magmas. Internal differentiation. Assimilation and syntexis. Geosynclines. Late magmatic and postmagmatic processes. Origin of rock types. Classification of igneous rocks. Appendix: Physical-chemical concepts useful to petrologists. Index.

Note: A short treatment written mainly for students of geology who do not plan to specialize in this branch of geology but nevertheless desire some knowledge of it. A fair acquaintance with basic geological terms and concepts has been assumed, and the reader needs also to be familiar with the concepts and terms of basic physics, chemistry and mathematics. Phase diagrams and other devices of physical chemistry are used freely. The emphasis is on the physico-chemical processes that produced igneous rocks, rather than on descriptions of the rocks themselves.

WAHLSTROM ERNEST EUGENE

Petrographic mineralogy New York John Wiley & Sons Inc., 1955 408 p. illus. 22 cm. $7 75 1646

Contents: Collection and preparation of samples. Petrographic techniques. Microscopic examination of minerals and aggregates. The universal stage. Graphical presentation of data and common petrographic calculations. Rock-making silicates, Nonsilicates. Tables for mineral identification. Composition, properties, and classification of igneous rocks. Composition, physical properties, and classification of sedimentary rocks. Composition, properties, and classification of metamorphic rocks. Index.

Note: A compact, practical introduction to the identification and classification of rocks and minerals by present-day petrographic techniques. The main techniques expounded in examination with the polarizing microscope. Complementary techniques such as X-ray examination are mentioned. Techniques, presentation of data and other general aspects are treated in the first five chapters, which account for 90 pages. The rest of the space, except that given to the index, is devoted to descriptions of specific groups of minerals and individual minerals. [illegible] these descriptions, data are given on general characteristics and also on characteristics which aid in particular identification with the polarizing microscope. The chapter "Table for mineral identification," runs to 50 pages and contains four original tables [illegible] to use the words of the author are constructed so as to permit [illegible] (1) identification in thin sections, (2) identification of fragments in immersion media, (3) identification by birefringence in color or (4) identification by crystal habit.

WILLIAMS HOWEL AND OTHERS

Petrography: an introduction to the study of rocks in thin sections. By Howel Williams, Francis J Turner and Charles M Gilbert. San Francisco W H. Freeman and Company 1954 406 p illus 24 cm. $6.50 1647

Contents: Part one, Igneous rocks: Introduction. Textures and classification of igneous rocks. The gabbro clan. The alkali gabbro clan. The ultramafic clan and the lamprophyres. The diorite, tonalite, and syenite clans. The granodiorite, adamellite, and granite clans. Pyroclastic rocks. Part two, Metamorphic rocks: Metamorphism, its petrographic criteria and its products. Hornfelses and spotted slates. Cataclasites, mylonites, and phyllonites. Slates, phyllites, and schists of low metamorphic grade. High-grade schists, amphibolites, granulites, and eclogites. Part three, Sedimentary rocks: The origin of sedimentary rocks. The composition and texture of sedimentary rocks. Sandstones. Argillaceous rocks. Calcareous rocks. Miscellaneous sedimentary rocks. List of references. Index of subjects. Index of localities.

Note: A college textbook developed by members of the faculty of the University of California. It is concerned primarily with the description of rocks but contains some material on their genesis. The illustrations are reproductions of drawings of microphotographs of rocks in thin section. They are arranged so that different varieties of the same kind of rock are illustrated adjacent to one another. The presentation is not dogmatic: in fact, the authors emphasize [illegible] that all rocks are transitional members of series, and that clear-cut boundaries are not to be expected.

WINCHELL, ALEXANDER NEWTON

Elements of optical mineralogy: an introduction to microscopic petrography New York John Wiley and Sons, Inc., 1933–51 3 v illus. 23 cm. Part I, $5 75 part II $13.50 part III $7.30 1648

Contents (abridged): Part I, Principles and methods: Elementary conceptions of mineralogy. Crystallography. Physical characters of minerals. Optical properties of isotropic minerals. Preparation of material for microscopic study. Microscopic study of anisotropic. Optical properties of uniaxial minerals. The Nicol prism. Uniaxial minerals in polarized light. Optical properties of biaxial minerals. Special methods of study—graphic methods for the improved universal stage, by R. C. Emmons. Index. Part II, Descriptions of minerals with special reference to their optical and microscopical characters. Elements. Halides. Sulfides. Oxides. Carbonates, etc.

in minerals. Convergent polarized light. Color, form or aggregation. Observation of mineral fragments. *Procedure for the identification of minerals in thin sections.* Part II, Descriptions of individual minerals: Elements. Sulfides and sulfosalts. Haloids. Oxides. Aluminates, etc., hydrous oxides. Carbonates. Sulfates. Phosphates. Titanates. Silicates. Mineraloids.

Note A simplified outline of the methods used in the identification of minerals in thin sections of rocks, covering the principles of optics employed in examining minerals with the polarizing microscope, and giving a concise description of the optical properties of common rock forming minerals. Simplified tables for use in determination of unknown minerals are included. Formerly published under the title, *Thin-section mineralogy* New York, 1933

SHAPIRO, LEONARD, AND W W BRANNOCK

Rapid analysis of silicate rocks (A contribution to geochemistry) Revised from Circular 165 Washington, D C Government Printing Office, 1956 38 p illus. 23 cm. (United States Geological Survey Bulletin 1036–C) $0 20 1636

Contents: Introduction. Apparatus and instruments. Preparation of sample solutions. Methods. Experimental results. References cited. Tables.

Note Described in this bulletin are methods for the rapid determination of the major constituents in silicate rocks: SiO_2, Al_2O_3, Fe_2O_3, FeO MgO CaO, Na_2O K_2O TiO_2, P_2O_5, MnO, H_2O, and CO_2. The expanded program of the Geological Survey following World War II led to an increased need for chemical analyses of rocks and other geological materials. The classical methods are slow and complicated. In 1950 a program of research was begun to develop economical and more speedy methods for making approximate analyses. Improvement and expansion of the original rapid methods described in Circular 165 in 1952 and substitution and addition of new methods resulted in the rapid procedures described in this publication.

SMITH, ORSINO C

Identification and qualitative chemical analysis of minerals. Second edition Princeton D Van Nostrand Company, Inc , 1953 385 p illus. 23 cm. $8 50 1637

Contents: Physical properties. History and uses of blowpiping. Blowpipe reactions. Ultra-violet light and fluorochemistry Mineral chemistry Tables of chemical reactions. Qualitative chemical tests. Mineral identification tables. General index. Mineral index.

Note. First published under the title *Mineral identification simplified*, Los Angeles, 1940 this book has undergone an extensive revision and amplification in each succeeding edition. It is recognized as a useful manual of simple, practical methods for the qualitative analysis of minerals. Both chemical and physical methods are explained, with more emphasis on the latter More than 150 pages of the present edition are devoted to series of tables in which minerals are grouped first by their specific gravity and second in order of their hardness. Detailed and specific directions for measuring these properties are included in the book. Comparing the present edition with the preceding one under the same title published in 1946 the identification tables are unchanged however the author indicates that rather extensive changes may be made in the next edition. On the other hand, the material on mineral analysis with the blowpipe has been considerably extended. Some new tests have been added in the chapters on chemical tests As in the preceding edition, the volume includes a remarkable series of pictures in color of minerals.

SPOCK, L E

Guide to the study of rocks New York Harper & Brothers 1953 256 p illus 24 cm. $4 50 1638

Contents: Introduction. The examination of rocks—identification of minerals—physical characteristics. Igneous rocks. The composition of igneous rocks. Petrogenesis of the igneous rocks. Altered rocks. Sedimentary rocks. Metamorphic rocks. Appendixes: Care of specimens. Density weight, and volume. Three-component diagrams. Summary of the igneous rocks. Summary of the sedimentary rocks. Summary of the metamorphic rocks. General review questions. Index.

Note: An elementary introduction to petrology. It is more scientific in style than some of the handbooks written especially for amateur collectors of rocks and minerals. However, it is organized and written so that it can be studied profitably by amateur collectors who are pursuing such study without the guidance of a professional instructor. It is also suitable for use as a textbook in beginning college courses. It is well organized and adequately, though not lavishly illustrated. The author is Professor of Geology at New York University

TICKELL, FREDERICK GEORGE

The examination of fragmental rocks. Revised edition. Stanford Stanford University Press, 1939 127 p illus. 26 cm. $5 00. 1639

Contents Introduction. Size analysis. Porosity and permeability. Preparation of specimens. Identification of minerals. Description of minerals found in sedimentary rocks. Bibliography. Index.

Note An outline of the physical properties of fragmental aggregates and of their mineral constituents, a laboratory manual and guide for students, geologists, petroleum engineers, chemical engineers, and microscopists, and anyone interested in a practical treatment either of identity or of size and shape relationships of fragmental rocks. The mineral tables present a dichotomous classification that makes comparatively simple and rapid the identification of the species commonly found in clastic mineral aggregates.

TRAVIS, RUSSELL B

Classification of rocks Golden Colorado School of Mines 1955 98 p illus. (part col'd) 23 cm (Colorado School of Mines. Quarterly Vol 50, no 1) $1 00 1640

Contents: Igneous rocks. Sedimentary rocks. Metamorphic rocks. References.

Note A compact and useful guide to rock classification on the basis of genesis and petrography It is directed primarily to college students of geology; but is useful also to others, particularly amateur rock collectors, who wish to classify rock specimens accurately. There are three folded charts, one for each of the genetic classes of rocks and 64 figures in the text. Most of the latter are reproductions of photomicrographs.

TURNER, FRANCIS JOHN, AND JEAN VERHOOGEN

Igneous and metamorphic petrology New York McGraw Hill Book Company, Inc., 1951 602 p illus. 24 cm. $9.50 1641

Contents (abridged) Principles of chemical equilibrium applied to rocks. Characteristics and classification of igneous rocks. Variation in associated igneous rocks. Crystallization of igneous minerals from silicate melts. Crystallization of basaltic and granitic magmas in the light of experimental data. The oceanic olivine-basalt trachyte volcanic association. Volcanic associations of orogenic regions. Basic and ultrabasic plutonic associations. The granite granodiorite plutonic association. Pegmatites, lamprophyres, nepheline syenites. Environment, origin, and evolution of magmas. Principles governing chemical adjustment of solid rocks to metamorphic conditions. Correlation of mineral assemblages with specific conditions of metamorphism. Characteristics of individual metamorphic facies. Special features of fabric of deformed rocks. Metamorphism in relation to magmas and to orogeny Index.

Note An advanced treatise of interest to graduate students preparing for work in petrology and to geologists already at work in the field. In it the modern knowledge of igneous and metamorphic petrology is presented from the physicochemical standpoint. The phase rule and other principles of chemical equilibria applicable to the formation of rocks at high temperatures and under moderate temperatures are summarized in the second chapter In the remainder of the book, groups of rocks are discussed from the viewpoint of their genesis, the genetic processes being viewed against the background of the second chapter as multi-component chemical systems. There is no systematic bibliography but selected literature is cited in footnotes.

TWENHOFEL, WILLIAM HENRY, AND S A. TYLER

Methods of study of sediments New York McGraw Hill Book Company Inc., 1941 183 p illus. 23 cm $4.50 1642

of America, 1946 Reprinted 195[illegible] (with supplement) 138 p. illus. 25 cm. (Geological Society of America. Memoir 18) $2.00 1655

POLDERVAART ARIE, editor
Crust of the earth (a symposium) New York The Geological Society of America, 1955 762 p. illus. 25 cm. (The Geological Society of America. Special paper 62) $6.50 1660

Contents: [illegible]

Other mineral carbon compounds. Borates. Sulfates, etc. Phosphates, etc. Silicates. Index. Part III Determinative tables Table I, Opaque minerals. Table II, Birefringence of minerals. Table III, Color of minerals. Table IV-a, Refringence of isotropic minerals. Table IV-b, Refringence of anisotropic minerals. Table V Dispersion of minerals. Explanation of plates. Index.

Note A standard work used both as textbook in college courses and as a reference book. Part I presents the techniques and background information necessary for the study of minerals in their sections, powders and fragments. Part II is devoted to descriptions of minerals with particular reference to their identification by optical techniques. In the present edition, references to X-ray studies have been included for the first time. Part III contains determinative tables covering all minerals whose optical properties are known. A current set consists of the following parts (actually volumes) Part I fifth edition 1937 Part II, fourth edition, 1951 Part III, second edition, 1939

ZIM, HERBERT SPENCER, AND ELIZABETH K COOPER

Minerals, their identification, uses, and how to collect them New York Harcourt, Brace and Company, 1943 368 p illus. 21 cm $3 75 1649

Contents Minerals in the earth. The rocks and minerals you collect. Discovering physical properties. Mineral tests. Setting up your collection Copper Iron. Aluminum. Lead, tin, and zinc. Other metals. Crystalline quartz. Non-crystalline quartz. Gems. Non-metallic minerals. The rock forming minerals. Identifying the rocks. Rocks and rock structure. The story of the earth. Finding and mining minerals. Minerals and ourselves. Appendix. Index.

Note A nontechnical treatment for the amateur collector of minerals, particularly one of high-school age with no special ized training but with a budding interest in mineralogy Tells how to identify test, and classify minerals, how to start a collection, and where the most likely specimens may be found. The characteristics of many metallic ores and minerals are given in tabular form, and important mineral localities throughout the United States are listed in the appendix.

GEMOLOGY

KRAUS, EDWARD HENRY, AND CHESTER BAKER SLAWSON

Gems and gem materials Fifth edition. New York McGraw Hill Book Company Inc 1947 332 p illus 23 cm $6 00 1650

Contents Introduction. Part I Crystal forms. Physical properties. Optical properties. Crystal structure and X-ray methods. Chemical properties. Formation and occurrence of gem minerals. Cutting and polishing of gems. The naming of gems. Manufactured gems. Metals used for gem mountings. Part II Description of individual gems. Part III Classification of gem materials, according to various properties. Selected bibliography Index.

Note This work, which provides a compact but authoritative review of information on both crude and cut gems, has been a standard text and manual since the publication of the first edition in 1925 Compared to the fourth edition this edition contains newly added material on gem-cutting machinery the evaluation of cut diamonds, new gem materials, and recent progress in the making of synthetic gems. A new chapter on crystal structure discusses the Laue Bragg powder and oscillation methods of determining the internal structure of crystals.

LIDDICOAT, RICHARD T JR.

Handbook of gem identification. With a foreword by *Edward H Kraus. Fourth edi tion. Los Angeles* Gemological Institute of *America, 1953 350 p* illus *21* cm $5 00 1651

Note A standard manual intended for the use of jewelers and others dealing professionally in gem stones. Essentially it is reference book of practical testing procedures. An important feature is fully detailed plan for identifying unknown stones in each of the different colors in which commercially important gems occur Properties of the individual kinds of gem stones are fully covered. A fifth edition, 383 p., $6.00, was published in 1957

PEARL, RICHARD MAXWELL

Popular gemology New York John Wiley & Sons, Inc., 1948 316 p illus 21 cm. $5.50 1652

Contents: The lure of gems. Recognizing gems. Faceted gems. Cabochon and carved gems. Gems of the silica group. Gems and genealogy Man-made gems. Luminescent gems. Selected reading Index.

Note. The information in this work is well selected, clearly presented and reliable. Persons interested in only one variety or kind of gems may find that the treatment of it is too concise to be satisfactory but the book will serve well as a general introduction to the subject and also as an elementary reference book. There are 115 black-and-white illustrations, most of which are clear reproductions of photographs, but no colored illustrations.

SHIPLEY, ROBERT MORRILL, AND OTHERS

Dictionary of gems and gemology, including ornamental decorative and curio stones. A glossary of over 4000 English and foreign words, terms and abbreviations which may be encountered in English literature or in the gem, jewelry or art trades. By Robert M. Shipley assisted by Anna McConnell Beckley, Edward Wigglesworth, and Robert M. Shipley, jr Fifth edition. Los Angeles Gemological Institute of America, 1951 261 p. 20 cm $5 50 1653

Note In this reference book terms of interest in the jewelry trade and in amateur collecting are defined. In addition to definitions of the names of precious and semi-precious stones and other terms that are frequently used in the trade, much useful supplementary information is included. This includes descriptions of famous gems, identifications and descriptions of museums, societies, laboratories of interest in connection with gems and capsule biographies of persons who have contributed to the knowledge of gems. The fourth edition was published in 1948 The fifth edition is essentially a reprint of the fourth edition however there are few new entries.

DYNAMIC AND STRUCTURAL GEOLOGY

BILLINGS, MARLAND P

Structural geology Second edition Englewood Cliffs N J Prentice-Hall Inc., 1954 514 p illus 24 cm $8 00 1654

Contents Structural geology Mechanical principles. Description of folds. Field study and representation of folds. Mechanics of folding. Failure by rupture. Joints. Description and classification of faults. Criteria for recognition of faults. Mechanics of faulting. Thrust faults. Gravity or normal faults. Strike-slip faults. Causes of folding and faulting. Unconformities. Salt domes. Extrusive igneous rocks. Plutons. Emplacement of large plutons. Cleavage and schistosity Lineation. Structural petrology Geophysical methods in structural geology Laboratory exercises. Index.

Note Mechanical principles and their applications in the study of geological structures, such as folds, faults, and intrusions, are emphasized in this standard college textbook. However, due attention is given also to techniques of studying geological structures. The book is well organized and fully illustrated. The first edition was published in 1942 In this second edition, the book's scope is essentially the same, but there have been some reorganization and considerable revision and augmentation. Faults are discussed at greater length and the treatment of them is reorganized. Chapters have been added on the emplacement of large plutons cleavage and schistosity; and lineation. References are made to recent literature; some of the laboratory exercises have been revised and there are ones have been added. The author is Professor of Geology in Harvard University

CLOOS, ERNST

Lineation, a critical review and annotated bibliography New York Geological Society

ton University Press 1954 310 p. illus. 28 cm. $10.00. 1667

Contents: Materials used. Methods used. Classification of shocks. Maps. Frequency and energy of earthquakes. Structure of the earth. Introduction to regional discussions. The Circum-Pacific belt. The Alpide belt. Non-Alpide Asia. [illegible] areas. Oceanic active belts. Rift zones. Seismicity marginal to stable masses. Minor seismicity. Stable masses. Tsunamis (seismic sea waves). Mechanism. Summary. Addenda. References. Tables. Index.

Note: An important systematic study and compilation of data pertaining to the geography and geological character of the areas of the earth where seismic activity occurs and to the relative seismicity of these areas. The seismic regions of the earth are discussed individually in regard to seismic activity and such pertinent features as active volcanoes, gravity anomalies and outstanding topographic features. The tables, which are detailed presentations of observations of earthquake shocks, occupy approximately half of the space. The first edition was published in 1949. In this second edition, the original text and tables have not been revised except for correction of discovered errors. However, new discussions and new data have been added in the form of addenda and extensions of tables. Eight pages of addenda have been added at the end of the text, six pages at the end of the list of literature references, 13 pages at the end of Table 17, etc. The added material has increased the length of the volume by 37 pages.

HECK, NICHOLAS HUNTER

Earthquake history of the United States. Revised (1947) edition. Washington, D. C. Government Printing Office, 1947–51 2 v. 25 cm. (United States Coast and Geodetic Survey Serial No. 609) Part i, $0.45 Part
Survey Serial No. 609) Part i, $0.45 part ii, $0.15 1668

Contents: Part i, Continental United States (exclusive of California and Western Nevada) and Alaska. Earthquake conditions in the various states. Explanation of details in lists of earthquakes. Northeastern region. Eastern region. Central region. Western mountain region. Washington and Oregon. Earthquakes by years and months. Alaska. References. Part ii, Stronger earthquakes of California and Western Nevada, by Harry O. Wood and N. H. Heck. Introduction. Intensity scale. Dates of principal earthquakes. Dates of marginal earthquakes. Description of earthquakes from 1769 to 1950.

Note: Presented in these pamphlets are concise descriptions arranged in chronological order of the chief earthquakes that have occurred in Continental United States of America including Alaska, from the earliest times for which records are available to the close of 1946 in the case of Part i, and to the close of 1950 in the case of Part ii. The work is intended primarily for those who have to deal in a practical way with earthquake problems, or who wish lists for reference on such details as dates and intensities. It is more convenient to use but not a substitute for the fuller reports contained in the annual publication, United States Coast and Geodetic Survey United States earthquakes, described below.

JAGGAR, THOMAS AUGUSTUS

My experiments with volcanoes. Honolulu Hawaiian Volcano Research Association, 1956 198 p. illus. 23 cm. $4.00. 1669

Note: The author of this book devoted a lifetime to the study of volcanoes, and much of his work was done under the sponsorship of the Hawaiian Volcano Research Association. The book itself is an informal account with an autobiographical flavor. However, it describes in considerable detail the author's observations and experiments. The illustrations include some remarkable photographs of volcanic activity.

JAGGAR, THOMAS AUGUSTUS

Origin and development of craters. New York Geological Society of America, 1947 508 p. illus. 25 cm. (Geological Society of America. Memoir 21) $6.00 1670

Contents (abridged): Abstract. Introduction. Part i, Kilauea Crater in 1912–1915. Part ii, Kilauea and Mauna Loa, 1909–1915. Review of Hawaiian volcanic system, 1909–1915. Part iii, Kilauea steam blast eruption, 1924. Part iv, Series of development sketch maps and profiles of Halemaumau, checked by topographic surveys, 1917–1934. Part v, Hawaiian crater histories. Geologic history of Hawaii. Hawaiian activities, 1790–1935. Part vi, Principles of crater evolution. Earth the offspring of the sun. Conclusions in volcanology. General physics and chemistry. Part vii, Summary and conclusions. References cited. Explanation of Plates 1–73. Index.

Note: The motive for spreading these observational maps, sections, diagrams, curves, photographs, reviews, and narrative histories was to outline the field of volcano science that has grown up since James Dwight Dana published his *Characteristics of volcanoes* in 1890. The title of the book follows the precedent of many authors, including Dana, in generalizing from Hawaii.

JAGGAR, THOMAS AUGUSTUS

Volcanoes declare war: logistics and strategy of Pacific volcano science. Honolulu T. H. Paradise of the Pacific, Limited, 1945 166 p. illus. 29 cm. $3 5 1671

Contents (abridged): Hawaiian volcanoes. Broadcasting from Kilauea's fiery caldron. What happened in Halemaumau's steamblast eruption of 1924. Army aviators successfully bomb Mauna Loa. South Sea outbreaks. The Cape Islanders live next to sputtering lava. New Zealand volcanoes fire up [illegible] Tonga. East Indian explosions. Rabaul harbor erupts suddenly in 1937. Krakatoa revives. [illegible] Java's gas warfare and Bali lava flows. The Western Pacific zone. Taal and Mayon are killers. [illegible] beyond the brows of Mount Fuji. Aleutian fire mountains. Bogoslof pops up from under the sea. Alaska declared hidden giant in 1912. The amphibious jeep of the Fried expedition. Canada and the Western States. Our Cascade Mountains are not dead. Lassen Peak in 1915 was as violent as Mount Pelée. California lava [illegible]. From Mexico to Chile the earth breathes fire. The Mexican Cordillera gives birth to new volcanoes. Central America is explosive. The Java. Fireworks [illegible] from Martinique to Cape Horn. Review of volcano science. References. Index.

Note: Volcanoes and volcanic activity in and near the Pacific Ocean are the subject of this book. The author has been Director for a quarter of a century of the volcano experiment station at Kilauea and the leader of several expeditions to investigate volcanoes. However, the book is not for professional workers in this field but is for the general reader. Specific volcanic eruptions and volcanology in general are described in popular, picturesque language. Catastrophic eruptions are usually described in the words of eye witnesses. The text is supplemented by more than one hundred remarkable photographs.

LEET, LEWIS DON

Earth waves. Cambridge Mass. Harvard University Press and New York John Wiley & Sons Inc., 1950. 122 p. 22 cm. $3.90 1672

Contents: The measurement of earth waves. Observed types of earth waves. Transmission of earth waves. Microseisms. Index.

Note: Although earthquake waves are discussed along with other types of waves, this is not primarily a book on earthquake phenomena. Instead, it deals broadly with the subject of waves that are transmitted through the earth. Thus it has bearing on geology, geophysical prospecting, seismology (the [illegible] earth waves), and even the engineering of buildings. The book is intended not for lay readers but for persons who have a fair knowledge of physics and college mathematics. For these it is an introductory work.

LEET, LEWIS DON

Practical seismology and seismic prospecting. New York D. Appleton-Century Company Inc., 1938 430 p. illus. 23 cm. (The Century earth science series K. F. Mather editor) $6.00. 1673

Contents: Part i, Cause and distribution of earthquakes. Cause of earthquakes. Distribution of earthquakes. Part ii, Elasticity and elastic waves: Elastic constants. Propagation of elastic waves: plane waves; earth's curvature neglected. Paths and travel times for earthquake waves. Part iii, Instrumental methods: Instruments. Instrumental observations of earthquakes. Part iv, Descriptive observation of earthquakes: Terminology. Effects of earthquakes. Important earthquakes of history. Mechanism of earthquake occurrence. History of seismology. Part v, Seismic prospecting: Data obtained

Volcanic rocks and the tectonic cycle, by A. C. Waters. Orogeny and epeirogeny through time, by P. B. King. Indexes, by F. B. O'Leary. Subject index. Author index.

Note: The Department of Geology of Columbia University organized a symposium on the crust of the earth which was held in New York, October 14, 15, 16, 1954 in connection with the Bicentennial of the University. In planning the program, the committee chose the subjects for each paper to assure the uniformity of the symposium, then found experts at home and abroad to write and deliver the papers. Although the scope of the symposium was limited to the crust of the earth, the definition of the concept was left to the individual contributors. This volume contains the texts of the 44 papers. Each paper is preceded by an abstract and followed by a list of the references cited. The publication is of interest to graduate geologists and to other scientists concerned with the physical history of the earth.

SHROCK, ROBERT RAKES

Sequence in layered rocks, a study of features and structures useful for determining top and bottom or order of succession in bedded and tabular rock bodies. New York, McGraw-Hill Book Company, Inc., 1948. 507 p. illus. 23 cm. $9.00 1661

Contents: Introduction. Gross relationships. Features of sedimentary rocks. I, Lithological—textural—mineralogical sequences. II, Features on upper and undersurfaces of sedimentary beds. III, Internal features. Features of igneous rocks. Features of metamorphosed rocks. Bibliography. Index.

Note: A description of the principles and methods utilized in determining the order of succession of bedded and layered rocks where the strata are steeply inclined or vertical. The book is planned for use as a text by advanced geology students, and as a manual of practical information for practicing geologists. It is for the latter group, particularly the petroleum and mining geologists, that the author has included detailed discussions of rock features and structures, and numerous photographs and diagrams of layered rocks. The references scattered throughout the text are keyed to the 30-page bibliography.

SOCIETY OF ECONOMIC PALEONTOLOGISTS AND MINERALOGISTS

Finding ancient shore lines, a symposium sponsored by the Society of Economic Paleontologists and Mineralogists. Edited by Jack L. Hough and Henry W. Menard. Tulsa, Society of Economic Paleontologists and Mineralogists, 1955. 129 p. illus. 24 cm. $3.00 1662

Contents: Continental terrace sediments in the northeastern Gulf of Mexico, by H. R. Gould and R. H. Stewart. Sediments of the eastern Mississippi delta, by P. C. Scruton. Sandless coastal terrain of the Atchafalaya Bay area, Louisiana, by W. C. Thompson. Sediment zones bordering the barrier islands of central Texas coast, by F. P. Shepard and D. G. Moore. Dynamic geology of the modern coastal region, northwest Gulf of Mexico, by K. A. Lohse. Particle size distribution in near shore sediments, by D. L. Inman and T. K. Chamberlain.

Note: The papers and accompanying transcripts of discussion in this volume are contributions to the knowledge of the processes of sedimentation and sedimentary deposits. Although slanted toward the discovery and identification of ancient and often buried shore lines, several of the papers report the results of studies of recently deposited sediments and sedimentation still in progress. Literature references are included in the individual papers.

SYKES, GODFREY GLENTON

The Colorado delta. Washington, D. C. Published jointly by Carnegie Institution of Washington and the American Geographical Society of New York, 1937. 193 p. illus. 26 cm. (American Geographical Society. Special publication no. 19, edited by W. L. G. Joerg) (Carnegie Institution of Washington. Publication no. 460) o.p. 1663

Contents: Part I, History of exploration and navigation: History of exploration (1539–1858). Navigation of the lower river (1852–1878). Part II, Physiographic history: The period of relative stability (1890–1900). The decade of the great diversion (1900–1910). The trend southwestward to a blind outlet (1910–1920). Artificial deflection to the south-southwest (1920–1930). Prospects of stability and a tidewater outlet (1930–1935). The Imperial Valley. Part III, Stream dynamics: The detrital load of the Colorado River water. Fluctuation and rhythm in the movement of debris. Deposition of the detrital material. Conclusions. Bibliography. Index.

Note: A survey of the physiographic history of the Colorado delta based on observations made over a 45-year period, showing the rapid changes that have taken place in this area during that time. A physiographic map and aerial photographs are included.

SYKES, GODFREY GLENTON

Delta, estuary and lower portion of the channel of the Colorado River, 1933–1935. Washington, D. C. Carnegie Institution of Washington, 1937. 70 p. illus. 25 cm. (Carnegie Institution of Washington. Publication no. 480) $1.75 1664

Contents (abridged): Deposition in the delta during the past 30 years. The river discharge at the head of the delta from June 1, 1933 to February 1, 1935. Delivery of detrital matter to the delta. River control as affecting the further movement of bed-silt already deposited. Bed-silt movement. Mechanical analysis of bed-silts. Desiccation of the delta area. Appendix. Tables.

Note: A continuation of, and supplement to, the more lengthy investigation of the various problems discussed in Sykes' *The Colorado delta*, described above. The periods immediately preceding and following the closure of the Boulder Dam constitute the main phase of the present studies.

WILLIAMS, HOWEL

Crater Lake: the story of its origin. Berkeley, University of California Press, 1941. 97 p. illus. (part col'd) 19 cm. $2.00. 1665

Contents: Introduction. Part I, The story: Before Mount Mazama was. How Mount Mazama rose. Glaciers of Mount Mazama. The climax of destruction. The growth of Wizard Island. Part II, The evidence: The setting of Crater Lake. Along the rim trail. By boat round the lake. Valleys of 10,000 smokes. How the mountain fell. How old is Crater Lake? List of references.

Note: A popular but scientifically accurate account of the growth and destruction of Mount Mazama, a volcanic peak, and the origin of Crater Lake. There is no index.

VOLCANOLOGY AND SEISMOLOGY

BYERLY, PERRY

Seismology. New York, Prentice-Hall, Inc., 1942. 256 p. illus. 23 cm. (Prentice-Hall geology series, edited by Norman E. A. Hinds) $5.00 1666

Contents: Preface. Part I, Earthquakes. Elasticity and plasticity. Earthquake vibrations. Immediate cause of earthquakes. Underlying causes of earthquakes. Effects of earthquakes. Distribution of earthquakes. Great earthquakes. Part II, Seismography: The seismograph. Elastic waves. Paths of waves and travel time curves. Location of epicenters. Seismograms. Index.

Note: An introductory college text covering in brief the subject of earthquake seismology. Part I, on the general subject of earthquakes, requires little technical knowledge on the part of the reader or student. Part II, which deals with the science of seismography, presupposes a working knowledge of the calculus and of general physics. References are given at the end of each chapter.

GUTENBERG, B., AND C. F. RICHTER

Seismicity of the earth and associated phenomena. Second edition. Princeton, Prince-

cm. (Carnegie Institution of Washington Publication no. 512) o.p. 1679

Contents: Volcanic history of the Lesser Antilles. Montserrat, the island. Narrative of the investigation. Volcanic phenomena of the archives of Montserrat. The earthquakes at Montserrat. Instruments. Summary and conclusions. Notes.

Note: A report on the period of abnormal volcano-seismic conditions at Montserrat based on observations during the period indicated and reliable information from other sources. The investigation deals only with the present, and no attempt is made to deal with past geologic and volcanic formations. There are numerous photographs and a volcano-seismic chart.

UNITED STATES. COAST AND GEODETIC SURVEY

United States earthquakes 1953 By Leonard M. Murphy and William K. Cloud. Washington, D. C. Government Printing Office 1955 51 p. 25 cm. (United States. Coast and Geodetic Survey Serial no. 785) $0.35 1680

Contents: Introduction. Noninstrumental results. Miscellaneous activities. Fluctuations in well-water levels. Seismological observatory results. Strong-motion seismograph results. Tilt observations. Corrections to previous editions.

Note: This work has been published annually since 1928. It presents a practically complete record of earthquakes in the United States of America and regions under its jurisdiction, namely Alaska, Hawaii, Panama Canal Zone and Puerto Rico. The arrangement is by state or region and by date under the name of the state or region. Each annual publication contains the record of a full calendar year. Each earthquake is described as to time, intensity, the latitude and longitude of the epicenter when known, destructive or other reported effects. Intensities are described in terms of the Modified Mercalli Intensity Scale of 1931.

HYDROLOGY

ELLIS CECIL B

Fresh water from the ocean for cities industry and irrigation. By Cecil B Ellis and members of the staff of Nuclear Development Associates, Inc. Sponsored by the Conservation Foundation. New York Ronald Press Company 1954 217 p. illus. 24 cm. $5.00. 1681

Contents: The problem. Types of separation methods. Energy costs. Integrated fuel systems. Actions on the consumer [illegible]. Distillation with conventional fuels. Distillation by waste heat sources. Chemical surface methods. The use of by-product chemicals. A 1000-mgd electrical membrane plant. Conclusions. Appendix: Ideas for by-passing the problem. Index.

Note: Although written in a style that will be intelligible to any educated reader, this book is essentially an engineering study of the problem of de-salting sea water at a cost which is low enough to permit the use of the water by cities, industries, and agriculture. For purposes of the study the problem was stated in terms of the production of 1,000 million gallons a day and all of the promising methods of de-salting ocean water which have been developed or proposed were studied in terms of this quantity. The main conclusions are (1) within the next decade fresh water can be extracted from the ocean at a total cost of about 50 cents a thousand gallons by use of the electric membrane method if cheap electricity is available. (2) there is no practical method in sight which holds the promise of de-salting ocean water at a cost low enough for agricultural irrigation. Literature references are included, and the names of some of the research organizations and private companies which are currently conducting research on de-salting are mentioned in passing.

HOUGH J L., editor

Turbidity currents and the transportation of coarse sediments to deep water A symposium sponsored by the Society of Economic Paleontologists and Mineralogists. Tulsa Society of Economic Paleontologists and Mineralogists 1951 107 p illus 24 cm. (Society of Economic Paleontologists and Mineralogists. Special publication no. 2) $2.75 1682

Contents: Introduction, by R. D. Russell. Applications of hydraulics to the study of marine turbidity currents, by H. W. Menard and J. C. Ludwick. Properties of turbidity currents of high density, by Ph. H. Kuenen. Some quantitative aspects of Lake Mead turbidity currents, by H. R. Gould. Transportation of sand into deep water, by F. P. Shepard. Displaced Foraminifera faunas, by F. B. Phleger. Sedimentary history of the Ventura Basin, California, and the action of turbidity currents, by M. L. Natland and Ph. H. Kuenen.

Note: This publication includes the six papers presented at a symposium held as part of the annual meeting of the Society of Economic Paleontologists and Mineralogists in Chicago in April, 1950. The subject of the symposium was the problem of the origin, transportation, and deposition of the relatively recently discovered layers of coarse sediments (silt and sand) at depths of several thousand feet, and many miles from land, on the floor of the ocean. Basic problems of paleontology, stratigraphy and paleography are involved in the answers to this problem, as well as the interpretation of ancient sediments as related to the origin of petroleum and the location of economically valuable oil deposits. At the end of each paper bibliographical references are given.

HOYT WILLIAM GLENN AND OTHERS

Studies of relations of rainfall and run-off in the United States. Washington, D C. Government Printing Office 1936 301 p illus. 22 cm. (United States Geological Survey Water supply paper 772) o.p 1683

Contents (abridged): Precipitation. Changes in temperature. Changes in run-off. Precipitation, temperature, and run-off, by basins. General accuracy of precipitation, temperature, and run-off data. Changes in rainfall, temperature and run-off, by basins. Storm flow. Surface run-off. The unit-hydrograph method and storm transposition in flood problems. Ground-water run-off. Soil moisture. Ground-water levels. Comparison of graphs of minimum flow. References. Index.

Note: This study is directed along two definite lines of approach—(1) investigation of relations between annual and monthly precipitation, temperature, evaporation, transpiration, direct surface run-off, ground-water run-off, and infiltration as a basis for the quantitative analysis of the hydrologic cycle over broad areas. (2) investigation of relations between storm precipitation and direct surface run-off.

KING THOMSON

Water miracle of nature. New York The Macmillan Company 1955 238 p. 21 cm. $3.75 1684

Contents: Part I, Water and the world. What is water? The three states. As it was in the beginning. The oceans. The great underseas and distribution. Water in the air. Inland waters. Solid water on the land. Life in water. Part II, Water and the life of man. What primitive and ancient man did with water. The struggle for the control of the sea. Pumps and ships [illegible] but man has done with them. Of irrigation, flood control, and water power. The water we drink. A medley—water worship and wells, dew ponds and dowsers. Canals. To conserve water is to conserve life. Index.

Note: A book for general reading. It discusses briefly and in an elementary way the chemical and physical properties of water; water as a geological element; water as a supporter of life; and water in man's life. There are no illustrations and no literature references, but there is an adequate index. The author is Director of the Maryland Academy of Sciences.

LEOPOLD LUNA B., AND THOMAS MADDOCK, JR.

The hydraulic geometry of stream channels and some physiographic implications quantitative measurement of some of the hydraulic

in the field. Reduction of observations. Special commercial applications. Appendix. Index.

Note Although the presentation of the subject is necessarily quantitative and hence numerical at many points, an attempt has been made to arrange the material so that fundamental principles and procedure can be mastered by readers whose mathematical training has not extended beyond trigonometry. To further this end, graphs and line drawings have been used liberally. Intended as a text for college students, the work presents in a descriptive manner the laws common to earthquakes and artificially generated elastic vibrations governing the propagation of elastic waves in materials of the earth. The characteristics and use of instruments designed to record these vibrations are also discussed, together with the laws of free and forced vibration which govern their operation. The discussion of seismic prospecting includes refraction methods of reconnaissance and detail as well as reflection technique, with an extensive list of formulas employed and a summary of the patent situation in the United States.

NATIONAL ACADEMY OF SCIENCES NATIONAL RESEARCH COUNCIL

Symposium on microseisms, held at Arden House Harriman, New York, 4–6 September, 1952 Sponsored by the Office of Naval Research and the Geophysical Research Directorate of the U S Air Force. Washington, D C. National Academy of Sciences—National Research Council, 1953 125 p illus 27 cm (National Academy of Sciences—National Research Council. Publication 306) $1 00 1674

Contents Moderator's comments, by P Byerly. Sketch of the history of microseismology by J B Macelwane. Tripartite stations and direction of approach of microseisms, by J E Ramirez. Amplitude distribution of storm microseisms, by M H. Gilmore. Microseismic period spectra and related problems in the Scandinavian area, by M Båth. Can sea waves cause microseisms? by M. S. Longuet-Higgins. Storm and surf microseisms, by F W van Straten. The ocean as an acoustic system by F Press and M. Ewing. On theories of the origin of microseisms, by J G. Scholte.

Note. The symposium of which this book is a product was arranged for the dual purpose of presenting accumulated information and stimulating further study. It was attended by scientists from the United States of America, England, the Netherlands, Sweden, and Colombia. The papers, together with excerpts of the discussions at the symposium, are published in this volume. Some of the papers are summaries of previously published information; others include some results not previously published. The volume is of interest to specialists in seismology and also to graduate geophysicists and oceanographers. Literature references are included in most of the papers.

NEUMANN, FRANK

Earthquake intensity and related ground motion Seattle University of Washington Press 1954 77 p illus. 21 cm $1 50 1675

Contents (abridged) Introduction. Materials used. Distance versus MM intensity. MM intensity versus maximum acceleration. Discussion of period-acceleration envelopes. Application of intensity grids to the analysis of strong-motion data. Imperial Valley earthquake May 18, 1940. Puget Sound earthquake, April 13 1949. Los Angeles County earthquake, October 2 1933. Long Beach earthquake, March 10 1933. Helena, Montana, earthquake, October 31 1935. Earthquake spectrums and period-acceleration envelopes. Nomenclature, formulas, and quantitative intensity table. Summary and conclusions. References.

Note In this publication—issued as a booklet independent of any series—relationships among earthquake intensity, epicentral distance, and the period and maximum acceleration of recorded ground waves are studied. "Formulas are developed for the distribution of intensity on two formations tentatively designated as basement rock outcrops, a method is suggested for evaluating intensity anomalies on various types of overburden, a new relationship is established between earthquake intensity in an epicentral region and earthquake magnitude as defined by the Gutenberg-Richter magnitude scale" and a method of using intensity data to locate major rock breaks in fault movements is advanced. The author was formerly Chief of the Seismology Branch of the United States Coast and Geodetic Survey

NEUMANN, FRANK

Principles underlying the interpretation of seismograms Washington, D C. Government Printing Office, 1951 41 p. illus. 25 cm. (United States Coast and Geodetic Survey Special publication no 254) $1.00. 1676

Contents. Introduction. Seismic waves and earth structure: Nature of seismic waves. Effect of earth structure on seismic waves. Elementary wave types. Dependent wave types. Response of seismographs to seismic waves: Operating characteristics of seismographs. Motion of a direct-recording seismograph pendulum under the influence of steady state vibrations. Motion of galvanometric recording systems under the influence of steady state vibrations. Travel-time tables and charts: Travel-time tables and charts for long epicentral distances. Travel-times for short epicentral distances. Interpretation of seismograms: Artificial and seismic phenomena common to all types of pendulum seismographs. Characteristics of various phases on the seismogram. Identification of phases and determination of epicentral distance and origin time. Interpretation of seismograms when distance and time of origin are known. Computation of ground amplitude. Direction of ground vibration. Miscellaneous: Operational problems affecting the interpretation of seismograms. Earthquake intensity and earthquake magnitude. Determination of instrumental magnitude. Seismological bulletins. Nomenclature used in instrumental reports. Examples of seismogram interpretation.

Note A handbook for amateur seismologists, seismograph station personnel, etc. Instruments and records for short-period waves in earthquake vibrations are discussed as well as those for intermediate period waves.

PERRET, FRANK ALVORD

The eruption of Mt. Pelée, *1929–1932.* Washington, D C. Carnegie Institution of Washington, 1935 126 p illus. 29 cm. (Carnegie Institution of Washington. Publication no 458) $1 50 1677

Contents (abridged) Author's note. Terminology. Diagnosis and prediction. Mt. Pelée—a historical sketch. Narrative: early phase of the eruption; observations; life at the Field Station; seismic effects. Analytical section: the "nuée ardente." Appendices: Water analysis, by E. G. Zies. Les observations volcanologiques de M. F Perret (offert par le journal "La Paix")

Note. An account of observations made by the author during the eruption of Mt. Pelée in Martinique during the years 1929–1932. Each of the conspicuous eruptive manifestations which occurred is carefully considered, some of them being of comparative rarity. One of the purposes of the study was to collect data for the diagnosis of eruptive conditions, in order to contribute to the saving of human life and the prevention of economic waste by timely warning.

PERRET, FRANK ALVORD

Volcanological observations. Washington, D C Carnegie Institution of Washington, *1950 162 p illus 29 cm* (Carnegie Institution of Washington. Publication *549) $5.00.* 1678

Contents: The greater solid constructions. The volcanic liquid. The gaseous element. Electric and atmospheric phenomena. Volcanic vegetation. Volcanic ejectamenta. Gravitational and volcano-seismic phenomena. Experimentation—field and laboratory. Diagnosis and prediction. Index.

Note A well-written summary of lifetime of observations of volcanic activity, most of which were made in the field during volcanic eruptions. The author describes selected events as he saw them and draws conclusions. The book is written in a style that makes it available to mature lay readers, and its content is substantial enough to attract professional volcanologists. The 117 illustrations include reproductions of many excellent photographs.

PERRET, FRANK ALVORD

The volcano-seismic crises at Montserrat, 1933–1937 Washington, D C. Carnegie Institution of Washington, 1939 76 p illus. 29

PALEONTOLOGY

GENERAL

JONES DANIEL J

Introduction to microfossils. New York Harper & Brothers Publishers, 1956 406 p. 25 cm. (Harper's geoscience series Carey Croneis, editor) $6.50 1690

Contents: Introduction. Collection, preparation, and preservation of microfossils. Synoptic classification of organisms with reference to microfossils. Microfossils of the kingdom Protista. Plant microfossils. Microfossils of the animal kingdom (exclusive of Conodonts, Ostracoda, and Foraminifera). The Conodonts. The Ostracoda. The Foraminifera. Environmental significance of microfossils. Stratigraphy of microfossils. Applied micropaleontology. Appendixes. General index. Index to fossils.

Note: A broad survey of present-day micropaleontology is presented in this work. Advanced undergraduate and first-year graduate college students taking their first course in the subject are the intended audience. The presentation is slanted toward economic geology rather than systematic paleontology although much of the material presented is basic to both fields. Approximately half the space is devoted to descriptions of specific microfossils. These descriptions are brief and are designed only as aids to identification. The chapter on plant microfossils includes [illegible] discussion of fossil pollens and spores as well as of fossil seeds and fossil [illegible]. Though designed as [illegible] textbook the book has many features that will make [illegible] useful to practicing economic geologists who feel the need of an introduction to micropaleontology. It includes specific descriptions of field and laboratory techniques used in both academic and applied work. Literature references, outlines [illegible] [illegible] glossary and detailed indexes are included. The author, at present [illegible] faculty member of the University of Utah, was formerly Chief of the Geological Research Section of the Phillips Petroleum Company

KUMMEL, BERNHARD editor

Status of invertebrate paleontology 1953 Cambridge, Mass. Printed for the Museum, 1954 91-317 p. illus. 23 cm. (Harvard College. Museum of Comparative Zoology Bulletin. Vol. 112 no. 3) $2.50 1691

Contents: Toward [illegible] more ample invertebrate paleontology by R. D. Kesling. Protozoa, by [illegible] Thalmann. Coelenterata, by J. W. Wells. Echinodermata—Pelmatozoa, by R. C. Moore. Eleutherozoa, by J. W. Durham. Mollusca—Pelecypoda, by N. D. Newell—Gastropoda, by J. B. Knight and others—Cephalopoda, by B. Kummel. Arthropoda—Trilobita, by H. B. Whittington. Graptolithina, by O. M. B. Bulman. On development, evolution and terminology of ammonoid suture line, by O. H. Schindewolf. Macroevolution and the problem of missing links, by A. Petrunkevitch. Evolution of late Paleozoic invertebrates in response to major oscillations of shallow seas, by R. C. Moore. Systematic, paleoecologic and evolutionary aspects of skeletal building materials, by H. A. Lowenstam.

Note: Eminent paleontologists of England, Germany and the United States of America contributed to this appraisal of the science of invertebrate paleontology. Each author surveyed the current status of [illegible] particular area of the field and, in most cases, pointed out problems in need of investigation. In the first paper, Dr. Newell of the American Museum of Natural History predicts increasing emphasis on the biological (in contrast to the stratigraphic) aspects of paleontology. All of the papers were first presented at the meeting of the Paleontological Society in 1953.

MOORE, RAYMOND C editor

Treatise on invertebrate paleontology prepared under the guidance of the Joint Committee on Invertebrate Paleontology of the Paleontological Society the Society of Economic Paleontologists and Mineralogists, and the Palaeontographical Society Directed and edited by Raymond C. Moore. New York The Geological Society of America and University of Kansas Press, 1953–56 6 v. illus 25 cm. Part D $3.00 part E $3.00 part F $7.00, part G $3.00 part P $3.50 part V $3.00. 1692

Contents: Part D. Protista 3—Protozoa (chiefly radiolaria and tintinnina) Part E. Archaeocyatha and Porifera. Part F. Coelenterata, by F. M. Bayer and others. Part G. Bryozoa. Part P. Arthropoda 2—Chelicerata, with sections on Pycnogonida and Palaeoisopus, by L. Størmer and others. Part V. Graptolithina, with sections on Enteropneusta and Pterobranchia.

Note: A work of primary importance. It is the co-operative production of the three societies named in the title, and is being written by 117 specialists, resident not only in the United States of America but also in Great Britain and other countries. It is planned as [illegible] present the most comprehensive and authoritative, yet compact statement of knowledge concerning invertebrate fossil groups that can be formulated by [illegible] collaboration of competent specialists in seeking to organize [illegible] has been learned of this subject up to the midpoint of the present century. Each part is issued as [illegible] separate bound volume with separate index. Illustrations are abundant and clearly reproduced. The very concise systematic descriptions which constitute the bulk of the parts so far published are preceded in each volume by discussions of morphological characters, techniques of study etc.

RAYMOND PERCY EDWARD

Prehistoric life. Cambridge Mass. Harvard University Press 1939 324 p. illus 25 cm. $5.00. 1693

Contents (abridged): Fossils. Collecting fossils. First animals and plants. Pre-Cambrian life. Quasi arachnids. The trilobites. Beginnings of the chordates. Origin of the vertebrates. Rise of the air-breathing vertebrates. Amphibia. First reptiles. The earth's floods. Marine reptiles. Flying reptiles. From scales to feathers. Insects. Archaic mammals. Beasts of prey. Mammals of secondary importance of plants. Index.

Note: This volume traces the history of life from the time of its first appearance on the earth up to the present. A broad overall picture is given of the development of animals in each era, without emphasizing specific details. The book is based on lectures given by the author at Harvard University It is of interest to the student of geology and the general reader

SIMPSON GEORGE GAYLORD

Life of the past an introduction to paleontology New Haven Yale University Press 1953 198 p. illus. 24 cm. $4.00. 1694

Contents: Prelude—a walk through time. The remains of ancient life. Fossils and rocks. Fossils as living things. Ancient communities. Fossils and geography The diversity of life. Life and time. Ways of organic change. Theories of evolution. Fossils and mankind. Appendix: A review of the forms of life. Suggestions for further reading. Index.

Note: A book on fossils for the general reader and for the beginning student of paleontology written by the Curator of Fossil Mammals and Birds in the American Museum of Natural History The book does not emphasize descriptions of particular sorts of fossils, but rather gives [illegible] scientific account of the most widely interesting aspects of the biological aspects of geology. It is thus

factors that help to determine the shape of natural steam channels depth, width, velocity, and suspended load and how they vary with discharge as simple power functions Their interrelations are described by the term "hydraulic geometry" Washington, D C Government Printing Office, 1953 57 p illus 29 cm. (United States Geological Survey Professional paper 252) $0 40 1685

Contents: Abstract. General statement. The hydraulic geometry of stream channels. The hydraulic geometry of stream channels in relation to sediment load. Some physiographic implications. Summary and interpretation. References. Appendix. Index.

Note. The important aspect of this study is that it was concerned with quantitative measurements of such hydraulic characteristics of stream channels as depth width, velocity and suspended load. The authors conclude that "the empiric relation between hydraulic characteristics of the channel and suspended load provides, in semi-quantitative terms, a logical explanation of the observed channel shape and that the average river channel-system tends to develop in a way to produce an approximate equilibrium between the channel and the water and the sediment it must transport. There are 52 figures, most of which are graphical representations of data and relationships. There are 43 citations in the bibliography

MEINZER, OSCAR E, editor
Hydrology Contributors Leonard D Baver and others New York Dover Publications, Inc, 1949 712 p illus 24 cm (National Research Council Physics of the earth, IX) $2 95 1686

Contents. Introduction, by O E. Meinzer Precipitation by M. Bernard. Evaporation from free water surfaces, by S. T Harding. Snow and snow surveying ice, by J E. Church. Glaciers, by F E. Matthes. Lakes, by S. T Harding. Infiltration, by L. K. Sherman and G. W Musgrave. Transpiration and total evaporation, by C. H. Lee. Soil moisture, by K. v Terzaghi and L. D Baver. Ground water by O E. Meinzer and L. K. Wenzel. Runoff, by *A. F Meyer and others. Droughts, by W G Hoyt. Physical* changes produced by the water of the earth, by W H. Twenhofel and others. Hydrology of limestone terranes, by A. C. Swinnerton. Hydrology of lava-rock terranes, by H T Stearns. Index.

Note This work was originally published in 1942 as part of series prepared under the sponsorship of the National Research Council. Most of the series is now out of print, and the present volume is a reprint without change in text. It presents detailed technical survey of the knowledge of hydrology as it existed circa 1941 The arrangement is based on the hydrologic cycle as nearly as practicable. After description of the basic principles of precipitation and evaporation, the processes of storage and transfer of water are covered. *References* to the pre-1942 literature are given at the end of each chapter The volume is of interest to such readers as civil and military engineers and geologists who are not specialists in hydrology

UNITED STATES FEDERAL INTER AGENCY RIVER BASIN COMMITTEE
Annotated bibliography on hydrology 1941–1950 (United States and Canada) Prepared by the American Geophysical Union, National Research Council of the National Academy of Sciences in cooperation with the Subcommittee on Hydrology Federal Inter Agency River Basin Committee Washington, D C Government Printing Office, 1952 408 p 25 cm. (Subcommittee on Hydrology Notes on hydrologic activities. *Bulletin no 5) $1 75* 1687

—— Annotated bibliography on hydrology (1951–54) and sedimentation (1950–54) United States and Canada Compiled and edited under the auspices of the Subcommittee on Hydrology and Sedimentation, Inter Agency Committee on Water Resources, by the American Geophysical Union, National Research Council of the National Academy of Sciences, Washington, D C. Washington, D C Government Printing Office, 1955 207 p 25 cm. (Joint hydrology sedimentation bulletin No 7) $1.25 1688

Note: Comprehensive bibliographies of journal articles, books, *university dissertations, etc., bearing on hydrology and sedimentation* in the United States of America and Canada, and published during the years given in the titles. The arrangement is by author, with subject indexes in each volume. The literature on sedimentation prior to 1950 was covered in the Federal Inter-Agency River Basin Committee, Subcommittee on Sedimentation's *Annotated bibliography on sedimentation* 1950.

WARING, GERALD ASHLEY, AND OSCAR E. MEINZER
Bibliography and index of publications relating to ground water prepared by the Geological Survey and cooperating agencies Washington, D C. Government Printing Office 1947 412 p 23 cm. (United States. Geological Survey Water supply paper 992) $1 00 1689

Contents Introduction. Bibliography: Water-supply papers. Annual reports. Monographs. Professional papers. Bulletins. Mineral resources. Geologic folios. Reports published by cooperating agencies. Mimeographed and other duplicated reports. Journal articles. Index.

Note In effect second edition of the bibliography published in 1918 as Water-supply paper 427 (*Bibliography and index of the publications of the United States Geological Survey relating to ground water* by O E. Meinzer) Lists total of 1 777 papers published between 1885 and 1946, including all listed in the 1918 bibliography and 1 168 issued since then In addition to author, title, and other publication information, each entry contains a brief abstract or notation of its references to ground water

Note: The report of an investigation designed "(1) to describe sequences of Upper Cretaceous and Lower Tertiary strata that outcrop in the [illegible] section [illegible] of the [illegible] and that should serve as control for subsequent stratigraphic and micro-paleontologic investigations of North Africa, (2) to place on record the common Foraminifera of the Upper Cretaceous (Unit A) and the basal Tertiary (Unit B) of the section, and (3) to present detailed analysis of the small Foraminifera of the Esna shale (Unit B)." Most of the space is devoted to systematic descriptions of the species of Foraminifera found in the section. They are supplemented by 13 plates, all but two of which are reproduced from drawings of the Foraminifera described.

McKee, Edwin D

Stratigraphy and history of the Moenkopi formation of Triassic age New York The Geological Society of America, 1954 133 p. illus. 25 cm. (The Geological Society of America. Memoir 61) $3.00 1702

Contents: Abstract. Introduction. General character. Stratigraphic traverse from Southwestern Utah to Northeastern Arizona. Moenkopi deposits other than along traverse. Regional stratigraphy. Vertebrates and [illegible]. [illegible]. Organic structures. Fossils. Environment of Moenkopi. Descriptions of sections. References cited. Index.

Note: The geological formation studied in this work lies in the southwestern portion of continental United States of America and is of interest largely because of its fossil content. The object of the study was "(1) to bring together as many data as possible bearing on the paleogeography of the time and the environment in which the vertebrate animals lived, (2) to check the [illegible] based on study of the vertebrates with those based on [illegible] of [illegible] at various horizons in the formation." Included are 13 plates containing reproductions of photographs of structures, rocks, etc. Also of special interest are 40 pages of descriptions of sections, including measurements of strata.

Matthew William Diller

Paleocene faunas of the San Juan basin, New Mexico. Philadelphia The American Philosophical Society 1937 510 p. illus. 30 cm. (American Philosophical Society Transactions New series. Vol. 30) $5.00. 1703

Contents (abridged): Part I. Introduction. Historical review of discovery and [illegible]. Stratigraphic relations of the Cretaceous and Paleocene formations in the San Juan basin. Comparative list of Puerco and Torrejon mammals, of Wasatch and [illegible] mammals. Part II. Systematic and descriptive revision of the Paleocene mammals of New Mexico. [illegible]. Order Carnivora. [illegible]. Creodonta. [illegible]. Order [illegible]. Part III. General observations and conclusions. Salient characters of Puerco and Torrejon mammals. The Paleocene [illegible]. Order [illegible]. Correlation of the Puerco and Torrejon faunas. Origin and relationships of the Tertiary Mammalia. Comparative list of [illegible] with Paleocene faunas of San Juan basin and vicinity. Index.

Note: The report is based in part upon material in the Cope Collection of the American Museum of Natural History and in part upon the collections made in that region by several American Museum expeditions, culminating in that of 1913, which added to the material nearly [illegible] and [illegible]. [illegible] representing various orders and archaic families of placental mammals. The fauna belongs to the two earlier phases of the Paleocene epoch, [illegible] following that of the great reptiles of the Mesozoic era and preceding the Lower Eocene phase, when the direct ancestors of the horses, tapirs, rhinoceroses, ruminants and other progressive placental families first became established in western North America.

Newell, Norman D., and others

The Permian reef complex of the Guadalupe Mountains region, Texas and New Mexico a study in paleoecology By Norman D Newell, J Keith Rigby Alfred G. Fischer A. J Whiteman, John E. Hickox, and John S Bradley San Francisco W. H. Freeman & Company 1953 236 p. illus. 24 cm. $7.50 1704

Contents: Introduction. Geologic setting of the reefs. Stratigraphy. Reef complex and associated sedimentary phases. Sedimentary petrology of the Capitan Reef complex and associated rocks. Paleoecology of the Permian rocks. Permian reef oil. Appendix. References. Localities. Check lists of fossil species. Index.

Note: The fossil reefs [illegible] which were the subject of this study are not only extensive but are well displayed. They have been extensively studied largely because petroleum has been found in association with buried Permian organic reefs in adjacent regions. Most of the studies, however, have been concerned with physical stratigraphy and regional geology. In contrast, the present study centered on an investigation of the environmental conditions which gave rise to the reefs and to the fossil life found in them. It was based on intensive field and laboratory work extending over two years and conducted from the viewpoint of basic science. A chapter on petroleum is included, but it is only three pages long. The results are related to the previous work of other researchers and there is [illegible] bibliography. There are 77 figures in the text and 32 plates.

Newell, Norman D and others

Upper Paleozoic of Peru by Norman D Newell, John Chronic, and Thomas G. Roberts New York The Geological Society of America, 1953 276 p. illus. 25 cm. (The Geological Society of America. Memoir 58) $4.00 1705

Contents: Part I. Formations and geologic history by N. D. Newell and others. Introduction. Stratigraphy. Basal complex. Pre-Mississippian shales. Upper [illegible]. Fossil zones. Stratigraphic sections. Localities. Part II. Invertebrate paleontology (excepting fusulinids and corals) by J. Chronic. Summary of Upper Pennsylvanian faunas. Permian faunas. Systematic paleontology. Brachiopoda. Bryozoa. Mollusca. Echinodermata. Part III. Fusulinids, by T. G. Roberts. Previous studies of Peruvian fusulinids. Method of study. Age of the faunas. Check list of species and localities. Check list of localities and species. Systematic paleontology. Bibliography. [illegible] of Peruvian fusulinids. Selected bibliography. Explanation of plates. Index.

Note: The detailed treatment in three parts is based upon reconnaissance [illegible] of the Upper Paleozoic sedimentary rocks and their fossils in the Peruvian Andes, [illegible] are found extremely thick and extensive sequences of [illegible] Upper Paleozoic rocks. The work was in part instigated by growing interest in the petroleum prospects in the area. The marine invertebrates described and pictured from the Permian and Pennsylvanian show affinities with the faunas of Brazil and the United States of America.

Northrop Stuart Alvord

Paleontology and stratigraphy of the Silurian rocks of the Port Daniel-Black Cape region, Gaspé New York The Society 1939 302 p. illus. 24 cm. (Geological Society of America. Special papers No 21) $2.50 1706

Contents: Part I. Introduction. Part II. General geology. Part III. Stratigraphy of the Chaleur series. Part IV. Systematic paleontology. Works to which reference is made. Index.

Note: A monograph summarizing the geologic structure and stratigraphy of the region, together with [illegible] descriptions of the species and genera of fossil forms, including new specimens of cephalopods, and the entire Chaleur series. With geologic map of the area and 28 pages of photographs.

Rasetti Franco

Middle Cambrian stratigraphy and faunas of the Canadian Rocky Mountains (with 34 plates) Washington D C. The Smithsonian Institution, 1951 277 p. illus. 24 cm. (Smithsonian miscellaneous collections. Vol. 116 no. 5 Publication 4046) $2.50. 1707

a book that falls between the journalistic popularization and the textbook of the subject. There are 48 illustrations from line drawings.

VARIOUS REGIONS

AMSDEN, THOMAS WILLIAM

Stratigraphy and paleontology of the Brownsport formation (Silurian) of western Tennessee. New Haven Yale University Press, 1949 138 p illus. 27 cm. (Peabody Museum of Natural History, Yale University Bulletin 5) $5 00 1695

Contents Introduction. Summary of previous investigations. Stratigraphy General discussion—underlying Dixon formation—overlying *Decatur formation—Brownsport formation. Stratigraphic and* geographic distribution of the fauna. Correlation. Catalogue of localities and of fossil collections. Description of genera and species. Bibliography Index.

Note. The Brownsport formation is noted as a source of Silurian fossils hence this work has considerable paleontological interest. It is based largely on field work and represents a detailed study of both stratigraphy and paleontology The descriptions of genera and species of fossils are presented in the traditional style and include literature references, morphological descriptions, and precise information on distribution. The illustrations include several stratigraphic maps and 34 plates of reproductions of fossils.

CLARK, BRUCE LAWRENCE, AND J WYATT DURHAM

Eocene faunas from the department of Bolivar, Colombia. New York Geological Society of America 1946 126 p illus 25 cm. (*Geological Society of America. Memoir 16*) $2 10 1696

Contents. Previous work. General statement. Part I The molluscan faunas, by B L. Clark. Part II Corals, by J W Durham. Description of localities. Bibliography Explanation of plates. Index.

Note *As indicated in the title*, this monograph contains descriptions of invertebrate fossils collected from the Middle to Upper Eocene strata of western Colombia. The work is intended for paleontologists and petroleum geologists. Most of the species described are also illustrated.

GRABAU, AMADEUS WILLIAM, *AND OTHERS*

The Permian of Mongolia a report on the Permian fauna of the *Jisu Honguer limestone* of Mongolia and its relations to the Permian *of other parts of the world with a chapter on* the relations of the Jisu Honguer formation *to the general geology of Mongolia*, by Charles P Berkey and Frederick K. Morris with 72 *illustrations in the text and 35 plates at end* of volume. New York American Museum of Natural History 1931 665 p illus 28 cm (Central Asiatic expeditions of the American Museum of Natural History Natural history of Central Asia. Vol IV) $10 00 1697

Contents (abridged) General introduction with chapter by Berkey and Morris on the *relations of the Jisu Honguer formation* to the general geology of Mongolia. Description of the genera and species of the Jisu Honguer limestone fauna of Mongolia. *Stratigraphic and faunal relations of the Jisu Honguer limestone* to the Permian formations of other regions. Appendices and list of specimens used in the descriptions of the fauna. Bibliography Index.

Note. This volume deals primarily with the description of fossil invertebrate species, nearly half of them new collected from limestone of Permian age at Jisu Honguer Mongolia, and with the correlation of the various Mongolian horizons of Permian age with those in various parts of the Eurasiatic world.

HOWELL, BENJAMIN FRANKLIN

Revision of the Upper Cambrian faunas of New Jersey New York The Geological Society of America, 1945 46 p. illus. 25 cm. (Geological Society of America. Memoir 12) $1 00 1698

Contents General statement. Lower Kittatinny trilobites at Carpentersville. Lower Kittatinny *fauna at Peapack*. Upper Kittatinny faunas. Age of the faunas. References cited. Explanation of plates. Index.

Note. A report of paleontologic research that has led the author to believe that the Upper Cambrian strata referred to in the older literature as the Kittatinny should be subdivided into stratigraphic members. The results of the author's studies have already been incorporated in his chart, *Correlation of the Cambrian formations of North America*, and the present memoir contains descriptions and photographs of the fossils upon which they were based.

KLEINPELL, ROBERT MINSSEN

Miocene stratigraphy of California. Tulsa, American Association of Petroleum Geologists, 1938 450 p. illus. 23 cm. $5 00 1699

Contents (abridged) The Reliz Canyon section General stratigraphy The Foraminifera. Paleogeographic significance of the foraminiferal assemblages. Correlation and age Historical summary of foraminiferal data. Analysis of stratigraphic distribution. *Chronologic-biostratigraphic classification of the marine* Middle Tertiary of California. Formational correlations within the California province *Age of California stage sequence* with respect to *European Tertiary columns. Systematic catalogue.* Index.

Note The systematic catalogue with 21 plates of illustrations occupies about two-thirds of the text and places in their proper systematic, geographic, and stratigraphic relationships the various Foraminifera which have been recorded from the California Miocene in this and previous publications. No taxonomy has been undertaken beyond establishing the systematic interrelationships of the California Miocene forms which have a distinct bearing on the stratigraphic aspects of the problem. In addition to figuring the Foraminifera from Reliz Canyon and recording their stratigraphic distribution, the writer has tried to ascertain from faunal assemblages as much as possible concerning the geologic history of the area. Five large-scale diagrams and charts are included, and there are bibliographical footnotes.

KNECHTEL, MAXWELL M , AND OTHERS

Mesozoic fossils of the Peruvian Andes. *Baltimore* Johns Hopkins Press, 1947 150 p illus 24 cm. (Johns Hopkins University *studies in geology* no. 15 J T Singewald, jr editor) $4 00 1700

Contents Part I Introduction, by M. M. Knechtel and E. F Richards. List of collections. Description of collecting localities, by J T Singewald, jr. Part II, Echinoidea, Pelecypoda and Gastropoda, by E. F Richards. Part III, Cephalopoda, by M. M Knechtel. Part IV Crustacea, by M. J. Rathbun. Bibliography Description of plates. Plates.

Note The morphology and taxonomy of fossils of invertebrate fossils. The papers *collected here provide descriptions* of Peruvian Mesozoic fossils obtained mostly in expeditions led by the editor of the volume and now housed at the Johns Hopkins University or the *United States National Museum*. They were originally prepared as doctoral dissertations and are reprinted here to aid current paleontological studies in the same region.

LEROY L W

Biostratigraphy of the Maqfi section, Egypt. New York The Geological Society of America, 1953 66 p. illus 25 cm. (Geological Society of America. Memoir 54) $1 75 1701

Contents Abstract. Introduction. *Stratigraphic and paleontologic* summary of the Maqfi section. Upper Cretaceous. Lower Tertiary Comments on local correlation. Conclusions. Description of the Foraminifera. References cited.

the physical environment. The bibliography lists 443 references to the world literature published between 1700 and 1938. There are 400 drawings and photographs of specimens and stratigraphic correlation chart.

WEAVER, CHARLES EDWIN
Paleontology of the marine Tertiary formations of Oregon and Washington. Seattle University of Washington Press, 1943 789 p. illus. 25 cm. (University of Washington publications in geology Vol. 5 December 1943) $15.00 1713

Contents: Part I, Coelenterata, Vermes, Echinodermata, Molluscoidea, Mollusca, Pelecypoda, Scaphopoda. Introduction. Previous work. Correlation table. Description of species. Part II, Mollusca, Gastropoda, Cephalopoda, Arthropoda: Description of species. Additional species. Part III, Bibliography. Faunal localities. Correlation chart. Faunal tables. List of new names. Index

Note: The purpose of this monograph is to place on record the marine invertebrate faunas of the Tertiary formations in Oregon and Washington, with original and supplementary descriptions of the species and illustrations of the holotypes and with better preserved topotype and hypotype material. Due to the greater refinement in biologic classification in recent years many of the earlier descriptions and identifications of genera and species have undergone much revision. The present work attempts to bring these changes up to date and to illustrate the biologic characters of the holotypes of the Tertiary faunas based on collections in the several museums and paleontological institutions in different parts of the United States. The bibliography lists 116 references published between 1837 and 1942. There are 104 plates of photographs. Each of the three parts is bound separately but paged continuously and sold as a set.

WEAVER CHARLES EDWIN
Tertiary stratigraphy of western Washington and northwestern Oregon. Seattle University of Washington 1937 266 p. illus 25 cm. (University of Washington. Publications in geology Vol. 4) $7.50 1714

Contents (abridged) Stratigraphy. Pre-Tertiary formations. Cretaceous. Tertiary. Eocene of western Washington. Puget group. [illegible] formation. Cowlitz formation. Oligocene: [illegible] nomenclature. Stratigraphy of critical oil areas. Miocene. Clallam formation. Astoria formation. Faunal relations. Associated igneous rocks. Pliocene. Montesano formation. Quinault formation. [illegible] formation. [illegible] formation. Geologic structure. Geologic history. Bibliography. Tertiary faunal localities in Washington and Oregon.

Note: A detailed study of the Tertiary stratigraphy and paleontology of western Washington and part of northwestern Oregon. It includes an extensive series of maps and a bibliography of the pertinent literature down to approximately the end of 1934. Out of print for many years, it was reissued in 1937

VARIOUS GROUPS

BASSLER, RAY SMITH AND MARGARET W MOODEY
Bibliographic and faunal index of Paleozoic pelmatozoan echinoderms. New York Geological Society of America, 1943 734 p. 25 cm. (Geological Society of America. Special papers. No 45) $5 70 1715

Contents: Systematic classification of Paleozoic Pelmatozoa. Faunal lists of species. Bibliography of genera and species. Classification of fragmentary crinoidal remains. "Collective group" names.

Note: The index and bibliography is based on the original work of Dr Frank Springer, authority on Paleozoic crinoids. It not only provides an index to the literature of Paleozoic pelmatozoan echinoderms, but also records the geological occurrence of the species

BASSLER, RAY SMITH AND BETTY KELLETT
Bibliographic index of Paleozoic Ostracoda. New York Geological Society of America, 1934 500 p illus. 25 cm (Geological Society of America. Special papers. No. 1) $3.00 1716

Contents (abridged) General considerations. Classification and diagnosis. Faunal lists. Bibliography. Catalogue of genera and species.

Note: An illustrated bibliographic index and synonymic catalogue of fossil Ostracoda. Genera and species are listed in an alphabetical order and each entry is followed by a list of publications from circa 1840 to early in 1934, in which the genus or species has been mentioned or discussed.

BRANSON, CARL COLTON
Bibliographic index of Permian invertebrates New York Geological Society of America, 1948 1,049 p. 25 cm. Geological Society of America. Memoir 26) $9.50 1717

Note: A guide to descriptions and illustrations of all genera, species, and variety of Permian invertebrates which have appeared in available literature through June 1944. The arrangement is by large taxonomic unit, and then alphabetically by genera and species. Bibliographic information including the source of the description, author, and date is given for each generic and specific name. The stratigraphic level and locality are also indicated. All references cited in the index are arranged alphabetically by author at the end of the volume.

BROWN BARNUM AND ERICH M SCHLAIKJER
The structure and relationships of Protoceratops. New York The New York Academy of Sciences, 1940 132 p. illus. 24 cm. (New York Academy of Sciences. Annals. Vol. XL, art. 1) $1 50. 1718

Contents: Introduction. Comparative study of the skull elements. The endocranial cast of *Protoceratops* and a comparison of it with that of later ceratopsians. Summary of the salient growth changes in the skull. Summary of the primitive characters of the skull. Comparative study of the lower jaw. Summary of the salient growth changes in the lower jaw. Summary of the primitive characters of the lower jaw. Comparative study of the teeth. Measurements of the skull and lower jaw. Comparative study of the vertebral column. Comparative study of the ribs and sternum. Comparative study of the appendicular skeleton. Measurements of the appendicular skeleton. Summary of the salient growth changes in the post cranial skeleton. Summary of the primitive characters of the post cranial skeleton. Ontogenetic characters of *Protoceratops* that foreshadow the evolution of later ceratopsians. The eggs of *Protoceratops*. The integument of *Protoceratops*. The family Protoceratopsidae. Appendix. Bibliography

Note: A detailed study of the anatomy and skeletal structure of this dinosaur of the order Ornithischia, based on a thorough re-examination of all the ceratopsian material in the American Museum of Natural History and by reference to the more important specimens in other large museums. There are 33 text figures and 15 plates of photographs.

BROWN BARNUM AND ERICH M SCHLAIKJER
A study of the troödont dinosaurs with the description of a new genus and four new species. New York American Museum of Natural History 1943 44 p. illus 27 cm. (American Museum of Natural History Bulletin Vol 82 article 5) $0 75 1719

Contents: Introduction. Systematic description and comparative study: Order Ornithischia. Suborder Ornithopoda. Family Troödontidae Gilmore. The origin of the dome of the troödont dinosaur skull. The troödont dinosaur skeleton. Affinities of the troödont dinosaurs. References.

Note: A comparative study of all the known troödont specimens, based upon an examination of 43 of the 44 specimens deposited in the American Museum of Natural History the United

Contents Part I Stratigraphy Introduction. Summary of previous work. Method of work. Description of localities and sections Terminology Bow Lake. Hector Creek. Slate Mountains. Mount Niblock. Mount Whyte—Plain of Six Glaciers. Ross Lake. Mount Bosworth. Mount Victoria. Cathedral Mountain. Popes Peak. Eiffel Peak Mount Temple. Pinnacle Mountain. Mount Schaffer Mount Odaray Park Mountain. Mount Field Kicking Horse Mine. Mount Field. Burgess Quarry Mount Stephen. Cambrian formations Lower Cambrian St. Piran sandstone. Middle Cambrian Mount Whyte formation. Cathedral formation. Stephen formation. Faunas General statement. Fauna of the *Bonnia-Olenellus* zone. Lower Middle Cambrian boundary Fauna of the *Wenkchemnia-Stephenaspis* zone. Fauna of the Plagiura-Kochaspis zone. Fauna of the *Albertella* zone. Fauna of the *Glossopleura* zone. Fauna of the *Bathyuriscus-Elrathina* zone. Order of *succession* of the faunules. Species not discussed in this paper Geographic and vertical distribution of trilobites. Environment of deposition. Index of localities. Part II Paleontology General statement. Terminology Classification of Cambrian trilobites. Descriptions of genera and species of trilobites Order Agnostida. Order Redlichiida. Order Opisthoparida. References. Explanation of plates. Plates. Index.

Note The area covered in this study is famous for the great development, high fossil content, and splendid exposures of the entire Cambrian system. The publication is based upon the findings and results of field work in the region covering four months in 1947 and 1948. The work is divided into two parts of equal size one covering the stratigraphy the other the paleontology of the area. The *trilobite fossils described and illustrated* were selected from approximately 4,000 collected by the writer and from others preserved in the United States National Museum collections. These fossils give a clear idea of the succession of trilobite faunas that followed the *Olenellus* fauna and preceded the *Albertella* fauna.

RICHARDSON, EUGENE S, JR

Pennsylvanian invertebrates of the Mazon Creek area Illinois Chicago Chicago Natural History Museum 1956 76 p illus 23 cm (Chicago Natural History Museum Fieldiana Geology Vol. 12 no 1–4) $2 00 1708

Content Introduction. Marine fauna. Trilobitomorpha. Arthropleurida.

Note Four papers on the fossil invertebrate fauna of the Middle Pennsylvanian Francis Creek shale in Will and Grundy counties in the state of Illinois, an area in which much strip mining of coal has been done, are published in this volume. For the most part the material studied and described is from the strip-mine dumps. Although plant remains—which are not described in these papers—predominate in the material studied, there is also a numerous representation of small animals that lived on an aggrading plain, above sea level but not far above it, and near shore. Photographs and drawings of specimens and literature references are included.

ROY, SHARAT KUMAR

The Upper Ordovician fauna of Frobisher Bay, Baffin Land Chicago Chicago Natural History Museum 1941 212 p illus 32 cm (Chicago Natural History Museum Geology memoirs Vol 2) $3 50 1709

Contents Narrative of the Expedition with notes on coastal geology of Labrador and Baffin Land. Description of fossils. Incertae sedis. Phylum Coelenterata Class Anthozoa. Phylum Echinodermata Class Cystoidea. Class Crinoidea. Phylum Molluscoidea. Class Bryozoa. Class Brachiopoda Phylum Mollusca Class Pelecypoda. Class Gastropoda. Class Cephalopoda Phylum Arthropoda Class Crustacea Synopsis of fauna. Previous collections from Silliman's Fossil Mount. Age of Silliman's Fossil Mount. Bibliography Index.

Note The data and material upon which this paper is based were collected by the author during 1927 and 1928 while serving as geologist of the Rawson-MacMillan Expedition of the Field Museum to Labrador and Baffin Land. His chief task was to collect fossils from Silliman's Fossil Mount in Baffin Land and to make observations on the geology of the coasts visited. The main subject matter of the memoir consists of the description and the determination of the stratigraphic range of the fossils collected at Silliman's Fossil Mount. The narrative chapter at the beginning gives a bird's-eye view of the expedition as a whole. The work contains 146 illustrations, most of them from photographs.

SHIMER, HERVEY WOODBURN, AND ROBERT R SHROCK

Index fossils of North America a new work based on the complete revision and reillustration of Grabau and Shimer's "North American index fossils" New York John Wiley & Sons, Inc., and the Technology Press of the Massachusetts Institute of Technology 1944 837 p illus 28 cm. $22 00 1710

Contents Introduction. Protozoa. Porifera. Coelenterata Echinoderma. Worms—Annelida (Annulata) Conodonts. Bryozoa (Polyzoa) Brachiopoda. Mollusca. Arthropoda. Fossil plants. Miscellaneous objects of probable organic origin. Index.

Note A comprehensive description of invertebrate fossils which are used to identify and date geologic formations and strata of North America. While this volume resembles Grabau and Shimer's *North American index fossils*, New York, 1909–10, in general purpose and content, the extensive revision and introduction of new material actually make it a new work. The fossils are grouped into nine divisions or phyla with a further break-down by genera and species. There is a general description of each phylum, and in the case of genera and species, stratigraphic range and geographic distribution are indicated. The acknowledgments of material which has been contributed by specialists or obtained from other publications provide an extensive bibliography These are supplemented by a list of the standard reference works used for research in geology and paleontology The illustrations and diagrams, which serve as a valuable adjunct to the text, occur in most cases after every page of text. Separate indexes to genera and species are provided.

STOYANOW, ALEXANDER

Lower Cretaceous stratigraphy in southeastern Arizona. New York Geological Society of American, 1949 169 p 26 cm. (Geological Society of America. Memoir 38) $2.50. 1711

Content Abstract. Introduction and acknowledgments. General part. Paleontological part—Pelecypoda—Ammonoidea. References. Explanation of plates. Index.

Note A detailed professional study of the stratigraphy and paleontology of an area in southeastern Arizona which is especially rich in ammonite and lamellibranch faunas. Twenty-one new species of ammonites and 22 of lamellibranchs are described. The work is based on a field study and also on a study of several museum and private collections. There are 26 plates, the majority of which contain reproductions of photographs of specimens. One plate is an original geological map of the area.

WEAVER, CHARLES EDWIN

Paleontology of the Jurassic and Cretaceous of west central Argentina. Seattle University of Washington Press 1931 594 p. illus. 34 cm. (University of Washington Memoirs Vol 1) $15 00 1712

Content Introduction. Geography Stratigraphy Geologic formations Paleozoic Leon Mahuida granite. Triassic. Jurassic. Lower Cretaceous. Middle Cretaceous diastrophism. Post Cretaceous history Faunal localities in west central Argentina. Faunal table for the Jurassic and Lower Cretaceous. Literature. Description of species.

Note. A monograph presenting the results obtained from field and laboratory investigations of the Jurassic and Cretaceous formations and faunas in the area lying approximately between the parallels 32 and 40° south latitude and the meridians 41 and 72 west of Greenwich. This area constitutes a single great stratigraphic and faunal province, and it was the desire of the author to investigate the faunas in their relations to former changes in geographic environments as interpreted by the stratigraphy and to compare these faunas with those in similar provinces in the Andean region of South America as well as in Europe, Asia, and South Africa. From the data presented, it is held possible to interpret the history of the physical changes in the environment throughout the entire basin of deposition for each of the epochs during the Jurassic and Cretaceous. After a biological analysis of the faunas of each formation an attempt is made to determine the relations between the variations in the faunas in different parts of the embayment and their adaptation to the interpreted continental changes in

Dalmanellidae. Bibliography. Index. Part II, Plates: Explanation of plates. Plates 1–349.

Note: The monograph describes and illustrates the fossil brachiopods of the Chazyan division of the Ordovician period, including Chazy forms with related Black River and Trenton types. It is based upon collections of fossils made by the author and others in an imposing sequence of rocks in the Appalachians and other parts of North America. In the first volume, in taxonomic order, appear the detailed descriptions of the various genera and species. Most of these genera are pictured in the plates in the second volume.

CUSHMAN, JOSEPH AUGUSTINE

Foraminifera: their classification and economic use. Fourth edition, revised and enlarged, with an illustrated key to the genera. Cambridge, Mass., Harvard University Press, 1948. 605 p. illus. 24 cm. $12.50 1727

Contents: The living animal. The test. Collecting and preparing material. Methods of study. Economic use. Geographic distribution. Geologic distribution. Trimorphism. Classification. Research problems concerning the Foraminifera. Systematic arrangement of the Foraminifera. Bibliography. An illustrated key to the genera of the Foraminifera. Index.

Note: A standard work known throughout the world. It provides an annotated, systematic description of families, genera and species of Foraminifera. The first edition was published in 1928 and the third in 1940. In the case of each succeeding edition, revisions have been made so as to include descriptions of Foraminifera reported in the literature published since the preceding edition. In the case of the fourth edition, an eight-year interval was involved, and the necessary additions were numerous, even though the author omitted some reported new genera which he felt required further study. The volume is 70 pages longer, the classified bibliography runs to 67 pages, and there are 55 plates, each containing from 11 to 33 illustrations.

CUSHMAN, JOSEPH AUGUSTINE

Paleocene Foraminifera of the Gulf Coastal region of the United States and adjacent areas. Descriptions and illustrations of smaller Foraminifera from the Gulf Coastal region, Cuba, Central America, Haiti and Trinidad. Washington, D. C., Government Printing Office, 1951. 75 p. illus. 29 cm. (United States. Geological Survey. Professional paper 232) $1.75 1728

Contents: Introduction. List of localities. Systematic descriptions: Rhizamminidae. Ammodiscidae. Lituolidae. Textulariidae. Verneuilinidae. Valvulinidae. Miliolidae. Ophthalmidiidae. Trochamminidae. Placopsilinidae. Lagenidae. Polymorphinidae. Nonionidae. Buliminidae. Rotaliidae. [illegible] Amphisteginidae. Cassidulinidae. Chilostomellidae. Globigerinidae. Globorotaliidae. Anomalinidae. Index. Plates.

Note: Describes and illustrates the Foraminifera from the Paleocene of the Gulf Coastal Plain, including parts of Texas, Arkansas, Mississippi, Alabama, and Tennessee, and related areas of Trinidad, Cuba, Haiti, and Central America. About 200 species and varieties are recorded, and nearly all are illustrated on the 24 photographic plates. Many of the species are considered excellent index fossils for study of the Paleocene.

CUSHMAN, JOSEPH AUGUSTINE

Upper Cretaceous Foraminifera of the Gulf coastal region of the United States and adjacent areas. Washington, D. C., Government Printing Office, 1946. 241 p. illus. 29 cm. (United States. Geological Survey. Professional paper 206) o.p. 1729

Contents: Introduction. List of localities. Systematic descriptions: Astrorhizidae. Rhizamminidae. Saccamminidae. Hyperamminidae. Reophacidae. Ammodiscidae. Lituolidae. Textulariidae. Verneuilinidae. Valvulinidae. Silicinidae. Miliolidae. Trochamminidae. Ophthalmidiidae. Lagenidae. Polymorphinidae. Nonionidae. Camerinidae. Heterohelicidae. Buliminidae. Ellipsoidinidae. Rotaliidae. Cassidulinidae. Chilostomellidae. Globigerinidae. Hantkeninidae. Globorotaliidae. Anomalinidae. Plates 1–66. Index.

Note: Collections on which this paper is based are largely from the Upper Cretaceous of Texas, where a succession of Foraminifera-bearing strata are exposed; material was also available from Louisiana, Arkansas, Tennessee, Mississippi, and Alabama, and is included, along with records from adjacent areas. Nearly 400 species and varieties are recorded, with description, locality, and bibliographical references, and nearly all are illustrated in the section of plates. Many of the species are known to be excellent index fossils.

DALL, WILLIAM HEALEY, AND OTHERS

A manual of the recent and fossil marine pelecypod mollusks of the Hawaiian Islands, by William Healey Dall, Paul Bartsch, and Harald Alfred Rehder. Honolulu, Hawaii, Bernice P. Bishop Museum, 1938. 233 p. illus. 25 cm. (Bernice P. Bishop Museum. Bulletin 153) $5.00 1730

Contents: Introduction. Phylum Mollusca. Class Pelecypoda. Order Taxodonta: Superfamily Nuculoidea. Superfamily Arcoidea. Order Dysodonta: Superfamily Mytiloidea. Superfamily Pterioidea. Superfamily Pectinoidea. Order Heterodonta: Superfamily Carditoidea. Superfamily Lucinoidea. Superfamily Cyrenoidea. Superfamily Chamoidea. Superfamily Leptonoidea. Superfamily [illegible]. Superfamily Cardioidea. Superfamily Veneroidea. Superfamily Mactroidea. Superfamily Tellinoidea. Order Desmodonta: Superfamily Saxicavoidea. Superfamily Gastrochaenoidea. Superfamily Adesmoidea. Suborder Anomalodesmacea: Superfamily Pandoroidea. Superfamily Poromyoidea. Index.

Note: Intended mainly as a technical manual of the Hawaiian species of marine pelecypod mollusks, which is to serve the people of Hawaii for the determination of their mollusks. General discussion of general relationships with congeners from other corners of the world has been purposely avoided as beyond the scope of the present paper. The material is based on the United States National Museum collection of Hawaiian marine mollusks, the collections made by the U.S. Bureau of Fisheries at much greater depth, and the specimens collected by the authors. There are 58 plates of photographs.

DELO, DAVID MARION

Phacopid trilobites of North America. New York, The Geological Society of America, 1940. 135 p. illus. 25 cm. (Geological Society of America. Special papers. No. 29) $1.20 1731

Contents: Introduction and acknowledgments. Summary of previous work. Principles of classification. Evolutionary development. Systematic description: Superfamily Phacopidacea. Family Phacopidae. Family Dalmanitidae. Bibliography. Index.

Note: A study of the North American representatives of the Phacopidacea, including all available types of species previously described and several new types. Redefinition of many old species has been made in order to place them in their proper systematic relationship.

DENISON, ROBERT H

A review of the habitat of the earliest vertebrates. Chicago, Chicago Natural History Museum, 1956. 359–457 p. 23 cm. (Chicago Natural History Museum. Fieldiana: Geology. Vol. 11, no. 8) $1.50. 1732

Contents: Introduction. Determination of early vertebrate environments. Review of early vertebrate occurrences. Systematic review of the habitat and adaptation of early vertebrates. Discussion of early vertebrate habitats. Summary and conclusions. Addendum. References.

Note: A comprehensive review of the problem of whether vertebrates originated in salt water or fresh water. The author describes criteria for determining whether specific sediments containing fossils were deposited by saline waters, then reviews the recorded occurrences of early vertebrates and evaluates them from the standpoint of their pertinence to the problem of origin. He criticizes the views of A. S. Romer, Homer W. Smith, and others, and concludes: [illegible] vertebrates originated in the sea and did not begin to enter fresh water until some time in the Silurian.

States National Museum, and the Academy of Natural Sciences of Philadelphia. The study involves a redefinition of the family Trolobitidae, the description of one new genus and four new species, and a discussion of the affinities of the trolobites.

CARPENTER, FRANK MORTON

The fossil ants of North America Cambridge, Mass The Museum 1930 66 p. illus 24 cm. (Harvard College Museum of Comparative Zoology Bulletin Vol LXX, no 1) $2 00 1720

Note This monograph presents the report of study of about 12,000 specimens of fossil ants obtained from American Tertiary rocks. More than 4 000 of the specimens were among the unworked material collected by Dr S. H Scudder in early expeditions to the Florissant shales and presented by him to the Museum of Comparative Zoology Other specimens had been acquired by the Museum later and material was also loaned for this study by various museums. Fossils from other American insect deposits, particularly those at Green River Wyoming, are included in this study but those from Florissant form the most important source of information. Illustrations consist of 11 plates, chiefly photographs, many of which show holotypes.

CAMP, CHARLES LEWIS, AND OTHERS

Bibliography of fossil vertebrates, 1939–1943 By C L Camp S P Welles, and Morton Green New York The Geological Society of America, 1949 371 p 26 cm (The Geological Society of America. Memoir 37) $4 50 1721

Contents Preface. List of serials and abbreviations. Supplementary list of serials. Author catalogue. Subject index. Systematic index. Synopsis of classification.

—— 1944–1948 By C. L Camp, S P Welles, and Morton Green New York The Geological Society of America 1953 465 p 26 cm (The Geological Society of America. Memoir 57) $5 50 1722

Contents Preface. Supplementary list of serials. Author catalogue. Subject index. Systematic index. Synopsis of classification.

Not A comprehensive bibliography of world literature. It began publication in 1940 with the appearance f C. L. Camp and V. L. Vanderhoof *Bibliography of fossil vertebrates, 1928–1933* (Geological Society of America, *Special papers*, No. 27) and was continued by C L. Camp and others, *Bibliography of fossil vertebrates* 1934–1938 New York, 1942 (Geological Society f America, Special papers. N 42) These first two publications in the series are now out of print. The third and fourth in the series are described above. The subjects covered in the series are vertebrate paleontology and paleolithic anthropology The coverage of writings on artifacts and other remains of early man is not comprehensive, but the criteria for inclusion and exclusion are stated in the volumes (see particularly the preface to the 1944–1948 volume) The indexes in each volume are exceptionally thorough pieces of work.

COLBERT, EDWIN HARRIS

The dinosaur book the ruling reptiles and their relatives. Illustrated by John C Germann with additional illustrations previously published by C R Knight and others New York McGraw Hill Book Company Inc 1951 156 p illus (part col d) 28 cm. (Man and nature publications Handbook no 14) $6 50 1723

Contents Introducing the dinosaurs. Pioneer students of the dinosaurs. Hunting dinosaurs The age of reptiles. The first land animals. Primitive reptiles. The mammal-like reptiles. Ancestors of the dinosaurs. The kinds of dinosaurs. Adaptations of the dinosaurs. Dinosaurian associations. Flight. Sea serpents. Decline of the dinosaurs. The survivors. Why study fossils? Where the dinosaurs and their relatives are found. How the dinosaurs and their relatives are classified and named. Other sources of information. Index.

Note. An informative and entertaining book for anyone interested in dinosaurs. A considerable amount of rather solid paleontological information is incorporated in the text and in the charts and synoptic tables, but all of it has been made readable and vital within the grasp f interested laymen who frequent natural history museums. *Excellent photographs of dinosaur restorations give the* reader a realistic idea of what these reptiles looked like when alive. A glossary and pronounciation guide is included with the index.

COLBERT, EDWIN HARRIS, AND DIRK ALBERT HOOIJER

Pleistocene mammals from the limestone fissures of Szechwan China. New York. American Museum of Natural History, 1953 134, 80 p illus 26 cm (American Museum of Natural History Bulletin Vol. 102, art. 1) $3.50 1724

Contents (abridged) Introduction. Systematic discussion of Yenchingkou fauna Primates. Lagomorpha. Rodentia. Carnivora. Proboscidea. Perissodactyla. Artiodactyla. Bibliography

Note A thorough study of fossil material collected in 1921–1923 and 1925–1926 and constituting one of the most important collections of Pleistocene mammals. The results of the study are presented in detail in a narrative text, 59 tables, 42 text figures and 40 plates. The plates are reproduced from photographs and most of them contain several photographs. Literature references to related publications are included.

COOPER, BYRON N

Trilobites from the lower Champlainian formations of the Appalachian valley New York The Geological Society of America, 1953 69 p illus 25 cm. (The Geological Society of America. Memoir 55) $1 75 1725

Contents Abstract. Introduction and acknowledgments Stratigraphy Materials studied. Classification and terminology Previous work. Description of species. Significance of the trilobites. References cited. Explanation of plates. Index.

Note A study whose purpose was to make available for biostratigraphic use number of trilobite species, most of which have been confused or misidentified previously Forty-five species of lower Middle Ordovician trilobites, including six new genera and three new species, are described and illustrated from the extensive collections in the United States National Museum. Most of these species occur in beds whose age and correlation have been a matter of controversy for more than a decade. The results of the study are related to previous work, and the pertinent publications of other investigators are cited in the two-page list of references. In the species descriptions, more than the usual amount of space is devoted to descriptions of morphology There are 19 plates of reproductions of photographs of specimens.

COOPER G ARTHUR

Chazyan and related brachiopods. Washington D C The Smithsonian Institution, 1956 2 v illus 24 cm (Smithsonian Institution Smithsonian miscellaneous collections. Vol 127 in two parts Publication 4253) $20 00 1726

Contents Part 1, Text Section I The formations: Introduction and stratigraphic setting. Geographic and geologic setting of the formations. Newfoundland, St. Lawrence and Ottawa valleys and adjacent areas. Champlain, Mohawk, and Hudson valleys. The Appalachians (Pennsylvania to Alabama) The Central basin of Tennessee Wells Creek basin, and High Bridge, Kentucky The disturbed area at Kentland, Indiana. The Mississippi valley The Arbuckle and Wichita Mountains, Oklahoma. The Black Hills, South Dakota. The Great Basin—Nevada and California. Formations in Utah. Section II, The fossils General discussion of the fossils. Annotated list of genera and species. Subclass Gastrocaulia Suborder Atremata. Subclass Pygocaulia suborder Orthoidea. Suborder Clitambonitoidea. Suborder Strophomenoidea. Suborder Pentameroidea. Suborder Triplesioidea. Suborder Dictyonelloidea. Suborder Strophomenoidea.

Society of America, 1939 179 p. 25 cm. (Geological Society of America. Special papers. No. 23) $1.20 1740

Contents: Tentative classification of American Devonian cephalopod genera. Bibliography. Catalogue of genera and species. North American Devonian formation names. References.

Note: Intended as the first unit of a bibliographic index to fill the gap between the following two volumes: E. Weller, *A bibliographic index of North American carboniferous invertebrates*, Washington, D.C., United States Geological Survey Bulletin no. 153, 1898 and R. S. Bassler, *Bibliographic index of American Ordovician and Silurian fossils*, Washington, D.C., Government Printing Office, 1915, Smithsonian Institution Bulletin no. 92. Bibliographic references are arranged under genera and species, covering all literature on North American Devonian cephalopods published prior to January 1, 1939. A list of the various North American Devonian formations with their approximate areal distribution and position in the Devonian system is included.

KUMMEL, BERNHARD

American Triassic coiled nautiloids. A study of the classification and evolution of late Paleozoic and early Mesozoic cephalopods, and description of new species. Washington, D.C. Government Printing Office, 1953 104 p. illus 29 cm. (United States. Geological Survey Professional paper 250) $1.25 1741

Contents: Introduction. Occurrence: [illegible] Rocky Mountain region, Nevada, California, Canada, Alaska, Mexico, South America. Classification of late Paleozoic and Triassic nautiloids. Geologic history. Evolution. Systematic paleontology: Family Tainoceratidae Hyatt, 1883. Family Grypoceratidae Hyatt, 1900. Family Syringonautilidae Mojsisovics, 1902. Family Pleuronautilidae Kummel, 1950. Family Clymenoceratidae Hyatt, 1900. Family Gonionautilidae Kummel, 1950. Bibliography. Index. Plates 1–[illegible].

Note: This study reviews the forms and phylogenetic relationships of late Paleozoic and Triassic coiled nautiloids. At the end of each generic discussion, the ranges and geographic distribution of species in each genus are listed. The systematic part of the text includes a discussion and description of all North American species of Triassic coiled nautiloids. As a systematic treatment of an invertebrate group on both sides of the Paleozoic-Mesozoic boundary, the publication is of value not only to paleontologists working in the Triassic but also to all scientists interested in the biological significance of the great systemic boundaries.

LULL, RICHARD SWANN, AND NELDA E. WRIGHT

Hadrosaurian dinosaurs of North America. New York Geological Society of America, 1942 242 p. illus 24 cm. (Geological Society of America. Special papers. No. 40) $2.70. 1742

Contents (abridged): Abbreviations. History of discovery. Geologic distribution. Geographic distribution. Alphabetical list of genera and species. Ecology, habits, and manner of life. Progressive evolutionary trends and phylogeny. General morphology: [illegible], skull, mandible, teeth, vertebral column, ribs, appendicular skeleton, tendons and ligaments, muscular system, integument, pigmentation and pattern, brain and endocranial cast, organs and special senses. Systematic description of genera and species: classification of hadrosaurs, family Hadrosauridae (Trachodontidae). Bibliography. Index.

Note: A study based on a critical review of the extant literature on the subject, attempting in part to reconcile the various descriptions and reduce them to certain comparable common factors. Redescriptions have been prepared, nearly always in the presence of the original types. A complete morphological study of the animals and an account of their distribution in time and space is also given, with notes on their probable phylogeny and evolutionary trends.

MILLER, ARTHUR K., AND WALTER YOUNGQUIST

American Permian nautiloids. New York Geological Society of America, 1949 218 p. illus 26 cm. (Geological Society of America. Memoir 41) $3.60 1743

Contents: Abstract. Introduction and acknowledgments. Previous work. Occurrence. Classification of Permian nautiloids. Systematic paleontology. Addendum. Bibliography. Explanation of plates. Index.

Note: A systematic catalogue of a group of fossils that had not been comprehensively described before the appearance of this work. It is based on a study of the specimens in the United States National Museum, in other museums, and in the possession of geologists associated with universities and oil companies. The descriptive material includes literature references, morphological data, discussions of occurrences, and illustrations of [illegible] (or other) nearly all [illegible] specimens. There are 19 plates each bearing reproduction of one to 12 or more photographs of specimens.

MILLER, ARTHUR K., AND OTHERS

Ordovician cephalopod fauna of Baffin Island. By A. K. Miller, Walter Youngquist, and Charles Collinson. Containing a study of the *Ordovician trilobites from Silliman's Fossil Mount* by Harry B. Whittington. And shorter supplements and notes by Preston E. Cloud, jr., Charles E. Decker, Y. O. Fortier, A. Scott Warthin, jr., and Alice E. Wilson. New York The Geological Society of America, 1954 234 p. illus 25 cm. (The Geological Society of America. Memoir 62) $4.75 1744

Contents: Introduction. General physical geography and geology of Baffin Island. Occurrence and nature of the cephalopod fauna: Silliman's Fossil Mount, [illegible], Amadjuak and Nettilling lakes, Northern Baffin Island (and [illegible] Island). Correlations. Summary and conclusions. Systematic paleontology: Genus *Endoceras* Hall, 1847. Genus *Cyclendoceras* Grabau and Shimer, 1910. [illegible] Ordovician trilobites from Silliman's Fossil Mount, by H. B. Whittington. Ordovician graptolites and cephalopods from Baffin Island, by C. E. Decker. Notes on Paleozoic outliers west of Silliman's Fossil Mount, by Y. O. Fortier (with lists of fossils identified by A. E. Wilson). Bibliography. Explanation of plates [illegible]. Index.

Note: A group of papers concerning the paleontology of southern Baffin Island, where are located remnants of [illegible] limestone and shale formations [illegible]. The cephalopods, which are the most numerous fossils, and the trilobites and the graptolites are described systematically. The fauna is assigned to the early Upper Ordovician age. A 12-page bibliography and a series of 43 plates are included. The work is mostly based upon fossil collections made in the area in 1947.

MILLER, ARTHUR K.

Tertiary nautiloids of the Americas. New York Geological Society of America, 1947 234 p. illus. 25 cm. (Geological Society of America. Memoir 23) $4.50 1745

Contents: Abstract. Introduction and acknowledgments. Previous work. Occurrence. Modern *Nautilus*, its habits, habitat, anatomy and shell. Glossary of shell terminology. Classification of Tertiary nautiloids. Systematic paleontology: Family Nautilidae d'Orbigny

ELLIS, BROOKS F , AND ANGELINA R. MESSINA

Catalogue of Ostracoda. Volumes I VIII. New York American Museum of Natural History, 1952–56 8 v illus 28 cm 1733

Note A monumental work which parallels the Museum well-known *Catalogue f Foraminifera* It has the same format, although the arrangement of the material is different. The basic arrangement is stratigraphic. *First, the Paleozoic* genera and species will be issued, with each volume arranged alphabetically by genera, and within each genus alphabetically by species. When all pre-*dominantly Paleozoic* forms have been issued, Mesozoic and finally Cenozoic forms will be covered additional references to each unit will be issued separately after the completion of the Catalogue this will permit us to compile more complete set of references, and to furnish references to species under all their generic combinations." "Genus units will comprise the type reference, type description, and type species, while species units will cover the *type reference, type figure, type description type level, type locality and type specimen.* Both types of unit will include synonymy *when given by the original author* Illustrations are included in most of the unit descriptions. Completion of the work is about *20* volumes is expected. Volumes I–VIII had been published to the close of 1956.

GARDNER, JULIA ANNA

Mollusca of the Tertiary formations of northeastern Mexico New York Geological Society of America, 1945 332 p illus 25 cm. (Geological Society of America. Memoir 11) $3 90 1734

Contents. Stratigraphic notes General statement. Paleocene series. *Eocene series.* Oligocene series. Miocene series. U S. Geological Survey station numbers. Systematic descriptions: Phylum Vermes. Phylum Mollusca. Class Pelecypoda. Order Prionodesmacea. Order Anomalodesmacea. Order Teleodesmacea. Class Scaphopoda. Class Gastropoda. Order Pectinibranchiata. Subclass Euthyneura Order Opisthobranchia. Order Pteropoda. Subclass Pulmonata. Class Cephalopoda. Order *N* autiloidea. Phylum Arthropoda. Explanation of plates. Index.

Note Old species of Tertiary mollusks from this area are discussed, and new species are described and illustrated in this systematic study An attempt also is made to correlate the fossils described with similar faunas from known areas. The report is based on oil company collections and is written for paleontologists and petroleum geologists.

GARDNER, JULIA ANNA

The molluscan fauna of the Alum Bluff group of Florida. Washington, D C Government Printing Office 1926–50 9 pts illus 28 cm (United States Geological Survey Professional paper 142 A–I) o p 1735

Note The Alum Bluff deposits consist of a series of sand and clays carrying varied and prolific molluscan fauna. Three distinct faunas are recognized in the deposit and, largely on the basis of them, the Alum Bluff is ranked as a group and divided into three formations. The faunal groups covered in Parts to VIII are Part I, Prionodesmacea and Anomalodesmacea Part II, Astartacea, Carditacea, Chamacea Part III, Lucinacea, Leptonacea, Cardiacea Part IV Veneracea Part Tellinacea Solenacea, Mactracea, Myacea, Molluscoidea Part VI, Pteropoda, Opisthobranchia, and Ctenobranchia (in part) Part VII Stenoglossa (in part) Part VIII, Ctenobranchia (remainder) Aspidobranchia and Scaphopoda. Part IX consists of an index to the whole work. All parts except the last contain a series of illustrations of type specimens.

GILMORE, CHARLES WHITNEY

Fossil snakes of North America New York The Geological Society of America, 1938 96 p illus 25 cm (Geological Society of America. Special papers No 9) $0 90 1736

Contents (abridged): Geological distribution of Serpentes in North America. Serpentes skeleton. Genera and species. List of family assignments. Systematic description. Bibliography Index.

Note A monograph summarizing the technical data on the 24 species of fossil snakes so far described by various authorities.

HENDERSON, JUNIUS

Fossil non marine Mollusca of North America. New York Geological Society of America, 1935 313 p 24 cm. (Geological Society of America. Special papers. No. 3) $2 10 1737

Contents Introduction. Systematic list [redacted] species. Remarks and locality lists of species. Systematic annotated catalogue. Bibliography Index.

Note A catalogue of all the species known to the author, except those from post Tertiary deposits, and the intention is to list all references made for all species. The arrangement is systematic rather than alphabetic. There are [redacted] pages of bibliography and a full index.

IMLAY, RALPH W

Callovian (Jurassic) ammonites from the United States and Alaska, descriptions and illustration of cephalopods of late Jurassic age Parts I II Washington, D C Government Printing Office, 1953 108 p illus. 28 cm (United States Geological Survey Professional paper 249A, 249B) Part I $1.25 part II, $1 75 1738

Content Part I Western interior of the United States Abstract. Introduction. Biologic analysis. Stratigraphic summary Faunal zones and correlations. Comparisons with other faunas Ecologic considerations. Geographic distribution. Summary of results. Systematic descriptions. References. Index. Part II, Alaska Peninsula and Cook Inlet regions Abstract. Introduction. Biologic analysis. Stratigraphic summary Age of the faunas Comparisons with other faunas. Ecologic considerations. Geographic distribution Summary of results. Systematic descriptions. References. Index.

Note Ten genera and 38 species and varieties, of which 19 species and one variety are new are described in the first part of this systematic study Nineteen genera and subgenera and 47 species, of which one subgenus and 18 species are new are described in the second part. In both parts the primary emphasis is on the systematic descriptions, but stratigraphic assignment receives a strong secondary emphasis. In the two parts together there are 55 plates, each of which contains several reproductions of photographs of type specimens in natural size (in most instances)

KELLOGG REMINGTON

A review of the Archaeoceti Washington, D C. Carnegie Institution of Washington 1936 366 p illus 29 cm. (Carnegie Institution of Washington Publication no. 482) $4 50 1739

Contents (abridged) Chronological record of discoveries of archaeocete remains. Classification of the Archaeoceti. characters of families, genera and species. Incertae sedis. Geologic range and geographic distribution of the Archaeoceti. Morphologic history f the Archaeoceti. Genetic relations of the Archaeoceti. Literature Index.

Note The Archaeoceti, or toothed whales with nontelescoped skulls, as now recognized, comprise three families, 10 genera, and 19 species. All of these species are discussed, as well as a number f additional forms for which available skeletal remains are not sufficient for accurate determination The descriptive portion deals chiefly with the dental and osteological details of the archaeocetes. The investigation is based chiefly on a review of the archaeocete material in European and American museums.

KINDLE, EDWARD MARTIN AND ARTHUR K. MILLER

Bibliographic index of North American Devonian Cephalopoda. New York Geological

of which are new; four new subfamilies, 45 new genera, and 66 new species. There are 617 drawings and photographs of specimens included.

PETRUNKEVITCH ALEXANDER IVANOVITCH

A study of the structure classification and relationships of the Palaeozoic Arachnida based on the collections of the British Museum. New Haven Connecticut Academy of Arts and Sciences, 1949 246 p. illus 24 cm (Connecticut Academy of Arts and Sciences. Transactions. Vol. 37 pages 69–315 January 1949) $7 70 1752

Contents (abridged) Introduction. Relationships and evolutionary trends. Phylogeny. Classification—Class Arachnida—subclass Latigastra—subclass Stethostomata—subclass Soluta—subclass Caulogastra. General conclusions. Summary. References. Plates. Index to orders, families and genera. List of species.

Note An exceptionally detailed study carried out with the object of clarifying classification and related aspects of the Palaeozoic Arachnida, in the light of the current knowledge of the developmental and internal anatomy of recent and extant examples of this order. In a long introduction the author has discussed such aspects of the problem as the segmentation of the abdomen, the organs of respiration, the circulatory system, and the sense organs. The heart of the book consists of detailed critical discussions of specific genera. In these discussions the author points out erroneous views of previous writers and states his own conclusions. Specimens examined by him are identified by number. There are 83 plates, most of which contain more than one drawing or photograph.

RATHBUN, MARY JANE

Fossil Crustacea of the Atlantic and Gulf coastal plain. New York The Geological Society of America, 1935 160 p. illus. 25 cm. (Geological Society of America. Special papers. No. 2) $1.30. 1753

Contents Introduction. List of species and distribution. Detailed description of genera and species, Cretaceous, Eocene, Oligocene, Miocene, Pliocene, Pleistocene. Bibliography. Explanation of plates. Index.

Note A study of the comparatively scarce Crustacea, based largely on the collections of the United States Geological Survey and the United States National Museum. Three new genera are listed: *Prehepatus*, *Ophthalmoplax*, and *Scyllarella*. Tables are given showing geographic and stratigraphic distribution of species in each period. Treatment under description is general discussion, and description, measurements, occurrence, and collection in which contained.

ROMER, ALFRED SHERWOOD AND L. I. PRICE

Review of the Pelycosauria. New York Geological Society of America, 1940 538 p illus. 25 cm. (Geological Society of America. Special papers. No 28) $4.20 1754

Contents Methods of study. Classification. Collecting localities. Geological and geographical distribution. General morphology. Habits. Pelycosaur relationships. Systematic descriptions. Measurements. Bibliography. Abbreviations used in skull illustrations. Explanation of plates. Index.

Note A review for professional geologists, zoologists, and paleontologists, of the dominant types in the oldest adequately known reptilian fauna. The work takes into account new material and re-examination of older collections, including nearly every specimen in major American institutions. Descriptions and treatment are general so far as possible and deal with species rather than with single specimens.

ROMER, ALFRED SHERWOOD

Vertebrate paleontology Second edition. Chicago University of Chicago Press 1945 687 p. illus. 25 cm. $8.50 1755

Contents Introductory. Primitive jawless vertebrates. Placoderms. Sharklike fishes. Bony fishes. Amphibians. Primitive reptiles. Varied reptilian types. Synaptosaurian reptiles. Lepidosaurian reptiles. Ruling reptiles. Dinosaurs. Birds. Mammal-like reptiles. The structure of mammals. Primitive mammals. Placental origins. Insectivores. Bats. Primates. Carnivores. Archaic ungulate groups. Subungulates. Perissodactyls. Artiodactyls. Edentates. Whales. Rodents. Vertebrate history: Paleozoic vertebrates. Mesozoic vertebrates. Cenozoic vertebrates. Classification of vertebrates. Bibliography. Index.

Note The only modern work in the English language that treats the whole subject. It is designed primarily for beginners at the undergraduate college level. Besides its uses as a text, it is valuable as a reference book to scientists in other professions, such as zoology, anatomy and physical anthropology. The major structural features of the various groups are discussed in detail. A complete skeleton and skull of a representative member of nearly every group is shown. In the present edition about half of the original work has been entirely rewritten, and the other parts have been somewhat revised. Three new chapters have been added. There are now 377 figures, and the revised bibliography contains 479 entries.

SCOTT, WILLIAM BERRYMAN AND OTHERS

The mammalian fauna of the White River Oligocene, by William Berryman Scott, Glenn Lowell Jepsen, and Albert Elmer Wood Philadelphia The American Philosophical Society 1941 980 p illus. 30 cm (American Philosophical Society Transactions. New series Vol. 28) $7.50 1756

Contents (abridged) Part I, Insectivora and Carnivora, by W. B. Scott and G. L. Jepsen. The White River formation. The White River fauna. Insectivora: Tupaiidae. Erinaceoidea. Soricoidea. Family incertae sedis. Carnivora. Creodonta. Fissipedia. Canidae. Mustelidae. Part II, Rodentia, by A. E. Wood. Introduction. Rodentia. Protrogomorpha. Sciuromorpha. Myomorpha. Rodentia incertae sedis. Conclusions. References. Part III, Lagomorpha, by A. E. Wood. Leporidae. Palaeolaginae. Discussion. Part IV Artiodactyla, by W. B. Scott. Non-Ruminantia: Palaeodonta. Anoplotheria. Suina. Ruminantia. Tylopoda. Hypertragulidae. Systematic position of the Hypertragulidae. Camelidae. Relationships of Leptomeryx. Oreodontoidea. Leptauchenia—Leptauchenia—Cyclopidius tribe. Relationships of Leptauchenia. The habits of Leptauchenia. Part V Perissodactyla, by W. B. Scott. Chalicoidea. Ceratomorpha. Hippomorpha. Remarks on the evolution of the horses and camels. Ancylopoda. Edentata. Palaeanodonta. Didelphidae. Marsupialia. Index.

Note In preparing this monograph of the White River mammalian fauna, use was made of the important collections stored in the various museums of the country: the National Museum in Washington, the American Museum of Natural History, New York, the Carnegie Museum, Pittsburgh, the Chicago Natural History Museum in Chicago and the Walker Museum of the University of Chicago, the State University Museum at Lincoln, Nebraska, the Colorado Museum of Natural History at Denver, the Museum of the State School of Mines at Rapid City, South Dakota, the museums of Amherst College, Yale and Harvard Universities, and the Academy of Natural Sciences in Philadelphia. A comparison of the families and genera of mammals which now inhabit all of North America north of the neotropical region and those which have been found in the White River reveals the great richness and diversity of the latter fauna.

SHIMER, HERVEY WOODBURN

An introduction to the study of fossils (plants and animals) Revised edition. New York The Macmillan Company 1933 496 p. illus. 20 cm. $6 75 1757

Contents General considerations. Plants: Introductory. Phylum I—Thallophyta. Phylum II—Bryophyta. Phylum III—Pteridophyta. Phylum IV—Spermatophyta. Animals: Introductory. Phylum I—Protozoa. Phylum II—Porifera (sponges). Phylum III—Coelenterata. Phylum IV—Ctenophora (comb-jellies). Phylum V—Platyhelminthes (flat-worms). Phylum VI—Nemathelminthes (thread-worms). Phylum VII—Trochelminthes (wheel-worms). Phylum VIII—Annelida (ring-worms). Phylum IX—Echinodermata. Phylum X—Molluscoidea. Phylum XI—Mollusca (mollusks). Phylum XII—Arthropoda. Phylum XIII—Chordata. Index—glossary.

Note A simple introduction to the subject written for college students. To stimulate the student's interest, living forms are often discussed, first as types of their phyla or classes before the fossil

1840, Family Hercoglossidae Spath, 1927 Family Aturidae Hyatt, 1894 Addendum, Bibliography Explanation of Plates 1 100. Index.

Note In this monograph the author has endeavored to assemble all the significant published data relating to the nautiloids in the Tertiary strata of North, Central, and South America and the West Indies, and, adding to them the new facts discovered by him, to make an account as nearly complete as possible. Some original contributions are thus reported. The work is a convenient reference aid for both students and professional geologists and paleontologists. Modern *Nautilus* although not known to be represented in the American Tertiary extends back to the Eocene and is discussed in detail because it is more or less typical of the Tertiary nautiloids.

MOORE, RAYMOND CECIL, *AND OTHERS*

Invertebrate fossils By Raymond C Moore, Cecil G Lalicker and Alfred G Fischer New York McGraw Hill Book Company, Inc., 1952 766 p illus 24 cm. $12 50 1746

Contents The nature of fossils. Foraminifera and radiolaria. Sponges and spongelik fossils. Coelenterates. Bryozoans. Brachiopods. Mollusks. Gastropods. Cephalopods. Pelecypoda. Annelids and other worms. Arthropods. Trilobites. Ostracodes and other crustaceans. Chelicerates, myriapods, and insects. Echinoderms. Primitive attached echinoderms. Crinoids. Holothuroids. Starfishes. Echinoids. Graptolites and pterobranchs. Conodonts. Index.

Note. Although this book is frankly college text for use in first courses in paleontology it has a number of features which make it useful outside of formal classes. Its inclusive scope is indicated by the chapter titles. In general the following points are covered for each of the main zoological groups anatomy and physiology geologic importance geologic history zoological classification, functions and development of shells, modes of life reproduction and ontogeny Also, there are adequately detailed descriptions of the main subgroups. The expository matter is supplemented by glossaries and abundant illustrations and literature references. The index is full.

OKULITCH, VLADIMIR JOSEPH

North American Pleospongia. New York The Geological Society of America, 1943 112 p illus 24 cm (Geological Society of America. Special papers No 48) $1 50 1747

Contents (abridged) Abstract. Introduction and acknowledgments. Previous work. Methods of study Part I, Distribution, morphology and physiology Part II, Affinities and classification. Part III, Description of North American Pleospongia. Literature cited. Explanation of plates. Index.

Note Geographic and stratigraphic distribution of Pleospongia, ecology and faunal associations are considered. Morphology ontogeny and phylogeny are described in detail. All known American species are fully described and illustrated.

OLSON, EVERETT CLAIRE

Diplocaulus, a study in growth and variation Chicago Chicago Natural History Museum 1951 154 p illus 24 cm (Fieldiana Geology Vol 11 no 2) $1 75 1748

Contents Introduction. Problems and methods. Review of Diplocaulus. Species and genus. Growth and variation. References.

Note A study by quantitative methods of *Diplocaulus*, a Permian amphibian. Forty-seven skulls and partial skulls were measured, and *the results are represented in tables and graphs.* Various statistical methods used in analyzing the data are illustrated. The chief purpose of the study was to determine whether quantitative methods are of much applicability in paleontology The author is Associate Dean, Physical Sciences Department, in the University of Chicago.

OSBORN, HENRY FAIRFIELD

Proboscidea. A monograph of the discovery, evolution migration and extinction of the mastodonts and elephants of the world. Edited by Mabel Rice Percy New York Published on the J Pierpont Morgan Fund by the trustees of American Museum of Natural History, the American Museum Press, 1936–42 2 v illus (part col'd) 33 cm. $20.00 per volume. 1749

Contents (abridged) Volume I, Moeritherioidea, Deinotherioidea, Mastodontoidea Discovery of the living and extinct proboscideans. Origin and classification of the Proboscidea. The moeritheres and deinotheres. History of the classification of the Mastodontoidea. *Histories of* the subfamilies Mastodontinae; the subfamily Zygolophodontinae, the subfamilies Longirostrinae and Amebelodontinae origin and geographic distribution. History of the rhynchorostrines. The South American mastodonts. The subfamily Brevirostrinae of Europe and Asia. Stegomastodon of North America. Appendices. Bibliography Volume II, Stegodontoidea, Elephantoidea. The roof-toothed stegodonts. Classification of the Elephantoidea by their cranial and dental characters. The genera Archidiskodon, Parelephas, and Mammonteus. The subfamily Elephantinae. Nomenclature of the Proboscidea. Geologic succession of the Proboscidea. Summary Appendices. Bibliography Index

Note An exhaustive monograph summarizing the author's 35 years of research from 1900–1935 in the evolution and phylogeny of the Proboscidea or group of mammals represented in the present day by the two species of elephant, and in prehistoric times by the mastodon and mammoth. In the detailed treatment of the discovery evolution and migrations of this order of mammals, the author replaces the purely zoologic classification of Linnaeus with an evolutionary and phylogenetic classification, now known as the Osbornian system, and first exemplified by the author in 1921. In this classification, all divisions from the subspecies to the order are placed vertically as succeeding each other during geologic time rather than horizontally as observed in recent or existing time by Linnaeus and all zoologists. The author has accomplished a revision and systematization of generic nomenclature, as well as separation of many direct phyletic lines of descent from each other, with the recognition of many mastodonts and elephants which are alike in certain characters yet which cannot possibly be descended one from the other The evolutionary changes are principally defined and observed by continuously progressive changes in the ontogeny and proportions of the grinding teeth. An intensive study of the teeth of the fossil Proboscidea is therefore a major feature of this monograph, which is written for the specialist in paleontology and not for the layman.

PETRUNKEVITCH, ALEXANDER IVANOVITCH

Paleozoic and Mesozoic Arachnida of Europe. New York The Geological Society of America, 1953 128 p illus 25 cm. (The Geological Society of America Memoir 53) $3 00 1750

Contents Introduction. Order Scorpiones. Order Pseudoscorpiones. Order Opiliones. Order Architarbi. Order Acari. Order Haptopoda. Order Anthracomarti. Order Trigonotarbi. Order Palpigradi. Order Thelyphonida. Order Schizomida. Order Kustarachnae. Order Phrynichida. Order Araneae. Order Solifugae. Order Ricinulei. General considerations. Addendum. References. Index to orders and families. Index to genera. Index to species. Plates 1–44.

Note. "This study is revision of all available types of Paleozoic and Mesozoic Arachnida in European collections, based on personal examination and modern knowledge of living and fossil forms, with complete synonomy and discussion of evolution. Keys and indexes to families, genera, and species are included. There are 114 line drawings and 88 photographs."

PETRUNKEVITCH, ALEXANDER IVANOVITCH

A study of amber spiders. New Haven Connecticut Academy of Arts and Sciences, *1942 345 p illus 23 cm* (Connecticut Academy of Arts and Sciences Transactions. Vol. 34 pages 119–464) $6 00 1751

Contents Introduction. Acknowledgments. Material. Methods of study Relationship of spiders to other Arachnida. Evolutionary trends in spiders. Taxonomic value of characters. Relationship of the spider fauna of the Baltic amber to recent spiders. Remarks concerning the definitions of families and genera. Description of Baltic amber spiders. References. Index.

Note The greater part of this monograph is devoted to systematic description of Baltic amber spiders, suborder Dipneumonomorphae, Cenozoic spiders which left numerous fossil remains in the amber deposits of the Baltic region. Each specimen is described in detail, with body measurements and characteristic features of anatomy *The 140 specimens presented represent 27 families, five*

the cuticle[illegible]. Part III, Systematic descriptions. References. Explanations of Plates I–II. Index.

Note: Due to [illegible] has made possible their extraction by acid, the fossils described in this publication are remarkable for the preservation of their morphological features. Full advantage of the material has been taken, particularly in the part devoted to morphology and development of the cuticle, in the morphological parts of the systematic descriptions, and in the series of plates which are reproduced from photographs and depict hundreds of details. Of the 14 species described, 13 are new.

ZANGERL RAINER

The vertebrate fauna of the Selma formation of Alabama. Chicago Chicago Natural History Museum, 1948 56 p illus. 31 cm. (Chicago Natural History Museum. Fieldiana Geology memoirs. Vol. 3 number 1 and 2) $1.50 1764

Contents: Part I, Introduction. List of illustrations. Geography and geology of region. Earlier finds of fossil vertebrates in Selma deposits of Alabama. References. Part II The pleurodiran turtles. List of illustrations. Introduction. Description of [illegible], sp. nov. Summary. References.

Note: A report of an investigation of fossils found in an investigation of the Selma outcrop in Alabama during two field trips made by the author and others in 19[illegible] and 1944. The locations of finds in relation to geology and geography are described. The second part describes in detail the turtle finds, giving tables of measurements and relationships of finds to the known material. There are 13 large carefully-drawn figures and four photographic plates. Bibliographies are attached to each.

PALEOBOTANY

ARNOLD CHESTER ARTHUR

An introduction to paleobotany New York McGraw Hill Book Company Inc., 1947 433 p. illus. 23 cm. (McGraw Hill publications in the botanical sciences Edmund W Sinnott, consulting editor) $8.50 1765

Contents: Introduction. How plants become fossils. The nonvascular plants. The early vascular plants. The ancient lycopods. Ancient scouring rushes and their relatives. Paleozoic fernlike foliage. The ancient ferns. The pteridosperms. Cycadophytes and ginkgos. The cordaitales. The ancient conifers. Ancient flowering plants. The sequence of the plant world in geologic time. Fossil plants and environment. Paleobotanical systematics. Index.

Note: An introduction to the study of fossil plants which is intended primarily for graduate or advanced undergraduate students in biology and botany rather than in geology. It emphasizes the usual botanic factors of morphology, structure, distribution, phylogeny and ecology of fossilized plants, and pays very little attention to the stratigraphy or lithology involved. There are many excellent photographs and drawings of fossil plant remains. North American plants are discussed and used for illustration wherever possible, and citations to relevant literature are given at the end of each chapter.

AXELROD DANIEL I.

A Miocene flora from the western border of the Mohave desert. Washington, D C. The Carnegie Institution of Washington, 1939 129 p. illus. 25 cm. (Carnegie Institution of Washington. Publication no. 516. Contributions to paleontology) $2.00. 1766

Contents: Physical relationships. Composition of the flora. Modern relationships of the Tehachapi flora. Paleoecology of the flora. Floristic and distributional considerations. Summary. Systematic descriptions.

Note: A study of the Tehachapi flora situated within 150 miles of the southern border of the northern Miocene forest flora and directly linked with the later Tertiary history of western North America. The fossil locality which is in Kern county about eight miles northeast of Tehachapi, California, has yielded representative collection of Miocene flora.

AXELROD DANIEL I

Studies in late Tertiary paleobotany Washington D C. Carnegie Institution of Washington 1950 323 p. illus 25 cm. (Carnegie Institution of Washington. Contributions to paleontology Publication 590) $3.25 1767

Contents: Classification of the Madro-Tertiary flora. A Sonoma florule from Napa, California. Further studies of the Mount Eden flora, southern California. The Anaverde flora of southern California. The Piru Gorge flora of southern California. Evolution of desert vegetation in western North America. Appendix: Systematic revision of fossil plants. Index.

Note: A collection of technical studies titled as given above. The final and longest paper is a critical summary of the present knowledge of the evolution of the contemporary desert vegetation of western North America. In this paper the author distinguishes floras and concludes that "present day desert plants have apparently been derived from species represented in the major Tertiary floras which occupied the regions now deserts.

BERRY EDWARD WILBER

The origin of land plants and four other papers. Baltimore Johns Hopkins Press 1945 186 p illus. 24 cm. (Johns Hopkins University studies in geology number 14 edited by J T Singewald jr) $2.50 1768

Contents: The beginnings and history of land plants. Fossil floras from southern Ecuador. The [illegible] stage in the Andean Cordillera. Late Tertiary land plants from eastern Colombia. The genus Liquidambar in Arber. Index.

Note: A collection of paleobotanical papers, four of which deal with fossil plants from northern South America. Photo-reprints and drawings of some of the fossil specimens are included. The volume is intended for paleontologists and students of historical geology.

CHANEY RALPH WORKS editor

Pliocene floras of California and Oregon edited by Ralph W Chaney Contributors Ralph W Chaney Carlton Condit Daniel I Axelrod. Washington D C. Carnegie Institution of Washington, 1944 407 p. illus 25 cm. (Carnegie Institution of Washington. Publication 553 Contributions to paleontology) o p 1769

Contents: Introduction. History of Pliocene floral studies in western North America. Terminology applied to vegetational units of the Tertiary. Taxonomic principles involved in the study of Pliocene floras. Outline of the floras included in this volume. The Remington Hill flora. The Table Mountain flora. The Black Hawk Ranch flora. The Mulholland flora. The Oakdale flora. The Sonoma flora. The Pliocene sequence in central California. The Alvord Creek flora. The Alturas flora. The Dalles flora. The Troutdale flora. Summary and conclusions. Literature cited. Appendices: Systematic revisions. List of Pliocene species in elements and components. List of Pliocene members of the Arcto-Tertiary flora. List of Pliocene members of the Madro-Tertiary flora. Index.

Note: This monograph contains studies of seven Pliocene floras of California and three of Oregon together with introductory matter concerning previous related studies, and conclusions concerning the relationships of these floras to one another and to 22 other floras of their approximate age in the western United States. One hundred ninety-two references are included in the bibliography and there are 64 plates of photographs.

DAUGHERTY LYMAN HARRY

The Upper Triassic flora of Arizona. With a discussion of its geologic occurrence by Howard R. Stagner Washington, D C., 1941 108 p. illus. 29 cm. (Carnegie Institution of Washington. Publication 526) $1 75 1770

Contents: Introduction. Historical sketch. Geologic considerations. Composition of the flora. Physical considerations. Correlation and age. Systematic descriptions. Literature cited. Index.

forms are taken up. Special effort has been made to keep the discussion free of technical terms. In this edition the classification has been revised, several new genera have been added as illustrations under various classes, and the discussion of each phylum concludes with two new sections—one on its *evolution* and one on the phylum as rock builders. A number of illustrations have been added.

SHROCK, ROBERT R AND WILLIAM H TWENHOFEL

Principles of invertebrate paleontology A *revised and enlarged edition of Twenhofel and Shrock, Invertebrate paleontology* Second edition New York McGraw Hill Book Company, Inc., 1953 816 p illus 24 cm $12 50 1758

Contents Introduction. Protozoa. Porifera. Coelenterata. Ctenophora. Worm phyla (excluding Annelida) Bryozoa (Polyzoa) Phoronida. Brachiopoda. Mollusca. Annelida. Onychophora. Arthropoda. Echinoderma. Hemichordata. Conodontophorida (Conodonts) Index.

Note As indicated in the subtitle this book replaces the authors' *Invertebrate paleontology* which was an introductory college text. The enlarged and retitled edition is essentially a new book. Except for the brief introductory chapter all of the space is given to the descriptions of fossils arranged by phyla. The descriptions are primarily taxonomic, but the valuable information on physiology and reproduction is included. Also there is usually included a description of one living example of each phyla. Extensive literature references accompany each chapter There are nearly 500 illustrations, many of which are originals and nearly all of which are well reproduced. The index is exceptionally detailed.

STAINBROOK, MERRILL ADDISON

Brachiopoda of the Independence shale of Iowa. New York The Geological Society of America, 1945 74 p illus 25 cm (The Geological Society of America. Memoir 14) $1.20 1759

Contents Stratigraphic position of the Independence shale. Relationships of the Independence fauna. Systematic descriptions Order Atremata. Order Neotremata. Order Protremata. Order Telotremata. *Bibliography Explanation of plates.* Index.

Note. The taxonomy and morphology of 40 species of Devonian brachiopods from the Independence shale formation of Iowa are contained in this monograph. All of the species are illustrated, and 27 of them are described here for the first time.

STUMM, ERWIN CHARLES

Revision of the families and genera of the Devonian tetracorals New York Geological Society of America 1949 92 p illus 26 cm. (Geological Society of America. Memoir 40) $2 00 1760

Contents Abstract. Introduction. Classification. Description of families and genera. *Bibliography Explanation of plates.* Index.

Note In this work a new classification, in which the Devonian tetracorals are divided into 14 families, is presented. Three of the families and five of the subfamilies have not been described before. Also given are new descriptions of the genotype species of all known Devonian genera. The descriptions of the genotype species are supplemented by illustrations and comprehensive bibliography

ULRICH EDWARD OSCAR, AND OTHERS

Ozarkian and Canadian cephalopods by E O Ulrich Aug F Foerste, A K. Miller and W M Furnish New York The Geological Society of America, *1942–44* 3 v illus 24 cm. (Geological Society of America. Special papers No 37 49 58) Part 1, $2 40 part 2, $3 00 part 3 $3 00 1761

Contents Part I (Volume I) Nautilicones: Abstract. Introduction. Previous work. Occurrence. Shell morphology Classification. Systematic paleontology Family Deltoceratidae. Family Ellesmeroceratidae. Family Plectoceratidae. Family Tarphyceratidae. Family Trocholitidae. Bibliography Index. Part II (Volume II), Brevicones. Abstract. Introduction. Previous work. Occurrence. Shell morphology Classification. *Systematic paleontology Bibliography* Explanation of plates. Index. Part III, Longicones: Abstract Introduction. Previous work. Occurrence. Shell morphology Classification. Systematic paleontology Family Stenosiphonoceratidae. Family Endocycloceratidae. Family Baltoceratidae. Family Rudolfoceratidae. *Family* Orthoceratidae. Family Robsonoceratidae. Family Syroceratidae. Family Endoceratidae. Family Suecoceratidae. Family Bathmoceratidae. Family Eothinoceratidae. *Supplement.* Family Piloceratidae. Family Cyclostomiceratidae. Family Plectronoceratidae Family Cyrtendoceratidae. Family Trochoiridae. Bibliography Addendum. Explanation of plates. Index.

Note The second in a series of monographs on Ozarkian and *Canadian fauna,* the first being *Ulrich and Cooper's Ozarkian and Canadian Brachiopoda,* New York, 1940 (now out-of-print) Part I of the present study of cephalopods covers the occurrence, morphology and systematic descriptions of the nautilicones, with 37 pages of photographs of fossil shells. Part II deals similarly with the brevicones, and has seventy pages of photographs. The third volume covers the longicones. There are 68 pages of photographs of fossil shells. *Each volume may be used separately*

WETMORE, ALEXANDER

A check list of the fossil and prehistoric birds of North America and the West Indies. Washington *D C* Published by the Smithsonian Institution, 1956 105 p 24 cm. (Smithsonian miscellaneous collections. Vol. *131, no 5 Publication 4228) $0 70* 1762

Note A revision and enlargement of the author's *A check-list of the fossil birds of North America* Washington, D C., 1940, (Smithsonian miscellaneous collections, vol. 99 no. 4) which was in turn a revision of the list of fossil birds which appeared in the American Ornithologists' Union *Check-list of North American birds,* 1931. The list now covers the known fossil birds of Mexico and the West Indies, as well as of continental *United States of America.* All modern forms for which there are fossil records are included and, in addition certain species which are known only from bones are listed. The list now *includes 189 forms still living and 148 species recorded* only in an extinct state

WESTOLL T STANLEY

The Haplolepidae, a new family of late Carboniferous bony fishes, a study in taxonomy and evolution. New York American Museum of Natural History 1944 122 p. illus 27 cm. (American Museum of Natural History Bulletin Vol 83 article 1) $1 75. 1762A

Contents Introduction. *Systematic description.* Phylogeny of *Haplolepis* and *Pyritocephalus.* Comparative morphology Bearing on Holostean evolution. General remarks on the evolution of the Actinopterygii. Summary Addenda. References. Abbreviations used in the text figures.

Note A group of late *Carboniferous* actinopterygian fishes is described and referred to the genera *Haplolepis* Miller 1892 and *Pyritocephalus* Fritsch, 1893 They are from six localities, of which the stratigraphical occurrences are mainly cannel or impure cannel coals, sometimes interbedded with ironstone. The fishes are shown to be closely related, *and sharply marked off* from all other known Carboniferous Actinopterygii, and the new family Haplolepidae, is set up for their reception. One hundred thirty-eight references are listed in the bibliography

WHITTINGTON, H B, AND W R. EVITT, II

Silicified Middle Ordovician trilobites New York The Geological Society of America. 1954 137 p illus. 25 cm. (The Geological Society of America Memoir 59) $3 00 1763

Contents Abstract. Introduction. Part I, Occurrence, technique, and terminology Part II, General morphology and development of

OCEANOGRAPHY

BIGELOW HENRY BRYANT AND W T EDMONDSON

Wind waves at sea, breakers and surf Washington, D C. Government Printing Office, 1947 177 p. illus. (part col d) 24 cm. (United States. Hydrographic Office. Publication no. 602) $2.80 1776

Contents: Foreword, by E. O. Glover. The physical nature of wind waves. The dimensions of waves. The conditions of waves. The effects of currents and of dead water. The measurement of waves and swells. The frequency of high and low seas and swells in different regions. Breakers and surf—their importance and origin. The character of surf under different conditions. Direction and height of breakers in relation to the shape of the coast. Selected references

Note A general account of the phenomena of waves caused by winds, and of breakers and surf. The book is designed for such readers as sailors and residents along seacoasts who have natural curiosity about waves but are not scientifically educated. Most of the descriptions are rather detailed. In addition to the general and theoretical material, there are also interesting facts about the heights of waves, the force exerted by them, and the damage done by waves, surfs, etc.

BUNKER, ANDREW F

Measurements of the vertical water vapor transport and distribution within unstable atmospheric ground layers and the turbulent mass exchange coefficient. Cambridge and Woods Hole, Mass., 1952 42 p. illus. 28 cm. (Papers in physical oceanography and meteorology published by Massachusetts Institute of Technology and Woods Hole Oceanographic Institution, in continuation of Massachusetts Institute of Technology meteorological papers. Vol. XII, no 3 Contribution no. 618 from the Woods Hole Oceanographic Institution) $1.00. 1777

Orders for this number should be addressed to Woods Hole Oceanographic Institution, Woods Hole, Massachusetts.

Contents: Introduction. Instruments and observational procedures. Tabulation and discussion of data. Analysis of transport in terms of turbulent diffusion and convection. Summary. References.

Note Data gathered in measurements of temperature, humidity and turbulence made from an airplane flying through ground layer of continental air blowing over warmer water are presented and analyzed in this publication. Considerably larger values for the coefficient of turbulent mass exchange were found than had previously been reported. The results of other investigators are discussed in the light of these findings.

CALIFORNIA. UNIVERSITY SCRIPPS INSTITUTION OF OCEANOGRAPHY

Contributions, 1954 La Jolla, Calif The Library Scripps Institution of Oceanography 1956 v.p. illus 25 cm. 1778

Note An annual compilation of papers written by members of the Scripps Institution of Oceanography which were published elsewhere than in the Bulletin or the Records of observations of the Institution. It consists of reprints and serves as partial record of the current work of the Institution. The volume is available to research libraries and other research institutions having interests in oceanography. Some of the contributions published in it are available as reprints on request to the Institution itself. There are about 1,200 pages in the present volume.

CARNEGIE INSTITUTION OF WASHINGTON

Scientific results of Cruise VII of the *Carnegie* during 1928–29 under command of Captain J P Ault. Washington D C. Carnegie Institution of Washington 1942–44 10 v illus. 29 cm. (Carnegie Institution of Washington Publication no. 536–7 542 544 545A 547 555–6 562 565) No 536 $3.50 no 537 $2.50 no 542 $2.00 no. 544 $2.00 no 545A $2.50 no. 547 $1.00 no. 555 $1 00 no. 562 $1 25 no. 565 $2.50—all in cloth most numbers are available also in paper at lower prices. 1779

Contents (abridged) Biology I The copepods of the plankton gathered during the last cruise of the *Carnegie*, by C. B. Wilson. Biology II The oceanic Tintinnoina of the plankton gathered during the last cruise of the *Carnegie* by A. S. Campbell. Biology III Studies in the morphology, taxonomy and ecology of the Peridiniales, by H. W. Graham. Biology IV The phytoplankton, by H. W. Graham. Marine algae, by W. A. Setchell. Polychaetous annelids, by A. L. Treadwell. The mysids, by W. M. Tattersall. The isopods, by J. O. Maloney. The holothurians, by H. G. Barber. List of birds, by A. Wetmore. Miscellaneous determinations, by M. W. de Laubenfels and others. Meteorology I Meteorological results of Cruise VII of the *Carnegie*, 1928–1929, by W. C. Jacobs and K. B. Clarke. Meteorology II Upper-wind observations and results obtained on Cruise VII of the *Carnegie* by A. Thomson. Biology VI Oceanography IA. Oceanography II. Chemistry I.

Note A series of reports on the scientific results obtained during the seventh and final cruise of the oceanographic ship *Carnegie*, covering an extensive program of observation in terrestrial magnetism, terrestrial electricity chemical oceanography physical oceanography marine biology and marine meteorology. The material consists for the most part of transcriptions of the original scientific data recorded during the voyage, together with evaluations, summaries, and conclusions based on detailed study of these original records. There are number of photographs, charts, and tables in each volume.

—— Scientific results of Cruise VII of the *Carnegie* during 1928–29 under command of Captain J P Ault. Washington D C. Carnegie Institution of Washington 1945–46 3 v illus. 29 cm. (Carnegie Institution of Washington. Publication no 545B 568 571) No 545B $2.00 no 568 $2 75 no 571 $2.00—all in cloth, also available in paper 1780

Contents (abridged) Oceanography I B Observations and results in physical oceanography graphical and tabular summaries, by J. A. Fleming and others. Oceanography III Ocean atmospheric-electric results, by O. W. Torreson and others. Oceanography IV The work of the *Carnegie* and suggestions for future scientific cruises, by J. P. Ault and others.

Note These volumes complete the important series in which the scientific results obtained during the seventh and final cruise of the oceanographic ship *Carnegie* have been presented.

Note A description and discussion of fossil leaves and wood of the Triassic period found in Arizona. Each specimen is described in detail and illustrated in plates, and is correlated with remains of the same geologic period found in other sections of the world whenever possible.

DORF, ERLING

Upper Cretaceous floras of the Rocky Mountain region. Washington, D C Carnegie Institution of Washington, 1942 168 p illus 29 cm. (Carnegie Institution of Washington Publication 508 Contributions to paleontology) $3 00 1771

Contents (abridged) Part I, Stratigraphy and paleontology of the Fox Hills and Lower Medicine Bow formations of southern Wyoming and northwestern Colorado. Part II, Flora of the Lance formation at its type locality Niobrara county Wyoming. Index of genera and species.

Note. A monograph covering the stratigraphy composition of the flora, climatic conditions, correlation, and systematic paleobotany of the areas mentioned in the contents, with emphasis upon the succession of Upper Cretaceous floras of the West and their relation to succeeding Cenozoic floras.

HU, HSIEN SU, AND RALPH W CHANEY

A Miocene flora from Shantung province, China. Part I, Introduction and systematic considerations Part II, Physical conditions and correlation Washington, D C Carnegie Institution of Washington, 1940 147 p illus 29 cm. (Carnegie Institution of Washington. Publication no 507 Contributions to paleontology) $3 75 1772

Contents Part I, Introduction and systematic considerations Introduction. Geologic occurrence. Composition of the flora: systematic relationships. *Distribution of modern equivalents.* Systematic descriptions. Part II, Physical conditions and correlation Introduction. Physical conditions indicated by the flora: Topography Climate. Summary of physical history Correlation and age. Index.

Note A discussion of Miocene flora discovered near the village of Shanwang in Shantung province, China. Each specimen is described in detail, and compared to living plants in China, Japan and North America. Physical conditions indicated by these flora are discussed, and an effort is made to correlate them with specimens from the same geologic period found in Manchuria, Siberia, and Japan. Each specimen is illustrated in plates.

JOHNSON, J HARLAN

An introduction to the study of rock building algae and algal limestones. Golden Colorado School of Mines 1954 117 p illus. 23 cm (Colorado School of Mines quarterly Vol 49 no 2) $2 50 1773

Contents Classification of rock-building algae. Rhodophyta Family Corallinaceae Systematic descriptions. Subfamily Corallineae. Genera of subfamily Corallineae. Ecology and distribution of crustose coralline algae Family Solenoporaceae. References—red algae. Chlorophyta. Family Dasycladaceae. Family Characeae. References—Chlorophyta. Cyanophyta or Chlorophyta. Porostromata. Cyanophyta: Family Spongiostromata. References—Porostromata and Spongiostromata.

Note A survey of the rock-building algae published in the form of a booklet. It is suitable for use by graduate students and professional geologists and paleobotanists as an introduction to the subject. Most of the space is devoted to outlining the classification of these algae and describing the genera. *The illustrations include* 63 plates, most of which are reproductions of photographs, including microphotographs. The references lists are selected, but cite the basic literature essential for further study of the subject. The author is Professor of Geology in the Colorado School of Mines.

LAMOTTE, ROBERT SMITH

Catalogue of the Cenozoic plants of North America through 1950 New York Geological Society of America, 1952 381 p 26 cm. (Geological Society of America. Memoir 51) $5.50 1773A

Contents. Introduction. Bibliography: Catalogued papers. Phycology Bacteria. Marine and fresh-water algae. Diatomaceae. Catalogue. Biologic classification of genera. Index of families and higher categories.

Note. The main part of this work is a carefully compiled catalogue of fossil plants of the Cenozoic period, which have been identified in North America and reported in the published literature. The catalogue is arranged alphabetically by botanical name. In general for each plant the information given includes the name of the scientist who *discovered the plant, the year it was reported,* citation of the paper in which it was reported, citations of additional papers that deal with the genus from a paleobotanical viewpoint, the formation, locality and age. Preceding the catalogue of plants is a bibliography of papers on paleobotany classified under the headings noted above.

MACGINITIE, HARRY D

Fossil plants of the Florissant beds, Colorado Washington, D C Carnegie Institution of Washington 1953 198 p. illus. 25 cm. (Carnegie Institution of Washington Contributions to paleontology Publication 599) $5 75 1774

Contents: Introduction. Modern vegetation of the region. Geographic and geologic setting. Stratigraphy and structure of the Florissant beds: Basal beds. Lower tuffs. The lake shales. Rhyolite. Later eruptive rocks. *Summary of geologic events in late Eocene,* Oligocene, and later Tertiary Note on the geologic structure of the Florissant beds. Composition and modern relationships of the Florissant beds. Composition and modern relationships of the fossil flora: Systematic list. Floristic composition. *Distribution of similar living* species. Ecological relationships of the flora. The problem of Tertiary grasslands. Age of the flora Relationship to other fossil floras. Evidence for geologic age furnished by fossil vertebrates, and lithologic correlation. Systematic descriptions. *Synonyms and* changes of name. Species rejected from the flora. Bibliography Plates 1–75 Index.

Note. The Tertiary beds of Florissant, Colorado, have since their discovery in the early 1870's been widely known among geologists because of the wealth of fossil plants and insects which they contain. This publication is a comprehensive account of the fossil flora of Florissant. *About one-half of the publication is given over to* the general description of the beds and the other half to the systematic description of the species of fossil plants there found.

MACGINITIE, HARRY D

A Middle Eocene flora from the central Sierra Nevada. Washington, D C. Carnegie Institution of Washington, 1941 178 p. illus. 28 cm. (Carnegie Institution of *Washington.* Publication no 534 Contributions to paleontology) $2 50 1775

Contents Introduction. Geology of the region. Climate and vegetation of the Chalk Bluffs area. Composition of the flora and relationship of the fossil specimens. Environment of the fossil flora. Distribution considerations. Age of the flora. Related pre-flora. Distribution considerations. Bibliography Index.

Note. A survey and systematic description of fossil flora from the Middle Eocene, based on field work among the gravel deposits of the Chalk Bluffs localities, Nevada county California. The author concludes that the flora studied is the oldest of the six well-known Tertiary floras of the Pacific Slope. The book is lithoprinted from typewritten copy

the summers of 1934 and 1935 By Joe R. Goodman, John H. Lincoln, Thomas G. Thompson, and Frederick A. Zeusler Seattle University of Washington Press, 1942 185 p. illus. 25 cm. (University of Washington Publications in oceanography Vol. 3 no. 4) $1.60 1786

Contents: Acknowledgments. Introduction. The area. Previous investigations. Experimental methods. Discussion of data. Temperature. Chlorinity. Phosphate. Dissolved oxygen. Silicate. Nitrites. Currents. Ice. Summary. Literature cited. Appendix. Tables and charts.

Note: The bulk of the material is contained in the 117-page appendix, which presents a transcription of the tables and charts derived from the investigation and studies made by the authors of temperature and chlorinity, dissolved oxygen, phosphate and silicate concentrations of the waters at various depths. Data explaining the origin and movement of the waters are also included, and there is a 65-page introductory analysis of general results with list of 12 references to the world literature.

GRIER, MARY CATHARINE

Oceanography of the North Pacific Ocean Bering Sea and Bering Strait a contribution toward a bibliography Seattle The University of Washington Press 1941 290 p. 25 cm. (University of Washington publications Library series. Vol. 2 May 1941) $2.50. 1787

Contents: General reference. Physical oceanography. General biology. Plankton. Invertebrates. Fishes. Birds. Mammals. Fisheries.

Note: A bibliography giving a fairly comprehensive list of references covering the world literature on the oceanography of the region. There are approximately 3,000 entries of books and publications issued from about 1800 to 1939 arranged alphabetically by author within each subject heading. The section on the invertebrates is subdivided according to order and family. There is a considerable number of Japanese works included. Many deal with technical data on tidal currents, atmospheric conditions, and hydrographic researches. There are no annotations or abstracts.

HAMILTON EDWIN L.

Sunken islands of the Mid-Pacific Mountains New York The Geological Society of America, 1956. 97 p. illus. 25 cm. (The Geological Society of America. Memoir 64) $2.50. 1788

Contents: Introduction. Physiography of the Mid-Pacific Mountains. Geology of the guyots. Introductory. Horizon Guyot. Guyot [illegible]. Guyot [illegible]. Cores at MP 17. Hess Guyot. Cape Johnson Guyot. Paleontology. Introduction. Megafossils. Microfossils. Lithology and sediments. General. Igneous rocks. Limestone and calcareous ooze. Manganese dioxide. Geomorphology. Origin of the submarine. Bearing of conclusions on coral-atoll hypotheses. Modification of theories of faulted margins. Conclusions. Geologic history of the mid-Pacific guyots. Appendix A. Systematic paleontology. Megafossils. Faunal list of Foraminifera. Appendix B. Lithology and sediments. Appendix C. Sampling equipment and techniques. Echo sounding. Location at sea. References cited. Index.

Note: A full-scale scientific study of a portion of the Mid-Pacific Mountains, a great submarine mountain chain extending from the Marianas Islands eastward a distance of 1,500 miles nearly to Wake Island. The work is based upon soundings made and bottom samples taken by the 1950 Scripps Institution—U. S. Navy Expedition to the Mid-Pacific. The findings show for the first time that these undersea mountains form a major well-defined geomorphic feature of the crust of the earth, a great chain of mountains surmounted by sharp peaks and ridges and by numerous flat-topped guyots. Five of these guyots were explored geologically by the expedition. The stations occupied, equipment used, samples gathered, and other pertinent data are tabulated in the tables. Fossils from dredge hauls are pictured on the plates. The appendices give systematic descriptions of fossils, lithology, sampling equipment and techniques, and a short account of echo sounding. In the pocket are four folding charts of the Mid-Pacific Mountains. Geologists concerned with the following matters will have especial interest in this volume: (1) the age, stability and tectonics of ocean basins, (2) coral-reef formation (in general the findings support Darwin's Subsidence Theory for the formation of atolls), (3) changes in the volume and depth of the ocean during geologic time and (4) history.

IGELSRUD IVER AND OTHERS

The distribution of phosphates in the sea water of the northeast Pacific. By Iver Igelsrud Rex J Robinson, and Thomas G Thompson Seattle University of Washington Press 1936 34 p. illus 25 cm. (University of Washington. Publications in oceanography Vol. 3 no. 1) $0.25 1789

Contents: Introduction. Description of region investigated. The method of analysis. Results and discussion. Summary. Literature cited.

Note: A summary of investigations of inorganic phosphate in the waters of the Pacific Ocean off the northwestern Washington and the Vancouver Island coasts and of the Strait of Juan de Fuca and the waterways adjoining it on the north, including study of the movement of deep ocean water, its transportation to waters north of the San Juan Archipelago, and the importance of tidal mixing as found in the various channels and straits.

ISELIN COLUMBUS O DONNELL

A study of the circulation of the western North Atlantic. Contribution no. 108 from the Woods Hole Oceanographic Institution. Cambridge and Woods Hole Mass. Massachusetts Institute of Technology and Woods Hole Oceanographic Institution, 1936 101 p. illus 28 cm. (Papers in physical oceanography and meteorology Vol. IV no. 4) $1.00 1790

Orders for this number should be addressed to Woods Hole Oceanographic Institution, Woods Hole Mass.

Contents (abridged): Introduction. The Bermuda triangle. Distribution of temperature and salinity by the method of sections. Variations of temperature and salinity with depth. Correlation between temperature and salinity. The deep water. Density. Other Atlantic sections. Mid-Atlantic. Antilles current. Florida current. The Gulf Stream system. Previous subsurface investigations. The three subdivisions. Sources and character. The Sargasso Sea. Surface movements in relation to wind. Lateral movements at mid-depths. Internal mixing. Summary and conclusions. Bibliography.

Note: With the opening of the Woods Hole Oceanographic Institution in July 1931, there was inaugurated a program of investigations in the deep waters of the western North Atlantic, where, however, deep stations had been lacking. A general program was launched which would be carried out gradually in order to take advantage of knowledge gained during the course of the work. This paper presents a preliminary report based on the temperature and salinity observations that have been completed. Since the movements of the sea water can together the whole subject of oceanography, it seemed essential that data on ocean circulation be made available as soon as possible for investigators of other problems in the same area.

KETCHUM BOSTWICK H., AND OTHERS

The oceanography of the New York Bight. By Bostwick H. Ketchum Alfred C. Redfield, and John C. Ayers. Cambridge and Woods Hole Massachusetts 1951 46 p. illus. 28 cm. (Papers in physical oceanography and meteorology published by Massachusetts Institute of Technology and Woods Hole Oceanographic Institution, in continuation of Massachusetts Institute of Technology meteorological papers. Vol. XII, no. 1 Contribution no. 549 from Woods Hole Oceanographic Institution) $1.00 1791

CARSON, RACHEL L

The sea around us Drawings by Katherine L Howe. New York Oxford University Press, 1951 230 p illus. (part col'd) 21 cm. $4 00 1781

Contents Part I, Mother sea: The gray beginnings. The pattern of the surface. The changing year The sunless sea. Hidden lands. The long snowfall. The birth of an island. The shape f ancient seas. Part II, The restless sea Wind and water Wind, sun and the spinning of the earth. The moving tides. Part III, Man and the sea about him The global thermostat. Wealth from th salt seas. The encircling sea. Suggestions for further reading. Index.

Note An outstanding example of popularization f scientific knowledge. Addressed to lay readers, it conveys in an engaging style some of the accumulated knowledge of the ocean hitherto locked up in the professional publications of oceanography and other technical literature. The subject is the world's oceans how they came into being, how they were shaped, their influences on the rest f the earth s surface and their potentialities as a source of mineral wealth. The book has won several awards in the United States of America, including the National Book Award and the Henry Bryant Gold Medal of the Geographical Society of Philadelphia.

COKER, ROBERT ERVIN

This great and wide sea. Chapel Hill University of North Carolina Press, 1947 325 p illus 24 cm $6 00 1782

Contents Part I, History and geography: Discovery f the seas. Beginnings of oceanography Pioneers of oceanography Oceanography in America. Sea and land. Part II, Chemistry and physics: The sea as a solution. Some physical properties of sea water Deposits at the bottom of the sea. Sea water in motion—general plans of circulation. Sea water in motion—water moved by the winds. Sea water in motion—tides and other movements. The sea and the sun. Part III, Lif in the sea Life in the seas—general conditions. Pasturage of the sea. *Drifting life*—the plankton. Composition of the plankton. Life on the bottom—the benthos. Life at large—the nekton. More about life at large—the nekton Selected bibliography Index.

Note Based mainly on survey of oceanographic literature, this book for the educated layman avoids highly technical language and any tendency to stress the curious or dramatic. Essentially the author provides an interesting, readable account, covering those aspects of the world's oceans and seas that are dealt with by the various branches of science. The work is well illustrated. There is short bibliography of books for collateral reading and reference.

DOUGLAS, JOHN SCOTT

The story of the oceans New York Dodd, *Mead & Company, 1952 315 p 22 cm* $3 50 1783

Contents Explorers of the depths. Lands beneath the oceans. The far flowing tides. White horses f the sea. The sweeping salt rivers. Island life is different. Laboratories of evolution. Gardens of the ocean. Up from primeval ooze. Insects of the seas. The snail's seafaring family Starfish, urchins and cucumbers. Our cousins, the fishes. Mammals in the sea menagerie. Mammals in fishes' clothing.

Note. A popular account of the oceans written for general readers of all ages. The physical aspects of the ocean, its beds, its tides, its waters, are treated in the first third of the volume the remainder of the volume is devoted t descriptions of oceanic plant and animal life. There are no illustrations or references to other literature.

GALTSOFF, PAUL S , editor

Gulf of Mexico its origin waters and marine life. Prepared by American scientists under the sponsorship of the Fish and Wild life Service United States Department of the Interior Coordinated by Paul S Galtsoff Washington *D C Government Printing Of* fice, 1954 604 p illus 26 cm (United States Fish and Wildlife Service. Fishery bulletin 89) $3 25 1784

Contents Historical sketch of the explorations in the Gulf of Mexico, by P S. Galtsoff Geology: Shorelines and coasts of the Gulf of Mexico, by W A. Price. Geology of the Gulf of Mexico, by S. A. Lynch. Marine meteorology of the Gulf of Mexico, by D F Leipper Physics and chemistry of Gulf waters: Tides and sea level in the *Gulf of Mexico*, by H. A. Marmer. Physical oceanography of the Gulf of Mexico, by D F Leipper. Light penetration in the Gulf f Mexico, by W S. Shoemaker. Distribution of chemical constituents of sea water in the Gulf of Mexico, by R. H. Williams. The recovery of minerals from sea water by C. M. Shigley Plant and animal communities in the Gulf of Mexico Phytoplankton by C. C. Davis. Zooplankton, by H. B. Moore. Red tide, by R. Lasker and F G. W Smith. Marine algal vegetation, by W R. Taylor Marine and strand flowering plants, by R. F Thorne. Bottom communities, by J W Hedgpeth. Bacteria, fungi, and unicellular algae of the Gulf of Mexico. Marine bacteria and fungi, by C. E. ZoBell. Dinoflagellates, by H. W Graham. Diatom studies, by P Conger Gulf of Mexico Protozoa. Foraminifera, by F B. Phleger and F L. Parker. Protozoa, by V Sprague. Sponges, coelenterates, and ctenophores of the Gulf of Mexico, by J Q Tierney and others. Free-living flatworms, nemerteans, nematodes, tardigrades, and chaetognaths of the Gulf of Mexico, by L. H. Hyman and others. Parasitic worms, by A C. Chandler and H. W Manter Bryozoa, brachiopoda, phoronida, and enteropneusta, by R. C. Osburn and others. Echinoderms of the Gulf of Mexico, by A. H. Clark and E. Deichmann. Annelids and miscellaneous worms, by O Hartman and J W Hedgpeth. Arthropods Xiphosura, by J W Hedgpeth. Pycnogonida, by J. W Hedgpeth. Marine Ostracoda, by W L. Tressler Copepoda, by W L. Schmitt. Cirripedia, by D P Henry Mysidacea and euphausiacea, by A. H. Banner Stomatopoda, by F A. Chace, Jr. Decapoda, by E. H. Behre. Biology of commercial shrimps, by M. J. Lindner and W W Anderson. Mollusks of the Gulf of Mexico Biology of the spiny lobster by F G. W Smith. Mollusks, by H. A. Rehder. Cephalopoda, by G. L. Voss. The oyster by P A. Butler. Oyster reefs, by W A. Price. The tunicates and lancelets of the Gulf of Mexico, by W G. Van Name and J W Hedgpeth. Fishes and sea turtles: The origin, relationships, and geographical distribution of the marine fishes of the Gulf of Mexico, by L. R. Rivas. History of the commercial fishes of the Gulf of Mexico, by G. A. Rounsefell. Taxonomy and distribution of sea turtles, by F G. W Smith The birds of the Gulf of Mexico, by G. H. Lowery Jr and R. J *Newman. Mammals f the Gulf of Mexico*, by G. Gunter. Pollution of water: Aspects f water pollution in the coastal area of the *Gulf of Mexico* prepared in the Division of Water Pollution Control, and Shellfish Branch, Division of Sanitation, Public Health *Service, U S. Department of Health, Education*, and Welfare. Index.

Note. This book contains the signed articles hose authors and *titles are listed above. Its purpose is to summarize present-day* knowledge f the Gulf its history its geology its oceanography and its plant and animal inhabitants. A pertinent bibliography is given at the end of each section.

GEOLOGICAL SOCIETY OF AMERICA

1940 E W Scripps cruise to the Gulf of California Part I, Geology of islands and neighboring land areas, by Charles A. Anderson. Part II Megascopic paleontology and marine stratigraphy, by J Wyatt Durham. Part III Submarine topography of the Gulf of California, by Francis P Shepard. *Part IV* Report on the Pleistocene and Pliocene *Foraminifera, by M L Natland.* Part V, Sedimentation and oceanography—survey of field observations, by Roger Revelle New York Geological Society of America, 1950 362 p. illus 26 cm (Geological Society of America. Memoir 43) $6.50 1785

Note This memoir contains fi scientific reports on the results of cruise sponsored by the Geological Society of America and the Scripps Institution of Oceanography in the fall of 1940 in the schooner *E. W Scripps*. The object of the cruise was to investigate the recent geologic history the bottom topography and sediments, and the nature of the marine environment of the Gulf of California

GOODMAN, JOE R , AND OTHERS

Physical and chemical investigations Bering Sea, *Bering Strait, Chukchi Sea,* during

kalten in Tiefen- und Bodenwasser des Atlantischen Ozeans auf Grund dynamischer der Meteor-Profile der Deutschen Atlantischen Expedition, 1925/27, by G. Böhnecke. U. S. participation in conservation in international fishery resources, by W. C. Herrington. Hearing and acoustic orientation in marine animals, by D. R. Griffin. Characteristics of the environment of the Philippine, Kermadec and Tonga trenches, by A. F. Bruun and A. Kiilerich. Polarization of scattered sunlight in deep water, by T. H. Waterman. Elevation of sea level caused by wind in a rectangular channel, by W. Hansen. On the breeding areas of the swordfish (Xiphias) by A. Vedel Tåning. Factors affecting productivity in fertilized sea water, by W. T. Edmondson. Die Ausbreitung des Mittelmeerwassers im Nordatlantischen Ozean, by A. Defant. New directions in fishery research, by L. A. Walford. Coastal currents and the fisheries, by C. O'D. Iselin. Electron microscopy in oceanographic research, by T. Braarud. Long term trends and changes in the hydrography of the Faroe-Shetland channel region, by J. B. Tait.

Note: The reviews and research papers published in this volume represent many segments of contemporary oceanographic research. All are listed by author and title above. Many of the papers include literature references and illustrations.

PIERSON, WILLARD J., JR. AND OTHERS

Practical methods for observing and forecasting ocean waves by means of wave spectra and statistics. By Willard J. Pierson, Jr., Gerhard Neumann, Richard W. James. Washington, D. C. U. S. Navy Hydrographic Office, 1955. 284 p. illus. 23 cm. (U. S. Navy Hydrographic Office. H. O. Pub. no. 603) $3.80. 1796

Contents: The properties of ocean waves. The generation and forecasting of sea waves. Wave propagation and forecasting swell waves—simple models. Wave observation techniques. Synoptic forecasting methods and weather map analysis. Wave refraction. Operational applications of forecasting methods. Conclusions. Bibliography.

Note: The new theory of wave forecasting on which this manual is based is described in the book's foreword as follows: "Basically the Pierson-Neumann-James method describes the sea surface as the result of the combination of an infinite number of infinitely small sine waves of various amplitudes, frequencies, and directions. The distribution of the wave characteristics formed in a combination of these sine waves is described by a Gaussian function. The amplitudes summed over the frequencies and directions can be represented by a spectrum. This method may be called the Wave Spectrum Method. In practice, the wave spectrum is computed from the predicted wind field, and the individual wave characteristics determined by use of graphic methods or simple formulas. The book is concerned primarily with applications of the theory in the forecasting of ocean waves. Methods of observing and forecasting are described explicitly and in detail. Numerous worked examples of calculations are included.

RILEY, GORDON A. AND OTHERS

Oceanography of Long Island Sound 1952–1954. New Haven. Bingham Oceanographic Laboratory. 1956. 414 p. illus. 23 cm. (Yale University. Peabody Museum of Natural History. Bingham Oceanographic Collection. Bulletin. Vol. 15) $7.50 1797

Contents: Harry Payne Bingham, 1887–1955. Introduction, by G. A. Riley. Physical oceanography, by G. A. Riley. Chemical oceanography, by G. A. Riley and S. A. M. Conover. Phytoplankton, by S. A. M. Conover. Zooplankton, by G. B. Deevey. Biology of *Acartia clausi* and *A. tonsa*, by R. J. Conover. Pelagic fish eggs and larvae, by S. B. Wheatland. Chemical composition of the plankton, by E. Harris and G. A. Riley. Production and utilization of organic matter, by G. A. Riley. The biology of marine bottom communities, by H. L. Sanders.

Note: Long Island Sound is a semi-enclosed body of water 100 nautical miles long and with an area of about 930 square miles. It provides a variety of aquatic environments, both marine and fresh-water, and poses many ecological questions. The Bingham Oceanographic Laboratory has been carrying on an investigation of this body of water for some years, and the research is continuing. Papers published in this volume are reports of some of the methods and most of the results to date. Together, they present a considerable range of data on a body of water of much oceanographic interest.

RILEY, GORDON A.

Oxygen, phosphate, and nitrate in the Atlantic Ocean. New Haven. Bingham Oceanographic Laboratory. 1951. 126 p. illus. 23 cm. (Yale University. Peabody Museum of Natural History. Bingham Oceanographic Collection. Bulletin. Vol. 13 article 1) $1.90 1798

Contents: Abstract. Introduction. The distribution of oxygen, phosphate and nitrate in the Atlantic Ocean. Theory of nonconservative properties. Analysis of distribution. Biological discussion. General discussion and conclusions. References. Appendix.

Note: In this essentially mathematical study a qualitative analysis included for background is followed by a detailed quantitative analysis in which the author makes extensive use of mathematical models. Finally the results of the analysis are compared with the known facts on deep-water distribution of marine organisms and their probable metabolic rates.

ROSSBY, CARL-GUSTAF

Dynamics of steady ocean currents in the light of experimental fluid mechanics. Contribution no. 115 from the Woods Hole Oceanographic Institution. Cambridge and Woods Hole, Mass. Massachusetts Institute of Technology and Woods Hole Oceanographic Institution. 1936. 43 p. illus. 28 cm. (Papers in physical oceanography and meteorology. Vol. v no. 1) $1.00 1799

Orders for this number should be addressed to Meteorological Division, Massachusetts Institute of Technology, Cambridge, Mass.

Contents: Introduction. Theoretical discussion. Formulation of problem. Effect of the earth's rotation on lateral stresses. "Coriolis" pressure gradients. Wake stream theory. Wake stream in stratified medium. Application to the Gulf Stream system. Temperature-salinity correlations. Oxygen-salinity correlations. References.

Note: This is a report of an investigation which may be regarded as part of a systematic effort to introduce into meteorology and physical oceanography methods and results which have contributed to the rapid growth and increasing practical significance of experimental fluid mechanics. In this paper the principal inadequacies of the present theory for the oceanic circulation are first set forth. Frictional forces due to horizontal mixing are then introduced and the effect of the earth's rotation on the horizontal eddy velocities analyzed. Tollmien's theory for the mixing along the edges of a steady stream moving through a resting fluid is then discussed and certain experimental verifications are described. With the aid of a principle first stated by G. I. Taylor, Tollmien's results are applied to current systems subject to deflecting forces. Finally certain modifications resulting from the stratification in the ocean are treated. In the second part of the paper the mixing between the Gulf Stream and its surroundings is traced with the aid of the observed distribution of temperature, salinity and oxygen.

SHEPARD, FRANCIS PARKER

Submarine geology. New York. Harper and Brothers. 1948. 338 p. illus. 24 cm. (Harper's geoscience series. Carey Croneis, editor) $6.00. 1800

Contents: Introduction and history. Methods of exploring the ocean floor. Waves and currents. Classification of sea coasts and shorelines. Beaches and sand shifting along the shores. Continental shelves—topography and sediments. Origin and history of the continental shelves. Continental slopes. Submarine canyons. Coral reefs. The floor of the deep oceans. Summary and economic applications. Appendix: Conversion tables. Bathymetric chart of the world. Index.

Note: This work by the Professor of Submarine Geology at the Scripps Institution of Oceanography, University of California, is a major contribution to its field. It embodies the results of many original investigations carried out by the author, some of them with the aid of newly developed and still secret instruments and techniques. In addition, earlier investigations and hypotheses are reviewed and evaluated, particularly in such chapters as the one on the origin and history of the continental shelves. The illustrative

Orders for this number should be addressed to Woods Hole Oceanographic Institution, Woods Hole, Massachusetts.

Contents Introduction. Methods. Distribution of properties. Rate and volume of water transport. Summary References.

Note The waters studied in the investigation covered by this report lie between Cape May New Jersey and Montauk Point, Long Island and comprise an area of complex hydrography because of the outflows of the Hudson River and other adjacent rivers. The hydrographic conditions in the area are considered to be essentially similar to those off the mouths of other large rivers. The investigation centered on the hydrographic processes and the results provide data of potential practical application This is especially true of the findings on distribution patterns of the fresh water and on average flushing times.

LaFond, E C

Processing oceanographic data. Washington, D C U S Navy Hydrographic Office, 1951 114 p illus 27 cm (U S Navy Hydrographic Office. H O Pub no 614) $7.00 1792

Contents (abridged) Part I, Processing procedures Processing of continuous temperature and salinity data. Determination of final values of serial temperature and salinity data. Computation of dependent quantities. Examples of processed serial temperature and salinity data. References. Part II Oceanographic tables.

Note Discussions by an expert of the problems of preparing for analysis the results of physical oceanographic measurements taken at sea, shortcuts in the processing of such data, and a series of tables useful in the processing are published in this volume. The greater part of the space is devoted to the tables, of which there are 20. The work is Section D of a comprehensive laboratory manual of oceanographic methods being prepared under the direction of H. U Sverdrup and the sponsorship of the International Association of Physical Oceanography

National Research Council Division of Physical Sciences

Symposium on oceanographic instrumentation. A conference held at Rancho Santa Fe, California, 21–23 June, 1952, under the sponsorship of the Office of Naval Research Editors John D Isaacs and Columbus O'D Iselin Washington D C National Research Council, 1954 233 p illus 25 cm (National Academy of Sciences—National Research Council Publication 309) $1 75 1793

Contents (abridged) Considerations of oceanographic instrumentation, by J D Isaacs. Measurements of the oceanic circulation in temperate and tropical latitudes, by W S. von Arx. Biological instruments, by E. H. Ahlstrom. Oceanographic instruments for measuring temperature by A. C. Vine. Geophysical measurements, by R. W Raitt. Sea-ice problems, by C. A. Barnes. Acoustic instrumentation as a tool in oceanography by J B Hersey Considerations in the construction of oceanographic vessels, by W V Kielhorn. Wave measurements, by F E. Snodgrass. Chemical measurements, by D E. Carritt. Methods of exploring the ocean floor by R. S. Dietz. Air-sea boundary processes, by W H. Munk.

Note Participation in the conference of which this volume is a product was limited to scientists deeply engrossed in the subject"; in other words, oceanographers and others whose fields of activity favored their being fully informed on available instruments and their limitations, and on needs for new instruments. Papers authored and titled as listed above are contained in the volume and, in addition, there is a transcript of the discussion of each paper Both standard and new instruments are discussed from the standpoint of their uses. Also, there is discussion of measurements that oceanographers would like to make if suitable instruments were available. A case in point is evaporation of water from the ocean surface. Literature references are given for all of the papers, and illustrations are included in some of them.

Neumann, Gerhard

On the dynamics of wind-driven ocean currents New York New York University Press, 1955 32 p illus. 26 cm. (New York University College of Engineering Meteorological papers Vol II no 4) $1.50. 1794

Contents. Introduction. The differential equation for the horizontal mass transport Conditions for stationary frictionless currents. Wind-driven currents in a homogeneous ocean. Wind-driven currents in a nonhomogeneous ocean. The development of a layer of no motion in a nonhomogeneous ocean. The topography of the layer of no motion in the Atlantic Ocean. Relationships between the level of no motion and the general circulation of the Atlantic Ocean. Some simple current systems. Summary and conclusions. References.

Note Results produced in a research project sponsored by the Office of Naval Research and directed toward discovering the interrelationships between the atmosphere and the oceans with special reference to the oceanic circulation and stratification are presented in this large pamphlet. Essentially the investigation involved a re-examination of the problem of wind-driven ocean circulation. The basic data were taken from the literature, and the problem was studied by mathematical analysis. Among the author's conclusions are "the analytical solution for a whole ocean even in the case of very simplified boundary conditions seems difficult, and the best procedure although time-consuming, is the numerical integration of the basic differential equation.

Papers in marine biology and oceanography Dedicated to Henry Bryant Bigelow by his former students and associates on the occasion of the twenty fifth anniversary of the founding of the Woods Hole Oceanographic Institution 1955 New York Pergamon Publishing Company, Inc., 1955 493 p illus (part col'd) 25 cm (Deep-sea research Supplement to Vol III) $10 50 1795

Contents Bibliography of Henry Bryant Bigelow Effect of trawling on animals of the seabed, by M Graham. A further example of the patchiness of plankton distribution, by A. C. Hardy Dissolved organic matter in the sea, by M. A. Plunkett and N W Rakestraw. Marine bacteria—recollections and problems, by S. A. Waksman. Geodetic Survey Special publication no. 215) $0.55 1805

Contents: General explanation. Instruments for observing. Current surveys. Observations at lightships. Reduction of current records. Index.

Note: This manual gives the general requirements of the United States Coast and Geodetic Survey in the observation and reduction of currents. The publication is designed to serve as a companion to the Manual of tide observations (Special publication no. 196). The first edition was published in 1933. This second edition represents slight revision and enlargement made necessary by changes in accepted procedures of the Coast and Geodetic Survey. The illustrations include a folded drawing of the mechanism of the Roberts radio current meter, original version and Model II.

UNITED STATES. HYDROGRAPHIC OFFICE

Instruction manual for oceanographic observations. Second edition, 1955 Washington, D C. U S Hydrographic Office 1956 210 p. illus. 27 cm. (United States. Hydrographic Office. H. O publication no. 607) $12.00. 1806

Contents: Part I: Introduction to oceanographic observations. Obtaining sea water samples and temperatures. Temperature and depth calculations. Drawing oceanographic graphs and profiles. Reception and sonic soundings. Obtaining bottom sediment samples. Underwater photography. Obtaining biological specimens. Current measurements. Sea and swell observations. Meteorological observations. Water transparency and light absorption measurements. Shipboard chemistry. Instructions for recording oceanographic observations, measurements, and samples on log sheets. Bibliography. Appendix. Part II, Oceanographic codes and tables.

Note: A manual of techniques for carrying out oceanographic observations of the kinds mentioned in the chapter titles listed above. It provides explicit, detailed instructions of good techniques. Explanations of forms for the recording of observations and many illustrations of apparatus and methods of using apparatus. There are 17 tables of useful data.

UNITED STATES HYDROGRAPHIC OFFICE

References on the physical oceanography of the western Pacific Ocean. Washington D C. Government Printing Office 1953 168 p. 26 cm. (United States. Navy Hydrographic Office. H. O. publication no 238) $2 40. 1807

Contents: Abbreviations of periodicals. References. Charts. Addenda. Index of subjects. Index of geographic names and expeditions.

Note: A very extensive but not complete bibliography compiled by Mary C. Grier and first published in 1946. It covers a wide range of oceanographical literature including official publications, the journals of learned societies, the proceedings of congresses, etc. Some references to literature published as recently as 1945 are included. Very brief annotations are included in some of the entries.

UNITED STATES. HYDROGRAPHIC OFFICE

World atlas of sea surface temperatures. Second edition, 1944 Washington, D C. Published by the Hydrographic Office United States Navy 1948. n. p. 56 cm. (H. O no. 225) $2 50 1808

Note: "This world atlas of sea surface temperatures was prepared by the Scripps Institution of Oceanography La Jolla, Calif. from all the surface temperature observations collected by the U. S. Hydrographic Office, together with all available data from other sources, with special attention to regions of few observations. It is believed that the compilation represents the most accurate pattern of sea surface temperatures of the world yet prepared. Isotherms are drawn for intervals of 5° F except that in regions of small horizontal temperature gradients 2.5° isotherms have been entered. A closer spacing of these lines would have created overcrowding and given a false idea of the reliability of the patterns. Information on ice limits is also shown wherever possible." The second edition was first published in 1944 and was reprinted without change in 1948.

UNITED STATES NAVY

Marine climatic atlas of the world Volume 1 North Atlantic Ocean. Volume 2 North Pacific Ocean. Published by direction of Chief of Naval Operations Washington, D C. Government Printing Office, 1955–56 2 v illus (part col d) 34 × 50 cm. (Navaer 50–1C–528–9) $8.00 per vol. 1809

Contents: Volume I, North Atlantic Ocean. Introduction. The charts. The observations and their processing. The individual surface charts. The individual upper air charts. References. Charts index. Chart 1, Map of surface stations and areas. Charts 2–133, Surface section. Chart 133, Map of upper air stations. Charts 134–271, Upper air section. Volume II, North Pacific Ocean. Introduction. The charts. The surface graphs and tables. The observations and their processing. The individual surface charts. The individual upper air charts. References. Chart index. Chart 1 Map of surface section network. Charts 2–133, Surface section. Chart 135 Map of upper air section networks. Charts 136–273, Upper air section.

Note: The two volumes here described are the first and second volumes of a set which when completed will include all the oceans of the world. The volumes present month-by-month meteorological information by graphs, tables, and isopleths superimposed on uniform maps of the entire North Atlantic or North Pacific Ocean. Fourteen different series of charts comprise the surface section. Development of each of the series began with the object of providing as much meteorological information in analyzed form as practicable from data comprised of individual weather observations over the oceans. The work is a valuable reference tool for geographers and other scientists, and technicians concerned with climatic over the oceans.

VAUGHAN THOMAS WAYLAND AND OTHERS

International aspects of oceanography Oceanographic data and provisions for oceanographic research. Washington D C. National Academy of Sciences 1937 225 p. illus. 31 cm. $1.50 1810

Contents (abridged): Serial sections of temperature and salinity in the different ocean basins. General discussion. Atlantic Ocean and connecting seas. Pacific Ocean. Red Sea and Indian Ocean. Charting the bottom of the oceans. Submarine earthquake epicenters, magnetic observations at sea, tidal records. Results of maritime gravity research, 1923–1932, by F. A. Vening Meinesz. Catalogue of institutions engaged in oceanographic work.

Note: This study may be regarded as a companion volume or supplement to H. B. Bigelow *Oceanography, its scope, problems, and economic importance*, Boston, 1931. The present volume does not attempt to cover the ground of Bigelow's work, but rather is planned to show mostly by means of charts, the status of the exploration of the different oceans for several lines of research, and to present a catalogue of institutions engaged in oceanographic work. The material is divided into three main branches, namely the study of water masses in ocean basins, the study of the interaction of the sea and the atmosphere, with a discussion of solar radiation and its penetration into seawater and, finally, the study of the configuration and composition of the ocean bottom. There are numerous maps and charts and a considerable amount of international data.

WIEGEL, ROBERT L.

Waves tides, currents and beaches glossary of terms and list of standard symbols. Berkeley Council on Wave Research—The Engineering Foundation, 1953 113 p. 27 cm. $1.00 1811

Note: In the main part of this book, technical terms pertaining to waves, tides, currents and ocean beaches are arranged in alphabetical order and defined. Then follow 24 pages of illustrations in which technical terms are identified with pictorial representations of the objects that they denote. Following the illustrative section are nine pages of symbols and definitions. The book concludes with a four-page list of books and other literature. The format suggests a trial or preliminary edition, but even in its present form—the only available work—it is a useful reference book for beginners in oceanography and for scientists in other fields who have occasion to read oceanographic literature.

matter includes reproductions of many excellent photographs of shore and submarine formations. A list of references to other literature accompanies each chapter

SKOGSBERG, TAGE

Hydrography of Monterey Bay, California. Thermal conditions, *1929–1933* Philadelphia The American Philosophical Society, *1936* 152 p *illus* 29 cm. (American Philosophical Society Transactions New series, Vol. XXIX, p 1–152) $2 00 1801

Contents Introduction. History and purpose of survey Location. Physiography in relation to hydrography Methods and material. Monthly thermal conditions in the upper *one hundred meters*. Annual thermal conditions in the superficial strata Thermal conditions in the upper 50 meters, in 1929 Thermal conditions in the upper 50 meters, in 1930 Thermal conditions in the upper 100 meters, in 1931 Thermal conditions in the upper *100 meters*, in 1932 Thermal conditions in the upper 100 meters, in 1933 Normal annual rhythm in the upper 100 meters. Comparisons of *the annual thermal conditions in the superficial strata* Thermal conditions at the surface, 50 meters, and 100 meters. Relative amounts of water of different degrees of temperature in the upper 50 meters. Monthly amplitudes of thermal variation. Surface temperatures, by the shore, from 1919 to 1934 Thermal conditions below 100 meters Monthly thermal conditions between 100 and 250 meters. Thermal conditions between 250 and 900 meters. *Annual* thermal rhythm from the surface to 900 meters. Water movements underlying the thermal rhythm Effects of the tides on the thermal rhythm. Water movements underlying the irregularities in the superficial thermal rhythm and causes of these movements. Water movements underlying the annual rhythm. Causes of other thermal characteristics. Special circulatory conditions. Circulation and bottom sediments. Water temperatures and the fisheries. Summary and conclusions. Appendix of tables of monthly average temperatures. Bibliography

Note This paper reports the thermal conditions as obtained in five-year hydrographic survey of Monterey Bay an important center of the fishing industry in California. Because of the extensive nature of the available data, it was found practical to reproduce only limited portion of the available readings. Aside from summarizing the results f the thermal survey the publication attempts to interpret the established thermal characteristics in terms f circulatory phenomena.

STETSON, HENRY C, AND PARKER D TRASK

The sediments of the western Gulf of Mexico Cambridge and Woods Hole, Mass, 1953 120 p illus 28 cm (Papers in physical oceanography and meteorology published by Massachusetts Institute of Technology and Woods Hole Oceanographic Institution, in continuation of Massachusetts Institute of Technology meteorological papers Vol. XII, no 4 *Contribution no 646 from Woods Hole* Oceanographic Institution) $1.25 1802

Orders for this number should be addressed to Woods Hole Oceanographic Institution Woods Hole, Massachusetts.

Contents. Part I, The continental terrace f the western Gulf of Mexico—its surface sediments, origin and development, by H. C. *Stetson* *Introduction.* Laboratory procedure and presentation f data. Sedimentary data by traverses. Distribution of the sediments. Comparison with the Atlantic continental shelf and slope. Geomorphology and evolution of continental terraces. Conclusions. Tables. Bibliography Part II, *Chemical studies of sediments of the western Gulf of Mexico,* by P D Trask Organic content Introduction. Acknowledgments. Procedure of analysis. Program f sampling. Results of analyses. Areal variation of organic content. Relation of organic matter to texture. Relation of organic matter to bottom configuration. Variation f organic matter with depth of burial. Discussion of results. Chemical composition Introduction. Methods of investigation. *Interpretation of* analyses. Water content Water content of Gulf of Mexico sediments. References. Tables.

Note. Published in this volume are two reports of an investigation carried out to determine the texture and organic content of the surface and near-surface sediments with their contained foraminiferal fauna, from the shelf, the slope, and the Sigsbee Deep. The investigation involved both field and laboratory work. In his study Dr. Stetson reached the conclusion that the continental shelves and slopes of the world represent many different stages of development, and that there is no single explanation of terrace formation that is universally applicable. Mr. Trask's report is concerned entirely with the chemical nature of the same sediments studied by Stetson from the viewpoint of mechanical composition. His findings are presented in considerable detail, and the results are discussed in similar fashion. However the author does point out that the interpretation of chemical analyses of sediments is difficult, and that more work on them from the chemical viewpoint is needed.

SVERDRUP, HARALD ULRIK, *AND OTHERS*

The oceans, their physics, chemistry, and general biology, by H. U Sverdrup, Martin W Johnson, and Richard H. Fleming. New York Prentice-Hall, Inc, 1942 1,087 p. illus. *23* cm *$12 50* 1803

Contents Introduction. The earth and the ocean basins. Physical *properties of sea water General distribution of temperature, salinity,* and density Theory f distribution of variables in the sea. Chemistry of sea water Organisms and the composition of sea water The sea as a biological environment. Populations of the sea. Observations and collections at sea. General character of ocean currents. Statistics and kinematics. Dynamics of ocean currents. Waves and tides. The water masses and currents of the oceans. *Phytoplankton in relation to* physical-chemical properties of the environment. Animals in relation to physical-chemical properties of the environment. Interrelations of marine organisms. Organic production in the sea. Marine sedimentation. Appendix Tables for computing geopotential distances between isobaric surfaces. Index.

Note. A comprehensive reference book on the subject. A large amount of factual information is provided, while at the same time the aim is to help the beginner and the specialist to co-ordinate the various fields of oceanography The bibliographies following chapters are extensive. A number of illustrative charts are appended.

UNITED STATES COAST AND GEODETIC SURVEY

Hydrographic manual. Revised (1942) edition Washington, D C. Government Printing Office, 1942 940 p illus. (part col'd) 26 cm. (United States Coast and Geodetic Survey Special publication no 143) $5 75 1804

Contents (abridged) Preliminary Control and signal building. Hydrography Equipment and instruments. Echo sounding. Radio acoustic ranging. The smooth sheet. Records and reports. Miscellaneous. Index.

Note A comprehensive and detailed manual and textbook describing modern methods f *hydrographic surveying* and equipment, including the general requirements of the United States Coast and Geodetic Survey for the execution of hydrographic surveys. The book describes in detail for the first time the instruments and methods used in echo sounding and radio range acoustics. The subject matter has been identified by decimal numbering system to which all references in the extensive index are made. Among the *separate topics treated* are triangulation, topography shore hydrographic stations, signal building, large-scale offshore surveys, survey ships and auxiliary craft, depth finding equipment and instruments, oceanographic instruments, radio acoustic ranging stations, bombs and explosives, plotting control and positions, reductions of soundings, and miscellaneous reports and data. There is large section devoted to symbols and abbreviations for nautical charts used by the Coast and Geodetic Survey with colored illustrations, and list of related publications and reference works. Such subjects as shore astronomic observations, triangulation, topography tides, magnetic observations, etc., *for each of which there is* separate manual, are *either omitted or* treated only briefly

UNITED STATES COAST AND GEODETIC SURVEY

Manual of current *observations.* Washington D C. Government Printing Office, 1950. 87 p illus. 23 cm. (United States. Coast and

NATURAL HISTORY

ALLAN HANCOCK FOUNDATION

Essays in the natural sciences in honor of Captain Allan Hancock on the occasion of his birthday July 26 1955 Los Angeles University of Southern California Press, 1955 345 p. illus. 23 cm. $5.00. 1813

Contents: An appreciation, by R. B. von KleinSmid. A pattern of international deep sea research, by [illegible]. The future of marine invertebrate systematic research, by F. A. Chace, Jr. The importance of systematics in ecology and oceanography, by J. W. Hedgpeth. The case for [illegible] warm-temperature marine fauna on the west coast of North America, by J. S. Garth. The [illegible] distribution of Arctic-Alaskan Bryozoa, by R. C. Osburn. Endemism in the North Pacific Ocean, with emphasis on the distribution of marine Annelida, and descriptions of new or little known species, by O. Hartman. New light on the biology of [illegible]. [illegible], by A. F. [illegible]. Observations on the [illegible] near Santa Catalina Island, by [illegible]. The wood boring habits of Chelura terebrans Philippi in Los Angeles harbor, by J. L. Barnard. Charting the "Enchanted Isles," by J. R. [illegible]. Marine mollusks collected at the Galapagos Islands during the voyage of the Velero III, 1931–1932, by L. G. Hertlein and A. M. Strong. A report on the [illegible] captured during the [illegible] expedition to the Galapagos Islands, by R. W. [illegible] and D. W. [illegible]. A new species of [illegible] from the Pacific [illegible] by J. D. Soule. A new record of [illegible] by E. Deichmann. A review of the genus [illegible] M. & T., by F. Ziesenhenne. [illegible] of the seal, [illegible], with [illegible], by W. E. Martin. Two new [illegible] from [illegible] from South Africa and New Zealand, by R. W. Menzies. The role of [illegible] in the [illegible], by C. R. Schroeder. [illegible] of the North Rim of the Grand Canyon, Arizona, by J. E. Durham. [illegible] of the Caribbean and its [illegible], by W. R. Taylor. A preliminary working key to the living species of Dermatolithon, by E. Y. Dawson. Structure and [illegible] of the two [illegible] Padina and Cymathere in the [illegible], by A. A. [illegible]. [illegible] in the ocean, by K. O. Emery and others. The Pleistocene history of the Channel Island region, Southern California, by T. Clements. Index of scientific names.

Note: Papers [illegible] as indicated above comprise the greater part of this volume in honor of the founder and Director (in the period [illegible]) of the Allan Hancock Foundation. Many of the papers are the reports of recent research in areas of oceanography and particularly marine biology. However, as their titles indicate, some of the papers deal with [illegible] topics. Most of the papers include literature references.

BATES, MARSTON

The nature of natural history New York Charles Scribner's Sons 1950 309 p. 24 cm. $3.95 1814

Contents: The science of natural history. The naming of organisms. The catalogue of nature. The history of organisms. Reproduction. The development of the individual. The environment. [illegible]. Partnership and cooperation. Parasitism. The behavior of individuals. The behavior of populations. Biological geography. [illegible]. The mechanism of evolution. Natural history and human economy. The natural history of naturalists. [illegible] and the [illegible]. Appendix: The literature of natural history. Index.

Note: In this book by an eminent biologist the [illegible] variety of topics in natural history is rendered in nontechnical terms for the general reader. In his discussion of such topics as bird migration, the author does not attempt to cover the subject or even present an outline. Instead, he [illegible] of the [illegible] them, then leaves it to the reader to pursue the subject further if he wishes. The appendix is [illegible] discussion of the literature of natural history with particular mention of [illegible] and the list of references is [illegible] selected list of books designed for the guidance of readers who wish to pursue reading in the field.

BEEBE, WILLIAM

Adventuring with Beebe selections from the writings of William Beebe. With illustrations. New York Duell, Sloan and Pearce Inc., 1955 283 p. illus. 20 cm. $4.50. 1815

Contents: [illegible]. Bermuda [illegible]. Feathered [illegible]. [illegible] (from [illegible]) A [illegible] trip to Davy Jones's locker. [illegible] (from [illegible]). Pacific [illegible]. [illegible]. [illegible] (from [illegible]). [illegible]. River of [illegible]. A [illegible]. [illegible] (from [illegible]). A [illegible]. The [illegible] (from [illegible]). St. Francis of the [illegible] (from [illegible]).

Note: The author of this book, now Director Emeritus of the Department of Tropical Research of the New York Zoological Society, is internationally known both for his scientific work in ornithology and oceanography and for his popular writings on nature subjects. The book is [illegible] designed for general reading. As the author states in [illegible] the selections cover more than 40 years of time: they range from Bermuda to British Guiana and the [illegible] Islands, from the tops of lofty trees to [illegible] beneath the sea. Some of them are taken from the author's previously published books and are so identified in the above table of contents. Except for the reproduction of one painting, the illustrations consist entirely of reproductions of photographs.

CALIFORNIA ACADEMY OF SCIENCES

A century of progress in the natural sciences 1853–1953 published in celebration of the centennial of the California Academy of Sciences San Francisco California Academy of Sciences, 1955 807 p. illus. 25 cm. $10.00 1816

Contents: San Francisco [illegible], by J. [illegible]. A century of astronomy and geodesy in California, by [illegible]. The contribution of natural history to human progress, by G. F. Ferris. [illegible] of the bacteria and [illegible], by C. B. Van Niel. Classification of the [illegible], by G. F. Papenfuss. Mycology, by [illegible]. Bryology [illegible]. Pteridology, by [illegible]. The systematics of the angiosperms, by [illegible]. The systematics of the angiosperms, by L. Constance. Systematic entomology, by E. S. Ross and [illegible]. Introduction, by E. S. Ross. The Apterygota, by [illegible]. Odonata, by [illegible]. Ephemeroptera, by [illegible]. Plecoptera, by [illegible]. Embioptera, by E. S. Ross. Zoraptera, by [illegible]. Some [illegible] insects—Anoplura, Mallophaga, and the [illegible] insects, by G. F. Ferris. Homoptera [illegible], by [illegible]. Thysanoptera, by [illegible]. Hemiptera, by R. L. Usinger. [illegible] and [illegible], by F. M. Carpenter. Trichoptera, by [illegible]. Lepidoptera, by [illegible]. Coleoptera, by [illegible]. Hymenoptera, by [illegible]. Art [illegible] by [illegible]. The [illegible], by P. D. Hurd, Jr. The Aphids, by [illegible]. Diptera, by [illegible]. Siphonaptera, by G. P. Holland. [illegible], by F. M. Carpenter. Herpetology by K. P. Schmidt. Ornithology, by [illegible]. Mammalogy in North America, by W. J. Hamilton, Jr. Invertebrate paleontology and historical geology from 1850 to 1953, by [illegible]. Plant geography, by [illegible]. Animal geography, by K. P. Schmidt. The conservation of wildlife, by A. S. Leopold.

Note: The central topic of this volume is the history of the development of biological systematics during the hundred years ending in 1953. Although some of the authors did not adhere [illegible] to the pattern, considered as [illegible] while the volume is devoted to this subject. The typical paper is [illegible] survey of the area of the field named in its title, and consists of brief discussion

ZERBE, W B , AND C B TAYLOR

Sea water temperature and density reduction tables Washington, D C. Government Printing Office, 1953 21 p illus. 26 cm. (United States Coast and Geodetic Survey Special publication no 298) $0.20 1812

Contents Introduction. Temperature conversion. Density reduction. Salinity from density Density at various temperatures. Freezing point of sea water

Note. The purpose of this publication is to furnish tables and graphs for the reduction and use of the sea-water temperature and density observations as obtained at harbor and coastal stations by the Coast and Geodetic Survey and to present the formulas and methods used in their construction. The introduction describes the instruments used in making the observations and the means of making the observations. The tables are entitled as follows. "Temperature conversion, Fahrenheit to Centigrade "Temperature conversion, Centigrade to Fahrenheit, "Differences to convert hydrometer readings at any temperature Fahrenheit to density at 59°F (15 C.) "Differences to convert hydrometer readings at any temperature centigrade to density at 15 C. (59 F.) "Corresponding densities and salinities (density at 15 C., salinity in parts per 1,000)

ROOSEVELT THEODORE

Theodore Roosevelt's America selections from the writings of the Oyster Bay naturalist. Edited by Farida A. Wiley With introductory essays by John Burroughs, Gifford Pinchot, Henry Fairfield Osborn, Ambrose Flack, and a foreword by Ethel Roosevelt Derby Illustrated by Ugo Mochi. New York. The Devin-Adair Company 1955 418 p. illus. 21 cm. $5 5. 1828

of the chief contributions, arranged more or less in chronological order Contributions from American scientists are emphasized, but the degree of emphasis varies from one paper to another Most of the authors have written from an international viewpoint. In some of the papers, there are portraits of eminent scientists and occasionally some other illustration of special interest, such as the reproduction of the title page of noted scientific work. The volume is a reference book of considerable authority and usefulness. However the latter quality would have been much enhanced if an index had been provided.

CARSON, RACHEL

The edge of the sea. With illustrations by Bob Hines Boston Houghton Mifflin Company, 1955 276 p illus 22 cm $3 95 1817

Contents The marginal world. Patterns of shore life. The rocky shores. The rim of sand. The coral coast. The enduring sea. Appendix Classification. Index.

Note. A popular and somewhat philosophic book for those interested in the various forms of life to be found in the sea along the coast—"the low-tide world. Written by the author of *The sea around us* and handsomely and profusely illustrated, the book is based upon study and field work from Maine to Florida, made possible by a Guggenheim Fellowship grant. Although based upon researches on the Atlantic coast of the United States, the work has application to many similar shores of the earth. Three basic types of shore are recognized, and to each is devoted a separate chapter the rocky shores represented by the coasts of northern New England, the sandy beaches represented by the coasts from Long Island south to Florida, and the coral reefs represented by the Florida Keys. In the appendix are provided brief descriptions of the chief phyla of plants and animals found on the sea coasts.

COMSTOCK, ANNA BOTSFORD

Handbook of nature study Twenty fourth edition Ithaca, New York Comstock Publishing Company, Inc., Cornell University Press, 1939 937 p illus 27 cm $6 75 1818

Contents. Part I, The teaching of nature-study Part II, Animals birds, fishes, amphibians, reptiles, mammals, insects of the fields and woods, insects of the brook and pond, other invertebrate animals. Part III, Plants wild flowers, weeds, garden flowers, cultivated crop plants, trees, flowerless plants. Part IV Earth and sky the brook, rocks and minerals, the soil, the magnet, climate and weather water forms, the skies. Bibliography Index.

Note A well-known text and reference book. With each of the 700 discussions of subjects in nature, a lesson, containing a leading thought to be emphasized by the teacher is included, with a description of the best method of developing this idea through personal observation. There are nearly 50 pages of bibliography

DUBKIN, LEONARD

The natural history of a yard Illustrations by Carl Kock Chicago Henry Regnery Company 1955 208 p illus 21 cm $3 50 1819

Note. An unusual book of nature observations. The area of observation was a small plot of grass containing a forsythia bush and an elm tree adjacent to an apartment hotel in Chicago. The fauna of this small area was observed by the author and his daughter over a period of three years. What they saw together with a little related material from literature is recounted in the book, which is remarkable on two counts one that so much could be observed in so small an urban area, and, two, the sensitive and charming style in which the observations are communicated. The two observers were both amateurs, and the book is addressed primarily to amateur naturalists and to lay readers who enjoy reading about nature.

GOLDMAN EDWARD ALPHONSO

Biological investigations in Mexico (with 71 plates) Washington D C. The Smithsonian Institution 1951 476 p illus 24 cm. (Smithsonian miscellaneous collections Vol 115 (whole volume) Publication 4017) 1820 $4 50

Contents Introduction. Itinerary of Nelson and Goldman in Mexico and Guatemala, 1892–1906. Localities visited by Nelson and Goldman in Mexico and Guatemala, 1892–1906 Mexico Aguascalientes. Baja California. Campeche. Chiapas. Chihuahua. Coahuila. Colima. Distrito Federal. Durango. Guanajuato. Guerrero. Hidalgo. Jalisco. México Michoacán. Morelos. Nayarit. Nuevo León. Oaxaca. Puebla. Querétaro. Quintana Roo. San Luis Potosí. Sinaloa. Sonora. Tabasco. Tamaulipas. Tlaxcala. Veracruz. Yucatán. Zacatecas. Guatemala. Physiography General features. The tableland or great interior plateau. Mountain ranges. Plains. Drainage. Climatic relations Geographic distribution of species. Life zones Lower tropical zone. Upper tropical zone. Lower austral zone. Upper austral zone. Transition zone. Canadian zone. Hudsonian zone. Arctic-Alpine zone. Biotic provinces. Literature cited. Index.

Note This volume describes a series of expeditions into Mexico between 1892 and 1906 by Edward W Nelson and Edward A. Goldman. At the time of the death of the author in 1946, the work was not entirely completed subsequently the manuscript was ordered, edited, and prepared for publication by his immediate superior, Hartley H. T Jackson, Chief of the Section of Biological Surveys, United States Fish and Wildlife Service. The outline of their itinerary during their time in Mexico is followed by a description of each of the towns visited, giving its altitude, the dates of their visit, and notes about physiography and vegetation. The remainder of the volume lists the species of plants, mammals, and birds found in each of the ten major life zones and subzones of Mexico, with identification provided of the localities where the species were found.

HIGMAN, HARRY WENTWORTH, AND EARL J LARRISON

Union Bay, the life of a city marsh. Illustrated by Edmund J Sawyer Seattle University of Washington Press, 1951 315 p. illus 21 cm $4 00 1821

Contents The marsh in Union Bay How the tule wren acquired summer quarters. The marsh is a hotel. The tail dipper. A worm's a worm. The bill of fare. Shells on Union Bay The white plague. The track near the marsh. Introducing something new. American squaw's toes, and other things. The henpecked blackbird that put to sea. Among the guests registered. A firm seat. How a new water witch came to the marsh. Teeters, nods, and bobs. How the great heron wandered. Marsh symphony Quintet. Pipskins and dowitchers. Sky sweepers. Wild fowl and men. Who killed Cock Robin? Fur is punishment. The specialist loses control.

Note A book of essays about the wildlife in a marsh located in a well-populated district in the city of Seattle Washington. The main theme is the interrelation between the wildlife and the adjacent settlement of man, but this idea is not overemphasized. The book is essentially a collection of sensitive writing about marsh life as observed by these two authors, and it is addressed to lay readers rather than to specialists.

FAIRCHILD, DAVID

The world grows round my door, the story of the Kampong, a home on the edge of the tropics New York Charles Scribner's Sons, 1947 347 p illus. 24 cm $5 00 1822

Contents (abridged) Waves of a long life. First day on the Kampong. The great trees. Doom along the Tamiami trail. Plants that climb. Some nesting habits of humans. Sausage tree and jungle. Among the palms on the Kampong. There's no disorder in a jungle. A plant breeder's moments. Keeping their names straight. Learning to like granddaddy's new fruits. The gorgeous East Indian mango. Stories of some Kampong trees. The ages of trees. Index.

Note Travels to foreign lands and the author's home in southern Florida constitute the background of this fascinating autobiography The real "dramatis personae" in this setting, however are the many tropical and subtropical trees, bushes, and flowers transplanted by Dr. Fairchild to his garden. The vivid narrative, interspersed with philosophical reflections and descriptive details and the many excellent photographs, makes this book by a well-known botanist pleasant and stimulating reading.

LEY, WILLY

Dragons in amber, further adventures of a romantic naturalist New York The Viking Press 1951 328 p illus 21 cm $3 75 1823

Contents: Part one, Records in amber: The tears of the Heliades. The secret of the blue earth. Footprints in red sandstone. The dragon from the Lias epsilon. The mammoth from the permafrost. Part two, Survivors: The last of their kind. The story of the okapi. Stronghold of the [illegible]. A bird known as takahe. Green lizard. The forest of the dinosaurs—cycads. Part three, Wanderers across the planet: The story of the fish *Anguilla*. The return of the native. Wanderers across the planet. The islands of adventure. Index.

Note: An interesting book in which there are several fascinating accounts of zoological discovery and research and also some stories about fossils. It is designed for the general reader. The various chapters are more or less independent accounts and are written in the vein of *The lungfish, the dodo, and the unicorn* by the same author. Drawings are by the author's wife, Olga Ley. Two chapters originally appeared in condensed form in *Natural history* magazine.

LEY WILLY

Salamanders and other wonders still more adventures of a romantic naturalist. With illustrations by Olga Ley New York The Viking Press, 1955 293 p illus. 21 cm. $3 95 1824

Contents: Part I, Problems of the past. Cave salamanders and high politics. The little people. *Natura Abhorret Vacuum*. The Abominable Snowman. Prelude to aviation. Part II, Retained information—three fabulous beasts: The tree of death. The man-eating tree of Madagascar. The emperors' *Araucaria Mirabilis*. Part III, Survivors: The case of the coelacanth. The wildcraps of Switzerland. The fairy old man of the sea. The old coast. Sequence and duration of geological periods. Index.

Note: The author of this book is well known as an interpreter of science for lay readers. He has written on such diverse subjects as rockets, space travel, and nature. This book, one of those on nature, deals with a selected group of "wonders" and remarkable facts and events in natural history. Little, if any, of it is based on the author's own observations of nature. Instead, the book is a critical review of the literature pertaining to the subjects of the various chapters. Although there is some stress on the unusual and "romantic" aspects of the topics discussed, the book was written with a considerable degree of scientific detachment. Viewed as a whole, it is fascinating, not only because of the out-of-the-ordinary subjects of its chapters, but also because of the author's unique way of presenting them.

NATIONAL RESEARCH COUNCIL. PACIFIC SCIENCE BOARD

Island bibliographies Micronesian botany Land environment and ecology of coral atolls. Vegetation of tropical pacific islands. By Marie-Hélène Sachet and F Raymond Fosberg. Compiled under the auspices of the Pacific Science Board. Washington, D C. National Academy of Sciences—National Research Council, 1955 577 p 28 cm. (National Research Council Publication 335) $6.00 1825

Contents: Annotated bibliography of Micronesian botany. Index. Bibliography of the land ecology and environment of coral atolls. Index. Selected bibliography of vegetation of the tropical Pacific islands. Index. List of serial abbreviations. Addenda to the annotated bibliography of Micronesian botany. Addenda to the bibliography of the land ecology and environment of coral atolls. Addenda to the selected bibliography of vegetation of the tropical Pacific islands. Addenda to the list of serial abbreviations.

Note: The three related bibliographies published in this volume are international in scope. Two of them are comprehensive in the sense that the compilers included references to all relevant literature published to November 1, 1954 that they were able to discover. The third one is a selected but nevertheless very extensive list. In each of the lists, the information given for each entry includes author's name, title of the paper or other publication, periodical citation including volume number, pagination, and year, and short annotations. The arrangement is alphabetical by name of author with indexes by localities, subjects, etc.

PALMER, EPHRAIM LAURENCE

Fieldbook of natural history New York McGraw Hill Book Company Inc., 1949 664 p. illus. 23 cm. $8 00 1826

Contents. The sky at night. The solar system. The sun. Planets. The earth. The moon. The mineral kingdom. Rocks. Minerals. The plant kingdom. Thallophytes: Algae. Fungi. Bryophytes: Liverworts. Mosses. Pteridophytes. Ferns. Fern allies. Spermatophytes: Gymnosperms. Angiosperms. Monocotyledons. Dicotyledons. The animal kingdom. Invertebrates: General invertebrates. Mollusks. Arthropods: Arachnids. Insects. Chordates, including vertebrates: Fishes. Amphibians. Reptiles. Birds. Mammals.

Note: This book presents a large amount of encyclopedic information about animate and inanimate nature. The first 39 pages of the volume are devoted to astronomy and geology. The remainder covers the vegetable kingdom and the animal kingdom. The arrangement of the biological material is by phyla and classes, a detailed index giving page references both to scientific and to common names in one alphabet. The illustrative material appears mostly in original line drawings occupying the upper third of each page. The remaining two-thirds of these pages present text in three columns containing detailed descriptions of the species and data on their range, relationships, life history, economic importance, etc. A feature is the inclusion of garden flowers, vegetables, and domesticated animals along with wild-life forms.

PETERSON ROGER TORY AND JAMES FISHER

Wild America. The record of a 30,000-mile journey around the continent by a distinguished naturalist and his British colleague. Illustrated by Roger Tory Peterson. Boston Houghton Mifflin Company 1955 434 p. illus. 22 cm. $5 00 1827

Contents. Prologue. Atlantic gateway. *Sea cliffs of Cape St. Mary.* The rude bridge. Wild trails for the millions. City in the woods. Down the Blue Ridge. *On top of Old Smoky.* Deep South. Wildlife chessboards. World invader—the cattle egret. Kites over the sawgrass. The 'Glades. America's coral islands. Ivory-bill quest. Flying gardens of Avery Island. Lydia Ann. Wilderness lost. South of the border. Sun on the last land. Islands in the sky. Desert gardens. Land of the old people. "Something has happened here." From inferno to valley of torture. The Cliffs of Coronado. Pale-[illegible] giants. Golden coast. Big trees and the big lie. Green country. Deep blue lake. Ghost forest and rain forest. Cr[illegible] dwellers of destruction. Tundra of the emperors. The islands of the seals. Birds of the Seal Islands. Back home. Appendix: History of the fur seal herds. Index.

Note: An interesting account by two naturalists of their journey in 1953 from Newfoundland south through Massachusetts and the Blue Ridge country to Florida, thence via Louisiana, Texas, and old Mexico, west to California, thence north through Oregon and Washington to Alaska and the Pribilof Islands, covering 30,000 miles in 14 weeks. The trip was by automobile, except for the portions from Newfoundland to Boston and from Seattle to Alaska, which were by airplane. National parks, national monuments, fish and wildlife refuges, and bird sanctuaries were focal points. Since the two authors are ornithologists, the major emphasis is on the bird life, but other aspects of wild life are by no means neglected. The book is "woven together" from the combined notes of the authors, each chapter containing an introduction and other portions by Peterson and extracts from the journal kept by Fisher and illustrations in black and white by Peterson. An outline map of the route is reproduced on the end papers.

ROOSEVELT THEODORE

Theodore Roosevelt's America selections from the writings of the Oyster Bay naturalist. Edited by Farida A. Wiley With introductory essays by John Burroughs, Gifford Pinchot, Henry Fairfield Osborn Ambrose Flack, and a foreword by Ethel Roosevelt Derby Illustrated by Ugo Mochi. New York The Devin-Adair Company 1955 418 p illus. 21 cm. $5 75 1828

Contents (abridged) Foreword. Roosevelt as a naturalist, by Ambrose Flack and others. Western cattle country in the 1880's. Frontier types—good, bad, and sometimes dangerous. Law and order on the plains—Roosevelt as sheriff. Roosevelt the ranchman. Providing food and collecting trophies. In defense of accurate scientific writing. In defense of our natural heritage. South American adventure. Important events in the life of Theodore Roosevelt. Sources of quotes. Index.

Note. Theodore Roosevelt, 25th President of the United States of America, was also an outstanding naturalist and writer on nature subjects. This book provides a selection from his writings on nature and related subjects, such as the hunting of game animals. In addition, it contains short appraisals of Roosevelt as naturalist by John Burroughs and the three other naturalists mentioned in the subtitle, a foreword by a daughter of Roosevelt, and a biographical introduction by the editor of the collection.

SETON, ERNEST THOMPSON

Ernest Thompson Seton's America, selections from the writings of the artist naturalist Edited with an introduction by Farida A Wiley With contributions by Julia M Seton and drawings by Ernest Thompson Seton New York The Devin Adair Company, 1954 413 p illus 22 cm $5 00 1829

Contents Impressions, by J M. Seton. Acknowledgments. Introduction by F A. Wiley Boyhood days in Canada. Across Canada by rail. The Manitoba prairies. Birds of Manitoba. Two bird stories. Mammals of Manitoba. Bison and Caribou herds. Studies in the anatomy of animals. Tracking and trailing. Can zoo animals lead normal life? Two life histories—grizzly bear and moose. The horse. A dog story—Hank and Jeff. Life history of the bighorn sheep. Krag, the Kootenay ram. Life history of the gray wolf Two wolf stories. The rise of the woodcraft Indians. Stories for the campfire. Indians real and make-believe. The "Buffalo Wind" calls again. Books by Ernest Thompson Seton. Index.

Note A short anthology of selections from the works of Ernest Thompson Seton, 1860–1946, who achieved fame as an observer of wild animals, as a writer of popular literature about them, as the author of the treatise, *Lives of game animals* and as an artist specializing in the depiction of wild animals. It contains examples of the various kinds of his writings and art work. In addition there is a sketch of his personality written by Julia M. Seton his second wife, and a biographical introduction by the editor of the volume.

TEALE, EDWIN WAY

Autumn across America, a naturalist's record of a 20,000-mile journey through the North American autumn. With photographs by the author New York Dodd, Mead & Company, 1956 386 p illus. 21 cm. $5 75. 1830

Contents Monomoy—turn of the tide. Forests of the sea. Feather clouds. The long valley The autumn stars. Butterflies in the wind. Warbler river Dusty autumn. The great flyway Petrified forests. Mystery sleep. Wonderful eighty-three. Badlands by moonlight. Tumbleweed winds. Ants of the battlefield. Rock rabbit. High autumn. Our million-duck day White desert. Craters of the moon. Lost in the mountains. Horse Heaven hills. The long way home. A day with the fern gatherers. Mysterious mound. The golden squirrel. Land of the windy rain. Tidepools. The [illegible] valley of the west. Otter surf. Butterfly trees. Mountain sea. Windy crag—ebb of the tide. Index.

Note A companion book to the author's *North with the spring*, New York, 1951 Ostensibly the account of a trip by automobile from Monomoy on the tip of Cape Cod to Yosemite valley in California, the book is essentially a volume of miscellaneous writings about nature, and particularly nature in the autumn. It includes also considerable description of the northern and western regions of continental United States of America. It is addressed primarily to amateur naturalists and general readers, and is written in a lucid, sensitive style that effectively evokes the scenes and phenomena that the author observed.

TEALE, EDWIN WAY

The lost woods adventures of a naturalist. Illustrated with 200 photographs by the author New York Dodd, Mead & Company 1945 326 p illus 25½ cm. $5.00 1831

Contents (abridged) The lost woods. The return of the [illegible]. The striking serpent. Audubon's Island. The mangrove wilderness. On the trail of Thoreau. Beaver show Submarine butterflies. Fishing ventures. Natural history in Times Square A memory of the redwoods. A school for fawns. The mystery of the vanishing [illegible]. Hawkways. Dark water World of a wild bee. The cabin of the [illegible]. Wildlife at Walden. The private life of a snowflake. Index.

Note A collection of essays on a variety of subjects by one of the most successful contemporary American interpreters of nature. Several of them have previously appeared in popular periodicals.

BIOLOGY

GENERAL

BONNER, JOHN TYLER

Morphogenesis an essay on development. Princeton Princeton University Press, 1952 296 p. illus. 23 cm. $5.00 1832

Contents: Introduction. Size and pattern. Physics and chemistry in development. Patterns of growth. Patterns of morphogenetic movements. Polarity and symmetry. Patterns of differentiation. An analysis of development. Bibliography. Index.

Note: This study by a member of the faculty of the Department of Biology at Princeton University is primarily an analytical survey of the current state of the knowledge of morphogenesis. The author divides morphogenesis into constructive processes, particularly growth, morphogenetic movements and differentiation, and limiting processes, such as food supply. He draws an analogy between growth and crystal formation but carefully points out that we do not know whether the processes that operate in the growth of crystals also operate in living organisms. The work is substantial enough to be of interest to professional biologists, but the style is not too technical for scientists who are not biologists nor for mature lay readers.

BUTLER, ELMER G., editor

Biological specificity and growth. Princeton Princeton University Press, 1955 233 p. illus. 25 cm. (Society for the Study of Development and Growth. Twelfth symposium, 1953) $5.00 1833

Contents: Ontogeny of the blood and related antigens and their significance for the theory of differentiation, by A. M. Schechtman. Immunobiological approach to some problems of induction and differentiation, by M. W. Woerdeman. Immunogenetics, by M. R. Irwin. Enzyme development as ontogeny of specific proteins, by F. C. Shen. Cellular differentiation and the development of enzyme proteins in plants, by R. Brown and E. Robinson. Some problems of specificity in the sexuality of plants, by J. R. Raper. General aspects of immunological reactions with bacteria and proteins, by J. A. Harrison. Specificity in the relationship between host and animal parasites, by W. H. Taliaferro. Compatibility and incompatibility in tissue transplantation, by H. B. M. Coombs. Specificity in growth control, by P. Weiss. Specificity of nucleic acid [illegible] in embryonic development, by R. Briggs and T. J. King. Index.

Note: Papers presented at a symposium of the Society for the Study of Development and Growth held in 1953 are published in this volume. The central theme is the role of biological specificity in growth and differentiation. The typical paper is a combination of results from the published literature and from recent research in which the author or authors played a prominent part. In some of the papers the recent investigations preliminary and this volume is the first publication of the results reported. All of the papers are written at a professional level and are addressed primarily to graduate biologists. All are accompanied by bibliographies of the literature pertinent to the topic of each paper.

CONN, H. J., AND OTHERS

Biological stains, a handbook on the nature and uses of the dyes employed in the biological laboratory Prepared with the collaboration of various members of the Biological Stain Commission. Sixth edition, revised with the assistance of Elmer H Stotz and Mary A. Darrow Baltimore The Williams & Wilkins Company 1953 367 p. illus. 20 cm. $5.00 1834

Contents: Uses and standardization of biological stains. The general nature of dyes and their classification. The theory of staining. Spectrophotometric and chromatographic analysis of dyes. Nitro and azo dyes. The quinone-imine dyes. The phenyl methane dyes. The xanthene dyes. The natural dyes. Miscellaneous dyes, pigments and biochemical reagents. Neutral stains. Appendixes: Tables relating to stains. Methods for testing biological stains. General laboratory information. Bibliography. Index.

Note: Biological stains are dyes adapted to special purposes, chiefly that of making microscopic objects more clearly visible than they would be unstained. This book is a standard handbook of these special dyes and of related dyes used in biology which are not stains, including medicinal dyes, bacteriostatic agents, and indicators. It is sponsored by the Biological Stain Commission and was formerly published by it. The first edition was published in 1925 and the fifth edition in 1946. In this sixth edition there has been no change in purpose and scope, but considerable material has been added, some of it on new dyes and some of it on biochemical reagents. Other important revisions are the inclusion of a discussion of chromatography and of more information on the identification of stains.

FESSENDEN, G R.

Preservation of agricultural specimens in plastics. Washington D C. Government Printing Office 1949 78 p. illus. 23 cm. (United States Department of Agriculture. Miscellaneous publication no. 679) $0.35 1835

Contents: Introduction. Part I, Preservation of natural color in plant specimens mounted in plastic plates. Equipment and supplies. Types of preserving fluids and their principal characteristics. Collection, storage, and preliminary preparation of specimens. Preparing the specimens for natural color preservation. Preserving and laying out the specimens. Dehydration and preparation for mounting. Mounting between plastic sheets. Care of finished mounts. Part II, Embedment of biological specimens in plastic blocks. Equipment and supplies. Properties of methyl and ethyl methacrylates. Preparation of plastic. Selection of specimens. Preparing specimens for embedment. Casting supporting bases for specimens. Embedment of specimens. Finishing the castings. Care of finished mounts. Literature cited. Patents. Selected bibliography.

Note: Equipment and supplies required for two different methods of preserving agricultural specimens in plastics and the techniques involved are described in this pamphlet. Photographic illustrations show steps in the processes and some samples of results.

GABRIEL, MORDECAI L. AND SEYMOUR FOGEL, editors

Great experiments in biology Englewood Cliffs N J Prentice Hall, Inc., 1955 317 p illus. 23 cm (The Prentice Hall animal science series H Burr Steinbach, editor) $3.75 1836

Note: This anthology, prepared especially for college students in biology and of interest to general readers also, reprints the texts of reports of classical experiments in biology from the earliest days of the introduction of the scientific method to the present time, with convenient chronologies which locate the experiments in their particular places in the history of science. The editors have presented connected sequences in a chain of discovery within a field, in preference to offering representative selections ranging over the entire field. Introductory paragraphs indicate the significance of each experiment. Many of the papers were translated into English especially for this volume, some of them presumably in abridged form, by M. L. Gabriel, O. Jeserich, W. Lewis, and E. R. Wolfe.

GERARD, RALPH WALDO

Unresting cells New York Harper and Brothers, 1949 439 p illus. 22 cm. $4 00 1837

Contents. Out of the nowhere—prologue. Odyssey of an amoeba—simple cell life. Cell substances—protoplasmic chemistry Architecture in miniature—protoplasmic structure. Master craftsmen—enzymes. Molecular traffic—metabolism. Fuel for the lamp of life—energy Action and its consequences—irritability and behavior Through the microscope—cell structure. Reproduction among molecules—specific synthesis. Oaks from acorns—growth, reproduction, and aging. From the general to the particular—differentiation embryogeny Inherited molecules—heredity and genes. Organism—epilogue. Index.

Note A brilliantly written account for lay readers and nonspecialists of the basic life processes. Genes, molecules, enzymes, etc., are discussed rather than the habits and behavior of complex animals. Experimental methods used in gaining such knowledge in biology are described. The latter feature, together with the over-all character of the book, makes it a good introduction for laymen to the methods of modern science. The book was first published in 1940, but publishing difficulties associated with World War II eventually caused it to go out of print. This edition appropriately called a reissue by the publisher has the original text except that errors have been corrected.

GREGG, JOHN R

The language of taxonomy, an application of symbolic logic to the study of classificatory systems New York Columbia University Press, 1954 70 p 21 cm (Columbia bicentennial editions and studies) $2 50 1838

Contents Sets. Sets of ordered pairs, or relations. Hierarchies. An introduction to taxonomic systems. The structure of taxonomic systems. Taxonomic systems and taxonomic categories. Selected bibliography Acknowledgements.

Note. The author of this book proposes application of the terms and rules of mathematical logic to methodological taxonomy The first three chapters are a concise introductory exposition of the applicable terms, concepts and symbols of mathematical logic. The next chapter is an analysis of existing taxonomic systems, and the final two chapters illustrate the construction (or reconstruction) of taxonomic systems according to the rules of set theory The book is potentially of interest to all biologists and is of special interest to those who are primarily concerned with classification. The author is Associate Professor of Zoology in Columbia University

HARVEY, EDMUND NEWTON

Bioluminescence. New York Academic Press, Inc., 1952 649 p illus. 24 cm $13 00 1839

Contents Bacteria. Fungi. Protozoa and Porifera. Calderia Ctenophora. Miscellaneous small groups. Annelida. Mollusca except Cephalopoda. Cephalopoda. Crustacea. Arachnoidea and Myriapoda. Insects except Coleoptera. Coleoptera. Echinodermata. Tunicata or Urochordata. Pisces. Addenda. Bibliography Index.

Note A monograph on the production of light by living organisms, written by one of the world's outstanding authorities on the subject. The arrangement of the book puts the emphasis on the organisms that have been studied, and information on the chemistry of bioluminescence is scattered throughout the book. Passages that contain more than incidental references to chemical processes are indexed under "Biochemistry" in the subject index. The book is of interest first to biologists studying bioluminescence and second to chemists. Among chemists the interest is not limited to those workers investigating the production of light by chemical means but includes chemists concerned with enzymology pharmacology etc. The comprehensive bibliography runs to 76 closely printed pages.

HJORT, JOHAN

The human value of biology Cambridge, Mass. Harvard University Press, 1938 241 p illus 20 cm. $2 50 1840

Contents Philosophy and research. The renaissance. The biological philosophy of the renaissance. Analogies of experience. The study of life. The meaning of species. Mental and physiological experience. Biology and the science of population. Biology and social service. Sociology in the light of biology.

Note This volume is of as much interest to students of sociology and government as it is to biologists. It is based upon the author's work in the marine fisheries and in the whaling industry His research, which has been concerned with population problems in the sea, has made him conscious of the social problems of living populations as distinguished from controlled phenomena in the laboratory The first part of his book is devoted to the history of biological science and its relations to current philosophical systems. The author insists that biology should be interpreted by biologists and should free itself from domination by philosophies derived from physics and mathematics. The method by which it developed as a science seem to him to fit its problems and materials better than those borrowed from the physical sciences. He adds a strong demand for a wider study of population biology the principles of which must be basic to any sound sociology politics, and government.

HOLMES, SAMUEL JACKSON

Organic form and related biological problems Berkeley University of California Press, 1948 169 p 24 cm. $2 50. 1841

Contents. The problem of organic form. Building through functioning. Competition as an integrative factor. The problem of divergent differentiation. Chemical equilibrium and organic integration. How life becomes complex. The regeneration of the blood and its bearing on morphogenic theory The reversal of development. Cancer as a biological problem. Genes versus gradients. The hypothesis of direct adaptation. Autocatalytic enzymes and the origin of life. Recapitulation and its supposed causes. References. Index.

Note. Essentially this book is a collection of more or less unrelated essays on the biological topics which are named in the chapter titles. In most cases, each essay is a critical evaluation of current concepts and theories pertaining to its special subject, but in some there is only discussion of certain interesting aspects, with no attempt to cover the broad topic. Although most of the essays are written so as to be intelligible to educated laymen, they appeal most to persons who have some special training or interests in biology

JAEGER, EDMUND C

A source book of biological names and terms. Third edition Illustrations by Merle Gish and the author Springfield Ill. Charles C Thomas, 1955 317 p illus. 25 cm $5 75. 1842

Note A standard reference book on the origin, meaning and use of the component parts of the scientific names and terms used in biology For each of over 13,000 word elements, including prefixes and suffixes, are shown Greek, Latin, or other origin, meaning and one or more examples of use in scientific terminology Though not lavishly illustrated, there is a fair number of small illustrations. The second edition was published in 1950. The main body of this third edition—that is to say the principal alphabet—appears to be unchanged except for the correction of errors. However a 30-page addendum has been added, 17 pages of which are devoted to another group of terms of the same kinds covered in the main alphabet. Following the supplementary alphabet is a section of short biographical sketches of men in whose honor plants and animals have been given commemorative names, for example, H. B. Rupp whose name is commemorated in the plant genus *Ruppia*.

JOHNSON, FRANK HARRIS, *editor*

The luminescence of biological systems. Proceedings of the Conference on Luminescence March 28–April 2 1954 sponsored by the Committee on Photobiology of the National Academy of Sciences—National Research Council and supported by the National Science Foundation Washington, D C The American Association for the Advancement of Science, 1955 452 p. illus. 24 cm. $7 00 1843

Contents Members of the Conference. Survey of luminescent organisms—problems and prospects, by E. N Harvey. Luminescence

spectroscopy of molecules and the photosynthetic system, by R. [illegible] Becker and M. Kasha. Light emission of delayed light production in green plants, by W Arnold. Fluorescence spectrophotometry of photosynthetic pigments, by C. S. French. Kinetics of chemiluminescence of the 2,3-dihydrophthalazine-1,4-diones, by F C. Wiedemann and others. Spectroscopic investigations of luminescent systems, by C. J. P. Spruit and A. Spruit-van der Burg. Recent studies on the chemistry of Cypridina luciferin, by F. L. Tsuji and others. Biochemistry of firefly luminescence, by W. D. McElroy and J. W. Hastings. Firefly luciferin, by B. L. Strehler. Factors and biochemistry of bacterial luminescence, by B. L. Strehler. Purification and properties of bacterial luciferase, by J. W. Hastings and W. D. McElroy. Inhibition and activation of intracellular luminescence, by F H. Johnson. Physiological control of luminescence in animals, by J. A. C. Nicol. Some reflections on the control of bioluminescence, by J. Buck. Luminous organisms of Japan and the Far East, by Y. Haneda. Ecology of autotrophic marine dinoflagellates with reference to red water conditions, by J. H. Ryther. Bioluminescence in Gonyaulax polyedra, by F. T. Haxo and B. M. Sweeney. Author index. Genera and species index. Subject index.

Note. The conference of which the contributed papers are here published in full was called to consider various types of luminescence found in plants and animals, whether self-luminous organisms or organisms whose light comes from symbiotic luminous bacteria. The authors are eminent biologists, and they addressed themselves to other graduate scientists. The 17 papers, each published with diagrammatic illustrations and bibliographical references, are interspersed in the volume with transcriptions of the chief discussions on the papers which took place at the conference. The preface by the editor synthesizes the papers and their relations to one another.

KEMPTHORNE, OSCAR, AND OTHERS editors
Statistics and mathematics in biology Edited by Oscar Kempthorne, Theodore A. Bancroft, John W Gowen, and Jay L. Lush. Ames Iowa State College Press 1954 632 p. illus. 23 cm. $7.50. 1844

Contents (abridged) General biometrical principles and procedures: Biometry its nature and concepts, by G. W. Snedecor. Multivariate analysis, by H. Hotelling. Efficient and inefficient methods of measuring specific differences, by E. Anderson. Problems in classifying populations, by S. L. Isaacson. Experimental designs in agronomy by W. H. Leonard. The experimental utilization of [illegible] twins, clones, and other genetic subgroups, by M. K. Quenouille. The philosophy of experimentation, by C. W. Churchman. II, Changes in population number: Competition and other interactions between species, by C. L. Chiang. Analyses of populations of mutating bacteria, by F J. Ryan. III, Estimation of populations: General methodology in sampling human populations, by R. J. Jessen. Problems in forest inventory from the statistical point of view by A. A. Hasel. Estimating fish and wildlife populations—a survey of methods, by L. W. Scattergood. On the assumptions underlying estimates of mobile populations, by D. B. DeLury. The growth of human populations, by P. K. Whelpton and R. Gilm. IV Determination of biological response: The quantal response in toxicity tests, by L. C. Miller. Intrathecal assays, by C. I. Bliss. Some statistical aspects of flavor and aroma testing, by J. W. Hopkins. Determinations of the nutritional requirements of dairy animals and swine, by J. K. Loosli. Biomathematical problems of sexual behavior, by J. P. Scott. Genetical analysis of populations: Gene frequencies in nonexperimental populations, by P. Levene. A description of studies on the potential genetic effects of the atomic bombs in Japan, by J. V. Neel and W. J. Schull. Effects of X-rays of different wave lengths on viruses, by J. W. Gowen. Breeding structure of populations, by J. L. Lush and J. F Crow. The cell nucleus in cell growth and division, by C. Leuchtenberger. Bibliography. Index.

Note Papers presented at [illegible] Statisticians Conference held at Iowa State College in June and July of 1 [illegible] are published in this volume. Specialists in biology mathematics, and statistics participated in the conference. Generally speaking, they addressed themselves to graduate and teachers of biology. Forty-four papers are presented in the volume, and the authors and titles of [illegible] selection of them are given above. The 42-page bibliography at the end of the volume [illegible] arranged alphabetically and pertains to the subject of the book as [illegible] whole rather than to that of individual papers.

KINKEAD EUGENE
Spider egg, and microcosm three men and three worlds of science. With an introduction by E. B White. New York Alfred A. Knopf 1955 244 p. 22 cm. $4.50 1845

Contents: Dr Alexander Petrunkevitch, arachnologist. Dr Alexis Romanoff, embryologist. Dr Rene Dubos, microbiologist.

Note: An example of good scientific writing for lay readers. The three parts or essays are biographical in nature, but they are concerned more with the methods and scientific achievements of their subjects than with traditional biographical material. Their effect is not only to make the scientist-subjects appear to be interesting as personalities, but also to make the importance of their activities apparent. The essays were originally published in *The New Yorker* magazine and were revised for book publication.

MINER ROY WALDO editor
Instrumentation. Conference chairman and consulting editor Joseph Greenspan. New York Published by the Academy 1955 807–964 p. illus. 22 cm. (New York Academy of Sciences. Annals Vol. 60 art. 6) $3 00 1846

Contents Part I, The science of instrumentation: Instrumentation research at the National Bureau of Standards, by W. A. Wildhack. Medical research instrumentation, by R. L. Bowman. The relationship between the process of measurement and instrumentation in biology by H. J. Morowitz. Measurement as [illegible] human activity by J. D. Trimmer. Part II, The translation of instrument requirements and specifications: Contribution of the atomic age to instrumentation, by V. L. Parsegian. Instrument requirements and specifications in bioelectric recording, by H. Grundfest. Instrumentation problems encountered in clinical research, by D. A. Holaday. General and specific problems involved in diagnosis and research by means of electronic instruments in [illegible] large general hospital, by R. S. Schwab. Instrumentation requirements in sensory aids, by W. E. Frank. Part III, Some examples of the use of analog instruments: An analog computer for studying biological systems, by C. C. Yang. Electric analog computers—classification, design, and application, by V. Paschkis. Transducers in instrumentation, by D. E. Kerr. Construction and application of membrane analogs, by W. E. Rogers. The application of the electrolytic tank to the solution of potential field problems, by C. Hechtmueller. Field mappers as visual analogs for potential fields, by A. D. Moore. Concluding remarks, by J Greenspan.

Note The papers presented at [illegible] conference held by the Section of Biology of the New York Academy of Sciences in October 1954 have been published in this monograph. The general topic of the conference was instrumentation in biological research and medicine rather than instrumentation in general, as the title might be taken to indicate. The sub-topics are obvious from the titles of the parts and of the individual papers. Biological applications of developed instruments and instrumental needs are both discussed. Short lists of literature references are included for most of the papers.

QUASTLER, HENRY editor
Essays on the use of information theory in biology Associate editors Leroy Augenstine, Robert M. Baer Eleanore B Carver James W Osborne, Kenyon S. Tweedell. Urbana University of Illinois Press, 1953 273 p. illus. 22 cm. $4 00 1847

Contents Section I, Definition and measurement of "information": Some fundamentals of information theory by S. Goldman. Statistical information, by R. A. Fisher. Information and physical entropy by M. Linschitz. Information and thermodynamic entropy, by L. Augenstine. Some general remarks on information theory and entropy by R. M. Baer. A definition of information from the thermodynamics of irreversible processes, by H. R. Branson. The measure of specificity by H. Quastler. Section IIa, Fundamental biological units—structural analyses: Remarks on Pauling's protein models, by L. Augenstine. Information theory and the structure of proteins, by H. R. Branson. A search for intersymbol influences in protein structure, by L. Augenstine and others. Structural interpretation of denaturation data, by L. Augenstine. Section IIb, Fundamental biological units—functional analysis: Protein synthesis and immunochemistry by F Haurowitz. Genes and antigens, by M. R. Irwin. The specificity of elementary biological functions, by H. Quastler. Section III, Bio-systems: The control of the blood sugar level, by D. E. Bergsten and others. Biological systems and information dynamics, by R. M. Baer. Identical twinning and the information content of zygotes, by K. S. Tweedell. The information content of [illegible] bacterial cell, by H. Linschitz. The information content and error rate of living things, by S. M. Dancoff and H. Quastler.

Note A volume of short, technical papers pertaining to entropy in biological systems and processes. The papers in the first section discuss the basic concepts of information theory and definitions. The others discuss those areas of biology indicated in their titles. The volume is a product of a course of lectures and discussions sponsored by the Control Systems Laboratory at the University of Illinois in 1952 It is of interest primarily to graduate biologists who wish an introduction to information theory in relation to their science, and secondarily to scientists who wish to keep abreast with all development in information theory

RUDNICK, DOROTHEA, editor
Aspects of synthesis and order in growth Princeton Princeton University Press, 1954 274 p illus 24 cm (Society for the Study of Development and Growth. Thirteenth symposium, 1954) $6 00 1848

Contents Part I, Physical chemical considerations The duplication of molecules, by L. Pauling. The biosynthesis of proteins and peptides, by J S. Fruton. Part II, Intrinsic and extrinsic growth controls The plasticity of enzymatic patterns in microbial cells, by R. Y Stanier Some aspects of protein biosynthesis in development, by J D Ebert. Review of the pleiotropic effects of W-series genes on growth and differentiation, by E. S. Russell. Virus-induced metabolic transformations and other studies on unbalanced growth, by S. S. Cohen. Photoresponsive growth, by S. B Hendricks and H. A. Borthwick. Part III, Morphogenetic pattern controls The biology of water molds, by R. Emerson. Studies on the organizer center of the early chick embryo by N T Spratt jr Tissue interaction in the morphogenesis of mouse embryonic rudiments in vitro by C. Grobstein. Humoral agents in insect morphogenesis, by D Bodenstein. Index.

Note Papers presented at a symposium of the Society for the Study of Development and Growth in Hanover New Hampshire, on June 23–26, 1954 have been collected in this volume. Most of the papers are reviews of recent research, and some remarkable advances in the understanding of growth processes are recorded. A majority of the papers are devoted to topics which are distinctly biochemical in nature.

SINNOTT, EDMUND WARE
Cell and psyche the biology of purpose Chapel Hill University of North Carolina Press, 1950 121 p 21 cm $2 00 1849

Contents Introduction. Organization the distinctive character of all life. Biological organization and psychological activity Some implications for philosophy Suggested readings. Index.

Note. In this short book an internationally famous botanist presents the view that body and mind are two aspects of the same biological phenomena. In other words, the evolution of living organisms and the development of man's mental qualities and even the individual traits of persons are all manifestations of a basic quality of protoplasm which has as its purpose the survival of living organisms. Although essentially a philosophical view the argument is solidly based on biological science. The contents of the book were first delivered as John Calvin McNair Lectures at the University of North Carolina.

SPECTOR WILLIAM S
Handbook of biological data. Prepared under the direction of the Committee on the *Handbook of Biological Data, Division of* Biology and Agriculture, The National Academy of Sciences the National Research Council Philadelphia W B Saunders Company, 1956 584 p 28 cm $7 50 1850

Contents (abridged) I, Biochemical and biophysical characteristics Standard solutions—pHs Oxidation-reduction (Redox) potentials. Amino acids—ionization constants and pH values. Bile acids—physical and chemical characteristics. Enzymes—chemical composition. The protoplasmic surface—physical, chemical, and electrical characteristics. Changes in stored preserved blood. Cerebrospinal fluid—physical and chemical characteristics. Tears, physical and chemical characteristics—man. Shoots, leaves, seeds—mineral composition. II, Genetics, cytogenetics, and reproduction Chromosome numbers. Cell division frequency—microorganisms. Blood groups and factors—distribution in various populations. Genetic linkage—man. Fertility and infertility—hybrids. Breeding habits—mammals. Ovum morphology—vertebrates. Pregnancy tests—man. Breeding systems—plants. Seed production dormancy and germination—forest trees. III, Development and morphology Size and growth rate—trees, shrubs. Growth rates—plant tissue cultures. Distribution and size of stomata—leaves. Prenatal development, reflex and spontaneous motor activities—mammals. Summary development characteristics—mammals and birds. Body and organ weights—vertebrates. Body weights—insects. Surface area relationships—mammals. Height and weight—man, North America. Temperature effect on life span—seeds. IV Nutrition, digestion, and metabolism. Foods of plant origin—composition. Foods of animal origin—composition. Nutrient losses in cooking. Daily nutrient allowances—beef and dairy cattle. Synthetic culture media—plants. Effect of soil reaction on availability—chemical elements. The Krebs cycle. Pathways of biosynthesis—chlorophyll. Metabolic rates—soil organisms. Comparative standards of basal metabolism—man. V, Respiration and circulation: Respiration rates—animals—plants. Lung ventilation—vertebrates. Artificial respiration—manual. Blood gases—man at atmospheric characteristics—various altitudes. Heart rates. Effect of inorganic ions and pH on the heart. Pulse characteristics and configurations. Blood flow tissues and organs—mammals. Fluid circulation—theories. VI, Other physiological activities and performance Muscle—physical properties. Nerves—man. The visual mechanism—morphology and physiology Bioluminescence. Water balance—animals. Hibernation—vertebrates. Physical training, effects—man. Antimetabolites. Herbicides—physical, chemical, and biological characteristics. Alkaloids—occurrence, physical, chemical, and biological characteristics. VII, Environment and survival Tolerance to extremes of heat and cold—animals. Effects of hypothermia—man. Vitality tests—seeds. Salt tolerance—plants. Shade tolerance—shrubs and herbaceous plants. Effect of light, with temperature interactions, on flowering of plants. Radioisotopes used in biological research. X-radiation—protection. Background and non-occupational exposures to ionizing radiation—man. Radiation biology—plants. IX, Symbiosis and parasitism. Alimentary tract microorganisms. Arthropods in relation to disease—man. Selected disease viruses—animals and bacteria. Selected protozoan and helminthic parasites—vertebrates. Selected fungal parasites—man. X, Ecology and biogeography Population, registered deaths and death rates, by race and sex—U S. A. 1906–1954 Average remaining lifetime in years at specified ages, by race and sex—U S. A. 1900–1953 Life expectancy—man, various nations. Sex ratios—animals. Sea water—characteristics. Appendices: Taxonomic classification—animals Taxonomic classification—plants. Estimated number of species—animal, plant kingdom. World weather extremes. Index.

Note. A well-sponsored, authoritative reference book. It consists almost altogether of tables, of which a somewhat random sampling is listed by title in the above contents. The total numbers of tables in the respective parts are Part I, 71 Part II, 41 Part III, 47 Part IV 64 Part V 48 Part VI, 85 Part VII, 371 Part VIII, 51, Part IX, 15 Part X, 14 and appendices, 7 All of the data were critically evaluated by experts. The names of the contributors and reviewers are given. Literature references also are given for tables taken from previously published literature. The subject index was expertly made and is fully detailed. Though printed four columns to the page, it runs to 39 pages.

SURVEY OF BIOLOGICAL PROGRESS Volume I. George S Avery, jr editor-in-chief New York Academic Press, Inc., 1949 396 p. illus 24 cm. $7.50 1851

Contents Teaching biology today by H. R. Creighton. The gene and gene action, by B Glass. Tracer methods in biological research, by M. D Kamen. Nutrition and reproduction by K. E. Mason. Growth and development, by H P Costello. Virus tumors, by L. M. Black. Hormones and the differentiation of sex, by R. K. Burns. Growth hormones and tissue growth in plants, by P R. White. Newer methods in the rapid development of disease-resistant vegetables, by W A. Frazier Influence of environmental factors on the vitamin content of food plants, by K. C. Hamner. Ecological studies on populations, by G. E. Hutchinson and E. S. Deevey Jr. Author index. Subject index.

—— Volume II George S Avery Jr., editor in-chief New York Academic Press, Inc., 1952 333 p illus 24 cm. $7 00 1852

Contents Effect of radiations on biological systems, by A. H. Sparrow and B A. Rubin. Progress in human genetics, by H Kalmus. Biological oceanography by G. A. Riley Morphogenesis in plants, by E. Bünning. The control of plant growth by the use of special chemicals, with particular emphasis on plant hormones, by L. G Nickell Histochemistry by F Moog. The fine structure of protoplasm, by L. H. Bretschneider Physiology of reproduction in plants, by A. W Naylor. Author index. Subject index.

Note: The first two issues of the new series that follows [illegible] pattern which is rather thoroughly established in several fields of science. Each of the papers is in effect a monograph of the current knowledge of its special subject. It is based on an extensive survey of the pertinent literature, and careful citations are made from the text to the bibliography. The main purpose of the series is to enable graduates to keep informed about the progress in areas in biological research other than their own.

GENERAL TEXTBOOKS

ALEXANDER, GORDON
General biology New York Thomas Y Crowell Company 1956. 881 p. illus 24 cm. $6 75 1853

Contents (abridged) Part I Introduction—fundamental principles. Part II, Metabolism and irritability in vertebrates. Part III, Reproduction and development in vertebrates. Part IV Metabolism and irritability in higher plants. Part V Reproduction and early development in higher plants. Part VI, Heredity Part VII, Survey of the animal kingdom. Part VIII, Survey of the plant kingdom. Part IX, Distribution Ecology Geographic distribution. Conservation. Part X, Organic evolution Organic evolution—evidences—methods. Evolution and mankind. Index.

Note A comprehensive college textbook of biology Distinctive features include an extensive account of the frog for the supplementation of laboratory study, the adoption of new interpretations of animal and plant classification, general principles illustrated with both plant and animal materials, ecology treated as a major division of biology, suggestions of unsolved problems for future investigation, summary and series of review questions at the end of each chapter. The author is professor and Chairman of the Department of Biology at the University of Colorado.

BAITSELL, GEORGE ALFRED
Human biology Second edition. New York McGraw Hill Book Company Inc., 1950 730 p. illus 24 cm. (McGraw Hill publications in the zoological sciences E. J Boell, consulting editor) $6.50. 1854

Contents (abridged) The world of life. Protoplasmic activities. Organization of the human body Biology of nutrition. Biology of respiration. Biology of secretion. Biology of excretion. Biology of the circulatory system. Biology of the skeletal system. Biology of the muscular system. Biology of the nervous system. Biology of growth and reproduction. Biology of inheritance Human heredity The web of life Biology of cancer. Appendix. Index.

Note A successful textbook for introductory college courses in biology Man rather than lower organisms is used as the chief example of life so as to take advantage of the greater interest in man on the part of beginning students. However many other organisms are discussed at appropriate places. The book includes as an appendix a useful cyclopedic arrangement of information in which advanced information on biological developments and personalities is included, along with discussions of such topics as enzymes. Substantial revisions and additions have been made in this edition.

BROWN, RELIS B
Biology Illustrated by R. Paul Larkin. Boston. D C Heath and Company 1956. 658 p. illus (part col'd) 23 cm. $6 75 1855

Contents Introduction. *Part I* Human biology The skeletal system. The muscular system. The digestive system. The respiratory system. The circulatory system. The excretory system. The nervous system. The endocrine system. The reproductive system. Embryology Cell division. Genetics. Part II, The plant kingdom Thallophyta—algae and bacteria, fungi, algae. Bryophyta. Pteridophyta. Spermatophyta—gymnosperms, angiosperms, dicotyledons, angiosperms, monocotyledons. Part III, The animal kingdom Protozoa. Coelenterata. Platyhelminthes and nemathelminthes. Annelida. Arthropoda. Mollusca. Echinodermata. Chordata. Part IV Evolution History of the theory of evolution. Evidence for the evolution theory The evolution story *Part V* Living together Food getting. Relations of organisms. Biogeography of the United States. Heredity and biology Glossary Index.

Note The author of this introductory college text has selected and organized the material so as to present first the human organism as a familiar and interesting example of how a living organism meets the demands of its environment. The different varieties of plant and animal life are then described against this background. Forms of life commonly available for observation are described as living things, not merely as reference frames for the illustration of principles. In the fourth and fifth parts of the work, some of the principles and information presented in the first three parts are used to set the broad evolutionary and ecological concepts. At the end of each chapter two kinds of questions are included: "review questions" to encourage the student to test his grasp of the material and "general questions" to encourage him to see beyond the material and to develop his scientific imagination and vision. An extensive glossary is included. The illustrations are outstanding in plan and detail.

DE LAUBENFELS, MAX WALKER
Life science Fourth edition containing 1024 illustrations 748 drawings by the author 276 photographs. New York Prentice Hall, Inc., 1949 407 p. illus. 29 cm. $6 95 1856

Contents (abridged) I, General biology Biology Biophysics Biochemistry Cytology Embryology Histology II, Human biology Anatomy Physiology Psychology Hygiene Immunology Dietetics. III, Plant biology Botany Phytophysiology Taxonomy Agriculture Forestry IV Animal biology Zoology Oceanography Parasitology Entomology Zoogeography V Social biology Ecology Genetics Eugenics Paleontology Anthropology Philosophy Index.

Note Among the outstanding features of this introductory college text are the large coverage, the exceptionally high number and excellence of the illustrations, and the author's easily read style. The expositions of such topics as heredity vs. environment are so well put that laymen can read the book with pleasure and profit without the aid of an instructor. Annotated reading lists are included.

ETKIN, WILLIAM
College biology Line drawings by Gottfried W Goldenberg. New York Thomas Y Crowell Company 1950. 806 p. illus. 24 cm. $6.25 1857

Contents Part I, The mechanism of our bodies Objectives of biological study The processes of living. The chemical machinery of the body. Part II, Behavior Movement. Irritability The nervous system. Hormones. Behavior patterns. Part III, The individual and the species. Reproduction. Development and growth. Mendel and the laws of heredity Gene action and development. Part IV Plant nutrition and the interdependence of organisms. The basic importance of green plant cells. The physiology of higher plants. The role of bacteria and fungi in nature. The organic community Parasitism and disease. Part V The evolution of plants The thallophytes. Vegetative evolution of higher plants. Evolution of reproduction in higher plants. Part VI, The evolution of animals Evolution of the arthropods. Evidence in invertebrate evolution. Vertebrate ancestry The evolution of mammals and man. The mechanics and control of evolution. Appendix Basic concepts from chemistry and physics. Bibliography Reports on experiments illustrated in figures. Glossary. Index.

Note The content and presentation in this textbook follow recommendations of the Committee on Basic Concepts in Biology of the Carnegie Foundation for the Advancement of Teaching, of which committee the author was a member. The style is concise but lucid. Basic principles, including physiological and biochemical principles, are emphasized, and selected experiments which resulted in advances in biological knowledge are described. Some of the figures are accompanied by detailed legends which provide information for laboratory experiments. These enabled the author to dispense with much purely descriptive material. All of the illustrations are of excellent quality

GARDINER, MARY SUMMERFIELD
The principles of general biology New York The Macmillan Company 1952 657 p. illus. 26 cm. $6.50 1858

Contents (abridged) Section I, The organization of the natural world The development of modern biology Matter and energy. Atomic combinations and chemical reactions. Protoplasm and the cell. Section II, The organization of biological systems The classification of biological systems and the divisions of biological science. Systems below the level of tissue organization. The vascular plants. The tube-within-a-tube plan of metazoan organization. The arthro-

pods. The Chordata. Integrating tissues of the vertebrate body Section III, The operation of biological systems Nutrition—the utilization f food. The dietary requirements f heterotrophs. Metabolism and its regulation. Growth and regeneration—fission, budding and parthenogenesis. Gametic reproduction. The inheritance of the individual. Section IV The evolution of biological systems The doctrine of organic evolution. Index.

Note The title and the content of this textbook for introductory college courses indicate the author's purpose f presenting well-rounded picture with emphasis on principles. There are long discussions of such aspects as nutrition, whereas the discussions of classification are much shorter than in some introductory texts. There is an adequate umber of illustrations, but not a lavish display such as is found in some contemporary textbooks in this field.

HARBAUGH, M J, AND A. L GOODRICH, editors

Fundamentals of biology, edited by M J Harbaugh and A. L Goodrich Contributors P L Gainey, A L Goodrich, M J Harbaugh, H. H. Haymaker, R H Painter, and E J Wimmer New York The McGraw Hill Book Company, Inc., 1953 611 p illus (part col'd) 23 cm $6 50 1859

Contents The nature, value, and scope of biology The living world about us. Naming and classifying plants and animals. The substance of life. Growth and differentiation in plants and animals. Food synthesis and utilization in plants. Digestion. Distribution and related phenomena. Respiration. Excretion and osmotic control. The framework of organisms—its origin and function. Motion and locomotion. Coordination, neural and chemical. Reproduction. Heredity Evolution. Organisms in relation to the environment. Parasitism, pathogenicity and some closely related phenomena. Disease, immunity and disease control. Conservation of natural resources. Appendix. Index.

Note This textbook was written by team of six professors on the faculty of Kansas State College and is designed for two-semester course covering the general field of the biological sciences and emphasizing man place in the living world and his dependence upon living organisms. The work was produced, following the adoption of four basic considerations as follows for the content of such course (1) the course should be general in nature and should emphasize basic principles rather than non-essential details (2) the unity of lif should be stressed (3) the basic manifestations f life are portrayed most clearly in their physiologic or functional activities (4) the position occupied by man in the world f life should be emphasized. Each chapter and each paragraph of the book is the collaborative result of all the authors, acting as committee.

HARDIN, GARRETT

Biology its human implications Second edition Illustrations by Evan L. Gillespie San Francisco W H. Freeman and Company 1952 720 p illus 24 cm (A series of biology texts editors, George W Beadle and others) $6 25 1860

Contents (abridged) Part I, Introduction to the science of biology Part II, The measure of man Skeletal and muscular systems f man. The breathing system. Digestion and utrition. The circulatory system. The endocrine organs. Disease antibodies blood transfusions. Nervous impulses, consciousness, and reflex action. The organism as whole. The senses. Human reproduction. Part III, Heredity The particulate nature of inheritance Genetic aspects of some human problems Sex and genes. Interactions of heredity and environment. Part IV Evolution and the living world The theory of evolution. Names and sizes of organisms. The conquest of the land by plants. Some aspects of reproduction and evolution in plants. Some invertebrate animals, and evolution to the land. Part V The web of lif What is life? The transformations f matter in nature. Energy and population problems. Man—evolution in the future. Bibliography Index.

Note In this textbook for introductory college courses the emphasis is on general principles and on their significance for man A considerable umber of topics not ordinarily discussed in introductory texts—for instance, the logic of blood tests in cases of disputed paternity—are discussed. On the other hand little space is given to systematics. The book is well illustrated and adequately indexed.

JEAN, FRANK COVERT, AND OTHERS

Man and his biological world. Revised edition. By Frank Covert Jean, Ezra Clarence Harrah, and Fred Louis Herman. With the editorial collaboration of Samuel Ralph Powers Boston Ginn and Company, 1952. 630 p illus 24 cm $5 75 1861

Contents (abridged) Unit one Lif became associated its protoplasm, which requires constant supply of food. Unit II, Living organisms must provide for the perpetuation of their own kind. Unit III Living things must adjust themselves to their environment. Unit IV Science has made great discoveries relative to the cause and control of disease. Unit V Synthesis and decomposition form a cycle in nature. Unit VI, The adaptations of plants and animals have been seriously disturbed by man. Unit VII, Living organisms have evolved in response to changing environment. Unit VIII, Mendel discovered genetic principles which make possible the improvement of all living species. Unit IX, Man's cultural development moved slowly at the outset but has been greatly accelerated by science and invention. Glossary Index.

Note An illustrated textbook written by three professors at the Colorado State College of Education for use in general survey courses in biological sciences. The uthors present the subject as one of importance to the individual student in locating himself in the universe and ordering his own life and not merely as body of knowledge to be absorbed. They also emphasize the importance of supplementing the text with field trips, readings, classroom discussions, teacher demonstrations, lantern slides, selected motion pictures, and other modern visual aids. Each of the chapters concludes with lists of questions for study and bibliographical references.

KENOYER, LESLIE, AND OTHERS

General biology Third edition By Leslie A. Kenoyer, Henry N Goddard, and Dwight D Miller New York Harper & Brothers, 1953 662 p. illus 24 cm. $6 00 1862

Contents (abridged) The cellular structure of organisms. The formation of new cells from old cells. Chemical and physical aspects of living things. Metabolism. Protozoa—one-celled animals. Introduction to the multicellular animals. Sponges and coelenterates. Mollusks. The crayfish and other crustaceans. Air-breathing arthropods. Echinoderms. Chordates. Vertebrate morphology and physiology Animal ontogeny The plant kingdom. Thallophytes. Bryophytes—mosses and liverworts. Vascular plants. Genetics. E olution. The organism and the environment. Conservation. Appendix: Classification of organisms. Glossary References. Index.

Note. An established textbook used in first courses in biology in undergraduate colleges. A well-rounded, general view of biological science is presented. The book is well illustrated, and the style is readable. Inclusion of numerous references to plants and animals that are readily available for observation is one of several devices used to make the book attractive to beginning students. The first edition was published in 1937 and the second edition in 1945. In this third edition—on which the name of a new co-author appears—there has been much rearrangement and rewriting. A selection of recent literature has been added to the list of references. There are now 443 figures f which considerable umber are reproductions of photographs.

MARSLAND DOUGLAS

Principles of modern biology A complete reconstruction and modernization of Charles R. Plunkett's *Elements of modern biology* revised edition New York Henry Holt and Company 1951 757 p illus 25 cm 1863

Contents (abridged) Part I, The cell Protoplasm, the cell, and the organism. Cell division in relation to reproduction. The chemical and physical structure of protoplasm. Enzymes—speed and order in cell chemistry Osmosis—material exchanges between the cell and the environment. Cells and their nutrition. Responsiveness in single cells. Part II, Multicellular plants: Reproduction in multicellular plants. Nutrition of multicellular plants. Part III, Multicellular animals, especially man Embryonic development—origin of organs and tissues. The digestive system in man and other multicellular animals. The circulatory system. Absorption, metabolism and the diet. Respiration. Excretion. Reproduction in multicellular animals. The

ductless glands. Responses of higher animals. Part IV Heredity and evolution. Natural selection—the origin of species. The consequences of evolution. Ecology and evolution. Appendices: Classification of organisms. Glossary. Index.

Note: A standard textbook for introductory college courses. The biology is emphasized, but the view given of the living world is sufficiently broad to meet the needs of the intended readers. In this edition a considerable number of illustrations are revised or newly added, there is a new chapter on ecology and evolution, and new discussions of such topics as virology and antibiotics. A third edition was published in 1947 412 p., $4.50.

Mavor, James Watt

General biology Fourth edition. New York The Macmillan Company 1952 875 p. illus. 24 cm. $6 50 1864

Contents (abridged) Part I, The nature of life. The scientific method and its application to biology. The general characteristics of living things. The classification of plants and animals. The cell. Protoplasm. Part II, Plant life: The thallus plants. Bacteria. Liverworts and mosses. The ferns and their relatives. The alternation of generations and its significance. Seed plants. Plant physiology. The economic importance of plants. Part III, Invertebrates: Unicellular animals. Saclike animals with ectoderm and endoderm. Flatworms. The round worms. The segmented worms. The arthropods. Part IV Vertebrate anatomy and physiology based on the frog and man: External features, skeleton, joints, muscles, and body cavity. The digestive system. The respiratory and excretory systems. The circulatory system. The nervous system. The sense organs. The endocrines. Reproduction. Part V Development and heredity. Part VI, The organic world and its evolution. The history of life on the earth. The history of the theory of evolution. The evidences for organic evolution. The mechanism of organic evolution. Early man. Appendix: A synoptic table of the plant and animal kingdoms. Reference and background material in chemistry. Glossary. Index.

Note: An established textbook for use in full-length introductory college courses. The treatment places emphasis on the scientific method and stresses phenomena and facts which can easily be verified in the college laboratory or from common experience. In the present edition there has been some reorganization, also some revision, and some addition of material that did not appear in the third edition. A considerable number of new illustrations have been added.

Milne, Lorus Johnson, and Margery J Milne

The biotic world and man. New York Prentice-Hall, Inc. 1952 588 p illus. 26 cm. (Prentice-Hall biological science series Henry Burr Steinbach, editor) $7.00. 1865

Contents: Approach to biology. The variety of life. The basic materials of life. Energy relations of life. Water relations of life. The form of life: single cells and smaller—multicellular plants—multicellular non-chordates—chordates. Chemical coordination. Factor coordination and behavior. Carriers of heredity. Development of the individual. The abundance of life. The bounds of life. The history of life. The value of life. Looking toward the future. Index.

Note: A college textbook for first courses in biology. The authors emphasize a grasp of the main features of biological panorama rather than the memorizing of the details of classification. Much more space is devoted to functions than to form. The book is written in a clear, factual style that holds the reader's interest, and it is very well illustrated.

Moment, Gairdner B

General biology Second edition. New York Appleton-Century-Crofts, Inc. 1950 680 p. illus. 25 cm. (The Century biological series Dwight E Minnich, editor) $5.50 1866

Contents (abridged) Foundations of biology. Classification of the living world. Universal characteristics of living things. Survey of plant types and ways of life. Plant life—conduction, support, and absorption—metabolism—reproduction—behavior and growth. Relationships of plants and animals. Animal types. Animal life—nutrition—[illegible]—nervous coordination—sense organs—hormonal coordination. Reproduction. Development. Heredity. Evolution—the origin of species. History of life on this planet. Classification of the plant and animal kingdoms. Glossary. Index.

Note: An introductory textbook of inclusive scope. Particular attention is given to the experimental evidence upon which the facts and principles of modern biology rest. Throughout the book human biology is related to the biology of other forms of life. It is generously illustrated. The previous edition was published in 1942. In preparing this edition the author added many new illustrations, a considerable amount of new text, and revised the reading lists.

Pauli Wolfgang F

The world of life, a general biology Boston Houghton Mifflin Company 1949 653 p. illus. 25 cm. (Under the editorship of Bentley Glass) $6 75 1867

Contents: Part one, Backgrounds—the physical world. The universe, the home of life. The behavior and structure of matter. Part two, The nature of life. Metabolism and nutrition. The cell—the unit of structure and behavior. Part three, The principle of evolution. The theory of evolution. The story in the rocks—a survey. The mechanism of evolution. Part four. The world of plants. Primitive plants—bacteria, algae, and fungi. Plants invade the land—mosses and ferns. Full conquest of the land—the seed plants. Specific adaptations of flowering plants. Part five, The rise of animal life: The first animals—Protozoa. Rise of the metazoan pattern—sponges and coelenterates. The metazoans diversify. The highest invertebrates—the arthropods. Forerunners of the vertebrates—echinoderms and primitive chordates. Part six, The vertebrates. The vertebrate pattern—framework and coordination—principal organ systems. Vertebrates in the water—fishes and amphibia. The great transition—reptiles and birds. Mammals—the highest vertebrates. Man, the supreme mammal. Part seven, The bridging of yesterday, today and tomorrow. The physical basis of heredity. Human genetics and eugenics. Appendices: Classification of plants and animals. Biological terms. Index.

Note: A broad, interesting introduction to biology is provided in this college text. Evolutionary rather than taxonomic aspects are stressed, but otherwise there is no overemphasis. The style is straightforward and clear. There are 324 well selected illustrations and a useful glossary of the technical terms of biology.

Rogers, J Speed, and others

Man and the biological world by J Speed Rogers, Theodore H Hubbell C. Francis Byers, with illustrations by William L. Brudon. Second edition. New York Mc Graw Hill Book Company Inc., 1952 690 p. illus. 24 cm. $6 75 1868

Contents (abridged) Part I, The individual organism. The organization of the individual. A, The human body. B, The individual plant. C, The varied patterns of individual organization. Part 2, The continuity of the race: A, Reproduction. B, Inheritance and variation. Part 3 The changing generations. The evolutionary concept. The geological background of evolution. The history of plants. Ancient animals. Man's relatives: the primates. The human species. Part 4 The economic and social interrelationships of organisms. The physical environment of organisms. The biotic environment of organisms. Summary: man and the biological world. Appendix. A survey of the kinds of organisms: The plant kingdom. The animal kingdom. List of visual aids. Index.

Note: A textbook for survey courses in the biological sciences offered to freshmen and sophomore college students. Biological principles are presented, together with the data and reasoning upon which they are based. In this second edition, the discussions of animals and animals and the whole section on evolution have been completely rewritten and brought up to date. Other portions of the book have been revised in the light of recent studies, and there has been some rearrangement of chapters. There is an entirely new set of drawings especially planned and executed for this second edition.

Shull Aaron Franklin

Principles of animal biology with the collaboration of George R. Larue and Alexander G. Ruthven. Sixth edition. New York Mc Graw Hill Book Company Inc., 1946 425 p. illus. 24 cm. (McGraw Hill publications in the zoological sciences A. Franklin Shull, consulting editor) $6.00 1869

Contents The growth and scope of biology Primary organization of living matter Some fundamental physics and chemistry The functions of protoplasm and cells. Cell division. From one cell to many cells. Basic organization of the metazoa. Physical support and movement. Sources of energy and materials. Respiration and release of energy Transportation system. Disposal of wastes. Integration of activities. Reproduction. The breeding behavior of animals. Embryonic development. Genetics. Principles of taxonomy The groups of animals. Animals and their environment. Geographic distribution. Fossil animals. Modification of species. Glossary Index.

Note. This introductory college text discusses the principles of animal biology under such headings as morphology physiology ecology taxonomy geographic distribution, paleontology and evolution. Function is emphasized in order to interest the student in living mechanism, and material on this subject is scattered through the physiological portions of the book. In this edition, there has been some rewriting, and further emphasis is given to function in such sections as those dealing with enzymes, photosynthesis, oxidation, breathing movements, blood composition vitamins, and reflex arcs. Other changes include more detailed discussion of historical zoogeography and prehistoric man, and the addition of marine habitats in the chapter on ecology Names of the phases of mitosis, omitted in the third edition, have been restored.

STANFORD, ERNEST ELWOOD

Man and the living world Second edition New York The Macmillan Company, 1951 863 p illus 22 cm $6 25 1870

Contents (abridged) Unit I, Science and living things. Unit II, The green plant—manufacturer of foodstuffs and of raw materials for industry Unit III, The human body—its structures and functions. Unit IV The maintenance and health of the body—foods, nutrition poisons, and disease. Unit V Microorganisms and their relation to human life. Unit VI, A survey of the animal kingdom. Unit VII, A survey of the plant kingdom. Unit VIII Evolution and heredity Unit IX, Domestication and breeding of plants and animals. Unit X, The biological resources of the United States and their utilization The soil. Forest resources of the United States. Conservation of wild life. Index.

Note A textbook designed for use in introductory courses in biology It offers the beginning student view of not only the nature of biology but also of the applications of biological sciences in many fields, such as nutrition, public health, zoological and botanical systematics, the study of heredity breeding of domestic animals, and conservation of natural resources. Both the text and the illustrations are designed to hold the attention of the beginning student. The first edition was published in 1940. The general plan and a considerable part of the contents of the book remain unaltered in this edition. However information was added on a number of topics, such as the effects of radiation on heredity in human beings. Also, historical and economic data were brought down to the date of publication. There are now 437 figures.

STAUFFER, ANDREW, editor

Introductory biology Second edition Authors Nelly J Bosma E C Colin R. Clark Gilmore S W Howe, W Henry Leigh, P Meglitsch, H C Nelson, J F Schuett, Andrew Stauffer J P Wessel New York D Van Nostrand Company Inc 1954 802 p illus 23 cm $6 85 1871

Contents (abridged) I Introducing living organisms—basic biological concepts. II, How organisms secure food. III, How organisms transport materials within their bodies Types of transporting mechanisms. Corpuscles or cells of the blood. The blood vessels. The flow of the blood. Exchange of materials between the blood and the cells. Disorders of the circulatory system. IV How organisms utilize food and excrete wastes Respiration in man. Muscles as users of energy The role of the skin in metabolism and health. V How organisms coordinate their activities. The endocrines of vertebrates. The hormones of plants. The mechanism of nervous coordination. The basis of human behavior VI, How organisms reproduce The simpler methods of reproduction. Sexual reproduction among land plants Sexual reproduction among animals. Embryonic development of animals in general. Human embryonic development. VII, How organisms inherit One pair of alleles. The factor principle. Multiple alleles. Chromosomes in inheritance. Heredity and environment in development. The hereditary improvement of plants and animals. Heredity in man. VIII, How organisms evolve Domestication and breeding. Comparative studies of living things. The fossil record. The Linnaean system of classification Ancestral relationships among animals. Ancestral relationships of plants. Factors involved in evolution. Historical theories of evolution. IX, How organisms live with one another Some environmental factors. Food-getting relationships. The cycle of elements. Life succession. The conservation of soil. The conservation of forests. Conservation of wild life. The principal biotic formations. X, How man may live healthfully Basic items in healthful living. How to control disease. Food and water as sources of disease. Public health organization. Glossary Index.

Note In this college textbook for introductory courses, emphasis is placed upon the similarities of functional processes in plants and animals and upon the unity found in the whole living world. In the second edition, many chapters have been rewritten, the organization within the units has been changed, and new illustrations have been included.

STRAUSBAUGH, PERRY D , AND BERNAL R WEIMER

General biology Third edition New York John Wiley & Sons, Inc., 1952 813 p. illus. (part col'd) 22 cm $6 50 1872

Contents Biology and the scientific method. Life and living things, protoplasm. Metabolism The manufacture of food, the food-manufacturing plant. Photosynthesis. The digestion and absorption of food. Foods and their uses. Vitamins. Transportation and distribution of food. The release of energy Respiration. Elimination of wastes. The carbon and nitrogen cycles in nature. Coordination and adjustment to environment chemical coordination Adjustment to environment: Nervous coordination. Receptors. The adjustment mechanisms. Adjustment in plants and simple animals Growth. Reproduction in plants. Reproduction in animals. Development of the individual embryology The mechanism of heredity Human heredity and eugenics. Classification and naming of animals and plants. taxonomy Invertebrates Protozoa, Porifera, and Coelenterata. Flatworms, roundworms, and segmented worms. The Arthropoda. Mollusks and echinoderms. Chordates and vertebrates. The plant kingdom Thallophytes Algae, Fungi. The bryophytes. The vascular plants. The relation of organisms to their environment. Ecology Life its nature and origin. The theory of evolution The course of evolution phylogeny Index and glossary

Note A textbook of wide scope for college courses in biology The authors, treating life as a unified concept, develop the study of plants and animals simultaneously only after principles, such as metabolism, heredity and taxonomy have been covered as they apply both to plants and animals are the two kingdoms surveyed separately The scientific method is introduced to the student in the first chapter frequent examples of it are pointed out in later chapters. In the new edition, aside from revisions and corrections throughout the volume, the authors have completely revised the chapters on enzymes, respiration, genetics, and the plant kingdom. Many new illustrations have been added.

WEISZ, PAUL B

Biology New York McGraw Hill Book Company, Inc., 1954 679 p. illus. 24 cm. $6 50 1873

Contents Foreword to the teacher Foreword to the student. The first level living system. The second level the changing environment. The living substance Metabolism. Self-perpetuation. The third level—the living substance Cells. Ways of life—the green plant. The animal. The living community The third level—metabolism Autotrophic nutrition. Heterotrophic nutrition. Energy metabolism. Synthesis metabolism. The third level—self-perpetuation the steady state—cellular steady state The body fluids. The nervous system. The third level—self-perpetuation reproduction. Cellular reproduction. Reproduction of plants. Animal reproduction and development. The third level—self-perpetuation—adaptation. Heredity Evolution. Past and prospect. Appendices: Classification of plants and animals. General reading list. Index.

Note. A textbook for first college courses in biology The author has employed a novel approach. In the first chapter which comprises the "first level," are discussed the four chief fundamentals of biology as a whole. There follow four chapters covering each of the four basic concepts in more detail this is the second level. Three of the four fundamental concepts are then individually expanded still further into three groups of chapters; this is the third level. Through this approach the wholeness of biology is emphasized from the beginning, while principles and concepts rather than separate facts are the central components of the discussion. The text is interestingly written and well illustrated. The "Foreword to the student" contains excellent advice for beginning students of science.

WELLS HARRINGTON, AND PATRICK H. WELLS

General biology New York McGraw Hill Book Company Inc., 1956 520 p. illus 26 cm. $6.50. 1874

Contents: Part I, Basic biology Biology in history The concept of evolution. Protoplasm and the cell. How life develops. Environment and ecology Part II, The living world: Lower plants. Seed plants. Unicellular animals. Lower invertebrates. Worms and mollusks. Arthropods. Echinoderms and lower chordates. Fishes. Amphibians and reptiles. Birds and mammals. Part III, Comparative biology: Nutrition. Respiration and circulation. Excretion. Motion. Reception and response. Growth and reproduction. Part IV Social biology: Biology and human disease. The endocrine control mechanism. Inheritance. Conservation of natural resources. Economic biology Biology and society Appendix: Reference classification of the plant kingdom. Reference classification of the animal kingdom. Index.

Note: A textbook of beginning biology for college students, this work is organized into four parts, each concerned with distinct division of biological science. It is the thesis of the authors that "a foundational biological education may best be acquired upon bases of plant-animal structure, ecology and comparative physiology leading to generalizations in terms of human social interrelationships. The four parts of the text are organized on the basis of this statement and an unusual feature is the emphasis on the social implications of biology. Each of the chapters concludes with set of "questions and answers for group discussion and review" and list of suggested readings.

WHALEY W GORDON AND OTHERS

Principles of biology by W Gordon Whaley, Osmond P Breland, Charles Heimsch, Austin Phelps, and Glenn S Rabideau New York Harper & Brothers, 1954 694 p illus. 24 cm. $6.00 1875

Contents (Abridged) Part I, Introduction The science of biology Part II, The structure and functioning of organisms. Organization. Cells and tissues. Osmosis and permeability Reproduction in plants Photosynthesis and carbon metabolism. Nitrogen assimilation and metabolism. Respiration and oxygen in metabolism Animal nutrition. Circulation. Breathing Excretion Covering and support. Movement. Nervous system. The senses. Endocrine system Reproduction Part III, The development of organisms Protoplasm Cell reproduction. Plant development Animal development Growth. Part IV The kinds of organisms The naming and classification of organisms. The plant kingdom. Algae. Fungi Bryophytes. Vascular plants. Protozoa. Sponges, coelenterates, and ctenophores. Flatworms and roundworms. Segmented worms Arthropods. Mollusks Echinoderms. Chordates. Part The interrelationships of organisms Organisms and environment. Health and disease. Part VI, The continuity of organisms: Heredity Sex determination Human heredity Evolution. Evolution of man. Index.

Note In 1946, the biological science departments of the University of Texas instituted course in general biology in place of separate basic departmental courses in the various branches of biological science. Originally designed as an experiment, the course was freely altered and reworked in the light of experience. After seven years the five authors of this book, all of whom connected with the course, produced this illustrated textbook, which reflects the eventual pattern of the course and places primary emphasis on important principles rather than on cyclopedic presentation of facts.

WINCHESTER, ALBERT MCCOMBS

Biology and its relation to mankind. New York D Van Nostrand Company Inc 1949 777 p illus. 23 cm. $5 75 1876

Contents (abridged) Part I, Foundations of biology The fundamental unit of life—the cell. The nature of protoplasm. Vital life processes. The classification of living things—taxonomy Part II, The plant kingdom Part III, The higher plant body Part IV The animal kingdom Part The higher animal body. The skeletal system The muscular system The nervous system. The respiratory system. The digestive system The circulatory system. The excretory system. The reproductive system The endocrine glands, regulators of the body Part VI, Some important divisions of biology: Microbiology—the study of microscopic organisms. Entomology—the study of insects. The story of insects. The bridge of heredity The principles of heredity Ontogeny of the chordates. Biological evolution—the concept of descent with change. Life of the past. Human life of the past. The founders of biology Glossary Index.

Note: A textbook designed for use in introductory courses in colleges. Life processes are stressed rather than taxonomic aspects. A wealth of material on various phases of the subject is presented to stimulate the interest of the beginning student. Illustrations, many of them from photographs by the author, add to the attractiveness of the volume. A second edition was published in 1957 902 p $7.25.

WOLCOTT, ROBERT HENRY

Animal biology Third edition New York McGraw Hill Book Company Inc. 1946 719 p. illus. 24 cm. (McGraw Hill publications in the zoological sciences A Franklin Shull consulting editor) $6 00 1877

Content (abridged) Part I, Fundamental principles. Part II, The one-celled animals: the Protozoa. Part III Fundamental principles (continued) Part IV, The multicellular animals, the Metazoa. Part General considerations. Glossary List of visual aids. Index.

Note: A standard textbook for use in introductory college courses. This edition was prepared by the staff of the Department of Zoology of the University of Nebraska as memorial to the late author. It has been rather extensively revised and many new illustrations added.

WOODRUFF LORANDE LOSS AND GEORGE ALFRED BAITSELL

Foundations of biology Seventh edition. New York The Macmillan Company 1951 719 p. illus. 22 cm. $6 75 1878

Contents (abridged) The scope of biology Cellular organization of life. The physical basis of life. Metabolism of organisms. The plant body The animal body Nutrition. Respiration. Secretion. Excretion. Circulation. Nervous system. Reproduction and cell division. Reproduction and germ cell formation. Reproduction and fertilization. Animal development. Reproduction in plants. Genetics. Origin of species. Organic adaptation. Biology and human welfare. Origin of life. Survey of the plant kingdom. Survey of the animal kingdom. The human background. History of biology Bibliography Glossary Synoptic classification of the plant kingdom. Synoptic classification of the animal kingdom. Index.

Note. An introductory textbook that has been widely used in American college courses since the publication of the first edition in 1922 Although shorter than many books of the kind, it is general treatment, and the style is not so compact that it is difficult to read. Professor Baitsell is responsible for the seventh edition. The number of chapters has been increased by six, and there has been some rearrangement of chapter order and material within the chapters carried over from the previous edition. Also, there has been some revision of the illustrative matter

YOUNG CLARENCE W AND OTHERS

Introduction to biological science a study of the human body and of the world of plants and animals. By Clarence W Young G Ledyard Stebbins and the late Frank G Brooks. Illustrations by Louise Bush. Harper & Brothers 1956 555 p. illus. 24 cm. $5.00 1879

Contents: Part I, The human organism: Protoplasm and the cell. The functioning of the cell. The architecture of the body The nervous system and the receptors. The circulatory system. The endocrine control of bodily activities. The work of the scientist. Respiration Digestion and absorption of food. The balance of the materials in the body Reproduction Early development of the human organism The principles of heredity The struggle against disease. Part II, The world of life: Metabolism in the plant kingdom and in the world of life The simpler forms of plant life. Maintenance, growth, and reproduction in the higher plants. The animal kingdom—lower invertebrate forms—higher invertebrate forms—phylum chordata. Adaptations of organisms. Communities of organisms. The fact of evolution. The mechanism of evolution. Human evolution. Conclusion. Appendix The branches of biological science. Suggested reading. Index.

Note A briefer textbook based on C. W Young's and G. L. Stebbins' *The human organism and the world of life*, revised edition, described above It presents an elementary but informative view of the nature f biology with some emphasis on the biology of man It contains less material than the original text, and the material has been somewhat reorganized and rewritten. The book is more suitable for short courses offered to undergraduate college students. Also, laymen who wish to undertake the home study of the subject find it an easier book to comprehend.

MARINE AND FRESHWATER BIOLOGY

Allan Hancock Atlantic Expedition

Reports 1–8 Los Angeles The University of Southern California, 1945–56 8 vol illus 23 cm (University of Southern California. Allan Hancock Atlantic Expedition Reports, 1–8) Part 1, $2 00, part 2, $3 50, part 3, $1 00 part 4, $1 00, part 5, $2 00, part 6 $1 50, part 7, $0 50, part 8, $0 90 1880

Contents (abridged) Report I, Geographical account and station records of Valero III in Atlantic waters in 1939 by J S. Garth. Report II Caribbean marine algae of the Allan Hancock Expedition 1939 by W R. T ylor Report III, Polychaetous annelids, by O Hartman. Report IV Hydroids of the 1939 Allan Hancock Caribbean Sea Expedition, by C. McL. Fraser Report V Bryozoa of the Allan Hancock Atlantic Expedition, 1939 by R. C. Osburn. Report VI, Land plants collected by the Allan Hancock Atlantic Expedition of 1939 by H S. Gentry Report VII, Amphipoda of the family Ampeliscidae collected by the Velero III in the Caribbean Sea, by J L. Barnard. Report VIII The Galatheidea (Crustacea anomura) of the Allan Hancock Atlantic Expedition with review of the Porcellanidae of the western North Atlantic, by J Haig.

Note Published in this series are monographs and technical papers in which are presented the results of observations and collections made by the Allan Hancock Atlantic Expedition in 1939 The authors and titles f those published are listed in the above Contents. Additional publications in this series are in preparation.

Allan Hancock Pacific Expeditions

No. 4, Four new genera and ten new species of eels from the Pacific coast of tropical America, by G. S. Myers and C. B. Wade. No. 5, The Pacific American atherinid fishes of the genera Eurystole, Nectarges, Coleotropis, and Melanorhinus, by G. S. Myers and C. B. Wade. No. 6, New fishes of the family Dactyloscopidae, Microdesmidae, and Antennariidae from the west coast of Mexico and the Galapagos Islands with a brief account of the use of rotenone fish poisons in ichthyological collecting, by G. S. Myers and C. B. Wade. Nos. 7–8, Two new genera and five new species of apodal fishes from the eastern Pacific; new fishes in the collections of the Allan Hancock Foundation, by C. B. Wade. Vol. X: "Polychaetous annelids, by O. Hartman. Vol. XI, no. 1, Sponges of the Gulf of California, by M. G. Dickinson. Vol. XII, Pacific marine algae of the Allan Hancock Expeditions to the Galapagos Islands, by W. R. Taylor. Vol. XIII, no. 1, The Bryophyta of the Allan Hancock Expedition of 1939 by W. C. Steere. No. 2, Land plants collected by the Velero III, Allan Hancock Pacific Expeditions 1932–1941, by H. S. Gentry. No. 3, Plant ecology of the Channel Islands of California, by M. F. Dunkle. Vol. XIV, Bryozoa of the Pacific coast of America, by R. C. Osburn. Vol. XV, no. 1, Goniadidae, Glyceridae and Lumbrineridae, by O. Hartman. No. 2, Some Polyclad turbellarians from the Galapagos Islands, by L. H. Hyman. Vol. XVI, no. 1, Stony corals of the eastern Pacific collected by the Velero III and Velero IV by J. W. Durham and J. L. Barnard. Vol. XVII, Marine red algae of Pacific Mexico, by E. Y. Dawson. Vol. XVIII, no. 1, Amphipoda of the family Ampeliscidae collected in the eastern Pacific by the Velero III and Velero IV by J. L. Barnard. No. 2, The genus Pylopagurus (Crustacea Anomura) in the Pacific with descriptions of two new species, by R. C. Walton. Vol. XIX, Quantitative survey of the benthos of San Pedro Basin, southern California, by O. Hartman. Vol. XX, no. 1, A report on the family Mysidacea (Pelecypoda) by T. Soot-Ryen. No. 2, A report on the family Arcidae (Pelecypoda) by H. Rost.

Note: This series of monographs and technical papers, which is still in the process of publication at this writing, represents the results of observations and collections made by the members of the Allan Hancock Pacific Expeditions between 1931 and 1941. Each of the papers is concerned mainly with systematic descriptions of the numerous specimens collected. The series constitutes a major contribution to marine biology and oceanography. Monographs concerned with organisms in the three contents are described separately under appropriate subjects in this bibliography.

Coker, Robert E.

Streams, lakes, ponds. Chapel Hill The University of North Carolina Press 1954 327 p. illus. 24 cm. $6 00 **1882**

Contents: Part I, Water and its contents. A little about water. Light and heat in water. Gases and heat—distribution, circulation stratification—some chemical and biological relations. Dissolved salts. The basic nutrients in water. Turbidity, color, odor and taste. Part II, Running water. The upland brook. Rivers. Stream pollution. Part III, Still water. The lake or pond as a place of life. Life in the lake—plants and lower animals—jointed-leg animals and vertebrates. The fish pond and its residents. The fish pond and production. Bibliography. Index.

Note: A readable and informative book about inland waters. Except for approximately the first 50 pages, which contain basic chemical and physical information, the book is mainly about the community of life in brooks, rivers, lakes and ponds. The chapters are tightly well packed with facts, hence the book cannot be rated as typical popularization, although it is intended for lay readers rather than specialists. It is quite within the scope of amateur naturalists, sportsmen and educated people in general who have some interest in freshwater biology. The two chapters on fish ponds constitute a useful and up-to-date survey of a topic which is of special interest to progressive farmers. The author is a Professor of Zoology in the University of North Carolina.

Davis Charles C

The marine and fresh-water plankton. East Lansing Michigan State University Press, 1955 562 p. illus. 24 cm. $10.00. **1883**

Contents: Introductory. Special adaptations to planktonic existence. General cycle of production in aquatic environments. The phytoplankton. Phytoplankton-zooplankton interrelationships. Distribution problems. Geographic and seasonal variations of structure. The food of plankters—plankters as food. The kinds of plankton organisms. Glossary of technical terms. Literature cited. Descriptions of figures in plates. Plates. Index.

Note: Essentially a compact reference book directed not to specialists but to readers with some background in biology and a layman's or nonspecialist interest in plankton. It is suitable also for use as a text in courses offered to advanced college students. The first eight chapters present the basic information on ecology, distribution, food supply and the plankton as a source of food for other organisms. They are followed by a long terminal chapter in which the morphology, reproductive cycles, etc., of the principal groups of plankton, ranging from Cyanophyta to the Chordata, are described. Keys to aid in identification are included in this chapter. Illustrations are an important feature. There are 45 figures in the text and 633 presented on a series of plates at the end of the volume. Many of these have been redrawn from the works of other authors, but most of them are reproduced in scale larger than life size. There are a 15-page glossary and a 24-page list of literature references.

Ellis, Max Mapes and others

Determination of water quality by M M Ellis B A. Westfall, and Marion D Ellis. Washington D C. Government Printing Office 1946 122 p illus. 23 cm. (United States. Fish and Wildlife Service Research report 9) $0.30 **1884**

Contents: Introduction. Collection and fixation of water samples. Dissolved oxygen. Oxygen demand and oxygen consumed. Specific conductance. Hydrogen-ion concentration, pH. Alkalinity and acidity. Suspended matter. Water hardness. Calcium and magnesium. Nitrogen determinations. Iron determinations. Manganese. Copper. Zinc. Sulphates. Sulfides, sulfites, and other non-volatile sulfur compounds. Phosphorus determinations. Fluorides. Chlorides. Chlorine. Acetylene. Special determinations. Exploratory tests. Fluorescence. Effluents and trade wastes. Evaluation of pollution hazards. Literature cited. Index.

Note: In this pamphlet are presented methods for the determination of those characteristics of natural waters which are of major importance to the aquatic biologist in connection with fisheries problems. Both unpolluted and polluted waters are considered, and procedures for the evaluation of pollution hazards are outlined. Usually more than one method for each type of determination is offered. The methods chosen have been used by the authors in the Water Quality Laboratories of the United States Fish and Wildlife Service and in field operations, in most cases, over a period of years. Aside from their intended use in aquatic biology many of the procedures would be applicable to problems in sanitary engineering and in trade waste disposal.

Grey Marion

The distribution of fishes found below a depth of 2000 meters. Chicago Chicago Natural History Museum 1956. 265 p. 23 cm. (Fieldiana Zoology Vol. 36 no 2) $4.00 **1885**

Contents (abridged): Introduction. Synonymies and distribution. Tables showing vertical distribution of species. List of benthic fishes found below 1000 fathoms. List of bathypelagic fishes found below 1000 fathoms. References. Addendum. Index.

Note: A summary of the accumulated information on the fish fauna of the waters of the ocean below a depth of 2000 meters. The current state of the knowledge of this subject is well outlined in the first 17 pages of the publication; here, also, the author emphasizes the incomplete state of the accumulated data and the need for much more investigation. Most of the volume is devoted to data on individual species which have been found in deep-abyssal waters. For each species synonyms are listed and literature references to systematic descriptions are given; the location and depth and number of specimens for deep-abyssal catches are currently stated; distribution is indicated, and the length of the specimen or specimens is stated. In addition, there is often a short section entitled "Remarks," in which the author supplies miscellaneous information of which the following is an example: "A brief discussion of the haul made in 4,000 meters may be found in Richards (1902, p. 33). For many years this was the deepest known record for any fish." The data on the vertical distribution of individual species are presented in a series of 31 tables following the text.

MACGINITIE, GEORGE EBER, AND NETTIE MACGINITIE

Natural history of marine animals New York McGraw Hill Book Company, Inc., 1949 473 p illus 23 cm $8 00 1886

Contents Introduction. Food Plankton. Detritus. Other animals. Debris. Seaweed. Comparison between the fauna of land and of ocean. Groupings of animals. Animal relationships To their physical environment. To each other *Sense organs. Luminescence.* Marine animal habitats. Growth rates. Burrowing. Variation and succession. Geological records left by animal activities. Protozoa. Porifera. Coelenterata. Ctenophora. Platyhelminthes· Turbellaria. Trematoda. Cestoda. Nemertea. Nematoda Chaetognatha. Phoronida. Bryozoa. Brachiopoda. Sipunculoidea. Echiuroidea. Annelida. Echinodermata. Asteroidea. Echinoidea. Ophiuroidea. Holothuroidea. Crinoidea. Arthropoda Crustacea. Arachnida. Mollusca: Pelecypoda. Gastropoda. Amphineura. Scaphopoda. Cephalopoda. Protochordata Enteropneusta. Tunicata. Cephalochordata. Vertebrata Cyclostomata. Pisces. Mammalia. The relation of higher vertebrates to shore conditions. Phyla of animals. General habitats of phyla and classes. Books dealing with marine animals. Index.

Note This book on representative marine animals is designed for amateur naturalists and for teachers and beginning students of zoology The longest chapters are those dealing with the Arthropoda and the Mollusca, each about 75 pages the chapter describing the vertebrate forms, including the true fishes, is about half as long. The species include at least one from each of the major groups of marine invertebrate animals, those chosen for description being those most frequently met with and those with the most interesting habits. Information on habits, habitats, and ecologies is included in the descriptions. The majority of the illustrations are from photographs taken by the authors along the Pacific Coast of North America.

MINER, ROY WALDO

Field book of seashore life New York G P Putnam's Sons 1950 888 p illus 19 cm. $7 00 1887

Contents Phylum Protozoa—the simplest animals. Porifera—sponges. Coelenterata—the polyps. Ctenophora—the comb jellies. Platyhelminths—the flatworms. Nemertea—the ribbon worms. Nemathelminths—roundworms, threadworms. Trochelminths—wheel animalcules. Annulata—segmented or ringed worms. Arthropoda—crustaceans, arachnoids, myriapods, and insects. Mollusca—snails, bivalves, chitons, octopuses, and squid. Chaetognatha—arrow worms. Echinoderma—sea-stars, brittle-stars, sea-urchins, sea-lilies, and sea-cucumbers. Prosopygia—moss animals and lamp shells. Chordata—the protochordates and vertebrates. Selected references. Index.

Note. A field manual for use by amateur and professional naturalists in the rapid identification f the invertebrate animals found in the shallow oceanic waters of the Atlantic coast of North America from Labrador to the Cape Hatteras region of North Carolina. Concise semitechnical descriptions of the various animals are supplemented by 251 plates in black and white and also plates in color Most of the plates contain plurality of drawings.

MORGAN, ANN HAVEN

Field book of ponds and streams an introduction to the life of fresh water With about 330 illustrations including 23 plates in color and black and white New York G P Putnam s Sons 1930 448 p illus (part col d) 18 cm (Putnam s nature field books) $5 00 1888

Content Water plants and animals and how they live. Lif in ponds and streams. Collecting and preserving water animals Simpler plants and animals. Higher plants. Sponges (Porifera) The hydras, fresh water jellyfishes (Coelenterata) Free-living flat worms (Planaria) Wheel animalcules (Rotifera) Bryozoans (Bryozoa or Polyzoa) Threadworms (Nematoda) and bristle-worms (Oligochaeta) Leeches (Hirudinea) Crustaceans (Crustacea) *Water-mites (Hydracarina)* Aquatic insects (Insecta) Snails and mussels (Mollusca) Lampreys and fishes. Salamanders, frogs, and toads, found in or near water (Amphibia) Turtles and snakes, found in or near water (Reptilia) Bibliography Glossary Index.

Note. A pocket-size handbook primarily for the amateur naturalist. *Written in nontechnical language* the work gives short descriptions of the various common forms of life, including habits, habitats, size, breeding habits, plus drawing or photograph.

NEEDHAM, JAMES GEORGE, AND PAUL R. NEEDHAM

A guide to the study of fresh-water biology with special reference to aquatic insects and other invertebrate animals and phyto-plankton Fourth edition revised and enlarged Ithaca Comstock Publishing Company, Inc., 1938 88 p. illus 21 cm. $1 00 1889

Contents Part I, Aids in recognition of fresh-water species Insects. Crustaceans. Mollusca. Pisces. Other lower invertebrates. Part II, A program f class work in fresh-water biology: Collecting methods and apparatus. Equipment. Practical exercises. Lentic water studies. Association studies. Adjustment studies. Lotic studies. Demonstrations.

Note. A brief pamphlet designed to facilitate the recognition of fresh-water organisms in the field and in the laboratory It offers umber f keys, tables, and figures which describe and illustrate the various genera. Vertebrate animals and vascular plants as well as inhabitants of salt and alkaline water are omitted. The fourth edition contains additions to the list of genera whose immature aquatic stages were formerly unknown. There are 25 practical exercises for use in elementary college classes.

RILEY, GORDON A , AND OTHERS

Hydrographic and biological studies of Block Island Sound. New Haven Bingham Oceanographic Laboratory 1952 237 p. illus. 23 cm (Yale University Peabody Museum of Natural History Bingham Oceanographic Collection Bulletin Vol 13, article 3) $3.60. 1890

Contents Hydrography of the Long Island and Block Island sounds, by G A. Riley Phytoplankton of Block Island Sound, 1949 by G. A. Riley A survey of the zooplankton of Block Island Sound, 1943–1946, by G. E. Deevey Quantity and composition of Block Island Sound, 1949 by G. B Deevey The pelagic fish eggs and larvae of Block Island Sound, by D Merriman and R. Sclar. The herring (*Clupea harengus*) of Block Island Sound, by H. L. Sanders

Note The reports published in this volume are based largely on observations and collections made on series of cruises from 1943 to 1949 as part of a systematic study of the hydrography and biology of the waters of Long Island and Block Island sounds. These waters, due to the admixture of fresh and salt water and to other factors, are of much interest in the study of oceanography and marine biology The paper on hydrography runs to only 44 pages; the papers on biological subjects account for the rest of the publication. In all of the papers the techniques of observing and collecting and the results are presented in detail. Literature references also are given.

WARD, HENRY BALDWIN, AND GEORGE CHANDLER WHIPPLE

Fresh water biology New York John Wiley & Sons Inc. 1918 1 111 p illus. 23 cm $12 00 1891

Contents I troduction, by H. B. Ward Conditions of existence, by V E. Shelford. Methods of collecting and photographing, by J Reighard. Bacteria, by E. O. Jordan. Blue-green algae (Cyanophyceae) by E. W Olive. The fresh-water algae (excluding the blue-green algae) *by J W Snow* The larger aquatic vegetation, by R. H. Pond. Amoeboid protozoa (Sarcodina) by C. H. Edmondson. Flagellate and ciliate protozoa (Mastigophora et Infusoria) by H. W Conn and C. H. Edmondson. The sponges (*Porif*) by E. Potts. Hydra and other fresh-water hydrozoa, by F Smith. The free-living flatworms (*Turbellaria*) by C. E. Stringer. Parasitic flatworms, by H. B. Ward. The Nemerteans, by W R. Coe. Free-living Nematodes, by N A. Cobb. Parasitic roundworms, by H. B. Ward. The wheel animalcules (Rotatoria) by H S. Jennings. Gastrotricha, by H. B. Ward. Aquatic earthworms and other bristle-bearing worms (Chaetopoda) *by F Smith. The leeches (Hirudinea),* by J P Moore The fairy shrimps (Phyllopoda) by A. S. Pearse. The water fleas (Cladocera) by E. A. Birge Copepods, by C. D. Marsh. The Ostracoda, by R. W Sharpe Higher crustaceans (Malacostraca) by A. E. Ortmann. The ter-mites (Hydracarina) by R. H. Wolcott Aquatic insects, by J G. Needham. Moss animalcules (Bryozoa) by C. B. Davenport. The Mollusca, by B.

Walls. The aquatic vertebrates, by C. H. Eigenmann. Technical and sanitary problems, by G. C. Whipple. Index.

Note: An old but still useful reference book and text. At the time of its writing, the authors of the chapters were among the most eminent biologists working in the United States of America. Each one presented a survey of his particular subject, thus was fair representation of the extant knowledge at the time. In the chapters dealing with forms of life, the authors limited themselves more or less to describing those forms found on the North American continent. The volume contains 1,347 figures, most of which though small are clear.

WELCH PAUL SMITH

Limnological methods. New York McGraw Hill Book Company Inc., 1948. 381 p. illus. 24 cm. $8.00 1892

Contents: Part I, Hydrographic mapping and morphometry: Shoreline surveys of lakes. Soundings. Stream surveys. Water levels. Map construction. Morphometry. Part II, Physical methods: Temperature. Turbidity. Color. Water movement. Light penetration. Wind velocity. Bottom materials. Part III, Chemical methods: Selected chemical methods. Part IV, Biological methods: Plankton methods. Bottom-fauna methods. Methods for plant-inhabiting organisms. Appendix: Lists. Tables. Sources of hydrographic maps and hydrographic information. Location of lakes and streams. Accessory equipment. Sources of limnological apparatus and supplies. Recommendations. Literature aids in the identification of plankton. Index.

Note: A manual of basic and standard methods, most of which have been used by the author in his own work. A certain amount of the material is designed for the guidance of workers limited to simple methods and improvised equipment, but in most of the book professional methods and standard equipment are described and illustrated. Both field and laboratory procedures are given in considerable detail. There are about 100 illustrations. Lists of the related literature are scattered throughout the book.

WELCH PAUL SMITH

Limnology Second edition. New York McGraw Hill Book Company Inc., 1952 538 p illus. 24 cm. (McGraw Hill publications in the zoological sciences E. J Boell, consulting editor) $9.50 1893

Contents: Part I, Preliminary considerations: Introduction. Inland waters. Lakes, their origin and diversity. Part II, Nature of inland-water environments: Physical conditions and related phenomena. Chemical conditions and related phenomena. Part III, Biological relations: Influence of physical conditions. Influence of chemical conditions. Organisms in inland waters. Plankton. Bacteria, other fungi, and the nonplankton algae. Larger aquatic plants and their biological significance. Nekton. Benthos. Biological productivity. Part IV, Some special types of lentic environments: Ponds. Bog lakes. Part V, Lotic environments: Running waters in general. Bibliography. Index.

Note: An advanced college text on fresh-water life first published in 1935 and now extensively revised and enlarged. The level of treatment presumes completion of basic introductory courses in biology, physics, and chemistry on the part of the reader. A brief history of the subject and analysis of physical and chemical influences are preliminary to the discussion of the biological aspects. Methods and practices for field and laboratory work are not covered. The extensive bibliography is classified and includes monographs and periodical literature through 1951 in English and other languages. There are 14 tables and 30 explanatory diagrams. The book is of interest not only to students of limnology but also to specialists in related fields such as ecology.

MICROSCOPY

ALLEN ROY MORRIS

The microscope Princeton D Van Nostrand Company Inc., 1940. 286 p. illus. 23 cm $4.75 1894

Contents: Historical. Optical principles of the microscope. Modern instruments. Illumination. Testing of microscope objectives. Getting the most out of the microscope. Preparation of material for microscopical examination. Bibliography. Glossary. Index.

Note: This book explains in detail the construction and use of the microscope. It assumes no previous experience with microscopes on the part of the reader and it requires no knowledge of optics or mathematics. The instruments described include those of both American and European manufacturers. The methods and techniques of using the instrument and preparing specimens for examination, reflect the author's specialized experience of more than 40 years.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on light microscopy Presented at the 55th annual meeting (50th anniversary meeting) American Society for Testing Materials, New York, N. Y., June 25 1952 Philadelphia American Society for Testing Materials 1953 126 p. illus. 16 cm. (American Society for Testing Materials. Publication no. 143) $2.50 1895

Contents: Introduction, by F. G. Foster and R. P. Loveland. The methods of microscopy, by C. W. Mason. Apparatus for microscopy by R. W. Zieler. Some applications of light microscopy and the study of textile materials by V. W. Tripp. Polarized light microscopy and supplementary techniques, by W. C. McCrone. Applications of light microscopy and concrete research, by K. Mather. The microscopical examination of metallic specimens, by J. R. Vilella. Resinography: the microscopy of resins and their plastics, by T. G. Rochow. Methods of particle size analysis, by R. P. Loveland. General discussion.

Note: New developments and methods in light microscopy were emphasized in the symposium of which this pamphlet is a product. These are discussed specifically and at a level that makes the papers of interest primarily to applied physicists and engineers engaged in research in industry. The illustrations include a number of reproductions of photomicrographs. The papers are accompanied by transcripts of discussion in addition to the general discussion that concluded the symposium. Literature references are supplied for most of the papers.

BENNETT ALVA HERSCHEL, AND OTHERS

Phase microscopy principles and applications. By Alva H. Bennett, Harold Osterberg Helen Jupnik and Oscar W Richards. New York John Wiley & Sons Inc., 1951 320 p. illus. 23 cm. $11.00. 1896

Contents: Introduction to phase microscopy. An elementary theory of phase microscopy. Instrumentation. The technics of phase microscopy. Phase microscopy in biology and medicine. Industrial applications of phase microscopy. Appendix. The diffraction theory of phase microscopy with Köhler illumination. Bibliography. Author index. Subject index.

Note: Phase microscopy is a relatively new technique that is especially valuable in viewing transparent and near-transparent material. When used in connection with biological research, it eliminates the need of laborious preparation, staining of tissues and facilitates the examination of living material. Many articles have been written on the subject, but this appears to be the first book. It is a technical, rather than a popular, treatise, and it is designed primarily for research workers who make extensive use of microscopy. Theory, mathematical calculations, and techniques are all covered. There is a comprehensive bibliography. The authors are associated with the research laboratory of the American Optical Company.

BURTON ELI FRANKLIN AND W H KOHL

The electron microscope an introduction to its fundamental principles and applications. Second edition. Drawings by Dorothy Stone. New York Reinhold Publishing Corporation, 1946 325 p. illus. 23 cm. $6.50 1897

Contents (abridged): Vision. Light microscopes. Wave motion and wave motion media. The electromagnetic theory of light. Electron emission. The dual theory of light. The dual theory of the electron. The motion of electrons in electrical fields. The motion of electrons in magnetic fields. Electron optics—magnetic focussing—electrostatic focussing. The electrostatic electron microscope. The magnetic electron microscope. The 1944 Toronto microscope. The

use of the electron microscope. Practical applications of the electron microscope. Bibliography of electron microscopy Indexes.

Note This book is for lay readers who have some background in science and for scientists interested in the uses and manipulation of the electron microscope but who are not specialists in electron optics. The present edition contains nearly 100 more pages than the 1942 edition. Besides extensive textual *revision*, *many* excellent reproductions of microphotographs have been added. Also included is a noteworthy bibliography of some 520 entries which, minus a few recently added references, first appeared in the August, 1944 issue of the *Journal of applied physics*.

CORRINGTON, JULIAN DANA

Working with the microscope. New York Whittlesey House, McGraw Hill Book Company, Inc , 1941 418 p illus 23 cm $6 50 1898

Contents: The microscope. Temporary mounts for immediate study Simple balsam mounts. Procedures in microtechnique. Proceed balsam mounts. Cell mounts. Stained whole mounts. Smear preparations. Bacteria. Microscopic skeletons. Grinding hard objects. Sectioning manual and freezing methods. Sectioning celloidin method. Sectioning paraffin method. The newer techniques. Special preparations. Preparation and use of reagents.

Note A comprehensive, practical manual for those concerned with microscopy and microtechnique, except the advanced professional. Directions cover the operation of the microscope as well as the preparation of all types of slides—whole mounts, smears, sections, and isolations. How to fix stain, section, and mount materials so they may be examined under the microscope to the best possible advantage, proceeding from the simplest of mounts to the highly technical.

FISCHER, ROBERT B

Applied electron microscopy Bloomington Indiana University Press, 1953 231 p illus 22 cm $4 85 1899

Contents Introduction. Resolution. Depth of field and contrast. Design and construction of electron microscopes. Selecting and mounting suitable specimens. Shadow-casting Examination of small particles. Examination of surfaces. Special methods. Related instruments. Index.

Note A broad introduction to the use of the electron microscope in physical and biological research. Some of the basic theory is outlined in the early chapters, but the greater share of the space is devoted to topics of practical concern to scientist users of electron microscopes such matters as microscope elements, the mounting of specimens, and various specialized techniques that have proved useful in the examination of various kinds of specimens. The illustrations include considerable number of micrographs ranging from biological to metallurgical. A selection of the literature is cited in footnotes. The author is Associate Professor of Chemistry in Indiana University

GAGE, SIMON HENRY

The microscope Seventeenth edition, revised. Ithaca Comstock Publishing Company Inc. 1941 617 p illus 23 cm $5 00 1900

Content Introduction Description of the electron microscope. Microscopes and their parts. Bright-field microscopes lighting, natural and artificial experiments with microscopes. Dark-field microscopy and its application. The polarizing microscope some optical principles in microscopy Micro-spectroscope pocket spectroscope. Ultra-violet (or fluorescence) microscope physical analysis. Interpretation of appearances. Magnification and micrometry Drawing with the microscope and projection apparatus class demonstrations. Photographing embryos and small animals photographic enlargements photographing with the microscope Cabinet slips and cover-glasses mounting, labeling, and storing microscopical specimens. Fixing and preservation of tissues, organs, and entire organisms infiltrating imbedding, sectioning, staining, and mounting for the microscope. Serial sectioning of organs, small animals, and embryos preparation of models. *Micro-incinerations and* optical appliances for their examination. History of lenses and microscopes. Bibliography Index.

Note The primary aim of the work is to guide those unfamiliar with the microscope into an understanding of *it*, *of its* limitations and uses. Added attention is given in this *17th* edition to the electron microscope, polaroid for the micro-polariscope, plastics as mounting media, high pressure mercury lamps in ultra-violet radiation, and bright mercury lines *for photography*. Lists of collateral reading follow the chapters in addition to the bibliography on pages 581 594

GRAY, PETER

Handbook of basic microtechnique. New York McGraw Hill Book Company, Inc, 1952 141 p illus. 24 cm $3 00 1901

Contents (abridged) Part 1 Materials and processes of slide making Materials and equipment. Fixation and fixatives. Stains and staining. Dehydrating and clearing. Mounts and mountants Making wholemounts. Making smears. Making sections. Cleaning, labeling, and storing slides. Part 2 Specific examples of slide-making tasks.

Note Explicit information on the preparation of biological material and the making of slides for microscopical examination is presented in this compact handbook. Materials, such as fixatives, and techniques, such as sectioning, are described in the first part. In the second part the making of 15 slides of various complexities is described in detail. These descriptions contain some fine points that could not be incorporated in the more generalized material of the first section. There are 57 figures. The book is suited to the needs of beginners and also to those of experienced laboratory workers who make biological slides only occasionally

GRAY, PETER

The microtomist's formulary and guide. New York The McGraw Hill Book Company, Inc., 1954 794 p illus 23 cm. $12.00. 1902

Contents (abridged) Part 1, The art of making microscope slides Dry wholemounts. Fluid wholemounts. Wholemounts in gum media —in jelly media—in resinous media. Smear preparations. Squash preparations from solid bodies. Ground sections. Sections of loose material. Paraffin sections. Nitrocellulose sections. Sections from double embedded material. Frozen sections. Injections. Part 2, Methods and formulas used in making microscope slides Preservatives. Fixatives. Formulas and techniques for dye stains of general application—of special applications. Accessory dye staining formulas. Formulas and techniques for metal stains. Solvents and [illegible] Mounting media. Embedding media. Various formulas. List of books and journals cited. Index.

Note A cyclopedic reference book of biological microtechnique, addressed to advanced laboratory workers and professional microscopists. The first part, on the making of microscopic slides of biological material, runs to 170 pages. The second and much longer part is a manual of formulas, embedding techniques, staining techniques, etc. In this part, adequate information is given, in most cases, for the making of the formula or carrying out of the technique. However a literature reference is given also. The very detailed author and subject index is 114 pages long.

GUYER, MICHAEL F

Animal micrology Practical exercises in zoölogical micro-technique. With a chapter on drawing by Elizabeth A. (Smith) Bean. Fifth revised edition Chicago University of Chicago Press 1953 327 p illus. 24 cm. (The University of Chicago committee on publications in biology and medicine Emmet B Bay and others) $5 50 1903

Contents Preparation of reagents. *General statement of methods*—Killing and fixing. Simple section methods. The paraffin method—infiltration and sectioning—staining and mounting The double method. The celloidin method. The freezing method. *Metallic substances for color differentiation. Isolation of histological elements*—minute dissections Tooth, bone, and other hard objects. Injection of blood and lymph vessels. Objects of general interest—cell-making, fluid mounts, *in toto* preparations, etc. Blood. Bacteria. Some embryological methods—sections and *in toto* mounts of frog and chick other forms. Some cytological methods *Reconstruction* of objects from sections. Drawing. Appendices The microscope and its optical principles Some standard reagents and their uses. Table of tissues and organs, with methods of preparation Preparation of microscopic material for a general course in *zoölogy* Table of equivalent weights and measures. References. Index.

Note: A standard manual of zoological microtechnique which has been widely used in biological laboratories in the United States of America and other countries since the publication of the first edition in 1906. A wide range of techniques is covered explicitly and in detail. Instruments also are described but less space is devoted to them. Both techniques and instruments pertain to the study of animal life and particularly to the microscopical study of it, but some are applicable also to the study of plant tissues and organs. Techniques are described specifically and in detail. Formulas are given for stains, fixing agents, mounting solutions, etc. Methods of preparation of tissues and organs are concisely tabulated in a long table. The fourth edition was published in 1936. This fifth edition does not represent an extensive revision. Minor, though useful, additions and revisions have been made in several parts, including the table on the preparation of tissues and organs.

HALL, CECIL E.

Introduction to electron microscopy New York McGraw-Hill Book Company Inc., 1953 451 p. illus. 24 cm. (International series in pure and applied physics) $9.50 1904

Contents: Elements of physical theory. Electrons in electrostatic fields. The ideal lens. The electrostatic lens. The magnetic lens. Aberrations and diffraction. The electron microscope. Commercial electron microscopes. Scattering phenomena. Image characteristics. Methods in electron microscopy. Examples from applied electron microscopy. Appendices: Examples of stereoscopic pairs. Answers to some of the problems. Constants and conversion factors. Name index. Subject index.

Note: A formal textbook which evolved from a course of lectures on electron microscopy presented by the author at the Massachusetts Institute of Technology. The course and the book are intended for students above the sophomore level who wish to gain knowledge of the electron microscope for use in varied fields, such as biology, medicine, chemistry, metallurgy and physics. The book presents in systematic fashion the essential principles and information which, when coupled with laboratory experience, will enable the student to understand the theory behind the techniques of operating electron microscopes and of interpreting the resulting records. The author states in his preface: "If the discussion should seem too theoretical at times for the purpose, it may be stated that if all parts were studied that were not [illegible] questions asked at one time or another by practical persons engaged in laboratory work, very little discussion would occur." The first chapter comprises a review of the development of modern physics and includes sections on the following topics basic to an understanding of electron optics: geometrical theory, wave theory and wave refraction, the nature of light, classical mechanics, and wave mechanics. Sample problems appear at the ends of nearly all the chapters, following which in most chapters are selected lists of references and general references.

SHILLABER, CHARLES PATTEN

Photomicrography in theory and practice. New York John Wiley & Sons Inc., 1944 773 p. illus. 22 cm. $16.50. 1905

Contents (abridged): The microscope, its use and adjustment. Lamp houses, lamps, methods of lighting, and photometric units. Light, lenses, lenses, and objectives. Oculars. Illuminating apparatus, slides, cover glasses, and the effect of each on the optical system. Optical light filters and the control of color. Cameras, photosensitive materials, formulas and photographic techniques. Mounting media, stains, reagents, and solvents; their use and application in photomicrography. Analysis of practical photomicrographical problems. Glossary. Addendum. Index.

Note: A text and reference book which presents the fundamental principles of the microscope, some of the related problems in optics and mechanics, the theoretical implications of the subject, and the practical application in the production of evenly exposed and in-focus negatives. Stress is placed on the necessity for exact and precise alignment of all optical parts, and the student is led to judge the accuracy of his own technique independently of all factory or museum adjustments, to find the proper balance for his optical equipment, and to select any required lens combination correctly. Mathematical derivation of optical formulas involves only elementary algebra and trigonometry. There are laboratory exercises and test questions at the end of each chapter and numerous illustrations of apparatus and typical photomicrographs.

WYCKOFF, RALPH WALTER GRAYSTONE

Electron microscopy technique and applications. With 202 illustrations New York Interscience Publishers, Inc., 1949 248 p. 24 cm. $5.00 1906

Contents: Introduction. Electron microscopes. Adjustment of the electron microscope. Preparations for electron microscopy. Metal shadowing and the visualization of very small objects. The use of surface replicas. The electron microscopy of particle suspensions. The electron microscopy of viruses. The photography of macromolecules. The structure of macromolecular solids. Index to text. Index to micrographs.

Note: The purpose of this volume is to provide laboratory technicians and students with brief descriptions of some of the successful applications made of the electron microscope, and to indicate its possibilities and limitations. Introductory chapters deal with the construction, operation and adjustment of such microscopes, but the main emphasis is on fields of application, especially in the biological and medical sciences. Each chapter includes an extensive bibliography and many excellent electron micrographs prepared by the author.

ZWORYKIN, VLADIMIR KOSMA, AND OTHERS

Electron optics and the electron microscope by V. K. Zworykin, G. A. Morton, E. G. Ramberg, J. Hillier and A. W. Vance. New York John Wiley & Sons, Inc., 1945 766 p. illus. 22 cm. $13.25 1907

Contents: Part I, Practical electron optics and electron microscopy: Electron optics. Applications of electron optics. Electron microscopes. Electron optics of high magnification. The magnetic electron microscope. Aberrations and tolerances in the electron microscope. Electron microscope power supplies. Manipulation of the electron microscope. The electron microscope as a research instrument. Part II, Theoretical basis of electron optics and the electron microscope: Theoretical basis of electron optics. Determination of potential distribution. Electron trajectory tracing. Gaussian dioptrics of electrostatic lenses. Magnetic fields. Electron motion in magnetic fields and magnetic lenses. Aberrations of electron lenses. Magnitude and correction of electron lens defects. High-voltage electron optics—light optics. Image formation in the electron microscope. Appendix: The problem of noise in amplification and in the scanning microscope. Miscellaneous tables. Author index. Subject index.

Note: The first part of this comprehensive and authoritative treatise is intended for users of electron microscopes; hence it deals with the general principles of electron optics and with the features of electron microscopes available at the time of preparation of the manuscript. In this part only simple mathematics is employed. Part II is intended chiefly for persons interested in the design and improvement of electron microscopes. Accordingly, it provides an exhaustive survey of both the theoretical and practical knowledge, and higher mathematics is employed. Bibliographies accompany all but one of the chapters, and there is a detailed manual of [illegible].

EVOLUTION

BLUM, HAROLD F.

Time's arrow and evolution. Second edition. Princeton Princeton University Press, 1955 223 p. illus. 24 cm. $4.50. 1908

Contents: Perspectives. The chronology of evolution. The energetics and kinetics of chemical reactions. The origin and early evolution of the earth. Later history of the earth. The fitness of the environment. The energetics and kinetics of living systems. Structure and its reproduction. Stability and variability. The origin of life. Irreversibility and direction in evolution. Some implications. Bibliography. Index.

Note: That the second law of thermodynamics ("time's arrow") has determined the origin of life and the direction of evolution of living organisms is the central theme of this book. The work is mainly an examination of the evidence of various fields of science that appears to support the basic idea rather than a statement of definite hypotheses. It is addressed primarily to scientists, or at least to persons who are moderately familiar with the terminology and concepts of physical and organic chemistry. The style is lucid, and the ideas advanced are well supported by references to the pertinent literature. The first edition was published in 1951. The

second edition represents rather limited revision. A six-page addendum has been added to the chapter on the origin of life. Lesser but important changes have been made in other chapters, and references to 18 recent publications which present more recent developments and points of view the latter not uncommonly in conflict, have been added to the bibliography

DOBZHANSKY, THEODOSIUS

Evolution, genetics and man New York John Wiley & Sons, Inc , 1955 398 p illus 24 cm $5 50 1909

Contents Nature and origin of life. The gene as the basis of evolution. Chromosomes as gene carriers. Heredity environment, and mutation. Elementary evolutionary changes or microevolution. Natural selection and adaptation. Individuals, populations, and races. Species. Evolution under domestication and evolution by polyploidy Evolution of the organic form and function. Evolution of sex. Historical record of organic evolution. Human evolution. Chance, guidance, and freedom in evolution. Index.

Note An illustrated textbook for use in college courses in biological evolution offered to students with an elementary knowledge of biology Because the fundamentals of genetics are basic to an understanding of evolution, the author devotes three whole chapters and parts of other chapters to genetics. Throughout the book wherever appropriate the author has pointed out the bearing of the topics discussed upon human problems. The book is a comprehensive and balanced presentation of the entire subject of evolution and is potentially of value to lay readers as well as to college students. Annotated "Suggestions for further reading appear at the ends of chapters.

DODSON, EDWARD OTTWAY

A textbook of evolution. Philadelphia W B Saunders Company, 1952 419 p illus 24 cm $5 00 1910

Contents (abridged) Part I, A definition of evolution Evolution by natural selection—Darwin's conception. Evidences of evolution I—biogeography Evidences of evolution, II—taxonomy comparative anatomy and comparative physiology Evidences of evolution, III—paleontology and genetics. The history of evolutionary thought. The two main problems of evolution. Part II, Phylogeny (evolution above the specific level): The origin of life and the differentiation of the plant and animal kingdoms. The main lines of evolution among land plants. The main lines of animal evolution. The history of the primates. Part III, The origin of variation (descent with modification) Gene mutation. Chromosomal mutations. Part IV The origin of species or the origin of discontinuity Natural selection. Continuous vs. discontinuous variation. Isolating mechanisms and species formation. Polyploidy Distribution of species. Index.

Note. The background and present status of evolutionary theory are well presented in this book. The author shows that evidence from several areas of scientific research is being fused in modern synthesis to which such men as Dobzhansky Goldschmidt, R. A. Fisher Mayr, and E. B. Babcock have made substantial contributions. The chapter on the primates includes the new light shed on the evolution of man by the discovery of the pithecanthropus skulls. Although designed as an introduction to the subject for college students, the book is suitable for reading by anyone interested in a survey of the contemporary situation in this field.

GREGORY WILLIAM KING

Evolution emerging a survey of changing patterns from primeval life to man. A collaborative work of the American Museum of Natural History and Columbia University New York The Macmillan Company, 1951 2 v illus 26 cm $20 00 1911

Content (abridged) Volume Text Part I, Time and evolution Introduction, the cosmic chorus. The first living things. The world of molluscs. Externally articulated animals (arthropods) Part II Emergence of the vertebrates Codonnui food-sifters of diverse types (brachiopods, polyzoa, echinoderms) The prechordates and the problem of the origin of the vertebrates. The vertebrates come forth (shell-skinned ancestors of the vertebrates and some of their branches) Early experiments among streamlined predators (placoderms) Advanced predators of the shark tribe. The branching tribes of bony fishes. Part III, Air-breathing fishes The air-breathers struggle for life. The air-breathers come up on land. From lowland marsh to forest and desert. Back to the waters and down to the sea. The reign of the archosaurians (thecodonts, crocodilians and dinosaurs) Bat-winged reptiles (pterosaurs) and the feather-clad frames of birds. Part IV The rise and branching of the mammals From sitalking reptiles to running mammals: a critical stage in evolution. The dark ages of mammalian history (mesozoic mammals) Branching evolution in egg-laying and marsupial mammals. Rise of the placental mammals (the outer form and inner frame of insectivores, tree-shrews, bats, edentates, rodents) Archaic and modernized carnivores, including seals (Pinnipedia) Outer form and inner frame among the hoofed mammals (Ungulata) Fish-like by convergence (Cetacea) Part V The devious paths to man Origin, rise and deployment of the primates. Man's debt to the past. Part VI, Evolution emerging, retrospect and prospect: Law and chance. Bibliography Index of authors. General index. Volume II. Illustrations.

Note The publication of this monumental work culminates a plan formulated by three successive generations of Columbia group professors for a textbook covering the evolution of vertebrate animals from earliest times to the present. The first volume contains the text without illustrations but with references to the illustrations. The second volume contains 1,013 pages of illustrations arranged under the same chapter titles as the text volume. In both volumes the details and evidences of vertebrate evolution are presented in logical order with attention centered especially upon the comparison of the skeletal patterns. The study of the skeleton is emphasized because of the opportunity it presents to combine and integrate the knowledge of both fossil and still-existing animals. The bibliography, which is classified to correspond to the chapter arrangement, covers 144 two-columned pages. Both students of comparative anatomy and general readers who are concerned in any manner with the subject will find the work of great interest and importance.

LULL, RICHARD SWANN

Organic evolution. Revised edition with numerous emendations New York The Macmillan Company, 1945 744 p. illus. 22 cm $7 50 1912

Contents (abridged) Part I, Introduction History of evolution. Geographic distribution. Bathymetric distribution. Geologic distribution. Part II, The mechanism of evolution Variation and mutation. Heredity Artificial selection. Natural selection. Sexual selection. Ontogenesis and kinetogenesis. Part III, The evidences of evolution. Section I, Ontogeny: The life cycle. Recapitulation—collection. Section II, Morphology and adaptations Coloration and mimicry Specialization and degeneracy Adaptive radiation. Aquatic adaptation. Volant adaptation. Cave and deep-sea life. Desert adaptation. Section III, Paleontology Fossils, their nature and interpretation. Origin of vertebrates. Rise of reptiles and dominance of dinosaurs. Origin of mammals and rise of archaic mammals. Inception of modernized mammals and evolution of carnivores. Cetaceans. Proboscideans. Horses. Camels. South American mammal radiation. The evolution of man. Index.

Note A distinguishing feature of this standard work is the inclusion of a large amount of material from paleontology It traces the evolution from fossil records is correlated with evidences from extant animal forms. It is used chiefly as college textbook, but it is suitable for reading by educated laymen also. The first edition was published in 1917, and a second edition containing fairly substantial revisions was published in 1929 In the preparation of the present edition rather numerous changes were made in the phrasing and content of scattered sentences and paragraphs, and in the bibliographies; but the revision was carried out so that the plates of the 1929 edition could still be used. There is accordingly no change in pagination and no major change in content.

MOODY, PAUL AMOS

Introduction to evolution New York Harper & Brothers 1953 475 p illus. 25 cm $6 00 1913

Contents (abridged) Changing animals. Evolution as seen in the structure of modern animals. Evolution as seen in embryonic development. Evolution as seen in chemical structure and in metabolism. Evolution as seen in serological tests. Evolution as seen in the geologic record. Evolution as seen in the geographic distribution of animals. Evolution as seen in the classification of animals. Means and methods of evolutionary change. Principles of evolutionary change—genetics of populations—natural selection. What of it— an open letter to students. Index.

Note. An introductory textbook for the instruction of undergraduate college students. An unusual feature is that the level of treatment does not assume previous education in basic biology All of the biological concepts that are essential to an understanding of the book are explained as they are introduced However elementary texts on biology are included among the "Suggested readings" at

the ends of chapters. The evidence for evolution is carefully presented in a series of chapters that constitute the main body of the book. The principles of evolutionary change are given somewhat less space, but the reader is introduced to the current thought on natural selection and the genetics of populations. The volume is adequately illustrated and well indexed.

NEWMAN, HORATIO HACKETT

Evolution, genetics and eugenics. Third edition. Chicago, University of Chicago Press 1932. 620 p. illus. 23 cm. $5.50 1914

Contents (abridged): Part I, Introductory and historical. Introduction. Historical account of the development of the evolution doctrine. Part II, Evidences of organic evolution. Is organic evolution an established principle? The fundamental postulate underlying all evidences of evolution. Evidences from morphology by G. J. [illegible]. Evidences from classification. Evidence from blood tests, by W. B. Scott. Evidences from embryology. Outline of the recapitulation theory by W. B. Scott. Evidences from paleontology. The evolution of man, paleontology by R. S. Lull. Evidences from geographic distribution. Part III, The mechanism of evolution. [illegible]. Introductory statement. The biological background of eugenics. Introduction to the study of [illegible] factors. Heredity in pure lines. Sex determination and sex differentiation. Mendel's laws of heredity. The factor hypothesis as applied to plants, by J. M. and M. C. Coulter. The factor hypothesis as applied to animals. Review of Mendelism. Sex-linked heredity. Linkage, crossing-over, and the architecture of the germ plasm. Part IV: Eugenics. Part [illegible]. Auxiliary reading. Bibliography. Glossary. Index.

Note: Presents an account of the various phases of evolutionary biology condensed within the scope of one volume of moderate size. Although designed to be used in college courses, it is not strictly a textbook, since it consists largely of excerpts from both the classical evolutionary writers and the modern writers. Unification has been accomplished by the aid of editorial comments, [illegible] and original [illegible]. The third edition has an enlarged section on eugenics.

PATTERSON, J. T., AND W. S. STONE

Evolution in the genus *Drosophila*. New York, The Macmillan Company 1952. 610 p. illus. 22 cm. $10.00 1915

Contents: Introduction: The problem. The genus Drosophila. Geographical distribution and speciation. Chromosomal evolution in the genus Drosophila. Salivary gland chromosomes. Gene variation, selection, and genic balance. Isolating mechanisms. The [illegible] and other isolating mechanisms. Hybrids and hybrid sterility. Evolution in the virilis species group. Comparisons and conclusions. References. Index.

Note: By serving as experimental material the fruitflies of the genus Drosophila have contributed much to the development of our present knowledge of genetics. In this book the mass of accumulated knowledge about this genus [illegible] reinterpreted from the standpoint of evidence of evolution. Although the authors state that they have [illegible] certain contributions, the treatment borders on the encyclopedic. The style [illegible] compact, and the text [illegible] supplemented by more than 100 tables. The bibliography runs to 33 pages. The work is a major addition to the scientific literature of evolution.

SHULL, AARON FRANKLIN

Evolution. Second edition. New York, McGraw-Hill Book Company, Inc., 1951. 322 p. illus. 24 cm. (McGraw-Hill publications in the zoological sciences. E. J. Boell, consulting editor) $6.00 1916

Contents: The evidence [illegible] over the centuries. Order in diversity among living things. Lineage [illegible]. Geographic distribution and the time and place of origin of species. Fossils [illegible] by evolution. Origin of man. Mechanism of [illegible] and change. Primary variation. Genetic variation in wild populations. [illegible]. Guidance of evolution. Isolation. Geographic races and speciation. Sequences of [illegible] and [illegible]. Origin of life. Index.

Note: A simple, straightforward introduction. The role of the genes in evolution is stressed, but adequate attention is also given to other aspects. The book is designed and widely used as a text for college courses, but it is equally suitable for a first book for interested lay readers. The first edition was [illegible] [illegible] from the genetic standpoint. In the present edition, published 23 years later, the chapters bearing on the genetic aspects have been largely rewritten. One of the principal changes is an account of polyploidy. There are 141 figures and a good index, but there is no bibliography.

SIMPSON, GEORGE GAYLORD

The major features of evolution. New York, Columbia University Press 1953. 434 p. illus. 23 cm. (Columbia biological series, No. XVII. General editor, L. C. Dunn) $7.50 1917

Contents: Rates of evolution—morphological rates. Taxonomic rates of evolution. Variation. Mutation. Population and selection. Adaptation. The evolution of adaptation. Trends and orientation. Extinction, relicts, and [illegible]. [illegible] and [illegible]. Higher categories. Patterns or modes of evolution. Works cited. Index.

Note: This book is a successor to the author's classic *Tempo and mode in evolution* 1944, which was a pioneer study of the rates and patterns of evolution as shown in the records of fossils. The present work is concerned with essentially the same pattern. In brief, it is a new study of evolution, in which it is shown that the fossil record supports the modern theory of evolution as do genetics—particularly population genetics—systematics, comparative morphology, ecology and other areas of biology. The treatment is at an intermediate level; that is to say, readers need a basic knowledge of biology and genetics, but advanced topics such as population genetics are discussed in descriptive rather than mathematical terms. An extensive list of literature cited is included.

SIMPSON, GEORGE GAYLORD

The meaning of evolution: a study of the history of life and of its significance for man. New Haven, Yale University Press 1950. 364 p. illus. 21 cm. (The Terry lectures) $4.00 1918

Contents: Part I, The course of evolution. Geologic time. The beginnings of life. Major outlines of the fossil record. The history of the vertebrates. Records and radiations of reptiles. Outlines of the history of mammals. The history of the primates. Rates of evolution. First conclusions from the record. Part II, The interpretation of evolution. The problem of problems. Oriented evolution: orthogenesis and trends. The opportunism of evolution. Racial life and death. Forces of evolution and their integration. The concept of progress in evolution. Historical retrospect: the evolution of evolution. Part III, Evolution, humanity and ethics. Man's place in nature. The search for an ethic. The ethics of knowledge and of responsibility. The future of man and of life. Epilogue and summary. Index.

Note: Liberated by readers with more than superficial interest in evolution [illegible], the general audience for this well-written, authentic book. Originally prepared and delivered at Yale University, November, 1948, as the 19th series of Terry lectures, the material has been expanded and augmented without loss of the easy-flowing informal style of scientific lectures addressed to laymen. The evidence in support of evolution and the meaning of the evolutionary process to man are presented in a synthesis that employs evidence from pertinent branches of science and an interpretation that points out the ethical and cultural values. The author is Chairman of the *Department of Geology and Paleontology* in the American Museum of Natural History and Professor of Vertebrate Paleontology at Columbia University.

SMITH, HOMER W.

From fish to philosopher. Boston, Little Brown and Company 1953. 264 p. illus. 21 cm. $4.50 1919

Contents: Earth. Evolution. The [illegible]. The kidney. The [illegible]. The lungfish. The amphibia. The bony fishes. The reptiles. The mammals. Animals that live without water. Man. Consciousness. Technical notes and bibliography. Index.

Note: In this well-written popular story of evolution, the kidney is utilized as the peg on which to hang the story. The author, a professional physiologist and internationally known authority on the kidney, traces the evolution of this organ and at the same time the evolution of the forms of life in which the kidney functions as the major controller of body chemistry. He relates very ingeniously and convincingly the evolution of the kidney and its function to the history of the earth and to the unending succession of vicissitudes that have driven the animal vertebrates from sea into fresh water.

into desiccated swamps, out upon the dry land, from one habitation to another perpetually in search of the free and independent life, perpetually failing, for one reason or another to find it."

STEBBINS, GEORGE LEDYARD, JR

Variation and evolution in plants New York Columbia University Press, 1950 643 p illus. 24 cm. (Columbia biological series Number XVI General editor L. C Dunn) $8 00 1920

Contents Description and analysis of variation patterns. Examples of variation patterns within species and genera. The basis of individual variation. Natural selection and variation in populations. Genetic systems as factors in evolution. Isolation and the origin of species. Hybridization and its effects. Polyploidy—Occurrence and nature of polyploid types—Geographic distribution and significance of polyploidy Apomixis in relation t variation and evolution. Structural hybridity and the genetic system. Evolutionary trends—The karyotype—External morphology Fossils, modern distribution patterns and rates of evolution. Works cited. Index.

Note. An important contribution to the literature of evolution. It epresents a synthesis of knowledge from many fields, particularly paleobotany genetics, cytology and, of course, systematic botany Plant variation and evolution is shown to be a complex process based on the accumulation of many small changes and taking place at three distinguishable levels which the uthor terms variation, microevolution and macroevolution. The work is essentially a masterly interpretation of the published literature including the uthor's own umerous papers. The list of works cited runs to 60 pages. The presentation is technical and is suited to advanced students and graduate scientists interested in such fields as evolution genetics, and botany

GENETICS

ADVANCES IN GENETICS Volume VII Edited by M Demerec. Editorial board G W Beadle and others New York Academic Press Inc., 1955 309 p illus 23 cm $8 00 1921

Contents Microbial drug resistance, by V Bryson and W Szybalski. The "Obscura group of the genus Drosophila, by A. A. Buzzati-Tra erso and R. E. Scossiroli. Chromosomal polymorphism in the Diptera, by A. B. da Cunha. Abnormal combinations of nuclear and cytoplasmic systems in frogs and toads, by J A. Moore. Recent genetics of the domestic rabbit, by P B. Sawin. The origin and evolution of cultivated barley by R. Takahashi. Author index to Volume VII. Subject index to Volume VII. Cumulative subject index to Volumes I–VII.

—— Volume VIII Edited by M Demerec. Editorial board G W Beadle and others New York Academic Press Inc., 1956 402 p illus 23 cm $9 00 1922

Contents Metabolism and spontaneous mutations in plants, by F D Amato and O. Hoffmann-Ostenhof. The complementary genic systems in flax and flax rust, by H. H. Flor The genetic structure of races and species in Gilia, by V Grant. Chromosome repatterning and adaptation, by V Grant, General genetics of bees, by W E. Kerr and H. H. Laidlaw Jr Genetics of ladybettles, by T Komai. The genetics of the sheep by A L. Rae. Cytogenetics of the tomato, by C. M. Rick and L. Butler Author index. Subject index.

Note. Two volumes in a series that began publication in 1947 and which is designed to provide summaries on the professional level of current research and recent advances in genetics. Each of the review papers is written by recognized uthority and is in effect a monographic survey of the recent literature of its topic. Contributors are selected from the scientists f various countries, although scientists working in the United States of America predominat The reviews are addressed to graduat scientists, and are particularly useful to research workers in both pure and applied fields who wish to keep abreast of new developments in areas of genetics outside their own specialties. Extensive keyed lists of literature accompany each of the papers.

ALTENBURG, EDGAR

Genetics New York Henry Holt and Company, 1945 452 p illus 22 cm. 1923

Contents. The physical basis of heredity Heredity and environment. Mendel's principle. Independent assortment. Multiple factors. The determination of sex. Inbreeding and outbreeding The genetical interpretation of sex. Selection. Linkage, crossing over, and chromosome maps. Crossing over and meiosis. Multiple "alleles". Abnormal chromosomal rearrangements. Cytogenetic maps. Gene balance and chromosome number. Mutation. The artificial production of mutations. Balanced lethals and chromosome complexes. Heredity and development. The genetic basis of evolution. Index.

Note. This text, designed for students ith a background of general college biology considers genetics as the study of the germ plasm. The author was among the pioneer investigators in the Drosophila experiments at Columbia University from 1911 to 1916, the influence of which is strongly indicated in this study In the introductory chapters, explanations are made with care and in detail, with an especially full treatment of the Mendelian principle, later the pace is considerably more rapid, and the material would be of little use t the layman studying alone. Human genetics is not considered separately as such, but is treated topically with other forms of life. There are helpful summaries and sets of problems following each chapter but no bibliographical references. A new edition was published in 1957 512 p., $4.50.

ANDERSON, EDGAR

Introgressive hybridization New York John Wiley & Sons, Inc., 1949 109 p illus. 22 cm. (Biological research series, advisory board, Paul A Weiss and others) $4.25 1924

Contents. Introgression in Iris typical example. The ecological basis of introgression. The genetic basis of introgression. Introgression in finite populations. Introgression and evolution. Special techniques for the study of introgression. Epilogue. Bibliography Index.

Note. The term introgressive hybridization designates the repeated backcrossing of hybrids to one or both parents. This book is about the study of such hybridization in the field under natural conditions, that is, introgressive hybridization outside the laboratory and the breeding plot. It deals particularly with how the effects of hybridization can best be measured in natural populations and what is the nature of the forces at work in such populations. All relevant literature dealing with the problem (which has been given intensive study chiefly since 1939) is summarized at the same time, a good deal of the material is original.

BRIDGES, CALVIN BLACKMAN, AND KATHERINE S BREHME

The mutants of *Drosophila melanogaster* Washington, D C Carnegie Institution of Washington, 1944 257 p illus. 25 cm. (Carnegie Institution of Washington. *Publication* no 552) $1 25 1925

Contents Nomenclature and symbolism. Mutants and aberrations listed and described in order of symbols. Descriptions of wild-type stocks. Linkage maps. Appendix *Bibliography of Calvin Blackman Bridges, 1913 to 1944*

Note. The compilation of descriptions of the mutants of *Drosophila melanogaster* contained in this volume was made by the senior author from the mutation list which he had maintained and continually revised from 1914 to his death in 1938, and which included the data concerning all significant mutations and reoccurrences found by himself and other workers in the laboratory of Dr T H. Morgan at Columbia University and later at California Institute of Technology He also used the information then published in Carnegie Institution of Washington Publications 237 (1916) 278 (1919), 327 (1923) and 421 (1931) and in Morgan *The genetics of Drosophila*, New York, 1925. After his death a systematic survey of the literature was made by the junior author covering all available publications on the genetics of Drosophila through December 1942 An attempt was made to include such information concerning the mutations as would be of use to investigators, and to document all data as thoroughly as possible. The mutations are listed in one alphabetical order in the present volume. There are three plates of reference maps of various chromosomes.

CASTLE, WILLIAM ERNEST

Genetics and eugenics a text-book for students of biology and a reference book for animal and plant breeders. Fourth revised edition. Cambridge, Mass Harvard University Press, 1930 395 p. illus. (part col d) 24 cm. $3 00 1926

Contents (abridged) Part I, The biological basis of genetics. The place of life in the universe. Chromatin, the directing agency of life and the material basis of heredity Reproduction. Chromosome reduction. Relation of genetics to the evolution theory Part II, The historical development of genetics: Darwin's theory of evolution and its evidences. Contributions of Lamarck, Weismann, and Spencer. Attempts to classify and measure variation. The mutation theory of De Vries and the modern theory. Discovery and rediscovery of Mendel's law Part III, The essential facts of genetics: Mendel's law. Some Mendelian terms and their uses. The unit-characters of rodents, cattle, horses, swine, sheep, dogs, cats, poultry, plants, and insects. Linkage. Artificial production of mutations. Inheritance of size. Genetic changes and the chromosomes. Hybrid vigor or heterosis. Galton's law Part IV Eugenics: Human crosses. Physical inheritance. Heredity of general mental ability, insanity, epilepsy and feeble-mindedness. Feasibility and prospects of breeding a better race. Bibliographies. Index.

Note: The fourth edition of this standard work on genetics gives a more extended account of human heredity than contained in former editions, and there is new material on the unit-characters of rodents, polyploidy, parthenogenesis, and the artificial production of mutations. The text has been written with the needs of the interested layman as well as the student in mind. The bibliographies contain about 1,000 references to the world literature of the subject, and there are 170 illustrations and charts.

CASTLE, WILLIAM ERNEST

Mammalian genetics. Cambridge Mass. Harvard University Press 1940 169 p. illus. 23 cm. $2.00. 1927

Contents: Heredity in general. Mendelian inheritance. Modified Mendelian ratios. Linkage, as illustrated in the [illegible] of rabbit genes. Known genes of rodents other than the rabbit. Hybridization and hybrid vigor. Self-sterility. Bipolar sexuality. Sex differentiation. Sex determination. Sex-linked inheritance in Drosophila and in mammals. Inheritance of blood groups in man and rabbit. Dominance. Multiple alleles. Lethal genes. Balanced lethals. Genes having pathological effects—"semilethal" genes. Maternal inheritance. The inheritance of body size. Variation and selection, quantitative characters, pure lines. Major contributions of fish genetics. The more important gene mutations of domestic mammals. Index.

Note: A summary of the present knowledge of the genetics of mammals as of 1940. The subject of the heredity of man is not included since it is as yet not subject to laboratory experiment. The reader is assumed to possess a clear knowledge of the anatomy and physiology of mammals and of the cytology of gametogenesis and fertilization. The author emphasizes that the use of the present work as a text requires supplementary laboratory study, for which he has prepared his *Manual for a laboratory course in genetics*, to accompany his textbook *Mammalian genetics*. Cambridge, Mass Harvard University Press, 1940, 34 p., $0.40. There are references at the end of each chapter except Chapter III, and 131 photographs and drawings.

CLAUSEN, JENS CHRISTIAN, AND OTHERS

Experimental studies on the nature of species. I. Effect of varied environments on western North American plants, by Jens Clausen David D Keck, and William M. Hiesey Washington D C. Carnegie Institution of Washington, 1940 452 p. illus. 25 cm. (Carnegie Institution of Washington. Publication no. 520) $2 75 1928

Contents: Introduction. *Potentilla glandulosa* and its allies. *Potentilla gracilis* and its allies. *Potentilla drummondii* and *Potentilla breweri*. Studies in the genus Horkelia. The genus Zauschneria. Penstemon, a study in cytotaxonomy and transplanting. The Achillea millefolium complex. The genus *Artemisia*. Miscellaneous species. Review of literature. Conclusions. List of chromosome numbers found in plants of the present experiments. New species, subspecies, combinations, and names published in this book. Literature cited. Index.

—— II. Plant evolution through amphiploidy and autoploidy with examples from the *Madiinae* by Jens Clausen, D D Keck, and W M Hiesey Washington, D C. Carnegie Institution of Washington 1945 174 p illus. 25 cm. (Carnegie Institution of Washington. Publication 564) $1.50 1929

Contents: Glossary of important terms. Introduction. Madia nutammii, Madia citriodora. Layia prelatissima. Biosystematic relationships and amphiploidy. Classification of experimental polyploids on biosystematic principles. Ecologic characteristics of natural amphiploids. Ecologic characteristics of natural autoploids. Taxonomic and evolutionary aspects of amphiploidy and autoploidy. Literature cited. Index.

—— III. Environmental responses of climatic races of Achillea, by Jens Clausen D D Keck and W M Hiesey Washington D C Carnegie Institution of Washington 1948 129 p. illus. 25 cm. (Carnegie Institution of Washington. Publication no 581) o.p. 1930

Contents: Introduction. Comparison of populations at Stanford. Responses of races in three climates. Growth responses under controlled conditions. The dynamics of climatic races. Literature cited. Index.

Note: The first volume of this series deals with experiments in transplanting wild plants to different natural environments and presents new evidence from the authors' cytological and genetic studies of these materials. The second volume pictures the building of plant species through multiplication of the chromosome sets. On the basis of their own investigations of the patterns of speciation in the Madiinae, a subtribe of the Compositae, the authors assemble representative material from contemporary literature and examine the evolutionary patterns disclosed. The third volume presents the results of an experimental analysis of a series of ecotypes of the Achillea millefolium complex, which was selected for study because of its occurrence over a wide region with a diversity of climatic conditions. Seeds of the ecotypes were sown in greenhouses at Stanford, California; the seedlings were transplanted to experimental gardens nearby and their responses to the different climatic were studied. The results are presented and analyzed. Finally problems that still remain in the understanding of climatic races are briefly described.

CLEVELAND LEMUEL ROSCOE

The whole life cycle of chromosomes and their coiling systems. Philadelphia The American Philosophical Society 1949 100 p. illus. 30 cm. (American Philosophical Society Transactions. New series—vol. 39 part 1) $1.50 1931

Contents: Introduction. The genus *Holomastigotoides*. Species of *Holomastigotoides* in *Prorhinotermes*. *Holomastigotoides* [illegible] species. *Holomastigotoides* [illegible] species [illegible]. Centrioles and achromatic figure. Relation of chromosomes to nucleoli. Relation of chromosomes to nuclear membrane. Single chromatids. Double chromatids Discussion. Summary. References. Explanation of plates. Index.

Note: A thorough study of the complete life cycle of chromosomes. It is based largely on original studies made by the author but a critical digest of the pertinent literature is also incorporated. In the work the author clears up the details of a number of items that have been heretofore treated only in general terms. Among his conclusions are, "all chromosomes have major and major coils some have super coils; and some have repeats in torsion but not in minor." "The minor coils are the only ones that arise throughout the life cycle of chromosomes; major and supers (when present) disappear and reappear during each chromosomal generation." "Chromosomes are of two types, those with single and those with

double chromatids." "Interphase and resting stages are not always synonymous. "There is no longer any question regarding the existence of terminal centromeres. There are 93 illustrations reproduced on 11 plates. All of the illustrations are reproductions of original drawings.

COLIN, EDWARD C

Elements of genetics, Mendel's laws of heredity with special application to man Third edition. New York McGraw Hill Book Company, Inc., 1956 498 p illus 24 cm $6 50 1932

Contents Mendel—student, priest teacher investigator Dominance and the law of segregation. Dihybrids—the law of independent assortment. The rediscovery of Mendel's work. Chromosomes and Mendel's laws. The factor principle—action and interaction of genes. Multiple alleles. Linkage and crossing over Sex determination and sex differentiation Sex-linked heredity Heredity and environment. The gene and mutation. Inbreeding and crossbreeding. Heredity and evolution. Heredity in man Improvement of the human species. Domesticated plants. Domesticated animals. Appendixes English translation of Mendel's autobiography Page one of Mendel's paper on peas in English. Laboratory exercises in genetics. Glossary Index.

Note. Although not limited to the study of heredity in man, this standard work contains much material on it. There are two long chapters specifically on heredity in man, one chapter on *eugenics*, and many references in other chapters to man genetics. Also there are specific discussions of genetics applied to the study and breeding of domesticated plants and animals. The book is, nevertheless, an introductory textbook on genetics in general. It is designed primarily for the instruction of undergraduate college students. However the book is informative also to laymen who are familiar with the basic terminology of biology In this third edition, there are 132 figures. In comparison to the second edition published in 1946, two chapters have been added and numerous revisions have been made in the chapters carried over

DOBZHANSKY, THEODOSIUS

Genetics and the origin of species Third edition, *revised New York Columbia University Press, 1951 364 p illus 24 cm* (Columbia biological series Number xi Edited at Columbia University) $5 00 1933

Contents Organic diversity Heredity and mutation. Mutation in populations. Selection. Adaptive polymorphism. Race formation. Isolating mechanisms. Hybrid sterility Species as natural units. Patterns of evolution. Literature. Index.

Note One of the chief books in the modern literature of evolution in which knowledge from various branches of biological science is synthesized. It is devoted particularly to the origins of variations in plants and animals and perpetuation of these by heredity The author emphasizes that "Mendelian populations" are the natural evolutionary units. The second edition appeared in 1941 The book has been rewritten and reorganized in the present edition. Although many pages shorter the scope is essentially the same. The revised bibliography which now runs to 31 pages, is valuable feature.

DUNN, LESLIE CLARENCE editor

Genetics in the 20th century essays on the progress of genetics during its first 50 years *Edited for the Genetics Society of America* by L. C Dunn New York The Macmillan Company, 1951 634 p illus 22 cm $6 00 1934

Contents The impact of genetics upon science by R. B Goldschmidt. Gregor Mendel's life and heritage, by H. Iltis. The knowledge of heredity before 1900, by C. Zirkle. The beginnings of Mendelism in America, by W E. Castle. The development of the gene theory by H. J Muller The relation of genes and chromosomes, by A. H. Sturtevant. The progress and prospect of biometrical genetics, by K. Mather Some chemical aspects of the cell nucleus, by A. E. Mirsky Cytochemical measurements in the study of the gene, by T Caspersson and J Schultz. Genetics and immunology by M. R. Irwin. Chemical genetics, by G. W Beadle. Research on cell heredity by B Ephrussi. Genetic studies in bacteria, by J. *Lederberg. The role of the genes in cytoplasmic inheritance*, by T. M Sonneborn. Mendel and the determinants, by C. D. Darlington. Evolution of cytogenetic mechanisms in animals, by M. J. D White. Old and new pathways in human genetics, by L. H. Snyder Genetics of the human race, by L. S. Penrose. Genetics and disease resistance, by J W Gowen. Genetics and the cancer problem, by C. C. Little. Genetics and plant breeding, by A. Müntzing. Genetics and animal breeding, by J L. Lush. Genetics and plant pathology, by J C. Walker Hybrid corn its genetic basis and its significance in human affairs, by P C. Mangelsdorf. Mendelian populations and their evolution, by T Dobzhansky Genetics, evolution, and human destiny by J Huxley Index.

Note A collection of original papers written for and presented at the Golden Jubilee of Genetics at *Ohio State University* in September 1950. Though the historical development of genetics is the background of most of the papers, many of them deal with the current state of knowledge of a particular area within genetics. The book is addressed to advanced students of genetics and professional *geneticists. Many of the papers are accompanied by substantial* reference lists.

GOLDSCHMIDT, RICHARD BENEDICT

Understanding heredity, an introduction to genetics. New York John Wiley & Sons, Inc., 1952 228 p illus 22 cm $4 00 1935

Contents Hereditary and non-hereditary traits. The sex cells and fertilization. Elementary Mendelism. More on elementary Mendelism. Chromosomes and Mendelism. Linkage. Mutation. Sex chromosomes and sex-linked inheritance. Collaboration of genes. Penetrance or multiple factors. Multiple alleles. A glimpse of more technical facts and problems of genetics. Problems. Books for further study. Glossary Index.

Note Though an introduction this book is not a popularization. In it the chief known facts pertaining to genetics are presented concisely but in sufficient detail so that thorough reader will gain a clear understanding of the basic genetic mechanisms. The book is *suitable for* use either as a college textbook or as an introduction for serious general readers. Problems for students to solve are suggested in the back of the book.

GOWEN, JOHN WHITTEMORE, editor

Heterosis. A record of researches directed toward explaining and utilizing the vigor of hybrids. Ames Iowa State College Press, 1952 552 p illus 24 cm. $7 50 1936

Contents Early ideas on inbreeding and crossbreeding, by C. Zirkle. Beginnings of the heterosis concept, by *G. H. Shull.* Development of the heterosis concept, by H. K. Hayes. Preferential segregation in maize, by M. M. Rhoades. Inbreeding *and crossbreeding* in seed development, by R. A. Brink. Physiology *of gene action* in hybrids, by W G Whaley Hybrid nutritional requirements, by W J Robbins. Origin of corn belt maize and its genetic significance, by E. Anderson and W L. Brown. Heterosis in population genetics, by A. A. *Buzzati-Traverso. Fixing transgressive vigor in Nicotiana rustica*, by H H. Smith. Hybridization in the evolution of maize, by P C. Mangelsdorf. Biochemical models of heterosis in Neurospora, by S. Emerson. Nature and origin of heterosis, by T Dobzhansky Plasmagenes and chromogenes in heterosis, by D F Jones. Specificity of gene effects, by M. R. Irwin. Genetic hybrids and cytology of saccharomyces, by C. C. Lindegren. Genetic implications of mutations in *Salmonella typhimurium*, by *R. H. Pengra.* Dominance and overdominance by J F Crow Gene recombination and heterosis, by L. Powers. Gene interaction in heterosis, by A. J. Mangelsdorf. Inbred lines for heterosis tests? by G. E. Dickerson. Specific *and general* combining ability by C. R. Henderson. Rotational crossbreeding and heterosis, by L. M. Winters. Genetic selection for specific combining ability by E. L. Pinnell and others. Monoploids in maize, by S. S. Chase. Early testing and recurrent selection by G. F Sprague. Heterosis in new population, by F J. Wellhausen. Recurrent selection and overdominance, by F. H. Hull. Hybrid vigor in Drosophila, by J W Gowen. Estimation of average dominance of genes, by R. E. Comstock and H. F Robinson. Bibliography Index.

Note Original papers first presented in June, 1950, at Iowa State College are collected in this volume. The speakers and audience were drawn largely from scientists engaged in research on genetics, plant breeding, etc., and the papers are addressed to graduate scientists with similar interests. Bibliographical references for all the papers are collected in single bibliography

HILL, J BEN, AND HELEN D HILL

Genetics and human heredity New York McGraw Hill Book Company Inc., 1955 526 p. illus 24 cm. $6.50 1937

Contents (abridged) Section I. The biological background of genetics. Cells, chromosomes, and genes. Section II. Mendelian principles. Segregation of allelic genes. Assortment of genes—Mendel's second law of heredity. Section III. Linkage and crossing over. Complete and incomplete linkage. Chromosomal relations of genes in linkage. Sex linkage. Section IV. Actions and interactions of genes in development of heritable characters. Action of genes in development. Interaction of genes in development—complementary and supplementary genes—inhibitory genes—epistasis. Section V. Influence of multiple genes in development. Duplicate genes. Quantitative characters and the multiple gene hypothesis—inheritance of differences in size. Selection and breeding techniques in relation to quantitative characters. Section VI. Biometry—the statistics of genetics. Statistical consideration of quantitative characters in living organisms. Population genetics. Section VII. Variations and gradual changes. Heteroploidy or variations in chromosome numbers in plants and animals. Chromosome numbers in development of heritable traits. Chromosomal aberrations—changes in the structure of chromosomes. Mutations. Section VIII. Development of heritable characters. Gene action in the development of heritable traits. Extranuclear inheritance. Section IX. Sex determination and sexual types. Sex determination and sex differentiation in animals. Sex determination in plants. Section X. Twins and human heredity. Twins and multiple births. Inheritance of physical traits in human beings. Inheritance of physiological conditions in human beings. Inheritance of mental traits in human beings. Index.

Note Designed as an introduction to genetics, the college textbook offers the view of present-day genetic knowledge, both in general and as applied to human heredity. The classic contents of genetics and the modern knowledge are both presented. In other words, the fundamentals of classic heredity and the newer cytogenetics are both presented. There are more than 100 figures and over 50 tables. Literature references are included in most of the chapters. Although the space devoted to human heredity proper—57 pages—is small in relation to the whole volume, most of the book leads to an understanding of this part.

HOVANITZ, WILLIAM

Textbook of genetics. Princeton D Van Nostrand Company Inc., 1953 419 p. illus. (part col'd) 24 cm. $5 95 1938

Contents The principle of Mendelian segregation. Probability and significance. Segregation in action. Mendel's principle of independent assortment. Chromosomes in cell division and gamete formation. Chromosome structure. Linkage. Linkage groups and chromosome maps. Multiple alleles and gene combinations. Mutations and chromosomal variations. Polyploidy, haploidy, and aneuploidy. Inheritance of intergrading characters (quantitative inheritance). Selection and populations. Mutations and the gene. Gene action and gene structure. Genetics in medicine and agriculture. Species differences, isolation and organic evolution. Appendices. Author index. Subject index.

Note An introductory textbook of general genetics for college students who have completed at least year of college botany or zoology. The author, who Professor of Cytology and Genetics at the University of San Francisco, states, so far as they are known, the mechanisms of heredity in plant and animal life. The general approach through the results of breeding experiments and cytological observations. Selected bibliographies appear at the ends of chapters. There are 187 illustrations and 43 tables in the text and five pages of probabilities of Mendelian ratios for different values of X in an appendix.

KINSEY ALFRED CHARLES

The gall wasp genus Cynips a study in the origin of species. Bloomington University of Indiana, 1930. 577 p. illus. 22 cm. (Indiana University studies Vol. XVI. Waterman Institute for Scientific Research publication no 42 Contribution from the Department of Zoology Indiana University no 220 Entomological series no 7) $2.50 1939

Contents Part I. The origin of species. The taxonomic method. Basis of present study. The species concept. Mutations. Phylogenetic species. The isolation of species. Hybridization. Phylogenetic history. Part II. Systematic data. Subgenus Cynips. Subgenus Antron. Subgenus Besbicus. Subgenus Philonix. Subgenus Atrusca. Subgenus Acraspis. Appendices. Index.

Note An intensive study of 93 species represented by more than 17,000 insects and 54,000 galls, involving an exposition of the nature of species, individual variation, mutation, and hybridization in nature, and the factors affecting the origin of species. The thesis is maintained that species, defined as populations with common heredity, are realities rather than merely mental concepts, and preserve morphologic and physiologic identity under varying conditions, over vast areas, and through periods of time that may extend beyond the present geologic epoch. About 900 works published prior to 1935 are listed in the bibliography

KINSEY, ALFRED CHARLES

The origin of higher categories in Cynips. Bloomington Indiana University 1936 333 p. illus. 25 cm. (Indiana University publications. Science series no 4 Contributions from the Department of Zoology no 242 Entomological series no 10) $2.50 1940

Contents Summary Part I. Evolutionary discussion Current concepts of higher categories. Basis of present study. Modern phylogenetics. Terminology of the higher categories. Characters in higher categories of Cynips. The nature and origin of higher categories. On the correlation of taxonomy and genetics. Part II. Systematic data. Subgenus Cynips. Subgenus Antron. Subgenus Atrusca. Subgenus Philonix. Subgenus Acraspis. Appendices. Index.

Note This is systematic study of 79 species of gall wasps new to the genus Cynips. New data have also been added on some of the species included in the author's earlier monograph, The gall wasp genus Cynips, described above. Most of the new species in the present paper are from Mexico, and the study includes all that is known of the Mexican and Guatemalan representatives of the group. The origin of higher categories in the genus is clarified through the inclusion of these Mexican insects. One hundred and two titles appear in the bibliography

LERNER I MICHAEL

Genetic homeostasis. New York John Wiley & Sons Inc., 1954 134 p. illus 22 cm. $3.25 1941

Contents Part I. Introductory. Homeostasis. The general hypothesis. Part II. Evidence. Selection results. Balanced phenotypes. Selective advantage of heterozygotes. Inbreeding degeneration. Crooked toes in chickens. Wing venation in *Drosophila*. Other phenodeviants. Variability of heterozygotes. Variance of heterozygotes in *Drosophila*. Heterozygote variance in higher animals and plants. Part III. Interpretation. Canalization and buffering. Synchrony of ... Genetic basis for phenodeviants. Relict homeostatic traits. Model of genetic homeostasis. Genetic homeostasis in selection. Stabilizing selection. Evolution of buffering properties. Some general considerations. Bibliography

Note The thesis of this book has been stated by the author as follows: "It is proposed to demonstrate that Mendelian populations possess self-regulating properties, to establish connection between genetic and developmental homeostasis, to suggest that heterozygosity provides basis for both phenomena, and to consider some consequences of these points for evolution and breeding." The development of the concept of genetic homeostasis is outlined in the first part, the evidence in support of it is concisely presented in the second part, and finally the evidence is interpreted and its implications pointed out in the third part. The bibliography is 14 pages long. The book is addressed primarily to graduate biologists.

LI, CHING CHUN

Population genetics. Chicago University of Chicago Press 1955 366 p. illus. 25 cm. (The University of Chicago committee on publications in biology and medicine Emmet B Bay and others) $10.00. 1942

Contents Large random-mating populations. Applications and extensions of the equilibrium law. Genetic variance and correlation. Multiple alleles. Sex-linked genes. Autopolyploids. Self-fertility. Two pairs of genes. Selfing, sib mating. Equilibrium populations with inbreeding. The theory of path coefficients. Path co-

lations between parent and offspring. Systems of inbreeding. Heterozygosis in finite groups. Irregular pedigrees of inbreeding. Phenotypic assortative mating. Gene mutations. Selection. Joint effects of mutation and selection. Subdivision and migration. Small populations and effective size. Stationary distributions of gene frequencies. References. Index.

Note A systematic and relatively lucid introduction to the general field of the genetics of populations is afforded by this book. Readers are assumed to be thoroughly acquainted with the concepts and terms of genetics and to have a knowledge of basic algebra and elementary statistics. To simplify the subject, the first eight chapters are concerned only with the population genetics of random-mating populations while from Chapter IX onward, specific cases of various degrees of inbreeding, selected mating, and other methods of selection are considered. The XII and XIII chapters are devoted to a thorough exposition of the path co-efficient theory originated by Professor Sewall Wright. The author has endeavored to simplify the mathematics as much as possible nevertheless, he has maintained a considerable degree of mathematical rigor Numerous examples of typical problems are fully solved in the course of the exposition. The book is based on an earlier one published by the National Peking University Press in 1948, but it has been revised and augmented. The author is now a member of the faculty of the Graduate School of Public Health of the University of Pittsburgh.

NATIONAL RESEARCH COUNCIL COMMITTEE ON COMMON PROBLEMS OF GENETICS, PALEONTOLOGY, AND SYSTEMATICS

Genetics, paleontology, and evolution Edited by Glenn L Jepson, Ernst Mayr, and George Gaylord Simpson Princeton Princeton University Press, 1949 474 p 24 cm. $7 50 1943

Contents I, Geological time Time in earth history by A. Knopf II, Viewpoints on evolution: Gene and character by C. Stern. Gene homologies and the mutants of *Drosophila hydei*, by W P Spencer. The evidence afforded by fossil vertebrates on the nature of evolution, by D M. S. Watson. Comparative anatomy and the evolution of vertebrates, by D D Davis. Some aspects of plant morphology and evolution, by T Just. III, Evolutionary trends Time series and trends in animal evolution by A. S. Romer On the evolution of the Dipnoi, by T S. Westoll. Evolutionary rates and trends in rhinoceroses, by H. E. Wood, II. Evolutionary trends in the angiosperms, by R. W Chaney IV Evolutionary rates Rates of evolution in animals, by G. G. Simpson. Rates of evolution in plants, by G. L. Stebbins, Jr Rates of evolution in taeniodonts, by B. Patterson. V Speciation Speciation and systematics, by E. Mayr The significance of ecological isolation, by D Lack. *Early stages in allopatric speciation*, by E. B. Ford. *Patterns of* evolution in the genus *Rana*, by J A. Moore. Increased variability in populations following natural hybridization, by W Hovanitz. Evidence for the genetic submergence of *Pinus remorata*, by H. L. Mason. VI, Adaptation Adaptation and selection by S Wright. Progressive adaptations as seen in the fossil record, by E. H. Colbert. VII, Human evolution Human evolution past and future by J B S. Haldane VIII, Summation Reintegration of the Symposium on Genetics, Paleontology and Evolution by H. J Muller Glossary Index.

Note This work represents a planned effort to synthesize thought *from the fields of genetics and paleontology that* has bearing on evolution and to resolve certain differences of terminology The style of the papers is technical, and the volume is intended chiefly for graduate scientists working in the three fields named in the title

PATTERSON, J T, *AND OTHERS*

Studies in the genetics of Drosophila. VIII. Articles on genetics taxonomy cytology and radiation Austin University of Texas, 1954 307 p illus 25 cm $2 00 1944

Contents Genetic variability in geographic strains of *Drosophila virilis*, by J T Patterson. Fate of the sperm in the reproductive tract of the Drosophila female in homogamic matings, by J T Patterson. Fertilizations in multiple matings *of the virilis group*, by W S. Stone and J T Patterson. Note on a case of interspecific hybridization in the affinis subgroup, by J T Patterson. Taxonomic studies of American Drosophilidae, by M. R. Wheeler Species differences in the utilization of wild yeast by Drosophila, by E. Dudgeon. Chromosomal studies of several species of Drosophilidae, by F E. Clayton and C. L. Ward. Chromosome variation in giant forms of *Drosophila montana*, by P S. Moorhead. Cytological studies of the repleta group, by M. Wasserman. The chromosomes of *Drosophila macrospina* and comparisons of the chromosome elements with other species, by R. Weinberg. Note on transplantation experiments in *Drosophila macrospina*—The formation of brown pigment, by J B Price. Population studies with *Drosophila* ..., by M. Wasserman. Phenotypic abnormalities of the eyes of Lozenge compounds, by F E. Clayton. The development of the compound eye of Lozenge Alleles in *Drosophila melanogaster* by F E. Clayton. Comments on the mechanism of action of radiations on living systems, by W S. Stone and others. Heterosis studies with species of Drosophila living in small populations, by W S. Stone and others.

Note This eighth number in an important series devoted to the publication of scientific papers pertaining to the genetics of Drosophila contains the papers whose authors and titles are listed above. The papers are based on research carried out in the genetics laboratory headed by Dr Patterson at the University of Texas, and they are addressed to biologists and other scientists who are interested in advances in genetics. The series began publication in 1940

RIDDLE, OSCAR

Endocrines and constitution in doves and pigeons. Washington, D C Carnegie Institution of Washington, 1947 306 p. illus. 25 cm (Carnegie Institution of Washington Publication 572) $4 00 1945

Contents Part I Introduction. Body weight in dove and pigeon races and in hybrids. The establishment of "thyroid" races in doves. The unequal response of races to prolactin. The establishment of dove races with unequal intestinal length, with consideration of unequal pituitary size in dove and pigeon races. Liver size in study of races. Age at sexual maturity as a racial character. Testis weight as a racial character Egg weight as a racial trait. A race of hermaphrodite-producing pigeons. Data on weight of heart, skeleton, and plumage in certain races and hybrids of doves and pigeons. Part II General statement on basal heat production. The role of race in heat production. Season and temperature as factors in heat production in doves and pigeons. The role of sex in heat production. Organs having special relations to heat production. The influence of age on metabolism. Concluding statement.

Note A detailed report of research conducted over a period of 24 years with the purpose of adding to the knowledge of inherited constitutional differences that characterize races and individuals. Doves and pigeons were selected as experimental animals because (among other reasons) "the degree of mongrelization present in each of these species is apparently comparable with that in the human population of an American city and that many facts relating to constitutional factors in these birds are probably applicable to man."

RILEY, HERBERT PARKES

Introduction to genetics and cytogenetics. New York John Wiley & Sons, Inc., 1948. 596 p illus 22 cm $6 75 1946

Contents (abridged) Genetics, cells, and chromosomes. Genes and characters. Reproduction and meiosis. The genetic distribution of a pair of alleles located in autosomes. Probability The distribution of two or more pairs of alleles in two or more chromosomes. Locating genes on chromosomes. Miscellaneous linkage topics. The nature of and changes in genes. The induction of gene mutations. Radiation, evolution and the position effect. Multiple alleles. Blood groups. Interaction of genes. Inbreeding, selection, and heterosis. Intra-chromosomal aberrations. Aneuploids and nondisjunction. Haploids and allopolyploids. The origin of polyploids. The determination of sex. Cytogenetics and evolution. General references. Specific references. Author index. Subject index.

Note. Although designed chiefly as a textbook for use in introductory courses in genetics in colleges, this work is suitable also for the scientifically trained general reader who is in need of a compact authoritative summary of modern knowledge of the mechanism of heredity The first five chapters are basic and elementary. In the rest of the book the findings and the methods of modern experimental investigations in genetics are presented. Here the treatment is more advanced, but still not over the head of the ardent reader A set of questions and problems follows each chapter. The general bibliography includes modern books of interest in the field. *The specific bibliography is arranged by chapter and refers* chiefly to periodical articles. It runs to more than 20 pages.

SCHRADER, FRANZ

Mitosis, the movements of chromosomes in cell division. Second edition New York

Columbia University Press 1953 170 p illus. 24 cm. (Columbia biological series edited by L. C. Dunn and others) $4.00 1947

Contents: Introduction. Structure. Hypotheses of mitosis. Related problems. Conclusion. Literature. Index.

Note: Essentially the book is a critical appraisal of the various modern hypotheses that have been offered to account for mitotic behavior of the chromosomes. As a prelude to the critical discussion, the current knowledge of mitosis is summarized in a 41-page chapter. The first edition was published in 1944. In preparing the second edition, the author surveyed the literature published since the first edition was written and has incorporated in this second edition a critical evaluation of the results and hypotheses contained in it. Except for a few papers deemed necessary as background, the bibliography is limited to literature published since 1935. Nevertheless, it runs to 33 pages. The concluding chapter in the second edition begins: "The present survey of past attempts to solve the puzzle that is mitosis may well seem disheartening. Not one of the many hypotheses that have been launched has led to the definite promise of a final solution. But we have come to realize that mitosis is composed of a great complex of diverse mechanisms."

SHULL, AARON FRANKLIN

Heredity Fourth edition. New York McGraw Hill Book Company Inc., 1948. 311 p. illus. 23 cm. (McGraw Hill publications in the zoological sciences A. Franklin Shull, consulting editor) $5.00 1948

Contents (abridged): Rise of modern genetics. Origin of new individuals. Mechanism of heredity. Dominance. Recessives and testcross. Sex-linkage. Multiple alleles. Lethal characters. Interactions of genes. Modification by environment. Linkage. Nature and action of genes. Non-Mendelian inheritance. Determination and development of sex. Inheritance of human structural characters. Human heredity—physiological characters. Inheritance of mental characters. Applied genetics. Eugenics. The population problem. Race and heredity. Appendix: Quantitative characters. List of visual aids. Index.

Note: A standard, long-established textbook for introductory college courses. The relationship of genetics to evolution and to current social problems, such as race, is emphasized. In this edition information has been added on the Rh factor, on the biochemical effects of gene mutation, and on the practical applications of genetic knowledge. Other changes are numerous but comparatively minor.

SINNOTT EDMUND WARE, AND OTHERS

The comparative anatomy of extra-chromosomal types in *Datura stramonium* by Edmund Ware Sinnott, Helen Houghtaling and Albert F Blakeslee. Washington, D C. Carnegie Institution of Washington, 1934 50 p. illus. 25 cm. (Carnegie Institution of Washington. Publication no 451) $2.50. 1949

Contents: Introduction. Constitution of extra-chromosomal types in *Datura*. Anatomy of the diploid. Pedicel structure in the diploid. Material and methods. Anatomy of polyploid types. Pedicel anatomy of heteroploid types. Genetic analysis. Morphogenetic analysis. Anatomy of stem, leaf and root in heteroploid types. Summary. Literature cited.

Note: A comparative study of the various polyploid and heteroploid (primary and secondary) types in *Datura stramonium*, special attention being paid to the anatomy of the floral pedicel because of the ease with which comparable material may thereby be secured. The structures are described and measurements are given for the average areas of the various tissue systems as seen in the transverse section of the pedicel in these mutant types and of the average cross-sectional area and the volumes of the component cells of certain of these tissues. There are 19 plates of photomicrographs and a reference to the world literature of the subject.

SINNOTT EDMUND WARE, AND OTHERS

Principles of genetics. Fourth edition. By Edmund W Sinnott, L. C. Dunn, and Th. Dobzhansky New York. McGraw Hill Book Company Inc., 1950. 505 p illus. 24 cm. (McGraw Hill publications in the botanical sciences Edmund W Sinnott, consulting editor) $6.50 1950

Contents: Genetics, the science of heredity and variation. Mendel's principle of segregation. Mendel's principle of independent assortment. Alleles. The expression and interaction of genes. The multiple-factor hypothesis. The physical basis of inheritance. Genes and chromosomes. Linkage and linkage maps. Chromosome aberrations and cytological maps of chromosomes. Mutation. Genes in populations. Genetics of race formation. Genetics of species formation. The determination of sex. Genetics and development. The cytoplasm in heredity and development. Gene action and the nature of the gene. Appendix. Index.

Note: The first edition of this work was published in 1925 and it has held a place since that time as a standard text for college courses. Though introductory it provides a fairly detailed presentation of genetic mechanisms and their effects on heredity and variation. The three chapters on "Genes in populations," "Genetics of race formation," and "Genetics of species formation" are new in this edition. Other important changes include a rewritten presentation of chromosome mechanisms. The translation into English made by the Royal Horticultural Society of London of Mendel's *Experiments in plant hybridization* is quoted in full in the appendix.

SNYDER, LAURENCE H.

The principles of heredity Fourth edition. Boston D C. Heath and Company 1951 515 p. illus. 22 cm. 1951

Contents (abridged): The study of heredity. Simple Mendelian inheritance. Crosses involving two pairs of genes. Modified two-pair ratios. Probability. Sex-linked genes. Lethal genes. Multiple alleles. Sex-influenced characters. Linkage. The cytological basis of crossing over. The mapping of chromosomes. Quantitative inheritance. Multiple genes—additional treatment. Selection and inbreeding. The genetics of domestic animals. The genetics of cultivated plants. Chromosome aberrations. Cytoplasmic inheritance. Genes and mutations. Giant chromosomes. Biochemical genetics. The mutant gene in man. Eugenics. The analysis of human family histories. Index.

Note: A short basic text, primarily for college students taking their first course in heredity but suitable also for serious general readers. A fifth edition written in collaboration with Paul R. David was published in 1957 [illegible] p. [illegible].

SRB, ADRIAN M., AND RAY D OWEN

General genetics. Illustrated by Evan L. Gillespie. San Francisco W. H. Freeman and Company 1952 561 p illus. (part col'd) 24 cm. (A series of biology texts editors, George W Beadle and others) $6.50. 1952

Contents (abridged): Inheritance patterns in living things. Tests of inheritance. Two or more pairs of alleles. The impact of environment. Sex chromosomes and sex linkage. The vehicles of inheritance. Life cycles. Linkage, crossing over and chromosome mapping. Chromosomal aberrations and position effects. Mutations. Extranuclear inheritance. Genetic aspects of sexuality and sex determination. Quantitative inheritance. Inbreeding and selection. Genes and cellular biochemistry. Genes and development. Heredity in populations. Genetics and evolution. Breeding better plants. Genetic aspects of animal productivity. Genetics and the welfare of the human individual. Index.

Note: An introductory textbook for use in college courses. It is written in a clear expository style, and the verbal exposition is supplemented by excellent illustrations. The scientific aspects of the subject are well presented. The authors have included much information on the applications of the knowledge of genetics in plant and animal breeding. An unusually wide selection of problems is included, and the lists of references include short annotations.

WALTER, HERBERT EUGENE

Genetics an introduction to the study of heredity Fourth edition. New York The Macmillan Company 1938 412 p. illus. 22 cm. $6.00. 1953

Contents: Introduction. The observational method of approach. The experimental method of approach. The statistical approach.

The cytological method of approach. The architecture of the germplasm. The contributions of sex. The developmental method of approach. The application to man. Human conservation. Problems for practice. Appendixes. Bibliography. Index.

Note A textbook for the beginning student which emphasizes the historical background out of which modern genetics is arising. The treatment is aimed at simplicity and ease of understanding for the uninitiated. A knowledge of elementary college biology is assumed but no mathematics beyond simple algebra is required. The subject of sex-linked inheritance is given detailed study and the importance of the experimental method is indicated. The appendixes contain statistical data for interpreting measurements, method of tracing characters, list of possible human traits, hereditary or acquired and other related information. The bibliography lists about 180 works of a general nature related to genetics.

WINCHESTER, A M

Genetics a survey of the principles of heredity Boston Houghton Mifflin Company, 1951 371 p illus 25 cm. (Under the editorship of Bentley Glass) $6 00 1954

Contents Heredity—fact and fancy Background of modern genetics. Two cells from one. The bridge of heredity Monohybrid inheritance. Dihybrid inheritance. The determination of sex. Other factors related to sex determination. Inheritance related to sex. Lethal genes. Probability and heredity Multiple alleles and blood group inheritance in man. Multiple gene inheritance and quantitative characteristics. Linked genes, crossing over and chromosome mapping. Chromosomal aberrations. Giant chromosomes. The nature of genes and their actions. Gene mutations. The artificial induction of genetic changes. The survival of man in an atomic age. Modification of gene expression. Cytoplasmic inheritance. Some genetic aspects of evolution. Genetics in plant and animal breeding. Survey of human heredity Eugenics. Selected references. Acknowledgments for illustrations. Index.

Note A textbook designed for use in introductory courses in genetics at the college level In it the author has made the subject of heredity fascinating without oversimplifying it Many illustrations of heredity in man are included, although the subject of the book is general genetics. As shown above, the terminal chapter deals with the question of eugenics. There are 231 figures.

BIOLOGICAL PHYSICS

ADVANCES IN BIOLOGICAL AND MEDICAL PHYSICS Volume III Edited by John H Lawrence and C A Tobias New York Academic Press, Inc. 1953 368 p illus 23 cm $9 00 1955

Contents The dosimetry of artificial radioactive isotopes, by W V Mayneord and W K Sinclair The kinetics of biological processes special problems connected with the use of tracers, by A. K. Solomon. *Antibodies as specific chemical reagents*, by D Pressman. Primary ionization as a test of molecular organization by E. Pollard. Biological actions of ultrasonic waves, by P Grabar Approaches to X-ray microscopy by P Kirkpatrick and H. H. Pattee, Jr Ultraviolet microscopy and ultraviolet microspectroscopy by E. R. Blout. Author index Subject index.

—— Volume IV Edited by John H Lawrence and Cornelius A. Tobias Editorial board H. J Curtis L H Gray and Bo Thorell. New York Academic Press, Inc 1956 356 p illus 23 cm $8 80 1955A

Contents X-ray diffraction applied to crystalline proteins, by D Harker The problem of information transfer from the nucleic acids to proteins, by G Gamow and others. Materials for the biophysical and biochemical study of cell division by D Mazia. Lethal effects of high and low temperatures on unicellular organisms, by T H. Wood. Infrared spectrometry by N K. Freeman. Kinetics of iron metabolism, by R. L. Huff and O. J Judd. The gross composition of the body by W Siri. *A special consideration of the aging process, disease, and life expectancy* by H. B. Jones. Author index. Subject index.

Note Two representative volumes in a series which began publication in 1948 Originally the purpose was to review developments in nuclear physics, particularly in the use of radioactive isotopes in biological and medical research. Later the scope of the series was enlarged to cover other areas in which physical knowledge finds application to biology and medicine. Each of the papers or chapters in the series is a critical review of the existing knowledge pertaining to its specific topic. It is based on the literature and includes an extensive bibliography of sources. The author is in all cases an established authority and in many cases, is a research worker in the area of biochemistry or biophysics about which he writes. The series is addressed to graduate scientists and is useful as a means of keeping informed about developments in areas of research related to but outside the reader's own specialty

BLAIR, HENRY A , editor

Biological effects of external radiation New York McGraw Hill Book Company, Inc , 1954 508 p illus 23 cm $7 00 1956

Contents Part I, Single doses of whole-body X radiation. Studies on the effects of massive doses of X radiation on mortality in laboratory animals, by R. D Boche and F W Bishop. Pathological changes exhibited by animals exposed to single doses of X radiation, by R. G. Metcalf and others. Effects of acute exposure to X radiation on the peripheral blood of experimental animals, by M. Ingram and W B Mason. Callicrein and radiation, by K. F Fink. Cross-circulation experiments, by J B Lawrence and W N. Valentine. *Finger ridge changes in monkeys following X radiation*, by R. A Harvey Experiments on the validity of the linear relation of mutation frequency to X-ray dose in Drosophila melanogaster by W P Spencer and C. Stern. Comparison of X and Beta-radiation effects in rabbits, by F W Bishop Part II, Chronic X radiation Observations on animals exposed to whole-body X radiation in divided doses over long periods—introduction and techniques, by A. E Dowdy and others. Effects of chronic exposure to X radiation on growth and survival by R. D Boche. Effects of chronic exposure to X radiation on the peripheral blood of experimental animals, by M. Ingram and W B Mason. Pathology in animals subjected to repeated daily exposure to X rays, by R. G. Metcalf and F A. Inda. Blood chemistry study in dogs exposed to chronic X radiation, by K. F Fink. Effect of short wavelength radiations on human finger ridge detail, by R. A. Harvey Influence of chronic irradiation with gamma rays at low dosages on mutation rate in Drosophila melanogaster by E. Caspari and C. Stern. Part III, Fractionated doses of fast neutrons Fast-neutron-irradiation procedure, by E. McDonald. Clinical, pathological, and hematological effects of chronic neutron radiation by J O Ely and others. Index.

Note The papers collected in this volume present the results of experiments which were carried out at the University of Rochester in the course of a research investigation planned with the objectives of obtaining a description of the lethality and of the pathological and genetic effects of both acute and chronic irradiation and of developing clinical criteria for detection of radiation effects of radiation in exposed personnel. The papers are written in physical and chemical terminology and are concise. Extensive use has been made of graphs and tables for presenting data. Most of the experiments described were carried out on animals, including monkeys. The book is of interest to graduate scientists who are concerned with research on the pathological and clinical effects of radiation.

BOELL, EDGAR J , editor

Dynamics of growth processes Princeton Princeton University Press 1954 304 p illus. 25 cm $7 50 1957

Contents. Virus reproduction and the replication of protoplasmic units, by L. M. Kozloff. Experiments with the chemostat on the rates of amino acid synthesis in bacteria, by A. Novick and L. Szilard. Cytochemical aspects of *protein synthesis*, by A. W Pollister Interaction of nucleus and cytoplasm in cell growth, by G. Frankhauser Cell and tissue differentiation in relation to growth (animals) by K. R. Porter Cell and tissue differentiation in relation to growth (plants) by D S. Van Fleet. Physical factors affecting growth in plants, by F W Went. Chemical regulation of growth in plants, by F Skoog. Chemical control of growth in animals, by R. Gaunt. The relationship of skeletal status to the physical growth and development of children, by W W Greulich. Regularities in growth curves, *including rhythms and allometry* by D A. Shell. Hereditary mechanisms in animal growth, by G. E. Dickerson. Quantitative aspects of population growth, by F E. Smith Author index. Subject index.

Note. Papers presented at the eleventh Growth Symposium sponsored by the Society for the Study of Development *and Growth* and held at Williams College in June *1952* have been collected in this volume As the titles indicate, a broad view has been taken of the boundaries of the field of growth. *Most of the papers* are accompanied by substantial bibliographies. The authors, all prominent scientists, have addressed themselves to other scientists.

Biology

Biological Physics

BOYD GEORGE A.
Autoradiography in biology and medicine. New York Academic Press Inc., 1955 399 p. illus. (part col d) 24 cm. $8.50. 1955

Contents: Part I, Theory: Introduction. The photographic process. Comparative response of commercial and nuclear emulsions. [illegible] Part II, Technique: [illegible] Part III, Bibliography. Index.

Note: [illegible]

COMAR, C. L.
Radioisotopes in biology and agriculture principles and practice. New York McGraw Hill Book Company Inc., 1955 481 p. illus. 24 cm. $9.50. 1959

Contents: Principles of tracer methodology. [illegible] Autoradiography. Paper chromatography. [illegible] Subject index.

Note: [illegible]

FINK, ROBERT MORGAN editor
Biological studies with polonium, radium, and plutonium. New York McGraw Hill Book Company Inc., 1950 411 p. illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division VI —Volume 3) $5.50 1960

Contents: Part I, Distribution and excretion of [illegible] by H. E. Stannard [illegible] by G. A. Boyd and others. Appendix. Index.

Note: The papers in this volume are [illegible] of the Manhattan Project at the University of Rochester. [illegible] references to related literature are included.

HARRIS R. J C., editor
Biological applications of freezing and drying New York Academic Press Inc., 1954 415 p. illus 24 cm. $10.00 1961

Contents: Effects of low temperatures on living cells and tissues, [illegible] by R. J. C. Harris. [illegible] Author index. Subject index.

Note: [illegible]

HINE, GERALD J., AND GORDON L. BROWNELL, editors
Radiation dosimetry New York Academic Press Inc., 1956 932 p. illus. 24 cm. $22.00 1962

Contents: Fundamental principles of dosimetry: Radiation units and theory of ionization dosimetry, by W. F. Spiers. Interaction of radiation with matter, by G. J. Hine and J. S. Laughlin. Biological and medical effects of radiation, by C. C. Wang and L. L. Robbins. Radiation detectors and their calibration. Ionization chambers, by J. W. Boag. Geiger-Mueller counters and proportional counters, by [illegible] Photographic film dosimetry, by E. A. Dudley. Chemical and calorimetric indicators, by [illegible] Calorimetric methods, by J. S. Laughlin and S. Genna. Survey instruments and pocket dosimeters, by [illegible] X-ray beams and radioactive isotopes, by [illegible] Radiation fields and their dosimetry: X-rays and teletherapy γ-rays, by [illegible] High-energy electron beams, by J. S. Laughlin. Heavy charged-particle beams, by [illegible] and others. Neutrons and mixed radiation, by [illegible] Internally administered isotopes, by [illegible] and others. Internally ad-

ministered radioisotopes, by R. Loevinger and others. Isotope shipment and disposal, by F P Cowan. Appendix: Tables of data useful for dose calculations, by G. J Hine. Author index. Subject index.

Note Essentially a reference treatise this authoritative work contains the chapters whose titles and authors are listed above. The general subject is the determination of the quantities of energy absorbed in media exposed to radiation including not only X-rays but all forms of nuclear radiation and beams of neutrons and charged particles. Biological and medical effects are not stressed—in fact, the chapter on this aspect is one of the shortest in the book. Basic principles, techniques of using, and calibration of the various detecting and measuring instruments are fully covered. In the chapters grouped under Radiation fields and their dosimetry the nature and characteristics of the radiation produced and problems of measuring the doses are discussed for various devices, such as X-ray apparatus, electron accelerators, and encapsulated radioisotopes. The appendix contains nine tables of physical radiological and biological data useful in calculating doses. Extensive bibliographies are included. The book is of interest to medical practitioners and to scientists who are concerned with the calculation of radiation exposures and protection of personnel exposed to radiation.

HOLLAENDER, ALEXANDER, editor

Radiation biology New York McGraw Hill Book Company, Inc., 1954–56 3 v in 4 parts 24 cm Vol I, $17 50, vol. II, $8 00, vol III, $10 00 1963

Contents Volume I, High energy radiation Part I: Principles of radiological physics, by U Fano. The measurement of ionizing radiations for biological purposes, by L. D Marinelli and L. S. Taylor Physical principles underlying photochemical radiation-chemical, and radiobiological reactions, by J Franck and R. Platzman. Basic radiation biochemistry by W M. Dale The effect of X rays on systems of biological importance, by E. S. Guzman Barron. The radiobiological importance of linear energy transfer by R. E. Zirkle The nature of the genetic effects produced by radiation, by H. J Muller The manner of production of mutations by radiation, by H. J Muller Part II Chromosome aberrations induced in animal cells by ionizing radiations, by B. P Kaufmann. Radiation-induced chromosome aberrations in *Tradescantia*, by N H. Giles, jr Immediate effects on division, morphology and viability *of the cell, by J G. Carlson. Genetic effects of radiation in mammals*, by W L. Russell. The effects of radiation on mammalian prenatal development, by L. B Russell. The pathological physiology of radiation injury in the mammal—physical and biological factors in radiation action—specific aspects of the physiology of radiation injury by H M Patt and A. M Brues. The hematologic effects of ionizing radiation, by L. O. Jacobson. Histological changes after irradiation, by W Bloom and M. A. Bloom. Carcinogenesis by ionizing radiations, by J Furth and E. Lorenz. Name index. Subject index. *Volume II, Ultraviolet and related radiations* Photochemistry by R. Livingston. Practical applications and sources of ultraviolet energy by L. J Buttolph. Sunlight as a source of radiation, by J A. Sanderson and E. O Hulburt. Technique of study of biological effects of ultraviolet radiation, by J F Scott and R. L. Sinsheimer Ultraviolet absorption spectra, by R. L. Sinsheimer A critique of cytochemical methods, by A. W Pollister The effect of ultraviolet radiation on the genes and chromosomes of higher organisms, by C. P Swanson and L. J Stadler The effects of radiation on protozoa and the eggs of invertebrates other than insects, by R. F Kimball. Radiation and viruses, by S. E. Luria. Effects of radiation on bacteria, by M R Zelle and A. Hollaender Radiation studies on fungi, by S. Pomper and K. C. Atwood Photoreactivation, by R. Dulbecco. Sunburn, by H. F Blum. Ultraviolet radiation and cancer by H. F Blum. Name index. Subject index. Volume III, Visible and near-visible light Energy exchange in photoreactions, by R. Lumry and H. Eyring. Electronic structure and excitation of polyenes and porphyrins, by J R. Platt. Generation control, and measurement of visible and near-visible radiant energy by R. B Withrow and A. P Withrow Energy efficiency in photosynthesis, by F Daniels. The mechanism of photosynthesis, by E. C. Wassink. The absorption, action, and fluorescence spectra of photosynthetic pigments in living cells and in solutions, by C. S. French and V M. K. Young. Chlorophyll formation and accumulation in plants, by J H. C. Smith and V M. K. Young. Nitrate reduction, by H. Burström. Phototropism, by F W Went. Photoperiodism, by H. A. Borthwick and others. Seed germination, by M. Evenari. Viscosity permeability and protoplasmic streaming, by M. G. Stålfelt. Electrical phenomena in vision by L. A. Riggs. Invertebrate photoreceptors, by L. J Milne and M. J Milne. Photodynamic action and its pathological effects, by N T Clare. Name index. Subject index.

Note A comprehensive presentation of basic scientific information and quantitative data on biological effects of radiation corpuscular and electromagnetic, throughout the energy spectrum from the highest energies to the near-infrared region. It contains the chapters whose authors and titles are listed above. In general, each chapter is a compact critical survey of published literature with references from important statements and data in the text to the source articles from which the information was drawn. Most of the authors surveyed the international literature. The work is addressed to such readers as graduate medical practitioners, medical researchers, and graduate biologists. The fully detailed indexes make it easy to use for reference.

JOHNSON, FRANK H , AND OTHERS

The kinetic basis of molecular biology By Frank H Johnson, Henry Eyring and Milton J Polissar New York John Wiley & Sons, Inc , 1954 874 p illus 24 cm. $15.00. 1964

Contents. Introduction. The basis of thermodynamics. Fundamentals of chemical mechanics. Principles of quantum mechanics. Essentials of statistical mechanics. Calculation of absolute rates; four-atom reactions. Luminescence. Temperature. Hydrostatic pressure and molecular volume changes. Action of inhibitors in relation to concentration, temperature and hydrostatic pressure. Diffusion through membranes and transmembrane potentials. Physical chemistry of cell irritability and of the nerve impulse. Physical chemistry of the nerve impulse. Physical chemistry of the contractile process in muscle. Potential barriers in diffusion. Appendix. Bibliography and author index. Subject index.

Note. In this important book the modern knowledge of the kinetics of reactions in chemical systems, together with knowledge from other areas in physical chemistry is related to the study of basic biological processes. The first six chapters derive the thermodynamical equations and equilibria constants and otherwise lay the necessary mathematical and physico-chemical background. The chapters that follow are studies in the light of physical chemistry and particularly of reaction-rate theory of the basic biological processes named in their titles. A wide range of knowledge gathered from physics, chemistry and biology is correlated in these chapters. The treatment is at a graduate level. The book is of interest to professional biologists, biochemists, and physiologists.

KAMEN, MARTIN DAVID

Radioactive tracers in biology, an introduction to tracer methodology Second edition revised and enlarged New York Academic Press, Inc., 1951 429 p illus. 24 cm. (Organic and biological chemistry, a series of monographs, edited by Louis F Fieser and Mary Fieser) 1965

Contents. Atomic nuclei, radioactivity and the production of radioactive isotopes. Radiation characteristics of tracer atoms. Procedures for radioactive assay Radiation hazards. Survey of tracer methodology—biochemical aspects—physiological and medical aspects. Radioactive hydrogen (*tritium H*[3]) Short-lived radioactive carbon (C^{11}) Long-lived radioactive carbon (C^{14}) Radioactive phosphorus (P^{32}) Radioactive sulfur (S^{35}) Alkali metal and alkaline earth tracers. Tracer isotopes of halogens. Various radioelements. Isotopes of importance in biology Appendix General bibliography Radioactivity units and standards. Some typical working rules for radiochemistry laboratory Radioactive nuclides of interest in biological tracer research. National Bureau of Standards radium E beta standards and their application to analysis of P^{32} and I^{131} Author index. Subject index.

Note. A well-documented work addressed primarily to graduate biologists who are engaged in biological research. In it the fundamental facts of radioactivity are presented, their applications to research problems in biology are evaluated and the preparation, properties, and methods of using the more important radioactive isotopes are reviewed at length. The first edition appeared in 1947. Much material has been added in the present edition, and parts of the first edition that have been carried over have been substantially revised. However the work remains an introductory survey rather than comprehensive presentation of pertinent information. In addition to the bibliography of books included in the appendix, there are hundreds of footnote references to related literature. A third edition, under the title *Isotopic tracers in biology* was published in 1957 474 p., $9.50.

MINER, ROY WALDO, editor

Ionizing radiation and the cell. Conference chairman and consulting editor Leslie F

Nims. New York Published by the Academy 1955 467–664 p. illus. 22 cm. (New York Academy of Sciences. Annals. Vol 59 art. 4) $4.00 1966

Contents: Ionizing radiation methods for determining biological structure, by E. Pollard. Radiation studies of proteins and enzymes, by R. [illegible] Bacterial virus—radiation and function, by D. J. Fluke and E. C. Pollard. Use of charged particles to measure skin thickness and other surface properties, by F. Hutchinson. Irradiation of parts of individual cells—cz, Effects of chromosomal and extrachromosomal irradiation on chromosome movements, by W. Bloom and others. The effects of X rays, 2 MEV electrons, thermal neutrons, and fast neutrons on dormant seeds of barley, by R. S. Caldecott. Comparative studies of X ray-induced forward and reverse mutation, by M. H. Glen and others. Cytochemical studies of changes induced in cellular materials by ionizing radiations, by B. P. Kaufmann and others. Track effect in biochemistry of aqueous solutions, by H. Fricke. The effect of ionizing radiations on systems of biological importance, by E. S. Guzman Barron. Studies on factors affecting the sensitivity of bacteria to high velocity electrons, by W. D. Bellamy and E. J. Lawton. The influence of pretreatments and posttreatments on bacterial inactivation by ionizing radiations, by G. E. Stapleton. Radiation effects in Paramecium, by E. L. Powers. The role of oxygen and peroxide in the production of radiation damage in Paramecium, by R. F. Kimball. Factors in the radiosensitivity of mammalian cells, by H. M. Patt.

Note: Papers first presented at a conference held by the Section of Biology of The New York Academy of Sciences in April, 1954, have been made available in this publication. The titles and authors are listed above. The use of radiation in the study of cells and the deleterious effects of radiation on cells were both considered. Most of the papers were based on the results of recent research, as well as on the related literature. References to literature are included, and in some instances the paper is accompanied by a condensed transcript of the discussion of it at the meeting.

NATIONAL RESEARCH COUNCIL. COMMITTEE ON NUCLEAR SCIENCE. SUBCOMMITTEE ON RADIOBIOLOGY

Symposium on radiobiology the basic aspects of radiation effects on living systems Oberlin College, June 14–18 1950. Edited by James J Nickson. Editorial committee P Morrison and others. Sponsored by the National Research Council of the National Academy of Sciences. New York John Wiley & Sons Inc., 1952 465 p. illus. 24 cm. $11.25 1967

Contents: Radiation in living matter—the physical processes, by P. Morrison. Secondary electrons—average energy loss per ionization, by U. Fano. Beams of high-energy particles, by R. R. Wilson. Neutrons and their special effects—recoil effects, by A. E. Schubert. General statements about chemical reactions induced by ionizing radiation, by R. Livingston. Chemical reactions in the gas phase connected with ionization, by M. Wolfsberg and others. On the primary processes in radiation chemistry and biology, by R. L. Platzman. Elementary chemical processes in radiobiological reactions, by M. Burton. Influence of details of electronic binding on penetration phenomena, and the penetration of energetic charged particles through liquid water, by R. L. Platzman. Some aspects of the biochemical effects of ionizing radiations, by W. M. Dale. Ionizing radiation and cellular metabolism, by G. Hevesy. The effect of ionizing radiations on some systems of biological importance, by E. S. Guzman Barron. Some factors influencing cell radiosensitivity by acting at the level of the primary biochemical action, by R. Latarjet. On the localization of radiation effects in molecules of biological importance, by M. D. Kamen. Recent evidence on the mechanism of chromosome aberration production by ionizing radiation, by H. H. Ozias, Jr. Physical and chemical factors modifying the sensitivity of cells to high-energy and ultraviolet radiation, by A. Hollaender. Gene mutations caused by radiation, by H. J. Muller. Speculations on cellular actions of radiation, by R. E. Zirkle. The dependence of gross biological effects of radiation on the rate of energy loss, by C. A. Tobias. The influence of quantity and quality of radiation on the biological effect, by T. C. Evans. Some physiological factors related to the effects of radiation in mammals, by E. P. Jacobs. Mammalian radiation genetics, by W. L. Russell. Analysis of mammalian radiation injury and lethality, by A. M. Brues and G. A. Sacher.

Note: A collection of original papers which are accompanied by literature references and also transcripts from the discussions at the meeting mentioned in the title. The object of the symposium and of the volume was to present the current state of knowledge in radiobiology and to indicate hypotheses that require further research. The papers are addressed to advanced research workers in physics, chemistry and biology who are concerned with radioactive aspects and also to other graduate scientists interested only in keeping informed about progress in the field.

NATIONAL RESEARCH COUNCIL. COMMITTEE ON PATHOLOGIC EFFECTS OF ATOMIC RADIATION

Report of the Committee on Pathologic Effects of Atomic Radiation from a study of the biological effects of atomic radiation. Washington D C. National Academy of Sciences—National Research Council 1956 200 p. illus. 28 cm. (National Research Council. Publication 452) $1.00 1968

Contents: Summary report. Appendices. Report of the Subcommittee on Acute and Long Term Hematological Effects. Bibliography 1950–1955. Report of the Subcommittee on Toxicity of Internal Emitters. Report of the Subcommittee on Acute and Chronic Effects of Radioactive Particles on the Respiratory Tract. Report of the Subcommittee on Permanent and Delayed Effects of Ionizing Radiation from External Sources. Summaries prepared by various panel members. Effects of radiation on the embryo and fetus, by S. P. Hicks. Radiation exposure and disturbed environment, by H. L. Andrews. Effects of irradiation of the nervous system, by W. Haymaker. Radiation effects on endocrine organs, by J. Furth.

Note. This is the first of six detailed reports on the biological effects of atomic radiation to be issued by the National Research Council. Six committees had been at work, and a summary of the reports of all six committees was published, without appendices, in 1956 by the National Research Council under the title, *The biological effects of atomic radiation summary reports from a study by the National Academy of Sciences*. Simultaneously a popular pamphlet under the title, *The biological effects of atomic radiation a report to the public* was published. Detailed reports will later be issued on five other aspects of the problem of the biological effects of atomic radiation on man, corresponding to the work of the five other committees which have been studying the problem from the point of view of genetics, meteorology, oceanography and fisheries, agriculture and food supplies, and the disposal and dispersal of radioactive wastes.

OSTER, GERALD AND ARTHUR W POLLISTER, editors

Physical techniques in biological research. Volume I, Optical techniques. New York Academic Press Inc., 1955 564 p illus. 24 cm. $13.50. 1969

Contents: Photochemistry and luminescence, by J. L. Rosenberg. Light scattering, by G. Oster. Absorption spectroscopy, by C. F. Hiskey. Ultraviolet absorption spectrophotometry, by J. F. Scott. Infrared spectrophotometry, by C. Clark. The light microscope, by L. C. Martin. Phase and interference microscopy, by H. Osterberg. Birefringence and dichroism, by G. Oster. Electron microscopy, by V. E. Cosslett. Author index. Subject index.

—— Volume II, Physical chemical techniques. New York Academic Press Inc., 1956 502 p. illus. 23 cm. $12.80 1970

Contents: Tracer techniques—stable and radioactive isotopes, by J. Bachs. The measurement and properties of ionizing radiation, by J. S. Kirby-Smith. Sedimentation, diffusion, and viscosity, by A. G. Ogston. Surface film techniques, by A. Rothen. Adsorption and chromatography, by M. Applezweig and T. F. Cleary. Electrophoresis and ionophoresis, by K. G. Stern. Electrical potential differences, by K. S. Spiegler and M. R. J. Wyllie. Magnetic methods, by E. Rich. X-ray diffraction and scattering, by G. Oster. Author index. Subject index.

—— Volume III, Cells and tissues New York Academic Press, Inc., 1956 728 p illus 23 cm. $16 50 1971

Contents Freeze-drying, by L. G. E. Bell. Phase contrast and interference microscopy in cytology by R. Barer Fluorescence microscopy by G. R. Price and S. Schwartz. Birefringence and dichroism of cells and tissues, by F Ruch. Electron microscopy of microorganisms, by T F Anderson. Electron microscopy of cells and tissues, by F S. Sjöstrand. Techniques for the mass isolation of cellular components, by N G. Anderson. Microphotometry with visible light, by H. Swift and E. Rasch. Ultraviolet absorption techniques, by P M. B. Walker Historadiography by A. Engström. Autoradiography at the cellular level, by J H. Taylor Manometric techniques for single cells, by H. Holter and others. Microtomy by M. E. Gettner and L. Ornstein. Author index. Subject index.

Note Techniques of physics and physical chemistry useful in biological research are covered from the viewpoint of graduate biologists in this valuable work. As the above table of contents shows, the work is a collaborative one, consisting of monographic chapters written by specialists. Basic theory apparatus and experimental techniques are covered. Literature references are given in all of the chapters and excellent indexes to authors cited and to subjects are included in each volume.

RASHEVSKY, NICOLAS

Mathematical biology of social behavior Chicago University of Chicago Press, 1951 256 p illus 25 cm. (The University of Chicago Committee on Publications in Biology and Medicine, Emmet B Bay and others) $5.00 1972

Contents Part I, Brain mechanism and behavior The central nervous system. Conflicting stimuli. Applications of the foregoing to psychometric methods. Learning. Satisfaction and hedonistic behavior Part II, Social hierarchies Peck-order Distribution of wealth. A general theory of social distributions. Distribution of conservative quantities, due to chance. Formation of social classes. Part III, Imitative behavior Behavior of a social group in which individuals imitate one another A different approach to the foregoing problem. Some possible generalizations and approximations. Part IV Motivational behavior Altruistic and egoistic societies. Another case of altruistic and egoistic societies. Other types of motivational interactions. Possible relation between imitative and motivational behavior Some examples based on motivational behavior Part V Learned behavior Some aspects of learning of social behavior The learning curve of a social group. Acceptance on faith versus rational thinking. Interaction of imitation and learning. Freedom. Part VI, Miscellaneous problems Hereditary effects in social changes. Some general considerations on social dynamics. A simplified mathematical model of socioeconomic dynamics. General conclusions. Index.

Note The author in this work develops further the postulates presented in his *Mathematical biophysics* (1948, rev ed) and *Mathematical theory of human relations* (1948) Part I contains a brief outline of the mathematical biophysics of the central nervous system, especially for the benefit of readers unfamiliar with the subject. In Part II is developed a mathematical approach to the problem of social hierarchies. The developments of Parts III, IV V are based directly on the mathematical biophysics outlined in Part I, the behavior of an individual in social group and the behavior of the group as whole being interpreted in terms of neurobiophysical mechanisms, and the growth of cultures being interpreted in terms of phenomena which take place in the nervous system of the individual. This leads to suggestions as to how biological measurements, made on large groups of individuals, may lead to the prediction of some social phenomena. The developments are presented largely in mathematical formulas and equations. Bibliographical references are given at the ends of the chapters.

SACKS, JACOB

Isotopic tracers in biochemistry and physiology New York McGraw Hill Book Company, Inc 1953 383 p illus 24 cm. $8.50 1973

Contents. General principles in the use of isotopic tracers Elements of nuclear physics and radioactivity Measurement of radioactivity The measurement of the heavy stable isotopes. Safe handling of radioactive isotopes. The scope of the tracer technique. Movement of ions across phase boundaries. Carbon isotopes in carbohydrate metabolism. Phosphorylated intermediates in carbohydrate metabolism. Metabolism of fatty acids, phospholipids, and sterols. Metabolism of proteins and amino acids. Metabolism of nucleic acids, purines, and pyrimidines. Radioactive iodine and the thyroid. Isotopes in the study of mineral metabolism. Tracer studies on the blood. Photosynthesis and related topics. Appendix. Author index. Subject index.

Note. One of the chief features of this book is survey of experiments in biology in which radioactive isotopes used as tracers have resulted in the extension of biological knowledge Approximately half of the space is devoted to this phase of the subject. Also discussed at some length are the principles and general techniques of using radioactive isotopes in biochemical and physiological research. The chapter entitled "The scope of the tracer technique" is a particularly helpful one for biologists with little or no tracer experience. Actual experimental techniques are not spelled out in detail. However references to wide range of literature published to approximately the close of 1951 are given and experimental details are, of course available in many of the cited papers.

SHANES, ABRAHAM M, editor

Electrolytes in biological systems, incorporating papers presented at a symposium at the Marine Biological Laboratory in Woods Hole, Massachusetts, on September 8, 1954 Sponsored and published under the auspices of the Society of General Physiologists Washington, D C. American Physiological Society, 1955 243 p illus. 23 cm. $4 00 1974

Contents Introduction. Permeability of microorganisms to inorganic ions, amino acids and peptides, by D B. Cowie and R. B. Roberts. Sodium and potassium regulation in *Ulva lactuca* and *Valonia macrophysa*, by G. T Scott and H. R. Hayward. Relationship of the cell surface to electrolyte metabolism in yeast, by A. Rothstein. Absorption of ions by plant roots, by E. Epstein. Electrolyte transport in isolated mitochondria, by G. H. Mudge. Sodium and potassium transport in red blood cells, by D C. Tosteson F[illegible] tors governing ion transfer in nerve, by A. M. Shanes. Biological aspects of active chloride transport, by C. A. M. Hogben. Ion transport and ion exchange in frog skin, by E. G. Huf. Index.

Note: The papers published in this volume represent fundamental advances in the understanding of the role of electrolytes in the biochemistry of biological systems, both plant and animal. [illegible] by scientists who are actively engaged in research in the field, they are addressed to other professional zoologists and biochemists, including those who are currently carrying on investigations on electrolytes. Studies on a variety of organisms and organs are presented in fact, the comparative approach runs as theme throughout the volume. Literature references are included in all of the papers.

SHEDLOVSKY, THEODORE, editor

Electrochemistry in biology and medicine edited by Theodore Shedlovsky Sponsored by The Electrochemical Society Inc. New York John Wiley & Sons Inc., 1955 369 p illus. 24 cm $11 00 1975

Contents Introduction, by T Shedlovsky *Membrane potentials in the Donnan equilibrium*, by D L Hitchcock *Transport of ions across charged membranes*, by G. Scatchard. *The electrochemistry of porous membranes*, by K. Sollner Membranes of high electrochemical activity in studies of biological interest, by K. Sollner and others. Dynamic negative admittance components in statically stable membranes, by O. H Schmitt. *Ions, potentials, and the nerve impulse*, by K. S. Cole *The nature of the electrochemical potentials of bioelectric tissues*, by H. Grundfest. Molecular basis for generation of bioelectric potentials, by D Nachmansohn and I. B. Wilson. Some electrical properties of large plant cells, by L. R. Blinks. Apparent violations of the all-or-none law in relation to potassium in the protoplasm, by W J V Osterhout. Diffusion in liquids and the Stokes-Einstein relation, by L. G. Longsworth. Hydrogen ion titration curves of proteins, by C. Tanford. Determination of ion activity in protein solutions with collodion membrane electrodes, by C. W Carr. Activity coefficients of some sodium and potassium phosphates in aqueous solutions, by F M. Smith. Polarographic behavior of various plasma protein fractions, by G. H. Miller. Some observations on electrocardiographs and electrocardiographic leads, by F D Johnston and J F Cordes. *Prospective electrocardiography*

[illegible] localization of brain tumors, by [illegible]. Electrical signs of epileptic discharge, by H. H. Jasper. Index.

Note: A product of a symposium held in April, 1948, in the city of New York, this volume contains the revised and edited text of 13 papers written by biologists, neurologists, and physicians associated with educational and research institutions in the United States of America and Canada. Bioelectric phenomena are the principal topic. Many of the papers describe the results of recent research and research in progress and relate them to the work of other investigators. References to the literature are included in all of the papers.

SPIEGEL-ADOLF, MONA, AND GEORGE C. HENNY

X-ray diffraction studies in biology and medicine. New York, Grune & Stratton, 1947. 215 p. illus. 23 cm. $5.50. 1976

Contents (abridged): Theory of X-ray diffraction. X-ray diffraction apparatus and techniques. Interpretation of X-ray diffraction patterns. X-ray diffraction studies on: Carbohydrates. Amino acids and derivatives. Proteins. Nucleic acids and nucleoproteins. Muscle. Lipids. Nerve. Steroids. Bone, teeth and concretions. Index of authors. Index of subjects.

Note: A description of X-ray diffraction techniques and apparatus as applied in biological and medical research. Basic principles and methods are discussed, but emphasis is placed on the preparation and interpretation of X-ray diffraction patterns of some of the chief constituents of human and animal bodies. The book is intended to serve as a manual for the guidance of research workers, and each chapter concludes with an extensive bibliography.

STACY, RALPH W., AND OTHERS

Essentials of biological and medical physics, by Ralph W. Stacy, David T. Williams, Ralph E. Worden, and Rex O. McMorris. With an introduction by Otto Glasser. New York, McGraw-Hill Book Company, Inc., 1955. 586 p. illus. 23 cm. $8.50. 1977

Contents (abridged): Fundamental concepts of biophysics. Mechanical biophysical systems. Heat and thermodynamics in life processes. Biophysical studies involving light. Gas physics in biology. Fluid flow systems in biology. Electrical systems in biology. Nuclear physics in biology. Theoretical biophysics. Appendixes. Index.

Note: Planned as a college text in biophysics, this book is a well-organized and authoritative introduction to the field. The authors have made a particular effort to present biophysics as a distinct field of applied science. A quantitative approach to biophysical matters is stressed. There are 43 chapters organized in 10 parts. Only the part-titles are listed in the above contents. The individual chapters are devoted to such subjects as the mathematical analysis of biophysical systems, the body from a mechanical engineering standpoint, the body as a thermodynamic system, the clinical applications of ultrasonics, the physical nature of animal light, the energetics of blood flow, and the biological and medical applications of nuclear radiation. The chapters are compactly written and are accompanied by substantial lists of literature references.

STUHLMAN, OTTO

An introduction to biophysics. New York, John Wiley & Sons, Inc., 1943. 375 p. illus. 23 cm. $6.00. 1978

Contents: Biophysically active X-rays. Applied radioactivity. Biophysical characteristics of the eye. Emission and absorption of biophysically active light. The structure and properties of surfaces and membranes. The biophysical problem of nerve conduction. Auditory biophysics. The compound microscope; the electron microscope. Physical constants. Problems. Name index. Subject index.

Note: An introduction to the applications of physical methods and equipment to the solution of biological and medical problems. The discussions include a fundamental cross-section of physical methods and physical principles applied to biology, the use of isotopes as tracers in physiological investigations, the application of ultraviolet light to physiological problems, the use of microscopy with particular regard to electron microscopy, physiological acoustics, classical physiological optics, important biophysical instruments, and recent developments and applications in radiology.

A SYMPOSIUM ON THE USE OF ISOTOPES IN BIOLOGY AND MEDICINE, by Hans T. Clarke and others. Madison, University of Wisconsin Press, 1948. 445 p. illus. 24 cm. $5.00. 1979

Contents: Address of welcome, by W. A. Middleton. Isotopes in biochemistry: historical background, by H. T. Clarke. Separation of stable isotopes, by H. C. Urey. The preparation of radioactive isotopes, by G. T. Seaborg. Recent developments in the availability of isotopes, by P. C. Aebersold. The detection of stable isotopes, by A. O. Nier. Fundamental principles of the detection and measurement of radioactivity, by C. D. Coryell. Assay of radioactive isotopes in biological research, by M. D. Kamen. Preparation of compounds containing isotopes, by D. B. Melville. Studies on the metabolism of proteins, by D. B. Sprinson. The use of isotopes in the study of intermediary carbohydrate metabolism, by H. G. Wood. The intermediary metabolism of lipids, by K. Bloch. Tracer studies on the metabolism of mineral elements with radioactive isotopes, by D. M. Greenberg. Application of radioactive iodine to studies in iodine metabolism and thyroid function, by I. L. Chaikoff and A. Taurog. Medical applications of radioactive tracers, by J. G. Hamilton. Therapeutic use of radiophosphorus in polycythemia vera, leukemia, and allied diseases, by E. E. Hall. Treatment of thyroid disease by means of radioactive iodine, by S. Hertz. Health hazards in the use of radioactive isotopes, by W. F. Bale. Measures for the protection of property and personnel, by J. J. Nickson. International aspects of atomic energy, by H. C. Urey. Comments on the development of atomic energy, by F. Daniels. Panel discussions on special topics.

Note: The papers comprising this volume were prepared by leading physicists, chemists, and biologists at a conference sponsored by the Wisconsin Alumni Research Foundation in 1947. Taken as a whole they provide a review of the developments in atomic physics that are especially applicable in the fields of biology and medicine. References are given at the end of each chapter, but there is no index.

UBER, FRED MUNEY, editor

Biophysical research methods. New York, Interscience Publishers, Inc., 1950. 667 p. 24 cm. $10.50. 1980

Contents: Avoid fruitless experiments, by F. M. Uber. Osmotic pressure measurements, by D. R. Briggs. Centrifugation, by E. G. Pickels. Viscosity measurements, by L. V. Heilbrunn. Temperature determinations, by L. R. Penney and J. D. Hardy. Calorimetric measurements, by M. Kleiber. Quick-freezing and the freezing-drying process, by E. W. Flosdorf. Bioelectric measurements, by H. J. Curtis. Electrophoresis, by D. R. Briggs. Ultrasonic vibrations, by E. C. Gregg, Jr. When to use special microscopes, by O. W. Richards. Electron microscopy, by J. Hillier. Action spectra, and absorption spectra, by H. F. Blum. X rays and X irradiation, by [illegible]. Electrons, neutrons, and alpha particles, by L. H. Gray. Stable isotopes as tracers, by F. M. Uber. Radioactive tracers, by A. F. Voigt. Subject index.

Note: A full-scale presentation of physical laboratory methods which are applicable to research in biology, medicine, and agriculture. The authors of the various chapters have assumed that their readers will be familiar with standard laboratory methods and instruments. Their papers are addressed to such readers as graduate students of the sciences, laboratory assistants, and experienced research workers who need guidance in the use of recently developed methods. Literature references accompany all of the chapters, and some of the chapters are supplemented by lists of sources of supply.

ZIRKLE, RAYMOND E., editor

Biological effects of external X and gamma radiation. Part 1. New York, McGraw-Hill Book Company, Inc., 1954. 530 p. illus. 23 cm. (National nuclear energy series. Manhattan Project technical section. Division IV—Plutonium project record. Vol. 22B) $7.25. 1981

Contents: Effects of long-continued total-body gamma irradiation on mice, guinea pigs, and rabbits: I. Preliminary experiments, by E. Lorenz and W. E. Heston—II. Physical arrangement, by E. Lorenz—III. Effects on life span, weight, blood picture, and carcinogenesis and the role of the intensity of radiation, by E. Lorenz and others—IV. Actions on the breeding behavior of mice, by M. K. Deringer and others—V. Pathological observations, by A. B. Eschenbrenner and E. Miller—VI. Conclusions and applicability of results

to the problem of human protection, by E. Lorenz. Effects of total-body X irradiation on rabbits I. Mortality after single and paired doses, by C. W Hagen, jr and G. A. Sacher—II. Hematological effects, by L. O Jacobson and others—III. Effects on the leucocytes, by G. A. Sacher and N Pearlman. Effects of total-body X irradiation on a preexisting induced anemia in rabbits I. Response of animals with anemia induced by phenylhydrazine, by L. O. Jacobson and others—II. Response of animals with an anemia induced by bleeding, by L. O Jacobson and others—III. Histopathological studies, by M. H. Block and others. Heparinemia (?) an anticoagulant in the blood of dogs with hemorrhagic tendency after total-body exposure to roentgen rays, by J G Allen and others. An electrophoretic study of the effects of X rays on the plasma protein pattern in dogs, by J A. Muntz and others. Effects of X rays on the activity of enzymes, by E. S. G Barron and others. Effects of X rays on tissue metabolism, by E. S. G. Barron. Effects of X rays on the metabolism of the small intestine and its permeability to glucose, by E. S. G. Barron and others. Effects of X rays on immunity by W H. Taliaferro and L. G Taliaferro Radiation-induced changes in ultraviolet absorption spectra of urine I General effects, by L. Wattenberg and S. Schwartz—II. Quantitative spectrophotometric studies, by L. Wattenberg and S. Schwartz. The effectiveness of drugs in preventing or alleviating X-ray damage, by E. L. Simmons and others. Methods of exposure of animals to X rays, by C. W Hagen jr and R. E. Zirkle, Index.

Note The chapters in this volume are all based on research work pursued during World War II at the National Cancer Institute and the Metallurgical Laboratory of the University of Chicago. They vary in length from abstracts less than one page in length to detailed reports running to many pages. When abstracts only are given a references to the place of publication of the full report is usually supplied. Together the papers in the volume plus the articles abstracted but published elsewhere present in considerable detail the experimental methods and findings of an extensive government-sponsored program of animal research directed toward determining the biological effects of externally applied X-ray and gamma ray radiation

ECOLOGY

CARPENTER, JOHN RICHARD, compiler

An ecological glossary New York Hafner Publishing Company 1938 306 p illus. 20 cm $5 75 1982

Contents: Preface. The development of ecological nomenclature. A—Z. Literature cited in glossary Historical bibliography Appendix Comparison of plant-sociological terminology terms by DuRietz '30. Comparison of sociological units, after DuRietz '30. Community classification, after Shelford 32 Subdivisions of the biotic formation, after Carpenter Biotic areas in North America, after Shelford 26. Life zones and biotic communities in America north of the Amazon after Shelford, Jones, and Goldberg 26. Life zones of North America, after Merriam, *et al.*, 1910. Zoological regions of the world, after Wallace. Vegetation regions of the world, after Grisebach 72. Mammalian geographic realms and regions, after Lydekker '96. F unistic realms of the world, after F Dahl '23 An example f seasonal composition and appropriate nomenclature, after Carpenter 35. The activ processes f erosion, after Malott 28

Note Defines nearly 3,000 terms that occur in ecological literature. Includes variant meanings and gives references to papers in which definitions and concepts are discussed in detail. The appendix includes many ecological maps.

CLARKE, GEORGE L

Elements of ecology New York John Wiley & Sons Inc 1954 534 p illus 24 cm (Woods Hole Oceanographic Institution. Contribution no 704) $7 50 1983

Content Viewpoint of modern ecology The medium. The substratum. Water Temperature. Light. Oxygen and carbon dioxide. Nutrients. Relations within the species. Relations between species. The community Succession and fluctuation. Dynamics of the ecosystem. References. Index.

Note: A book planned to bring together and present in simple way the elements of plant and animal ecology With special emphasis on the modern viewpoint of the science ecology is defined as the study of the interrelations of the organism and its environment, the dynamic interplay of the forces f the living community Since many of these relationships are seen in a relatively simple form in the marine environment, many illustrations are taken from marine habitats. While written primarily for college students, the book can also be read for background by persons concerned with conservation, forestry agriculture, fisheries, wildlife management, and other types of "applied ecology It has also some appeal to general readers interested in biology

CLEMENTS, FREDERIC EDWARD, AND VICTOR E SHELFORD

Bio-ecology New York John Wiley & Sons, Inc., 1939 425 p illus. 23 cm. $9.25 1984

Contents Nature and relations of bio-ecology Community functions the dynamics of the biotic formation. Reaction the influence of community on habitat. Coaction the interrelations of organisms. Aggregation, competition and cycles. Migration. Climax and sere. The North American grassland Stipa-Antilocapra biotic formation (biome) Aquatic climax communities. Marine biotic communities. Appendix. Index.

Note A highly technical survey of the general field of bio-relationships f combined animal and plant communities, valuable not only as manual for the teacher and student of biology but as a reference for the ecologist and biologist. The book shows how in practice, bio-ecological data deal with the study of life communities or microcosms, or the science of community populations of plants and animals. Bio-ecology deals also with the cause-and-effect relations between habitat on the one hand and the organism and community on the other An extensive bibliography is included.

DICE, LEE RAYMOND

The biotic provinces of North America Ann Arbor University of Michigan Press, 1943 78 p illus 26 cm. $4 00 1985

Contents. Introduction. Descriptions of the biotic provinces Eskimoan. Hudsonian. Canadian. Carolinian. Austroriparian. Floridian. Texan. Saskatchewan. Kansan. Comanchian. Aleutian. Sitkan. Oregonian. Montanian. Coloradan. Navahonian. Palusian. Artemisian. Californian. Sonoran. Mohavian. Apachian. Durangan Chihuahuan. Tamaulipan. Yucatan. Literature cited. Index.

Note. A new classification of the natural biological areas of North America from the Arctic zone to middle Mexico, by a biologist whose field trips have brought him into almost all of them. The classification is based primarily on vegetation but takes account also of climate, physiography and animal life. The ecological point of view is maintained throughout, with emphasis on the relationship between the plants and animals and their environment. One hundred and fifty-two titles are listed in the bibliography

DICE, LEE RAYMOND

Natural communities Ann Arbor University of Michigan Press, 1952 547 p. illus. 26 cm. $7 50 1986

Contents (abridged) Some important kinds of communities. Methods for describing and measuring communities. Effects on communities of fluctuations in the physical conditions of their habitats. Food relations within communities. Fluctuations in populations. Fluctuations in community composition. Relations of organisms to their ecosystems. Home ranges and territories. Effects of social behavior on the community Ecologic relations between species. Community equilibrium. Effects of communities on their physical habitats. Ecological succession. Local and geographic variation within communities. Relations between communities. Classification of communities. Relations between communities. Larger units of community classification and microassociations. Larger units of community classification. Evolution of communities. Philosophy of communities. Literature cited. Index.

Note. A substantial introductory survey of the current knowledge of the ecologic principles of plant and animal communities under natural conditions. It is introductory in the sense that no previous acquaintance with ecology on the part of the reader has been presumed. However the reader does need an understanding of the general principles of biology Along with the delineation of principles the author mentions great variety of facts culled from the literature and gives references from the text to the source articles.

ODUM EUGENE P
Fundamentals of ecology Philadelphia W B Saunders Company 1953 384 p. illus. 24 cm. $6.50. 1987

Contents: Part I, Basic ecological principles and concepts: Introduction—the scope of ecology Principles and concepts pertaining to the ecosystem and biogeochemical cycles. Principles pertaining to limiting factors. Principles and concepts pertaining to energy in ecological systems. Introduction to population and community ecology Principles and concepts pertaining to organization at the species population level. Principles and concepts pertaining to organization at the interspecies population level. Principles and concepts pertaining to organization at the community level. Part II, The habitat approach: Fresh-water ecology Marine ecology Terrestrial ecology Part III, Applied ecology: Applications—natural resources—public health and welfare—human society Bibliography Index with reference glossary

Note. A general introduction to ecology is afforded by this book. As the preface indicates, the author has presented the subject from two viewpoints: that of principles and concepts, and that of environment or habitat. The exposition of basic principles and concepts is a substantial one, considering not only definitions of terms and statements of principles, but also the experimental and observational results upon which the principles are based. The section on applications, although it adds interest to the book, is no more than an outline. There are 118 figures and a 33-page bibliography Instead of a glossary the locations of definitions in the text itself are distinguished by use of boldfaced type. The author is Professor of Zoology in the University of Georgia.

STORER, JOHN H.
The web of life a first book of ecology New York The Devin-Adair Company 1953 142 p. illus. 22 cm. $3.00. 1988

Contents: Introduction, by F Osborn. The stream of life. When the rocks crumbled. How the land gets its water. Life prepares its own environment. Life comes to the soil. The soil community. The forest grows. The forest community The community through the seasons. Community life cycles. Life zones. A strand of the web breaks. The grassland community Some laws of life Attacks of life. Land and water meet: the Pacific salmon. The evolution of life. Human intelligence—evolution takes a new direction Man in the web. Summary Bibliography

Note: A book for the average reader who wishes to know something of ecology the fundamental interrelationships of living things, either as a part of his general education or as a practical basis for sound conservation practices. An extensive section of photographic illustrations in the center of the book complements the text.

WOODBURY ANGUS M.
Principles of general ecology New York The McGraw-Hill Book Company Inc., 1954 503 p. illus 24 cm. $7.50. 1989

Contents: Part I, General considerations: Introduction. Historical perspective. Organisms and environment. Part II, The physical environment: The solid earth—soils. The liquid cover of the earth—water. Air and its constituents. Radiant energy Gravity and pressure. Climate. Adaptations that meet the physical environment. Part III, Biotic interrelationships: Biotic communities. Development of biotic communities. Community analysis. Conditions of existence—energy space, shelter, protection, comfort. Food relations. Reproduction and species persistence. Population problems. Dispersal and evolution. Biotic rhythms and migrations. Biotic adaptations. Historical distribution. Geographic distribution. Consortism. Social relations—aggregations. Succession. Ecology and human affairs. Bibliography Index.

Note: An introduction to ecology written and organized primarily for use as a textbook in advanced undergraduate college courses offered to students who have completed basic courses in biology botany or zoology The physical and biotic elements of ecology are described in a style that is easy to read. Numerous references are made to related literature. The author is Director of Ecological Research in the University of Utah.

CYTOLOGY

GORDON MYRON editor
Pigment cell growth proceedings of the Third Conference on the Biology of Normal and Atypical Pigment Cell Growth. New York Academic Press, Inc., 1953 365 p. illus. 24 cm. $7 00 1990

Contents: Origin of the mammalian pigment cell and its role in the pigmentation of hair, by M. E. Rawles. Relations between developing melanophores and embryonic tissues in the Mexican axolotl, by H. C. Dalton. Genetic control of pigmentation in the fowl, by F B. Hutt. Relationship of atypical pigment cell growth to gonadal development in hybrid fishes, by O. Berg and M. Gordon. Thyroid hormone, and the differentiation of pigment cells in the brown leghorn, by J F Trinkaus. Growth and pathology of melanotic and amelanotic derivatives of the Cloudman melanoma S91, by G. H. Algire, and others. Dendritic melanoblasts in metastatic squamous cell carcinoma, by H. Z. Lund and C. Chernov Microscopic analysis of normal melanoblasts, nevus cells and melanoma cells, by S. W Becker Problems concerning melanoma in man, by R. W Raven. The natural history of melanoma in man, by R. L. Clarke, Jr and E. J. MacDonald. Analysis of skin color in living human subjects by spectrophotometric means, by E. A. Edwards. The two types of acanthosis nigricans, by H. O. Curth. End results in the treatment of malignant melanoma—A report of 1190 cases, by G. T Pack, and others. Control of melanization of S91 tumors by reactive transfer and biochemical studies of the tumors produced, by M. L. Hesselbach. Melanin and tyrosinase production in normal and pathological skin pigmentation, by E. Y Traub and R. J. Spenc. Oxidizing enzymes of mouse melanomas—their influence, enhancement and chromatographic separation, by V Riley and others. Phase contrast and electron microscopy of the Cloudman S91 mouse melanoma, by A. J Dalton and M. D Felix. The structure of melanins, by H. S. Mason. The in vitro production of pigment granules, by J L Plummer and M. J Kopac. The control of melanogenesis in human pigment cells, by A. B. Lerner and T. B. Fitzpatrick. Glycolytic activities of tissue and subcellular fractions of the Cloudman S91 mouse melanoma compared to a nonmelanotic hepatoma and normal liver, by H. G. du Buy and others. Index.

Note: Participants in the conference of which this book is a record represented several areas of biological and medical research. The implications for cancer research are obvious in many of the papers but the overall viewpoint is a broader one, including both normal and abnormal processes of pigment cells. Most of the papers are illustrated, some of them with remarkable microphotographs. Literature references are included in the individual papers and the names of the authors of the cited literature are included in the index.

HEILBRUNN L. V
The dynamics of living protoplasm. New York Academic Press Inc., 1956. 327 p. illus. 23 cm. $6.50. 1991

Contents: Introduction. Protoplasmic viscosity Protoplasmic gels. The electrochemistry of the cell. The surface precipitation reaction. Protoplasmic clotting. Muscle contraction. The excitation of nerve. Conduction and transmission. Cell division. The suppression of cell division. Stimulation and anesthesia. The colloidal theory of stimulation and anesthesia. Cellular homeostasis. Conclusion. Bibliography Author index. Subject index.

Note In this monograph the author, who has devoted most of his lifetime to research on protoplasm and closely related areas of biology assembles a wide range of information and interprets it. His object is to organize the accumulated results into a body of knowledge that will throw light on the mechanisms underlying vital activity However, he does not hesitate to point out interesting tangential observations that seem to be worth further investigation, such as the possibility of anticoagulant polysaccharides. Such aspects as stimulation and anesthesia of protoplasm are discussed at considerable length. In the end the author concludes that a great deal has been learned about protoplasm, but that much more must be discovered before the fundamental nature of the vital activity [illegible] can be fully understood. The book is written in a relatively simple style and is designed to appeal to biologists and physiologists generally It includes a 33-page bibliography

MURRAY MARGARET R., AND GERTRUDE KOPECH, compilers
A bibliography of the research in tissue culture, 1884 to 1950: an index to the literature of the living cell cultivated *in vitro* New York. Academic Press Inc., 1953 2 v $24.00. 1992

Note A comprehensive, international bibliography of tissue culture defined as the maintenance of isolated portions of multicellular organisms in artificial containers outside the individual for considerable periods of time. The cultivation of tissue cells from *parts of any plant or animal from sponges to vertebrates and from* thallophytes to spermatophytes therefore is *included* the culture of Protista, bacteria, Rickettsiae and viruses is *excluded*, unless tissue cells are actually cultivated along with them. *Observations* upon blood smears and tissue slices are *excluded* also in vivo observations in chambers utilizing the rabbit's ear tadpole's tail, peritoneal flap etc., as well as all *forms* of grafting (in individuals, eggs and embryos) unless the tissue was first cultivated *in vitro*. The maintenance of whole plants or whole embryos on culture media was omitted, with the exception of some plant embryos. It has been our aim to collect and classify all the available references (within the stipulated limitations) which deal with observations on the structure, growth and behavior of tissue cells maintained *in vitro* as well as with methods of culture, and with generalizations typified by symposia, monographs and reviews." Entries under authors and entries under subjects are arranged in alphabetical order in a single alphabet that extends through the two volumes.

PARKER, RAYMOND CRANDALL

Methods of tissue culture With a chapter by Joseph F Morgan Second edition, revised, with 113 illustrations New York Paul B Hoeber, Inc., Medical Book Department of Harper & Brothers, 1950 294 p illus 24 cm. $7 50 1993

Contents Introduction. The laboratory Special equipment. Cleaning and sterilization procedures. Diluting fluids, pH determinations and osmotic pressure. Preparation of plasma and serum. Preparation of tissue extracts. Development of synthetic media, by Joseph F Morgan. Coverslip cultures Flask techniques for plasma cultures. Flask techniques for fluid cultures. Roller-tube techniques. Flask techniques for tissue fragments in suspension. Watch-glass cultures for embryological studies. Growth measurements and their interpretation. Histological procedures. Photomicrography and microcinematography References. Index.

Note The first edition of this work described techniques in use in the laboratory of Dr Alexis Carrel at the Rockefeller Institute for Medical Research. In this edition the scope has been expanded to include techniques generally in use in biological research laboratories. Accordingly many important revisions and additions have been made throughout the book. Techniques are described explicitly furthermore, references are included in the text to citations of source articles. There are now 73 figures. The book is intended for graduate biologists, pathologists, etc., in need of a practical guide to the field.

RUDNICK, DOROTHEA, editor

Cellular mechanisms in differentiation and growth Princeton Princeton University Press 1956 236 p illus 24 cm. (Society for the Study of Development and Growth Fourteenth symposium, 1955) $7 50 1994

Contents Part I, Intracellular events System analysis for the light growth reactions of phycomyces, by M. Delbrück and W Reichardt. The cytology of nuclear RNA, by H. Swift and others. Plant cells and associated organelles, by I Manton. Pattern and substance in *Stentor* by V Tartar. Part II, Intercellular relations Infection and heredity by J Lederberg and E. M. Lederberg. Cellular interactions during the development of the cellular slime molds, by M Sussman and R. R. Sussman New approaches to the problem of embryonic induction by M. C. Niu. Growth and development in the shoot system of plants, by R. H. Wetmore. Developmental correlations in neurogenesis, by V Hamburger Structural studies of the formation of the myelin sheath in peripheral nerve fibers, by B. B Geren. Acquired tolerance of foreign cells, by R. E. Billingham. Index.

Note. Papers presented at a symposium of the Society for the Study of Development and Growth are published in this volume As their titles, quoted above, show various aspects pertaining to the activities of cells in growth and differentiation are discussed. The typical paper is a combination of results from published literature and reports of research carried on by the author or others. A critical discussion of the results reported in the individual papers is included in some of the papers. All of the papers are supplemented by bibliographies. The volume is of interest to graduate biologists.

SCHERER, WILLIAM F, editor

An introduction to cell and tissue culture, by the staff of the Tissue Culture Course, Cooperstown, New York, 1949–1953 Sponsored by the National Cancer Institute, United States Public Health Service, the Mary Imogene Bassett Hospital and the Tissue Culture Association. The resident staff John H Hanks director, William F Scherer, editor, Don W Fawcett Joseph Leighton, Keith R. Porter Contributors from the visiting staff Esther Carpenter, Wilton R Earle. Minneapolis Burgess Publishing Company, 1955 123 p illus. 28 cm. $4 00 1995

Contents (abridged) Part 1 The practical aspects of tissue culture. Preparation of the laboratory and of reagents The laboratory equipment and supplies. Balanced salt solution, inorganic supplements, and pH control. Plasma, serum, other body fluids and derivatives. Tissue extracts and derivatives. Preparation and management of cell cultures. Basic methods of cell and tissue culture. Cells handled in suspension. Cells in minced tissue fragments. Slide cultures. Test tube and flask cultures. Cultures in sponge and other special matrices. Cultivation of chicken macrophages. Cultivation of cells for virus propagation. Measurement of cell growth. Part 2, Lectures on principles of cell culture Principal cell types and patterns of growth in cell and tissue cultures. Cell differentiation and modulation. Nutrition of cells in vitro. Certain re-orientations of the study of animal cells in vitro. Organ culture. Part 3, Lectures on specialized applications: Cell and tissue culture in virology Cell and tissue culture in cancer biology Part 4 Appendix, The Tissue Culture Course, 1949–1953 Lecture schedule. General work schedule. Staining reagents and procedures. Sources of selected supplies and equipment.

Note In vitro cultivation of tissue cells has become important in the solution of biological problems on many levels, and this publication presents detailed suggestions on techniques of cell and tissue culture for the use of laboratory workers in the biological and medical sciences. It can also be used as a text for college courses in the subject. The publication is a result of a course on tissue culture given in Cooperstown, N Y under the auspices of the Tissue Culture Association. It pools much practical information gained from the experience of many workers in this new field. Bibliographical references appear at the ends of the chapters.

WHITE, PHILIP R

The cultivation of animal and plant cells New York The Ronald Press Company 1954 239 p illus 22 cm $6 00 1996

Contents The cell versus the organism. The history of cell culture The living material. The laboratory Nutrients. Types of cultures. Setting up cultures. Growth measurements and their interpretations. Applications. Appendix Some simple techniques for beginners. Bibliography Index of names. Index of subjects.

Note A useful and fairly comprehensive manual of techniques and related information on the laboratory culture of cells. The author has carefully pointed out that the book does not deal with "tissue culture," because there is no such thing but is concerned... known as tissue culture is the cultivation of groups of cells which make up tissues, or organs made up of tissues The book is, therefore about "cell culture" or for those who prefer the less precise term, "tissue culture." It describes concisely but in a straightforward style, materials, equipment, techniques, and interpretation of results. The appendix on simple techniques for beginners is a useful feature. There are 54 figures and a 16-page bibliography The author is Research Associate on the staff of the Roscoe B. Jackson Memorial Laboratory

BOTANY

GENERAL

AMERICAN JOINT COMMITTEE ON HORTICULTURAL NOMENCLATURE

Standardized plant names. Second edition. A revised and enlarged listing of approved scientific and common names of plants and plant products in American commerce or use. Prepared for the American Joint Committee on Horticultural Nomenclature by its editorial committee, Harlan P Kelsey and William A. Dayton. Harrisburg J Horace McFarland Company 1942 675 p 23 cm $10.50 1997

Note An official list designed to aid in bringing about as far as practicable the consistent use of single standardized scientific names and single standardized common names for every tree, shrub, and plant in American commerce or use, and to establish well-organized machinery for the registration and [illegible] of horticultural varieties and the adoption of standard rules of nomenclature for the guidance of those naming horticultural varieties. Some of the features of the earlier edition which are retained in the present volume are the dropping of capital initials for all species and botanical varieties, the changing of the double "i" ending to single "i", the adoption of one standard common name for each plant, and the consolidation of compound names. [illegible] of the 1942 edition include eliminating the hyphen. The [illegible] of the 1942 edition [illegible] the use of new symbols for the class [illegible] pronunciation guide, the use of new symbols for the class [illegible] and polyploids, a short glossary and a list of 770 new forest-tree names as approved by the United States Forest Service

BLAKE, S F

Guide to popular floras of the United States and Alaska. An annotated selected list of nontechnical works for the identification of flowers, ferns, and trees. Washington, D C. Government Printing Office 1954 56 p. 23 cm. (United States. Department of Agriculture. Bibliographical bulletin no 23) $0.25 1998

Contents Introduction. General publications. Publications listed by regions. Publications listed by states. Index to authors.

Note Under "General publications" in this bibliography are listed 77 works devoted to American plants regardless of region or state. Under "Publications listed by regions" are grouped 51 for the Northeastern region, 11 for the Pacific region, 6 for the Southeastern region, and 20 for the Western region. Under Alaska, the District of Columbia, and the individual states except Rhode Island, are listed the names of 707 additional publications dealing with the flora of these states. Complete publishing details are given for each title, followed by a brief note describing the contents. Out-of-print publications are listed as well as those still in print.

FINAN JOHN J

Maize in the great herbals. With a foreword by Edgar Anderson. Waltham Chronica Botanica Company 1950 191 p illus. 26 cm. $3.00. 1999

Contents (abridged) Maize in post-conquest Hispanic America Descriptions of maize by Spanish chroniclers. Use of maize by the natives of the New World. Maize in the great herbals of Europe Discussions of maize in the herbals—The German herbalists—Herbalists in the Low Countries—The Italian herbalists—The Spanish herbalists—The herbalists in Switzerland—The English herbalists. Appendices The woodcuts of the great herbals. Passages from original texts quoted and translated. Bibliography

Note A scholarly study of the history of the introduction of maize into Europe. It is based on a detailed study of descriptions and illustrations in herbals. The author shows that two general types of maize are represented in these works, one of which may have been brought to Europe from Asia, and the other of which was undoubtedly brought to Europe from America by Columbus and other Hispanic explorers. The book is thoroughly documented; also, it contains reproductions of about 25 illustrations of the maize plant that originally appeared in the herbals.

JOHANSEN DONALD ALEXANDER

Plant embryology embryogeny of the Spermatophyta. Waltham Chronica Botanica Company 1950 305 p illus. 27 cm. (A new series of plant science books edited by Frans Verdoorn. Vol. XXIV) $6.00 2000

Contents Introduction Cycadophyta. Ginkgophyta. Coniferophyta: Pinaceae. Araucariaceae. Sciadopityaceae. Taxodiaceae. Cupressaceae. Podocarpaceae. Pherosphaeraceae. Cephalotaxaceae. [illegible]. Taxaceae. Ephedrophyta: Ephedraceae. Gnetaceae. Welwitschiaceae. Anthophyta General considerations. Types and variations. Special and comparative embryology Apomictic embryogeny Adventitious embryogeny Polyembryony Glossary Index to phyla, orders, and families. Index to genera and species. Recapitulatory tables.

Note A systematic discussion and summary of knowledge in the field of the embryology of gymnosperms and angiospermous plants. It is limited to consideration of embryogenesis, embryotectonics, embryogeny and embryonomy with occasional reference to such topics as megasporogeny and fertilization. References to the literature in English, French, German, and Italian are found at the ends of the sections. The original manuscript was completed in 1944 additions were subsequently made to bring the literature up to the end of 1946

JOHANSEN DONALD ALEXANDER

Plant microtechnique. New York McGraw Hill Book Company Inc., 1940 523 p. illus. 23 cm. (McGraw Hill publications in the botanical sciences E W Sinnott, consulting editor) $8.50 2001

Contents Section I, General methods Introduction. Laboratory rules Apparatus. Reagents. Killing and fixing. Stains. Staining procedures. Special methods. Whole-mount methods. The glycerin method. Celloidin methods. Paraffin methods. Smear methods. Cytological methods. Microchemical methods. Sources of materials. Section II, Special methods for the various phyla Schizophyta. Chlorophyta. Euglenophyta. Pyrrophyta. Chrysophyta. Phaeophyta. Cyanophyta Rhodophyta. Myxothallophyta. Mycophyta (Eumycetae) Bryophyta. Pteridophyta Cycadophyta Coniferophyta Anthophyta. Index.

Note A standard, comprehensive manual of microscopic techniques useful in the study of botany It describes a wide range of methods specifically and in detail It includes also numerous formulas for culture media, stains, etc. As the above Contents shows, it is organized in two sections, one dealing with methods that are generally applicable and one dealing with special methods applicable to the study of individual phyla. Techniques of photomicrography and palaeobotany are not covered.

KELLEY, ARTHUR PIERSON

Mycotrophy in plants, lectures on the biology of mycorrhizae and related structures Waltham Chronica Botanica Company 1950 223 p illus 23 cm. (A new series of plant science books edited by Frans Verdoorn. Vol XXII) $5 00 2001A

Contents The rise of mycotrophic study The occurrence of mycorrhizae. The fungal endophytes. Fossil mycorrhizas. Distribution of mycotrophic plants. Mycotrophic plants and their environment. Mycothalli and mycorrhizomes. Mycodomatia. Structure of mycorrhizae. Obligate symbiosis. Theories of mycotrophy Mycotrophic phagocytosis. Bibliography Subject index. Index of plant names.

Note A survey of the current knowledge of mycotrophy The author believes that the mycorrhizae represent a type of fungus symbiosis, and that they are essential to the existence of many host plants. However he also presents the conflicting views held by other authorities. Although organized as lectures under the subheadings noted above, the book is essentially a digest of the published literature down to 1947

MEDSGER, OLIVER PERRY

Edible wild plants With an introduction by Ernest Thompson Seton. Illustrated with eighty pen and ink drawings and nineteen photographs New York The Macmillan Company, 1939 323 p illus 21 cm. $6 95 2002

Contents Edible wild fruits. Edible nuts. Edible seeds and seed pods. Salad plants and potherbs. Edible roots and tubers. Beverages and flavoring plants. Sugars and gums. Mushrooms. Finding indices Edible plants of northeastern United States and eastern Canada west to the Mississippi River Edible plants of southern United States. Edible plants from the Mississippi River to the Rocky Mountains. Edible plants of the Rocky Mountains and Pacific states. General index.

Note. This manual does not include all the edible plants in the United States and Canada, a few having been omitted intentionally because of their rarity or limited range. In certain large groups, such as the blackberries, blueberries, etc., only a few important species are described. The work includes species from nearly all of the chief orders of flowering plants, as well as a few lower forms of plant life. There are numerous drawings and photographs as well as a "finding index" which gives the names of plants, both common and scientific, with the range, season, and a few of the most pronounced characteristics. The work is based mainly on the existing literature of the field.

MERRILL, ELMER DREW

Merrilleana a selection from the general writings of Elmer Drew Merrill. Waltham Chronica Botanica Company 1946 393 p illus 26 cm. (Chronica botanica. Vol 10, nos 3 and 4) $4 00 2003

Contents The ascent of Mount Halcon. Amboina floristic problems in relation to the early work of Rumphius. Comments on Cook's theory as to the American origin and prehistoric Polynesian distribution of certain economic plants, especially *Hibiscus tiliaceus* Linnaeus. On the flora of Borneo Die Pflanzengeographische Scheidung von Formosa und den Philippinen. An appeal for simplified literature citations. Correlation of the indicated biologic alliances of the Philippines with the geologic history of Malaysia. Lepromy bows to science. One-name periodicals. On Loureiro's "Flora Cochinchinensis. Scuttling Atlantis and Mu. Palisot de Beauvois as an overlooked American botanist. On the technique of inserting published data in the herbarium. On the significance of certain Oriental plant names in relation to introduced species. Domesticated plants in relation to the diffusion of culture. Index Kewensis in improved loose leaf ledger form. A simple change in name. Man's influence on the vegetation of Polynesia, with special reference to introduced species. Some economic aspects of taxonomy Rafinesque's publications from the standpoint of world botany Sir David Prain (1857 1944) In defense of the validity of William Bartram's binomials. Further notes on tobacco in New Guinea.

Note Representative writings of an eminent American botanist are collected in this volume, without change in their text from the original publications. References are given to the original appearances in journals. Also included is a condensed chronological tabulation of the outstanding events in the author's life and a bibliography of all of his writings.

MOLDENKE, HAROLD N, AND ALMA L MOLDENKE

Plants of the Bible. Waltham Chronica Botanica Company, 1952 328 p illus 26 cm (A new series of plant science books edited by Frans Verdoorn. Vol. XXVIII) $7 50 2004

Contents (abridged) Historical sketch. Description of the land. Helps to users of this work. Unidentified plant references. Bibliography Supplementary notes. Index to Bible verses. General index.

Note A study of biblical botany by botanists. It provides botanical identifications for most of the plants mentioned in the Bible, quotes the books and verses in which specific plants are mentioned and, in most instances, provides a discussion of some length on variant names in old manuscripts and in various translations. Uses of the plants and other miscellaneous topics are discussed. Illustrations of some of the plants are provided in a series of plates. An index to Bible verses is supplemented by a very full general index.

PEATTIE, DONALD CULROSS

Flowering earth Wood engravings by Paul Landacre New York G P Putnam's Sons. 1939 260 p illus 21 cm. $3 75 2005

Contents On striking your roots. On branching out. Chlorophyll the sun trap. What a plant is. Protoplasm—the body of life. The seeds of life. The first algae. The seaweeds. The fern forests. Diatoms—grass of the sea. Conifers and cycads. The [illegible] of the modern flora. A transplanting. A garden alliance. The moment of flowering. The sleep of the seed. Growth. The web of life. Bibliography Index.

Note. A readable discussion of the fundamentals of plant history written for the interested layman. The style is intentionally literary and is aimed at conveying a sense of the beauty and mystery of the growth of plants, from the primeval algae to the flora of the present-day forests and gardens. Such topics as the relation of insects and birds to the cross-fertilization of plants, the mystery of life as represented in the longevity and impermeability of the seed, and the extinction of the fern forests of the Carboniferous period are treated in a somewhat poetic and philosophic fashion

PLATT, RUTHERFORD HAYES

This green world. With illustrations from photographs by the author New York Dodd, Mead and Company 1942 222 p illus. (part col'd) 25 cm $6 00 2006

Contents: Trees. Listen to them grow—introductory World's greatest waterworks. Hundred-mile roots Inside information on tree trunks. Green leaves as food factories. The dynamic spiral of plants. What happens to make autumn colors. Winter buds and how they work. Flowers. The spectrum marches across the pasture. Seeing color the year round. The day-length director's [illegible] of flowers. Tree and grass equipment for wind pollination. [illegible] jewelry and how flowers guard it. How flowers and insects [illegible] each other The precision tools of cross-pollination. Flower [illegible] —the products of nature' assembly line. From buttercups to [illegible] worts. From mints to orchids. Supplements. Indexes.

Note. A handsomely illustrated volume presenting an introduction to the world of plant life from the viewpoint of the amateur naturalist and the general reader who desires knowledge of the way plants live The author although primarily a photographer rather than a professional botanist, writes with an estimable degree of scientific accuracy A feature of the book is the collection of 133 excellent photographs by the author 41 of which are in natural color An annotated list of 24 books for the layman on trees, flowers, pollen, and plants in general is given in the appendix.

REED HOWARD SPRAGUE

A short history of the plant sciences. Waltham Chronica Botanica Company 1942 320 p. illus. 27 cm. (A new series of plant science books edited by Frans Verdoorn. Vol. VII) $6.50. 2007

Contents: Introduction. Gardeners and herbalists of antiquity. The ancient period, from the sixth century B.C. to the end of the second century A.D. The interpretative period, from the beginning of the third to the end of the twelfth century. The transitional period, from the beginning of the thirteenth to the end of the sixteenth century. The seventeenth century. The eighteenth century. Gardens and other trends. Plant geography in the nineteenth century. Morphology. Cytology. The water economy of plants. The fixation of carbon by plants. The assimilation of nitrogen. The fixation and metabolism of nitrogen. Plant nutrition. Mineral constituents in metabolism. Mycology. Plant pathology. Significant names in the history of botanical science. Index.

Note: This history of botany is intended for the average graduate student and others of similar educational background. It attempts to give a readable account of the growth of the plant sciences from early times to the present. The discovery and domestication of plants, ancient records, voyages and discoveries are discussed with reference to the progress of the sciences, and to the growth of specialization and the formation of scientific societies and research institutions throughout the world. The progress in various provinces of botany since the beginning of the 20th century receives particular attention. References are given at the end of each chapter.

RICKETT HAROLD WILLIAM

The green earth an invitation to botany Revised printing. New York The Ronald Press Company 1951 359 p. illus. 23 cm $3.50 2008

Contents: Prologue. Of the green color of leaves and what comes of it. Of the anatomy of leaves. Of the architecture of plants. Of the growth of plants. Of the purposes of plants. Of flowers and their fruits. Of the [illegible] of [illegible] . Of [illegible]. Of [illegible] and [illegible]. [illegible] for old. The end of things. Epilogue. Index.

Note: A distinguished book for lay readers. The fundamental principles of plant life are the subject, and no attempt is made to describe a wide range of plants nor to cover even in an elementary way the traditional contents of introductory college courses in botany. On the other hand, the elements of plant physiology, plant evolution, and other basic aspects of botany are described in a style that is a pleasure to read. The illustrations, all from drawings, are in harmony with the text. The book was published in 1943 and a "revised printing" without major changes except for the addition of an index was issued in 1951 and is described here.

RICKETT HAROLD WILLIAM

The Royal Botanical Expedition to New Spain, 1788–1820 as described in documents in the Archivo General de la Nación [Mexico] now translated and collated by Harold William Rickett. Waltham Chronica Botanica Company 1947 86 p. illus. 26 cm. (Chronica botanica. Vol. 11 no 1) $2.50 2009

Contents: Sessé. Establishment of the Royal Botanical Garden. Mociño. Explorations of Mexico. Sessé. The West Indies. Longinos Martínez. Mociño on the expedition. Cervantes. The Botanical Garden and the teaching of botany. Sessé and Mociño. Return to Spain. Appendices: Plants introduced into the Royal Botanical Garden of Mexico. Names and dates of certain graduates of the course in botany of the Royal Botanical Garden. References. Index.

Note: From the incomplete evidence preserved in the Archivo General de la Nación of Mexico the author has compiled a brief account of the expedition sent by King Charles III of Spain in 1787 to survey the flora and fauna of New Spain and to establish a botanical garden. The report, meant primarily as a contribution to the history of botany, sheds also an interesting light on the relation between government and science during that period.

SASS JOHN EUGENE

Botanical microtechnique. Second edition. Ames The Iowa State College Press 1951 228 p. illus. 23 cm. $4.50 2010

Contents. Part I. General principles and methods. Introduction. Collecting and subdividing plant materials. Killing, fixing, and storing plant tissues. Dehydration for embedding. Infiltration and embedding in paraffin wax. Microtome sectioning of material in paraffin. Staining paraffin sections. The celloidin method. Sectioning unembedded tissues. The preparation of whole mounts and smears. Criteria of successful processing. Part II. Specific methods: Introduction. Vegetative organs of vascular plants. Thallophyta and Bryophyta. Reproductive structures of vascular plants. Microscope construction, use, and care. Photomicrography. Index.

Note: An introductory manual designed primarily for use in instruction rather than for reference. Nevertheless, the descriptions of techniques are specific, and a few selected formulas are included. The author is Professor of Botany in Iowa State College.

VENNING FRANK D

Manual of advanced plant microtechnique. Dubuque, Iowa Wm. C Brown Company 1954 96 p. 29 cm. $4 00 2011

Contents: General laboratory procedures and techniques. Dehydration and embedding. Softening and sectioning. Stains and staining procedures. Mounting, coverslipping. Ding. Special techniques for special structures. Microchemical methods. Whole mount methods. Some specific techniques. Cytological methods. Pollen grains and pollen tubes. Smear and squash techniques for chromosome studies. The fixation of cytological material. Techniques involving sections for cytological studies. Author index. Subject index.

Note: Techniques and formulas of particular interest to advanced botanical microtechnicians are published in this volume. Most of the information has been collected from the literature and literature references are given to the sources. However, methods and formulas are both described in detail, thus making reading of the source literature unnecessary in most instances.

WATT LUCITA HARDIE

Fairchild Tropical Garden the first ten years. New York The Ronald Press Company 1948 381 p. illus. 21 cm. $3 00 2012

Contents (abridged): How the garden got its start. Early planting. The Bailey vine collection. The buildings. The expeditions. The Bailey palm glade. The palm products museum and its contents. The library and its books. Publications. The plant and seed distribution. The staff. Finances. Looking forward. Appendix: Trees and plants donated during the ten years.

Note: The Fairchild Tropical Garden, near Miami, Florida, was established in 1938 with the view of maintaining, for purposes of display and study, a representative collection of tropical flora. The garden is particularly noted for its extensive collection of palms and related families of trees. This volume traces the development of the garden and serves as a history and record of what has been accomplished during the first decade of operation.

YOCUM LAWSON EDWIN

Plant growth. New York The Ronald Press Company 1945 203 p illus. 24 cm. $3 40 2013

Contents (abridged): Seeds and seedlings. Cell structure and protoplasm. Roots. Absorption of water and mineral salts. The soil. Stems and buds. Pruning and training plants. Propagation. Leaf structure. Food making. Transpiration. Insects and diseases. Weeds. Flowers. Hybridizing plants. Heredity and variation in plants. Plant hormones. Fertilizers. Rest period of plants. Glossary.

Note: An easy-to-read book in which an exposition of elementary botany is combined with some essentials of successful gardening. It is addressed chiefly to persons whose curiosity about plants and plant life is aroused by their interest in home gardening.

GENERAL TEXTBOOKS

FULLER, HARRY J, AND OSWALD TIPPO

College botany Revised edition. New York Henry Holt and Company, Inc., 1954 993 p illus (part col'd) 24 cm $8 95 2014

Contents (abridged) Part I The nature of plants and plant study Part II The structure physiology and reproduction of flowering plants: Seed structure and germination. The gross structure and activities of seed plants. The microscopic structure of plants, cells and tissues. The physiology of plant cells. The structure and physiology of roots. The gross structure of stems. The internal structure of stems. The properties and uses of wood economic importance of stems. The structure and economic importance of leaves. The physiology of leaves. Growth and irritability The structure and functions of flowers. Fruit development and structure Variation and heredity in plants—plant breeding. Part III, The plant kingdom. Part IV The distribution of plants in time and space Plant evolution. The relation of plants to their environments. Part V Plants and man Glossary Index.

Note A textbook intended for use in full length introductory courses in colleges. The range of material included is broader than in some contemporary texts designed for beginning college students of botany More than the usual amount of material is included on plant physiology and on economic botany Part II on structure, physiology and reproduction is 479 pages long in contrast to the 323 pages of Part III, which contains the descriptions of the chief plant groups. There are a high number of illustrations and a useful glossary The book is suitable for use in courses offered to students who are planning no further work in biology and also to those who are preparing for careers in economic botany or other fields where the applications of botany are important. The first edition was published in 1951 Changes in this revised edition are few

FULLER, HARRY J

The plant world, a text in college botany Third edition. New York Henry Holt and Company, Inc 1955 584 p illus (part col'd) 24 cm $6 95 2015

Content (abridged) The nature of plant science. Seed structure and germination. The gross structure and activities of flowering plants. The microscopic structure of plants—cells and tissues. The physiology of plant cells. Roots and the relation of roots to soils. The origin and gross structure of stems. Wood and the economic uses of stems. The physiology of stems and its practical implications. The origin and structure of leaves. The physiology of leaves. Metabolism. Growth and irritability The structure and functions of flowers. Fruit development and structure Heredity in plants—plant breeding. *The principles of plant classification.* Thallophyta Embryophyta. Tracheophyta. The evolution of plants. The distribution of plants on the earth. Plants and man. Glossary Index.

Note A shorter text than *College botany* written by Professor Fuller in collaboration with Professor Oswald Tippo and described below It is intended for use in one-semester courses. A considerable part of the expository text and many of the illustrations are common to both books. Omitted from this book are such sections as the one entitled "The major groups of plant products" which is to be found in the terminal chapter of the longer book. However not all of the shortening has been accomplished by omission. Numerous sections have been condensed by rewriting. The second edition was published in 1951 This third edition includes various revisions in text and illustrations.

HAUPT, ARTHUR W

An introduction to botany Third edition New York McGraw Hill Book Company Inc., 1956 447 p illus 24 cm (McGraw Hill publications in the botanical sciences Edmund W Sinnott consulting editor) $5 50 2016

Contents Part I, The structure functions, and life relations of seed plants Introduction The plant cell. Protoplasm The root. The stem. The leaf Metabolism. Growth and movement. Environmental relations. The flower and fruit. Floral evolution and pollination Seeds and *seedlings Heredity* and plant breeding. The principle of evolution. Part II, The evolution of the plant kingdom The algae. The fungi. Liverworts and mosses. Club mosses, horsetails, and ferns. *The seed plants.* Chief families of flowering plants. Plant life of the past. Glossary Index.

Note. A textbook designed for use in short courses offered to undergraduate college students. It presents a simple, balanced treatment of elementary but *fundamental* knowledge. There is scarcely more emphasis on structure than on other aspects of the subject. Part I is 258 pages long and Part II, 154 pages. In this third edition, there are 297 figures including portraits of botanists, drawings of plant elements, photographs of habitat scenes, etc. The second edition was published in 1946. Two new chapters, many new illustrations and a 20-page glossary have been added in this third edition.

HILL, JOHN BENJAMIN, AND OTHERS

Botany, a textbook for colleges. By J Ben Hill, the late Lee O Overholts and Henry W Popp Second edition New York McGraw Hill Book Company Inc., 1950 710 p. illus. 24 cm. (McGraw Hill publications in the botanical sciences, Edmund W Sinnott, consulting editor) $7 50 2017

Contents (abridged): Part I, Structure and physiology of seed plants Coloration in plants. Plant cells. Leaves. Metabolism—photosynthesis. Roots. Absorption of water and inorganic salts. Stems. Growth and movement. Flowers. Fruits, seeds and seedlings. Part II, *The plant groups Plant classification and nomenclature.* Thallophyta. Bryophyta. Tracheophyta or vascular plants. Families of angiosperms. Heredity Index.

Note An introductory textbook for full-length college courses. No single aspect of the subject is emphasized Instead, the student is given a broad view of the field and also considerable detail of information. In this edition material has been added on several developments that have occurred since 1936 including antibiotics, hormones, and the uses of radioisotopes in botanical research. Several chapters have been rewritten and many of the 333 figures have been improved.

NORTHEN, HENRY T

Introductory plant science. New York The Ronald Press Company, 1953 601 p illus 24 cm $5 50 2018

Contents Botany in human affairs. Kinds of plants. From seed to plant. Units of protoplasm—cells. Absorption of materials by cells. Food manufacture—photosynthesis. Food utilization—respiration Structure of leaves. Water Roots. Soils. Stems. Water stress. Conduction. Metabolism. Growth. Plant hormones Reproduction of seed plants—asexual methods. Sexual reproduction—flower structure. Sexual reproduction of seed plants. Seeds, seedlings and fruits. Factors affecting flowering. Genetics. Variations. Plant communities. The nature of plant communities. Conservation Evolution. Groups of plants. Algae. Fungi—bacteria. Slime molds and true fungi. True fungi. Mosses, liverworts, and hornworts. *Primitive vascular plants.* Ferns. Gymnosperms. Angiosperms. Index.

Note Botany is made interesting for the average college student in this skillfully written, elementary textbook. A broad view is given of the science, and its importance to man is stressed at appropriate points. The expository text is written in a lively style and the illustrations, which are numerous, have been well selected to stimulate interest on the part of the reader. The book is suitable for use in short courses offered primarily for the benefit of students who do not plan to pursue further *study of* botany It is also suitable for lay readers who wish a more substantial book than the strict popularizations. The author is Professor of Botany in the University of Wyoming.

ROBBINS, WILFRED WILLIAM, AND T ELLIOT WEIER

Botany an introduction to plant science New York John Wiley & Sons Inc., 1950 480 p illus. 25 cm 2019

Contents: Introduction. The plant world. Classification and naming of plants. The plant body of seed plants. The plant cell. The stem. The roots. The leaf The flower The fruit, seed, and seedling. Inheritance. The plant as a living mechanism The groups of plants. The fission plants. The algae. The fungi. The viruses. The bryophytes. The vascular plants. Evolution. Index.

Note: A college textbook which is shorter and more briefly [illegible] than some textbooks written at this level. It is suited to the needs of students whose main interest in the subject is cultural. Its simplicity [illegible] the needs of those [illegible] students who wish to study the subject [illegible] the breadth of its treatment. The authors are members of the faculty of the College of Agriculture of the University of California. A second edition, revised by the authors [illegible] and C. Ralph Stocking, was published in [illegible]. [illegible]

ROBBINS WILLIAM JACOB AND HAROLD W RICKETT

Botany: a textbook for college and university students. Third edition. Princeton D Van Nostrand Company Inc., 1939 658 p. illus. 23 cm. $6.50. 2020

Contents: The living plant: Introduction. Growth. Cells. Roots. Stems. Leaves. Water. Foods and nutrition. Life and energy. [illegible] and response. Reproduction. Heredity. The nature of life. The kinds of plants: Introduction to the plant kingdom. Algae. Fungi. Bryophyta. Filicineae. Lycopodineae and Equisetineae. Gymnospermae. Angiospermae. The origin of life. The evolution of life. The distribution of plants on the earth. Questions for review and discussion. Appendix. References. Index.

Note: This textbook is designed for study by students in their first year at college. It provides a thorough elementary account of the basic [illegible] processes and structures, and of each of the various types of plants and their [illegible] characteristics. The text part includes discussions of the general principles of heredity and such fundamental types of heredity and reproduction.

SINNOTT EDMUND W., AND KATHERINE S WILSON

Botany: principles and problems. Fifth edition. New York McGraw Hill Book Company Inc., 1955 528 p. illus. 26 cm. (McGraw-Hill publications in the botanical sciences Edmund W Sinnott, consulting editor) $6.95 2021

Contents (abridged): Plants and life. Plant science and its development. The physical basis of life. The root. The leaf. The stem. Metabolism. Growth. Development and morphogenesis. Plants and its environment. Plant [illegible]. Reproduction. Heredity and variation. Plant evolution. Algae. Fungi. Bryophyta. Psilopsida. Lycopsida. Sphenopsida. Ferns. Gymnosperms. Angiosperms. Botany and the future. Appendix. Index.

Note: This standard American textbook was first published in 1923; the fourth edition appeared in 1946. The material in this fifth edition has not only been reorganized and revised but given an [illegible] and inviting format. The original conceptual [illegible]; the plant is studied as a functioning structure; the chapter "Questions for thought and discussion" is practical; and the presentation does not assume more scientific knowledge than the beginning student will have. Throughout, the authors include up-to-date scientific information appropriate to an elementary text. Among major changes are [illegible] chapters on metabolism and expanded discussions of photosynthesis and respiration. The numerous illustrations are clearly reproduced; many of the photographs have artistic as well as botanical merit.

SMITH GILBERT M

Cryptogamic botany. Second edition. New York McGraw-Hill Book Company Inc., 1955 2 v. illus. 24 cm. (McGraw Hill publications in the botanical sciences Edmund W Sinnott, consulting editor) Vol. I, $9.50; vol. II, $5.50. 2022

Contents: Volume I, Algae and fungi: The classification of spore-producing plants. Chlorophyta. Euglenophyta. Pyrrophyta. Chrysophyta. Phaeophyta. Cyanophyta. Rhodophyta. Myxomycophyta. [illegible]. Phycomycetes. Ascomycetes. Basidiomycetes. Deuteromycetes. Lichens (Lichenes). Index. Volume II, Bryophytes and pteridophytes: Bryophyta and pteridophyta. [illegible]. Hepaticae. Anthocerotae. Musci. Pteridophyta. [illegible]. Psilophyta. Lepidophyta. Calamophyta. Pterophyta. Index.

Note: A college textbook designed for the instruction of students who have completed introductory courses in general botany. Its subject is the classification and morphology of plants below the level of seed-bearing plants. It is not encyclopedic but instead offers [illegible] through treatment of representative genera in each of the major groups. The illustrations are well executed, and they include many series that show in sequence the development of specific plants. Literature references are given. The first edition was published in 1938. Revisions in the second edition include rewritten discussions of the major taxa, revised descriptions of some genera, and additions to the bibliographies. The number of figures in Volume I is now 311 and in Volume II, 224. Many of the figures contain several drawings.

SMITH GILBERT M., AND OTHERS

A textbook of general botany. Fifth edition. By Gilbert M Smith, Edward M. Gilbert, George S Bryan, Richard I. Evans, John F Stauffer. New York The Macmillan Company 1953 606 p. illus. 24 cm. $6.25 2023

Contents: Plants, animals, and man. The life cycle of a seed plant. Cells—general structure and functions. Nucleus and cell division. Roots. Stems. Buds. Leaves. The nutrition and metabolism of plants. The water relations of plants. Growth and movement. The classification of plants. Meiosis and the life cycle of plants. Algae—Chlorophyceae—Myxophyceae—Phaeophyceae—Rhodophyceae. Fungi—Schizomycetes—Myxomycetes—Phycomycetes—Ascomycetes—Basidiomycetes. Lichens. Bryophyta—Hepaticae and Anthocerotae—Musci. Tracheophyta. Psilopsida. Lycopsida. Sphenopsida—Pteropsida—Filicineae—Pteropsida—Gymnospermae—Pteropsida—Angiospermae. Fruits and seeds. Fossil plants. Inheritance and variation. The major regions of vegetation in North America. Index.

Note: A standard work used in its various editions in introductory college courses since the first edition was published in 1924. It presents a rounded view of the field of botany with slightly less than half of the space devoted to the systematic descriptions of plant groups, and the remainder devoted to anatomy, physiology, genetics, etc. The fourth edition was published in 1942. The book's scope remains essentially the same in this edition but there has been some reorganization and some new material added on such topics as embryology, photosynthesis, and plant hormones. There are now [illegible] illustrations. The group of authors includes two new names. The senior author is presently a member of the faculty of Stanford University and the others are members of the faculty of the University of Wisconsin.

TAYLOR, WILLIAM T., AND RICHARD J WEBER

General botany. Illustrated by Wilma Riley. Princeton D Van Nostrand Company Inc., 1956 346 p. illus. 24 cm. $5 [illegible] 2024

Contents (abridged): Introductory concepts: Botany and its relationships. Chemical principles and the organization of protoplasm. Plant cells. Taxonomy of plants. Phylum Tracheophyta—Pteropsida—Angiospermae: Plant tissues and organs. The root. The leaf. Plant metabolism. The flower. Phylum Thallophyta. The algae. The fungi. The lichens. Phylum Bryophyta. Phylum Tracheophyta—other subphyla. Genetics and evolution. Index.

Note: Although shorter than many of the established introductory college texts in botany and designed by the authors primarily for use in one-semester courses, the book [illegible] presentation of the most simple aspects of the science of botany. Technical terminology is used freely and such aspects as the anatomy of leaves and stems are described in considerable detail. There is more emphasis on plant structure and physiology than on taxonomy and the morphological characteristics of plant groups. In fact, the chapters devoted to individual plant groups cover such matters as the general characteristics of the group, the methods of reproduction, and the chief features of structure; and no attempt is made to present the conventional taxonomic and morphologic descriptions. The illustrations are exceptionally good. A considerable number present three-dimensional views, and all are clear and well reproduced. The authors are members of the faculty of Georgetown University.

TORREY RAY ETHAN

General botany for colleges with 257 illustrations. New York. Appleton-Century Crofts Inc., 1932 449 p. illus. 23 cm. $4.50. 2025

Contents Part I, The structure and classification of seed plants The seed plant and its organs. The seed and its germination. The root. The stem. The leaf. The inflorescence and the flower The fruit and the seed. General ecology Part II, The anatomy and physiology of seed plants The structure of the cell. The activities of the cell-physiology Anatomy of the vegetative system of the seed plants. Coal and its formation The physiology of the vegetative system. The reproduction of seed plants. Part III The evolution of the plant kingdom Schizophyta. Algae (Phycophyta) Fungi (Mycophyta) Embryophyta. Tracheata. Summary Conclusion. Index.

Note A long-established introductory textbook. Although not revised for many years, it is still valuable for its sound factual presentation of the fundamentals of botanical science.

WEATHERWAX, PAUL

Botany Third edition. Philadelphia W B Saunders Company 1956 509 p illus (part col'd) 24 cm $5 75 2026

Contents I, General principles Introduction. Cells and living material. The manufacture of food. How plants use food. The mechanism of metabolism. Transport of materials. Leaves. Roots. The soil. Stems. Tissue systems. Wood and its uses. Specialized organs. Growth. Responses to stimuli. Reproduction—asexual methods. Simple sexual reproduction. Reproduction by seeds. Dormancy and dispersal. Heredity Ecologic relations. Evolution. II, The plant kingdom Classes and names. Thallophyta—algae—bacteria and slime molds—true fungi. Bryophyta. Tracheophyta—the "fern allies, Pteropsida—ferns—gymnosperms—angiosperms Pollination. The course of evolution in plants. Glossary Index.

Note The author designed this book primarily for use in short, introductory courses and for the botany part of elementary general biology courses. It presents the fundamental principles and facts of plant morphology physiology and reproduction in the first part, and in the second part, descriptions of some of the chief plant groups. Lacking are the discussions of applications of botany which are found in some texts of this kind. The style is relatively free of technical terms. In view of the book's purpose a reasonably wide range of material is presented. Also there is a high number of illustrations. The author is Professor of Botany in Indiana University

WILSON, CARL L

Botany With line drawings by Hannah T Croasdale. New York The Dryden Press 1952 483 p illus 26 cm $6 90 2027

Contents. The science of botany Plants, their nature and use. The plant plan and its modifications. The cell as the basis of plant life. The matter and mechanics of cells. Photosynthesis and the leaf Respiration and digestion The structure and growth of stems. Plants and water The root and the soil. Natural cycles and plant life. Growth and movement. Vegetative reproduction. The flower and seed production. The fruit, the seed, and seed germination. Plants in their environment. How plants inherit. The mechanisms of evolution The names and kinds of plants. The algae. The bacteria. Bacteria and man. The fungi. The liverworts and the mosses. The ferns. Early land plants and their evolution. The club mosses and the horsetails. The gymnosperms. The angiosperms. Glossary Index.

Note An introductory textbook written at the college level and designed primarily for students who do not plan to major in botany A general but fairly comprehensive view of the field is given with the emphasis on basic knowledge and functions rather than classification. The illustrations are of excellent quality and are numerous. The printing is in red and black A second edition by Carl L. Wilson and W E. Loomis was published in 1957 518 p $7.25

ECOLOGY

CLEMENTS, FREDERIC EDWARD

Dynamics of vegetation selections from the writings of Frederic E Clements Compiled and edited by B W Allred and Edith S Clements New York Hafner Publishing Company 1949 296 p illus. 23 cm. $4 50 2028

Contents. Plant succession and human problems. Competition in plant societies. Plant indicators. Nature and structure of the climax. The relict method in dynamic ecology Climax, succession and conservation *Climatic* cycles and human populations in the Great Plains. Ecology in the public service. Glossary Index.

Note A compilation of previously published writings by a botanist who made a life-long study of ecology first at the universities of Nebraska and Minnesota, later and until his death at the Carnegie Institution of Washington. The illustrations are from photographs and are reproduced on 70 plates, [illegible] to [illegible] plate.

DAUBENMIRE, REXFORD F

Plants and environment, a textbook of plant autecology New York John Wiley & Sons, Inc., 1947 424 p illus 22 cm. $4 50 2029

Contents Introduction. The soil factor The water factor The temperature factor The light factor The atmospheric factor The biotic factor The fire factor The environmental complex. Ecologic adaptation and evolution. Literature cited. Index.

Note An interesting, well-organized survey of the effects of environmental factors upon plant life. It is more detailed than the chapter titles indicate for example, some of the subtopics in the chapter entitled "The atmospheric factor" are gas exchange between plants and the atmosphere factors that affect soil aeration injuries to plants by wind, salt spray and snow pollination and plant dissemination by wind. The bibliography contains [illegible] references. The work is designed as a college textbook, but other groups such as foresters and amateur naturalists will find it of interest

OOSTING, HENRY J

The study of plant communities, an introduction to plant ecology Second edition. San Francisco W H. Freeman and Company 1956 440 p illus 22 cm. $6 00 2030

Content Part I, Introduction Ecology and its subject matter. Part II, The plant community Nature of the community Vegetational analysis—quantitative methods—phytosociological objectives. Part III, Factors controlling the community The environment. Climatic factors—radiant energy light, and temperature—[illegible] Physiographic factors—Pedogenesis—Edaphology Biological factors. Part IV Community dynamics. Plant succession. The distribution of climax communities—present distribution of climaxes—shifts of climaxes with time. Part V Practical considerations: Applied ecology References cited. Index.

Note Although designed as an introductory text for undergraduate college students taking their first courses in plant ecology the book provides a comprehensive view of the field and detailed discussions of many sub-topics. Plant ecology is presented as an interesting and vital field of knowledge. Techniques of ecological study such as sampling, are described explicitly Many technical topics, such as the movement of soil water, that might have been left out of a less substantial text are accorded several pages of space. The level of treatment assumes a fair amount of knowledge of basic botany including plant physiology The list of references cited contains 419 entries in addition to which there are selected lists of books intended as guides to further reading. There are nearly 200 figures, of which many are reproductions of photographs. The first edition was published in 1948. In this second edition numerous sections have been revised and rewritten including the discussion of succession and climax. The list of references has been substantially extended, and literature published since the first edition was written has been added.

WEAVER, JOHN ERNEST, AND FREDERIC E. CLEMENTS

Plant ecology Second edition. New York McGraw Hill Book Company, Inc., 1938. 601 p illus 23 cm. (McGraw Hill publications in the botanical sciences E W Sinnott, consulting editor) $8 50 2031

Content Vegetation its origin development, and structure Methods of studying vegetation. Plant succession. The units of vegetation. Initial causes of succession. Migration, ecesis, and aggregation. Competition and invasion Soil in relation to plant development. Reaction and stabilization. Climax and community development. Relation of under-ground plant parts to environment. Humidity wind, and evaporation. Temperature. Light. Plant response as a measure of environment. Adaptation to water Plant and plant communities as indicators. Climax formations of North America.

Note: A comprehensive textbook for students of plant ecology and guide for workers in related fields, written from the standpoint of development, instrumentation, and experiment. The book discusses the habitat's substance between plants or groups of plants and their environment—the relations of plant to habitat, whether the latter be natural or modified by cultivation. Experiments and exercises for greenhouse and laboratory are outlined in detail, and field studies are suggested. A long bibliography is included.

MORPHOLOGY AND TAXONOMY

AMERICAN SOCIETY OF PLANT TAXONOMISTS

Plant genera their nature and definition. A symposium by G. H. M. Lawrence and others. Proceedings of the Symposium on Plant Genera, organized by the American Society of Plant Taxonomists and the Systematic Section of the Botanical Society of America, at the meetings of the American Institute of Biological Sciences Cornell University Ithaca, N. Y., U. S. A. on September 10, 1952 Waltham Chronica Botanica, 1953 89–160 p. illus. 26 cm. (Chronica Botanica edited by Frans Verdoorn. Vol. 14 no. 3) $2.00. 2032

Contents: Editor's foreword. Introductory essay—generic concepts and modern taxonomy, by T. Just. Plant genera, their nature and definition—the need for an expanded outlook, by G. H. M. Lawrence. The anatomical approach to the study of genera, by I. W. Bailey. Floral anatomy as an aid in generic limitation, by A. J. Eames. Cytogenetical approaches to the study of genera, by R. C. Rollins. Cytology and embryology in the delimitation of genera, by R. E. Cave. Plant geography in the delimitation of genera—the role of plant geography in taxonomy, by H. L. Mason.

Note: The symposium of which this publication is a product was the second on plant genera held under the same sponsorship. The first one dealt with the concept of the genus and papers presented at it were published in the May 1951, issue of the *Bulletin* of the Torrey Botanical Club. The papers presented at the second one are published in full here, together with a long foreword by the editor of *Chronica Botanica* and the introductory essay by Theodor Just which runs to 12 pages. In both the foreword and the introductory essay the importance of the genus in botanical taxonomy and the need for intensive work in this area of botany are stressed. In the symposium papers, the dominant theme is that morphology is an inadequate basis for classification and that the modern taxonomist must take into account contributions from other scientific fields such as cytology, genetics, embryology and plant geography in setting up genera.

BAILEY, IRVING W.

Contributions to plant anatomy. Waltham Chronica Botanica Company 1954 259 p. illus. 24 cm. (Chronica Botanica edited by Frans Verdoorn. Vol. 15 nos. 1–6) $7.50 2033

Contents (abridged): Irving W. Bailey. Biographical sketch, by K. S. [illegible]. Author's bibliography. Part I, Cytology and ontogeny: Phenomena of cell division in the cambium of arborescent gymnosperms and their cytological significance. The formation of the cell plate in the cambium of higher plants. The cambium and its derivative tissues—III. A reconnaissance of cytological phenomena in the cambium—IV. The increase in girth of the cambium—V. A reconnaissance of the vacuome in living cells. Part II, Biochemistry and biophysics: The orientation of cellulose in the secondary wall of tracheary cells (in collaboration with M. R. Vestal). The significance of certain wood-destroying fungi in the study of the enzymatic hydrolysis of cellulose (in collaboration with M. R. Vestal). Part III, Phylogeny: The development of vessels in angiosperms and its significance in morphological research. Evolution of the tracheary tissue of land plants. Part IV, Taxonomy: Degeneriaceae—a new family of flowering plants from Fiji (in collaboration with A. C. Smith). The comparative morphology of the Winteraceae—II. Carpels (in collaboration with C. G. Nast). Part V, Ecological anatomy: Notes on neotropical ant-plants—I. *Cecropia angulata*. Part VI, Paleobotany: The cambium and its derivative tissues—VII. Problems in identifying the wood of Mesozoic coniferae. Part VII, Wood technology: The preservative treatment of wood—II. The structure of the pit membranes in the tracheids of conifers and their relation to the penetration of gases, liquids and finely divided solids into green and seasoned wood. Part VIII, Cooperation in scientific research: The role of research in the development of forestry in North America (in collaboration with H. A. Spoehr). References. Subject index. Author index. Index of plants and animals.

Note: A selection made by the author of his own papers at the request of the editor of *Chronica Botanica*. To use the author's words, "the papers in this book have been selected and arranged to illustrate successive attempts between 1909–1953 to bridge the gaps between Plant Anatomy and other fields of scientific endeavor." There are 20 papers arranged in eight groups, the titles of which are given above. References are given to the journal or book in which the paper was first published. A complete bibliography of the author's publications from 1909 to 1953 is included.

CORE, EARL L.

Plant taxonomy. Englewood Cliffs N. J. Prentice Hall, Inc., 1955 459 p. illus. 23 cm. $7.50 2034

Contents (abridged): The development of taxonomy. Modern classification. Plant exploration. The evolution and migration of floras. Climate and natural vegetation. Gardens and herbaria. The principles of taxonomy. Nomenclature. The literature of systematic botany. The vascular plants—pteridophytes, ferns, Psilopsida—Filicineae. Gymnospermae. Angiospermae—Monocotyledoneae—Dicotyledoneae. Glossary of common Greek and Latin roots. Index to technical terms. General index.

Note: Although undoubtedly designed as a text for introductory college courses in plant taxonomy, this book is also an elementary reference manual of the subject. The first part, which amounts to approximately half of the length of the work, is written from the historical point of view. It covers not only the history of plant taxonomy, both classical and modern, but also the history of plant exploration, the history of plants, the great gardens and herbaria, the development of nomenclature, and in addition contains a chapter on the literature of the field. The second part contains the expected and necessary descriptions of the major plant groups. The descriptions are, however, written for beginners and cover more than strict taxonomy. If, for example, the plant has economic importance, there is almost always a short statement about the nature and extent of the uses to which it is put. The illustrations are not particularly distinguished. However there are 115 figures, many of which contain several drawings. The author is Head of the Department of Biology of the University of West Virginia.

EAMES, ARTHUR JOHNSON AND LAURENCE H. MACDANIELS

An introduction to plant anatomy. Second edition. New York McGraw-Hill Book Company Inc., 1947 427 p. illus. 23 cm. (McGraw-Hill publications in the botanical sciences Edmund W. Sinnott, consulting editor) $7.50 2035

Contents: Introductory. General structure of the plant body—an outline. General histology: The cell. Meristem. Tissues and tissue systems. The primary body. The secondary body: The origin and development of the secondary body and its relation to the primary body. The cambium. Secondary xylem. Secondary phloem. Periderm and abscission. The organs. The root. The stem. The leaf. The flower. The fruit. The seed. Ecology: Ecological anatomy. Index.

Note: A well-organized and illustrated textbook designed for first college courses. Extensive lists of the pertinent literature give it some value as a reference book also. The first edition was published in 1925, and fairly extensive changes have been made in this edition to bring it abreast of current knowledge. The authors are professors at Cornell University.

EAMES, ARTHUR JOHNSON

Morphology of vascular plants, lower groups (Psilophytales to Filicales). New York McGraw-Hill Book Company Inc.,

1936 433 p illus 23 cm (McGraw Hill publications in the agricultural and botanical sciences, E W Sinnott consulting editor) $8 50 2036

Content Lycopodiaceae Club mosses. Selaginellaceae Small club mosses. Isoetaceae. Quillworts. Psilotaceae Equisetaceae Horsetails. Filicineae. Ferns. Ophioglossaceae Adder's-tongue ferns. Marattiaceae. Marattiaceous ferns. Filicales. Leptosporangiate ferns. Osmundaceae Gleicheniaceae, Schizaeaceae. Marsileaceae. Water ferns. Cyatheaceae Dicksoniaceae Polypodiaceae. General discussion and summary for ferns. Paleobotany and the fossil record. Psilophytales. Lepidodendrales. Calamitales, Hyeniales, Sphenophyllales, Coenopteridales. The plant body alternation of generations, classification of vascular plants. Index.

Note A textbook of advanced level covering the morphology and life histories of vascular plants. Emphasis is placed on broad comparative study of the various groups, with the development of natural classification and of phylogenetic relationships as a goal. Especial attention is given to the more recently acquired information, particularly that concerning fossil groups, and the bearing of these discoveries upon the older view of relationship and upon theories of the nature of the plant body and the relation of gametophyte and sporophyte.

ESAU, KATHERINE

Plant anatomy New York John Wiley & Sons, Inc., 1953 735 p illus 24 cm $9 75 2037

Contents The plant body The protoplast. The cell wall. Meristems and their differentiation Apical meristems. The vascular cambium. The epidermis. Parenchyma. Collenchyma. Sclerenchyma. Xylem. Phloem. Laticifers. The periderm. The stem. The leaf The root. The flower The fruit. The seed. Plates. Author index. Subject index.

Note Plant anatomy is covered at a mature level in this distinguished textbook which is designed for the instruction of advanced college students of botany including those who are preparing to teach this science. Basic anatomical terms and concepts are carefully defined when first introduced. Although written in a straightforward style that is not difficult to read, the discussions of most topics are concise. Much ground is covered, but the author did not attempt an exhaustive treatment of the subject. Much of the exposition is written from the developmental point of view There is a high number of illustrations. Figures consisting of clearly reproduced line drawings are scattered throughout the text. At the end of the volume, 85 plates printed from halftones are assembled. These plates are largely reproductions of microphotographs, but a few photographs of gross anatomical features are also included. Extensive lists of literature references are found in all of the chapters, and the names of the authors of the cited literature are indexed. The author is Professor of Botany in the University of California.

FEATHERLY, H. I

Taxonomic terminology of the higher plants Ames Iowa State College Press, 1954 166 p 19 cm $3 95 2038

Contents. Glossary of botanical technical terms. Subject classification Aestivation Agents of pollination Corolla. Dehiscence. Direction. Dispersal. Fruits. Habitats. Inflorescence. Leaves. -onymus. Ovules and seeds. *Pistils. Positions. Sepals Sex distribution.* Stamens. Stems. Surfaces and ventures Texture Time and season. Tropisms. Type terminology Vernation. Specific epithets with their meanings. Greek and Latin components of scientific words. Appendix Bibliography

Note A unique and useful reference book The glossary which occupies about half the space, is an alphabetical arrangement of the technical terms currently used in the literature on botanical taxonomy plant distribution and speciation. Definitions are brief but clear and, in many instances, are expressed in the common language rather than in the technical terminology of botany In the subject classification which follows the glossary terms are arranged under subject hence, the reader who wishes to find the terms associated with the description of stems, for example, will find them grouped under this heading. The appendix contains an outline of the indications of the evolution of flowers, concise descriptions of important laws, theories and hypotheses and an outline of phyllotaxy or leaf arrangement. The author is Professor of Botany in Oklahoma Agricultural and Mechanical College.

FOSTER, ADRIANCE S

Practical plant anatomy Second edition Princeton D Van Nostrand Company, Inc. 1949 228 p 21 cm $4 00 2039

Content The protoplast. The cell wall. Meristems. Principles of the classification of cell types, tissues and tissue systems (including tabular summary of main cell types in seed plants) The epidermis. Parenchyma. Collenchyma. Sclerenchyma—sclereids—fibers. Tracheids and vessel elements. Sieve cells and sieve-tube elements. Laticiferous tubes. Stem. Leaf Root. Appendix. Index.

Note This book for college students combines the functions of text and laboratory manual. The 13 chapters that comprise the body of the book are called "exercises. In each of them, there is an introductory discussion of basic theory and this is followed by a scientific discussion of a specific plant part, directions for obtaining study material and for its study in the laboratory and literature references. The appendix provides suggestions and specific information on microtechniques. The first edition was published in [illegible] In this second edition, there is one new exercise and most of the exercises carried over from the first edition have been revised and extended More recent literature has been added to the bibliography

HAUPT, ARTHUR W

Plant morphology New York McGraw Hill Book Company, Inc., 1953 464 p illus 24 cm (McGraw Hill publications in the botanical sciences, Edmund W Sinnott, consulting editor) $8 00 2040

Contents Introduction. Thallophyta—algae—fungi. Bryophyta Pteridophyta. Spermatophyta. Evolution in the plant kingdom Selected references. Glossary Index.

Note A standard textbook used in college courses following a course in general botany The primary theme is the evolution of the principal plant groups in the light of the evidence gained in studies of their structure and reproduction. The arrangement is from simple forms of plants to complex ones, as the chapter titles indicate. There are 338 figures, most of which contain several drawings arranged as series. An extended glossary and a [illegible] classified bibliography are included. The author is Professor of Botany in the University of California.

LAWRENCE, GEORGE HILL MATHEWSON

An introduction to plant taxonomy Illustrations by Marion Ruff Sheehan. New York The Macmillan Company, 1955 179 p illus 22 cm $3 65 2041

Contents. Introduction Plant classification. Evolution and systems of classification. Plant structures. Collecting and identifying techniques. Nomenclature Phylogeny and biosystematics. Taxonomy in North America. Important families and their characters. Glossary and index.

Note A brief and relatively simplified introduction based partly on the author's *Taxonomy of vascular plants,* described below It covers the elements of the taxonomy of vascular plants and includes a useful glossary in which the technical terminology of systematic botany is defined. The chapter on taxonomy in North America outlines the development of this important area of botany in the United States of America, names the eminent botanists, and mentions the titles of their more important works. The book is suitable for use in short courses in taxonomy at the college level and for the guidance of amateur botanists who have progressed far enough in their hobby to be interested in the elements of taxonomy

LAWRENCE, GEORGE HILL MATHEWSON

Taxonomy of vascular plants New York The Macmillan Company, 1951 823 p illus 22 cm $9 00 2042

Contents. Part I, Principles and practices of plant taxonomy Introduction. Taxonomy and its significance History of classification. Principles of taxonomy Phylogenetic considerations. Current systems of classification. The geography of vascular plants. Biosystematics and cytogenetics. Plant nomenclature. Plant identification. Field and herbarium techniques. Monographs and revisions. Floristics. Literature of taxonomic botany Part II, Selected families of vascular plants Pteridophyta. Embryophyta Siphonogama—Gymnospermae—

[illegible]

Merrill, Elmer D.

Index Rafinesquianus: the plant names published by C. S. Rafinesque with reductions, and a consideration of his methods, objectives, and attainments. Jamaica Plain, Mass., The Arnold Arboretum of Harvard University, 1949. 295 p. 30 cm. $10.00 2043

Contents (abridged): Rafinesque's methods, [illegible]. Index Rafinesquianus. Unplaced names. Index.

Note: The principal part of this volume is the "Index Rafinesquianus" [illegible]

VARIOUS REGIONS

Abrams, Le Roy

An illustrated flora of the Pacific states: Washington, Oregon, and California. Stanford University, Calif., Stanford University Press, 1940–44. 2 v. illus. 27 cm. $15.00 2045

Contents (abridged): [illegible]

Note: [illegible]

—— Volume III: Geraniaceae to Scrophulariaceae, geraniums to figworts. Stanford, Calif., Stanford University Press, 1951. 866 p. illus. 26 cm. $17.50 2045A

Contents (abridged): [illegible]

Note: The third volume [illegible]

Bailey, Liberty Hyde

Manual of cultivated plants most commonly grown in the continental United States and Canada, by L. H. Bailey and the staff of the Bailey Hortorium at Cornell University. Revised edition, completely restudied. New York, The Macmillan Company, 1949. 1116 p. illus. 2? cm. $18.50 2046

Contents (abridged): [illegible]

Note: [illegible]

e.g., *Lupinus albus* The revised edition is the first since the original edition of 1924 It follows the general plan of the earlier edition, omitting only the single mushroom family representing the allophytes in that edition The increase in the number of descriptions between the old and new editions is as follows families from 167 to 194 genera from 1,346 to 1,523, and species from 3,665 to 5,347 The number of illustrations has been increased from 14 to 195

BAKER, MARY EVANS (FRANCIS)

Florida wild flowers, an introduction to the Florida flora. Photographs by the author New edition New York The Macmillan Company, 1938 245 p illus 19 cm $4 50 2047

Contents Preface. Introduction. Explanations. Key Descriptions of plants. Index.

Note In this edition of a popular work for amateur naturalists the author has selected 800 of the more common and more interesting herbs, shrubs, and trees native to Florida and has indicated in simple terms their more noticeable characteristics. Common names are given first, followed by names of genera, nontechnical description, habits, habitat, and varieties. The nomenclature follows that of the International Code. There are 50 full-page photographs.

BARRETT, MARY FRANKLIN

Common exotic trees of south Florida (Dicotyledons) Gainesville University of Florida Press, 1956 414 p illus 24 cm $8 50 2048

Content Introduction. List of plates. Explanations. Plate Section. General abbreviations. Keys. Descriptions, Illustrations, and Florida locations. Sight-seeing trips in greater Miami. References. Index.

Note Although limited in scope, this is a well-written and useful book. It includes only trees which have been introduced into Florida and of which living specimens are to be found in readily accessible locations. It is directed primarily to amateur botanists and to laymen who wish to know the names and characteristics of interesting trees they see. The species descriptions emphasize taxonomy and morphology Scientific names and popular names are given and—an unusual feature—pronunciation of the scientific names be indicated. The accounts of the individual trees are longer than is usual in books of this nature. Morphology and miscellaneous distinguishing characteristics are described in reasonable detail and largely in terms of the common language. Other information usually given includes statement on distribution both outside and inside the state of Florida specific locations of living specimens in Florida, economic uses and selected literature references. Well executed leaf drawings supplement the verbal descriptions.

BENSON, LYMAN, AND ROBERT A DARROW

The trees and shrubs of the Southwestern deserts Line drawings by Lucretia Breazeale Hamilton Second edition Tucson University of Arizona Press Albuquerque University of New Mexico Press 1954 437 p illus 23 cm $8 50 2049

Contents (abridged) Introduction Vegetation of the Southwestern deserts. Medicinal value of plants. Arrangement of flowers and fruits. Leaves. Systems of measurement. Scientific names. Policy in classification. Popular names. How to use the keys for plant identification. Classification of Southwestern desert trees and shrubs Class I, Gymnospermae, cone-bearing plants. Class II, Angiospermae, flowering plants. Appendix. Index.

Note A slightly revised edition of a book first published in 1945 by the University of Arizona under the title, *A manual of Southwestern desert trees and shrubs*. The region covered by it is one composed largely of desert and semi-desert land. Another unusual characteristic is range in altitude from below sea level to approximately 5,000 feet above sea level. The book is directed primarily to amateur naturalists and botanists, and its chief purpose is to aid such readers in the identification of desert plants of the region. Even so, it incorporates good deal of scientific botany Th illustrations, which include reproductions of number of color photographs, range maps in two colors, and well-executed drawings, are of high quality The species descriptions include nontechnical descriptions of morphology statements on range and habitat, and often an additional commentary covering miscellaneous [illegible] information. The appendix lists scientific synonyms and [illegible] lections and gives literature references. This feature, [illegible] the excellent coverage of a varied desert flora, makes the book of interest to professional botanists, also.

BILLINGTON, CECIL

Shrubs of Michigan. Second edition Bloomfield Hills, Mich Cranbrook Institute of Science, 1949 329 p illus. 24 cm. (Cranbrook Institute of Science. Bulletin no. [illegible]) $4 00 2050

Content Introduction. Ecology Distribution. [illegible] species. Plant names and their authors. Plant names and their origin. The form and structure of shrubs. Keys to the [illegible] Michigan shrubs. Shrubs of Michigan. Glossary Bibliography. Index.

Note Although intended primarily for amateur use and limited to the shrubs that have been found in the state of Michigan, the work is of more than local interest. Many of the shrubs described are found also in many other states of the United States and in Canada. Drawings of the leaf fruit and (sometimes) the [illegible] included for most of the plants described. The descriptions include the botanical name, the local popular name, information [illegible] growth of flowering and of ripening of the fruit in addition [illegible] descriptions in botanical terminology of the plant itself. The first edition was published in 1943 A number of new descriptions have been added in this edition and many descriptions carried over from the previous edition have been revised or augmented.

BLACKBURN, BENJAMIN COLEMAN

Trees and shrubs in eastern North America, keys to the wild and cultivated woody plants growing in the temperate regions exclusive of conifers New York Oxford University Press 1952 358 p 21 cm $6 00. 2051

Contents. How to use the keys. Preliminary key. General key. Plants with scale-like, needle-like, or linear leaves. Plants with opposite or whorled simple leaves. Plants with opposite or whorled compound leaves. Plants with alternate simple leaves. Plants with alternate compound leaves. Key to species. Selected bibliography. Glossary Index.

Note A reference book designed to aid amateur naturalists and gardeners in identifying the wild and cultivated woody plants of eastern North America. It consists of series of general and specific tabular keys which, by means of brief descriptions of outstanding features, lead from broad groups of plants to specific genera and species. The preliminary identifying keys are followed by an alphabetical listing, by genera, of more than 2,500 species and subspecies. For each species and subspecies, there are included short descriptive statement, the common and scientific names, area of distribution and country of origin.

BOWERS, NATHAN A.

Cone-bearing trees of the Pacific coast. Fifth printing in which is included new material on an introduction to tree ring analyses Palo Alto Calif Pacific Books 1956 169 p illus 21 cm $3 50 2052

Contents Foreword. An introduction to tree-ring analysis. Directions for use of this manual What to observe. Reference [illegible] abbreviations. List of tree groups. How to use the needle key. The [illegible] needle key. How to use the elevation key. The elevation [illegible] How to use the geographical key. The geographical key. Geographical districts. Species grouped by geographical districts. Descriptions of species. Glossary Index.

Note. A compact field manual designed to aid in the quick identification of conifers native to the Pacific coast. All distinguishing features—needles, cones, shape, coloring, etc.—are uniquely grouped and classified to save time and assure accuracy in identifying species. The descriptions of species are written largely in the common language and cover such points as occurrence appearance and other characteristics of needles, cones and bark appearance and dimensions of mature trees distribution in and outside of California common names and general comments on economic uses, etc. Each species description is accompanied by illustrations, and these include drawing of needle and cone, photograph of living tree [illegible]

natural habitat, and often close-up view of the trunk, showing details of the bark. The book was first published in New York in 1942. In this fifth printing, the new material consists of preface, foreword by Dr Waldo E. Glock, and 19-page prefatory section on tree-ring analysis.

Brown Forest B H., and Elizabeth D W Brown

Flora of southeastern Polynesia. Honolulu Bernice P Bishop Museum 1931–35 3 v illus. 25 cm. (Bernice P Bishop Museum. Bulletin 84 89 130 Bayard Dominick Expedition publication nos. 20–22) Pt. i, $2.25 pt. ii $2.50 pt. iii, $3.50 2053

Note In these monographs the authors report on collections obtained between April, 1921 and September, 1922 in an intensive survey of all the inhabited islands of the Marquesas as well as of many islands visited enroute. The discovery of considerable new material in the collections from the latter islands made it necessary to identify numerous extra-Marquesan species and varieties before the systematic position of close relatives in the Marquesas could be determined. These new data are of value not only in respect to taxonomy but also in connection with the ecology of the Pacific flora and problems dealing with the migration of the Polynesians. Bulletin 84 presents an outline of the geology and geography of the Marquesas and of the floral regions of southeastern Polynesia. The native names are given in all three bulletins, and especial attention is paid to the botanical knowledge displayed by the Polynesians, their development of an extensive agriculture which supported dense populations in small areas, and particularly to their system of botanical nomenclature which appears to be an ancient Polynesian discovery and is therefore a well-preserved remnant of the pre-Linnaean botany of the continent

Christophersen Erling

Flowering plants of Samoa i–ii. Honolulu Bernice P Bishop Museum, 1935–38 2 v illus. 25 cm. (Bernice P Bishop Museum. Bulletins 128 154) Vol. i, $2.50 vol. ii $2.50. 2054

Note These two papers constitute a report on a collection of plants made from August to November, 1929 and from June, 1931 to January 1932 and on other Samoan collections in the Museum not previously studied with access to types, and other plants which can be treated satisfactorily only in herbaria with a general, world-wide scope. The Pandanaceae were reported on in the Museum's Occasional papers, 9 (13) by Martelli, the *Peperomia* in *Bulletin* 41, by Yuncker. At the time of publication of Part ii, *Peperomia*, *Ficus*, Urticaceae (*Laportea*, *Elatostema*, and *Cypholophus*) were still being studied by specialists. In Part i, 34 species and varieties are described as new to science, and in Part ii, 11 species and one variety while various species are new records for Samoa. With the inclusion of 10 new species and records of Pandanaceae, the total number of species of flowering plants known in Samoa is about ,033

Clokey Ira Waddell

Flora of the Charleston Mountains, Clark county Nevada. Berkeley and Los Angeles University of California Press, 1951 274 p. illus. 27 cm. (University of California publications in botany editors, H L. Mason and others. Vol. 24) $3 75 2055

Contents Introduction History of botanical exploration. The Charleston Mountains. Vegetational and floristic considerations Vascular plants of the Charleston Mountains. Pteridophyta. Spermatophyta. Index

Note A detailed professional study of the flora of an isolated mountain range in the northern part of the Mojave Desert. In the middle and higher elevations, the region contains a flora which has been botanically isolated for many thousands of years. The author made field studies and massive collections in the years 1935–1942. He was aware of the significance of the ecological aspects, but most of the present book is devoted to systematic descriptions of the collected plants. A map of the region studied is included.

Coker, William Chambers and Henry R. Totten

Trees of the southeastern states including Virginia, North Carolina South Carolina Tennessee Georgia, and northern Florida. Third edition Chapel Hill University of North Carolina Press, 1945 419 p. illus. 20 cm. $4 00 2056

Note A field book and reference manual that is addressed primarily to the amateur botanist. Over 200 trees and some shrubs are described, and most of the descriptions are accompanied by an illustration which is, in most cases, a carefully-rendered line drawing of a twig with leaves and fruit. In this edition, the principal changes are concerned with more complete information on ranges of many trees.

Degener Otto

Flora Hawaiiensis or The new illustrated flora of the Hawaiian Islands. New edition. Honolulu O Degener 1946 4 v in one illus. 24 cm. $6 00 2057

Contents Introduction and scope. The Hawaiian Islands. Origin and relationship of the Hawaiian flora. Historical sketch of Hawaiian botany. Rules governing botanical nomenclature. Abbreviations of the names of authors. Glossary of botanical terms. Key to families of ferns and fern allies. Key to families of monocotyledonous plants. Key to families of dicotyledonous plants. List of families of vascular plants. Descriptive flora. Index. Maps.

Note This work is designed to present illustrated descriptions of all the native and foreign ferns and flowering plants growing in the Hawaiian Islands. It gives the common English, Hawaiian, and scientific names for each plant as well as the synonym by which it is known in other publications. It states whether the plant is endemic, indigenous, or introduced, the exact range of the plant in the islands, its general range elsewhere, and its present and former uses. It includes keys for the determination of family genera, and species and maps. It was first published 1932–1940 as four loose-leaf volumes designed for the insertion of new sheets as they were issued. The present edition, copyrighted 1946, is, in effect, a facsimile copy of the first one, except that the indices have been deleted and some of the individual sheets revised.

Eliot Willard Ayres and G B McLean

Forest trees of the Pacific Coast including a brief account of the outstanding characters distribution and habitat of the trees native to Alaska, British Columbia, Washington and Oregon. Illustrated principally from original photographs by George C. Stephenson. New York G P Putnam's Sons 1938. 565 p. illus. 21 cm. $7.50 2058

Contents Acknowledgments This book, definitions and general comments. Needle-leaved trees, Gymnospermae. Broad-leaved trees, Angiospermae (dicotyledons) Odds and ends. Appendix: List of the forest trees of the Pacific Coast. Alphabetical index to common and scientific names of trees described in this book.

Note Designed as a field book for the ready identification of trees by students without technical botanical training, as an introductory textbook for beginning forestry students, and as a manual for nature teachers, forest rangers, park naturalists, and lumbermen. Detailed and technical descriptions are not provided, emphasis being placed upon showing, by photographs and brief descriptions, the characteristics of a tree which distinguish it at sight from other trees around it. Some information about wood, flowers, fruit, habit of growth, range, and habitat is included, as well as brief notes on facts of general or commercial interest. A revised edition with the same number of pages and the same table of contents was published in 1948. It contains a photograph of the blossoms *Garrya elliptica* which did not appear in the first edition.

FOSTER, MULFORD B, AND RACINE SARASY FOSTER

Brazil New York The Ronald Press Company 1946 314 p illus (part col'd) 24 cm. $3 50 2059

Note. The title of this book is somewhat misleading, since it is by no means a routine guide to the country or a general travel description, but an informal account of the explorations of two plant collectors in eastern and southern Brazil. As such, it is highly informative, and although generally flavored with descriptive observations of the people, the cities and the countryside, its primary appeal will be to students of tropical and semitropical botany The principal objective of the expeditions was the collection of "air plants"—bromeliads—and rare orchids, and a full account is rendered of the difficulties, the thrills, and the very rich botanical rewards encountered. The text is liberally illustrated with drawings and some 150 excellent photographs.

FRY, WALTER, AND JOHN R WHITE

Big trees Stanford Stanford University Press 1938 126 p illus 22 cm $2 00 2060

Contents Significance of the Big Trees. Discovery of the Big Trees. Saving the Big Trees. Big Tree and Coast Redwood. Age of the Big Trees. The record of the rings. Size of the Big Trees. The birth of a giant. Seedlings and the study tree. The harvest and the first fruit. The cone pigment and propagation. General appearance and foliage The bark and the root system. The death of a giant. The General Sherman Big Tree Geologic history of the Big Tree. Naming of the Big Tree The California Big Tree groves. Index.

Note A book about the world's largest trees, the *Sequoia gigantea* their size age, where and why they grow best, their discovery and the difference between the big sequoias that grow on the coast of California and those found in the Sierra Nevada, with photographs and a map showing the location of every grove of these trees known to exist. For readers interested in trees and our national parks.

GILKEY, HELEN M

Handbook of Northwest flowering plants. Second edition By Helen M Gilkey, assisted by Garland M Powell Portland Binfords & Mort, 1951 412 p illus 20 cm $3 50 2061

Note A concise manual of the flowering plants of the states of Washington and Oregon, except that the eastern areas of both states and the northern area of Washington are not completely covered It is directed to students and amateurs and is primarily an aid in identification. The descriptions of families and species are concerned mainly with morphology but include in many instances a statement on habitat. The illustrations, reproductions of line drawings, are numerous but small. In some instances their details are not clear This second edition contains some corrections and additions, but is not an extensive revision.

GLASSMAN SIDNEY F

The flora of Ponape Honolulu Bernice P Bishop Museum 1952 152 p illus. 25 cm (Bernice P Bishop Museum Bulletin 209) $2 50 2062

Contents Introduction Geography and climate. Botanical history Agriculture and economic botany Vegetation. Flora. Literature cited. Index.

Note A general report on the botany of Ponape, a small tropical island in the Pacific, where the climate is characterized by high temperatures, very heavy rainfall and high humidity Thirty-three pages are devoted to brief discussions of the geography climate history of the botanical exploration agriculture, economic botany and general characteristics of the vegetation of the island. The remainder of the space is devoted to a list, arranged systematically of all species of vascular plants, except plants cultivated in the agricultural experiment station on the island, that have been reported from Ponape

GLEASON, HENRY A

The new Britton and Brown illustrated flora of the northeastern United States and adjacent Canada, by Henry A. Gleason, with the assistance of specialists in certain groups Illustrated by original drawings. New York The New York Botanical Garden, 1952 3 v illus 27 cm $30 00 2063

Contents Vol. 1 The Pteridophyta, Gymnospermae and Monocotyledoneae Introduction. General keys. List of botanical authors. Glossary Pteridophyta. Order Lycopodiales. Order Selaginellales. Order Isoetales. Order Equisetales. Order Ophioglossales. Order Filicales. Spermatophyta. Gymnospermae Order Coniferae Angiospermae. Monocotyledoneae Order Pandanales. Order Najadales. Order Alismales. Order Hydrocharitales. Order Graminales. Order Arales. Order Xyridales. Order Liliales. Order Scitamineae. Order Burmanniales. Order Orchidales. Index to Vol. 1. Vol. 2, The Choripetalous Dicotyledoneae Order Piperales. Order Salicales. Order Myricales. Order Leitneriales. Order Juglandales. Order Fagales. Order Urticales. Order Santalales. Order Aristolochiales. Order Polygonales. Order Caryophyllales. Order Ranales Order Papaverales. Order Sarraceniales. Order Rosales. Order Geraniales. Order Sapindales. Order Rhamnales. Order Malvales. Order Parietales. Order Cactales. Order Thymelaeales. Order Myrtales. Order Umbellales. Index to vol. 2 Vol 3, The Sympetalous Dicotyledoneae Order Ericales. Order Primulales. Order Plumbaginales. Order Ebenales. Order Gentianales, Order Polemoniales. Order Plantaginales. Order Rubiales. Order Cucurbitales. Order Campanulales. Order Asterales. Appendix. General index. Summary

Note A systematic work describing and picturing all known rooted plants found growing in the wild state in the northern United States and its adjoining parts of Canada, with keys for their identification. In preparation for more than 10 years, the work is based upon and is the successor to the illustrated three-volume flora written by Nathaniel Lord Britton and Addison Brown, first edition 1896–98, second edition 1913. The original work was entirely rewritten, much new material was added and the illustrations were newly drawn from original material. Under 53 orders, 175 families are described, under the families 1 137 genera are described, and under the genera 4 660 species are described. Range and blooming season as well as morphological description are given for each species. The illustrations, from line drawings, are unusually complete; degree of magnification is indicated when the illustration is larger or reduced from life size. While published primarily for layman and amateurs, the work can serve as a useful guide for anyone, layman or professional botanist, concerned with the identification of American plants found north of the southern boundaries of Virginia, Kentucky and Missouri, and east of the western boundaries of Missouri, Iowa, and Minnesota.

GOTTSCHO, SAMUEL H.

Wildflowers how to know and enjoy them. Pictures and text by Samuel H. Gottscho. New York Dodd, Mead & Company, 1951 192 p illus (part col d) 17 cm. $2 75 2064

Contents Introducing the book. The pursuit of a hobby The enjoyment of wildflowers. With the seasons. Wildflower lore. Of things botanical. Flower names and families. Flower colors. Pink flower section. Yellow flower section. White flower section. Blue flower section. The travels of seeds. Wildflower conservation. Wildflowers in the house. Books. Coloring guide. Photography. Index.

Note Illustrated by photographs, 172 in black and white, 93 in color this pocket-sized volume is an excellent guide to the common wildflowers of the United States of America east of the Mississippi River and north of the Carolinas. The book is arranged so that flowers of the same color are described and pictured in the same section, in the approximate order of their month of bloom. The descriptions, ranging from eight to 12 lines each, include common name scientific name, family name, locality where commonly found, size of flowers and plants, range, and season of bloom, together with special details if any Symbols indicate rarer wildflowers, the picking of which is restricted. The photographic illustrations, most of them one-fourth page in size are successfully reproduced from pictures taken by the author

GRAVES ARTHUR HARMOUNT

Illustrated guide to trees and shrubs a handbook of the woody plants of the northeastern United States and adjacent regions. Revised edition New York Harper & Brothers 1956 271 p illus 24 cm $6 00. 2065

Contents: Introduction. How to use the keys. Summer key. Winter key. Distinguishing characters of species. Short cuts to naming. Some helpful references. Glossary. Index.

Note: A popular reference book for amateur naturalists and amateur and professional gardeners. Its purpose is to aid such readers in the identification of the trees and shrubs which grow in the northeastern portion of continental United States of America and in Canada. The descriptions of specific plants are preceded by keys for determining family and genus. Descriptions of species are concise, and some abbreviations are used in order to keep them short. Common and scientific names and features useful in field identification, such as twig characteristics, appearance of bud, leaf and bark, are given. The illustrations are numerous and of high quality. They depict leaves, terminal buds, fruit, and sometimes flowers. The leaves are usually shown in life size, and the buds in three to five times life size. The first edition was published in 1932. A "Winter key" complementary to the "Summer key" has been added in this revised edition. The nomenclature has been somewhat revised, and descriptions of a few species have been added.

GRAY, ASA

Gray's manual of botany. Eighth (centennial) edition—illustrated. A handbook of the flowering plants and ferns of the central and northeastern United States and adjacent Canada. Largely rewritten and expanded by Merritt Lyndon Fernald, with assistance of specialists in some groups. New York American Book Company 1950. 1 632 p. illus. 23 cm. $9 75 2066

Contents: Preface. Synopsis of the orders and families of vascular plants. Artificial analytical key to the families. Explanation of abbreviated names of authors. Other abbreviations and signs. Summary of the families. Descriptive flora. Glossary. Index to Latin names of families, genera and species. Index to English, French-Canadian and colloquial names.

Note: Forty-two years had passed since the publication of the seventh edition of this classical reference book. Since the period was one of the most active in botanical research on the part of both professional botanists and amateurs, the changes in this edition are many. In the seventh edition, 4,441 species, varieties, and minor forms were described; the comparative number for this edition is 8,000. The number of illustrations has been increased to 1,306. In addition, important changes have been made in groupings, nomenclature, and literature. The book remains the standard systematic description of the flora found in the region named in the subtitle.

GREENE, WILHELMINA F., AND HUGO L. BLOMQUIST

Flowers of the South, native and exotic. Chapel Hill University of North Carolina Press, 1953 208 p. illus. (part col d) 25 cm. $5.00. 2067

Contents: Introduction. Natives. Exotics and wild flowers for the [illegible]. Exotics. Index.

Note: In this book, about 600 species of flowering plants that grow in the southern portion of the United States of America are described and illustrated, some of them in line drawings, some in natural color. Both wild and cultivated plants are included. The line drawings are three to the page, with verbal description adjoining. The colored illustrations are on 23 separate plates. The illustrations are by Mrs. Greene, the descriptions by Dr. Blomquist. Both technical and common names are given, and the arrangement is by family. The book is addressed to gardeners, amateur botanists and laymen rather than to professional botanists.

GREY, ROBERT M AND F TRACY HUBBARD

List of plants growing in the botanical garden of the Atkins Institution of the Arnold Arboretum at Soledad Cienfuegos, Cuba. Cambridge, Mass Harvard University Press 1933 245 p. 27 cm. $3.00 2068

Note: The list gives genera, species, and common names in alphabetical order with synonymy, original literature, and names of first describer or classifier, plus a shorter list of genera and species arranged according to families. There are approximately 1,970 species belonging to 911 genera and 165 families, with all nomenclature revised and corrected to conform to the International Code and the interpretations of genera and species delimitations current at the time of publication. The names of certain invalid genera have been retained because the earlier use or uses of the name is either obsolete or placed in synonymy and recently has not been in common use. Common or vernacular names are provided.

HARLOW, WILLIAM MOREHOUSE, AND ELLWOOD S HARRAR

Textbook of dendrology covering the important forest trees of the United States and Canada. Third edition. New York McGraw Hill Book Company Inc., 1950 555 p. illus 23 cm. (American forestry series Walter Mulford, consulting editor) $7.50 2069

Contents: Introduction. Nomenclature. Classification. Identification. Variation. Description of species. Gymnospermae. Cycadales. Ginkgoales. Coniferales. Angiospermae. The plant families. Amentiferae. Fluviforae. Apetalae. Polypetalae. Sympetalae. Glossary. Derivation of some scientific names. Selected references. Index.

Note: The authors of this book describe the important forest trees of the United States and Canada. Nearly 250 species of trees are covered in detail, and most of the descriptions include distinguishing characteristics, general description, range, and botanical features. Many other species of less importance are also mentioned, making the book one of the most comprehensive treatments of the subject available. The second edition was published in 1941. Nomenclature was revised for this third edition. The bibliography was extended to include literature published since 1940.

HARRAR, ELLWOOD SCOTT AND JACOB GEORGE HARRAR

Guide to southern trees New York Whittlesey House McGraw Hill Book Company Inc. 1946 712 p. illus. 18 cm. (Whittlesey House field guide series) $6.00 2070

Contents: Introduction. Keys to the generic groups. The conifers. The broadleaved trees. Glossary. Selected references. Index.

Note: A field manual designed to aid in the identification and study of trees indigenous to the southern states of the United States. More than 350 species are described. For each species are given common name or names, scientific name and descriptions of habit, leaves, flowers, fruit, twigs, bark, habitat, distribution, importance. Two-hundred-one full-page plates depict the foliage, fruit, flowers, etc. of different species, in illustrations prepared by Mrs. Helene E. Miller from living materials and authentic herbarium sheets. Keys and synopses of the different groups and families are given to aid in the identification of specimens.

HARRINGTON H. D

Manual of the plants of Colorado for the identification of the ferns and flowering plants of the state. Authorized by the Colorado State Board of Agriculture and prepared with the cooperation of Colorado A & M College. Denver Sage Books 1954 666 p. 28 cm $8.00 2071

Note: Because Colorado is a state that includes both plains and mountainous areas, its flora is characterized by much variety. This manual provides descriptions of all of the species that have been recorded in the state. Specimens of most of them have been seen by the author. However, he has included in the keys and lists, but not in the species descriptions, about 130 plants recorded by others but not seen by him. Most of the space is devoted to the descriptions of species. These are fully detailed in regard to morphology but are somewhat abridged as to taxonomy. Notes on range and habitat are also included. There are no illustrations.

FOSTER, MULFORD B., AND RACINE SARASY FOSTER

Brazil New York The Ronald Press Company, 1946 314 p illus. (part col'd) 24 cm $3 50 2059

Note. The title of this book is somewhat misleading, since it is by no means a routine guide to the country or a general travel description but an informal account of the explorations of two plant collectors in eastern and southern Brazil. As such, it is highly informative, and although generally flavored with descriptive observations of the people the cities and the countryside, its primary appeal will be to students of *tropical* and *semitropical* botany. The principal objective of the expeditions was the collection of air plants'—bromeliads—and rare orchids, and a full account is rendered of the difficulties, the thrills, and the very rich botanical rewards encountered. The text is liberally illustrated with drawings and some 150 excellent photographs.

FRY, WALTER, AND JOHN R WHITE

Big trees. Stanford Stanford University Press 1938 126 p illus 22 cm $2 00 2060

Contents Significance of the Big Trees. Discovery of the Big Trees. Saving the Big Trees. Big Tree and Coast Redwood. Age of the Big Trees. The record of the rings. Size of the Big Trees. The birth f a giant. Seedlings and the study tree. The harvest and the first fruit. The cone pigment and propagation. General appearance and foliage. The bark and the root system. Th death f a giant. The General Sherman Big Tree. Geologic history f the Big Tree Naming of the Big Tree. The California Big Tree groves. Index.

Note A book about the world's largest trees, the *Sequoia gigantea*, their size, age, where and why they grow best, their discovery and the difference between the big sequoias that grow on the coast of California and those found in the Sierra Nevada, with photographs and map showing the location f every grove f these trees known to exist. For readers interested in trees and our national parks.

GILKEY, HELEN M

Handbook of Northwest flowering plants Second edition By Helen M Gilkey, assisted by Garland M Powell. Portland Binfords & Mort, 1951 412 p illus. 20 cm $3 50 2061

Note A concise manual of the flowering plants of the states of Washington and Oregon, except that the eastern areas of both states and the northern area f Washington are not completely covered. It is directed to students and amateurs nd is primarily an aid in identification The descriptions f families and species are concerned mainly with morphology but include in many instances statement on habitat. The illustrations, reproductions of line drawings, are numerous but small. In some instances their details are not clear This second edition contains some corrections and additions, but is not an extensive revision.

GLASSMAN, SIDNEY F

The flora of Ponape. Honolulu Bernice P Bishop Museum 1952 152 p illus 25 cm (*Bernice P Bishop Museum Bulletin 209*) $2 50 2062

Contents Introduction. Geography and climate. Botanical history Agriculture and economic botany Vegetation Flora. Literature cited. Index.

Not A general report on the botany f Ponape, small tropical island in the Pacific, where the climate is characterized by high temperatures, very heavy rainfall, and high humidity Thirty-three pages are devoted to brief discussions of the geography climate history f the botanical exploration agriculture, economic botany and general characteristics of the vegetation of the island. The remainder of the space is devoted t list, arranged systematically of all species of vascular plants, except plants cultivated in the agricultural experiment station on the island, that have been reported from Ponape.

GLEASON HENRY A

The new Britton and Brown illustrated flora of the northeastern United States and adjacent Canada, by Henry A. Gleason, with the assistance of specialists in certain groups. Illustrated by original drawings. New York. The New York Botanical Garden, 1952 3 v. illus. 27 cm $30 00 2063

Contents Vol. 1 The Pteridophyta, Gymnospermae and Monocotyledoneae Introduction. General keys. List of botanical authors. Glossary Pteridophyta Order Lycopodiales. Order Selaginellales. Order Isoetales. Order Equisetales. Order Ophioglossales. Order Filicales. Spermatophyta. Gymnospermae Order Coniferae. Angiospermae. Monocotyledoneae Order Pandanales. Order Najadales. Order Alismales. Order Hydrocharitales. Order Graminales. Order Arales. Order Xyridales. Order Liliales. Order Scitamineales. Order Burmanniales. Order Orchidales. Index to Vol. 1. Vol. 2. The Choripetalous Dicotyledoneae Order Piperales. Order Salicales. Order Myricales. Order Leitneriales. Order Juglandales. Order Fagales. Order Urticales. Order Santalales. Order Aristolochiales. Order Polygonales. Order Caryophyllales. Order Ranales. Order Papaverales. Order Sarraceniales. Order Rosales. Order Geraniales. Order Sapindales. Order Rhamnales. Order Malvales. Order Parietales. Order Gentianales. Order Polemoniales. Order Plantaginales. Order Rubiales. Order Cucurbitales. Order Campanulales. Order Asterales. Appendix. General index. Summary

Note A systematic work describing and picturing all the rooted plants found growing in the wild state in the northern United States and in adjoining parts of Canada, with keys for their identification. In preparation for more than 10 years, the work is based upon and is the successor to the Illustrated three-volume flora written by Nathaniel Lord Britton and Addison Brown, first edition 1896–98, second edition 1913. The original work was entirely rewritten much new material was added and the illustrations were newly drawn from original material. Under 51 orders, 175 families are described, under the *families* 1 137 genera are described, and under the genera 4 660 species are described. Range and flowering season as well as morphological description are given for each species. The illustrations, from line drawings, are unusually complete; power of magnification is indicated when the illustration is larger or reduced from life size. While published primarily for laymen and amateurs, the work can serve as useful guide for anyone, layman or professional botanist, concerned with the identification of American plant found north of the southern boundaries of Virginia, Kentucky and Missouri, and east of the western boundaries of Missouri, Iowa, and Minnesota.

GOTTSCHO, SAMUEL H

Wildflowers how to know and enjoy them. Pictures and text by Samuel H. Gottscho. New York Dodd, Mead & Company, 1951. 192 p illus (part col d) 17 cm. $2 75 2064

Contents Introducing the book. The pursuit of a hobby. The enjoyment of wildflowers. With the seasons. Wildflower lore. Of things botanical. Flower names and families. Flower colors. Red flower section. Yellow flower section. White flower section. Blue flower section. The travels of seeds. Wildflower conservation. Wildflowers in the home. Books. Coloring guide. Photography. Index.

Note Illustrated by photographs, 122 in black and white, 65 in color this pocket-sized volume is an excellent guide to the common wildflowers of the United States of America east of the Mississippi River and north of the Carolinas. The book is arranged so that flowers of the same color are described and pictured in the same section, in the approximate order of their month of bloom. The descriptions, ranging from eight to 12 lines each, include common name scientific name, family name, locality where commonly found, size of flowers and plants, range, and season of bloom, together with special details if any. Symbols indicate rare wildflowers the picking of which is restricted. The photographs, most of them one-fourth page in size, are successfully reproduced from pictures taken by the uthor

GRAVES, ARTHUR HARMOUNT

Illustrated guide to trees and shrubs a handbook of the woody plants of the northeastern United States and adjacent regions. Revised edition New York Harper & Brothers 1956 271 p illus 24 cm $6 00 2065

Contents Introduction. How to use the keys. Summer key. Winter key. Distinguishing characters of species. Short cuts to naming. Some helpful references. Glossary. Index.

Note: A popular reference book for amateur naturalists and amateur and professional gardeners. Its purpose is to aid such readers in the identification of the trees and shrubs which grow in the northeastern portion of continental United States of America and in Canada. The descriptions of specific plants are preceded by keys for determining family and genus. Descriptions of species are concise, and even abbreviations are used in order to keep them short. Common and scientific names and features useful in field identification, such as twig characteristics, appearance of bud, leaf and bark, are given. The illustrations are numerous and of high quality. They depict leaves, branched buds, fruit, and sometimes flowers. The leaves are usually shown in life size, and the buds in three or five times life size. The first edition was published in 1932. A "Winter key" complementary to the "Summer key" has been added in the revised edition. The nomenclature has been somewhat revised, and descriptions of a few species have been added.

GRAY ASA

Gray's manual of botany Eighth (centennial) edition—illustrated. A handbook of the flowering plants and ferns of the central and northeastern United States and adjacent Canada. Largely rewritten and expanded by Merritt Lyndon Fernald with assistance of specialists in some groups. New York American Book Company 1950 1 632 p illus 23 cm $9 75 2066

Contents: Preface. Synopsis of the orders and families of vascular plants. Artificial analytical key to the families. Explanations of abbreviated names of authors. Other abbreviations and signs. Summary of the families. Descriptive flora. Glossary. Index to Latin names of families, genera and species. Index to English, French-Canadian and colloquial names.

Note: Forty-two years had passed since the publication of the seventh edition of this classical reference book. Since the period was one of the most active in botanical research on the part of both professional botanists and amateurs, the changes in this edition are many. In the seventh edition 4,535 species, varieties, and named forms were described, the comparative number for this edition is 8,000. The number of illustrations has been increased to 1,806. In addition, important changes have been made in grouping, nomenclature, and descriptions. The book remains the standard systematic description of the flora found in the regions named in the subtitle.

GREENE, WILHELMINA F AND HUGO L. BLOMQUIST

Flowers of the South, native and exotic. Chapel Hill University of North Carolina Press 1953 208 p illus. (part col d) 23 cm. $5.00. 2067

Contents Introduction. Native. Exotics and wild flowers for the home. Exotics. Index.

Note: In this book, about 500 species of flowering plants that grow in the southern portion of the United States of America are described and illustrated, some of them in line drawings, some in natural color. Both wild and cultivated plants are included. The line drawings are close to the page, with verbal descriptions adjoining. The colored illustrations are on 32 separate plates. The illustrations are by Mrs. Greene, the descriptions by Dr. Blomquist. Both technical and common names are given, and the arrangement is by family. The book is addressed to gardeners, amateur botanists and laymen rather than to professional botanists.

GREY ROBERT M AND F TRACY HUBBARD

List of plants growing in the botanical garden of the Atkins Institution of the Arnold Arboretum at Soledad Cienfuegos Cuba. Cambridge, Mass. Harvard University Press, 1933 245 p 27 cm. $3 00 2068

Note: The list gives genera, species, and common names in alphabetical order, with synonymy, original locations, and names of first describer or classifiers, plus a shorter list of genera and species arranged according to families. There are approximately 1,970 species belonging to 911 genera and 1[illegible] families. The [illegible] nomenclature revised and corrected to conform to the International Code and the interpretations of genera and species delimitations current at the time of publication. The names of certain families of genera have been retained because the other use of one of the name is either obsolete or [illegible] in synonymy, and recently has not been in common usage. [illegible] names are [illegible] provided.

HARLOW, WILLIAM MOREHOUSE AND ELLWOOD S HARRAR

Textbook of dendrology covering the important forest trees of the United States and Canada. Third edition New York McGraw Hill Book Company Inc. 1950 555 p illus 23 cm. (American forestry series Walter Mulford consulting editor) $7 30 2069

Contents Introduction. Nomenclature. Classification. Identification. Variation. Description of species. Gymnosperms. Cycadales. Ginkgoales. Gnetales. Coniferales. Angiosperms. The plant families. Amentiferae. Thalliflorae. Apetalae. Calyciflorae. Sympetalae. Glossary. Derivations of names of the genera. Selected references. Index.

Note: The authors of this book describe the important forest trees of the United States and Canada. Nearly 235 species of trees are covered in detail, and most of the descriptions include distinguishing characteristics, general description, range and botanical features. Many other species of less importance are also mentioned, making the book one of the most comprehensive treatments of the subject available. The second edition was published in 1941. Nomenclature was revised for this third edition. The bibliography was extended to include literature published since 1940.

HARRAR ELLWOOD SCOTT, AND JACOB GEORGE HARRAR

Guide to southern trees New York Whittlesey House, McGraw Hill Book Company Inc., 1946 712 p illus. 18 cm. (Whittlesey House field guide series) $6.00 2070

Contents Introduction. Keys to the generic groups. The conifers. The broadleaved trees. Glossary. Selected references. Index.

Note: A field manual designed to aid in the identification and study of trees indigenous to the southern states of the United States. More than 350 species are described. For each species are given common name or names, scientific name and descriptions of habit, leaves, flowers, fruit, twigs, bark, habitat, distribution, importance. Two-hundred-one full page plates depict the foliage, fruit, flowers, etc., of different species, in illustrations prepared by Mrs. Helene S. Muller from living materials and authentic herbarium sheets. Keys and synopses of the different groups and families are given to aid in the identification of specimens.

HARRINGTON H D

Manual of the plants of Colorado for the identification of the ferns and flowering plants of the state. Authorized by the Colorado State Board of Agriculture and prepared with the cooperation of Colorado A & M College. Denver Sage Books 1954 666 p 28 cm $8.00 2071

Note: Because Colorado is a state that includes both plains and mountainous areas, its flora is characterized by much variety. This manual provides descriptions of all of the species that have been recorded in the state. Specimens of most of them have been seen by the author. However, he has included in the keys and lists, but not in the species descriptions, about 350 plants recorded by others but not seen by him. Most of the space is devoted to the descriptions of species. These are fully detailed in regard to morphology but are somewhat abridged as to taxonomy. Notes on range and habitat are also included. There are no illustrations.

FOSTER, MULFORD B , AND RACINE SARASY FOSTER

Brazil New York The Ronald Press Company, 1946 314 p illus (part col'd) 24 cm $3 50 2059

Note The title of this book is somewhat misleading, since it is by no means a routine guide to the country or a general travel description but an informal account of the explorations of two plant collectors in eastern and southern Brazil. As such, it is highly informative, and although generally favored with descriptive observations of the people, the cities and the countryside, its primary appeal will be to students of tropical and semitropical botany The principal objective of the expeditions was the collection of "air plants"—bromeliads—and rare orchids, and a full account is rendered of the difficulties, the thrills, and the very rich botanical rewards encountered. The text is liberally illustrated with drawings and some 180 excellent photographs.

FRY WALTER, AND JOHN R WHITE

Big trees Stanford Stanford University Press 1938 126 p illus 22 cm $2 00 2060

Contents Significance of the Big Trees. Discovery of the Big Trees. Saving the Big Trees. Big Tree and Coast Redwood. Age of the Big Trees. The record of the rings. Size of the Big Trees. The birth of a giant. Seedlings and the study tree. The harvest and the first fruit. The cone pigment and propagation. General appearance and foliage. The bark and the root system. The death of a giant. The General Sherman Big Tree. Geologic history of the Big Tree Naming of the Big Tree The California Big Tree groves. Index.

Note. A book about the world's largest trees, the *Sequoia gigantea*, their size, age, where and why they grow best, their discovery and the difference between the big sequoias that grow on the coast of California and those found in the Sierra Nevada, with photographs and a map showing the location of every grove of these trees known to exist. For readers interested in trees and our national parks.

GILKEY, HELEN M

Handbook of Northwest flowering plants Second edition By Helen M Gilkey assisted by Garland M Powell Portland Binfords & Mort, 1951 412 p illus 20 cm $3 50 2061

Note A concise manual of the flowering plants of the states of Washington and Oregon, except that the eastern areas of both states and the northern area of Washington are not completely covered. It is directed to students and amateurs and is primarily an aid in identification. The descriptions of families and species are concerned mainly with morphology but include in many instances a statement on habitat. The illustrations, reproductions of line drawings, are numerous but small. In some instances their details are not clear This second edition contains some corrections and additions, but is not an extensive revision

GLASSMAN SIDNEY F

The flora of Ponape Honolulu Bernice P Bishop Museum 1952 152 p illus 25 cm. (Bernice P Bishop Museum Bulletin 209) $2 50 2062

Contents Introduction. Geography and climate. Botanical history Agriculture and economic botany Vegetation. Flora. Literature cited Index.

Note A general report on the botany of Ponape, a small tropical island in the Pacific, where the climate is characterized by high temperatures, very heavy rainfall, and high humidity Thirty-three pages are devoted to brief discussions of the geography climate history of the botanical exploration, agriculture, economic botany and general characteristics of the vegetation of the island. The remainder of the space is devoted to a list, arranged systematically of all species of vascular plants except plants cultivated in the agricultural experiment station on the island that have been reported from Ponape.

Note A systematic work describing and picturing all known rooted plants found growing in the ild state in the northeastern United States and in adjoining parts of Canada, with keys for their identification. In preparation for more than 10 years, the work is based upon and is the successor to the illustrated three-volume flora written by Nathaniel Lord Britton and Addison Brown, original edition 1896–98, second edition 1913. The original work was entirely rewritten, much new material was added and the illustrations were newly drawn from original material. Under 33 orders, 175 families are described, under the families 1,137 genera are described, and under the genera 4 660 species are described. Range and flowering season as well as morphological description are given for each species. The illustrations, from line drawings, are unusually complete; power of magnification is indicated when the illustration is larger or reduced from nat size. While published primarily for laymen and amateurs, the work can serve as useful guide for anyone, layman or professional botanist, concerned with the identification of American plant found north of the southern boundaries of Virginia, Kentucky and Missouri, and east of the western boundaries of Missouri, Iowa, and Minnesota.

GOTTSCHO, SAMUEL H

Wildflowers how to know and enjoy them. Pictures and text by Samuel H Gottscho. New York Dodd, Mead & Company, 1951 192 p illus. (part col d) 17 cm $2 75 2064

Contents Introducing the book. The pursuit of a hobby The enjoyment of wildflowers. With the seasons. Wildflower lists. Of things botanical. Flower names and families. Flower colors. Pink flower section. Yellow flower section. White flower section. Fall flower section. The travels of seeds. Wildflower conservation. Wild flowers in the home. Books. Coloring guide. Photography Index.

Note Illustrated by photographs, 122 in black and white, 69 in color this pocket-sized volume is an excellent guide to the commoner wildflowers of the United States of America east of the Mississippi River and north of the Carolinas. The book is organized so that flowers of the same color are described and pictured in the same section, in the approximate order of their month of bloom. The descriptions, ranging from eight to 12 lines each, include common name scientific name, family name locality here commonly found, size of flowers and plants, range and season of bloom, together with special details if any Symbols indicate rarer wildflowers the picking of which is restricted The photographic illustrations, most f them one-fourth page in size are successfully reproduced from pictures taken by the uthor

GRAVES ARTHUR HARMOUNT

Illustrated guide to trees and shrubs, a handbook of the woody plants of the northeastern United States and adjacent regions. Revised edition New York Harper & Brothers 1956 271 p illus 24 cm $6.00 2065

watercolors by Andrey Avinoff Pittsburgh University of Pittsburgh Press 1953 2 v illus. (part col'd) 36 cm. $60.00 2078

Contents (abridged) Author's introduction. The botany of the region. Bibliography. Glossary. Analytical key to the families. Summary of plants included in the text. Descriptive text. [illegible]. Index.

Note Few works on wild flowers combine the authority and magnificence of this one. The author of the descriptive text is Director Emeritus of the Carnegie Museum and [illegible] botanist, and the illustrator was eminent both in botany and in art. The work was published under [illegible] grant from the Buhl Foundation to the Carnegie Institute and the University of Pittsburgh, [illegible] large to make it possible to offer the book for sale at less than the cost of production. The first volume is devoted to the introductory material and to concise systematic descriptions of the species. [illegible] are illustrated in the second volume. The descriptions of species give the botanical name and in most cases the popular name, describe the plant in morphological terms, and indicate its range. The second volume is devoted to the illustrations. These rank high in artistic merit and all are reproduced in color as accurately as possible with the best techniques of present-day color printing. The reproductions were made without reduction from the original watercolors which were painted in life size. Flowers are always shown, compound buds and leaves are shown in many instances, and in some cases the entire plant is depicted. There are 200 of the plates, and each one is accompanied by [illegible] legend which includes [illegible] on the plant's habitat and [illegible] statement of [illegible] when the specimen that the artist used was collected.

JEPSON WILLIS LINN

A manual of the flowering plants of California. Berkeley University of California Press, 1951 1,238 p. illus. 22 cm. $6.50 2079

Note This book was the first comprehensive manual published of the flowering plants of the state of California, [illegible] region that has very rich flora. The number of species described is [illegible] of which more than [illegible] are endemic. The manual [illegible] intended as an aid in identification. The descriptions of families include keys to identification. The descriptions of species deal primarily with morphology but also indicate range and habitat. A 13-page glossary defines the technical terms used. There are 1,023 illustrations, [illegible] of which are small but clear reproductions of line drawings. The complete work was first published in [illegible] and [illegible] reprinted, apparently without change, in 1951 and in 1957.

JOHNSTON IVAN MURRAY

The botany of San Jose Island (Gulf of Panama) With seventeen plates and two text-figures. Jamaica Plain, Mass. The Arnold Arboretum of Harvard University 1949 306 p. illus. 25 cm. (Sargentia, a continuation of the Contributions from the Arnold Arboretum of Harvard University No. 8) $6.00 2080

Contents Physical features and history of the island. General characteristics of the flora. Types of natural vegetation. Grassland. Thicket. North forest. South forest. Mature forest. Deciduous forest and other vegetation on thin soil. Streamside forest. Coastal-swamp forest. Beach vegetation. Growth on clearings. Immigrant weeds. Economic plants. Natural history of forest vegetation. The forest floor. Trunks of the forest canopy. Tree trunks. Vines and their role in the forest. Epiphytes. Ant plants. Display of flowers. Characteristics of tropical foliage. Fall and renewal of leaves. Fruits and seeds in humid dark. Identification. Key to the trees and shrubs. Key to the vines. Key to the orchids. Catalogue of flowering plants. New botanical names. Index.

Note A treatise that provides [illegible] detailed description and discussion of the vegetation and flora of San José, an island 5 miles long about 30 miles off the Pacific end of the Panama Canal. The study was executed in 1944 because of the interest on the island of [illegible] tropical testing ground for the Chemical Warfare Service of the United States Army. The data are presented with [illegible] of botanical phenomena to that Army personnel working in the forests of the island and other visitors from the United States of America may find the report as intelligible as the professional botanist. Technical matter interesting only to botanists is included, but [illegible] appears in segregated paragraphs, so that the general reader may skip it. The catalogue of flowering plants, which comprises about three-fourths of the text, contains descriptions of 621 species known to grow without cultivation on the island. Included in the account of each species are the author's observations regarding its behavior and distribution on the island, together [illegible] some descriptive details useful in identifying the plant.

JONES GEORGE NEVILLE

A botanical survey of the Olympic peninsula Washington. Seattle Published by the University of Washington 1936 286 p illus. 25 cm. (University of Washington publications in biology Vol. 5) $3.00 2081

Contents (abridged) Introduction. Physiography and geology. Climate. The zonal distribution of the vegetation. The geographical relationship of the flora. Life-forms according to the Raunkiaer system. A phytogeographical summary. Botanical exploration. Bibliography. The annotated catalogue of plants. Index.

Note A [illegible] for the botanist, of an [illegible] area on the Pacific Coast. It comprises [illegible] description of the vegetation, [illegible] facts about the physical environment, [illegible] catalogue of the vascular flora, and [illegible] comparison of the flora [illegible] that of adjacent areas.

JONES GEORGE NEVILLE

Flora of Illinois. Second edition. Notre Dame University of Notre Dame Press 1950 368 p 24 cm (The American midland naturalist. Monograph no 5 Edited by John D Mizelle) $4.25 2082

Contents Flora and vegetation. Description of the area. Vegetational divisions. Systematic treatment. Key to the sections. Key to the families. Keys to the genera and species. Bibliography. Taxonomic monographs and revisions. Author index. Glossary. Index of plant names.

Note A manual based on material in the herbarium of the University of Illinois and in other herbaria in the state. It covers 65 [illegible] and [illegible] species, [illegible] plants recorded by the writer as growing spontaneously in Illinois. Approximately 2,500 species are described. The descriptions are in technical terminology and the arrangement is conventional. Taxonomic keys are included to facilitate identification. The bibliography lists also the taxonomic monographs that are useful in the study of Illinois plants. Since the flora of Illinois is similar to the flora of [illegible] considerable adjacent area, the work is of some interest to botanists [illegible] outside of that state.

KEARNEY THOMAS HENRY AND OTHERS

Arizona flora. By Thomas H. Kearney Robert H. Peebles and collaborators Berkeley and Los Angeles University of California Press, 1951 1,032 p. illus. (part col'd) 24 cm. $7.50. 2083

Contents Introduction. Botanical exploration. Part one, The physical background and vegetation of Arizona. Topography. Geology and soils. Climate. Vegetation in relation to physical conditions. Life forms. Part two, The flora of Arizona. Plan of the book. Geographic [illegible] of the flora. Taxonomic composition of the flora. Key to the phyla. Pteridophyta—ferns and fern allies. Spermatophyta—flowering plants. Plates. Literature consulted. Glossary. Index.

Note A work designed as [illegible] reference book to be used in identifying "the approximately 3,370 species of flowering plants, ferns and fern allies known to be growing (or to have grown) without cultivation in the state of Arizona." A diverse flora ranging from arctic-alpine to subtropical is covered, reflecting the great ranges of altitude, rainfall, and soils found within the state of Arizona. Keys to families, genera and species are [illegible] special feature of the book. Geographical range is indicated for not only the state but also adjoining states. The illustrations consist of the frontispiece in color and 45 black-and-white reproductions of photographs.

LUNDELL, CYRUS LONGWORTH AND OTHERS

Flora of Texas. By Cyrus Longworth Lundell and collaborators. Volume 1 part 1 Volume 3 parts 1 v Dallas University Press in Dallas, Southern Methodist University 1942–

HAUSMAN, ETHEL HINCKLEY

Beginner's guide to the wild flowers Illustrated by the author New York G P Putnam's Sons 1948 376 p illus 22 cm $3 50 2072

Contents How to use this beginner's guide. Flowers white or whitish. Flowers yellow or orange. Flowers pink or red. Flowers blue or violet. Flowers green or brown Index.

Note. A pocket-sized reference book, arranged in a way that makes sense to the beginner To facilitate identification in the field, the flowers are classified in five color groups, named above. The typical description of a specific plant covers the common name, scientific name, color size, shape odor whether the plant is sticky hairy or smooth, whether the leaves are rough, soft, rigid or flexible the type habitat geographic range, and season of flowering. This matter is supplemented in every case by a clear line drawing.

HITCHCOCK, C LEO, AND OTHERS

Vascular plants of the Pacific Northwest, by C Leo Hitchcock Arthur Cronquist, Marion Ownbey, J W Thompson Illustrated by John H. Rumely Part 5 Compositae, by Arthur Cronquist. Seattle University of Washington Press, 1955 343 p illus. 29 cm (University of Washington publications in biology, Vol 17 part 5) $7 50 2073

Contents Introduction. Technical description and discussion of the family Compositae. Key to the tribes. Key to the genera of the Anthemideae. Key to the genera of the Astereae. Key to the genera of the Cichorieae. Key to the genera of the Cynareae (see also Echinops) Key to the genera of the Eupatorieae. Key to the genera of the Heliantheae. Key to the genera of the Inuleae. Key to the genera of the Senecioneae. Artificial keys to the genera. Achillea. Adenocaulon. Agoseris Ambrosia. Anaphalis. Antennaria. Anthemis. Apargidium Arctium. Arnica. Artemisia. Aster Baccharis. Baeria. Bahia. Balsamorhiza. Bellis. Bidens. Blepharipappus. Boltonia. Brickellia. Carduus. Centaurea. Chaenactis. Chrysanthemum. Chrysopsis. Chrysothamnus. Cichorium. Cirsium. Cnicus. Conyza. Coreopsis. Cotula. Crepis. Crocidium. Dimeresia. Dyssodia. Eatonella. Echinacea. Echinops. Enceliopsis. Erechtites. Erigeron. Eriophyllum. Eupatorium. Filago. Franseria. Gaillardia. Galinsoga. Gnaphalium Grindelia Gutierrezia. Haplopappus. Helenium. Helianthella. Helianthus. Heliopsis. Hemizonia. Hieracium. Hulsea. Hymenopappus. Hymenoxys. Hypochaeris. Inula. Iva. Jaumea. Kuhnia Lactuca. Lagophylla. Lapsana. Lasthenia. Layia. Leontodon. Liatris. Luina Lygodesmia. Madia. Malacothrix. Matricaria. Microseris. Micropus. Onopordum. Petasites. Prenanthes. Psilocarphus. Raillardella. Ratibida. Rigiopappus. Rudbeckia. Saussurea. Senecio. Silybum Solidago Sonchus. Stephanomeria. Stylocline. Tanacetum. Taraxacum Tetradymia. Thelesperma. Townsendia. Tragopogon. Viguiera. Wyethia. Xanthium. Disposition of certain names. Appendix.

Note. The first published part of a systematic botanical study of the vascular plants of the Pacific Northwest section of the United States of America, including the state of Washington, the part of Oregon north of the 44th parallel, Idaho north of the Snake River plains, and the mountainous portion of Montana, including also the southern fringe of British Columbia. Described and illustrated in line drawings are the species of 103 genera of Compositae. The manuscript was prepared on the basis of the examination of collections in the chief institutional herbaria and in two private herbaria.

HOUGH ROMEYN BECK

Handbook of the trees of the Northern States and Canada east of the Rocky Mountains. Illustrated with photographs New York *The Macmillan Company,* 1907 470 p illus. 24 cm. $7 50 2074

Note Although originally published in 1907 this book is still in demand and still useful. In fact, the copy examined for purposes of this review was of a printing made in 1956. It covers both the native and the naturalized trees of northeastern United States of America and Canada north from North Carolina, Tennessee, Arkansas and Oklahoma and east of the Rocky Mountains. For each species included there are photographs of the trunk showing details of the bark, the leaves and fruit, a twig with buds, and a map of the continental *United States* and Canada showing distribution of the species in these regions. The pictures are accompanied by a short descriptive text designed for general reading.

HOWELL, JOHN THOMAS

Marin flora. Manual of the flowering plants and ferns of Marin county, California. Photographs by Charles T Townsend. Berkeley University of California Press, 1949 322 p. illus 22 cm $4 50 2075

Contents (abridged) Introduction Location and physiographic features. Geologic structure and rocks. Soils. Climate and weather Life zones and plant associations. Effect of fire. Numerical analysis of the flora. Geographic distribution of plants in Marin county. Marin county flora and flora of Coast Ranges. Endemic plants. Naturalized plants. Early botanical explorers. Later botanical explorers. Keys to the groups and families. Enumeration of the flora. Principal references. Glossary of technical terms. Index. scientific and common names in the enumeration of the flora. Map of Marin county California. Place names on map of Marin county Mt. Tamalpais and vicinity Place names on map of Mount Tamalpais and vicinity

Note. Marin county is the county occupying the peninsula immediately to the north of the Golden Gate. It covers 529 square miles, yet it is estimated its flora represents approximately 25 per cent of the flora of the entire state of California. This volume is a complete guide to the flora of the county published for amateur and professional botanists alike. Following the introductory pages, the plants of the county are named in systematic order and then the names are recorded the localities in Marin county where found, with occasional other descriptive and taxonomic notes. Keys are provided for the identification of families, tribes, genera, and species, with an extensive glossary for those unfamiliar with the language of botany The book is based upon field work by the author in Marin county over a 10-year period. Totals of 1,313 species and 144 named varieties and forms are recognized. The 25 photographic plates show landscapes and plants, especially trees, of the county

HYLANDER, CLARENCE J

The Macmillan wild flower book Illustrations by Edith Farrington Johnston. New York The Macmillan Company, 1954 480 p illus (part col d) 26 cm $8 95 2076

Note A popular book on the wild flowers of continental United States of America, particularly the eastern portion from the coast of the Atlantic Ocean westward to the Rocky Mountains. The illustrations are the principal feature. There are 230 plates, all of which are faithful reproductions in color of paintings of the plants described. The paintings depict the flowers and associated leaves in all cases, and in some cases show the whole plant. The plates are accompanied by a brief descriptive text which gives the common and scientific names for the genus and the family then a short commentary in the common language of which the following is typical "This roughly hairy species is a tall-stemmed plant reaching 6 or 7 feet in height. Opposite, stemless leaves have margins of rounded teeth. Small, white flowerheads are borne in a small flat-topped cluster each head consisting of 8 tubular flowers. Rough-Thoroughwort grows in wet sandy soil from southern New England to Florida and Louisiana, and flowers in August and September

JAEGER, EDMUND CARROLL

Desert wild flowers. Revised edition. Stanford *Stanford University Press* 1941 322 p. 2077 illus. 21 cm *$5 00*

Note This book for the layman and amateur botanist contains descriptions of 764 desert plants Each plant is illustrated by a line drawing or in a few cases, a photograph. The derivations of the botanical names are given Practically all known plants of the deserts of California and related portions of Nevada, including the Lake Mead area at Boulder Dam, are included.

JENNINGS O E

Wild flowers of western Pennsylvania and the upper Ohio basin. Text by O E Jennings

ceming the contents of the articles. Botanists of all nationalities from Linnaeus to the present time are included. The index, by Egbert H. Walker, designed to facilitate reference to the bibliography, is published as a separate paper though under the same cover as the main work.

MERRILL, ELMER DREW
Plant life of the Pacific world. New York The Macmillan Company 1945 295 p. illus. 21 cm. (The Pacific world series) $4.50. 2090

Contents: The rain forests and jungles of the tropics. General principles of botanical classification. Plants of the seashore. The mangrove forest. The secondary forests and open grass-lands. The primary forest. Noteworthy plants of special interest. Weeds and their significance. The cultivated plants. Jungle foods. Problems of Malaysian plant distribution. Problems of Polynesian plant distribution. The significance of certain local plant names. Notes on specific islands and island groups. Notes on botanical history, exploration, and bibliography. Simple directions for preparing botanical specimens. Botanical arrangement of the species. Glossary. Index.

Note: A survey of plant life in the whole Pacific area, together with descriptions of some of the commonest plants and those having the widest geographical distribution. The material is arranged under types of vegetation, and the short discussions has been to interpret in simple terms the interrelations of plant and animal life in the tropical forests, in the open grass-lands, and along the seashore. The book, as others in the series, was written especially for the information of members of the United States armed forces stationed in the Pacific area during World War [illegible] but it is useful to any reader who desires information about these regions. There is [illegible] bibliography listing botanical works on the [illegible] area but [illegible] publications on individual islands and regions.

MERRILL, ELMER DREW
Polynesian botanical bibliography 1773–1935 Honolulu Bernice P Bishop Museum, 1937 194 p. 25 cm. (Bernice P Bishop Museum. Bulletin 144) Gratis 2091

Note: This work represents [illegible] revised, and much more complete edition of the author's *Bibliography of Polynesian botany* published in 192[illegible] by the Museum in Bulletin 13. The present work lists 2,600 titles as against 1,370 titles in the first edition, the additions consisting of papers published between 1923 and 1935 and also references from the older literature previously overlooked. An innovation adopted is the inclusion of brief abstracts indicating the general scope of the papers which will assist the investigator in judging of their relative value. The region covered is essentially that of the original work, the islands in the Pacific basin lying between 30° North latitude and 35° South latitude excluding the Bonin Islands, Juan Fernandez, New Caledonia, Lord Howe, Norfolk, the Kermadec Islands, and the New Hebrides are also included.

MUENSCHER, WALTER CONRAD LEOPOLD
Aquatic plants of the United States. Ithaca. Comstock Publishing Company Inc., 1944 374 p. illus 24 cm. (Handbooks of American natural history edited by A. H Wright. Vol. IV) $5.00 2092

Contents (abridged): Introduction. Key to the families. Aquatic plants arranged by families: Typhaceae. Sparganiaceae. Potamogetonaceae. Najadaceae. Juncaginaceae. Alismaceae. Butomaceae. Hydrocharitaceae. Gramineae. Cyperaceae. Araceae. Lemnaceae. Mayacaceae. Xyridaceae. Eriocaulaceae. Pontederiaceae. Juncaceae. [illegible] Polygonaceae. Chenopodiaceae. Amaranthaceae. Caryophyllaceae. Ceratophyllaceae. Nymphaeaceae. Ranunculaceae. Cruciferae. Podostemaceae. Crassulaceae. Rosaceae. Callitrichaceae. Elatinaceae. Lythraceae. Onagraceae. Trapaceae. Haloragidaceae. Umbelliferae. Primulaceae. Menyanthaceae. Hydrophyllaceae. Scrophulariaceae. Lentibulariaceae. Acanthaceae. Plantaginaceae. Lobeliaceae. Campanulaceae. [illegible] Equisetaceae. Marsileaceae. Salviniaceae. Parkeriaceae. Glossary. Index.

Note: A systematic classification and description of those species which normally start in the water and must grow for at least part of their life cycle in water either completely submersed or emersed. A few borderline species occurring in bogs and marshes are also included, but land plants which are periodically inundated or submersed are omitted. The general plan of the work includes

key to the families [illegible] generic species, keyed by [illegible] detailed treatment [illegible] description, [illegible] range and [illegible] botanical [illegible] each species treated. Most of the species are illustrated, and there are numerous distribution maps.

MUENSCHER, WALTER CONRAD LEOPOLD
Poisonous plants of the United States. Revised edition. New York. The Macmillan Company 1951 27[illegible] p illus 22 cm $4.95 2093

Contents (abridged): Part I, Nature and [illegible] of poisonous plants. The classification of poisonous plants. The [illegible] of [illegible] of plants. The chemical nature and properties of the toxic principle. The physiological action of the toxic principle. The conditions under which poisoning is produced. Plants poisonous or injurious under special conditions. Plants causing dermatitis. Plants causing photosensitization. Cyanogenetic plants. Introduced poisonous ornamental plants. Plants producing poisonous seeds. [illegible] plants. Plants causing [illegible] by stored [illegible]. Plants producing undesirable flavors in milk and milk products. Plants causing mechanical injury. Part II, Poisonous plants arranged according to families. Literature references. Index.

Note: A standard manual of information on the poisonous plants of continental United States of America and Canada. Poisonous has been interpreted liberally so that the book includes all plants in which poisoning has been attributed. Thus the onion and [illegible] are included, even though they are [illegible] used for food. [illegible] cases the author makes it clear that the plants are [illegible] generally [illegible] and refers to the literature in which the specific cases of poisoning are described. Plants poisonous to livestock are included, along with those poisonous to man. The first part is only [illegible] pages long and is devoted to a brief discussion of the groups of poisonous [illegible] and of the types of poisoning and injury caused by plants. The second part is devoted to descriptions of species of poisonous plants. The space given to each species [illegible] from several pages to species [illegible] poisonous nature to man or grazing animals is well established, down to [illegible] paragraph or two on species [illegible] in few cases [illegible] poisoning have been reported. The information given for each species is designed to aid in its identification and to give the conditions under which it is poisonous [illegible] the symptoms of poisoning by it. Treatment for poisoning is described very briefly. Clearly reproduced drawings supplement the verbal descriptions [illegible] the more important plants. The first edition was published in 1[illegible] [illegible] this revised ed[illegible] descriptions of 21 species have been added and some other changes have been made.

NEAL, MARIE C
In gardens of Hawaii. Honolulu Bernice P Bishop Museum, 1948. 805 p. illus. 23 cm. (Bernice P Bishop Museum. Special publication 40) $8.00 2094

Contents: Introduction. Descriptions of the plants: Plant [illegible] [illegible] allies. Ferns. Gymnosperms. Angiosperms. Illustrated glossary. Approximate flowering [illegible] of some plants in Hawaii. Color keys. Color key to flowers. Color key to fruits and seeds. Index.

Note: Rather than [illegible] book on gardening in Hawaii, as the title might be taken to indicate, this is [illegible] guide for amateur botanists and nature observers to the identification of plants of horticultural interest, both introduced and endemic, that grow in Hawaii. It is not [illegible] complete list. In fact, the author states that it covers chiefly "plants found at warm, low altitudes where the great majority of gardens are located." Nevertheless, more than 2,000 species are described, and nearly 400 are illustrated. The coverage is not limited to cultivated plants, since many of those described grow in the wild state in Hawaii. The descriptions of taxa are nontechnical and cover chiefly morphology though uses for the economic plants are mentioned. Identification keys for families and other taxa are included.

NORTH AMERICAN FLORA. H. A. Gleason, H. W Rickett, and Fred J. Seaver editorial committee New York The New York Botanical Garden, 1907–57 2095

Note: The monumental *North American flora* is designed to present in one work descriptions of all plants growing, independent of cultivation, in North America, here taken to include Greenland, Central America, the Republic of Panama, and the West Indies, except Trinidad, Tobago, Curaçao and other islands off the north coast of Venezuela, [illegible] flora is essentially South American. The work is *still* in the process of completion as of January 1958, al-

55 6 pts illus 26 cm Vol 1, pt. I, $5 00, vol 3, pt I, $1 50 Vol 3, pt. II, $1 50, vol 3, pt. III, $3 00, vol 3, pt IV $1 50, vol 3 pt. V, $3 00 2084

Content Vol 1 pt. I Pteridophyta contributed by D S. Correll Vol 3 pt. I, Eriocaulaceae Avicenniaceae, Verbenaceae, by H. N Moldenke. Vol 3 pt. II, Anacardiaceae, Cyrillaceae Aquifoliaceae, contributed by F A. Barkley Genus Cuscuta, Convolvulaceae, contributed by T G. Yuncker Vol. 3 pt. III, Orchidaceae, contributed by D S. Correll. Vol. 3 pt. IV Palmaceae, contributed by L. H. Bailey bromeliaceae contributed by L. B. Smith. Onagraceae, contributed by P A. Munz. Vol. 3 pt. V Umbelliferae, contributed by M E. Mathias and L. Constance Campanulaceae, contributed by R. McVaugh.

Note The parts listed above are all which had been published at the close of 1956 of projected ten-volume publication designed to present descriptions of all ferns and flowering plants which grow without cultivation within the state of Texas. The species descriptions include literature references, technical descriptions of morphology known distribution within the state, and vernacular name Illustrations which are reproductions from drawings are included in some of the parts.

MACBRIDE, JAMES FRANCIS

Flora of Peru Chicago Chicago Natural History Museum, 1936–51 12 v 23 cm (Chicago Natural History Museum Fieldiana Botany Vol XIII, pt. I, no 1 3 pt. II, no 1–3, pt III, no 1–3, pt. IIIA no 1, pt. IV, no 1 pt. VI, no 1–2) Pt. I, no 1 3, o p pt. II, no 1, $1 50 no 2 3 o p, pt III, no 1, $3 50, 2, $2 00 3, $1 75, pt. IIIA, no 1, $2 50 pt IV, no 1, $3 00 pt. VI no 1, o p, 2, $1 50 2085

Note A comprehensive compilation of the taxonomic data based on the world literature relating to the seed plants of Peru. The work attempts to bring together descriptions of all known Peruvian seed plants and ferns, most of which have been published during the last century Except as the taxonomic relationship of the plants listed has already been determined, no effort has been made at critical disposition of them, and synonyms are therefore not particularly numerous and are mostly the result of transfers and name changes. In the case of widely distributed species usually there are listed only the original name if it has been transferred, and the synonyms based on Peruvian material. The compilation is intended primarily as an aid to the determination of Peruvian plants, while the monographs cited supply such information as exists regarding relationships. The descriptions are adapted from the original publication or reference work.

MCMINN, HOWARD EARNEST

An illustrated manual of California shrubs Berkeley University of California Press 1951 663 p illus 24 cm $6 50 2086

Content Introduction. Key to the genera. Key to the families. Descriptive account of the shrubs 1 Gymnospermae or cone-bearing shrubs and their allies. 2 Angiospermae or true-flowering shrubs. Addenda. Glossary of botanical terms. Index to names f species. *Nomenclatorial changes. Bibliography Index.*

Note. A systematic and descriptive account of the shrubs f California, written on the basis of 20 years of study of them in their native habitats. About 800 species are included, and the number of separate illustrations runs to 775 The work is of more than local interest, for most of the plants described are found in other regions also. The above is the second printing of the title, which was copyrighted by th uthor in 1939 and first published in that year by J W Stacey Inc.

MATHEWS, F SCHUYLER

F Schuyler Mathews Field book of American wild flowers. Completely revised and enlarged by Norman Taylor With 30 colored plates and over *300 black and white illustrations* drawn from nature by F Schuyler Mathews and Eduardo Salgado. New York G P Putnam's Sons, 1955 601 p. illus (part col'd) 18 cm $5 00 2087

Contents (abridged) How t use this book. Color rank Glossary f terms. The field guide. Index.

Note First published in 1902 this book has been used for over half century as standard guide to the identification of the wild flowers that grow in the central and eastern portion of continental United States of America. In this new edition—the result of a thorough revision of the original work, the number species described has been increased, and the classification and descriptions have been corrected on the basis of the eighth edition of Gray *Manual of botany* and H. A. Gleason's new edition of Britton and Brown *Illustrated flora* The greater part of the text is devoted to the descriptions of species. These give the scientific and common names, the color of the flower and the time of blooming, a semitechnical description of morphology a short range and sometimes one on habitat. Every alternate page in the body of the book is devoted to black-and-white drawings and in addition there are 31 plates in color

MERRILL, ELMER DREW, AND EGBERT H. WALKER

A bibliography of eastern Asiatic botany Sponsored by the Smithsonian Institution Arnold Arboretum of Harvard University New York Botanical Garden, Harvard-Yenching Institute. Jamaica Plain, Mass. The Arnold Arboretum of Harvard University 1938 719 p 30 cm $6 50 2088

Contents Bibliography proper: Introduction, Reference list of serial abbreviations. Authors and titles. Appendix: Older Oriental works. Reference lists of Oriental serials. Reference list of Oriental authors. Subject index Index I, General. Index II, Regional. Index III, Systematic. Family index of generic names of vascular cryptogams (Pteridophyta) and seed plants. Index of principal geographic names.

Note: The regional scope of this monumental work comprises China, Japan, Formosa, Korea, Manchuria, Tibet, eastern and southern Siberia, the Philippines, Indo-China, Siam, Burma, India and central and northern Asia. Its subject scope is the taxonomic, economic, and geographic botany of this region, and it lists all the pertinent literature that could be discovered by the compilers that was published through December 1936, together with inclusion of the parts published in 1937 of continued papers whose publication began before 1937 of continued papers whose publication began before 1937 The arrangement is alphabetical by authors' names with titles arranged in chronological order under the names of individual authors. Titles in non-Roman alphabets are transliterated Three separate indexes are provided as noted in the above contents. Together these indexes run to 140 pages.

MERRILL, ELMER DREW

A botanical bibliography of the islands of the Pacific. Washington D C. Government Printing Office, 1947 404 p. 25 cm. (Smithsonian Institution United States National Museum Contributions from the United States National Herbarium Vol 30 part 1) 2089

Contents A botanical bibliography of the islands of the Pacific by Elmer D Merrill Introduction Reference list of abbreviations Bibliography A subject index to Elmer D Merrill's A botanical bibliography of the islands of the Pacific, by Egbert H. Walker Introduction General index. Regional index. Systematic index. Index of principal references t geographic names.

Note About 3800 titles are recorded in this bibliography which is a revision of two papers published in 1924 and 1937 with the addition of numerous titles. Included are works upon the botany, cryptogams, ferns, and seed plants, and on economic, taxonomic, ecological and other botanical studies on the flora of the Pacific islands from Juan Fernández on the east to New Caledonia and New Hebrides on the west and from Midway Island on the north t the Kermadec Islands on the south. The bibliography is arranged by author and under each author his publications are listed in order the titles being supplemented by brief descriptive notes on

Contents: Introduction. Plant areas of Oregon. Numerical summary of groups. Key to the higher groups. Descriptive flora. Glossary. Illustrations of plant parts. Explanation of abbreviations of authors' names. Index.

Note: A manual for those students of higher plants who are interested in the classification and naming of species, but who have neither time nor technical training for detailed taxonomic study. The work is based upon the herbarium of Willamette University collected through many years from nearly every portion of the state. Data provided for each specimen described includes scientific and popular names, general description, measurements, general range, and conditions under which found. Illustrations are used sparingly.

Preston Richard Joseph Jr.

North American trees (exclusive of Mexico and tropical United States) a handbook designed for field use with plates and distribution maps. Ames Iowa State College Press, 1948 371 p. illus. 20 cm $3 75 2102

Contents: Introduction. Natural relationship of trees. Forest regions of North America. Tree characters. Key to the genera. Handbook of North American trees. Glossary. Index.

Note: Designed to meet the needs of scientists, students, and general public, this up-to-date field manual is a guide to the trees of North America north of Mexico. Both trees native to the area and trees naturalized or commonly planted are included. The principal trees (231 species of importance or general interest) are described in the following respects: habit, leaves, fruit, twigs, bark, wood, [illegible] characters; the leaves, fruit and other parts are illustrated in line drawings. [illegible] range map to show the distribution of the species. An additional 176 less important species are more briefly described or mentioned in the keys. The arrangement is by family with numerous keys to assist in identification. The nomenclature follows the 1944 revision of the United States Forest Service check list.

Raup Hugh Miller

The botany of southwestern Mackenzie. With thirty-seven plates and sixteen text figures. Jamaica Plain, Mass The Arnold Arboretum of Harvard University 1947 275 p. illus. 25 cm. (Sargentia, a continuation of the Contributions from the Arnold Arboretum of Harvard University vi) $5.00 2103

Contents: Introduction and acknowledgments. Topography of southwestern Mackenzie. History of exploration. Geology and soils. Climate and agriculture. Plant communities of southwestern Mackenzie. Geographic affinities of the [illegible] of southwestern Mackenzie. Origins of the flora of southwestern Mackenzie. Catalogue of the vascular flora of southwestern Mackenzie. Literature cited. Plates. Index.

Note: Conceived as a contribution toward the description [illegible] botany of boreal America, this volume deals with the southwestern part of the District of Mackenzie, Northwest Territories. The publication, which was founded upon fieldwork in the District, divides roughly into four parts: the general description of the region, an account of the plant communities there, a study of the geographic affinities of [illegible] species, and an annotated catalogue of the vascular plants known to occur in southwestern Mackenzie. The last does not presume to be complete, as areas of the region are still unexplored botanically. The aim of the author was chiefly to bring printed knowledge of the flora up to date in order to furnish a sounder basis for further work. Twenty-five of the plates at the end of the book contain 71 species of plants in Canada and Alaska.

Rehder, Alfred

Bibliography of cultivated trees and shrubs hardy in the cooler temperate regions of the northern hemisphere. Jamaica Plain Mass. The Arnold Arboretum of Harvard University 1949 825 p 30 cm. $20.00 2104

Contents: Introduction. Explanation of abbreviations of periodicals and titles. Systematic enumeration of cultivated trees and shrubs. Additions and emendations. Index.

Note: A monumental reference work of value to botanists and horticulturists. It provides literature references to the sources of the botanical names, valid names and synonyms, of the [illegible] trees and shrubs of the north temperate zone. It is [illegible] complemental to the author's *Manual of cultivated trees and shrubs hardy in North America, exclusive of the subtropical and warmer regions*, second edition, New York, 1940. All tree and shrub names in the *Manual* are to be found here in the *Bibliography* [illegible] in addition all genera, species, and varieties introduced or described to the end of 1947. The index provides an alphabetical reference to the plants included. In [illegible] the system [illegible] and the index the names are [illegible] following the international rules of botanical nomenclature. The work is not a bibliography of books and periodicals on trees and shrubs, but is rather a bibliography of original sources for the names of each tree and shrub.

Rehder Alfred

Manual of cultivated trees and shrubs hardy in North America, exclusive of the subtropical and warmer temperate regions. Second edition revised and enlarged. New York The Macmillan Company 1940 996 p illus 22 cm. $12.50 2105

Contents: Preface to the second edition. Introduction. Abbreviations of authors' names. Abbreviations of references to illustrations. Further abbreviations and explanations of signs. Synopsis of the orders and families contained in this book. Analytical key to the families and aberrant genera. Description of trees and shrubs. Glossary of botanical terms. Index. Additions and emendations.

Note: This handbook describes from the botanical and horticultural point of view the cultivated woody plants which are grown in the colder and cooler temperate regions of North America. It presents in concise form a complete [illegible] of [illegible] trees and shrubs known to be in cultivation and capable of enduring the [illegible] under consideration. Woody vines, bamboos, cacti, and suffruticose plants are included. Revised and enlarged, it covers the new species and varieties that have been introduced in the past [illegible] years, the new hybrids that have appeared in cultivation, and includes new data on the zones of hardiness. It incorporates the changes in names necessitated by the amendments and changes in International Rules of Botanical Nomenclature adopted by the Botanical Congress in 1930 and 1935.

Rickett H W

Wild flowers of America 400 flowers in full color based on paintings by Mary Vaux Walcott as published by the Smithsonian Institution of Washington. With additional paintings by Dorothy Falcon Platt Edited with an introduction and detailed description by H W Rickett. New York Crown Publishers Inc., 1953 400 p colored illus. 30 cm. $10.00 2106

Contents: Introduction. Glossary. Flower descriptions. Identification chart. Index.

Note: The colored plates of which there are 400 are the principal feature of this volume. As noted in the title, the Walcott plates were first published by the Smithsonian Institution. The original format was one of loose prints in a portfolio, whereas in this book the plates are bound in as pages of the volume. The majority of reproductions in this volume are sharp and of high quality. Some are a little fuzzy but are nevertheless sufficiently clear for identification purposes. The plates are preceded by an introduction and plant descriptions written by Dr Rickett of the New York Botanical Garden. The book is addressed primarily to amateur naturalists, but it has appeal for anyone, professional or nonprofessional, who is interested in wild flowers of the North American continent.

Rydberg Per Axel

Flora of the prairies and plains of central North America. New York New York Botanical Garden 1932 969 p. illus. 23 cm. $5.50 2107

Contents: Abbreviations, signs, and measurements. Pteridophyta. Spermatophyta. Gymnospermae. Angiospermae. Monocotyledoneae. Dicotyledoneae. Errata. Summary. Abbreviations of authors' names. Glossary. Index.

though more than 130 of the separate parts have been published. The completed work will form a series of volumes with the following sequence Volume 1 Myxomycetes, Schizophyta volumes 2 to 10, Fungi volumes 11 to 13 Algae volumes 14 and 15 Bryophyta volume 16, Pteridophyta and Gymnospermae volumes 17 to 19 Monocotyledones volumes 20 to 34 Dicotyledones. Four or more parts are required for each volume, the subscription price for all parts published prior to 1936 being fixed at $1.50 for each part for later parts it is approximately two cents per page. Several parts are ow out of print. The material has been prepared by a large number of specialists in each of the orders, classes, and families described. Original citations, synonymy characters, measurements, type locality distribution references to previously published illustrations, and special notes are given in the systematic descriptions. A complete list of available volumes and parts, ith prices, can be obtained from the New York Botanical Garden.

PALMER, ERNEST JESSE, AND JULIAN STEYERMARK

An annotated catalogue of the flowering plants of Missouri St. Louis, Mo The Missouri Botanical Garden 1935 383 p illus 25 cm (Missouri Botanical Garden Annals Vol XXII, no 3) $5 00 2096

Note. The principal sources drawn upon in compiling this catalogue and in working out the distribution of species were first, the collections in the herbarium of the Missouri Botanical Garden the Gray Herbarium, the Arnold Arboretum, the National Herbarium (for the grasses) and other public and private collections second lists and monographs in which Missouri specimens are cited and third, the unpublished notes and correspondence of the two authors, supplemented by notes and correspondence from other collectors. Free use has also been made of manuals and general works on botany and a list of 300 titles on the phanerogamic botany of Missouri which have been consulted is given in the bibliography A umber of ew combinations in plant ames have been made there are one new species, three new varieties, and six new forms described, and names are proposed for four hybrid oaks. The index lists valid names, synonyms or otherwise invalid names, new species varieties, forms, hybrids, and new combinations, and family names. There are six plates of photographs. A 20-page supplementary paper has been prepared by the same authors, entitled *Additions, corrections and revisions to the Annotated catalogue of th flowering plants of Missouri St. Louis, Mo., 1938* and published as part of its *Annals*, Volume XXV no. 3

PARSONS, MARY ELIZABETH

The wild flowers of California their names haunts, and habits. Illustrated by Margaret Warriner Buck. San Francisco California Academy of Sciences 1955 423 p illus (part col'd) 20 cm $3 95 2097

Contents How to use the book. Explanation of terms. Key to the flowering plants. Plant families or orders. Some important genera. Index to technical terms. English index to plant families. Latin index to plant families. Introductory Prelude. Flower descriptions white—yellow—pink—blue and purple—red—miscellaneous Index to Latin names. Index to English names. Glossary

Note A standard manual of the wild flowers of the state of California. The first edition as published in 1897 and several other editions have followed It is addressed primarily to amateur botanists, and the descriptions of species contained in it are brief and largely ritten in the common language. Concise morphological descriptions are supplemented by comments directed to amateur nature observers. The present edition has been printed from the plates f the 1930 edition without change in the main body f the book However six reproductions in color of water-colors, have been added to the illustrations, and short appendix of currently accepted scientific names has been inserted at the end of the volume

PEATTIE, DONALD CULROSS

Flora of the Indiana dunes, a handbook of the flowering plants and ferns of the Lake Michigan coast of Indiana and of the Calumet district Chicago Field Museum of Natural History 1930 432 p illus. 19 cm $2 00 2098

Contents List of illustrations. Preface. Flora of the Indiana dunes. Plant hunting in the dunes. How to use a key Analytical key t the families. Systematic list of the families, genera, and species Glossary Index.

Note This guide for the beginner and student is written in simplified language. It contains more than 1,100 species of flowering plants and ferns and is arranged primarily to assist in field identification The descriptions are based largely on easily visible characters. The region covered contains sand-dunes, lagoons, bogs, swamps, strands, lakes, slow rivers, and prairies.

PEATTIE, DONALD CULROSS

A natural history of trees of eastern and central North America. Illustrated by Paul Landacre. Boston Houghton Mifflin Company, 1950 606 p illus 23 cm $5 00 2099

Contents. Notes on nomenclature and distribution. The trees The pines (*Pinus*) The larches (*Larix*) The hemlocks (*Tsuga*) The spruces (*Picea*) The firs (*Abies*) The arbor-vitaes (*Thuja*) The false cypresses (*Chamaecyparis*) The junipers (*Juniperus*) The poplars (*Populus*) The willows (*Salix*) The walnuts (*Juglans*) The hickories (*Carya*) The hornbeams (*Carpinus*) The hop hornbeams (*Ostrya*) The birches (*Betula*) The beeches (*Fagus*) The chestnuts (*Castanea*) The oaks (*Quercus*) The elms (*Ulmus*) The hackberries (*Celtis*) The mulberries (*Morus*) The tuliptrees (*Liriodendron*) The magnolias (*Magnolia*) The pawpaws (*Asimina*) The sassafrases (*Sassafras*) The witch hazels (*Hamamelis*) The sweet gums (*Liquidambar*) The sycamores (*Platanus*) The apples (*Malus*) The mountain-ashes (*Sorbus*) The shadblows (*Amelanchier*) The hawthorns (*Crataegus*) The plums and cherries (*Prunus*) The redbuds (*Cerci*) The coffeetrees (*Gymnocladus*) The sweet locusts (*Gleditsia*) The yellow-woods (*Cladrastis*) The locusts (*Robinia*) The prickly ashes (*Zanthoxylum*) The hoptrees (*Ptelea*) The sumacs (*Rhus*) The hollies (*Ilex*) The maples (*Acer*) The horse chestnuts (*Aesculus*) The lindens (*Tilia*) The Hercules'-clubs (*Aralia*) The tupelos (*Nyssa*) The cornels (*Cornus*) The viburnums (*Viburnum*) The rhododendrons (*Rhododendron*) The mountain laurels (*Kalmia*) The sorreltrees (*Oxydendrum*) The ebonies (*Diospyros*) The silverbells (*Halesia*) The sweetleaves (*Symplocos*) The fringetrees (*Chionanthus*) The ashes (*Fraxinus*) Keys to species and genera. Glossary Index of scientific names. Index of English names.

Not Described in this book are 187 species divided into 57 genera. For each species are given common name, scientific name other names, range, description of leaves, flowers, fruit, seeds, bark wood, and brief essay telling something of the use and the lore of the species and of its place in American history especially in pioneer times. T assist in identification, illustrations are given in black and white f the mature leaves and flower or fruit of each species, together with 19 full-page drawings showing the general aspect of 19 of the genera. A book for reading and reference rather than field book.

PEATTIE DONALD CULROSS

A natural history of Western trees Illustrated by Paul Landacre. Boston Houghton Mifflin Company, 1953 751 p illus 23 cm $6 00 2100

Content The trees of western North America. Keys t species and genera. Glossary Index of scientific names. Index of common names.

Note This book is both popular guide to tree identification and an example of excellent writing on natural history It describes the nath trees of continental United States f America in the region that lies westward of the 100th meridian. Alaska is included The greater part of the volume is devoted to descriptions of individual species. In all f the descriptions th accepted botanical name is given and, in addition, one or more common names. The names are followed by statement on the range of the species and nontechnical description of morphology Then follows short essay of interesting miscellaneous information on the species. I the case of species outstanding for their grandeur or beauty the author pays full tribute to these qualities. The volume is generously illustrated with woodcuts and drawings of high artistic quality

PECK, MORTON EATON

A manual of the higher plants of Oregon Portland, Ore Binfords and Mort 1941 866 p illus 22 cm $6 00 2101

Contents Introduction. Plant areas of Oregon. Numerical summary of groups. Key to the higher groups. Descriptive flora. Glossary. Illustrations of plant parts. Explanation of abbreviations of authors' names. Index.

Note A manual for those students of higher plants who are interested in the classification and naming of species, but who have neither time nor technical training for detailed taxonomic study. The work is based upon the herbarium of Willamette University, collected through many years from nearly every portion of the state. Data provided for each specimen described includes scientific and popular names, general description, measurements, general range and conditions under which found. Illustrations are used sparingly.

PRESTON RICHARD JOSEPH JR.

North American trees (exclusive of Mexico and tropical United States) a handbook designed for field use with plates and distribution maps. Ames Iowa State College Press 1948. 371 p. illus. 20 cm. $3 75 2102

Contents Introduction. Natural relationship of trees. Forest regions of North America. Tree characters. Key to the genera. Handbook of North American trees. Glossary. Index.

Note Designed to meet the needs of scientists, students, and general public, this up-to-date field manual is a guide to the trees of North America north of Mexico. Both trees native to the area and trees naturalized or commonly planted are included. The principal trees (132 species of importance or general interest) are described in the following respects: habit, leaves, fruit, twigs, bark, wood, special characters; the leaves, fruit, and other parts are illustrated in line drawings, with 2-inch-square range map to show the distribution of the species. An additional 114 less important species are more briefly described or mentioned in the keys. The arrangement is by family with numerous keys to assist in identification. The nomenclature follows the 1944 revision of the United States Forest Service check list.

RAUP HUGH MILLER

The botany of southwestern Mackenzie. With thirty-seven plates and sixteen text figures. Jamaica Plain Mass. The Arnold Arboretum of Harvard University 1947 275 p. illus. 25 cm. (Sargentia, a continuation of the Contributions from the Arnold Arboretum of Harvard University vi) $5 00. 2103

Contents Introduction and acknowledgements. Topography of southwestern Mackenzie. History of exploration. Geology and soils. Climate and agriculture. Plant communities of southwestern Mackenzie. Geographic affinities of the vegetation of southwestern Mackenzie. Origins of the flora of southwestern Mackenzie. Catalogue of the vascular flora of southwestern Mackenzie. Literature cited. Plates. Index.

Note Conceived as a contribution toward the description of the botany of boreal America, this volume deals with the southwestern part of the District of Mackenzie, Northwest Territories. The publication, which was founded upon fieldwork in the District, divides roughly into four parts: the general description of the region, an account of the plant communities there, a study of the geographic affinities of the species, and an annotated catalogue of the vascular plants known to occur in southwestern Mackenzie. The last does not pretend to be complete, as some of the region are still unexplored botanically. The aim of the author was chiefly to bring printed knowledge of the flora up to date in order to furnish a broader base for further work. Twenty-five of the plates at the end of the book contain 271 species of plants in Canada and Alaska.

REHDER ALFRED

Bibliography of cultivated trees and shrubs hardy in the cooler temperate regions of the northern hemisphere. Jamaica Plain Mass. The Arnold Arboretum of Harvard University 1949 825 p. 30 cm $20.00 2104

Contents Introduction. Explanation of abbreviations of periodicals and titles. Systematic enumeration of cultivated trees and shrubs. Additions and emendations. Index.

Note A monumental reference work of value to botanists and horticulturists. It provides literature references to the sources of the botanical names, valid names and synonyms, of the cultivated trees and shrubs of the north temperate zone. It is complementary to the author's Manual of cultivated trees and shrubs hardy in North America, exclusive of the subtropical and warmer regions, second edition, New York 1940. All tree and shrub names in the Manual are to be found also in the Bibliography with full synonymy and with additional genera, species and varieties listed and described to the end of 1947. The index provides an alphabetical reference to the plants included in the systematic enumeration, and in the index the names are in Latin following the latest International rules of botanical nomenclature. The work is not a bibliography of books and periodicals on trees and shrubs but is rather a bibliography of original sources for the names of each tree and shrub.

REHDER, ALFRED

Manual of cultivated trees and shrubs hardy in North America, exclusive of the subtropical and warmer temperate regions. Second edition revised and enlarged. New York The Macmillan Company 1940 996 p illus 22 cm. $12.50 2105

Contents Preface to the second edition. Introduction. Abbreviations of authors' names. Abbreviations of references to illustrations. Further abbreviations and explanation of signs. Synopsis of the orders and families contained in this book. Analytical key to the families and aberrant genera. Descriptions of trees and shrubs. Glossary of botanical terms. Index. Additions and emendations.

Note This handbook describes from a botanical and horticultural point of view the cultivated woody plants which are grown in the colder and cooler temperate regions of North America. It presents in concise form a complete list of all trees and shrubs known to be in cultivation and capable of enduring the winter in the region under consideration. Woody vines, bamboos, and suffruticose plants are included. Revised and enlarged, it covers the new species and varieties that have been introduced in the past 13 years, the new hybrids that have appeared in cultivation, and includes a new map on the zones of hardiness. It incorporates the changes in names necessitated by the amendments and changes in the International Rules of Botanical Nomenclature adopted by the Botanical Congress in 1930 and 1935.

RICKETT H W

Wild flowers of America. 400 flowers in full color based on paintings by Mary Vaux Walcott, as published by the Smithsonian Institution of Washington. With additional paintings by Dorothy Falcon Platt. Edited with an introduction and detailed description by H. W. Rickett New York Crown Publishers Inc., 1953 400 p colored illus. 30 cm. $10.00 2106

Contents Introduction. Glossary. Flower descriptions. Identification chart. Index.

Note The colored plates of which there are 400 are the principal feature of this volume. As noted in the title, the Walcott plates were first published by the Smithsonian Institution. The original format was one of loose prints in a portfolio, whereas in this book the plates are bound in as pages of the volume. The majority of reproductions in this volume are sharp and of high quality. Some are a little fuzzy but are nevertheless sufficiently clear for identification purposes. Note Described in this book are 187 species divided into 57 genera. For each species are given common name scientific name other names, range description of leaves, flowers, fruit, seeds, bark, wood, and a brief essay telling something of the use and the lore of the species and of its place in American history especially in pioneer times. To assist in identification, illustrations are given in black and white of the mature leaves and flower or fruit of each species, together with 11 full-page drawings showing the general aspect of 19 of the genera. A book for reading and reference rather than a field book.

PEATTIE, DONALD CULROSS

A natural history of Western trees. Illustrated by Paul Landacre Boston Houghton Mifflin Company 1953 751 p illus. 23 cm $6 00 2100

Contents The trees of western North America. Keys to species and genera. Glossary Index of scientific names. Index of common names.

Note This book is both a popular guide to tree identification and an example of excellent writing on natural history It describes the native trees of continental United States of America in the region that lies westward of the 100th meridian Alaska is included. The greater part of the volume is devoted to descriptions of individual species. In all of the descriptions the accepted botanical name is given and, in addition, one or more common names. The names are followed by a statement on the range of the species and a short semitechnical description of morphology Then follows an essay of interesting miscellaneous information on the species. In the case of species outstanding for their grandeur or beauty the author pays full tribute to these qualities The volume is generously illustrated with woodcuts and drawings of high artistic quality

PECK MORTON EATON

A manual of the higher plants of Oregon Portland Ore Binfords and Mort 1941 866 p illus. 22 cm $6 00 2101

—— Part III. Chicago Chicago Natural History Museum, 1952 432 p. illus. 23 cm. (Chicago Natural History Museum. Fieldiana Botany Vol. 24 part III) $6.00 2113

Contents: Families included in Part III: [illegible]

—— Part IV. Chicago Chicago Natural History Museum, 1946 493 p. illus. 23 cm. (Chicago Natural History Museum. Fieldiana Botany Volume 24 Part IV) o.p. 2114

Contents: Families included in Part IV: [illegible]

—— Part V. Chicago Chicago Natural History Museum, 1946 502 p. illus. 23 cm. (Chicago Natural History Museum. Fieldiana Botany Vol. 24 part V) o.p. 2115

Contents: Families included in Part V: [illegible]

—— Part VI. Chicago Chicago Natural History Museum, 440 p. illus. 23 cm. (Chicago Natural History Museum. Fieldiana Botany Vol. 24 part VI) $6.00 2116

Contents: [illegible]

Note: Listed above are the parts published to the end of 1946 of [illegible] treatment of the flora of Guatemala. The work is based partly on extensive collections made by the authors and partly on [illegible] of specimens in earlier collections. The species descriptions include the customary literature references, notes on habitat and distribution, descriptions of morphology and, in some instances, [illegible] that may pertain to uses of the plant, its local names, its virtues or other miscellaneous information.

STANDLEY PAUL CARPENTER

Flora of the Lancetilla valley Honduras Chicago Chicago Natural History Museum 1931 418 p illus. 23 cm. (Chicago Natural History Museum. Publication 283 Botanical series. Vol. X) $6.00 2117

Contents: Introduction. Geography and inhabitants. Climate. Vegetation. Relationships of the flora. [illegible] plants. [illegible] Exploration of the region. Plan of the flora. Acknowledgments. Annotated list of genera and species. Index.

Note: Following an introductory section on the general [illegible] and climatic conditions of the region, this monograph presents an annotated systematic description of genera and species based almost wholly upon the collections made by the author in 1927-28 [illegible] plates of photographs.

STANDLEY PAUL CARPENTER

Flora of Yucatan Chicago Chicago Natural History Museum 1930 338 p illus 24 cm. (Chicago Natural History Museum. Publication 279 Botanical series Vol III no 3) $4.00 2118

[illegible]

STANDLEY PAUL CARPENTER AND JULIAN A. STEYERMARK

Studies of Central American plants. Chicago Chicago Natural History Museum 1940-47 7 v illus 23 cm (Chicago Natural History Museum. Publication nos. 480 482 524 549 556 565 and 609 Fieldiana Botany Vol 22 nos 4-5 vol 23 nos. 1-5) Part I $0.75 part II $0.50 part III $0.15 part IV $0.50 part V $0.30 part VI $0.35 part VII $0.75 2119

STEVENS WILLIAM CHASE

Kansas wild flowers. Lawrence University of Kansas Press, 1948 463 p. illus (part col d) 26 cm. $7.50 2120

Contents (abridged): Introduction. The Kansas [illegible]

Note: A comprehensive, detailed description in words and photographs of the [illegible] flowers of Kansas. [illegible]

Note A standard manual for the botanist. It covers fully the states of Kansas, Nebraska, Iowa, Minnesota, South Dakota, and North Dakota, and the Canadian provinces, Manitoba, the southern part, and Saskatchewan, the southeastern part. Less fully it covers the prairie regions of Illinois, southern Wisconsin northern Missouri, eastern Colorado eastern Montana, and southern Saskatchewan *The editorial* ork as completed by Marshall A. Howe

RYDBERG, PER AXEL

Flora of the Rocky Mountains and adjacent plains Colorado Utah, Wyoming Idaho, Montana, Saskatchewan Alberta, and neighboring parts of Nebraska, South Dakota, North Dakota, and British Columbia Second edition (reprint) New York Hafner Publishing Company, *1954 1,144* p *24* cm. $15 00 2108

Contents: Introduction Tables—abbreviations, signs and measurements. Descriptive flora. Spermatophyta Key to the families—Gymnospermae—Angiospermae. Pteridophyta. Appendix Summary New genera and species and new combinations. Abbreviations of the names of authors. *Glossary* Index. Second appendix: Additions and corrections. Extensions of ranges. New species and new combinations published in the second edition. Index to the additions.

Not First published in 1917 and published again in second edition in 1922 this book was out of print for a number of years. However it is still useful, and demand for it has continued in sufficient volume to justify this reprint. It was commenced as study of the flora of the Rocky Mountains, but the author eventually elected to include also the flora of the plains adjacent to the Rocky Mountains. It remains, however primarily manual of mountain flora, useful as an aid in identification. The arrangement is systematic however the descriptions of species and other forms are limited to the scientific names concise descriptions of morphology *brief statements on habitat and distribution, life zone,* such as subalpine zone and month of flowering. Described in this style are 6,029 species in 1,055 genera.

SHREVE, FORREST

Vegetation of the Sonoran desert. Washington D C Carnegie Institution of Washington, *1951 192 p illus (part col d) 25 cm* (Carnegie Institution of Washington. Publication 591 Vegetation and flora of the Sonoran desert by *Forrest Shreve* and Ira L Wiggins Vol 1) $3 25 2109

Contents Introduction. Physical features Geography Drainage systems. Mountain ranges. Climate. Soils. Perennial egetation. *General characteristics of deserts. The North American desert* and its parts. Vegetational features of the Sonoran desert. Vegetational subdivisions of the Sonoran desert. Ephemeral herbaceous vegetation Winter ephemerals Summer ephemerals. Ecological features of characteristic species. Literature. Plates. Index.

Note. A monograph written on the basis of 40 years of study and field investigation of the subject. The final chapter describes th distribution, habitats, and ecological characteristics of 26 of the commonest plants of the Sonoran desert 24 full-page distribution maps illustrate this chapter

SMALL JOHN KUNKEL

Manual of the southeastern flora being descriptions of the seed plants growing naturally in Florida Alabama, Mississippi eastern Louisiana, Tennessee, North Carolina, South Carolina and Georgia. Chapel Hill University of North *Carolina Press* 1933 1 554 p illus *23 cm* $12 50 2110

Content Preface. Introduction Key to the orders. Descriptive flora. Appendix. Genera and species published in this flora. Table of orders and families. Index

Note This extensive volume is designed to record and describe the species f native and naturalized flowering plants known by the author to grow naturally in the southeastern United States south of the northern boundaries of North Carolina and Tennessee and east of the Mississippi river The species are grouped in genera, families, and orders, and are so arranged and described that they may be identified by means f the analytical keys and synopses gi en under each group, mainly by study of the morphology of the flowers and fruits. The arrangement of the natural plant families is essentially that f Engler and Prantl's *Die Natürlichen Pflanzenfamilien* Leipzig, *1887 1915* although in a few cases modifications of the sequence there adopted have been desirable. The descriptive material has been made very short, and a drawing showing flower and its gross morphology and a fruit of the first species under each genus, is also given. The present manual, which includes *259* new genera and species, supplants in part the author's *Flora f th southeastern United States,* second edition, New York, 1913 The Pteridophyta were intentionally omitted.

STANDLEY, PAUL CARPENTER

Flora of Costa Rica. Chicago Chicago Natural History Museum, 1937–38 4 v 24 cm. (*Chicago Natural History* Museum Publication nos 391, 392, 420, and 429 Botanical series Vol XVIII, parts 1–4) $2.50 per vol 2111

Contents Introduction Plant geography Atlantic *tierra caliente.* Pacific *tierra caliente.* Temperate region (*tierra templada*). Cold region (*tierra fria*) Relationships of the Costa Rican flora. Botanical exploration in Costa Rica. Plan of the flora. Acknowledgments. *Bibliography Systematic list of families, genera, and species.*

Note. The bulk of the work is a systematic annotated list of the phanerogamic plants of Costa Rica. For each family there have been cited all Costa Rican species known to the author, with indication f their distribution within and outside the country For names based on Costa Rican material, there is cited the place of publication, and for each species, there are cited also the synonyms with place of publication. Type collections of synonyms are cited in parentheses after the citation of the synonym. Cultivated plants are included in the list so far as they are known, and all the species known or reported for Cocos Island are also listed The bibliography lists 13 publications held to be the most important or useful for study of the Costa Rican flora, and there is detailed index.

STANDLEY, PAUL CARPENTER, AND JULIAN A STEYERMARK

Flora of Guatemala Part II. Grasses of Guatemala, by Jason R Swallen. Bamboos by F A McClure. Chicago Chicago Natural History Museum, 1955 390 p illus. 23 cm (Chicago Natural *History* Museum. Fieldiana Botany Vol 24 part II) $6.00. 2112

Content Genera included in Volume 24 Part II: Aegopogon. Agrostis. Andropogon. Anthephora. Aristida. Arthraxon. Arthrostylidium. Arundinaria. Arundinella. Avena. Axonopus. Bambusa. Bouteloua. Brachiaria. Brachypodium. Briza. Bromus. Calamagrostis. Cathestecum. Cenchrus. Chaetium. Chloris. Chusquea. Cinna. Coix. Cryptochloa. Cymbopogon. Cynodon. Dactyloctenium. Dendrocalamus. Diectomis. Digitaria. Distichlis. Echinochloa. Echinolaena. Eleusine. Elyonurus. Eragrostis. Eriochloa. Eriochrysis. Euchlaena. Festuca. Gigantochloa. Glyceria. Gouinia. Guadua. Gymnopogon. Gynerium. Hackelochloa. Heteropogon. Hierochloe. Hilaria. Homolepis. Hymenachne. Hyparrhenia. Ichnanthus. Imperata. Isachne. Ischaemum. Isophorus. Jouvea. Lamarckia. Lasiacis. Leersia. Leptochloa. Leptocoryphium. Lithachne. Lolium. Luziola. Manisuris. Melinis. Melocanna. Merostachys. Mesosetum. Microchloa. Muhlenbergia. Olyra. Oplismenus. Orthoclada. Oryza. Panicum. Pappophorum. Paspalum. Pennisetum. Pentarrhaphis. Pereilema. Pharus. Phragmites. Phyllostachys. Piptochaetium. Poa. Polypogon. Pseudechinolaena. Rhipidocladum. Saccharum. Sacciolepis. Schizachyrium. Setaria. Setariopsis. Sorghastrum. Sorghum. Spartina. Sporobolus. Stenotaphrum. Stipa. Streptochaeta. Thrasya. Trachypogon. Trichachne. Trichloris. Tripsacum. Trisetum. Tristachya. Triticum. Uniola. Zea. Zeugites. Emendations. Index.

of which were not recorded by Dr Cheeseman. On the other hand, of the 72 species of ferns named by the latter author Dr Wilder could find only 15, while recording 54 not present in the Cheeseman collection.

WILLIAMS LLEWELYN

Woods of northeastern Peru. Chicago Chicago Natural History Museum 1936 588 p. illus. 24 cm. (Chicago Natural History Museum. Publication 377 Botanical series Vol xv) $6.50 2128

Contents: Introduction. Route. Geography of Peru. The montaña. Formations and associations. Climate. Inhabitants. Communications. Agriculture. Forest products. Descriptions of the woods. Tables of anatomical characters of Peruvian woods. Vernacular names. Bibliography. Index.

Note: Following a brief introductory section describing the general features of the montaña or forest region, which constitutes more than half the total area of the republic of Peru, the present monograph offers an annotated descriptive catalogue of genera and species of trees and shrubs found growing in that area. The families are arranged according to the classification of Engler and Prantl, and the genera and species are listed alphabetically. The résumé of general characters for families and genera is based on the author's collection of 22,500 specimens obtained in the locality during 1929–30. The work includes an account of the principal characters of the leaves, flowers, and fruits, followed by a summary of the salient structural features of the dried woods with their macroscopic and microscopic physical properties. The bibliography lists 1[illegible] articles and monographs from the pertinent world literature.

WOODSON ROBERT EVERARD JR. AND OTHERS

Contributions toward a flora of Panama. Based upon collections by expeditions from the Missouri Botanical Garden Tropical Station, Balboa C.Z. By Robert E. Woodson, jr Robert W Schery and collaborators St. Louis The Missouri Botanical Garden 1937–51 illus. 26 cm. (Missouri Botanical Garden Annals) 2129

Contents (abridged): Part i Collections in the provinces of Chiriquí, Coclé and Panamá, by R. J. Seibert during the summer of 1935, by R. E. Woodson, jr and R. J. Seibert. Part ii, fascicle 1 Cycadaceae. Taxaceae. Typhaceae. Alismaceae. Butomaceae. Triuridaceae. Gramineae. Part ii, fascicle 2 Cyperaceae. Palmaceae. Cyclanthaceae. Part ii, fascicle 3 Araceae. Lemnaceae. Mayacaceae. Xyridaceae. Eriocaulaceae. Rapateaceae. Bromeliaceae. Commelinaceae. Pontederiaceae. Part iii, fascicle [illegible] Juncaceae to Marantaceae. Part iii, fascicles 2–3 Orchidaceae. Part iv fascicle 1 Piperaceae. Miscellaneous collections. Part [illegible] fascicle 1 Lauraceae to Cruciferae. Part [illegible] fascicle 2 Rosaceae. Leguminosae. Part [illegible] fascicle [illegible] Leguminosae (second part)

Note: A comprehensive descriptive catalogue which is still in the process of publication. Most of the parts published are still in print. However apply to the publisher for [illegible] list of those available and the prices.

VARIOUS PLANT GROUPS

ALEXOPOULOS CONSTANTINE JOHN

Introductory mycology Art work by Mrs Sun Huang Sung. New York John Wiley & Sons, Inc 1952 482 p. illus. 24 cm. $8.50 2130

Contents: The fungi. Phylum Schizomycophyta. Phylum Myxomycophyta. Phylum Eumycophyta—class Phycomycetes. Series Uniflagellatae. Series Biflagellatae. Series Aplanatae. Class Ascomycetes. Sub-class Protoascomycetes. Sub-class Euascomycetes—series Plectomycetes. Series Pyrenomycetes. Series Discomycetes. Form-class Deuteromycetes. Class Basidiomycetes. Sub-class Homobasidiomycetes. Sub-class Heterobasidiomycetes. The lichens. Glossary. Index.

Note: Designed as a textbook for college students who are beginning the study of fungi, this book [illegible] presentation of basic information rather than [illegible] comprehensive treatise. The main facts on occurrence, importance to man, general characteristics, structure, reproduction, life cycle and classification are given for selected groups of fungi. The classification followed is conservative yet modern. The illustrations are mostly clear reproductions of excellent [illegible]. The illustrations are mostly clear reproductions of photographs, drawings, but there are [illegible] some reproductions of photographs. Fairly extensive bibliographies are included. The author is Professor of Botany and Plant Pathology in Michigan State College.

AMES OAKES AND DONOVAN STEWART CORRELL

Orchids of Guatemala. Chicago Chicago Natural History Museum 1952–53 2 v. illus. 23 cm. (Chicago Natural History Museum Fieldiana Botany Vol 26 nos 1–2) $4.00 2131

Contents: Vol. xxvi, no. [illegible] Cypripedium. Phragmipedium. Habenaria. Triphora. Pogonia. Vanilla. [illegible] Sobralia. Cyrtopodium. [illegible] Ponthieva. Cranichis. Prescottia. Spiranthes. Goodyera. Erythrodes. [illegible] Corymborchis. [illegible] Physurus. [illegible] Scaphyglottis. Liparis. [illegible] Malaxis. Hexalectris. [illegible] Vol. xxvi, no. [illegible] Isochilus. Cattleya. Laelia. Brassavola. [illegible] Epidendrum. [illegible] Pleurothallis. [illegible] Stelis. [illegible] Polystachya. Calanthe. Epidendrum. [illegible] Bletia. Chysis. [illegible] Cyrtopodium. Govenia. [illegible] Catasetum. Cycnoches. [illegible] Lycaste. [illegible] Maxillaria. [illegible] Trichocentrum. [illegible] Oncidium. [illegible] Brassia. [illegible] Leochilus. [illegible] Ornithocephalus. [illegible] Notylia. [illegible] Trichopilia. [illegible] Index.

Note: A treatment of the known orchids of Guatemala [illegible] British Honduras. Described from the taxonomic and morphological viewpoints, are 5[illegible] species and 2[illegible] varieties in [illegible] genera. Included are the orchids collected by Paul C Standley and Julian A. Steyermark from 1938 to 1941 as well as those collected by other collectors. Descriptions of individual species contain, in addition to taxonomic and morphologic data, information on habitat and range. There are 1[illegible] figures most of which contain reproductions of several drawings. The drawings are [illegible] executed and clearly reproduced. Although published as two volumes, the set is continuously paged, and there is only one index.

BABCOCK ERNEST BROWN AND G LEDYARD STEBBINS JR.

The American species of *Crepis* their interrelationships and distribution as affected by polyploidy and apomixis. Washington D C. Carnegie Institution of Washington 1938 199 p. illus. 25 cm. (Carnegie Institution of Washington Publication no 504) o p 2132

Contents: Taxonomic history of the indigenous species. Present distribution of the species. Cytology of the species. Genetic interrelationships of the species. Factors affecting the distribution of the species. Origin and development of the species. The effects of polyploidy and apomixis on evolution. The systematic treatment of the agamic complex. Summary of the preceding sections. Materials and methods. Literature cited. Generic description. Key to the western American species of *Crepis*. Descriptions of species. Indexes.

Note: A cyto-taxonomic treatment of the 12 indigenous and 7 introduced North American species of *Crepis*, being an attempt to apply directly some of the best-established principles of modern cytogenetics to the species problem.

BABCOCK, ERNEST BROWN AND G LEDYARD STEBBINS JR.

The genus *Youngia* Washington D C. Carnegie Institution of Washington, 1937 106 p illus. 25 cm. (Carnegie Institution of Washington Publication no 484) $1.75 2133

STEYERMARK, JULIAN ALFRED, AND OTHERS

Contributions to the flora of Venezuela. Chicago Chicago Natural History Museum, 1951–57 1,190 p illus 24 cm (Chicago Natural History Museum Fieldiana Botany Vol 28, nos 1–4) Parts I–II, $4 00 each, part III, $4 25, part IV, $7 50 2121

Note This work is the report of three botanical explorations in Venezuela by the author from December 1943 to June 1945 during which large number of plants was collected. Numerous species were collected that were previously unrecorded for Venezuela, and some new genera and a large number f new species were found. Th first three parts—except for three pages of introduction in the first part——are devoted to systematic descriptions of th new taxa and new combinations made necessary as result of the taxonomic studies. The genera are divided among the three parts as follows Number 1 Mixed through Sarraceniaceae Number 2 Droseraceae through Umbelliferae Number 3 Ericaceae through Compositae. The fourth part consists of summaries in systematic order of (1) additions t the flora f the regions explored (2) f species new to Venezuela (3) of the new taxa with bibliographic citations and localities, and (4) groups described as new arranged as a table

STEYERMARK, JULIAN ALFRED

Studies of the vegetation of Missouri Chicago Chicago Natural History Museum 1940–41 2 v illus 23 cm (Chicago Natural History Museum Publication nos 485 and 491 Botanical series Vol IX, no 5–6) Part I $1 00 part II $1 25 2122

Contents Part I Natural plant societies and succession in the Ozarks of Missouri: Introduction. Natural plant associations and succession in th Ozarks of Missouri. Subclimax stages I the Ozarks. Plant indicators of acidity and alkalinity Ecological variations induced by burning, logging, clearing, and other unnatural causes. Examples taken from specific areas showing particular stages within an sociation. Part II Phanerogamic flora of the fresh-water springs in the Ozarks f Missouri General discussion of Ozark springs. Description f the chief springs in the Ozarks.

Note This two-part monograph records the uthor's observations and conclusions on the ecological and phytogeographical conditions prevailing in the Ozark flora f Missouri The first part of the work presents a critical study of the natural plant succession and the related variations in the environment and past geological history of the region. The effect upon pla ts in the Ozarks of the presence or absence I limestone in the soil is discussed at length. Part II describes the vegetation of the Ozark springs as a distinct unit in the flora of the stat including list of the various species found in each spring with the dominant species noted in each case. There are 16 full-page distribution maps and over 50 photographs.

TAYLOR, WILLIAM RANDOLPH

Plants of Bikini and other northern Marshall Islands Ann Arbor University of Michigan Press 1950 227 p illus. (incl col d frontispiece) 24 cm (University of Michigan studies Scientific series Vol XVIII) $5 50 2123

Content Previous botanical exploration f the Marshall Islands Description f the atolls and the marine flora. Characteristics of the land flora Detailed botanical features Annotated catalogue I the plants Algae. Fungi. Bryophyta. Spermatophyta. Diagnoses of new species and new forms. Bibliography Plates 1 79 Index.

Note Before carrying out the gigantic tomic-bomb tests of "Operation Crossroads of 1946 the commanding officers of the joint task force directed that comprehensive scientific studies be made f the site f the test Part of these studies was an analysis f the plant and animal life of Biki i toll nd of other atolls in the same latitude for comparison The present report describes the plants, excepting phytoplank on of these areas The book contains sketches f the physical haracteristics of Eniwetok Bikini, Rongelap, and Rongerik atoll as they affect the vegetation report on the botan ical aspects I each atoll, and brief technical descriptions of the plants observed Th plates are photographic illustrations f the plants.

VERMONT BOTANICAL CLUB

The flora of Vermont, an annotated list of the ferns and seed plants of the state of Vermont Compiled by a committee of the Vermont Botanical Club E J Dole, editor Third revised edition Burlington, Vt. The Vermont Botanical Club 1937 353 p. illus. 23 cm $1 50 2124

Content Catalogue of fernworts and seed plants: Pteridophyta. Spermatophyta. Supplementary tables. Index of scientific names. Index to English names.

Not A systematic tabulation with references to the original literature on each of the genera and species described. Each species or group listed is cited with statement of habitat, distribution within the stat of Vermont, and degree of frequency Plants rare in Vermont are cited with a record of the first collector and, in some cases, the latest modern collector of the species. All recorded type-stations in Vermont are also cited. The work contains 1,5?? annotated records of fernworts and seed plants, in which there are 36 new combinations. The third edition represents revision and enlargement of the 1915 list and includes new species and some reclassification of names.

WEST, ERDMAN, AND LILLIAN E ARNOLD

The native trees of Florida. Revised edition Gainesville University of Florida Press, 1956 218 p illus 24 cm $4 50 2125

Contents Foreword, by H. H. Hume Introduction How to use the key Key to the native trees of Florida. Descriptive account of the trees. List of references. Glossary Index.

Note A manual f the trees of state hich is rich in tree flora. It is directed t amateur botanists and other laymen, and its chief purpose is to aid in identification. The descriptions of species give the scientific name and one or more common names, describe morphological characteristics in nontechnical language name distinguishing character nd include general comment on range, uses of the wood, etc. The first edition was published in 1946. This second edition contains descriptions f six additional species and a umber f other additions and corrections.

WHERRY, EDGAR THEODORE

Wild flower guide, northeastern and midland United States Illustrated by Tabea Hofmann Sponsored by The Wild Flower Preservation Society Washington D C. Garden City Doubleday & Company Inc. 1948 202 p illus (part col d) 20 cm $3 95 2126

Content I troduction. Wild flower conservation. Glossary Flower parts. Classification. Monocots. Illustrations of monocots Free-petal dicots. Illustrations f free-petal dicots. United-petal dicots. Illustrations f united-pet l dicots. Appendices Flowers according to color I troduced wild flowers. An outline f plant ecology Wild flower literature. Index.

Not A compact and simplified guide to the identification of some 400 species of wild flowers growing in the United States east of longitude 100° and north of latitude 37 The plants are grouped according to family and each species is described as to common name, technical name, features, range habitat, and culture Drawings of each plant, many of them in color are included. The appendix listing f flowers by color ill be of value to the layman, for hom the book is designed.

WILDER, GERRIT PARMILE

Flora of Rarotonga. Honolulu Bernice P Bishop Museum 1931 113 p. illus. 25 cm. (Bernice P Bishop Museum. Bulletin 86) No 1 $4 00 no 2 $4 00 2127

Not I this paper are recorded the data obtained by the uthor during three isits made in 1925 1927 and 1929 to Rarotonga, the largest f the Cook Islands. In 1903, Dr T F Cheeseman published book on the same subject, and it is of interest to not he hanges in the flora—and also in the number of the genera and species f some plants— hich ha taken place in the interval This bulletin records 560 species of plants, 135

of which were not recorded by Dr. Cheesman. On the other hand, of the 72 species of ferns named by the latter author Dr. Wilder could find only 11, while recording 34 not present in the Cheesman [illegible].

WILLIAMS LLEWELYN

Woods of northeastern Peru. Chicago Chicago Natural History Museum, 1936 588 p. illus 24 cm. (Chicago Natural History Museum. Publication 377 Botanical series Vol. xv) $6.50 2128

Contents: Introduction. Route. Geography of Peru. The materials. Formations and associations. Climate. Inhabitants. Communications. Agriculture. Forest products. Descriptions of the woods. Tables of anatomical characters of Peruvian woods. Vernacular names. Bibliography. Index.

Note: Following a brief introductory section describing the general features of the materials or forest region which constitutes more than half the total area of the republic of Peru, the present monograph offers an annotated descriptive catalogue of genera and species of trees and shrubs found growing in that area. The taxa are arranged according to the classification of Engler and Prantl, and the genera and species are listed alphabetically. The selection of general characters for families and genera is based on the author's collection of [illegible] specimens obtained in the herbarium during [illegible]. The work includes an account of the principal characters of the leaves, flowers, and fruits, followed by a summary of the [illegible] structural features of the dried woods with their macroscopic and microscopic physical properties. The bibliography lists [illegible] articles and monographs from the pertinent wood literature.

WOODSON ROBERT EVERARD JR., AND OTHERS

Woodson Jr Robert W Schery and collaborators. St. Louis The Missouri Botanical Garden, 1937–51 illus. 26 cm. (Missouri Botanical Garden. Annals) 2129

Contents (abridged): Part 1: Collections in the provinces of Chiriquí, Coclé, and Panamá, by R. J. Seibert during the summer of 1935, by R. E. Woodson, jr. and R. J. Seibert. Part II, fascicle 1 [illegible]

Note: A comprehensive descriptive catalogue [illegible] in the process of publication. Most of the parts published are still in print. However, apply to the publisher for [illegible] list of those available and the prices.

VARIOUS PLANT GROUPS

ALEXOPOULOS CONSTANTINE JOHN

Introductory mycology. Art work by Mrs. Sun Huang Sung. New York. John Wiley & Sons Inc., 1952 482 p illus. 24 cm. $8.50. 2130

Contents: The fungi. Phylum Schizomycophyta. Phylum Myxomycophyta. Phylum Eumycophyta—class Phycomycetes. [illegible] Class Ascomycetes. Sub-class [illegible] Class Basidiomycetes. Sub-class [illegible] The lichens. Glossary. Index.

Note: Designed as a textbook for college students who are beginning the study of fungi, this book [illegible] presentation of basic information rather than comprehensive treatise. The main facts on occurrence, importance to man, general characteristics, structure, reproduction, life cycle, and [illegible] are given for selected groups of fungi. The illustration is [illegible] and good. [illegible] are mostly line reproductions of [illegible], but there are some reproductions of photographs. Fairly extensive bibliographies are included. The author is Professor of Botany and Plant Pathology in [illegible].

AMES OAKES AND DONOVAN STEWART CORRELL

Orchids of Guatemala. Chicago Chicago Natural History Museum 1952–53 2 v illus 23 cm. (Chicago Natural History Museum. Fieldiana Botany Vol. 26 nos 1–2) $4.00 2131

Contents: Vol. xxvi, no. [illegible]

Note: A revision of the known orchids of Guatemala and British Honduras. Described from the taxonomic and morphological viewpoints, are [illegible] species and [illegible] varieties in [illegible] genera. Included are the orchids collected by Paul C. Standley and Julian A. Steyermark from 1938 to [illegible] as well as those collected by earlier collectors. Descriptions of [illegible] species [illegible] taxonomic and morphologic data, information on habitat and range. There are [illegible] figures, most of which contain reproductions of several drawings. The drawings are [illegible] executed and [illegible] reproduced. Although published as two volumes, the work is consecutively paged, and there is only one index.

BABCOCK ERNEST BROWN AND G LEDYARD STEBBINS JR.

The American species of *Crepis* their interrelationships and distribution as affected by polyploidy and apomixis. Washington D C Carnegie Institution of Washington, 1938 199 p. illus. 25 cm. (Carnegie Institution of Washington. Publication no. 504) o.p 2132

Contents: Taxonomic history of the indigenous species. Present distribution of the species. Cytology of the species. Genetic interrelationships of the species. Factors affecting the distribution of the species. Origin and development of the species. The effects of polyploidy and apomixis on evolution. The systematic treatment of the agamic complex. Summary of the preceding sections. Materials and methods. Literature cited. Generic description. Key to the western American species of *Crepis*. Description of species. Indexes.

Note: A cytotaxonomic treatment of the 12 indigenous and [illegible] introduced North American species of *Crepis*, being an attempt to apply directly some of the best-established principles of modern cytogenetics to the species problem.

BABCOCK, ERNEST BROWN AND G LEDYARD STEBBINS JR.

The genus *Youngia*. Washington, D. C. Carnegie Institution of Washington, 1937 106 p. illus. 25 cm. (Carnegie Institution of Washington. Publication no 484) $1.75 2133

Contents (abridged) History of the genus. Diagnosis of the genus. Relationships of *Youngia*. Geographic distribution. Artificial key to the species. *Doliphyllum Stenophytum*, *Hieracioidea*, *Crepidopsis Mesomeris*, *Euyoungia*. Species incertae sedis. Species exclusae. Index to species, subspecies, and synonyms.

Note A monographic treatment of the species of the herbaceous plant *Youngia*, with the purpose of redefining the genus and its relations to *Crepis* and the neighboring genera, and of clarifying the interrelationships of the species.

BAILEY, LIBERTY HYDE

The cultivated conifers in North America, comprising the pine family and the taxads, successor to *The cultivated evergreens* New York The Macmillan Company, 1933 404 p illus 24 cm $13 50 2134

Contents Book I, The kinds of conifers Preview of the systematic treatment. The taxads, or yews and their kindred. The true cone-bearers pines. Firs and spruces. Cedars, larches, cypresses, and others. Junipers. Book II, The growing of conifers for ornament and interest Conifers in the landscape. Cultivation and propagation of conifers. Experiences with conifers. Insects, diseases, and injuries of conifers in North America. Index.

Note A complete manual, abundantly illustrated, of the North American cone-bearing evergreens, intended both for the student of forestry and for the practicing silviculturist. The volume is the successor to *The cultivated evergreens*, edited by L. H. Bailey New York, 1923 bringing that work up to date where necessary Its first book is a systematic treatment of the subject and includes descriptions of about 1,000 species and varieties. The second book contains practical information on the growing of conifers and includes contributions by 10 specialists other than the author

BARNETT, H L

Illustrated genera of imperfect fungi. Minneapolis Burgess Publishing Co 1955 218 p illus 28 cm $4 00 2135

Contents Introduction. Key to genera. Descriptions and illustrations Conidial phycomycetes. Moniliales. Sphaeropsidales. Melanconiales. Mycelia sterilia. General references. Index to genera.

Note The chief purpose of this book is to teach identification of the imperfect fungi. It is designed for the instruction of college students, particularly students majoring in plant pathology and other fields where the identification of these plants is of practical importance. Most of the space is devoted to descriptions and reproductions of drawings. The drawings are printed on right-hand pages, and the identifying captions on facing left hand pages. The drawings are clear and well reproduced, but the degree of magnification is not stated. The author is Professor of Mycology in the University of West Virginia.

BARTRAM, EDWIN BUNTING

Manual of Hawaiian mosses Honolulu Bernice P Bishop Museum 1933 275 p illus 25 cm (Bernice P Bishop Museum Bulletin 101) $4 00 2136

Content (abridged) Introduction: Scope life history and structural features of mosses key to the genera Sphagnales. Andreaeales. Bryales Arthrodonteae, Nematodonteae. Excluded and uncertain species. Literature cited. Glossary Additions. Index to genera and species.

Note Because the literature relative to the Hawaiian mosses is widely scattered and much of it is difficult of access to any but professional botanists, the author has embodied the available information in this manual for the use of students interested in these forms of plant life. With this purpose in mind, he has presented descriptions, distributional data, and sketches illustrating the characteristics of the respective species of mosses Collections which he made during 1930 supplemented by other collections in the herbarium of the Museum formed the groundwork of these studies, which deal with one of the most unique phytogeographical areas in the world The *Supplement* was published in 1939 in the Museum Occasional papers, volume 15 no 6, $0.50.

BARTRAM, EDWIN BUNTING

Mosses of Guatemala. Chicago Chicago Natural History Museum 1949 442 p illus 24 cm (Fieldiana Botany, Vol 25) $6.00 2137

Note. A systematic description of approximately 500 species and 203 genera. Its taxonomic importance is indicated in the following sentences of the author "As this is the first attempt at a similar analysis of the mosses of any restricted tropical American country the task is, to some extent, explorative. For until many of the tropical American genera are disencumbered of numerous dubious species by careful revisional studies, the specific entities involved are open to a wide variety of interpretations. The individual descriptions include statements on distribution and also on the site from which the particular specimen was collected. The author points out that some of these habitats pose interesting problems in ecology and plant migration.

BARTRAM, EDWIN BUNTING

Mosses of southeastern Polynesia. Honolulu, Hawaii Bernice P Bishop Museum, 1941 29 p illus 23 cm. (Bernice P Bishop Museum. Occasional papers Vol. xv, no. 27, May 29, 1940) $0 50 2138

Note. The material on which this study is based consists of the collections made during the Mangarevan Expedition from the Museum in 1934 Previous records from the Austral Islands and the Tuamotus (*Occasional papers* Vol. 10, no. 10) have also been included. The total number of species reported is only 63 a circumstance probably to be explained by the fact that the islands are low and the rain-forest flora is nearly or quite absent. This material gives for the first time a fairly comprehensive outline of the moss flora of the numerous islands in the extreme southeastern corner of the Polynesian area, which includes the Tuamotu Archipelago, the Austral Islands, the Mangareva (Gambier) Islands, and Pitcairn and Henderson Islands. In this flora there are clear indications of an intimate connection with the New Zealand flora which is apparently confined to these southernmost islands. The author has published in the same series several other studies of the mosses of this region.

BENSON, LYMAN

The cacti of Arizona Second edition. Line drawings by Lucretia Breazeale Hamilton. Albuquerque University of Arizona Press, Tucson, *published at the University of New Mexico Press*, 1950 134 p illus. (part col d) 24 cm $4 00 2139

Content Introduction The structure of cacti. Juvenile forms. How to identify cacti. Problems in the naming of cacti. The geographical distribution of cacti. Classification of cacti Key to the genera. *Opuntia* (cholla prickly pear) Cereus. *Echinocereus* (hedgehog cactus) *Echinocactus* (barrel cactus, bisnaga, or biznaga) *Mammillaria* (pincushion and fishhook cacti) Culture and care of Arizona native cacti General considerations. Special groups.

Note A semitechnical manual organized and written so that it is useful both to amateurs and to professional botanists who are interested in the collection or identification of the cacti found in the state of Arizona, a state noted for its abundant flora of this plant group. Also included is a short discussion for gardeners of the culture of transplanted and seedling cacti. The first edition appeared in 1940 A number of revisions of classification and nomenclature have been incorporated in this edition, and some changes have been made in the illustrations. The book now contains 33 figures and 19 plates. Five of the latter have been reproduced in color

BENSON, LYMAN

A treatise on the North American Ranunculi Notre Dame *University of Notre Dame* 1948 264 p 23 cm (The American midland naturalist. Vol 40 no 1) $1 25 2140

Content Methods of investigation. Diagnostic characters. Geographical distribution. Policy in classification Concept of genera. Concepts of species and varieties. References. Ranunculus L. List of species and varieties by subgenera and sections Index.

Note The accumulation of specimens collected since the last revision of the North American Ranunculi has created a need for a more complete coverage which is offered by this publication. The reclassification is based on extensive field studies, and the following conservative policy in the segregation of groups, considering

[illegible] ... from the same publisher for $0.75.

BESSEY ERNST ATHEARN

Morphology and taxonomy of fungi. New York The Blakiston Division McGraw Hill Book Company 1950 791 p. illus. 23 cm $9.50 2141

Contents (abridged) Introduction. Myxomycetes. Phycomycetes. The higher fungi—Carpomycetae. Class Ascomycetes. Class Basidiomycetes. Fungi Imperfecti—the imperfect fungi. The phylogeny of the fungi. Guide to the literature for the identification of fungi. Index.

Note Although this book [illegible]

CHRISTENSEN, CARL FREDERIK ALBERT

A revision of the Pteridophyta of Samoa. (Selaginella by A H G Alston) Honolulu Bernice P Bishop Museum 1943 138 p illus 25 cm (Bernice P Bishop Museum Bulletin 177) $2 00 2147

Note This report presents a complete revised list of all known Samoan species of Pteridophyta, based on an examination of all Samoan collections. The material employed in this study consisted of collections made in 1929 and 1931 by Dr Erling Christophersen supplemented by loans from various museums. The author disagrees with the naming of the specimens in previously published lists of the fern flora of Samoa. A further difference between these papers and the present report is due to the change of the species concept and to the totally different nomenclature employed.

CHRISTENSEN, CLYDE MARTIN

Common fleshy fungi. Revised edition Minneapolis Burgess Publishing Company 1955 246 p illus 21 cm $3 00 2148

Contents (abridged) Introduction How to use the keys. Edible and poisonous mushrooms. Keys and descriptions White spored mushrooms. Yellow-brown spored mushrooms. Pink spored mushrooms. Purple-brown spored mushrooms. Black spored mushrooms. Polyporaceae—pore fungi. Hydnaceae—tooth fungi. Boletaceae. Clavariaceae—club fungi. Gastromycetales—puffballs and relatives Lycoperdaceae. Sclerodermataceae Secotiaceae. Nidulariaceae Phallaceae—stink horns. Tremellales—jelly fungi. Ascomycetes—cup fungi and relatives. References. Glossary Index.

Note This manual for amateur naturalists provides in relatively small space keys and descriptions of species for the identification of a considerable range of fungal forms. It is concerned with such fungi as mushrooms and puffballs however it is not a guide to the collecting of edible mushrooms In fact, the author refers his readers to other books for the detailed descriptions of the common edible mushrooms.

CHRISTENSEN, CLYDE MARTIN

COPELAND, EDWIN BINGHAM

Ferns of Fiji. Honolulu, Bernice P. Bishop Museum, 1929. 105 p. illus. 25 cm. (Bernice P. Bishop Museum. Bulletin 59) $1.25 2154

Contents: Part ... New species. Part ii. Fern flora of Fiji. Key ... the families. Ophioglossaceae. Marattiaceae. Osmundaceae. Hymenophyllaceae. Schizaeaceae. Gleicheniaceae. Polypodiaceae. ... Index.

Note: A tentative description of the ferns of Fiji published ... to stimulate interest in increased collecting of ferns, not only in Fiji but in other tropical islands ... have the fern flora has not been completely explored. It ... based largely on collections made in 1927 by H. E. Parks and in 1927 and 1928 by J. ... Gillespie. However, information from other collections has been incorporated. In fact, the report describes all species collected in Fiji to the time of its writing. The descriptions of taxa are primarily morphological, but in the species descriptions, in addition to the morphological diagnoses, information is included on range and habitat. Ten of the new species described are shown on the plates in the form of reproductions of photographs of herbarium specimens.

COPELAND, EDWIN BINGHAM

Ferns of southeastern Polynesia. Honolulu, Bernice P. Bishop Museum, 1938. 58 p. illus. 23 cm. (Bernice P. Bishop Museum. Occasional papers. Vol. xiv, no. 5. May 31, 1938) $0.[illegible] 2155

Note: The material on which this study ... based consists of 429 collections, two from ... Island, 117 from the Society Islands, ... from islands to the south and southeast of the Society Islands. Bulletin ... of the Museum contained ... preliminary description of the ferns of the Society Islands. The present study adds three species, two of them new. The flora of southeastern Polynesia was described in Bulletin ... of the Museum, and the only changes in conclusions stated there are in respect to detail. The types of the new species are in the herbarium of the Bishop Museum. The illustrations for this paper consist of ... plates.

COPELAND, EDWIN BINGHAM

Genera filicum: the genera of ferns. Waltham, Chronica Botanica Company, 194[illegible]. 247 p. illus. 27 cm. (Annales cryptogamici et phytopathologici. Vol. v) $6.50 2156

Contents: Introduction. Order Ophioglossales. Ophioglossaceae. Order Marattiales. Marattiaceae. Order Filicales. Osmundaceae. Schizaeaceae. Gleicheniaceae. Loxsomaceae. Hymenophyllaceae. Plagiogyriaceae. ... Dicksoniaceae. ... Cyatheaceae. Aspidiaceae. ... Aspleniaceae. ... Polypodiaceae. ... Marsileaceae. Salviniaceae. Index. Plates.

Note: This is ... systematic work describing the 305 genera of the ... recognized families of ferns. Under each genus there are one or more bibliographical citations and the name of ... type species with range. The work is not illustrated except for the ... plates. The introduction contains ... brief history of pteridology from the time of Linnaeus to the present.

COPELAND, EDWIN BINGHAM

Pteridophytes of the Society Islands. Honolulu, Bernice P. Bishop Museum, 1932. 86 p. illus. 25 cm. (Bernice P. Bishop Museum Bulletin 93) $1.50. 2157

Contents (abridged): Introduction. New species. Fern flora of the Society Islands. Filicineae. Lycopodiaceae. Index.

Note: This study was based on material collected in Tahiti and most of the other islands in 1922, the total number of specimens being about 343. The author identified this and other collections of Bishop Museum and prepared this bulletin to serve as ... companion to Bulletin 89 from the Museum, on the ferns of Fiji. This study differs from the other in that it includes the Lycopodiaceae and excludes almost all species previously reported but ... in the Museum herbarium. The fern flora of Tahiti ... found to be naturally poorer than that of Fiji, ... circumstance which may be explained by the fact that Tahiti is younger and lies farther out in the ocean, away from the source of immigrants.

COPELAND, JOSEPH JOHN

Yellowstone thermal Myxophyceae. New York, New York Academy of Sciences, 1936. 229 p. illus. 23 cm. (New York Academy of Sciences. Annals. Vol. xxxvi, p. 1-232) $2.00 2158

Contents: Introduction. Location and nature of the Yellowstone National Park. Geological history. Algological studies in the Yellowstone. Survey of the Yellowstone hot springs. Descriptive list and keys. Chroococcaceae. Chamaesiphonaceae. Oscillatoriaceae. ... temperature ... Nature of thermal ... and tolerance. Thermal distribution of the Yellowstone Myxophyceae. Origin and relationships of the Yellowstone thermal flora. Bibliography. Index.

Note: A study of the Myxophyceae of the Yellowstone hot springs, in which ... genera belonging to ... families in three orders are described.

CORRELL, DONOVAN STEWART

Ferns and fern allies of Texas. Renner, Texas, Published by Texas Research Foundation, 1956. 188 p. illus. 27 cm. (Texas Research Foundation. Contributions, a series of botanical studies edited by Cyrus Longworth Lundell. Vol. 2) $5.50 2159

Contents (abridged): Introduction. Ecology and distribution of Texas ferns. Fern structure. Reproduction. Hybridization—propagation and culture. ... Pteridophyta—key to the families. Fern allies. Equisetaceae. Lycopodiaceae. Selaginellaceae. Isoetaceae. The ferns. Ophioglossaceae. Osmundaceae. Schizaeaceae. Marsileaceae. Polypodiaceae. Salviniaceae. Appendix. Glossary. Bibliography. Index.

Note: Texas, covered in this study of ferns and fern allies, is not only the largest state of the United States of America, but has an unusually diverse geography and climate. Its fern flora is especially rich. The 1?? species which have been found in the state are described in this book. The species descriptions cover literature references, morphology, range in continental North America and distribution within Texas. They are supplemented by clear well-reproduced drawings.

CORRELL, DONOVAN STEWART

Native orchids of North America north of Mexico by Donald Stewart Correll, with illustrations by Blanche Ames Ames and Gordon Winston Dillon; cultural notes contributed by Edgar Theodore Wherry and John Vertrees Watkins; foreword by Charles Schweinfurth. Waltham, Chronica Botanica Company, 1950. 399 p. illus. 27 cm. (A new series of plant science books, edited by Frans Verdoorn. Vol. xxvi) $7.50 2160

Content Introduction Distribution of our native orchids. General characteristics of orchids. Cultural notes on extra-tropical orchids. Explanation of the text. Use of keys. Orchidaceae Cypripedium Orchis. Habenaria. Listera. Epipactis. Cephalanthera. Triphora. Isotria. Pogonia. Cleistes. Vanilla. Arethusa. Calopogon. Prescottia Cranichis. Ponthieva. Spiranthes. Centrogenium. Goodyera. Erythrodes. Zeuxine Tropidia. Pleurothallis. Lepanthopsis. Malaxis. Liparis. Tipularia. Calypso. Epidendrum. Basiphyllaea. Polystachya. Galeandra. Aplectrum. Hexalectris. Corallorhiza. Bletia. Eulophia. Cyrtopodium. Maxillaria. Ionopsis. Brassia. Oncidium. Macradenia. Campylocentrum. Harrisella. Polyrrhiza. Glossary Selected bibliography Index of scientific names. Index of common names.

Note A systematic treatise in which are assembled for the first time accounts of all recorded North American orchids north of Mexico. Described and discussed are 170 species divided into 46 genera. A key to the genera and keys to the species are furnished. Typical information given for each species includes scientific name or names, etymology of same, common names, botanical description discussion of distinctive features, range geographical distribution, preferred locations, and cultural notes. The cultural notes are for the benefit of collectors interested in growing wild orchids in their own gardens. Careful and detailed line drawings are included for most species.

COUCH, JOHN NATHANIEL

The genus *Septobasidium* with frontispiece, 114 plates and 60 text figures Chapel Hill University of North Carolina Press 1938 480 p illus 26 cm $5 00 2161

Content Preface. The fungus-insect relationship. Pathological considerations and control methods. Geographical distribution host trees and host insects. Structural features of taxonomic importance. Hybridization. Cytology Relationship. Generic description. Key to species. Description of species. Notes on incompletely known species. Notes on excluded species. Literature list. Index.

Note The purpose of this work is to assemble descriptions and illustrations of the type species of *Septobasidium*. It includes descriptions with photographs and line drawings of about 175 species. About 90 of the descriptions are of the old original types, most of which have never been adequately described, and only a few of which have been illustrated. Of the remainder 27 have been previously described by the author and 55 new ones are described and illustrated here for the first time. The genus is practically worldwide in distribution, is very abundant in certain localities, and occurs on a great variety of wild and cultivated woody plants, as *citrus, apple tea, rubber etc* sometimes causing much damage.

DAWSON E YALE

Marine red algae of Pacific Mexico Los Angeles University of Southern California Press 1952–54 396 p illus 22 cm (University of Southern California Allan Hancock Pacific Expeditions Vol 17 no 1–2) $6 50 2162

Content Part I, Bangiales to Corallinaceae Subf Corallinoideae Introduction. Bangiales. Nemalionales. Gelidiales. Cryptonemiales Literature cited. Part II, Cryptonemiales (cont.) Introduction Dermocorynidaceae. Grateloupiaceae. Callymeniaceae Choreocolaceae. Literature cited.

Note A systematic description of the Rhodophyceae based largely on collections made by the author on four *Allan Hancock Pacific* expeditions but including also material from some other collections and specimens collected by other collectors The species descriptions contain the customary literature citations and diagnoses of morphology In addition they identify the type specimen and type locality and give information on the Mexican distribution. In most cases, there is also a paragraph of miscellaneous information on such points as variability in the species and distinguishing characteristics. Part I contains 33 plates and Part II, 44 plates. The majority of plates are reproductions of photographs of specimens. The two parts published so far are continuously paged, but may be purchased separately Part I $3.00 Part II, $3.50

EVANS ALEXANDER W

The *Cladoniae* of Florida. New Haven The Connecticut Academy of Arts and Sciences 1952 87 p illus 24 cm (Connecticut Academy of Arts and Sciences Transactions Vol 38 pages 249–336) $2 00 2163

Content Introduction. Systematic arrangement of the species. Section *Clausae* Koerb. Subsection *Cocciferae* Del. Subsection *Foliosae* Bagl & Carest. Subsection *Podostelides* (Wallr.) Vain. Subsection *Thallostelides* Vainio. Section *Perviae* (F.) Fr. Subsection *Chasmariae* (Ach.) Floerke. Subsection *Cenodes* (Del.) Vainio, Subsection *Cladinae* (Nyl.) Mattick. Census of the *Cladoniae* in Florida. Literature cited.

Note A systematic study of an important component of the lichen-flora of the state of Florida. It is based on collections made by the author and several assistants during a series of explorations in Florida 1903 to 1950, and on personal examinations of specimens of *Cladoniae* from Florida in five herbaria, including the Eckfeldt collection in the Philadelphia Academy of Sciences and the large collection in the University of Florida. After classifying and describing all of the species that have been found in Florida, the author presents a census by counties of numbers of species reported. Mattick's classification of *Cladoniae* has been followed and all of the species described belong to his subgenus Eucladonia.

FASSETT, NORMAN CARTER

Grasses of Wisconsin the taxonomy ecology, and distribution of the Gramineae growing in the state without cultivation. With an essay "The vegetation of Wisconsin" by John T Curtis Madison University of Wisconsin Press 1951 173 p illus 22 cm. $3.00 2164

Content Introduction Limitations of range maps. To identify a grass. Structure of grasses. Key to subfamilies and tribes. Characteristics and distribution of the Gramineae of Wisconsin. Festuceae Hordeae. Aveneae. Agrostideae. Chlorideae. Phalarideae. Oryzeae Paniceae. Andropogoneae. Tripsaceae. The geological setting The vegetation of Wisconsin, by John T Curtis. Figures. Glossary Index.

Note The grasses covered in this study include more than 90 natives of Wisconsin and others that have been introduced either intentionally or unintentionally into the state. The different grasses are listed and described in systematic order Small county maps of the state six to a page, show distribution of 176 species of grass. Following the text is a section of 59 pages containing 136 line drawing figures, many of them in magnified size to assist in identification.

FASSETT, NORMAN CARTER

A manual of aquatic plants. New York McGraw Hill Book Company Inc., 1940. 382 p illus 23 cm. 2164A

Content Part I, General key Part II, Descriptive treatment. Appendix. Uses by wildlife. Uses of aquatic plants by birds and mammals. Animal index. Bibliography The relation of plants to fish. Bibliography Glossary

Note In this simple, practical book the author provides keys and illustrations for macroscopic plants which normally grow in water (saline, tidal and bog habitats excluded) from Minnesota to Missouri and eastward to the Maritime Provinces and Virginia. Part I is a key based on vegetative characters, for identifying aquatic plants. The key to sterile plants is unique. Part II is a taxonomic treatment of all the plants. A revised edition was published in 1957 by the University of Wisconsin Press, 406 p., $4.50

FAULL, JOSEPH HORACE

Taxonomy and geographical distribution of the genus Milesia. With nine plates. Jamaica Plain Mass The Arnold Arboretum of Harvard University 1932 138 p. illus. 25 cm. (Arnold Arboretum of Harvard University Contributions II) $3 00 2165

Contents Introduction. Nomenclature Historical résumé. Fern hosts Geographical distribution. The taxonomy of Milesia. Fern hosts and the species of Milesia that occur on them. The species of Milesia, the two generations of which are known, and their alternative hosts. Species of Milesia and their fern hosts. Excluded species. Acknowledgments. Summary Bibliography Addendum to the species on Dryopteris. Explanation of plates. Index.

Note A comprehensive treatise in monographic form of the most unique and least understood genus of all the rust fungi. In taxonomic treatment it evaluates each historical reference both as to genus and species, and for geographical distribution embraces

[illegible] material throughout the world. Consistent with the accepted definition of the genus, [illegible] is defined in this paper as a genus of white-spored rusts, characterized by [illegible], [illegible] spermogonia, peridermia, uredinia with [illegible] peridium and [illegible] teliospores, and many-celled, [illegible] teliospores. Fifty-one references are listed.

FISCHER GEORGE WILLIAM

Manual of the North American smut fungi New York The Ronald Press Company 1953 343 p. illus. 24 cm. $8.75 2166

Contents: Introduction. Host genus index and key to the species of North American smut fungi. Key to the genera of the North American smut fungi. North American smut fungi: [illegible]. [illegible]. Literature cited. Index.

Note: A reference manual designed [illegible] to enable persons with some botanical and mycological background to identify with reasonable certainty any of the species of smut fungi known to occur in North America. The introduction and the two keys at the beginning of the volume run to only 31 pages, and the taxonomic descriptions occupy the rest of the space. Most of the species descriptions were based on personal examination of specimens by the author. Known hosts are listed for each species. In cases where two or more species of similar morphology are found on hosts of different families, the species are maintained as distinct. Twenty-two genera, 276 species, and [illegible] few varieties, on species of 747 host genera are described. There are 136 figures. In many instances [illegible] single figure contains [illegible] reproduction of [illegible] photograph which shows the gross appearance of the affected host and one or more microphotographs of spores. The author, one of the most [illegible] American authorities on the smut fungi, has also written The smut fungi, 1951, described below, and with C. S. Holton, Biology and control of the smut fungi, New York, Ronald Press, 1957. 622 p. $10.00.

FISCHER, GEORGE WILLIAM

The smut fungi a guide to the literature, with bibliography New York The Ronald Press Company 1951 387 p. 24 cm. $8.50 2167

Contents (abridged): Part I, Subject-matter guide to the literature. Part II, Bibliography. Index.

Note: In this book the first part is arranged by genera and species, and under each species references are given to published literature bearing on the following aspects: control, culture on artificial media, cytology, [illegible], hybridization and genetics, life history, parasitism, longevity of spores, miscellaneous records, spore germination, and varietal resistance and susceptibility. Of course, headings are omitted in instances [illegible] the author found no pertinent literature. Furthermore, species were omitted if no literature bearing on their biology was found. The number of entries under individual species varies from one to 100 and more. The second part of the book is [illegible] bibliography of 3,[illegible] citations of the [illegible] literature. This part is arranged alphabetically by author but is keyed by numbers to the first part. The whole constitutes [illegible] very useful literature index and guide for plant pathologists and other scientists interested in the biology of the smut fungi.

FOSBERG FRANCIS RAYMOND

The genus Gouldia (Rubiaceae) Honolulu Bernice P Bishop Museum, 1937 82 p illus. 26 cm. (Bernice P Bishop Museum. Bulletin 147) $1.50 2168

Contents (abridged): Introduction. History of the genus, relationships, criteria used in classification, hybridism, geographical distribution. Artificial keys. Systematic treatment. Hybrids. Literature cited. Index to names and synonyms.

Note: This study was undertaken because the classification of this group had proved [illegible] stumbling block ever since extensive plant collecting began in the Hawaiian Islands. The material employed consists of specimens preserved in the herbarium of the Museum and other collections. The genus [illegible] [illegible] in most of the Hawaiian moist or wet forests and in some localities it forms [illegible] considerable component of the forest. Further collecting is necessary for the establishment of relationships of the groups within the genus, and also for the study of [illegible] phylogenetic and geological history—information which may contribute to the knowledge of the geological history and relative age of the islands.

FOSBERG FRANCIS RAYMOND

The Hawaiian geraniums. Honolulu Bernice P Bishop Museum, 1936 19 p illus 23 cm (Bernice P Bishop Museum. Occasional papers Vol XII no 16) $0.50 2169

Note: The native Hawaiian geraniums forming the section [illegible] Gray are of considerable phytogeographic interest, since the section is endemic to these islands and lacks close relationships within the genus. They are members of the [illegible] and subalpine flora of the Hawaiian high mountains. [illegible] their genetic variability, the diversity of habitat and the [illegible] variation in growth habit, there has been much confusion in the taxonomy of the group and it was the fact which awakened the author's interest and led to the research on which this paper is based.

FRYE THEODORE CHRISTIAN AND LOIS CLARK

Hepaticae of North America. Seattle University of Washington 1937–47 1,022 p. illus 25 cm. (University of Washington. Publications in biology Vol. 6) Pt. 1 $1.50 pt. 2 $2.00 pt. 3 $3.00 pt 4 $2.50 pt. 5 $4.50 2170

Contents: Part 1: Ricciaceae. Marchantiaceae. [illegible]. [illegible]. Part 2: Jungermanniaceae. [illegible]. [illegible]. Part 3: [illegible]. Brief index to Parts 1–4. Part [illegible]. [illegible]. Part 5: [illegible]. References. Abbreviations. Corrections. Explanation of [illegible] terms. Index.

Note: A systematic classification of the liverworts and [illegible] of North America with descriptions, illustrations or references to illustrations, type locality, geographic range and citations to original literature.

FULFORD MARGARET

The genus Bazzania in Central and South America. Waltham Chronica Botanica Company 1946 175 p. illus. 27 cm (Annales cryptogamici et phytopathologici edited by Frans Verdoorn. Vol. III) $5.00 2171

Contents (abridged): Characteristics of the genus Bazzania. Description of the American species. Key to the subgenera. Subgenus [illegible]. Subgenus [illegible]. Section I, [illegible]. Section II, [illegible]. Section III, [illegible]. Section IV, [illegible]. Section [illegible]. Excluded species. List of species not available for this study. Distribution. Literature. Index.

Note: An important taxonomic classification and description of [illegible] large genus of the class Hepaticae. The descriptions of species, their habitat, distribution, etc., follow the usual pattern of monographs of this type, but the author's comments on the species, particularly in regard to distinguishing characteristics, are full and very clearly expressed.

GERBING GUSTAV GEORGE

Camellias. Fernandina, Fla. G G Gerbing 1943 264 p illus (col'd) 24 cm. $15.00 2172

Contents: The author's story. Camellias in full color. New and unusual camellias. An introduction to camellias. Growing camellias month by month. Further cultural notes. Camellia pests and diseases. How to cut and pack camellia blooms. Camellias for indoor culture. Index.

Note: The main portion of this book consists of 108 beautiful reproductions of full-color photographs, each accompanied by descriptive notes on the flower.

GILL, LAKE S

Arceuthobium in the United States New Haven Connecticut Academy of Arts and Sciences 1935 135 p illus 24 cm (Connecticut Academy of Arts and Sciences Transactions Vol 32 p 111–245) $1 80 2173

Content (abridged) Part I, Characters of the genus The shoot. Flowers. Fruit. Seed. The endophytic system. Summary Part II, Classification of the species *Arceuthobium pusillum americanum douglasii vaginatum campylopodum*. Part III Pathological considerations *Effects on the form of attacked trees*. Physiological relationships. Other biotic relationships. Economic importance. Methods of control Summary Bibliography

Note The species of *Arceuthobium*, or dwarf mistletoes, are economically among the most important indigenous parasites in the coniferous forests of the western United States. As the cutting of virgin timber increases and the supply of forest products from this region becomes more and more dependent upon second-growth, the control of these mistletoes will doubtless take a foremost place among the problems of applied forest pathology It has also become increasingly evident that the species are in need of more critical taxonomic consideration than they have received, and the study here reported was undertaken to supply this need.

GOODSPEED, THOMAS HARPER

The genus Nicotiana origins relationships and evolution of its species in the light of their distribution morphology and cytogenetics Parts 1–5 Distribution morphology cytology of species cytology of F_1 Interspecific hybrids phylesis by T H Goodspeed Part 6 Taxonomy by T H Goodspeed H-M Wheeler and P C Hutchison Waltham Chronica Botanica Company 1954 536 p illus 25 cm (Chronica Botanica, an international collection of studies in the method and history of biology and agriculture edited by Frans Verdoorn. Vol 16 nos 1–6) $12 50 2174

Contents Objective and argument. Part I Distribution World distribution. South America—distribution. North America—distribution. Australia and the South Pacific—distribution Part II, Morphology General morphology Anatomy and trichomes. Part III Cytology of species Chromosome number and morphology Cytology of reproduction. Euploidy aneuploidy and amphiploidy Part IV Cytology of F interspecific hybrids Categories of pairing and meiotic sequences Nature and significance of MI behavior Part Phylesis Species origins, relationships and evolution. The future of the genus. Part VI, Taxonomy of *Nicotiana* Historical résumé Remarks. Herbaria cited. Description of genus Key to subgenera and sections. Descriptions of subgeneric categories with keys to species and varieties. Subgenus *Rustica*. Subgenus *Tabacum* Subgenus *Petunioides*. Insufficiently known. Excluded Hybrids Literature cited. Author index. Subject index

Note A full-scale monograph on the genus *Nicotiana* concerning origin evolution and relationships of the modern species of the genus, with accompanying geographic morphological cytogenetic and taxonomic considerations Most of the research reported including the cytogenetic analysis of the results of large-scale interspecific hybridization was conducted at the Botanical Garden of the University of California, Berkeley of which the author is director A total of 60 species of *Nicotiana* are recognized and described in detail in the part covering the taxonomy of the genus, which occupies the final one-third of the book.

GUBERLET MURIEL LEWIN

Seaweeds at ebb tide Illustrated by Elizabeth L Curtis Seattle University of Washington Press 1956 182 p illus 22 cm $3 50 2175

Note Amateur naturalists and other laymen who are curious about the algae that they see along the seacoast, particularly along the Pacific coast of continental United States of America, are the intended readers of this book The scientific names of the plants are given, along with common names (some of them coined by the author) but otherwise there is nothing of scientific botany in the book. First, there is an introduction in which the author makes clear the book's limitations. This is followed by three pages of suggestions on the collecting of algae. The rest of the volume is devoted to pictures of individual species and nontechnical descriptions of them. The pictures are reproductions of exquisite drawings Throughout the volume they are printed on right-hand pages and the descriptive captions are printed on facing left-hand pages for convenience in using the book.

GUNDERSEN, ALFRED, AND OTHERS

Families of dicotyledons By Alfred Gundersen with introductory chapters by C. A. Arnold and others Drawings by Maud H. Purdy Waltham Chronica Botanica Company, 1950 237 p illus 23 cm. (A new series of plant science books edited by Frans Verdoorn Vol XXV) $4 75 2176

Content Part I, Introduction Fossil dicotyledons, by C. A. Arnold. Wood anatomy by O. Tippo. Carpels and ovules, by T. Just. Embryology by H. F. Copeland. Cytotaxonomy by J. R. Taylor Plant geography by W. H. Camp. Part II, Characters of dicotyledons Stem. Leaf. Inflorescence. Flowers and insects. Floral anatomy Perianth. Stamens and nectaries. Pollen. Placentation Ovule and seed. Part III, Historical notes Seventeenth century Eighteenth century Nineteenth century Systems since 1900. Orders compared. Part IV *Systematic arrangement* Beginning of the system. Sequence of groups. Nomenclature. Scope of orders and families. Magnoliflorae Magnoliales. Ranales Piperales. Cistiflorae Cactales. Cistales. Salicales. Papaverales. Sarraceniales. Aristolochiales. Tamaricales. Thea group Theales. Ebenales. Ericales. Rosiflorae Rosales. Hamamelidales. Thymelaeales. Myrtales. Urticales group Proteales. Santalales. Urticales. Balanopsidales. Juglandales Leitneriales. Casuarinales. Malva group Malvales. Euphorbiales Geranium group Rutales. Juglandales. Sapindales. Celastrales. Cyrilliales. Dianthiflorae Caryophyllales. Polygonales. Primulales. Plantaginales. Jasminiflorae Loganiales Polemoniales. Boraginales. Campanales. Rubiiflorae Umbellales. Rubiales. Asterales. Incertae sedis. Concluding remarks. Literature cited. Index of plant names.

Note A systematic reclassification of the dicotyledons written on the basis of more than 20 years' study of the group. Two hundred forty families are grouped into 47 orders in an arrangement which the author recognizes as tentative and subject to future improvement. Comparisons with other classifications are touched upon, for in large part the systems of Engler and Bentham and Hooker have been followed. The accounts of the separate families, each including brief descriptions and citations from recent literature, occupy more than half the volume. The illustrative drawings, mostly prepared from living plants, show the details of seeds, buds and flowers of typical species in the various orders.

HITCHCOCK ALBERT SPEAR

Manual of the grasses of the United States. Second edition Revised by Agnes Chase Washington D C Government Printing Office 1950 1 051 p illus 24 cm (United States Department of Agriculture. Miscellaneous publication no 200) $3 75 2177

Content Introduction Uses of grasses. Distribution of grasses. Morphology of grasses. *Classification* of grasses Nomenclature Common names. Scope of the manual Gramineae (Poaceae) the grass family Descriptions of the subfamilies and keys to the tribes *Festucoideae*. *Panicoideae*. Descriptions of the tribes and keys to the genera Bambuseae. Festuceae Hordeae. Aveneae Agrostideae Zoysieae Chlorideae. Phalarideae. Oryzeae Zizanieae Melinideae Paniceae Andropogoneae. Tripsaceae Description of genera and species Bambuseae Festuceae Hordeae Aveneae Agrostideae Melinideae Zoysieae Chlorideae. Phalarideae Oryzeae Zizanieae Melinideae Paniceae Andropogoneae Tripsaceae Synonymy Unidentified names Persons for whom grasses have been named Glossary Append. Place of publication and type species of new genera described Addenda. Index

Note A comprehensive systematic catalogue based mainly on the very extensive collection in the United States National Herbarium. Botanical descriptions of the grasses are supplemented in most instances by drawings of good quality In contrast to the 159 genera and 1 100 species described in the first edition (1935) 169 genera and 1,398 species are described There are now 1,200 illustrations

HITCHCOCK CHARLES LEO

A revision of the Drabas of western North America. Seattle University of Washington, 1941 132 p. illus. 25 cm. (University of Washington. Publication in biology Vol xi) $3.00 2178

Contents: Introduction. Key to species. Description of species. Excluded species of uncertain identity. List of specimens seen. Table of comparison of species. Index.

Note: A systematic and descriptive catalogue which includes [illegible] species on the basis of [illegible] study of this genus of herbaceous herbs of temperate and arctic regions. The key is intended to be concise rather than exhaustive. It contains [illegible] species included in two or more places. [illegible] however there is any possibility of confusion. Descriptions, measurements, distribution, and citations of the original literature are included, together with eight plates of line drawings.

HITCHCOCK, CHARLES LEO

A revision of the North American species of Lathyrus. Seattle University of Washington Press 1952 104 p. illus. 25 cm. (University of Washington. Publications in biology Vol. 15) $2.50 2179

Contents: Introduction. Description of species. Index to collection [illegible]. Representative collections examined. Index to pertinent names. Illustrations.

Note: A new systematic description based on extensive field and herbarium studies and incorporating recently developed data on chromosome number and on crossing among species. The information on interbreeding has been derived largely from cultural experiments conducted by the author. The author's studies and observations have led him to believe that "many of the species interbreed rather freely, producing hybrid populations of great variability." This characteristic is taken into account in the species descriptions.

HITCHCOCK CHARLES LEO AND BASSETT MAGUIRE

A revision of the North American species of Silene. Seattle University of Washington Press 1947 73 p illus 25 cm. (University of Washington publications in biology Vol. 13) $1.50. 2180

Contents: History. Relationship. Infrageneric categories. Meaning of terms. Material examined. Taxonomic treatment. Key to species. Descriptions of species. Representative collections examined. Index to collections area. Index to pertinent names.

Note: A systematic work for botanists which classifies and describes 54 species of Silene found in North America. There are five plates containing drawings of representative Silene plant structures, and two plates of maps showing areal distribution. The descriptions are based on the authors' study of these plants in the laboratory, in the field, and in various herbariums.

HOWARD GRACE E

Lichens of the state of Washington. Seattle University of Washington Press 1950 191 p. illus. 25 cm $3.00 2181

Contents: Introduction. Key to genera. Plant section. Literature. Glossary. Index.

Note: Based upon field work by the author in the [illegible] of Washington during many of the years between 1929 and 1942 and upon examination of specimens in leading herbarium collections in the United States of America, this publication lists and describes 333 species and varieties belonging to 69 genera and 33 families of lichens in the state of Washington. The names and bibliographical reference of each species are followed by detailed description, locations where found in the state, and annotations as to distinguishing characteristics.

JENNINGS O E

Manual of the mosses of western Pennsylvania and adjacent regions. Second edition Notre Dame Ind. University of Notre Dame Press, 1951 396 p. illus 23 cm (American midland naturalist. Monograph no. [illegible] Edited by J D Mizelle) $4.25 2182

Contents: Introduction. Directions for collecting, preparing and preserving specimens of mosses. Abbreviations of names used in the manual. Analytical key to the genera of mosses of western Pennsylvania. Systematic treatment: Sphagnaceae. Andreaeales. Bryales—Acrocarpi—Pleurocarpi. Glossary of [illegible] terms used in the manual. Plates [illegible]. Index.

Note: Designed primarily as an aid in identification of the mosses of the territory covered, this book is of interest both to amateur and professional bryologists. Most of the space in it is devoted to the systematic descriptions and the plates. The plates are reproductions of original drawings made directly from specimens. The systematic descriptions include detailed morphological diagnoses and also information on habitat, range in continental United States and Canada, and distribution within western Pennsylvania and adjacent regions. The first edition [illegible] different [illegible] written and was published in 1913. Twenty [illegible] species not included in it are described in this second edition, and, in addition, changes have been made in nomenclature and more drawings have been added.

JOHNSON TERRY W., JR.

The genus Achlya—morphology and taxonomy. Ann Arbor University of Michigan Press 1956. 180 p. illus. 24 cm (University of Michigan studies. Scientific series Vol. xx) $4.50 2183

Contents: Introduction. Systematic account of *Achlya*. Subgenus *Centroachlya*. Subgenus *Subcentrica*. Subgenus *Achlya*. Taxa of doubtful alliance. Excluded taxa. Bibliography. Plates. Index.

Note: A systematic catalog of the *Achlya*, comprising over 100 taxa, the largest genus of the water molds. Dr. Johnson, Assistant Professor of Botany at Duke University, has included the results of both his own observations and those of other botanists. He admits the difficulties of resolving some of the taxa, even in the light of present-day knowledge. The bibliography is presumably a complete compilation of the published literature.

JONES GEORGE NEVILLE

American species of Amelanchier with 14 maps and 23 plates. Urbana University of Illinois Press 1946 126 p illus 27 cm. (Illinois biological monographs Vol. xx, no. 2) $2.00 2184

Contents: Introduction. Taxonomy. Bibliography and description of the genus. Keys to species. Description and discussion of species. List of numbered exsiccatae. Plates. Index to plant names.

Note: A description for botanists of American species of *Amelanchier*, a genus of shrubs and small trees. The work is based on a survey of the related literature and on the author's personal study of these plants in various herbariums. Each species is described botanically and its range is given. Type localities and literature references are cited. A set of plates reproduces photographs of branchlets and leaf types.

KILLIP ELLSWORTH PAINE

The American species of Passifloraceae. Chicago Chicago Natural History Museum 1938 2 v illus 24 cm. (Chicago Natural History Museum. Publication nos 407 and 408 Botanical series Vol. xix, parts i–ii) $5.00. 2185

Contents: Introduction. Historical survey. Varying concepts of classification. General morphology. Economic uses. General remarks. List of abbreviations for herbaria cited. Bibliography. Systematic treatment. List of exsiccatae. Index.

Note: An annotated systematic description of all the known genera and species of passionflowers native to North and South America, Mexico, and Central America, including [illegible] reviews of the earlier catalogues. A total of 355 species of *Passiflora* and 10 belonging to closely related genera are recognized in the

present monograph of which 17 are proposed for the first time plus 13 varieties of *P saltera foetida* newly described. Little or no attention has been given to the numerous hybrids in the family developed in horticulture. The work is based mainly on the author's studies of collections in 46 herbaria located throughout the world. Description, type locality distribution, and species numbers for each country are included in the annotations.

LEONARD, EMERY C

The Acanthaceae of Colombia, I Washington D C Government Printing Office 1951 117 p illus 24 cm. (Smithsonian Institution United States National Museum. Contributions from the United States National Herbarium. Vol. 31, pt. 1) $0 50 2186

Contents Introduction Systematic treatment Subfamily Nelsonioideae. Subfamily Mendoncioideae. Subfamily Thunbergioideae. Subfamily Acanthoideae: Series Contortae Tribe Trichantheraee. Tribe Hygrophileae. Tribe Petalidieae. Tribe Ruellieae. Tribe Barlerieae. Index.

Note This is the first part of a work to be completed in three parts describing and discussing in systematic fashion the known Colombian species of the family Acanthaceae. It is a reference work for botanists, so that they may identify their collections of acanthaceous plants or use the keys for detecting further undescribed species.

—— II Washington, D C Government Printing Office, 1953 119–322 p illus 24 cm (Smithsonian Institution United States National Museum Contributions from the United States National Herbarium Vol 31 pt 2) $0 70 2187

Contents Introduction Systematic treatment Subfamily Acanthoideae (continued from Part I) Series Imbricatae. Tribe Aphelandreae. Tribe Rhombochlamydeae Tribe Asystasieae Tribe Graptophylleae. Tribe Pseuderanthemeae. Index.

Note The second part of a projected three of systematic description of the known Colombian species of the family Acanthaceae It covers the genera, including 106 species of which 73 are described as new

LI, HUI LIN

The Araliaceae of China. With 14 text figures Jamaica Plain Mass The Arnold Arboretum of Harvard University 1942 134 p illus 25 cm (Sargentia a continuation of the *Contributions from the Arnold Arboretum* of Harvard University II) $2 25 2188

Note A systematic study of the family Araliaceae of woody plants common to China. An attempt is made to account for every published binomial belonging to the family as recorded from China in botanical literature from 1753 to the present date. A total of 17 genera, 121 species, 32 varieties, and three forms are recognized, the study being based on the extensive collection of Chinese plants at the Arnold Arboretum, supplemented by collections from other Chinese and American herbaria. Complete systematic descriptions are given for all species treated.

LLOYD, FRANCIS ERNEST

The carnivorous plants Waltham Chronica Botanica Company 1942 352 p illus 27 cm (A new series of plant science books edited by Frans Verdoorn. Vol IX) $7 50 2189

Content Introduction. *Heliamphora. Sarracenia. Darlingtonia californica. Nepenthes. Cephalotus follicularis. Genlisea. Byblis. Drosophyllum lusitanicum. Pinguicula. Drosera.* The carnivorous fungi. *Dionaea. Aldrovanda. Utricularia Biovularia,* and *Polypompholyx.* The *Utricularia* trap. Indices.

Note This monograph embodies the results of 13 years of intensive study of representatives of all the various types of carnivorous plants. Much work was done in the field (in South Africa, Australasia, and North America) and this has been amplified by extensive laboratory studies. The illustrations are nearly original and include numerous halftone plates and a large number of line drawings.

MCKELVEY, SUSAN DELANO

Yuccas of the southwestern United States. Part I–II Jamaica Plain, Mass. The Arnold Arboretum of Harvard University, 1938–47 2 v illus 27 cm Part I o p part II $10.00 2190

Note A detailed, monographic description of species and varieties of the genus Yucca known to grow naturally in southwestern continental United States of America. In the second part, one species so far identified only with Lower California in Mexico is also included. The first part is devoted to species classified in the sections *Sarcocarpa* Engelm. and *Clistocarpa* Engelm., and key characters for use in identifying these species are described. Part II describes 19 species, nine of which are new and three new varieties, all classified in the sections *Hesperoyucca* Engelm. and *Chaenocarpa* Engelm. The study was based on a review of the literature, on specimens in the author's own collection and in all the important herbaria, and on field work. The descriptions are monographic in nature, covering not only the morphology but also describing the range containing long comments on comparative morphology and on uses and sometimes quotations from the studies of other writers. The verbal descriptions are supplemented by 65 plates in the first volume and 80 plates in the second volume, all of which are reproductions of photographs of Yucca in their natural habitats.

MACKENZIE KENNETH KENT

North American Cariceae, illustrated by Harry Charles Creutzburg edited by Harold William Rickett. New York New York Botanical Garden 1940 2 v illus 35 cm. $17 50 2191

Content Plates. Descriptions. Index. Appendix: Collectors of specimens used for illustrations.

Note This collection of 539 plates, with technical descriptions is for the botanist. The text follows the author's monograph in the Carex, which appeared in volume 18 of *North American flora*. The same numbers are assigned to the species in both works. For synonymy keys, descriptions of genera and of varieties, and statements of type localities, and citations of previous illustrations are not repeated in this work.

MCVAUGH ROGERS, AND JOSEPH H PYRON

Ferns of Georgia. Sponsored by the Garden Club of Georgia Inc. Athens University of Georgia Press 1951 195 p illus. 24 cm $5.00. 2192

Content Introduction Life history of ferns. Classification of ferns. How plants get their names. Arrangement of genera and species. How to use the manual. Key to the genera of ferns and species. How to use the manual. Key to the genera of ferns and fern allies. Keys to the species. Descriptions and illustrations. Explanation of special terms. Index.

Note A semitechnical manual suitable for use by amateur botanists in the study and identification of ferns and by professional botanists interested in the geographical distribution of fern species in southern United States of America. It is based on three-year field study and on the examination of herbarium collections. Each fern is described in a one-page entry which covers the Latin name and the common name (when one exists) description, habitat range, and general remarks. Opposite the entry there is in each instance a drawing of fronds or of the whole plant, together with a map showing the portions of Georgia in which the fern may be found.

MARSHALL WILLIAM TAYLOR, AND THOR METHVEN BOCK

Cactaceae. With illustrated keys of all tribes sub-tribes and genera. Arranged and published by Scott E Haselton Supplement

ing the work of Doctors Britton and Rose this volume describes all of the acceptable new genera and species since nineteen nineteen and the changes in classifications necessitated by recent discoveries Pasadena Calif Abbey Garden Press 1941 227 p. illus. 30 cm. $7.50 2193

Contents. The Cactaceae. Key to tribes. Illustrated key to the genera. Descriptions of the genera. Tribe I, Pereskieae. Tribe II, Opuntieae. Tribe III, Cereeae: Cereanae, Hylocereanae, Echinocereanae, Echinocactanae, Cactanae, Coryphanthanae, Epiphyllanae. Appendices. Index.

Note This illustrated systematic description includes generic names, synonymy, habitat, culture, desirability, desirable species, recent introductions, and recent new species since the publication of Britton and Rose's *The Cactaceae*, Washington, D. C., 1919–23. There is a short bibliography and many excellent photographs and drawings.

MATTHEWS VELMA DARE

Studies on the genus Pythium. Chapel Hill University of North Carolina Press 1931 136 p. illus. 26 cm. $3.00 2194

Contents. Introduction. Methods and culture media. Taxonomy. Distribution and habitat. Mycelium. Sporangia. Conidia. Zoospores. Sexual organs. Family Pythiaceae and key to the genera. Genus Pythium and key to the species. Descriptions of the species of Pythium. Species omitted. Literature. Index.

Note. An attempt is made to give descriptions of all the species of Pythium which had been discovered at the time of publication, and to report on 28 species which have been isolated by the writer. Of these 4 are considered new. Keys are given to the genera of the family Pythiaceae and to the species of the genus Pythium. Several species are reported from the United States of America for the first time. There are 29 fine line plates, 26 from original drawings, and three copies from illustrations of species which the writer has not seen. There is an extensive bibliography.

MIDDLETON JOHN TYLOR

The taxonomy host range and geographic distribution of the genus *Pythium* Lancaster Pa. Lancaster Press Inc. 1943 171 p illus 23 cm. (Torrey Botanical Club. Memoirs Harold W Rickett editor Vol 20 no 1) $2.00 2195

Note A contribution towards a better understanding of the species, their taxonomic status, and their phylogeny. An effort has been made to secure from various hosts and localities as many cultures as were available of the described species, since a study of a group of isolates is held to be more representative than the study of a single isolate, and enables the investigator to determine the extent and nature of variations within a natural species. As further aid to students of the genus and plant pathologists encountering members of the genus as plant pathogens, information relative to host and geographic distribution is included. In addition to a summary and condensation of the available literature on this phase of the work, the extent and variety of hosts have been materially amplified. About 600 references are listed in the bibliography.

MINER, ROY WALDO editor

Speciation and variation in asexual fungi. Conference chairman and consulting editor Kenneth B Raper New York Published by the Academy 1954 182 p illus. (part col d) 22 cm. (New York Academy of Sciences. Annals Vol. 60 art. 1) $3.50 2196

Contents Introduction by K B Raper. Some interrelationships of speciation, [illegible], and nomenclature in bacteria, by R E Buchanan. Variation and speciation in the genus *Fusarium*, by W C Snyder and H N Hansen. The evolution of species concepts in *Aspergillus* and *Penicillium*, by C. Thom. Spontaneous and induced variation in selected stocks of the *Penicillium chrysogenum* series, by J F Stauffer and M P Backus. Experimental control of morphogenesis in microorganisms, by W J Nickerson. Natural and cultural variation in entomogenous fungi imperfecti, by D. M. MacLeod. Types of variation in actinomycetes, by B. M. Duggar and others. Variation in *Streptomyces aureofaciens*, by E. J. Backus and others. Criteria of speciation in the genus *Streptomyces*, by P. R. Burkholder and others. Variation in *Streptomyces*, by K. L. Jones. Useful criteria for species differentiation in the genus *Streptomyces*, by C. W. Hesseltine and others. [illegible] as aids in actinomycete classification, by A. Dietz. Induced mutation and strain selection in some industrially important microorganisms, by E. L. Dulaney. Morphological studies in the genus *Nocardia*—III The morphology of young colonies, by N. M. McClung.

Note Papers first presented at a conference held by the Section of Biology and the Division of Mycology of the New York Academy of Sciences in June 1954 have been made available in this publication. The conference was concerned primarily with the taxonomy of the asexual fungi. As noted above, several papers were directed to the genus *Streptomyces*, a troublesome group from the viewpoint of classification. Literature references are included.

MUNZ PHILIP ALEXANDER

A revision of the genus Fuchsia (Onagraceae) San Francisco California Academy of Sciences 1944 138 p illus 26 cm (California Academy of Sciences Proceedings. 4th series. Vol xxv no 1 December 11 1943 Alice Eastwood semi-centennial publications) $1.75 2197

Note This article was written because the genus Fuchsia has been cultivated widely in recent years and has had no botanical revision since many of the species have become known. In addition to the taxonomic analysis, he also gives an account of the history of the plant, its introduction into England from Santo Domingo, and its earliest description by Plumier. Photographs of the title page and the pages containing the original description of the new genus Fuchsia are reproduced from Plumier's book as Plate 16 of this account.

NEARING G G

The lichen book handbook of the lichens of northeastern United States. Illustrations by the author Ramsey N J., P O Box 402 Published by the author 1947 648 p illus. 22 cm. $8.00 2198

Note A manual for beginners and amateurs in which the lichens are described primarily from the standpoint of their identification. The author has described the book's purpose in the following words: "It is not the aim of this book to present original findings, but to describe known lichens, especially the more common ones, in greater detail than elsewhere in similar form. Its drawings, to compare them with at least some of the species they resemble, and thus to present this hitherto not widely known group for students, beginners, and non-specializing botanists." The author's aim has been fulfilled in the detailed descriptions of species and in the drawings. The book is organized in six divisions and 75 groups, and keys arranged in tabular form are provided for each of the groups. The index, compiled by Robert L. [illegible], is a thorough one.

OVERHOLTS LEE ORAS

The polyporaceae of the United States Alaska and Canada. Prepared for publication by Josiah L. Lowe Ann Arbor University of Michigan Press 1953 466 p illus. 24 cm (University of Michigan studies Scientific series. Vol xix) $7.50 2199

Contents Introduction. *Keys and descriptions*: Family Polyporaceae. Key to the genera. Genus *Fomes*. Genus *Lenzites*. Genus *Cyclomyces*. Genus *Daedalea*. Genus *Hexagona*. Genus *Trametes*. Genus *Favolus*. Genus *Polyporus*. Bibliography. Glossary. Index.

Note A systematic description of the pileate Polyporaceae native to the North American continent, north of Mexico, based on more than 30 years' study by the author. He was during his lifetime the *United States of America* leading authority on this group of

fungi. The 27-page introduction covers briefly such matters as the early history of this family its morphology and terminology economic importance, and its activity in the decay of wood. The keys and descriptions are cast in the traditional style of such monographs. They are followed by 131 plates, many of which are photographs of specimens from the Overholts Herbarium. The author left a virtually complete manuscript when he died in 1946 In preparing it for publication Dr Lowe added descriptions of 30 species and completed the bibliography

POHL, RICHARD W

How to know the grasses pictured keys for determining the common and important American grasses with suggestions and aids for their study Dubuque Wm C Brown Company, 1954 192 p illus 22 cm. (The Pictured key nature series) $2 75 2200

Content What is a grass? Key to grasses, sedges and rushes. What do grasses look like? How to collect and study grasses. How to recognize the tribes of grasses. Some useful books on grasses. Pictured-keys to common American grasses. Tribe Bambuseae Festuceae. Hordeae. Aveneae. Agrostideae. Zoysieae. Chlorideae Phalarideae. Oryzeae. Zizanieae. Paniceae. Andropogoneae Tripsaceae. Index and pictured-glossary

Note An elementary and useful manual designed as an aid in the identification of grasses that grow in continental United States of America. The illustrations, of which there are well over 400 arranged as 385 figures, are a special feature. All are reproductions of small but reasonably clear line drawings. For the most part, they show florets and spikelets, and these are drawn to an indicated scale. Ranges of species are indicated graphically The verbal descriptions are concerned largely with morphological details

PRESCOTT, GERALD WEBBER

Algae of the western Great Lakes area exclusive of desmids and diatoms Bloomfield Hills, Mich Cranbrook Institute of Science 1951 946 p illus 24 cm $10 50 2201

Contents (abridged) Geographical features and algal distribution. Relationships of phytoplankton to lake productivity Morphological characters illustrated. Systematic account Division Chlorophyta. Division Chrysophyta. Division Euglenophyta. Division Chloromonadophyta. Division Pyrrhophyta. Division Cyanophyta. Division Rhodophyta. Analytical key to the genera. Glossary Bibliography Plates. Index.

Note A systematic description of algae collected from lakes and marshes of Wisconsin and Michigan, a region noted for its abundance of algal flora. The work is comprehensive, in that it describes all of the species reported in the publications of earlier workers, as well as species collected by the author It is a substantial contribution to the literature of both phycology and limnology

RAPER KENNETH BRYAN AND CHARLES THOM

A manual of the Penicillia. With the technical assistance and illustrations by Dorothy I Fennel Baltimore The Williams & Wilkins Company 1949 875 p illus (part col d) 24 cm $12 00 2202

Content Part I, General discussion Historical. Generic diagnosis and synonymy Observation and description of Penicillia. Cultivation and preservation of Penicillia. Penicillia. Part II, The manual proper Use of the manual. Monoverticillata. Asymmetrica—divaricata—velutina—lanata—funiculosa—fasciculata. Biverticillata-symmetrica. Polyverticillata. Gliocladium, Paecilomyces, and Scopulariopsis Part III, Reference material Topical bibliography General bibliography Species index. Accepted species and varieties. Index.

Note A new systematic study in which is incorporated the useful material from many unpublished surveys and groupings made in industrial laboratories and elsewhere as a result of the interest in this genus occasioned by the discovery of the antibiotic penicillin. It supersedes Thom *The Penicillia* published in 1930 but in contrast is designed for quick reference The systematic description which account for approximately 600 of the book's pages are arranged in the traditional manner but they consist largely of information that is useful in identification and laboratory culture. According to the authors, about 4,000 strains were examined in the course of the book's preparation. Strains upon which particular descriptions are based are identified. There are 172 figures, most of which consist of several illustrations. There are 10 color plates. The topical bibliography consists of literature references arranged according to field of interest or application, for example, cheese. The general bibliography is arranged by author and includes both the systematic literature and that bearing on pharmacological and industrial applications.

RUDD, VELVA E

The American species of *Aeschynomene*. Washington, D C Smithsonian Institution, 1955 172 p illus 24 cm. (Smithsonian Institution United States National Museum. Contributions from the United States National Herbarium. Vol 32 pt. 1) Gratis 2203

Content Introduction. Systematic treatment, with keys. Excluded and doubtful taxa. New taxa, new names and new combinations. Collections of *Aeschynomene* cited. Index.

Note A revision of the American species of *Aeschynomene* based on collections in the United States National Herbarium and in other herbaria. Economic aspects, geographic distribution, etc. are considered in the introduction. However most of the space is devoted to the systematic descriptions and to the supplementary lists of excluded and doubtful taxa and new taxa. All of the illustrations are distribution maps rather than pictures of the plants described.

SEAVER, FRED JAY

The North American cup-fungi (Inoperculates) Illustrated New York Published by the author 1951 428 p illus. (part col d) 24 cm $7 50 2204

Content Introductory Taxonomic treatment. Explanation of plates. Host index Index to illustrations. Index to recognized genera. Index to genera and species.

Note This work complements the author's *The North American cup-fungi (Operculates)* supplemented edition, New York, 1942. It is a systematic description addressed to professional botanists but the author disavows finality in these words "There are many controversial questions and the writer makes no pretense that this is the last word in the treatment of species, genera or families but merely a summary of the available facts as they appear at the present time. Nevertheless, the work is a major contribution to the description of this plant group. There are 150 plates of good quality

SHERFF, EARL EDWARD

The genus *Bidens* Chicago Chicago Natural History Museum 1937 2 v. illus. 24 cm. (Chicago Natural History Museum. Publication nos 388 and 389 Botanical series. Vol. XVI part I–II) Part I $3 50 Part II, $4.00. 2205

Content Historical survey of genus *Bidens*. Morphology, teratology cytology ecology and other special lines of inquiry. Description of genus *Bidens* Synopsis of sections Key. Abbreviations used for herbaria cited Descriptions. Names to be excluded from *Bidens*. Addenda. Names of uncertain status. Index of collectors cited. General index.

Note A systematic description of the species of the genus *Bidens* of the family Compositae based upon the author's 25 years of specialized study in this and in related genera from the collections of 63 herbaria throughout the world. Description, synonymy, type specimen, distribution, index numbers of specimens examined, and related data accompany the detailed entries for each species. An outstanding feature of the work is the reproduction of 137 of the author's original drawings showing anatomical details of selected species. The indexes are extensive

SHERFF EARL EDWARD

Revision of the genus *Coreopsis* Chicago Chicago Natural History Museum 1936 216 p illus 24 cm (Chicago Natural History

Museum. Publication 366 Botanical series Vol. xi, no 6) $1.50. 2206

Note This monograph presents a revisional survey of the entire genus Crepis of the family Compositae. Original descriptions (in Latin), type specimens, distribution, and [illegible] with references are included in each species note. Additional descriptive data so as to aid in further differentiation are given wherever available. No attempt has been made to present an extended history of the genus [illegible] as this material has already been covered in [illegible] The genus *Bidens*, Chicago, 1937 (see above). The author has also published *[illegible] of the genus* [illegible], Chicago, 1937 [illegible] p. $0.90, covering another closely related genus of the family Compositae.

Smith Alexander Hanchett

Puffballs and their allies in Michigan Ann Arbor University of Michigan Press 1951 131 p. illus. 24 cm. $5 00 2207

Contents The fructification. Bibliography Key to orders of Gasteromycetes. Hymenogastrales, Gautieriales, Tremellogastrales, Hysterangiales. Phallales. Lycoperdales. Sclerodermatales. Nidulariales. Podaxales. Literature cited. Index.

Note A systematic description of an interesting group of fungi Although limited to those species that are found naturally within the state of Michigan, the book is of wider interest because the species described are found in many other parts of the world as well. The author states that the book is intended for general use. Because the morphological descriptions are cast in technical terms, and he has included a glossary The verbal descriptions are supplemented by a series of plates made from photographs of collected specimens.

Smith Gilbert Morgan

The fresh-water algae of the United States Second edition. New York McGraw Hill Book Company Inc., 1950. 719 p. illus. 24 cm. (McGraw Hill publications in the botanical sciences Edmund W Sinnott consulting editor) $12 50 2208

Contents Nature, evolution, and classification of the algae. The distribution and occurrence of fresh-water algae. Collection, preservation, and methods of studying the fresh-water algae Chlorophyta. Euglenophyta. Chrysophyta. Phaeophyta. Pyrrophyta. Cyanophyta. Rhodophyta. Groups of uncertain systematic position. *Key to the fresh-water algae of the United States.* Bibliography. Index.

Note A standard comprehensive description, useful both to specialists and to advanced students. The three preliminary chapters occupy only 38 pages. The greater part of the volume is devoted to the systematic descriptions. Groups are described down to genera [illegible] of genera. Instead of descriptions of species, literature references are given to descriptions published elsewhere. There are 15 figures, most of which contain more than one drawing.

Smith, Gilbert Morgan and others

Manual of phycology an introduction to the algae and their biology Edited by Gilbert M. Smith. With [illegible] plates and figures in the text. Waltham Chronica Botanica Company 1951. 375 p. illus. 26 cm. (A new series of plant science books edited by Frans Verdoorn. Vol. xxvii) $7.50 2209

Contents History of phycology by G W Prescott The classification of algae, by G M Smith Chlorophyta, by M O P Iyengar Euglenophyta, by T L Jahn Chrysophyta, by F E Fritsch Pyrrophyta, by H W Graham Phaeophyta, by G F Papenfuss Cyanophyta, by Francis Drouet Rhodophyta, by K M Drew Fossil algae, by J H Johnson Cytology of algae, by H C Bold Sexuality of algae, by G M Smith The pigments of algae by [illegible] Physiology and biochemistry of algae, by [illegible] Ecology of fresh water algae, by L H Tiffany Ecology of marine algae by Jean Feldmann Plankton algae and their biological significance, by B H Ketchum. Appendices. Methods for the cultivation of algae. Micro[illegible]. Index.

Note A volume of separate, signed chapters, each complete from brief introduction to bibliography covering all aspects of algology except economic phycology to cover which subject another volume is projected in the same series. Each author covering a major group of the algae discusses structure, reproduction, and classification of his group. Seven separate chapters are devoted to ecological, physiological, and other general problems. The work is a companion volume to F Verdoorn, editor *Manual of bryology* The Hague 1932 and to F Verdoorn, editor, *Manual of pteridology* The Hague 1938

Smith Gilbert Morgan

Marine Algae of the Monterey peninsula, California. Stanford Stanford University Press 1944 622 p illus. 23 cm. $7.50 2210

Contents Introduction. Glossary Chlorophyta. Phaeophyta. Rhodophyta. Bibliography Comprehensive keys to genera. Explanation of plates. Index.

Note Although limited to a small geographical area (approximately 100 miles south of San Francisco) this work for the student and specialist describes about 85 per cent of the seaweeds along the western coast of the United States of America. For each species, there is a description, an illustration in most cases, a reference to authentic specimens, a reference to other recent descriptions, local distribution, type locality and Pacific Coast distribution

Smith Lyman B

The Bromeliaceae of Brazil With 128 illustrations by Robert J Downes Washington D C. Published by the Smithsonian Institution 1955 290 p illus 24 cm. (Smithsonian Institution. Smithsonian miscellaneous collections. Vol 26 no 1) $3.50. 2211

Contents Introduction Preliminary records Systematic treatment. Excluded and doubtful taxa. Literature cited. Index.

Note A compact, systematic manual based on the literature field work, and an extensive study of collections in herbaria, including the herbarium of the Instituto de Botânica in São Paulo Although there are short discussions of economic, [illegible] aspects, etc. of the bromeliads, most of the space is devoted to the keys and to the accounts of species. Citations of localities where specimens were collected is a special feature of the latter There are 128 figures, all of which are reproductions of drawings. A companion work, *The Bromeliaceae of Colombia*, by the same author was published by the Smithsonian Institution, 1957 311 p. (Contributions from the United States National Herbarium, Vol. 33)

Taylor William Randolph

Marine Algae of the northeastern coast of North America. Illustrated by Chin-Chin Jao. Ann Arbor University of Michigan Press 193 427 p. illus. 24 cm. (University of Michigan studies. Scientific series. Vol. xiii) $12 50 2212

Contents Introduction Area surveyed. Geographical distribution. Algal habitats Collection and preservation. Historical survey Purpose and limitations. Systematic list. Descriptive catalogue: Chlorophyceae. Phaeophyceae Rhodophyceae Bibliography Plates. Index

Note A standard manual with wider scope than is typical of such works. It contains a check list, full keys, systematic descriptions, an extensive bibliography and, in addition, information on the historic collections of marine algae in America, and techniques of collecting and preservation. A second edition, revised, was issued by the same publisher in 1957 509 p. $12.50.

Taylor William Randolph

Pacific marine algae of the Allan Hancock Expeditions to the Galapagos Islands Los Angeles University of Southern California Press, 1945 528 p illus. 23 cm. (Allan Hancock Pacific expeditions. Vol. 12) $8.00 2213

Contents Introduction Historical review Equipment. General descriptions of localities. General characteristics of the algal flora. Summary of algal distribution. Descriptive catalogue: Chlorophyceae.

Phaeophyceae. Myxophyceae. Rhodophyceae. Literature cited. Plates. Index to stations. Index to algae

Note A report of algae collected on two expeditions in 1934 and 1939 in regions of the Pacific that are rich in Phaeophyceae and Rhodophyceae. In the 36 pages of the introduction, the history of plant collecting in this region is reviewed briefly the collecting localities of the 1934 and 1939 expeditions are described, and there is summary of the characteristics and distribution of the algal flora of the region. The remainder of the space is devoted to keys and systematic descriptions of the plants collected. There are 100 plates, a few of which are reproductions of drawings, and the balance reproductions of photographs of specimens.

THOM, CHARLES, AND KENNETH B RAPER

A manual of the Aspergilli Baltimore The Williams & Wilkins Company 1945 373 p illus (part col'd) 23 cm $7 00 2214

Content (abridged) Part I General discussion Historical introduction. Classification, generic diagnosis, and synonymy Morphology and description. Cultivation and examination. Preservation of cultures. Part II, The manual proper The Aspergillus clavatus group. The Aspergillus glaucus group The Aspergillus fumigatus group The Aspergillus nidulans group The Aspergillus ustus group The Aspergillus flavipes group The Aspergillus versicolor group. The Aspergillus terreus group The Aspergillus candidus group. The Aspergillus niger group. The Aspergillus wentii group The Aspergillus tamarii group. The Aspergillus flavus-oryzae group. The Aspergillus ochraceus group. Part III Reference material Topical bibliography General bibliography Check list of species and genera Accepted species, varieties, and mutations. Index.

Note This manual has been prepared specifically to assist research workers identify the Aspergilli, large group of molds active in various decaying processes, and important economically in the production of industrial fermentations and antibiotic substances. It does not discuss the biochemical activities of these molds, but provides detailed description of their characteristics, occurrence and economic importance Almost as important to workers in this field as the text itself is the extensal bibliography arranged first by subject and then by author

THOMAS WILLIAM STURGIS

Field book of common mushrooms With a key to identification of the gilled mushrooms and directions for cooking those that are edible New and enlarged third edition With 93 species in color and numerous black and white illustrations New York G P Putnam's Sons 1948 369 p illus (part col'd) 18 cm $5 00 2215

Content How to collect and examine mushrooms Gilled mushrooms, their propagation and structure How to use the key Table of features of gilled mushrooms used in their identification. Key to common gilled mushrooms—pictorial key to genera. Descriptions of genera and species of common gilled mushrooms Common mushrooms other than those with gills Mushrooms as food Mushrooms as food and general directions for preparing and cooking them Special recipes for preparing various species of edible gilled mushrooms for the table Glossary Names of gilled mushrooms in the Key with translations of their botanical names, their derivation and pronunciation. General index. Index to botanical names of genera and species.

Note A compact reference manual designed as guide to mushroom identification As implied in the title it is intended for use in the field, and its size and format are such that it can easily be carried in pocket. It is abundantly equipped with keys arranged in various ways such as manner of growth odor place of growth, and season of growth The species descriptions are brief but are adequate in view of the book purpose As stated in the title 93 species are illustrated in color The chapters on mushrooms in cookery contain more information on this subject than the typical cookbook

TIFFANY LEWIS HANFORD AND MAX EDWIN BRITTON

The algae of Illinois Chicago University of Chicago Press 1952 407 p illus 25 cm (The University of Chicago Committee on Publications in Biology and Medicine by Emmet B Bay and others) $10.00 2216

Content (abridged) Introduction. Brief synopsis of the classes. Phylum Chlorophyta. Phylum Chrysophyta. Phylum Pyrrophyta. Phylum Euglenophyta. Phylum Myxophyta. Phylum Rhodophyta. Doubtful species. Glossary Bibliography Index.

Note Descriptions, keys, and illustrations of the algae of Illinois, a state noted for its diverse algal flora, are supplied in this work, which supplements M. E. Britton, *A catalog of Illinois algae*, Evanston Illinois, 1944 Species descriptions are written in botanical terminology and are very detailed. The 108 plates contain 1 186 reproductions of original drawings.

TILDEN, JOSEPHINE ELIZABETH

The Algae and their life relations fundamentals of phycology Minneapolis University of Minnesota Press, 1935 550 p. illus. 24 cm $5 00 2217

Content Some hypotheses concerning the phylogeny of the Algae. The distribution of marine Algae in time and space A classification based on evolutionary development, with special reference to pigmentation and food reserves. Class I. Cyanophyceae Class II. Rhodophyceae. Class III. Phaeophyceae. Class IV Chrysophyceae. Class V Chlorophyceae. The problem of algal control Algae food of animals. Marine Algae, our richest source of vitamins Algae as food for man. Appendix Standardization of method of drawing Algae for publication. Bibliography Index.

Note A combined text and reference book on the fundamentals of phycology The structure reproduction, and distribution of the various species are discussed and described. There is treatment of the economic aspect of the Algae, with methods of collecting, marketing, and cooking them.

TRELEASE, WILLIAM AND TRUMAN G YUNCKER

The Piperaceae of northern South America Urbana University of Illinois Press 1950. 2 v illus 24 cm $10 00 2218

Content Volume Introduction. Key to the genera. Genera Piper—Ottonia—Sarcorhachis—Trianaeopiper Plates. Volume Genus Pothomorphe—Peperomia. Bibliography Index of collections cited. Index of names. Plates

Note A systematic description of one of the large dicotyledonous plant families. Although limited to species known to occur in the Guianas, Venezuela, Colombia, and Ecuador only it contains descriptions of many species not reported hitherto. The work was based on comprehensive examination of specimens in the larger herbaria of the world. A symbol that indicates the location in herbarium of the specimen examined is included in the species description The work includes 674 plates, all of which are reproductions of photographs of specimens.

TRYON ROLLA M JR.

The ferns and fern allies of Minnesota Illustrated by Wilma Monserud Minneapolis University of Minnesota Press 1954 166 p. illus 22 cm $4 00 2219

Content True ferns Adder's tongue family (*Ophioglossaceae*) Flowering fern family (*Osmundaceae*) Water clover family (*Marsileaceae*) Floating fern family (*Salviniaceae*) Polypody family (*Polypodiaceae*) Fern allies Horsetail family (*Equisetaceae*) Club moss family (*Lycopodiaceae*) Spike moss family (*Selaginellaceae*) Quillwort family (*Isoetaceae*) Index

Note An illustrated handbook similar in style to the work *The ferns and fern allies of Wisconsin* described below It is popular guide to the rich and varied fern flora of the state and is fully illustrated with over two hundred good drawings and 85 maps showing known ranges in Minnesota. The species descriptions are directed primarily to students of botany and to laymen interested in the identification and study of ferns.

TRYON ROLLA M JR AND OTHERS

The ferns and fern allies of Wisconsin Second edition Madison University of Wisconsin Press 1953 158 p illus 26 cm $3.50 2220

Note A well-organized, popular guide to the ferns and fern allies of [illegible] state that is rich in such flora. It contains keys to genera, species and varieties, and systematic descriptions of species and other taxa. The descriptions cover range in North America, habitat and morphology. They are supplemented by more than 200 figures and 73 maps of distribution within the state of Wisconsin. Included among the illustrations are [illegible] number of photographs of ferns in their natural habitat. The first edition was published in 1940. In this second edition the nomenclature has been brought into line with the eighth edition of Gray's Manual of botany and the range maps have been brought up to date

Van Rensselaer, Maunsell and Howard E. McMinn

Ceanothus Part i *Ceanothus* for gardens parks, and roadsides by Maunsell Van Rensselaer Part ii A systematic study of the genus *Ceanothus* by Howard E. McMinn. Santa Barbara, Calif Santa Barbara Botanic Garden, 1942 308 p. illus (part col'd) 23 cm. $2.50 2221

Contents (abridged) Part i. Ceanothus for gardens, parks and roadsides Introduction. Noteworthy Ceanothus collections. Descriptive account of the species and varieties. Horticultural varieties. Propagation and cultivation, by Alfred J Stewart References. Part ii. A systematic study of the genus Ceanothus Introduction General discussion. Key to the species. Descriptive account References. Distributional history and fossil record of Ceanothus, by Herbert L. Mason. Invalid and uncertain names. Index

Note This work is [illegible] combination of practical horticultural information for the gardener and scientific facts for the botanist. The genus *Ceanothus* is also known as wild lilac or buckbrush and is restricted mainly to west of the Mississippi

Waksman Selman A

The actinomycetes their nature occurrence activities and importance Waltham Chronica Botanica Company 1950 230 p. illus. 24 cm. (Annales cryptogamici et phytopathologici incorporating Annales bryologici edited by Frans Verdoorn. Vol. 9) $5.50 2222

Contents Introductory Terminology phylogeny and taxonomy Identification and descriptions of important types. Morphology and life cycle Variation and mutations. Metabolism of actinomycetes—growth and nutrition, production of odors and pigments. Production of enzymes and of growth-promoting substances. Antagonistic properties of actinomycetes and production of antibiotics. Distribution of actinomycetes in nature Decomposition of plant and animal residues. Actinomycetes as causative agents of plant diseases. Actinomycetes as causative agents of human and animal diseases. Summary Appendix Media used for the study of actinomycetes. Bibliography General index Index of organisms

Note A summary of accumulated information on an interesting and important group of microorganisms. The author who [illegible] internationally known for his work on soil organisms, draws on the basis of more than one-third of [illegible] century of study and research on the actinomycetes He drew upon both the work done in his own laboratory and the work of other investigators. The bibliography which includes references to his papers as well as to the publications of others, contains over 500 citations of the international literature Although much work has been done in the field since [illegible] was written, the book [illegible] have use for graduate students who are about to enter this field of research

Waksman Selman A. and Hubert A. Lechevalier

Guide to the classification and identification of the actinomycetes and their antibiotics. Baltimore The Williams & Wilkins Company 1953 246 p. 24 cm. $5.00 2223

Contents (abridged) Part i. The actinomycetes Classification of the actinomycetes. The genus Streptomyces. The genus Nocardia The genus Micromonospora. The genus Thermoactinomyces. The genus Actinomyces Part ii. The antibiotics Production of antibiotics by actinomycetes [illegible] groups. Description of the antibiotics of actinomycetes. Selected general references. Index to species of actinomycetes. Index to antibiotics of actinomycetes

Note Part [illegible] of this work—written by [illegible] Waksman alone—concerned entirely with classification and identification of the actinomycetes It presents detailed classification and descriptive range of information useful in the identification of species. This information includes description of colors and other features characteristic of growth on different media. The second part of the book—written by both Waksman and Lechevalier—deals with the antibiotics produced by actinomycetes It is arranged by name of antibiotic compound and gives for each compound the name of the species that produces it, synonyms, method of extraction, chemical and physical properties, biological activity toxicity and literature references. The selected general references given at the end of the volume are supplementary to the literature references in the genus descriptions.

Wickerham Lynferd Joseph

Taxonomy of yeasts Washington D C. Government Printing Office 1951 56 p illus. 23 cm (United States Department of Agriculture. Technical bulletin no. 1029) Gratis 2224

Contents. Introduction Part i. Techniques of classification Isolation and maintenance Morphology Sporulation Colony morphology Physiology: Carbon assimilation tests Nitrate assimilation test Vitamin deficiency test. Fermentation tests. Growth. Ability [illegible] Ability to grow at 37 C. Production of starch Production of esters. Variation. Part ii. A classification of the genus *Hansenula* History of the genus. Keys to the species. Descriptions of the species. Discussion. Phylogenetic relationships. Summary Literature cited. Plates 1–3

Note A method of classification leading to the defining of each genus of [illegible] yeasts so that it will contain only [illegible] group of related species is presented in this pamphlet. A similar definition, covering the same range of characteristics except the ability to form ascospores, is used to define the corresponding [illegible] genus [illegible]. Through [illegible] changes in the current classification, this procedure clarifies relationships between certain sporogenous genera and their previously unestablished generic counterparts among the [illegible] yeasts.

Wolf Frederick Adolf, and Frederick T Wolf

The fungi. New York John Wiley & Sons Inc., 1947 2 v illus. 21 cm. Vol. i o.p. vol. ii $7 75. 2225

Contents Volume [illegible] The beginning of mycology Isolation and cultivation of fungi. Classification and taxonomy of fungi. The myxomycetes. The phycomycetes. The ascomycetes. The basidiomycetes. The deuteromycetes (fungi imperfecti) Author index. Subject index. Volume [illegible] Nutrition of fungi. Enzymes and enzymatic activities of fungi. Respiration Biochemistry of fungi. Effects of temperature on fungi. Effects of radiation on fungi Effects of reaction of substrate on fungi Spore discharge Germination of spores. Host penetration. Physiologic specialization and variation among fungi. Associative effects among fungi. Mycorrhizae and mycotrophy Genetics of fungi. Poisonous and edible fungi. Medical mycology Geographical distribution of fungi. Mycology in relation to plant pathology Soil fungi. Fungus-insect interrelationships Marine fungi. Fossil fungi. Author index. Subject index.

Note Although there has long been recognition of the economic and biological importance of fungi, research into their behavior and potential uses has multiplied many times since the discovery of penicillin. This important book, designed both as [illegible] text for use in advanced courses and [illegible] reference work, deals neither [illegible] industrial nor pathological mycology yet the viewpoint from which it is written should make it useful to [illegible] research workers who are concerned with fungi. The authors have elected throughout both volumes to emphasize behavior rather than taxonomy While the first volume is arranged by class and order and includes [illegible] consideration of morphology and classification basic to the study of fungi, the discussion deals mainly with habits and reproductive processes Volume ii is concerned chiefly with the physiology of fungi and the influence of environment upon their processes and activities. Related literature is cited in extensive chapter bibliographies, and there are many excellently drawn figures.

WOLF, FREDERICK TAYLOR

The aquatic Oomycetes of Wisconsin Part I Madison Wis The University of Wisconsin Press, 1944 64 p illus 23 cm $4 00 2226

Content (abridged) Order Lagenidiales. Order Blastocladiales. Order Monoblepharidales. Order Saprolegniales. Order Leptomitales. Order Pythiales. *Literature cited.*

Note A correlation of the results of investigations, including collections and taxonomic work, of certain research workers on the Saprolegniaceae or aquatic fungi, including descriptions of the forms, records of the collections, and a key for their identification. The author has worked largely from existing literature in the field but has also cultured several thousand water and soil samples for aquatic fungi, to determine presence in Wisconsin.

YUNCKER, TRUMAN GEORGE

Revision of the Polynesian species of Peperomia. Honolulu Bernice P Bishop Museum 1937 73 p illus 25 cm (Bernice P Bishop Museum. Bulletin 143) $2 00 2227

Contents Introduction. Description of genus. Key to species. Taxonomic arrangement of species. Keys to species in the island groups. List of specimens. Index.

Note In the preparation of this paper all available collections of Polynesian species have been studied, the specimens belonging to the Museum forming the basis of the material. There are included 38 species, 12 varieties, and one form of which 14 species, 12 varieties, and one form are new to science. The region covered by the studies includes the islands in the South Pacific lying east of Micronesia and Melanesia and extending from the Tongan and Samoan groups on the west to Pitcairn and Henderson islands on the east. The species occurring in the Hawaiian Islands were studied by the author and presented in Bulletin 112 of the Museum.

ZUNDEL, GEORGE LORENZO

The Ustilaginales of the world State College Department of Botany The Pennsylvania State College 1953 410 p illus 27 cm (Department of Botany The Pennsylvania State College School of Agriculture Contribution no 176) $3 50 2228

Content Introduction. Historical. Characterization of the Ustilaginales. Taxonomy and cytology. Selected and cited references on the Ustilaginales. Artificial key to the genera of the Ustilaginales. Key to the families. Family 1 Ustilaginaceae. Family 2 Tilletiaceae. Host index of the Ustilaginales. Index of synonyms and some species mentioned in notes or in places other than their alphabetical order in the text.

Note An extensive monograph on the Ustilaginales, parasitic fungi which attack various parts of herbaceous plants. The major portion of the work consists of scientific descriptions of the genera and species of the two recognized families of the Ustilaginales with keys to identification. Over 1,000 species are described, each with bibliographical citation to its first description. Information is as of 1945 when the manuscript was completed. The subject is of considerable economic importance because of the losses in yield and value of cereal crops caused by the various smuts, hence this publication is of interest to plant pathologists as well as to botanists.

PLANT CHEMISTRY AND PHYSIOLOGY

ANNUAL REVIEW OF PLANT PHYSIOLOGY Volume 7 Lawrence R. Blinks editor Leonard Machlis and John G Torrey associate editors. Palo Alto Calif Annual Reviews Inc. 1956 456 p illus 23 cm. $7 00 2229

Content Mineral nutrition of plants—mechanisms of uptake and transport, by E. Epstein. Energy transformations in photosynthesis, by L. N. M. Duysens. Nitrogen fixation by photosynthetic organisms, by G. E. Fogg. Endogenous rhythms in plants, by E. Bünning. The physiology of cell division, by H. Stern. Obligate parasitism, by C. E. Yarwood. Biological relations of plant viruses, by C. W. Bennett. Iron chlorosis, by J. C. Brown. Photoperiodism in woody plants, by P. F. Wareing. Plant proteins, by C. L. Danielson. Physiology of root elongation, by J. G. Torrey. Mechanisms of carbohydrate breakdown in plants, by B. Axelrod and H. Beevers. Physiology of seed germination, by E. H. Toole and others. Phosphorus metabolism and photosynthesis, by D. I. Arnon. Absorption and translocation of plant regulators, by J. van Overbeek. Effects of light quality on plant growth, by E. C. Wassink and J. A. J. Stolwijk. Recent advances in plant physiology in the U.S.S.R. by A. L. Kursanov. Author index. Subject index.

Note This is the seventh volume in a useful series which covers both scientific advances and developments in application. The sections or chapters are essentially literature surveys, as is customary in this type of publication. They are written concisely but are not unpleasantly terse. A majority of the monographs in each issue are based on the literature published in the year (or two) preceding publication of the volume, but in some instances the author covers a larger span of time. An example of the latter type of survey in the present volume is Yarwood's "Obligate parasitism" which cites papers published as early as 1911 and as recently as September 1955. The series is addressed to graduate botanists and other scientists who have need to keep abreast of advances in plant physiology and chemistry.

BONNER, JAMES

Plant biochemistry New York Academic Press Inc. 1950 537 p illus 23 cm. $7.50 2230

Content (abridged) Part I Carbohydrates and carbohydrate metabolism. Transformation of the sugars. Starch. Inulin and the water-soluble polysaccharides. Part II, The cell wall and cell wall metabolism. Cellulose. Noncellulosic polysaccharides. The pectic substances. The gums, mucilages, and gel-forming substances. Lignin. Part III, Plant acids and plant respiration. The organic acids of plants. Plant respiration. Part IV Metabolism of nitrogenous compounds. Synthesis and metabolism of amino acids. The plant proteins. The plant proteolytic enzymes. Nitrogen metabolism of seedlings. Nitrogen metabolism of leaves. Purines and pyrimidines. Alkaloids. Nitrification and nitrogen fixation. Part V, Secondary plant products. Lipids and lipid metabolism. Essential oils. The carotenoids. Rubber. The anthocyanins and anthoxanthins. Part VI, Certain aspects of plant growth. The plant growth substances. Photosynthesis. *Author index. Subject index.*

Note An inclusive introductory text. Since it is intended for study by upperclass and graduate students in organic chemistry, knowledge of fundamental organic chemistry has been assumed. Most of the chapters are short and are intended only to introduce the reader to the topic under discussion. On the other hand, extensive list of source material is appended to each chapter. Because of this feature, readers outside of colleges who have the necessary education in chemistry can use the book as a guide to the recent literature of specific topics.

BONNER JAMES AND ARTHUR W GALSTON

Principles of plant physiology Illustrations by Evan L. Gillespie San Francisco W H. Freeman and Company 1952 499 p. illus 24 cm. (A series of biology texts George W Beadle Ralph Emerson Douglas M Whitaker editors) $6 00 2231

Content Plants and plant physiology. Part I, Nutrition. Photosynthesis. Mineral nutrition. Permeability and the absorption of nutrients. Water economy. The soil as a medium for plant growth. Translocation—the redistribution of nutrients. Part II, Metabolism. Enzymes—the machinery of metabolism. Carbohydrates—their structure, functions, and interrelations. Respiration and the mechanism of biological oxidations. Nitrogen—its metabolism and economy in plant and nature. Lipids—their role in structure and function. Pathways and byways in plant metabolism. Part III, Growth and development. The dynamics of growth and development. The interpretation of growth. Auxin and the control of growth. The physiology of reproduction. Dormancy and arrested development. The problem of differentiation. Plant and environment. Index.

Note A well-written introduction. The authors' style is sharp and easy to read, and they have included numerous descriptions of experiments and results from experimental investigations that increase the reader's interest. The illustrations have been well thought out and are clearly reproduced. The authors have assumed that students using the book will have had introductory courses in general chemistry and botany.

Crafts Alden Springer and others

Water in the physiology of plants, by A S Crafts H. B Currier and C. R. Stocking Waltham Chronica Botanica Company 1949 240 p. illus. 26 cm. (A new series of plant science books edited by Frans Verdoorn. Vol. XXI) $6.00 2232

Contents: Introduction. Structure of water. Properties of solutions. Osmosis and osmotic pressure. The mechanism of osmosis. Water as a plant component, intercellular distribution of [illegible]. The osmotic quantities of plant cells. Active cell water relations. Turgor and movement of water in plants. Water loss and water retention. Bibliography. Author index. Subject index.

Note. A reference book on plant and water relations intended for the use of botanists and plant physiologists. The chapters are essentially reviews of the published literature of the subject, from early times to the present. Full bibliographical details are given in the 18-page bibliography. As the authors have made the material [illegible] connected discourse, with summaries at the ends of the chapters, the work may also be used as [illegible] textbook for advanced courses.

Crocker, William

Growth of plants twenty years research at Boyce Thompson Institute. New York Reinhold Publishing Corporation 1948 459 p illus. (part col d) 24 cm. $10.00 2233

Contents: Introduction. Early problems. Life span of seeds. Dormancy in seeds. Physiological effects of ethylene and other unsaturated carbon-containing gases. Effect of certain lethal gases upon plants and animals. Plant hormones, by P. W. Zimmerman. Dormancy in buds. Plant cell membranes, by W. E. Fore. Plants grown under controlled environmental conditions. Research on insecticides, by A. Hartzell. Fungicide investigations, by S. E. A. McCallan. Miscellaneous. Author index. Subject index.

Note. The Boyce Thompson Institute for Plant Research was founded in 1924 for the purpose of conducting basic research on various aspects of plant growth. This volume, prepared by the director of the Institute, gives [illegible] summarized, critical accounts of the research work carried on at the Institute since its inception. The book is well illustrated with photographs [illegible] which depict the results of experimentation on plant development, and each chapter concludes with [illegible] two- to four-page bibliography.

Crocker, William and Lela V. Barton

Physiology of seeds an introduction to the experimental study of seed and germination problems. Waltham Chronica Botanica Company 1953 267 p. illus. 24 cm. (A new series of plant science books edited by Frans Verdoorn. Vol. 29) $6 50 2234

Contents: Anatomy of seeds. Seed production. Chemical composition of seeds. Water relations of seeds. Respiration. Factors affecting germination. Dormancy in seeds. Storage and life span of seeds. Metabolic and energy changes in seed development and germination. Vernalization. Embryo culture. Seed transmission of disease. Subject index. Index of authors.

Note. Two members of the staff of Boyce Thompson Institute for Plant Research, Yonkers, N. Y. are the authors of this summary of current basic knowledge on seeds and germination. The book is therefore written from the standpoint of the investigator of seed and germination problems and should be of value to all those who work with seeds and seed technology and who are interested in the fundamentals of seed knowledge. It includes discussions of the economic significance of seeds and seed products, as well as of the scientific aspects of the subject. Extensive references to the literature on each topic at the ends of the chapters.

Curtis Otis Freeman and Daniel G Clark

An introduction to plant physiology New York McGraw Hill Book Company Inc., 1950. 752 p. illus. 23 cm. (McGraw Hill publications in the botanical sciences Edmund W Sinnott, consulting editor) $9.50 2235

Contents (abridged). Foods and photosynthesis. Diffusion and osmosis. Surface phenomena, colloids, absorption and imbibition. Water absorption. Transpiration: rates, measurements, and factors. Frost resistance and death by freezing. Injury at high temperatures. Permeability, accumulation, and antagonism. Mineral nutrition. Nitrogen relations. Translocation of solutes. Enzymes and digestion. Respiration and fermentation. Viability, dormancy, and rest in seeds and other plant parts. The role of organic accessory substances in plant growth. Conditions influencing flowering and fruiting as compared with vegetative growth. Growth. Appendices. Author index. Subject index.

Note. The authors in preparing this textbook for college students taking [illegible] first course in plant physiology assumed that readers will have had introductory courses in chemistry and either botany or biology. There is minimum emphasis on the biochemical aspects of plant physiology. Other aspects [illegible] plant physiology, such as photosynthesis and water relations, are developed in detail. Each chapter closes [illegible] with about two pages of bibliographical citations. The book incidentally stresses effective training in scientific methods.

Foster Jackson Walter

Chemical activities of fungi New York Academic Press Inc. 1949 648 p illus. 24 cm. $12.00 2236

Contents: Introduction, history perspective. The methodology of mold metabolism. Chemical nature of the mold mycelium. General considerations of mold metabolism. Natural variation. Mutations, physiological genetics, and biochemical syntheses. Trace element nutrition of fungi. Lactic acid formation by fungi. Alcoholic fermentation by molds. Oxalic acid metabolism. Fumaric and other C_4-dicarboxylic acids. Citric acid. Itaconic acid. Kojic acid. Gluconic and other sugar acids. Carbohydrates produced by fungi. Nitrogen metabolism of fungi. Other transformations in fungi. Microbiological aspects of penicillin. Author index. Subject index.

Note. The title of this book is well chosen. It deals not only [illegible] the biochemical processes of molds as these proceed under natural conditions but also [illegible] the manipulation and regulation of these processes in such ways that optimum amounts of desired chemical substances are produced under laboratory or factory conditions. Essentially the book is [illegible] critical review of published literature. A considerable degree of chemical maturity is assumed. The chapters are supplemented by long lists of pertinent literature. The author is Professor of Bacteriology in the University of Texas and has himself made notable contributions to the knowledge of the field.

Haasis Ferdinand Wead

Diametral changes in tree trunks Washington, D. C. Carnegie Institution of Washington, 1934 103 p. illus 25 cm. (Carnegie Institution of Washington. Publication no 450) $2.00 2237

Contents (abridged). Introduction. Historical—description. Diurnal fluctuations: species for which observed—general similarity of pattern—amount of daily fluctuation—similarity to other fluctuations due to evaporating power of air. Seasonal shrinkage: occurrence—conditions affecting shrinkage and rehydration. Traumatic and prolonged shrinkage: short- and long-period shrinkage—shrinkage following installation of dendrograph. Diametral increases: rehydration—growth. Significance of diametral changes: location of fluctuation—relation of diametral fluctuation to liquid tension—other causes of fluctuations. List of individual trees and other plants. Summary. Bibliography.

Note. Records made with the MacDougal dendrograph during the years 1918-1933 in Colorado and Arizona on trees of 23 species, mostly Monterey pine and redwood. The bibliography includes titles of 42 papers presenting results of dendrographic studies. The changes discovered and the factors affecting and causing these changes are reported and discussed.

Hoagland Dennis Robert

Lectures on the inorganic nutrition of plants. Waltham Chronica Botanica Company 1944 226 p. illus. 23 cm. (Prather lectures at Harvard University) $4 75 2238

Contents: A survey of problems of plant nutrition. Micronutrient chemical elements and plant growth. The absorption and accumulation of salts by plant cells. Upward movement and distribution of inorganic solutes in the plant. The growth of plants

in artificial media in relation to the study of plant nutrition. Some biochemical problems associated with salt absorption. Aspects of the potassium nutrition of plants as illustrating problems of the system, soil-plant-atmosphere. Plates. General index. Author index.

Note This series of lectures, based on the Prather Lectures at Harvard University delivered by the author in the spring of 1947 outlines a number of important problems of plant nutrition, with illustrative material derived from researches at the University of California. Scientific aspects of certain soil-plant interrelations, nutrient absorption and utilization, and artificial culture methods are primarily discussed. Trends of research in plant nutrition and opportunities for further exploration are stressed. The discussions have been prepared with consideration given to the broad interests of plant scientists who are not specialists in the subjects presented, but who wish to learn of the nature of problems of plant nutrition especially of recent advances in this field, as they may have a bearing on related fields of research. The book is intended not only for the plant physiologist but also for the general physiologist, the agronomist horticulturist, plant pathologist, and soil scientist. There are references at the end of each chapter

KRAMER, PAUL JACKSON

Plant and soil water relationships New York McGraw Hill Book Company, Inc 1949 347 p illus 23 cm (McGraw Hill publications in the botanical sciences Edmund W Sinnott consulting editor) $7 00 2239

Contents Historical introduction. Soil-moisture relations. Factors affecting the supply of soil moisture. Measurement and control of soil moisture. Structure and growth of roots. Factors affecting the development of root systems. Root and stem pressures and exudation phenomena. Processes concerned in water absorption. Factors affecting the absorption of water The absorption of solutes. Absorption deficits and their effects on plants. Bibliography Author index. Subject index.

Note A textbook intended for teachers, investigators, and students in all fields of plant science who are interested in the principles governing plant and soil-water relations. Following a review of the early development of plant physiology the author proceeds to present the fundamental facts of the subject in relatively simple terms for the benefit of those working in the various basic and applied plant sciences rather than for specialists in plant-water relations. The author writes on the basis of a number of years of research on the absorption of water by plants. The bibliography extends to 34 pages.

LEOPOLD A CARL

Auxins and plant growth Berkeley University of California Press 1955 354 p illus 24 cm. $5 00 2240

Content Part I, Fundamentals of auxin action Development of knowledge of auxins Auxin extraction and measurement techniques The occurrence and role of growth hormones in plants Developmental effects of auxins. Physiological and anatomical effects of auxin applications. Factors altering effectiveness of auxin applications The chemical nature of growth regulators Theories of the mechanism of auxin action. Part II Auxins in agriculture Methods of applying auxins and their persistence in plants and soils. Rooting. Parthenocarpy Flower and fruit thinning. Control of pre-harvest fruit drop Flowering. Dormancy and storage. Herbicides. Miscellaneous uses of auxins Potentials of auxins and auxin research. Bibliography Appendix. Index

Note In the first part of this book—which accounts for approximately one-half of its length—the basic scientific knowledge pertaining to the action of auxins in plants is presented Of particular importance for the intended audience is the second chapter which deals with methods of extracting auxins the techniques of assays, including biological, chemical and physical techniques and techniques for their identification and quantitative estimation. The second part of the book relates the basic knowledge to specific applications in agriculture. As the chapter titles indicate these applications are not limited to growth but include also such uses as the control of preharvest drop of tree fruits. In both parts, some space is given to the historical development, and the significant early papers are cited. The pertinent literature is cited briefly throughout the book, and the full references, including the titles of the articles, are given in the 33-page bibliography The book is directed to such readers as research workers in agriculture rather than to specialists in plant physiology

LEVITT, J

The hardiness of plants New York Academic Press Inc. 1956 278 p illus 23 cm. (Agronomy, a series of monographs prepared under the auspices of the American Society of Agronomy Vol 6 General editor A. G. Norman) $7 00 2241

Content Part I, Low temperature hardiness The limits of low temperature hardiness. The temperatures of plants exposed to freezing. Ice formation in the plant. Chilling injury Frost injury The measurement and meaning of frost hardiness. Variations in frost hardiness with environment. The relation of frost hardiness to growth and development. Morphological factors associated with hardiness. The relation of total and bound water content to frost hardiness. The relation of cell sap concentration and sugars to frost hardiness. Miscellaneous factors investigated in relation to frost hardiness. The relation of protoplasmic properties to frost hardiness. The mechanism of frost injury and hardiness. The relative importance of protoplasmal and nonprotoplasmal factors in frost hardiness. Part II, Low moisture or drought hardiness The limits of drought hardiness. Drought injury The measurement and meaning of drought hardiness. The relation of drought hardiness to growth and development. Factors associated with drought hardiness. The mechanism of drought injury and hardiness. Tolerance of drought dehydration. Dehydration hardiness. Part III, High temperature hardiness The limits of high temperature hardiness. Heat injury—hardiness. The mechanism of heat hardiness. Hardiness to dehydration, heat, and other injurious agents. References Index

Note A comprehensive survey of the accumulated knowledge pertaining to the resistance of living plants to low temperatures, high temperatures, and drought. It has been based on an extensive survey of the literature, and important statements in the text are keyed to a 45-page list of references. There are 128 tables. The author has described its purpose as follows (a) to bring together the known facts on hardiness in a single volume which is intended not only for those involved in basic plant physiological studies but also for others concerned with the many agronomic and horticultural problems that involve crop responses to environment and (b) to stimulate further research by presenting hypotheses that are based on the known facts but that must be tested by experiment. The book supersedes his *Frost killing and frost hardiness*, Minneapolis, 1941.

LILLY VIRGIL GREENE AND HORACE L. BARNETT

Physiology of the fungi New York McGraw Hill Book Company Inc. 1951 464 p. illus 23 cm (McGraw Hill publications in the botanical sciences Edmund W Sinnott, consulting editor) $8 00 2242

Content Introduction Culture media. Growth. Enzymes and enzyme action. Essential metallic elements. The essential nonmetallic elements other than carbon. Carbon sources and carbon utilization Hydrogen-ion concentration. Vitamins and growth factors. Fungi as test organisms. Metabolic antagonists. The action of fungicides. Metabolic products Factors influencing sporulation of fungi Spore discharge and dissemination. Spore germination The physiology of parasitism and resistance Physiological variation and inheritance of physiological characters. Suggested laboratory exercises. Index.

Note An advanced textbook for the student already acquainted with the structure of fungi It comprises a systematic discussion of the life processes of fungi. Summaries and bibliographical references are given at the ends of the chapters, and a series of 11 suggested laboratory exercises is outlined in 20 pages at the end of the book The work had its origin in the lectures and laboratory exercises used by the authors in a course offered to graduate students at the University of West Virginia. Aside from a basic knowledge of fungus morphology the student is also supposed to have some knowledge of organic chemistry The book is of some value as a reference work to persons actively engaged in physiological research on fungi.

LOOMIS WALTER E, editor

Growth and differentiation in plants Ames Iowa State College Press 1953 458 p illus. 23 cm (A monograph of the American Society of Plant Physiologists) $7 50 2243

Contents: Growth and differentiation—an introduction and summary, by W. E. Loomis. Plant morphogenesis, by E. W. Sinnott. Growth of the root tip, by [illegible]. Elongation of the cotton fiber, by J. C. O'Kelley and F. W. Carr. Anatomical differentiation in shoot and root stem, by K. Esau. Some elementary mathematics of plant growth, by R. E. Buchanan. [illegible], by G. F. Sprague. Dormancy, by N. C. Thompson. [illegible]. Reactions of plants to photoperiod, by A. W. Naylor. Vernalization of growing plants, by H. C. Thompson. Growth correlation, by W. E. Loomis. Electric fields and correlation in plants, by [illegible] and E. J. Lund. Physiology of hormone action, by S. A. Gordon. Hormonal control of flower initiation, by J. Bonner and J. Liverman. Structure and synthesis of protoplasm, by H. S. McKee. Cellular differentiation: an experimental approach, by B. Commoner and M. L. Zucker. Some factors associated with abnormal growth in plants, by A. J. Riker and A. C. Hildebrandt. Comparative physiology of heterotrophic growth in plants, by S. H. Hutner. Literature cited. Index.

Note: An authoritative survey of the current knowledge of growth and differentiation in plants. It is composed, as shown in the above table of contents, of signed monographic chapters. However, the book was planned as [illegible] and the chapters are original compositions, not reprints. Each one is [illegible] critical presentation of its particular topic containing, in most cases, an outline of the historical development, and [illegible] summary of recent publications and current theories. Several of the authors have [illegible] called special attention to problems needing solution. The typical chapter is very compactly written, and the texts of all chapters are keyed to literature citations. The book is addressed primarily to graduate botanists and other scientists in need of information on the biochemistry and growth mechanisms of plants.

MacDougal, Daniel Trembly

Studies in tree-growth by the dendrographic method. Washington, D. C. Carnegie Institution of Washington, 1936. 256 p. illus. 25 cm. (Carnegie Institution of Washington. Publication no. 462) $2.75 2244

Contents: Action of cambium, trees observed, and apparatus used. The Monterey pine (*Pinus radiata*). Experimental defoliation. General considerations.

Note: This monograph presents the results of [illegible] study of the activities of the cambium of trees and its relation to the growth and other physiological changes in tree structure. [illegible]

Martin, Emmett Virgil

Studies of evaporation and transpiration under controlled conditions. Washington, D. C. Carnegie Institution of Washington, 1943. 48 p. illus. 25 cm. (Carnegie Institution of Washington. Publication 550) $0.40 2245

Contents: Introduction. Evaporation. Methods. Control chamber. Evaporimeters. Temperature measurement. General experimental procedure. Results. Leaf-shaped evaporimeter. Dependency upon evaporimeter [illegible]. Transpiration. Methods. Material. Temperature measurement. General experimental procedure. Results. Correlation with air temperature and relative humidity in calm air in darkness. Leaf-temperature relations. [illegible] Relative transpiration. Certain energy considerations. Effect of size of surface. Effect of [illegible] and ecological applications. Vapor pressure deficit. Dependence of transpiration rate on size of leaf. Relative transpiration. Summary. Literature cited.

Note: This paper deals with the correlation under controlled conditions between air temperature, relative humidity and transpiration rate. The experiments were begun by measuring the evaporation rate of [illegible] in darkness, the purpose being to evaluate the comparative influence of temperature and atmospheric moisture in producing the relatively low rates of transpiration found in regions of high elevation where sea level [illegible] and to obtain more information concerning the much-debated question of the cooling effect of transpiration. These experiments yielded such marked response to changes in temperature that it seemed desirable to measure rates of evaporation from pieces of blotting paper shaped like the leaves employed, in order to find whether this degree of response differed appreciably from that of [illegible] purely physical evaporating surface. This led to a test of the validity of the expressions for evaporation from such surfaces as presented by J. Leighly in "A note on evaporation," *Ecology*, vol. 18, p. 180–198, 1937, especially the [illegible] with respect to size and shape of evaporating surface.

Meyer, Bernard Sandler and Donald B. Anderson

Plant physiology. Second edition. New York, D. Van Nostrand Company, Inc., 1952. 784 p. illus. 24 cm. $8.50 2246

Contents: The field of plant physiology. Properties of solutions. Colloidal systems. Plant cells. Diffusion. Osmosis and osmotic pressure. Imbibition. The water relations of plant cells. The loss of water from plants. The stomatal mechanism. Factors affecting transpiration. The translocation of water. Soils and soil-water relations. Absorption of water. The internal water relations of plants. Enzymes. The chlorophylls and the carotenoids. Photosynthesis. Factors affecting photosynthesis. Carbohydrate metabolism. Respiration. The mechanism of respiration. Fat metabolism. Absorption of mineral salts. Utilization of mineral salts. Nitrogen metabolism. Translocation of solutes. Plant hormones. Vegetative growth. Environmental factors affecting vegetative growth. Reproductive growth. Environmental factors influencing reproductive growth. Growth correlations. Germination and dormancy. Growth periodicity. Plant movements. Author index. Subject index.

Note: A thoroughly revised edition of [illegible] standard college text book. Prerequisite courses in general botany and general chemistry on the part of the [illegible] have been assumed. [illegible] the original edition, the revision emphasizes experimental results and the interpretation of plant processes in terms of physicochemical principles. Most of the presentation is based directly on data selected from the original literature of the subject. In the new edition the chapters on various aspects of water relations have been somewhat shortened, [illegible] corresponding expansion of the chapters on metabolic processes and growth. A new chapter on enzymes replaces the former chapter on digestion. The extensive bibliographies of books and periodical articles printed at the conclusion of each chapter have been brought up to date.

Miller, Edwin Cyrus

Plant physiology, with reference to the green plant. Second edition. New York, McGraw Hill Book Company, Inc., 1938. 1,201 p. illus. 23 cm. (McGraw Hill publications in the botanical sciences. E. W. Sinnott, consulting editor) $15.00 2247

Contents: The plant cell. Solutions and membranes in relation to the plant cell. The roots of plants. The intake of water by plants. The intake of solutes by the plant. The elements absorbed by the plant. The loss of water from plants. The formation of carbohydrates by the green plant. The nitrogen metabolism by the green plant. The fat metabolism of the green plant. The process of digestion in the green plant. The translocation of materials in plants. The process of respiration in plants. The process of growth in plants. Bibliography. Author index. Subject index.

Note: This book gives [illegible] complete survey of the field of plant physiology in [illegible] comprehensive and minutely detailed treatment that makes [illegible] suitable both as [illegible] text for advanced college students and as [illegible] reference work for investigators. The work is confined entirely to the physiology of the green plant; the findings of the leading American, English, and Continental investigators are summarized. New material in this edition accounts for an increase of about 300 pages.

Murneek, Andrew Edward and R. O. Whyte

Vernalization and photoperiodism, a symposium; foreword by Kenneth V. Thimann.

Waltham Chronica Botanica Company, 1948 196 p illus 27 cm (Lotsya—a biological miscellany, Frans Verdoorn, editor Vol 1) $4 75 2248

Content (abridged) Foreword, by K. V Thimann. History of research in vernalization, by R. O Whyte. History of research in photoperiodism, by A. E. Murneek. Hormones in relation to vernalization and photoperiodism by K. C. Hamner Wave length dependence and the nature of photoperiodism, by H. A. Borthwick and others. The photoperiodicity of flowering under short day with supplemental light of different wave lengths, by G. L. Funke. Nutrition and metabolism as related to photoperiodism, by A. E. Murneek. Anatomical and histological changes in relation to vernalization and photoperiodism, by R. H. Roberts and B E. Struckmeyer Length of day in the climates of past geological eras and its possible effects upon changes in plant life by H. A. Allard. Vernalization and photoperiodism in the tropics, by S. M Sircar Some preliminary observations of phenological data as tool in the study of photoperiodic and thermal requirements of various plant material, by M. Y Nuttonson. Thermoperiodicity by F W Went. Author index. Subject index.

Note A comprehensive review of the present state of knowledge and research regarding the physiology of plant flowering as it is affected by the chilling of germinating seeds and by varying lengths of periods of light. Each chapter prepared by an authority of international repute in the field of agricultural research, reviews not only the author's experience in a particular aspect of the problem, but also provides a résumé of pertinent literature of the subject. An extensive list of references is cited at the end of each paper

RABINOWITCH EUGENE I

Photosynthesis and related processes New York Interscience Publishers Inc. 1945–56 2 v in 3 parts illus 24 cm. Vol I $12 00 vol II part 1 $16 50 vol II part 2 $18 50 2249

Content (abridged) Volume I, Chemistry of photosynthesis, chemosynthesis and related processes in vitro and in vivo. Photosynthesis and its role in nature. The discovery of photosynthesis. Part I, The chemistry of photosynthesis and related processes The over-all reaction and the products of photosynthesis. Photosynthesis and chemosynthesis of bacteria. The metabolism of anaerobically adapted algae. The primary photochemical process. Intermediates in the reduction of carbon dioxide. Inhibition and stimulation of photosynthesis. Part II, The structure and chemistry of the photosynthetic apparatus The chloroplasts and chromoplasts. The pigment system. Chlorophyll. The accessory pigments. Photosynthesis and respiration. Author index of the main investigations in Volume I. Subject index Volume II part 1 Spectroscopy and fluorescence of photosynthetic pigments kinetics of photosynthesis. Part III, Spectroscopy and fluorescence of photosynthetic pigments Absorption spectra of pigments in vitro Light absorption by pigments in the living cell. Fluorescence of pigments in vitro Fluorescence of pigments in vivo Part IV Kinetics of photosynthesis Methods of kinetic measurements. External and internal factors in photosynthesis. The light factor—I, Intensity II, Maximum quantum yield of photosynthesis III, Photosynthesis and light quality; role of accessory pigments. Index Volume II, part 1 Part four Kinetics of photosynthesis (continued) The temperature factor The pigment factor Time effects I, Induction phenomena II, Photosynthesis in intermittent light. Part five Addenda to Volume I and Volume II, part 1 Photochemistry of chlorophyll in vitro and in vivo Chemical path of carbon dioxide reduction. Miscellaneous additions to Volume I and Volume II, part 1 Epilogue. Author index of the main investigations in Volume II, part 2 Subject index to Volumes I, II-1 and II-2

Note A monumental survey of the knowledge accumulated so far in the study of photosynthesis. While brief summary of early work is included, the major emphasis is on results published since 1935 including those achieved with the newer methods of attacking this intricate problem such as the use of radioactive isotopes, deuterium, spectroscopy and the electron microscope. The account is critical one, not mere stringing together of abstracts. The literature is extensively cited, and the names of the authors are assembled in the author indexes in Volume and Volume II, part 2 The terminal chapters in the last part provide condensed account of published research and progress achieved since the writing of Volume I and Volume II, part 1

SKOOG, FOLKE, editor

Plant growth substances. Madison University of Wisconsin Press 1951 476 p. illus. 24 cm. $6 00 2250

Content Plant growth substances The history and action of plant growth hormones, by A. J Haagen-Smit. The synthetic auxins: relation between structure and activity by K. V Thimann Growth and structure of the primary wall, by T Kerr Mechanism of cell elongation, by H. Burström. Control of evolution and life processes in plants, by A. F Blakeslee. Twenty years of plant hormone research, by F W Went. Plant hormones in practice, by P W Zimmerman. Growth substances in plant metabolism The state of growth substances in plant metabolism, by R. H. Burris. Changes in metabolism during growth and its inhibition, by K. V Thimann and others. Stimulation of respiration in relation to growth, by G S. Avery Jr Respiratory changes in relation to toxicity by J G Smith. Tissue responses to growth substances. Electrical polarity and auxins, by A. R. Schrank. Translocation of growth-regulating substances and their effect on tissue composition, by J. W Mitchell. Histological responses to growth-regulating substances, by J. M. Beal. Comparative effects of growth substances on stem anatomy by B E. Struckmeyer Formative effects of hormone-like growth regulators, by P W Zimmerman. Practical applications of growth regulators. Vegetation control on nonagricultural land, by K. C. Barrons. Differential responses in crop plants, by R. S. Dunham Growth substances in relation to the production of tree fruits, by F E. Gardner Use of growth substances in tropical agriculture, by J. van Overbeek. Growth substances in vegetative development. The role of growth substances in vegetative development as exemplified in tissue cultures, by P R. White. Factors influencing the growth of plant embryos, by N K. Ziebur Growth substances and the formation of buds in plant tissues, by F Skoog and C. Tsui. The development of stems and leaves, by F W Went. Growth substances in reproductive development Chemical regulation of sexual processes in fungi, by J. R. Raper The sexual substances of algae, by G. M Smith. Growth-regulating substances in relation to reproduction of some horticultural plants, by A. E. Murneek. The induction of flowering with a plant extract, by R. H. Roberts. Fruit development as influenced by growth hormones, by F G. Gustafson. The growth hormone mechanism in fruit development, by R. M. Muir Growth substances in fruit setting, by S. H. Wittwer. Growth substances in pathological growth Experimental induction and inhibition of overgrowths in plants, by R. S. de Ropp In vitro experiments on tumors of pathological origin, by A. C. Hildebrandt. The interaction between causative agents in diseased growth, by A. J Riker and J E. Thomas. Deformities caused by insects, by T C. Allen. Comparative studies of metabolism in insect galls and normal tissues by E. H. Newcomb. Vitamins and amino acids as growth factors Growth factors in bacterial nutrition, by E. E. Snell. Genetic aspects of growth responses in fungi, by E. L. Tatum. Vitamin and amino acid requirements for the growth of higher plants, by W J. Robbins

Note The papers published in this volume were presented in general meetings and round table discussions at the University of Wisconsin, September 5–7 1949 They cover all aspects of the physiology biochemistry chemistry and agricultural uses of plant growth substances. Bibliographical references are printed at the end of each paper

TRUOG, EMIL editor

Mineral nutrition of plants Madison University of Wisconsin Press 1951 469 p. illus. 24 cm. $6 00 2251

Content Mineral nutrition of plants World food possibilities and fertility status of our soils, by C. E. Kellogg and A. C. Orvedal Physico-chemical and biological factors affecting nutrient availability in soils Soil as medium for plant growth, by E. Truog. The activities of cations held by soil colloids and the chemical environment of plant roots, by C. E. Marshall The availability of soil anions by R. Overstreet and L. A. Dean. Contact phenomena between adsorbents and their significance in plant nutrition by H. Jenny The effect of soil physical properties on nutrient availability by J B. Page and G. B Bodman. Role of soil microorganisms in nutrient availability by A. G. Norman. Mechanism of entry and translocation of mineral nutrients in plants The nature of the process of inorganic solute accumulation in roots, by T C. Broyer The mechanism of ion absorption, by H Burström. The translocation of minerals in plants, by O. Biddulph. Some field problems in plant nutrition Control of nitrogen effects on McIntosh apple trees in New York by D Boynton. Production of vegetable crops for the canning industry by J B. Hester Role of minerals in plant nutrition Growth and function as criteria in determining the essential nature of inorganic nutrients, by D I Arnon. Mineral nutrition in relation to the ontogeny of plants, by W F Loehwing Correlations between protein-carbohydrate metabolism and mineral deficiencies

ences in plants, by R. A. Steinberg. Modifying influences of various environmental factors upon mineral nutrition. Light as a modifying influence on the mineral nutrition of plants, by R. B. Withrow. Soil moisture and the mineral nutrition of plants, by C. H. Wadleigh and L. A. Richards. Environmental influences on the growth of sugar cane, by H. F. Clements.

Note: This volume is composed of original papers which were presented at a symposium sponsored by the University of Wisconsin as one of the events in celebration of its centennial. In general, the papers are addressed to productive scientists who are concerned with research in connection with horticulture, plant biochemistry and plant physiology and they are written in technical terminology. Most of them are accompanied by references to the literature. There is no volume index.

VAN DE SANDE BAKHUYZEN, HENDRIK LEO

Studies on wheat grown under constant conditions: a monograph on growth. With contributions on the carbon and nitrogen content of the wheat plant, by Elizabeth P. Griffing and Carl L. Alsberg. Stanford, Food Research Institute, 1937. 400 p. illus. 23 cm. (Leland Stanford Junior University. Food Research Institute. Miscellaneous publications. No. 8) $4.00 2252

Contents (abridged): Part I, The growth curve in normal plant. Part II, Methods and materials. Part III, General growth features. Part IV, Dry weight and moisture content of the different organs. Part V, Dry weight and moisture of the standard plant. Part VI, Nitrogen and carbon of the organs. Part VII, Nitrogen metabolism in relation to growth and development. Bibliography. Index.

Note: A report of experiments carried on under the auspices of the Food Research Institute of Stanford University in 1933 and 1936. The experiments were conducted under constant conditions with only single variables modified. The object was to establish sound bases for use in studies designed to forecast wheat yields from weather data.

Waltham Chronica Botanica Company, 1948 196 p illus 27 cm. (Lotsya—a biological miscellany, Frans Verdoorn, editor Vol 1) $4 75 2248

Contents (abridged) Foreword, by K. V Thimann. History of research in vernalization by R. O Whyte. History of research in photoperiodism by A. E. Murneek. Hormones in relation to vernalization and photoperiodism, by K. C. Hamner W ve length dependence and the nature of photoperiodism, by H. A. Borthwick and others. The photoperiodicity of flowering under short day with supplemental light f different wave lengths, by G. L. Funke. Nutrition and metabolism as related to photoperiodism, by A. E. Murneek. Anatomical and histological changes in relation t vernalization and photoperiodism, by R. H. Roberts and B E. Struckmeyer Length of day in the climates of past geological eras and its possible effects upon changes in plant life, by H. A. Allard. Vernalization and photoperiodism in the tropics, by S. M Sircar Some preliminary observations f phenological data as tool in the study f photoperiodic and thermal requirements of various plant material, by M. Y Nuttonson. Thermoperiodicity by F W Went. Author index. Subject index.

Note A comprehensive review of the present stat of knowledge and research regarding the physiology of plant flowering as it is affected by the chilling of germinating seeds and by varying lengths of periods of light. Each chapter prepared by an authority of international repute in the field of agricultural research reviews not only the uthor's experience in a particular aspect f the problem, but also provides a résumé f pertinent literature of the subject. An extensive list of references is cited at the end of each paper

RABINOWITCH, EUGENE I

Photosynthesis and related processes New York Interscience Publishers, Inc. 1945–56 2 v in 3 parts illus 24 cm Vol I $12 00 vol II part 1, $16 50, vol II, part 2, $18 50 2249

Contents (abridged) Volume I, Chemistry of photosynthesis, chemosynthesis and related processes in vitro and in vivo. Photosynthesis and its role in nature. The discovery of photosynthesis. Part I, The chemistry of photosynthesis and related processes: The over-all reaction and the products of photosynthesis. Photosynthesis and chemosynthesis of bacteria. The metabolism of anaerobically adapted algae. The primary photochemical process. Intermediates in the reduction of carbon dioxide. Inhibition and stimulation of photosynthesis. Part II, The structure and chemistry of the photosynthetic apparatus The chloroplasts and chromoplasts. The pigment system. Chlorophyll. The accessory pigments. Photosynthesis and respiration. Author index of the main investigations in Volume I. Subject index. Volume II, part 1 Spectroscopy and fluorescence of photosynthetic pigments kinetics of photosynthesis. Part III, Spectroscopy and fluorescence of photosynthetic pigments: Absorption spectra of pigments *in vitro* Light absorption by pigments in the living cell. Fluorescence of pigments *in vitro* Fluorescence of pigments *in vivo* Part IV Kinetics of photosynthesis Methods of kinetic measurements. External and internal factors in photosynthesis The light factor—I, Intensity II, Maximum quantum yield of photosynthesis III, Photosynthesis and light quality; role of accessory pigments. Index Volume II, part 2 Part four Kinetics of photosynthesis (continued) The temperature factor The pigment factor Time effects I, Induction phenomena II Photosynthesis in intermittent light. Part five, Addenda to Volume I and Volume II, part 1 Photochemistry of chlorophyll *in vitro* and *in vivo*. Chemical path of carbon dioxide reduction. Miscellaneous additions to Volume and Volume II, part 1 Epilogue. Author index of the main investigations in Volume II, part 2 Subject index to Volumes I, II-1 and II 2

Note A monumental survey of the knowledge accumulated so far in the study of photosynthesis. While brief summary of early work is included, the major emphasis is on results published since 1925 including those achieved with the newer methods of attacking this intricate problem, such as the use of radioactive isotopes, deuterium, spectroscopy and the electron microscope. The account is critical one not mere stringing together of abstracts. The literature is extensively cited, and the names of the authors are assembled in the author indexes in Volume and Volume II, part 2 The terminal chapters in the last part provide condensed account of published research and progress achieved since the writing of Volume I and Volume II, part 1

Hester Role of minerals in plant utrition Growth and function as criteria i determining the essential nature of inorganic utrients, by D I Arnon. Mineral nutrition in relation t the ontogeny of plants, by W F Loehwing Correlations between *protein-carbohydrate* metabolism and mineral deficiencies

General

Contents: Introduction. Protozoa. Moss-like and jelly-like animals. Bodies and [illegible]. Worm-like and leech-like animals. Mollusks. Arthropods. Fishes. Salamanders. Frogs and toads. Lizards. Snakes. Turtles. Birds. Mammals. Eggs. Tracks.

Note: This work is [illegible] classified and illustrated guide for the identification of land and fresh-water animals of eastern North America. It is designed to serve the needs of those [illegible] who are not specialists in zoology and yet wish an introduction to the principal genera and species of the [illegible] orders of animals. The second edition is revised and enlarged from the first edition. Additions have been made to the keys and to the lists of references, as [illegible] as to the text.

FARRIS, EDMOND JOHN editor

The care and breeding of laboratory animals. New York John Wiley & Sons Inc., 1950 515 p. illus. 23 cm. $13.00 2259

Contents: The monkey, by G. van Wagenen. The rat as an experimental animal, by E. J. Farris. The care of experimental rats, by L. C. Strong. The guinea pig, by [illegible]. Breeding and care of the Syrian hamster, by [illegible]. The rabbit, by [illegible]. The dog, by L. F. Whitney. The domestic cat, by A. B. Dawson. Ferrets, by T. H. Shillingworth. The opossum, by E. J. Farris. The domestic fowl, by F. B. Hutt. Reptiles, by C. H. Pope. Amphibia, by R. C. Hutchinson. Fishes as laboratory animals, by M. Gordon. Drosophila, by W. P. Spencer. The control of laboratory pests and parasites of laboratory animals, by W. E. Dove. Index.

Note: In this valuable book, each author discusses an animal with which he has worked; consequently the text abounds in details that would not be found in a book written solely from the literature. In most chapters the following points are covered: cages, equipment, record keeping, handling, reproduction, diet, disease, shipping regulations and procedure. References to the literature accompany each chapter. The book was written primarily for professionally trained personnel associated with university and other experimental laboratories. Although the commercial raising of laboratory animals for sale is not covered, there is valuable information for persons engaged in this business.

FOX, DENIS L.

Animal biochromes and structural colours: physical, chemical, distributional & physiological features of coloured bodies in the animal world. New York Cambridge University Press 1953 378 p. illus. (part col d) 25 cm. $13.50 2260

Contents: Introduction. Physical and chemical foundations of colour. Structural colours of animals. Tyndall scattering and diffraction colours. Iridescent colours. Carotenoids. Chromolipoids or lipochromes. Quinones. Anthocyanins and flavones. Indole pigments—indigoids and melanins. Tetrapyrroles—porphins and bilins. Flavins or lyochromes. Purines and pterins. Some miscellaneous animal biochromes. Bibliography. Index of subjects. Index of authors.

Note: The physics, biochemistry and comparative physiology of animal colors are treated in this work. Esthetic, evolutionary and adaptive aspects are not covered. Essentially the book is a survey of the knowledge that has been published in hundreds of separate studies. The chapter organization is shown above. In the individual chapters the pertinent literature is abstracted and the abstracts are joined together in a narrative text designed for straightforward reading. References are given to the original publications. The molecular structures of many of the compounds discussed are diagrammed, and there is an occasional table of chemical or other data. A folded chart bound in at the end of the volume presents information on the occurrence and chemical nature of colors and pigments in the various animal phyla. The 23 page bibliography is [illegible] in its coverage. It is arranged alphabetically by authors' names, and, in addition, the index of authors aids in locating the mention in the text of authors' works. The subject index is a detailed one. The author is currently Professor of Marine Biochemistry in the Scripps Institution of Oceanography of the University of California.

HEGNER, ROBERT

Parade of the animal kingdom, by Robert Hegner. Assisted by Jane Z. Hegner. With over seven hundred illustrations. New York The Macmillan Company 1955 675 p. illus. 26 cm. $6.95 2261

Contents: Parade of the animal kingdom. The first animals, the protozoa. Sponges. Coelenterates—polyps, jellyfishes and corals. Spiny-skinned animals—echinoderms. Worms. Mollusks. [illegible]. Arachnids. Insects. Straight-winged insects, or orthoptera. True bugs, or hemiptera. Beetles, or coleoptera. Butterflies and moths, or lepidoptera. Flies, or diptera. Membrane-winged insects, or hymenoptera. Fish. Amphibia. Salamanders and caecilians. Lizards. Snakes. Turtles. Toothed birds and flightless birds. Diving birds and swimming birds. Stork-like birds and [illegible] fowl. Marsh dwellers and shore birds. Birds of prey. Game birds, pigeons, and doves. Parrots, kingfishers, nighthawks, hummingbirds, etc., and woodpeckers. Perching birds—flycatchers, horned larks, and swallows. Jays, crows, etc., and blackbirds, orioles, etc. Chickadees, [illegible] warblers, etc. Thrashers, thrushes, sparrows, etc. Mammals—egg laying, pouched, toothless, flying, and insect-eating mammals. Gnawing mammals, or rodents. Hoofed mammals, or ungulates. Flesh eating mammals, or carnivores. Aquatic mammals. Primates. Index.

[illegible] A popular book designed for reading and reference by laymen. The verbal text is written in simple style and the technical terminology of zoology is largely avoided. The animals described are those likely to be seen in zoos or in environments accessible to persons who are not professional scientists. The book contains several hundred illustrations, most of them reproduced from photographs. Unfortunately in many instances the reproductions are of poor quality.

KARL PATTERSON SCHMIDT ANNIVERSARY VOLUME In honor of his sixty fifth birthday. Chicago Chicago Natural History Museum 1955 728 p. illus. 24 cm (Fieldiana Zoology Vol 37) $10.00 2262

Contents: The work of Karl Patterson Schmidt, by S. Field. An appreciation of Karl Patterson Schmidt, by C. C. Lowe. A [illegible] of Colombian game birds, by E. R. Blake. Masticatory apparatus in the spectacled bear *Tremarctos ornatus*, by D. D. Davis. Ecological notes on the fish fauna of [illegible] coastal drainage of North Borneo, by R. F. Inger. Western Atlantic species of the genus *Bathygobius*, by L. P. Woods. The morphology of the swim bladder and auditory bulla in the Holocentridae, by E. M. Nelson. The origin of the land birds of Tristan da Cunha, by A. L. Rand. Notes on snakes of the genus *Calamaria*, by H. Marx and R. F. Inger. A revision of the tribe Amblyopinini—staphylinid beetles parasitic on mammals, by C. H. Seevers. Notes on a collection of Bermuda deep-sea fishes, by M. Grey. On non-marine shells from Northeastern Brazil and Peru, by F. Haas. A new subspecies of *Caiman sclerops* from Colombia, by F. Medem. *Procolpochelys grandaeva* (Leidy), an early carettine sea turtle, by R. Zangerl and W. D. Turnbull. Parallelism in the evolution of the Permian reptilian faunas of the Old and New World, by E. C. Olson. Remarks on the taxa of the genus *Lampropeltis*, by C. C. Sanborn. Palestinian species and races of *Jaminia* Risso (Mollusca: Gastropoda), by G. Haas. A new variety of Cretaceous Decapod from Texas, by E. S. Richardson, Jr. Early Devonian eurypterids from the Kenyadan Formation of Nova Scotia, by R. H. Denison. Geographical origins and dispersions of termite genera, by A. E. Emerson. A recently discovered *Plilogothecion* from Illinois, by W. D. Turnbull and P. J. Turnbull. Three new fleas of the genus *Stivalius* Traub (Siphonaptera: Hystrichopsyllidae), by R. Traub and A. Barrera. New feather-wing beetles from termite nests in the American tropics (Coleoptera: Ptiliidae), by H. S. Dybas. Bat ticks of the genus *Argas* (Ixodoidea: Argasidae). I. The subgenus *Chiropterargas*, by H. Hoogstraal. The leaf beetles of New Caledonia (Coleoptera: Hispinae), by R. L. Wenzel. South American marsh rats, genus *Holochilus*, with a summary of sigmodont rodents, by P. Hershkovitz. A symmetrodont from the Early Cretaceous of northern Texas, by B. Patterson. Bats from Guerrero, Jalisco and Oaxaca, Mexico, by L. de la Torre. Index.

Note: Scientific papers [illegible] whose authors and titles are given above are published in this anniversary volume on the occasion of the retirement from administrative duties of Dr. Schmidt, Chief Curator of the Department of Zoology of the Chicago Natural History Museum. Most of the papers describe the results of recent studies. Some of them, such as Emerson's paper "Geographical origins and dispersions of termite genera," summarize and interpret [illegible] considerable body of literature.

MARTIN, ALEXANDER CAMPBELL, AND OTHERS

American wildlife & plants by Alexander C. Martin, Herbert S. Zim, and Arnold L. Nelson. A guide to wildlife food habits: the use of trees, shrubs, weeds and herbs by

ZOOLOGY

GENERAL

BARTH, LESTER G , AND LUCENA J BARTH

The energetics of development a study of metabolism in the frog egg New York Columbia University Press 1954 117 p illus 24 cm $3 00 2253

Contents Introduction The storage of energy The release of energy Localization of the release of energy Protein metabolism. Literature cited. Acknowledgments.

Note In the introductory chapter of this book, the authors state the goal of research in the energetics of development as being to explain the various aspects of development in terms of chemical reactions. Here also they describe a *general pattern of energetics* and survey the complexity of the research problem that it presents. The four chapters that follow constitute detailed report of experiments done by them—together with related information from the literature—on studies of the developing egg of the frog *Rana pipiens* from the standpoint of energetics. The authors show that the energy for development is furnished by carbohydrates. In regard to protein metabolism, they state "The proteins, by directing or accepting the energy from general, nonspecific carbohydrate metabolism, might provide the mechanism for chemical differentiation. Although the study of protein metabolism is one of the longer sections of the book, it is essentially report of various experiments whose results still defy synthesis.

BOGERT, CHARLES MITCHELL, AND OTHERS

Criteria for vertebrate subspecies species and genera New York New York Academy of Sciences, 1943 84 p illus 22 cm. (New York Academy of Sciences Annals Vol XLIV p 105–188) $1 00 2254

Contents Introduction, by C M Bogert. Criteria for subspecies, species and genera, as determined by researches on fishes, by C. L. Hubbs. Lower categories in herpetology by E. R. Dunn. Criteria for subspecies, species and genera in ornithology by E. Mayr Criteria for vertebrate subspecies, species and genera mammals, by E. R. Hall. Criteria for genera, species and subspecies in zoology and paleozoology by G G Simpson Criteria for species and their subdivision from the point f view of genetics, by W F Blair

Note The purpose f these papers, presented at joint symposium held by the American Society of Ichthyologists and Herpetologists and the America Society of Mammalogists at the American Museum f Natural History April 3 1942 is the discussion of criteria for the lower taxonomic categories. The papers were planned to deal primarily with methods used in ertebrat classification, and as whole present summary of information relevant to the problems involved in the interpretation f th processes f evol tion.

BONNER JOHN TYLER

Cells and societies Princeton Princeton University Press 1955 234 p illus. 23 cm $4 50 2255

Contents The sameness of living things Howling monkeys. Societies and evolution F seals Red deer Beavers Social insects. Army ants. Termites Colonial hydroids. Cell colonies. A single cell. Energy matter and cells. Feeding in plants Reproduction and development in plants. Coordination in plants. Feeding and digestion in animals. Breathing in animals Circulation in animals. Excretion in animals. Development and reproduction in animals. Coordination in animals. Human societies. Selected readings. Index

Note In this book professional biologist explores for the benefit of general readers the essential nature of biology He presents biology as study of organization and points out in his first chapter that the three basic characteristics common to all biological organizations or societies are The organization (1) takes in food, (2) maintains itself by reproducing individuals and (3) exhibits some co-ordination integration or communication among its members. As the chapter titles show the discussion in the early part of the book concerns animals and groups that are not only known to most readers but may be visually observed. Gradually the size of the form of lif under discussion is reduced until the single cell reached. Then the discussion turns again to larger things and to biological phenomena ithin the common knowledge. The facts presented are interesting, and the author's style is eminently readable. The book is an outstanding example of fresh and vital approach t science writing for non-specialists

CLARK, AUSTIN HOBART

Animals alive. New York D Van Nostrand Company Inc., 1948 472 p. illus. 24 cm. $6 00 2256

Content (abridged) Part I, Man and the animal world Background f animal life. Man and his mastery of the animal world. *Domesticated birds and insects, and products from wild animals.* Animal enemies. How other people live. Part II, Land animals The insects. Spiders and their relatives. Earthworms, snails, slugs, and other land-living invertebrates. Birds Mammals The flesh-eating mammals. Reptiles. Part III Freshwater animals Animals of swamps, lakes and rivers. The amphibians. Aquatic insects. Fresh-water crustaceans. Fresh-water fishes. Part IV Sea life: The ocean The exclusively marine animals. The exclusively marine mollusks. Marine gastropods and bivalves. The plant-like animals Marine fishes. Marine mammals. Sea birds and sea reptiles. Appendix—Classification of animals. Index.

Note In terse, nontechnical style an outstanding zoologist describes for general readers the animals that inhabit the earth and how they live. Not much space is given to any one animal, and practically no space is given to "wonders" of the type that used to fill popular natural histories. Even the drawings are conservative and informative, rather than spectacular Nevertheless, the work is fascinating and achieves its purpose of conveying panorama of the animal world in relation to its environment and to man.

DEVOE, ALAN

This fascinating animal world New York McGraw Hill Book Company Inc., 1951 303 p illus 21 cm. $3 75 2257

Content The nature of this book. Animals in general. Mammals. Birds. Insects. Snakes. Fish. Animal ariety The adventure of animals. Index.

Note. A well-written book of miscellaneous information about animals. It provides authentic answers for such questions as, "Can porcupines throw their quills?" "Can fish drown? and Is there such thing as white elephant? However it is not mere miscellany Its contents are such that practically everyone who reads it through will gain more profound understanding of animals and of lif processes, such as evolution and reproduction. The book is intended for popular reading and reference hence, there are no references to related literature.

DRIVER ERNEST CHARLES

Name that animal a guide to the identification of the common land and fresh-water animals of the United States with special reference to the area east of the Rockies. With drawings by Olive Driver Second edition. Northampton Mass The author 1950 558 p illus 23 cm $6 50 2258

forest). Water, Its blood of the earth. The swamps and fresh marshes. The coast and the sea. The South. Grass country (the prairies and the plains). The desert. The West. The Far North and the Arctic. Index.

Note. A novelty among books on nature. It contains 431 illustrations in full color, all of which are reproductions of paintings made for the National Wildlife Federation from 1939 to 1951 by noted wildlife artists. They were first reproduced and sold in the form of stamps to further conservation of wildlife. In this book the reproductions are in the same size as the stamps, some being as large as 2 in. by 2½ in. and others being 2 in. by 1½ in. Wild flowers as well as animals are illustrated. The text is written for popular reading and is built upon the theme of conserving wildlife.

SCHENK, EDWARD T. AND JOHN H. McMASTERS

Procedure in taxonomy. Including a reprint in translation of the *Règles internationales de la nomenclature zoölogique* (International code of zoological nomenclature) with titles and notes on the opinions rendered to the present date (1907 to 1956). Completely indexed. Third edition enlarged and in part rewritten by A. Myra Keen and Siemon William Muller. Stanford: Stanford University Press, 1956. 119 p. 24 cm. $3.50 — 2269

Contents: Introduction. Systematic categories. Types. Storage of type material. Specific and trivial names. Synonymy. The description of new species. Latin terms and abbreviations. The International Commission on Zoological Nomenclature. Appendix: International code of zoological nomenclature. Summaries of opinions rendered through 1934. Titles to opinions rendered by the International Commission on Zoological Nomenclature subsequent to August 1939 with notes. Titles to declarations of the International Commission on Zoological Nomenclature. Directions issued by the International Commission on Zoological Nomenclature since 1954. Index (including index to International rules and to Opinions rendered).

Note. A useful, concise manual covering both procedures and nomenclature. Approximately two-thirds of the text is devoted to the English translation of the International code of zoological nomenclature, the summaries of opinions and the related sections of the appendix. Inclusion of the International rules and opinions in the book's index is a particularly useful feature. The first edition was published in 1936 and the second edition in 1942. Important revisions have been made in the text, in the literature references, and in the appendix material in this third edition.

SMITH, ROGER C.

Guide to the literature of the zoological sciences. Fourth edition. Minneapolis: Burgess Publishing Company, 1955. 135 p. 28 cm. $2.75 — 2270

Contents: Introduction and the literature problems of the scientist. The mechanics of the library and book classification. Bibliographies of the zoological sciences. Abstract journals. The form of bibliographies. The forms of literature. Preparation of scientific papers. Taxonomic indexes and literature. Library assignments. Index.

Note. A standard manual for the instruction of students of zoology in the use of the literature of the field and for the guidance of graduate zoologists and other scientists in finding the basic important literature on specific topics, for example on the animals. The first edition was published in 1942 and the third edition in 1951. Each succeeding edition has been revised to include recent literature.

STORER, TRACY IRWIN

General zoology. Second edition. New York: McGraw-Hill Book Company, Inc., 1951. 832 p. illus. 24 cm. (McGraw-Hill publications in the zoological sciences. E. J. Boell, consulting editor) — 2271

Contents (abridged): Part 1, General animal biology: The frog as representative animal. Protoplasm, cells, and tissues. Organs and organ systems. Reproduction and development. Heredity and genetics. Animal ecology. Organic evolution. History of zoology. Classification and nomenclature. Part 2, The animal kingdom. Glossary. Index.

Note. A general introductory text for colleges and universities. The first part—which accounts for approximately one-third of the book's length—contains chapters on the general aspects of animal biology including organ systems and evolution. The second part is a traditional arrangement of descriptive material arranged by phyla and classes. The illustrations are numerous and are well executed. A detailed index makes the book useful for elementary reference. A fair number of additions and revisions have been made in the present edition. These include the adding of recent books to the lists of references. A third edition was published in 1957. $7.50.

UNITED STATES. FISH AND WILDLIFE SERVICE

Wildlife abstracts 1935–51. An annotated bibliography of the publications abstracted in *The wildlife review*, Nos. 1–66. Compiled by Nell Hotchkiss. Washington, D. C.: Government Printing Office, 1954. 435 p. 26 cm. $2.00 — 2272

Contents (abridged): Introduction. Abbreviations. Bibliography. Wildlife. Mammals. Birds. Reptiles and amphibians. Fish. Ticks, mites, and spiders. Insects. Myriapods. Crustaceans. Annelids. Mollusks. Parasitic worms. Plants. Soils and land. Water. Weather and climate. Index.

Note. Essentially this work is an index to the more than 18,000 abstracts that appeared in *Wildlife review* from September 1935, through December 1951. The original entries have been condensed, and in some instances reduced to a mere citation of the original article. However, reference is given in all cases to the original abstract in *Wildlife review*. The entries are classified under essentially the same headings used in 1951 issues of *Wildlife review*. The index, which covers both authors and subjects and is very detailed, is an added and useful feature.

ECOLOGY

ALLEE, W. C. AND KARL P. SCHMIDT

Ecological animal geography. Second edition. An authorized edition, rewritten and revised, based on *Tiergeographie auf oekologischer Grundlage* by the late Richard Hesse. New York: John Wiley & Sons, Inc., 1951. 715 p. illus. 24 cm. $9.50 — 2273

Contents (abridged): Part 1, The ecological foundations of zoogeography. The conditions of existence for animals. Barriers to distribution and means of dispersal. The effect of geographic isolation. The influence of extent of range. Ecotopes and biocoenoses. Part 2, The distribution of marine animals. The chemistry of the sea and its influence on animal life. The biotic divisions of the ocean. Geographic divisions of the animal communities of the sea. Part 3, The distribution of animals in inland waters. [illegible] of limnology. The environmental factors in inland waters. Communities in running waters. Communities in other inland waters. Part 4, The distribution of land animals. Ecological factors of the land and their effect on animals. Forest communities. Animal life of swamps and of shores. Alpine animals. Island communities. Subterranean animal life. The effect of man on the distribution of other animals. Index.

Note. One of the more important studies of animal distribution and of the influence of environment and animals upon each other. The first edition of the book was largely a translation of Hesse's *Tiergeographie auf oekologischer Grundlage*, 1924. The present revision, although still based on the German work, has been so extensively rewritten and enlarged as to rank almost as a new work. Specifically new material has been added on such topics as aerial transportation in distribution, bioluminescence, coral reefs and islands, Hawaiian fauna, and winglessness in beetles. The data concerning the number of species in various regions have also been revised, and the chapter bibliographies have been brought up to date.

ALLEE, W. C., AND OTHERS

Principles of animal ecology. By W. C. Allee, Alfred E. Emerson, Orlando Park,

birds and mammals of the United States Prepared under the direction of the United States Fish and Wildlife Service, Department of the Interior at the Patuxent Research Refuge, Laurel Maryland New York Mc Graw Hill Book Company Inc., 1951 500 p illus 23 cm. $8 50 2263

Contents Part I, Introductory chapters The plant roots of wildlife. Farm crops and wildlif Wildlife food-habits studies. Interpreting the data of this book. Part II, Animals and their food Water birds. Marshbirds and shorebirds. Upland gamebirds. Songbirds. Birds of prey Fur and game mammals. Small mammals. Hoofed browsers. Fish, amphibians, and reptiles. Part III Plants useful to wildlif Woody plants. Upland eeds and herbs. Marsh and aquatic plants. Cultivated plants. Wildlif plants ranked according to their value Index.

Not An elementary inclusive reference book for students of bird life, foresters, conservationists, etc. The second part treats the wildlife of the United States of America group by group, giving data on their foods, ranges, habits, and economics. About half of a page is devoted to each principal species of bird or animal For most species the data given include common name scientific name range general description, both animal food and plant food, with list of plants eaten in specified localities, and an animal-plant food ratio diagram showing the seasonal changes in the proportions of plant and animal food eaten. Literature references ar given in some cases. The third part of the book denotes the value of different genera of trees, shrubs, eeds, aquatic plants, and cultivated crops to various kinds of wildlif in different parts of the country

MAYR, ERNST, AND OTHERS

Methods and principles of systematic zoology by Ernst Mayr E Gorton Linsley, and Robert L Usinger New York McGraw Hill Book Company, Inc 1953 328 p illus 24 cm (McGraw Hill publications in the zoological sciences E J Boell consulting editor) $6 50 2264

Content Part Taxonomic categories and concepts Taxonomy its history and functions. The species and the infraspecific categories. Classification and the higher categories Part II, Taxonomic procedure Collecting and collections. Identification and taxonomic discrimination. Taxonomic characters. Quantitative methods of analysis. Presentation f findings. Preparation of taxonomic papers. Part III, Zoological nomenclature Historical and philosophical basis f nomenclature. The principle f priority The type method and its significance. Specific and infraspecific names Generic names Family names. Names of orders, classes, and phyla. Ethics in taxonomy Bibliography Index.

Not This book deals with the theory and the methods of zoological taxonomy that is to say with such matters as the basic philosophy of nomenclature and scientifically sound procedures in identification and naming. It covers also such allied topics as the collecting of specimens and the preparation of papers in which findings ar reported to other scientists. The chapter on preparation f papers includes also discussion f techniques of illustrating The bibliography is an extensive one and is organized in the same order as the chapters. Designed primarily for use as text in advanced courses offered to students preparing for careers in biology the book is potentially useful also to graduate scientists, science journalists, and other readers in need f reference book on the subject.

MOORE CLIFFORD B

The book of wild pets being a discussion on the care and feeding of our native wildlife in captivity together with notes on their identification and life habits With over 300 illustrations Newton Centre Mass Charles T Branford Co 1937 553 p illus 23 cm $5 95 2265

Content Part The aquarium The balanced fresh-water aquarium. Inhabitants for the balanced aquarium. Miscellaneous inhabitants for non-balanced aquaria. Water insects for aquaria Garden pools and water cages. The marine aquarium. Fish diseases and their treatment. Part II, Terraria and their animal inhabitants What a terrarium is. The woodland terrarium and its inhabitants. The semi-aquatic terrarium and its inhabitants. The desert terrarium and its inhabitants. Part III, Insects and spiders as pets Miscellaneous insects. Spiders. Part Mammals Stocking the home zoo. The health and conditioning of animal life. Approaching and feeding wild animals Native mammals as pets. Part V Birds Food, feeding and drinking ...to ttract birds. Bird houses, nesting shelters, roosting and ... shelters. N th land birds in captivity Aquatic game birds. Upland game birds in captivity Index.

Note A useful reference book on the care and feeding of the most common native wildlife forms in captivity and designed for the use of teachers, laboratory and museum workers, and young people. The material is largely nontechnical and is based mainly upon a study f the pertinent literature on the subject. Descriptions and drawings ar given for the construction of pens, traps, cages, hives, bird houses, and other types of shelters. Identifying characteristics, habits, diet, and general care are given for each wild pet treated. There are 314 photographs and drawings, and bibliography at the end of each chapter.

MOORE, CLIFFORD B

Ways of mammals in fact and fancy New York The Ronald Press Company 1953 273 p 21 cm $3 50 2266

Content (abridged) Part I, Hoofed mammals. Part II, Mammals with pouches. Part III Mammals that fly Part IV Flesh-eating mammals. Part V Gnawing mammals. Part VI, Aquatic mammals Part VII, Monkeys, apes, and men. Part VIII, More habits that mammals Seeing in the dark. Chains and bridges. Feigning injury and death. Human children reared by wild mammals. Interbreeding and animal freaks. Literature cited. Bibliography Index.

Note The subtitle f this book indicates but does not fully describe its subject hich is the myths, superstitions and misconceptions" that pertain to animals. Apparently in order to keep the volume within reasonable bounds, the author selected for discussion only about 50 common mammals, including elephants, camels, horses, bats, foxes, cats, beavers, porcupines and monkeys. Quoting extensively from the literature in hich their folklore embedded, he gives the gist of it and then presents the scientific facts, often also in the form of quotations. The book is written in a popular style and is suitable for reading by laymen interested generally in animals or in superstitions and popular fallacies. It is also handy volume for biologists and other authorities on animals ho are in such positions that they must accurately answer questions about the memory of elephants, nine lives of cats, etc.

MORGAN, ANN HAVEN

Field book of animals in winter With 283 illustrations, including 4 full-color plates New York G P Putnam s Sons 1939 527 p illus (part col d) 18 cm $5 00 2267

Content Winter Activity of animals in winter Seasonal migrations. Hibernation. Winter communities f land animals. Seasonal changes in fresh water and in fresh-water animals. Fresh-water sponges. Hydras. Fresh-water flatworms, planarians Rotifers. Fresh-water bryozoans. Annelid and nematode worms. Leeches. Fresh-water and land crustaceans. Insects The "snow insects. Land insects. Aquatic insects. Spiders. Snails and fresh-water mussels. Winter habits f fresh-water fishes. Salamanders, frogs, and toads. Snakes and turtles. Birds. Mammals. References. Index.

Note A popular introduction to the ways in which animals meet the seasonal changes of inter intended for the layman and student f natural history The pocket-size format permits the book to be carried easily on field trips for purposes of observance and identification of observed forms and specimens. No previous knowledge of zoology is assumed, and technical language has been voided. There ar 157 illustrations, including 4 color plates of birds, and bibliography of 243 books and articles arranged by chapter heading

PETERSON ROGER TORY

Wildlife in color Sponsored by the National Wildlife Federation Boston Houghton Mifflin Company 1949 191 p. illus (col d) 20 cm $3 75 2268

Content Wildlife in color New homes—the towns and farms The deciduous woodlands. The North Woods country (the coniferous

[illegible] The illustrations are of high quality and are clearly reproduced.

GUYER, MICHAEL FREDERIC

Animal biology. Fourth edition. New York Harper & Brothers 1948 [illegible]80 p. illus 24 cm $5.00 2280

Contents (abridged) Part I, Introduction. Characteristics of living matter. Protoplasm and the cell. [illegible] Part II, Representative animals. Part III, Organ systems and their functions. [illegible] Digestive systems. Respiratory systems. Circulatory systems and [illegible] Reproductive systems. Nervous systems and how they operate. [illegible] Part IV. Origin of the individual. The germ cells and fertilization. Heredity. Part [illegible] Origin of the kinds of animals. Evolution. [illegible] Part VI, Synoptic survey of the animal kingdom. The major groups of the animal kingdom. Reference books. Glossary. Visual aids. Index.

Note A college textbook for use in an introductory course combining zoology and botany. [illegible] Throughout the volume, however, application [illegible] made to human structure, functions, and problems. In this edition certain sections dealing with protoplasm and the cell, the [illegible] have been rewritten in line with recent biological advances. [illegible] human blood has been added.

HEGNER, ROBERT WILLIAM AND KARL A. STILES

College zoology. Sixth edition. New York The Macmillan Company 1951 911 p. illus. (part col'd) 24 cm. $6.75 2281

Contents (abridged) [illegible] Phylum Protozoa. [illegible] Phylum Porifera. Phylum Coelenterata. [illegible] Phylum Platyhelminthes. [illegible] Phylum Annelida. Phylum Arthropoda. Phylum Mollusca. Phylum Echinodermata. Phylum Chordata. [illegible] Heredity. [illegible] Glossary. Index.

Note A long-established college textbook [illegible] Professor Stiles—who [illegible] member of the faculty of Michigan State University.

HEGNER, ROBERT WILLIAM

Invertebrate zoology. New York The Macmillan Company 1933 570 p. illus 22 cm. $3.75 2282

Contents (abridged) Phylum Protozoa. Phylum Porifera. Phylum Coelenterata. Phylum Ctenophora. Phylum Platyhelminthes. Rotifera. Gastrotricha. Bryozoa. Brachiopoda. Chaetognatha, and Phoronidea. Phylum Annelida. Phylum Mollusca. Phylum Arthropoda. Phylum Echinodermata.

Note This textbook [illegible] covers every group of invertebrates, with the exception of those belonging to the phylum Chordata [illegible] general characteristics of each phylum and each important subgroup; the morphology, physiology, behavior and ecology of representative types [illegible] the relationships within phyla and between phyla; the [illegible] vertebrates; the importance economic and medical of various forms to man; and something of the history of the study of [illegible] invertebrate zoology. Lists of references to the literature [illegible] phyla are included.

MILLER, DAVID F. AND JAMES G. HAUB

General zoology. New York Henry Holt and Company, Inc., 1956 550 p. illus 25 cm. $6.95 2283

Contents (abridged) Section I, The different kinds of animal life. Zoology in everyday life. The one-celled animals. The two-layered animals. The three-layered animals. Animals [illegible] Animals with segmented bodies. Animals with internal skeletons. Section II, Animal habitats and associations. What determines where animals live. How animals live in groups. Conserving animal life. Section III, How animals change. The formation of new individuals. [illegible] How man makes use of gene activity. Animals changing through the ages. The evolution of man and his relatives. Section IV, The functions of animal life. [illegible] Growth. Reproduction. [illegible] Index.

Note An introductory textbook written by two members of the faculty of Ohio State University and designed for use in undergraduate college classes. Although the first part on the various animal groups accounts for almost half of the length of the volume, the other parts round out the treatment and serve to present a broad view of biological science. The style is informal, and even the descriptions of taxa bear little resemblance to the usual style of systematic zoology. The illustrations are numerous and varied.

MORGAN, ANN H

Kinships of animals and man. A textbook of animal biology. New York McGraw Hill Book Company, Inc., 1955 839 p. illus 24 cm. $6.95 2284

Contents [illegible] Part I, The foundation [illegible] Living matter and cells. Part II, Ecology. Plants provide for themselves and animals. Animals and their environments. Mutual relationships of animals. Part III, The internal environment of the body. Tissues. [illegible] Part IV, The new individual. Development. The physical basis of heredity. Part [illegible] Evolution of animals. [illegible] Mammals and mankind. Part VI, Evolution and conservation. [illegible] Appendix. Scheme of classification. The plant kingdom. The animal kingdom. [illegible] Suggested reading. Index.

Note This textbook of animal biology takes as its central theme the kinships and relationships to be found in all living matter from the single cell to the complex combination of cells present in the body of the human being. The author, Professor of Zoology at Mount Holyoke College, explains how animals have developed so they not only to how they are related, but also to how they behave. There are numerous illustrations from drawings and from photographs, and in the appendix are selected lists of readings.

POTTER, GEORGE EDWIN

Textbook of zoology. Second edition. With 445 text illustrations. St. Louis The C. V. Mosby Company 1947 948 p. illus 22 cm $5.00. 2285

Thomas Park, Karl P Schmidt. Philadelphia W B Saunders Company 1949 837 p illus 26 cm $15 00 2274

Contents (abridged) Section I The history of ecology Section II Analysis of the environment The general environment. Heat. Light. Gravity pressure, and sound. Currents of air and of water The substratum. Physicochemical and chemical phases. Water The atmospheric gases. Dissolved salts as limiting factors. Combinations of environmental factors. Ecological relations of soil. Biotic factors in relation to individuals. Section III, Populations General properties of populations. Biological backgrounds for population studies. Certain demographic backgrounds for population studies. The growth form of populations. Population factors and selected population problems. Animal aggregations. The organization of insect societies. Section IV The community Community organization—stratification—metabolism—periodism. Community succession and development. Biome and biome-type in world distribution. Section V Ecology and evolution Ecology and genetic variation. Ecology and isolation. Adaptation. Natural selection. Evolution of interspecies integration and the ecosystem. Bibliography and author index. Subject index.

Note A presentation in the form of a college textbook of the principles of ecology with emphasis on the animal factors. Throughout the work, the authors give samplings of the evidence on which the principles of ecology are based, and frequent references are made to the bibliography of the subject, which covers more than 80 double-columned pages at the end of the book. The work may be used in university courses as a textbook and by professional zoologists and other scientists as a summary of the current status of animal ecology

BAER, JEAN GEORGES

Ecology of animal parasites Urbana University of Illinois Press, 1951 224 p illus 28 cm $5 00 2275

Content Introduction. Part I, Animal associations, definitions. Part II, Adaptations to parasitism Protozoa. Mollusca. Turbellaria. Annelida. Gordiacea. Arthropoda. Crustacea. Copepoda. Cirripedia. Isopoda. Amphipoda. Summary of parasitic adaptations among crustaceans. Acarina. Insecta. Nematoda. Pentastomida. Acanthocephala. Trematoda Monogenea. Digenea. Cestodaria. Cestoda. Part III, Host-parasite relationships Host specificity The action of parasites upon their hosts. Part IV Physiology of parasites Physiology of parasitic protozoa Blood parasites. Intestinal symbionts and parasites. Physiology of parasitic helminths Somatic helminths Intestinal helminths. Conclusions. In vitro cultures of parasitic helminths. Part V Origin of parasitism. Index.

Note A study of animal parasitism adapted from the material presented in two courses in parasitology given in the Graduate College of the University of Illinois by a visiting professor from the University of Neuchâtel. How parasitism had its beginning and what are its present forms are among the matters discussed. The zoological and ecological rather than the medical and veterinary aspects of the subject are emphasized. Adaptations to parasitism are examined from both the morphological and the biological angles, with stress laid on the latter The illustrative drawings, which number more than 150 are the work of Katherine Hill Paul. Bibliographical references appear at the ends of the chapters. This is an advanced work of interest to ecologists in general and of particular interest to invertebrate zoologists and helminthologists

CHAPMAN, ROYAL NORTON

Animal ecology with especial reference to insects New York McGraw Hill Book Company Inc 1931 464 p illus 23 cm. (McGraw Hill publications in the zoological sciences) $7 00 2276

Contents Light as an ecological factor Temperature as an ecological factor Moisture as an ecological factor Effects of temperature and moisture acting together in the ecology of animals. Physical conditions of environmental media. Nutrition. Biotic factors in autecology Synecology Chorology distribution in space or zoogeography Chronology Aquatic synecology Physical characteristics of aquatic communities. Biotic characteristics of aquatic communities. Lentic environments Lakes. Lotic environments Terrestrial synecology—communities of the soil Communities of the sand dune Communities of the grass or herb stratum. Communities of the shrub and tree strata. Appendix Variations and fluctuations of the number of individuals in animal species living together Index.

Note This book brings together the various and diverse materials embraced by the subject of ecology and is intended for use by students and those engaged in ecological research. The material presented is largely quantitative. The author's objective is a critical consideration of what has been accomplished in the field, and the important literature in various phases of the subject is reviewed

PEARSE, ARTHUR SPERRY

Animal ecology Second edition New York McGraw Hill Book Company, Inc., 1939 642 p illus 23 cm (McGraw Hill publications in the zoological sciences) $9 00 2277

Contents Introduction. Environments. Animals. Ecological factors. Evolution, chorology succession climaxes. Rhythms. Communities, competition, populations, and classification of communities. Oceans. Freshwater Terrestrial habitats. Relations of animals to plants. Intraspecific relations. Interspecific relations. Economic ecology Teaching of ecology Ecological methods Problems of ecology Bibliography Index.

Note A textbook for college students specializing in biology This book studies only the zoological aspect of ecology the relation of plants to environments being outside its scope. The effect of metabolic, reproductive and other physiological rhythms is shown, along with the effects of rhythms in the physical world, such as lunar solar seasonal, annular and temperature rhythms. The relations between animals of the same and of different species, and the ecology of pelagic life are also discussed. The second edition contains new chapters including information on climax, evolution, teaching, ecological problems, and economic zoology and new illustrations.

GENERAL TEXTBOOKS

BRENEMAN, W R

Animal form and function, an introduction to college zoology Boston Ginn and Company 1954 488 p illus 24 cm. $6.25 2278

Contents. This is life—the characteristics of living matter. How work is done—the functions of organisms. Port of entry and customs Acellular organisms—phylum protozoa. Cataloguing animals—classification The transition from acellular to many-celled systems. Nature's dead-end street—phylum porifera. How to make the most out of tissues—the Coelenterata (Cnidaria) Development of head—phylum Platyhelminthes. Worms and more worms—phylum Nemathelminthes. Room to grow—the coelom Serial duplication—phylum Annelida. The shellfishes—phylum Mollusca. A biological success story—phylum Arthropoda. Hydraulics—phylum Echinodermata. How to live on income—parasitism Accent on brains—phylum Chordata, subphylum Vertebrata. Like father like son, yet different—genetics. Changing organisms—organic evolution. Prospective—some biological concepts and problems. Glossary Index

Note In this textbook zoology is made interesting and meaningful by the elaboration of two themes (1) the principles that are common to all life, and (2) the progressive specialization that has occurred in animals in response to living in varying environments. There is little discussion of taxonomy but considerable emphasis on physiology biochemistry and other aspects of function. Illustrations are numerous and are clearly reproduced.

COLBERT, EDWIN H

Evolution of the vertebrates a history of the backboned animals through time New York John Wiley & Sons Inc 1955 479 p. illus 23 cm $8 95 2279

Content Introduction. Jawless vertebrates. Placoderms. Success of the fishes. From water to land. Early vertebrate faunas. Amphibians. Advent of the reptiles. Mammal-like reptiles. Conquest of the land. Early ruling reptiles. Marine reptiles. Flying reptiles and birds. Triumph of the dinosaurs. Years of the dinosaurs. Surviving reptiles. Beginning of the mammals. Marsupials. Introduction to the placentals Unguiculate mammals. Evolution of the primates. Rodents and rabbits. Cetaceans. Carnivores. Ancient hoofed mammals. South American ungulates. Perissodactyls. Artiodactyls Elephants and their kin The age of mammals A classification of the chordates Generic index. Subject index.

Note This book is primarily a text for use in undergraduate college courses and secondarily as exposition for lay readers. The subject is vertebrate paleontology or the fossil evidence for the evolution of the vertebrate animals. Changes in vertebrate form are interpreted in terms of adaptation in such passages as, "The same

related information are included, together with the usual citation of original publication of each species covered. There are a total of 13 plates of photographs, and bibliographies accompanying each of the papers except that on birds by Peters and Loveridge

BUTCHER DEVEREUX

Seeing America's wildlife in our national refuges. Prepared under the auspices of Defenders of Furbearers. New York The Devin-Adair Company 1955 338 p. illus 24 cm $5.00. 2291

Contents (abridged) Introduction. You are the guest of wildlife. The primitive land. National wildlife refuges. Map of wildlife refuges. Other sanctuaries and refuges. The vanished and the vanishing. These refuges, too, are in the care of the Fish and Wildlife Service. For further reading. Index

Note The national wildlife refuges of the United States of America are concisely described in this book for general readers. Supplementing the verbal descriptions are several hundred reproductions of photographs of birds, mammals and other kinds of native wild animals, many of which were taken in natural surroundings in the wildlife refuges. A strong plea for the preservation of wild life and the creation of more wildlife refuges is made in the introduction, and in the prefatory essay "The primitive land

CHICAGO NATURAL HISTORY MUSEUM

Philippine Zoological expedition 1946–1947 Chicago Chicago Natural History Museum, 1951–56 539 p. illus. 24 cm. (Fieldiana Zoology Vol. 33 no 1–5) No 1–2 $1.50 per number no 3 $6.50 no 4 $6.00 no 5 $0 15 2292

Contents (abridged) No 1 Narrative and itinerary, by H. Hoogstraal. No. 2 Mammals, by C. C. Sanborn. No. 3 Notes on Philippine [illegible], [illegible] new species of [illegible] and [illegible], by F. E. Baker and P. [illegible]. No. [illegible] Systematics and zoogeography of Philippine amphibia, by R. F. Inger. No. 5 On the status and relations of *[illegible]*, by K. P. Schmidt.

Note These five publications constitute a report of an expedition by the Chicago Natural History Museum and the Philippine National Museum. Both zoological and botanical specimens were collected, but only the zoological are reported here. There was concentration on the collecting of mammals, and 1,446 specimens representing [illegible] species and subspecies, 13 of them new, were collected. The second number of the report is devoted to the mammals. It is arranged by class and gives the number of specimens examined at the various collecting stations of the expedition, miscellaneous information on color, [illegible], etc. Mosquitoes were collected at the request of the United States Army and the species found are described in the third number. The study of amphibia published as No. [illegible] is not limited to material collected by the expedition, but is a comprehensive account based on several collections and on literature. It [illegible] 347 pages long and contains its own bibliography and index.

EDMONDSON CHARLES HOWARD

Reef and shore fauna of Hawaii Honolulu Bernice P Bishop Museum, 1946 381 p. illus. 24 cm. (Bernice P Bishop Museum Special publication 22) $5 00 2293

Contents (abridged) Introduction. Protozoa. Porifera. Coelenterata. Ctenophora. Platyhelminthes. Nemathelminthes. Echinodermata. Annelida. Mollusca. Arthropoda. Chordata. Glossary. Bibliography. Index

Note The purpose of this work is (1) to provide authoritative information for the benefit of students and teachers in Hawaii who are interested in the reef and shore fauna and (2) to provide investigators with information on the general character, scarcity or abundance, and relative accessibility of the main groups of invertebrates available for purposes of research about the shores of Hawaii. It is not an exhaustive treatment of local marine fauna, but does cover all of the common forms and some of the uncommon ones. The descriptions are nontechnical and are intended to aid students in identification. Keys are included, also a glossary and a selected bibliography. The first edition was published in 1933. In the second edition, the work is about 81 pages longer and it contains descriptions of new species, additional data on species that were described in the first edition, and some new drawings. The number of figures is now 223

HATT ROBERT TORRENS AND OTHERS

Island life a study of the land vertebrates of the islands of eastern Lake Michigan by Robert T Hatt Josselyn Van Tyne Laurence C. Stuart Clifford H Pope and Arnold B Grobman. Bloomfield Hills, Mich. Cranbrook Institute of Science 1948. 179 p. illus 24 cm (Cranbrook Institute of Science Bulletin no. 27) $2.50 2294

Contents Introduction. Geological history. Cultural history. The islands described. The amphibians and reptiles. The birds. The mammals. Modification of habits. Factors of distribution. Appendix. List of the vertebrate fauna arranged by islands. Bibliography. Index.

Note The information in this volume is based on investigations carried out from 1937 to 1944 under the auspices of the Cranbrook Institute of Science and the University of Michigan. To provide background material, each of the 14 islands studied is described as to geology and physical geography. The greater part of the book, however, consists of a catalogue of all species of animal life found in the islands, with brief notes regarding their abundance, distribution, and special or noteworthy characteristics.

LOVERIDGE ARTHUR AND OTHERS

Scientific results of an expedition to rain forest regions in eastern Africa. Cambridge Mass. The Cosmos Press Inc., 1935 541 p illus. 24 cm. (Harvard College Museum of Comparative Zoology Bulletin Vol. LXXIX nos. 1–9) $5.60 2295

Contents [illegible] New reptiles and amphibians from East Africa, by Arthur Loveridge [illegible] Crustacea, by Mary J. Rathbun. III. Mammals, by Glover M. Allen and Barbara Lawrence. IV. Field notes by Arthur Loveridge. V. Birds, by James Lee Peters and Arthur Loveridge [illegible] Reptiles, by Arthur Loveridge. VI. [illegible], by J. M. [illegible]. VII. Amphibians, by Arthur Loveridge. VIII. Oligochaeta, by Wilhelm Michaelsen. Zoogeography and itinerary by Arthur Loveridge.

Note In this series of papers are reported the results of an expedition undertaken by the author during 1933 and 1934. This was the third expedition made to eastern Africa in fulfillment of a program outlined in 1924. The principal object of these expeditions [illegible] clarification and extension of our knowledge regarding the distribution of the isolated, arboreal forms of life associated with the forest islands of East Africa, and a further elucidation of their relationship with the fauna of the great West African forests, particularly that of the Cameroon Mountains. In conjunction with his scientific pursuits, the author was also interested in observing the ill effects of the deforestation in this part of the world. He reports on the resulting erosion and warns of the dire consequences which may follow

MASON GEORGE FREDERICK

Animal tracks. New York William Morrow and Company 1943 95 p illus. 21 cm. $2.25 2296

Note Written primarily to aid in the identification of the tracks of our best known North American animals, this book presents a collection of about 77 drawings of tracks showing much more detail than is generally seen in nature where tracking conditions are not always ideal. This is done with the assumption that for the purpose of identification it is easier to compare the perfect track with the natural. The descriptive text accompanying the line drawings gives a brief résumé of the habits and range of the animals for the purpose of acquainting the young naturalist or outdoor enthusiast with the fundamentals of animal lore.

MUSEUM OF COMPARATIVE ZOOLOGY

Zoological results of a fifth expedition to East Africa. Cambridge Mass. Museum of

Contents (abridged) History of zoology Protoplasm and the cell. Phylum Protozoa in general. Metazoan organization. Phylum Porifera. Phylum Coelenterata. Phylum Ctenophora. Phylum Platyhelminthes. Phylum Nemathelminthes. Phylum Annelida, by J T Self Phylum Echinodermata. Phylum Mollusca, by E. P Cheatum. Phylum Arthropoda, by V M. Tanner Phylum Chordata. The vertebrate animal—subphylum Vertebrata. Class Amphibia, by H Sanders. Reptilia, by L. T Murray and J E. Blaylock. Aves. Mammalia. The endocrine glands and their functions. Regeneration, by T C. Byerly Biological effects of radiations, by T C. Evans. Animal distribution by W Hewatt. The animal and its environment, by A. O. Weese. Animal parasitism, by S. H. Hopkins. Marine zoology Comparative embryology by A. Richards. Genetics and eugenics, by F G. Brooks. Animal behavior by L. C. Gardner Paleontology by W M. Winton. Phylogenetic relations of animal groups and the theory of evolution. Index.

Note An inclusive textbook which is suitable primarily for use in introductory college courses offered to students who do not plan to specialize in general zoology Although the greater part of the book is arranged by phyla and smaller taxonomic groups, the exposition is chiefly concerned with function. A special feature is the use as examples for discussion of animals which are readily found in the regions of the United States of America located west of the Mississippi River An extensive bibliography and also a glossary are included.

STORER, TRACY I, AND ROBERT L USINGER

Elements of zoology New York McGraw Hill Book Company, Inc, 1955 552 p illus (part col d) 24 cm. (McGraw Hill publications in the zoological sciences, E J Boell consulting editor) $6 00 2286

Contents (abridged) Part I, Animal biology A representative animal, the frog. The animal body Body covering, skeleton, and body muscles. Digestive systems and metabolism. Circulatory systems. Respiratory systems. Excretory systems and regulation. The endocrine glands or system. Nervous systems and sense organs. Reproduction and development. Heredity and genetics. Animal ecology and distribution. Organic evolution. Part II, The animal kingdom One-celled animals—phylum protozoa. Sponges and coelenterates. Flatworms and roundworms. Echinoderms and miscellaneous groups. Mollusks—phylum Mollusca. Segmented worms—phylum Annelida. Joint-footed animals—phylum Arthropoda. Insects—class Insecta. Fishes. Amphibians and reptiles. Birds—class Aves. Mammals—class Mammalia. Mankind. Glossary Index.

Note A textbook based in part on the senior author's *General zoology* described above. It is designed for use in short introductory courses offered to students who do not plan to take additional work in zoology The space is almost evenly divided between discussions of anatomy physiology reproduction, etc., and descriptions of animal groups. There is a large number of illustrations, but many of them are small. Both authors are members of the faculty of the University of California.

WEIMER, BERNAL ROBINSON

Man and the animal world New York John Wiley & Sons, Inc. 1951 569 p illus (part col d) 23 cm $5 75 2287

Content (abridged) Biology and the scientific method. Life and living things. Metabolism. Foods and their uses The blood and circulatory system. Adjustment to environment. Growth and reproduction. The mechanism of heredity Human heredity and eugenics The scientific naming of animals—taxonomy Protozoa, sponges, and coelenterates. Flatworms, roundworms, and segmented worms. Arthropods Mollusks and echinoderms. Chordates. Animals and their environment—ecology Life its nature and origin. The theory of evolution. The course of evolution. Index and glossary

Note An elementary textbook of zoology on the college level. Features of the presentation include approach to the animal kingdom through man as the living animal best known to the student inclusion of practical aspects of zoology such as the ways in which animal organisms influence human health emphasis on the scientific method and careful adaptation of illustrations to textual material. The author is Professor of Biology in Bethany College.

WINCHESTER A M, AND HARVEY B LOVELL

Zoology Second edition Princeton D Van Nostrand Company Inc. 1955 582 p illus 23 cm. $1 50 2288

Contents (abridged) The scope of zoology The cell as a fundamental unit of life. The chemistry of life. Vital moment in protozoa. Animal classification—taxonomy One-celled animals—phylum Protozoa. The sponges—phylum Porifera. Two-layered animals—phylum Coelenterata. Segmented worms—the annelids. Animals with jointed legs—the arthropods. Insect orders. Soft-bodied animals—the mollusks. Animals with spiny skins—the echinoderms. Crown of the animal kingdom—phylum Chordata. The vertebrate body. Aquatic vertebrates—cyclostomes and fishes. The transition to land. The birds. The mammals. Ecology and wild life conservation. The principles of heredity The development of the individual. The changing world of life. Glossary Index.

Note An established, introductory textbook which is particularly suited for use in the survey type of course offered to students who do not plan to pursue the study of zoology beyond the first course. It covers the traditional ground of introductory college courses but is less cyclopedic and puts very little stress on taxonomy It is written in an elementary vivid style that is calculated to hold the interest of beginners. It is well illustrated, and the illustrations include reproductions of many photographs made by the author. The first edition was published in 1947 and was written by the senior author alone. In the second edition, the general plan and style of the book has been maintained, but the contents have been expanded by the addition of new chapters and the expansion of some of those carried over More emphasis has been placed on physiology genetics and ecology

VARIOUS REGIONS

ADAMSON, ALASTAIR MARTIN

Review of the fauna of the Marquesas Islands and discussion of its origin. Honolulu Bernice P Bishop Museum 1939 93 p illus 26 cm (Bernice P Bishop Museum Bulletin 159 Pacific Entomological Survey publication 10) $1 00 2289

Content (abridged) The Pacific and its islands. Extent of biological exploration on central Pacific islands. Means of dispersal to Pacific insular faunas and floras. Biogeographic theories. The Marquesas as an environment for a fauna. Systematic review of the Marquesan fauna. Endemism and age. Faunal affinities. Conclusions: Origin of the Marquesan fauna on the assumption of past land connections of transoceanic dispersal. Summary Bibliography Index.

Note. In this work the author presents a review of the land and fresh-water fauna of these islands. His review of the arthropods and vertebrates, exclusive of insects, and a description of the islands from the point of view of a student of the fauna had already been published by the Museum as Occasional papers, Vol. 11 no. 10, and Bulletin 139 respectively This paper also deals with the much discussed problem of the origin of the faunas and floras of the central Pacific islands. Biological, geographical, and geological evidence is offered and various opinions are expressed, but necessarily without any attempt to reach definite conclusions. The taxonomic data on the material here review are reported in Bulletins 98, 114 and 142

ALLEN, GLOVER MORRILL, AND OTHERS

Scientific results of a fourth expedition to forested areas in east and central Africa, by Glover M Allen Arthur Loveridge James Lee Peters Fenner A Chace, Jr Cambridge Mass Harvard Museum of Comparative Zoology 1942 5 v illus 23 cm (Harvard University Museum of Comparative Zoology Bulletin Vol LXXXIX nos 4 5 vol XCI nos 3–5) $5.25 2290

Contents Mammals, by G. M. Allen and A. Loveridge. Birds, by J L. Peters and A. Loveridge. Decapod Crustacea, by F A. Chace, Jr Reptiles, by A. Loveridge. Amphibians, by A. Loveridge.

Note Each of these papers presents an annotated descriptive list of specimens collected by Arthur Loveridge between 1938 and 1939 while investigating the fauna of certain forested regions of east and central Africa. The number of species covered in the present work, with the number of new forms shown in parentheses, is as follows mammals, 110 (40) birds, 246 (10); decapod Crustacea, 20 (2) reptiles, 144 (17) amphibians, 77 (10) Native names, description, measurements, diet enemies, parasites, habits, breeding, and other

of the species, while others are pictures from photographs on 40 plates, 2 of the plates in full color. The author and the illustrator are both staff members of the Smithsonian Institution.

BAILY JOSHUA LONGSTRETH JR.
Physiological group differentiation in *Lymnaea columella* Foreword by Raymond Pearl. Baltimore The Johns Hopkins Press 1939 133 p. illus 23 cm. (The American Journal of hygiene Monographic series No 14) $1.10. 2302

Contents: Preliminary survey. The problem. Material. The method. Longevity. Fecundity. Growth. Interrelations involving different biological variables. Conclusion. Bibliography. Index.
Note This study concerns the possibility of physiological differentiation of races which are structurally indistinguishable. The particular traits analyzed are rate of growth, fecundity and duration of life. The evidence presented is for the pond snail, *Lymnaea columella*, taken from two different geographical locations, and it indicates that this study emphasizes the limitations of purely morphological description and the need for wider knowledge of the physiological patterns of biological populations.

BAKER, EDWARD WILLIAM AND G W WHARTON
An introduction to acarology New York The Macmillan Company 1952 465 p. illus. (part col'd) 22 cm. $10.00. 2303

Contents: Introduction. The suborder Onychopalpida Wharton, 1947. The suborder Mesostigmata G. Canestrini, 1891. The suborder Ixodides Leach, 1815. The suborder Trombidiformes Reuter, 1909. Hydrachnellae Latreille, 1802. The suborder Sarcoptiformes Reuter, 1909. Oribatei Dugès, 1833. Index.
Note An elementary yet very comprehensive book on mites. The introduction covers the general structure, development, and ecology of mites. The families then are taken up one by one. [illegible] keys to assist in identification. For each family the following information is given if known: [illegible] list of genera and their type species. [illegible] the economic, or medical importance with emphasis on the species involved, and [illegible] references to pertinent literature. Line drawings are included. The work [illegible] not only as [illegible] guide to the professional acarologist but also for the information of those in related fields, including agriculture, entomology, zoology and medical parasitology.

BAKER, FRANK COLLINS
The molluscan family Planorbidae Collation, revision, and additions by Harley Jones Van Cleave Urbana University of Illinois Press 1945 530 p. illus 26 cm $14.50 2304

Contents: A memorial to Frank Collins Baker 186[illegible]–19[illegible]. Chronological list of the scientific publications of Frank Collins Baker. Part I: General morphology. General ecology. [illegible] and embryological development. Distribution in time and space. Historical sketch of classification. [illegible] classification of the family Planorbidae. Systematic account of the subfamilies, genera, and subgenera—recent and fossil. Groups of uncertain affinities. Family [illegible]. Genera wrongly referred to Planorbidae. Bibliography. Part II: The Planorbidae inhabiting North and South America and the West Indies. Descriptions of new species and new varieties. [illegible] of the anatomy and of shells. Index to text. Index to [illegible].
Note The family Planorbidae constitutes one of the largest groups of fresh-water Mollusca or snails. The monograph provides [illegible] description and classification of the family as derived from study of the anatomy and shell construction. The work was carried on by the author over [illegible] period of 10 years and [illegible] the examination of [illegible] species and races and more than 725 specimens. Part II, which comprises more than half the volume, consists largely of [illegible] plates illustrating the anatomy and shells of the Planorbidae. The bibliography, although extensive, [illegible] limited to [illegible] the most important references.

BAKER, HORACE BURRINGTON
Zonitid snails from Pacific islands Part 1–4 Honolulu, Hawaii Bernice P Bishop Museum 1938–41 4 parts in 3 v. illus. 25 cm. (Bernice P Bishop Museum. Bulletins 158 165 166) Vol. 1 $7.50 vol 2 $2.50 vol. 3 $3.00. 2305

Contents: Part 1. Southern genera of Microcystinae. Part 2. Hawaiian genera of Microcystinae. Part 3. Genera other than Microcystinae. Part 4. Distribution and indexes.
Note This series of papers deals [illegible] the Zonitidae and [illegible] subfamilies, the most highly evolved pulmonate mollusks that have [illegible] members in most parts of the Pacific area. The region covered includes the [illegible] Hawaii, Marquesas, Tuamotu, Society, Austral, Cook, Samoa, Tonga, Fiji, Caroline, Palau, and Mariana Islands, and, so far as their fauna is known, the smaller islands and groups between them. The material consisted of the collections of the Museum, supplemented by those of the Zoological Laboratory of the University of Pennsylvania and of the Academy of Natural Sciences of Philadelphia. The figures of shells were made by Y. K. Tatsham.

BROWN, FRANK ARTHUR JR. editor
Selected invertebrate types New York John Wiley & Sons Inc., 1950 597 p illus. 24 cm. $7.50 2306

Contents (abridged): The Protozoa. Metazoa. Porifera. Cnidaria. Ctenophora. Platyhelminthes. Rhynchocoela. Acanthocephala. Aschelminthes. Entoprocta. Ectoprocta. Phoronida. Annelida. Echiuroidea. Sipunculoidea. Mollusca. Arthropoda. Onychophora. Crustacea. Insecta. Chaetognatha. Echinodermata. Enteropneusta. Chordata. Bibliography. Index.
Note The authors of this work are W. [illegible], F. A. Brown, Jr., J. B. Buck, W. D. Burbanck, C. G. Goodchild, L. H. Hyman, M. L. Kenter, L. H. Kleinholz, J. H. Lochhead, M. E. Pierce, W. M. Reid, M. D. Rosenberg, and T. H. Waterman, 7 members and former members of the staff of the Department of Invertebrate Zoology, the Marine Biological Laboratory, Woods Hole, Massachusetts. In the book more than 100 species of animals commonly used in laboratory instruction and experimentation are described in detail, with particular attention to such parts as external structure, general organization, feeding and digestion, nervous system and sense organs, muscular system, and reproductive system. The book is suitable [illegible] as [illegible] laboratory manual in undergraduate courses and [illegible] as [illegible] guide for instructors and research workers in species particularly adapted to laboratory use.

BRYANT ELIZABETH B
Cuban spiders in the Museum of Comparative Zoology Cambridge, Mass. The Cosmos Press Inc., 1940 284 p. illus. 24 cm. (Harvard College Museum of Comparative Zoology Bulletin. Vol. LXXXVI, no. 7 June) $3.50 2307

Note The collection of spiders in the Museum of Comparative Zoology is very rich in Cuban material, many of the specimens having been collected about the Harvard Station at Soledad. The specimens represent not only [illegible] the [illegible] area, but also have been taken in every month of the year. In the preparation of this paper 283 species were seen, of which 92 are new. That each island of the West Indies has an indigenous fauna is evident from comparing the species of Cuba and those of Puerto Rico, the only other island that has been studied carefully. The presence of *Tetrablemma* [illegible] Bryant, [illegible] very primitive [illegible] species less than [illegible] millimeter in length, indicates that remnants of [illegible] very ancient fauna are present in Cuba. The classification of Petrunkevitch, *Systema Aranearum* has been followed in this study. There are 22 plates showing line drawings.

BRYANT ELIZABETH B
The spiders of Hispaniola. With twelve plates Cambridge Mass. The Museum of Comparative Zoology 1948 331–44 p. illus 24 cm. (Harvard College Museum of Comparative Zoology Bulletin. Vol. 100 no 4) $2.00 2308

Contents (abridged): Introduction. Previous investigations. Table of species found on islands of the Caribbean. Systematic list. Appendix. Bibliography. Index of genera and species.

Comparative Zoology, 1953 487 p illus 24 cm (Harvard College Museum of Comparative Zoology Bulletin Vol 110, nos 1–7) No 1, $1 00, no 2, $0 75 no 3 $2.35, no 4, $1 25 no 5, $0 30 no 6 $0.30 no 7 $0 85 set $6 80 2297

Contents No. 1 Mammals from Nyasaland and Tete with notes on the genus Otomys, by B Lawrence and A. Loveridge. No. 2 Birds from Nyasaland and Tete, by J L. Peters and A. Loveridge. No. 3, Reptiles from Nyasaland and Tete, by A. Loveridge. No. 4 Amphibians from Nyasaland and Tete, by A. Loveridge. No. 5 Chilopoda (Myriopoda) by R. F Lawrence. No. 6 Decapod Crustacea, by F A. Chace Jr No. 7 Itinerary and conclusions, by A. Loveridge with an appendix on the vikuma, by C. W Benson

Note The scientific expedition whose zoological results are described in this Bulletin was undertaken in the hope of ascertaining how much of Nyasaland's primary forest fauna survive. It was known that vast tracts of montane forest in this country had been destroyed and that destruction by man and erosion was still going on with deleterious effects on the forest fauna. Systematic descriptions of the animals collected account for most of the length of the report. However an itinerary written more or less in the form of diary is presented in the last number along with generalized discussion of the findings of the expedition. The third number of the series Reptiles from Nyasaland and Tete, is not limited to collections made by this expedition but includes all known reptiles of Nyasaland.

PEARSE, ARTHUR SPERRY, AND OTHERS

The cenotes of Yucatan, a zoological and hydrographic survey, by A S Pearse, Edwin P Creaser, F G Hall, and the following collaborators J Bequaert, H. B Hungerford [and others] Washington, D C Carnegie Institution of Washington, 1936 304 p illus 29 cm. (Carnegie Institution of Washington Publication no 457) o p 2298

Contents (abridged) Physical and chemical survey of cenotes of Yucatan, by F. G. Hall. Results of survey of the cenotes in Yucatan, by A. S. Pearse. Yucatan fresh-water sponges, by M. C. Old. Some trematodes of cenote fishes from Yucatan by H. W Manter Polyzoa, by C. J D Brown Hirudinea from Yucatan, by J P Moore. A second contribution to the mollusca of the Yucatan, by J Bequaert and W J Clench. Copepods from the cenotes and caves of the Yucatan peninsula, with notes on cladocerans, by C. B Wilson On the Ostracoda from the cenotes of Yucatan and vicinity by N C. Furtos. Crustaceans from Yucatan by E P Creaser Hydracarina from Yucatan, by R. Marshall. Odonata from Yucatan, by E. B Williamson Aquatic and semiaquatic Hemiptera collected in Yucatan and Campeche, by H B Hungerford. Chironomid larvae from Yucatan by A. S. Pearse. Aquatic Coleoptera from Yucatan, by P J Darlington, Jr Fishes of the Yucatan peninsula, by C. L. Hubbs Some reptiles and amphibians from Yucatan and Campeche Mexico by H. T Gaige.

Note A collection of papers on various aspects of the fauna observed in the water-containing cavities in the limestone of the flat plains of Yucatan These cavities and caverns are interesting to biologists because they are isolated aquatic habitats, many of which have existed for long periods of time

PEARSE, ARTHUR SPERRY AND OTHERS

Fauna of the caves of Yucatan. With the collaboration of Nathan Banks Joseph C Bequaert Joseph C Chamberlin [and others] Washington, D C Carnegie Institution of Washington, 1938 304 p illus 29 cm (Carnegie Institution of Washington Publication no 491) o p 2299

Content (abridged) Fungal flora of Yucatan caves, by F A. Wolf. Land planarians from Yucatan by L. H Hyman. Parasitic flatworms from Yucatan, by H. W Stunkard. Some nematodes from the caves of Yucatan, by B G. Chitwood. Leeches (Hirudinea) from Yucatan caves, by J P Moore. Earthworms in Yucatan caves, by G E. Pickford. Arachnida of the orders of Pedipalpida, Scorpionida and Ricinulida, by R. V Chamberlin and W I Acarina of Yucatan caves, by G. W Wharton. Copepods from Yucatan caves, by A. S. Pearse and C. B. Wilson A new species of Cypridopsis from Yucatan, by N C. Furtos. Large cave Crustacea of the Yucatan peninsula, by E. P Creaser Diplopoda from Yucatan, by R V Chamberlin Collembola from Yucatan caves, by H. B Mills. New cave-crickets from Yucatan, by T H. Hubbell A new myrmecleonid from Yucatan by N Banks. Insects from Yucatan caves, by A. S. Pearse. Ants from the caves of Yucatan, by W M. Wheeler A third contribution to the molluscan fauna of Yucatan by J Bequaert and W J Clench. Fishes from the caves of Yucatan, by C. L. Hubbs. Some reptilian records from the caves of Yucatan, by H. T Gaige. Birds in Yucatan caves by A. S. Pearse. Mammalia from Yucatan caves, by A. S. Pearse with R. Kellogg.

Note A collection of papers on various aspects of the fauna observed in the caves of Yucatan, including the systematic classification of new species found among troglobite, troglophile, and trogloxene animals, with numerous detailed drawings.

SUMNER, LOWELL, AND JOSEPH S DIXON

Birds and mammals of the Sierra Nevada, with records from Sequoia and Kings Canyon National Parks Berkeley University of California Press, 1953 484 p illus. 24 cm. $7 50 2300

Contents Introduction. Wildlife policies and problems. Human use of parks. Life zones. The birds. Vanished species and questionable records—birds. The mammals. Vanished species and questionable records—mammals References. Index.

Note Although based partly on field investigations sponsored by the Museum of Vertebrate Zoology of the University of California and partly on scientific studies carried out by the authors under the sponsorship of the National Park Service, this book is directed to laymen rather than to specialists in zoology Visitors to the national parks are the particular audience for whom the book is designed however the birds and mammals described in it have a considerable range outside the national parks. The descriptions of species include the scientific name and one or more common names, description of color size and weight discussion of habits, including nesting and food habits; and statement on the status of the species in Sequoia and Kings Canyon National Parks. Also included is range of miscellaneous information from the file of observations of park naturalists and rangers. A list of literature of interest to amateur naturalists and other nonspecialists is included at the end of the volume. The illustrations include colored reproductions from paintings and monochrome reproductions of photographs of habitat scenes. The colored illustrations are from previously published books, but the photographs have not been published before

INVERTEBRATES (EXCEPT INSECTS)

ABBOTT, R. TUCKER

American seashells With illustrations by Frederick M Bayer New York D Van Nostrand Company, Inc, 1954 541 p illus. (part col d) 26 cm (The new illustrated naturalist editorial advisory board William Beebe and others) $12 50 2301

Content Part I, The natural history of seashells Man and mollusks. Life of the snails Life of the clams. Lives of other mollusks. Collecting American seashells. How to know American mollusks. Part II, Guide to the American seashells Class Gastropoda (periwinkles, conchs and other snails) Class Amphineura (coat-of-mails and other chitons) Class Scaphopoda (dentaliums and other tusk-shells) Class Pelecypoda (scallops, oysters and other clams) Class Cephalopoda (squid, octopus and cuttlefish) Guide to the molluscan literature. Index to subject matter and common names. Index to scientific names.

Note A handsomely illustrated, large-sized manual for the collector and student of the seashells of the Atlantic, Pacific, and Gulf coasts of North America Fifteen thousand species are described in systematic order Scientific name common name, range, size, descriptive notes, and indication of commonness or rarity are given for each species. Line drawings appear in the text for most

of the species, while others are pictured from photographs on 40 plates, 24 of the plates in full color. The author and the illustrator are both staff members of the Smithsonian Institution.

BAILY JOSHUA LONGSTRETH JR
Physiological group differentiation in *Lymnaea columella* Foreword by Raymond Pearl Baltimore The Johns Hopkins Press 1939 133 p. illus. 23 cm. (The American journal of hygiene. Monographic series No 14) $1 10 2302

Contents: Preliminary survey The problem. Material. The method Longevity Fecundity Growth. Interrelations [illegible] different biological variables Conclusion. Bibliography Index.

Note This study examines the possibility of physiological differentiation of races [illegible] are structurally indistinguishable. The particular traits analyzed are rate of growth, fecundity and duration of life. The evidence presented is for the pond snail, Lymnaea columella, taken from two different geographical localities, and it indicates that this study emphasizes the limitation of purely [illegible] [illegible] description and the need for [illegible] wider knowledge of the physiological patterns of biological population.

BAKER, EDWARD WILLIAM AND G W WHARTON
An introduction to acarology New York The Macmillan Company 1952 465 p. illus. (part col'd) 22 cm. $10.00 2303

Contents: Introduction. The suborder Onychopalpida Wharton, 1947 The suborder Mesostigmata G. Canestrini, 1891 The suborder Ixodides Leach, 1815 The suborder Trombidiformes Reuter 1909 [illegible] Leach, 1902 The suborder Sarcoptiformes Reuter 1909 [illegible], 1833. Index

Note An elementary yet very comprehensive book on mites. The introduction covers the general structure development, and ecology of mites. The families then are taken up one by one with suitable keys to assist in identification. For each family the following information is given if known [illegible] diagnosis, [illegible] list of genera and their type species, [illegible] economic [illegible] including the biologic, the economic, or medical importance [illegible] with emphasis on the species involved, and [illegible] of references to pertinent literature. Line drawings are included. The work is intended not only as [illegible] guide to the professional acarologist but also for the information of those in related fields, including agricultural entomology, zoology and medical parasitology

BAKER, FRANK COLLINS
The molluscan family Planorbidae. Collation, revision and additions by Harley Jones Van Cleave Urbana University of Illinois Press 1945 530 p illus. 26 cm. $14 50 2304

Contents: A memorial to Frank Collins Baker (1867–1942) A chronological list of the scientific publications of Frank Collins Baker Part [illegible] General morphology General anatomy [illegible] and embryological development Distribution in time and space Historical sketch of classification A new classification of the family Planorbidae Systematic account of the subfamilies, genera, and subgenera—recent and fossil Groups of uncertain affinities Family [illegible] Genera wrongly referred to Planorbidae. Bibliography Part [illegible] The Planorbidae inhabiting North and South America and the West Indies Descriptions of new species and new varieties Illustrations of the anatomy and of shells Index to text. Index to illustrations.

Note The family Planorbidae constitutes one of the largest groups of fresh-water Mollusca or snails This monograph provides [illegible] detailed description and classification of the family as derived from study of the anatomy and shell construction The work was carried on by the author over [illegible] period of 30 years and entailed the examination of 80 species and races and more than 775 specimens Part II, which comprises more than half the volume, consists largely of full-page plates illustrating the anatomy and shells of the Planorbidae The bibliography although extensive, [illegible] limited to only the most important references

BAKER, HORACE BURRINGTON
Zonitid snails from Pacific islands. Part 1–4 Honolulu, Hawaii Bernice P Bishop Museum 1938–41 4 parts in 3 v illus. 25 cm (Bernice P Bishop Museum. Bulletins 158 165 166) Vol 1 $2.50 vol 2 $2 50 vol. 3 $3.00 2305

Contents Part 1 Southern genera of Microcystinae Part 2 Hawaiian genera of Microcystinae Part 3 Genera other than Microcystinae Part 4 Distribution and indexes.

Note This series of papers deal [illegible] the Zonitidae and Helicarionidae, the most highly evolved pulmonate snails, that have endemic members in most parts of the Pacific area. The region covered includes the major island groups of Hawaii, Marquesas, Tuamotu, Society Austral, Cook, Samoa, Tonga, Fiji, Caroline, Palau, and Mariana Islands, and, so far as their fauna is known, the smaller islands and groups between them The material consisted of the collections of the Museum, supplemented by those of the Zoological Laboratory of the University of Pennsylvania and of the Academy of Natural Sciences of Philadelphia. The figures of shells [illegible] are made by E. H. [illegible]

BROWN FRANK ARTHUR JR. editor
Selected invertebrate types New York John Wiley & Sons Inc. 1950 597 p illus 24 cm. $7.50 2306

Contents (abridged) Phyla Protozoa Mesozoa Porifera Coelenterata Ctenophora Platyhelminthes Rhynchocoela Acanthocephala Aschelminthes Entoprocta Ectoprocta Phoronidea Annelida Echiuroidea Sipunculoidea Mollusca Brachiopoda Onychophora Arthropoda Linguatula Tardigrada Chaetognatha Echinodermata Enteropneusta Chordata Bibliography Index.

Note The authors of this work are W [illegible], F A Brown, Jr [illegible], W D Burbanck, C G Goodchild, L H Hyman, H L Kelley, L H Kleinholz, J H Lochhead, M E [illegible], W M Reid, M D Rogick, and T H Waterman, all members and former members of the staff of the Department of Invertebrate Zoology, the Marine Biological Laboratory, Woods Hole, Massachusetts. In the book more than 100 species of animals commonly used in laboratory instruction and experimentation are described in detail, with particular attention to such points as external structure, general organization, feeding and digestion, nervous system and sense organs, muscular system, and reproductive system. The book is suitable for use as [illegible] laboratory manual in undergraduate courses and also as [illegible] guide for instructors and research workers to species particularly adapted to laboratory use

BRYANT ELIZABETH B
Cuban spiders in the Museum of Comparative Zoology Cambridge Mass. The Cosmos Press, Inc. 1940 284 p illus. 24 cm. (Harvard College Museum of Comparative Zoology Bulletin Vol LXXXVI no. 7 June) $3.50 230

Note The collection of spiders in the Museum of Comparative Zoology is very rich in Cuban material many of the specimens having been collected about the Harvard Station, at Soledad. The specimens represent not only [illegible] [illegible] and diversified area, but also have been taken in every month of the year In the preparation of this paper 230 species were seen, of which 92 are new That each island of the West Indies has an indigenous fauna is evident from comparing the species of Cuba and those of Puerto Rico, the only other island that has been studied carefully The presence of *Tetrablemma [illegible]* Bryant, [illegible] very primitive four-eyed species less than [illegible] millimeter in length, indicates that remnants of [illegible] very ancient fauna are present in Cuba. The classification of Petrunkevitch's Systema Aranearum has been followed in this study There are 22 plates showing line drawings.

BRYANT ELIZABETH B
The spiders of Hispaniola. With twelve plates. Cambridge, Mass The Museum of Comparative Zoology 1948 331–447 p. illus 24 cm. (Harvard College Museum of Comparative Zoology Bulletin. Vol. 100 no 4) $2.00 2308

Contents (abridged) Introduction Previous investigations. Table of species found on islands of the Caribbean Systematic list. Appendix. Bibliography Index of genera and species.

Note A systematic description of 120 species of spiders from Hispaniola which are represented in the collection of the Museum of Comparative Zoology Many of the species described are new to the literature. The species descriptions include complete morphological details. They are supplemented by 12 plates containing reproductions of 123 drawings.

BUCHSBAUM, RALPH

Animals without backbones, an introduction to the invertebrates Second edition revised Chicago University of Chicago Press 1948 405 p illus 23 cm. $7 00 2309

Contents By way of introduction Life-activities. The first true animals. Classified knowledge. A variety of protozoa. A side issue—sponges. Two layers of cells. *Polyps* and medusae. Comb jellies. Three layers of cells. The shapes of animals. New parts from old. Free-living and parasitic flatworms. One-way traffic—proboscis worms. Roundworms. Lesser lights. Soft-bodied animals. Two ways of life—clam and squid. Segmented worms—nereis. Earthworms and other annelids. A missing link—peripatus. Jointed-legged animals. The lobster and other arthropods. The grasshopper and other insects. Spiny-skinned animals. Invertebrate chordates. Records of the invertebrate past. *Invertebrate relationships.* Further knowledge. Index.

Note An authentic, easy-to-read, and lavishly illustrated introduction to invertebrate zoology It is intended for use in college courses, but is also suitable for general readers. In this edition, there are about 130 new illustrations and a newly added final chapter designed to aid the student in the selection of further reading. The attractive format of the first edition has been retained.

CLARK, AUSTIN H

Ophiuroidea of the Hawaiian Islands Honolulu Bernice P Bishop Museum, 1949 133 p illus 25 cm (Bernice P Bishop Museum Bulletin 195) $1 50 2310

Content (abridged) Introduction. Ophiuroidea. Appendix The Hawaiian echinoderm fauna. Records from the Hawaiian Islands. Species taken in shore collecting. Bibliography Index.

Note The main part of this Bulletin is an account based primarily upon extensive collections made by the *Albatross* in 1902 It completes the series of reports on the echinoderms collected on that expedition The other reports—of which a complete list is given in the bibliography of this publication—were published in the Bulletin of the United States Fish Commission in 1906 and elsewhere. A few species recorded since 1902 are included. Approximately 63 pages of the publication are devoted to the systematic descriptions which include literature references, morphological data, and listing of the *Albatross* stations at which specimens of the species were collected. Twenty-two figures, including a somewhat higher number of illustrations and consisting largely of photographs of specimens of brittle stars, accompany the text of this part. The appendix, which runs from page 69 to page 122 is a list of all the echinoderm fauna recorded from the Hawaiian Islands and vicinity

CLARK HUBERT LYMAN

The echinoderm fauna of Australia its composition and its origin. Washington D C. Carnegie Institution of Washington 1946 567 p 25 cm (Carnegie Institution of Washington Publication no 566) $4 50 2311

Contents Introduction. Part I, Annotated list of the echinoderms of Australia, both fossil and recent General statement. Crinoidea. Asteroidea. Ophiuroidea. Echinoidea. Holothurioidea. Part II, The relationships of the Australian echinoderm fauna The recent echinoderms of Australia. The extinct echinoderms of Australia. The echinoderms of lands surrounding Australia. The apparent origin of Australia's echinoderm fauna. Bibliography Index

Note The two parts of this work have differing purposes the first to serve as an annotated list of the groups down to and including species of the five classes of echinoderms known (to 1941) to occur in Australia in order to help zoologists and paleontologists identify material with which they are working the second to discuss the relationships and possible origin of the Australian echinoderm fauna and to compare it with the corresponding faunas of southern and eastern Africa, of India and adjoining parts of the East Indies and western Pacific Islands, and of New Zealand, with the general aim of throwing some light on the plausibility of the Wegener hypothesis concerning the flotation of continents. The first part describes the various families, genera, and species of Australian echinoderms, and presents keys to all the groups. Absence of figures is compensated by references to figures in other publications, including the author's *Echinoderms from Australia*, 1938 (Harvard College Museum of Comparative Zoology Memoirs. Vol. LV), to which the present volume is in some respects a continuation

CLARK, HUBERT LYMAN

Echinoderms from Australia. An account of collections made in 1929 and 1932 with 28 plates (16 colored) and 64 text figures. Cambridge Mass The Museum, 1938. 596 p. illus (part col'd) 30 cm. (Harvard College Museum of Comparative Zoology Memoirs Vol LV) $25 00 2312

Note The material described in this monograph consists of 11 484 specimens, representing 423 species of 184 genera. Most of the material was collected by the author on his two expeditions to Australia, while the balance is made up of gifts and loans from Australian colleagues and friends. The introduction, in which the two expeditions are described, contains descriptions of the entire coastal regions of this continent which may be of value to future collectors. In the body of the book the material is treated first *systematically* by classes, then geographically by areas. Under each genera containing representatives of more than one species, previously known forms are given first, then the new species; in each group the species are arranged alphabetically The source of the material is mentioned under each species. The monograph is beautifully illustrated.

COOKE, CHARLES MONTAGUE, JR.

The land snail genus Carelia. Honolulu Bernice P Bishop Museum 1931 97 p. illus. 25 cm (Bernice P Bishop Museum. Bulletin 85) $2 50 2313

Contents (abridged) Characters of the shell size and shape texture color aperture columella outer lip. Anatomy Adults. Embryos. Species concept. New species. General relations. Climate. Hybrids. History Groups and keys. Explanation of plates.

Note This paper is based on the nearly 3,300 specimens of the genus Carelia in the collections of the Bishop Museum Of the 37 species and subspecies recognized in this paper 22 are known only in the fossil state and are doubtless entirely extinct; 15 species or subspecies may be considered as recent or living, while nine may be classed as living. Many new species and subspecies are reported, and the author feels certain that many others will be discovered among both the living and extinct forms. Of the 42 colonies known at present, 13 are fossil Besides these, specimens from three additional fossil colonies whose localities are unknown are represented in the Museum's collections. The logical sequence in which the groups of species of Carelia are distributed offers some clue to the early geography and topography of the island of Kauai.

CRAMPTON HENRY EDWARD

Studies on the variation distribution, and evolution of the genus Partula the species inhabiting Moorea. Washington D C. Carnegie Institution of Washington 1932 335 p. illus (part col d) 29 cm (Carnegie Institution of Washington. Publication no. 410) $14 00 2314

Content Introduction relations and scope of the present investigation. The island of Moorea. The collections from Moorea. *Partula* *Partula taeniata* new species. *Partula exigua* new species. *Partula* *tohiveana* Crampton *Partula olympia* Crampton. *Partula* *mooreana* Crampton. *Partula aurantia* new species. *Partula* *mirabilis* Crampton. *Partula* *suturalis* Pfeiffer. *Partula* *Partula* *mooreana* Hartman. *Partula* *Partula* *navigatoria* March General discussion. *Résumé* Supplement statistical tables.

Note A monograph dealing with the nature and natural history of the land-gasteropod belonging to the genus Partula which

[illegible] the island of Moorea in the Society Group in the South Pacific Ocean. The present volume is the third in a series of studies of *Partula* by the same author, the first two being his *Studies on the variation, distribution, and evolution of the genus Partula: the species inhabiting Tahiti*, Washington, D. C., Carnegie Institution Publication no. 231, 1916; and *The species of the Mariana Islands*, Guam and Saipan, Washington, D. C., Carnegie Institution Publication no. 228, 1925. The fundamental facts presented by the study are the characters of the shells of the animals belonging to the species under consideration, and their individual, varietal and specific [illegible] from locality to locality. Proceeding from such data, conclusions are drawn concerning the prior conditions and history of the several distinguishable colonies and species. The author affirms that organic differentiation among the species cannot be traced to environmental circumstances. The main body of the work describes in detail the 10 species which exist in Moorea only, their geographical locations, their varied conditions of internal diversification, the interrelationships, and their evolutionary histories. There are 22 plates in color and a large number of statistical tables.

De Laubenfels Max Walker

A discussion of the sponge fauna of the Dry Tortugas in particular and the West Indies in general, with material for a revision of the families and orders of the Porifera. Washington D C. Carnegie Institution of Washington 1936 225 p. illus. 29 cm. (Carnegie Institution of Washington. Publication no. 467 Papers from Tortugas Laboratory Vol. xxx) $3.25 2315

Contents. Introduction. Demospongiae Sollas: Keratosa, [illegible]. [illegible]. [illegible]. [illegible]. [illegible]. Carnosa. [illegible] Vosmaer. [illegible]. [illegible]. Calcispongiae Schmidt. Sycones. Ascones. Bibliography. Index.

Note This paper is an attempt to systematize all sponge genera based upon studies carried on at the Tortugas Laboratory of the Carnegie Institution. Major attention is given to the class Demospongiae. The publication contains 22 plates and a bibliography of ten double-columned pages.

De Laubenfels Max Walker

The order Keratosa of the phylum Porifera—a monographic study Los Angeles University of Southern California Press 1948. 217 p. illus. 23 cm. (University of Southern California. Allan Hancock Foundation. Publications. Occasional paper no. 3) $3.50 2316

Note Taxonomy, morphology, distribution, synonymy and other aspects of the order Keratosa are all covered in this comprehensive study. Identification keys also are included. There are 31 figures in the text and 30 plates, containing 53 additional figures. Many of the latter group are reproductions of photographs of specimens. The list of literature cited runs to eight pages.

De Laubenfels Max Walker

The sponges of the West-Central Pacific. Corvallis Oregon State College, 1954 320 p illus. 27 cm. (Oregon State College. Oregon State monographs, studies in zoology No. 7) $4.00 2317

Contents (abridged) Descriptions of species ([illegible] Porifera [illegible] Grant) Demospongiae. Keratosa Grant (or [illegible]) Spongiidae Gray Dysideidae Gray [illegible] Vosmaer [illegible] Vosmaer [illegible] Topsent (or [illegible]) [illegible] de Laubenfels. [illegible] de Laubenfels. [illegible] Gray [illegible] Topsent (or [illegible]) [illegible] de Laubenfels [illegible] [illegible] de Laubenfels [illegible] Ridley and Dendy [illegible] de Laubenfels [illegible] [illegible] de Laubenfels. [illegible] de Laubenfels [illegible] Vosmaer (or [illegible]) [illegible] Ridley and Dendy [illegible] Gray [illegible] de Laubenfels. [illegible] de Laubenfels. [illegible] Topsent (or [illegible]) [illegible] de Laubenfels. [illegible] Schmidt. [illegible] Gray [illegible] [illegible] Sollas. [illegible] Laubenfels. [illegible] Gray [illegible] Sollas. [illegible] Gray [illegible] de Laubenfels. [illegible] Carter (or [illegible]) [illegible] de Laubenfels. [illegible] Gray [illegible] Schulze. Calcispongiae Schmidt. [illegible] de Laubenfels (or Ascandra) [illegible] de Laubenfels. Sycones de Laubenfels (or Syconidae) [illegible] de Laubenfels. [illegible] de Laubenfels. Ecological discussion. Sponges of the Marianas. Bibliography.

Note Primarily a description of sponges collected by the author in June-September 1949 in the Marianas, Palaus, the (eastern) Carolines, and the Marshalls. One hundred eighty-three species are described of which more than 100 are new. A text figure containing one or more drawings (usually more) accompanies each species description.

Gertsch Willis John

American spiders. New York D Van Nostrand Company Inc., 1949 285 p. illus. (part col d) 22 cm. (The new illustrated naturalist editorial advisory board William Beebe and others) $7 95 2318

Contents Introducing spiders. The place of spiders in nature. The life of the spider. Silk spinning and handiwork. Courtship and mating. The evolution of spiders. The tarantulas. The cribellate spiders. The aerial web spinners. The hunting spiders. Economic and medical importance. The North American spider fauna. Glossary. Bibliography. Index.

Note A general, readable account of the spiders of the United States and Canada written for the general reader. The selected bibliography of 16 items is a guide to further reading on the same subject. The book contains 64 plates reproduced from photographs, half of them in color.

Gojdics Mary

The genus *Euglena*. Madison University of Wisconsin Press, 1953 268 p. illus. 25 cm. $6.50. 2319

Contents. Part I, General discussion. Introduction. Size. Shape. Pellicle and [illegible]. Color. Cytoplasmic granules. Cyst. Chromatophores. Pyrenoids. Paramylum. Flagellum. Eyespot. Nucleus. Cytostome, canal, reservoir and contractile vacuole. Definition and position of *Euglena*. Part II, *Keys*. Foreword to the key. Key to the main groups. Key to the species. Supplementary key to the red species. Supplementary key to the attached species. Part III, Taxonomy. *Euglenas* with long, ribbon-like chromatophores. *Euglenas* with trough-shaped chromatophores. *Euglenas* with ribbon-like chromatophores. *E. [illegible]* [illegible] small discoid chromatophores. *Euglenas* with larger discoid chromatophores. *Euglenas* with chromatophores bearing sheathed pyrenoids. *Euglenas* with spindle-shaped chromatophores. *Euglenas* with chromatophores different from the other groups. Part IV Annotated check list. Species of the genus *Euglena* Ehrenberg, 1830. Plates. Bibliography. Index to the species of *Euglena*. General index.

Note This volume brings together in one place a large amount of information concerning the microscopic unicellular fresh-water flagellates of the genus *Euglena*. It is based both on published descriptions and on personal observations made by the author over a period of 22 years. Almost 300 species of the genus are listed in the alphabetical check list. The bibliography covers 12 pages. While the author recognizes that additions to her work may be expected, the book is a unique publication and an essential reference for any zoologist interested in *Euglena*.

Hall R P

Protozoology New York Prentice Hall, Inc., 1953 682 p. illus. 24 cm. (Prentice-Hall animal science series H. Burr Steinbach, editor) $10.00. 2320

Contents: General morphology of the protozoa. Reproduction and life-cycles. The classification of protozoa. The mastigophora. The sarcodina. Sporozoa. Ciliophora. Physiology. Heredity in protozoa. Host-parasite relationships. Protozoa of the digestive and urogenital tracts. The blood flagellates. Malaria. Immunity and resistance. Index.

Note A fairly comprehensive survey of the accumulated knowledge of the Protozoa is provided in this compactly written work,

which is designed primarily for use as a textbook in advanced college courses. The systematic descriptions of groups occupy 512 pages. The remainder of the space is devoted to the general biological and physiological aspects of the phylum and of the subgroups within it. Physiology and host-parasite relationships, including immunity and resistance are discussed at some length. Throughout the book, the style is concise. The volume is generously illustrated with clear drawings that are well reproduced. References to the international literature are prominent and useful feature.

HARTMAN, OLGA

Polychaetous annelids Los Angeles University of Southern California Press 1939–47 24 cm (University of Southern California. Allan Hancock Pacific Expeditions Volume 7, Nos 1–5 Volume 10 Nos 1–5) Vol 7 $8 50, vol 10 $8 00 (parts also sold separately) 2321

Content (abridged) Parts I-II, Aphroditidae to Pisionidae. New species of polychaetous annelids from Southern California with discussion on the host of one of them. Part III, Chrysopetalidae t Goniadidae. *Part IV Some contributions to the biology and life history of Spionidae from California, with keys to species and genera and descriptions of two new forms.* Part V Eunicea. Part VI, Paraonidae Magelonidae Longosomidae, Ctenodrilidae and Sabellariidae Part VII, Capitellidae. Part VIII, Pilargidae.

Note A report based largely on collections obtained by Allan Hancock Pacific Expeditions from *1932* to 1941 but including also some material from other collections. The systematic descriptions of taxa are supplemented by illustrations on plates. There are 52 plates in Volume 7 of the series, and 65 plates in Volume 10.

HARVEY, ETHEL BROWNE

The American Arbacia and other sea urchins Princeton Princeton University Press 1956 298 p illus 25 cm $6 00 2322

Content Part I, General subjects Etymology nomenclature. Historical. Fossils. Uses of sea urchins. Description. Natural history Sex and breeding. Species of Echinoidea near Woods Hole and *Arbacia lixula (pustulosa)* Classification, including places of occurrence and size of eggs when available Part II Normal development Immature egg and maturation. Mature egg, unfertilized and fertilized. Sperm. Fertilization and cleavage. Blastula, gastrula and pluteus. Metamorphosis. Part III Centrifuged eggs Methods, Stratification of the egg granules. Breaking of the egg egg fractions and contents. Factors affecting stratification and breaking. Properties of egg fractions. Development of centrifuged eggs and fractions. Part IV Compilation of experimental work. Bibliography Index

Note A comprehensive presentation of the accumulated scientific knowledge on the sea urchin *Arbacia punctulata.* The history and taxonomy are covered concisely but adequately in the first part. The other parts of the book are well-organized summaries of the extensive experimental work which has been done on this animal and particularly on its egg. In the fourth part, this experimental work is summarized under such topics as Ageing of eggs, Chromatophores (pigment granules) Cleavage delay or arrest Enzymes, Jelly layer 'CH, Parthenogenesis, and Permeability Literature references are appended to each summary The bibliography at the end of the volume covers the pertinent literature from 1850 to 1914

HOBBS HORTON HOLCOMBE JR

The crayfishes of Florida. Gainesville University of Florida 1942 179 p illus 25 cm (University of Florida publication Biological science series Vol III no 2) $2 25 plus $0 20 postage 2323

Content The crayfishes of Florida. Factors affecting the distribution of crayfishes in Florida. The subfamily Cambarinae. Genus Procambarus. Genus Troglocambarus. Genus Cambarellus. Genus Orconectes. Genus Cambarus. A county list of the Florida crayfishes Literature cited. Index

Note A study of specimens of crayfishes found throughout the state of Florida, with emphasis upon those from the northern and western parts of the state While a large proportion of these specimens were collected by the author or his colleagues at the University of Florida comprising some 10 to 12 thousand Florida specimens, material was also studied in the United States National Museum, the Museum of Comparative Zoology the Philadelphia Academy of Sciences, and the University of Michigan Museum of Zoology For each species the author gives data on the types of both male and female, measurements, type locality, disposition of types, specimens examined, and geographical and ecological distribution.

HOFF, G CLAYTON

The ostracods of Illinois their biology and taxonomy Urbana University of Illinois Press 1942 196 p illus 26 cm. (Illinois biological monographs. Vol. XIX, nos. 1-2) $2 50 2324

Contents (condensed) Introduction. Review of the literature. Methods of collection and preparation. Biology of Illinois ostracods Habitats Physical factors in the habitat. Biotic relationships. Seasonal distribution. Reproduction and ontogeny Food. Geographical distribution of ostracods. Morphology of freshwater ostracods Shell. Body segmentation and appendages. Respiratory circulatory excretory digestive and nervous systems. Reproductive system. *Taxonomy Order Ostracoda. Suborders of the order Ostracoda* Families of the suborder Podocopa *str* Family Cypridae Subfamily Candoninae *s. str* Genus Candona Baird 1845. Subfamily Cyclocyprinae. Genus *Cyclocypris* Brady and Norman 1889 Genus Cypris Zenker 1854 Genus Physocypria Vávra 1897 Subfamily Ilyocyprinae Genus Ilyocypris Brady and Norman 1889 Subfamily *Cyprinae s. str Genus Cypricercus* Sars 1895. Genus Cypridopsis Brady 1885 Subfamily Notodromadinae. Genus Notodromas Lilljeborg 1853 Genus Cypreis Zenker 1854 *Subfamily Cypridopsinae* Genus *Cypridopsis Brady 1867* Genus Potamocypris Brady 1870. Family Darwinulidae. Genus Darwinula Brady and Norman 1889 Family Cytheridae. Subfamily Limnocytherinae. Genus *Limnocythere* Brady 1867 Subfamily Entocytherinae. Summary Bibliography Plates. Index.

Note An original contribution to aid ecologists, fresh-water biologists, and zoologists in identifying ostracods occurring in Illinois, and to give some insight into the biology of the species found in Illinois.

HOLTHUIS, LIPKE B

A general revision of the Palaemonidae (Crustacea, Decapoda Natantia) of the Americas I, The subfamilies Euryrhynchinae and Pontoniinae II The subfamily Palaemoninae Los Angeles University of Southern California Press 1951–52 2 v illus. 24 cm. (Allan Hancock Foundation publications. Occasional paper *Nos 11 12)* $6 00 each. 2325

Note This revision of the Palaemonidae from the Americas contains a complete list of all known species there are keys to all genera and species, and there are *full synonymies* Its distributional records for each species. In most cases, description and figures accompany each species. The author has divided the family Palaemonidae into four subfamilies, based on degree of fusion of the ramus of the upper antennular flagellum, and on modified structural characteristics. Three of the subfamilies are represented in America. There are numerous notes on color [redacted] life, stages of development, size variations, including maximal figures, stages of reproductive development, and many comments on affinities with nearly related species. The two volumes contain 63 and 55 plates respectively

HYMAN LIBBIE HENRIETTA

The invertebrates New York McGraw Hill Book Company Inc 1940–55 4 v illus. 24 cm (McGraw Hill publications in the zoological sciences E J Boell consulting editor) *Vol I* $11 00 vols II & III $9.50 per vol vol IV $11 00 2326

Content Volume I, Protozoa through Ctenophora. Introduction. The cell, and the organism, Classification. The acellular animals—phylum *Protozoa* Phylum Mesozoa Introduction to the lower Metazoa Metazoa of the cellular grade of construction—Porifera, the sponges Metazoa of the tissue grade of construction

—the radiate phyla—phylum Cnidaria. The radiate phyla—phylum Ctenophora. Volume II, Platyhelminthes and Rhynchocoela, the acoelomate Bilateria: Introduction of the Bilateria. The acoelomate Bilateria—phylum Platyhelminthes. The acoelomate Bilateria—phylum Rhynchocoela. Index. Volume III, Acanthocephala, Aschelminthes, and Entoprocta. The pseudocoelomate Bilateria. The pseudocoelomate Bilateria—phylum Acanthocephala. The pseudocoelomate Bilateria—phylum Aschelminthes. The pseudocoelomate Bilateria—phylum Entoprocta. Index. Volume IV, Echinodermata. The coelomate Bilateria. The enterocoelous coelomates—phylum Echinodermata. Index.

Note: A comprehensive, systematic treatise covering the embryology, morphology, geographical distribution, etc. of the invertebrates. Both living and fossil forms are covered, but the latter are described with relative brevity. The work is addressed to advanced students and professional zoologists and is written in the technical terminology of the field. The drawings are excellent and clearly reproduced. Literature citations are given. Although originally planned for completion in three volumes, six volumes are now included.

KESLING ROBERT VERNON

The morphology of ostracod molt stages. Urbana University of Illinois Press, 1951 324 p. illus. 26 cm. (Illinois biological monographs Harley Jones Van Cleave and others, editorial committee Vol. XXI no 1–3) o.p 2327

Contents: Taxonomy. General description. Detailed description. Ontogeny. Instar stages. Variations in size of instars. Variations in shape of instars. Relations of appendages and internal organs to the shape of the valves in instars. Height-length ratio as a valid character for determination of species. Bibliography. Plates. Index.

Note: A detailed study of Cypridopsis vidua carried out in order to give a full description of a typical living ostracod, some pertinent biological information and a comparison of the valves of the various instars. Chapters I and II contain general and anatomical description. Chapter III describes the egg, embryology, development, molting, swimming, rate of reproduction, life span, etc. The remaining chapters are chiefly descriptions of the molt stages or instars. There are 14 figures in the text and in addition 96 plates containing reproductions of 419 photographs of stained instars.

KUDO RICHARD R.

Protozoology Fourth edition With three hundred and seventy-six illustrations Springfield, Ill. Charles C Thomas Publisher 1954 966 p illus. (part col d) 23 cm. $10 75 23 8

Contents (abridged): Part I. General biology: Ecology. Morphology. Physiology. Reproduction. Variation and heredity. Part II. Taxonomy and special biology: Major groups and phylogeny of protozoa. Phylum protozoa. Author index. Subject index.

Note: A standard work widely used as a textbook in college courses and of broad enough scope that it is useful also as a one-volume reference work on the classification of protozoa. In this edition, the first part on the biology of the phylum is 246 pages long. The remainder of the space is devoted to systematic descriptions arranged under subphylum, class, subclass, and order. Most of the descriptions of taxa are necessarily limited to morphological details. However protozoa of medical interest, for example, the genus Plasmodium, are discussed also as to their life cycles and pathology. The descriptions are supplemented by a high number of expertly drawn and clearly reproduced illustrations. Bibliographies are extensive, and the names of the authors of the cited literature are assembled in the author index. The first edition was published in 1931 and the third edition in 1946. In comparison with the third edition, the fourth edition is similar in scope and organization. However many of the chapters contain revised sections, the lists of literature references have been much expanded, and many old illustrations have been replaced by new and better ones. The author is Professor of Zoology at the University of Illinois.

MORRIS PERCY A.

A field guide to the shells of our Atlantic and Gulf coasts. Revised and enlarged edition. Illustrated with photographs. Boston Houghton Mifflin Company 1951 236 p. illus (part col d) 19 cm. (The Peterson field guide series) $3 95 2329

Contents (abridged): The pelecypods. Gastropods. Glossary of descriptive terms. Index.

Note: A standard handbook for amateur shell collectors. It contains descriptions in nontechnical language of marine shells that can be collected along the Atlantic and Gulf coasts of the United States. All of the larger and more common forms are described. From 3 to 15 lines of description are given for each species. The book is illustrated with reproductions of photographs of 318 species and subspecies of pelecypods and 276 species and subspecies of gastropods. In this second edition the number of species described has been increased by 112, and the common or popular names of the species wherever established have been added.

OSBURN RAYMOND C

Bryozoa of the Pacific coast of America Los Angeles University of Southern California Press 1953 841 p. illus. 24 cm (Allan Hancock Pacific expeditions Vol. 14 no. 1–3) $14.25 2330

Contents (abridged): Part I, Cheilostomata-Anasca. Part II, Cheilostomata-Ascophora. Part III, Cyclostomata, Ctenostomata, Entoprocta, and addenda.

Note: A report based chiefly on specimens of Bryozoa that were collected during the cruises of the *Velero III* during the years 1931–1941, and which together constitute a very extensive collection. Except for some concise preliminary matter including a short glossary of anatomical terms that have special application in the study of the Bryozoa, the work is cast in the form of a systematic catalog. Species descriptions cover literature references, morphology, range and, in many cases, discussions of conflicts between the author's observations and the records of others. Together, the three parts contain 82 plates, all of which are reproductions of drawings.

PENNAK ROBERT W

Fresh-water invertebrates of the United States. New York The Ronald Press Company 1953 769 p. illus. 25 cm. $14 00 2331

Contents: Introduction. Protozoa. Porifera. Coelenterata. Turbellaria. Nemertea. Gastrotricha. Rotatoria. Nematoda. Nematomorpha. Tardigrada. Bryozoa. Annelida. Introduction to the Crustacea. Eubranchiopoda. Cladocera. Copepoda. Ostracoda. Mysidacea. Isopoda. Amphipoda. Decapoda. Hydracarina. Introduction to the insects. Collembola. Plecoptera. Ephemeroptera. Odonata. Hemiptera. Megaloptera. Neuroptera. Trichoptera. Lepidoptera. Coleoptera. Diptera. Gastropoda. Pelecypoda. Appendices. Index.

Note: A comprehensive work in which a very wide range of accumulated knowledge on the free-living fresh-water invertebrate fauna of the United States of America is presented. The arrangement is by systematic group as indicated in the above contents. Keys to genera are always and keys to species sometimes included. Natural history, ecology and taxonomy are emphasized. Most chapters include also discussions of collecting, culturing and preserving techniques. Drawings are numerous and clearly reproduced in large scale.

PERRY LOUISE M AND JEANNE S SCHWENGEL

Marine shells of the western coast of Florida. With revisions and additions to Louise M Perry's *Marine shells of the southwest coast of Florida* Illustrations by W Hammersley Southwick, Axel A. Olsson and Frank White Ithaca Paleontological Research Institution 1955 318 p. illus. 23 cm. $7.00 2332

Contents: Preface by author. Foreword by Wm. J. Clench. Introduction. Glossaries. Collection and preparation of specimens. Systematic descriptions: Class Amphineura. Class Pelecypoda. Class Scaphopoda. Class Gastropoda. Plates. Index.

Note: A revised and enlarged edition of Louise M. Perry's *Marine shells of the southwest coast of Florida*, Ithaca, 1940. It describes

the shells of a region of the United States of America which is especially noted for the abundance and variety of its molluscan fauna. Most of the space in the volume is devoted to the systematic descriptions. Name, author synonymy measurements, anatomical description, locality habits and habitat, distribution and depth are given for each species listed. In this considerably enlarged edition, there are 55 plates, each of which contains illustrations of a number of species. Although most of the illustration ar of shells, there ar few of egg capsules, embryonic shells, and animals.

PILSBRY, HENRY AUGUSTUS

Land mollusca of North America (north of Mexico) Philadelphia The Academy of Natural Sciences of Philadelphia, 1939–48 2 v in 4 pts illus 27 cm (The Academy of Natural Sciences of Philadelphia. Monographs No 3) Vol. 1 pt. 1, $8 00, vol 1, pt. 2 $6 00 vol. 2, pt. 1, $7 00 vol 2, pt. 2, $8 00 2333

Content (abridged) Vol. 1 pt. 1 Helicoid shells of the families Helicidae Helicellidae, Helminthoglyptidae, and Camaenidae. Vol. 1 pt. 2 Helicoid shells of the families Polygyridae and Sagdidae Vol. 2 pt. 1 The non-helicoid families Bulimulidae, Urocoptidae, Cerionidae Achatinidae, Oleacinidae Haplotrematidae and Zonitidae. Vol 2 pt. 2 Non-helicoid families Limacidae, Endodontidae Arionidae Philomycidae, Succineidae Strobilopsidae Pupillidae, Valloniidae Cionellidae, Carychiidae, Veronicellidae, Truncatellidae Pomatiidae and Helicinidae.

Note A comprehensive systematic and distributional study of the land mollusks known to occur in the United States, Canada, Alaska, Labrador Greenland and the islands of St. Pierr and Miquelon. Many new forms are described. Included in the descriptions of all specimens are data on measurements, color reproductive organs, distribution and literature references. Illustrations include both reproductions of photographs and of drawings.

PRATT, HENRY SHERRING

A manual of the common invertebrate animals, exclusive of insects Thoroughly revised edition 974 illustrations New York Mc Graw Hill Book Company Inc. 1935 854 p illus 23 cm $9 00 2334

Content (abridged) Introduction. Protozoa. Porifera. Coelenterata. Ctenophora. Plathelminthes. Nemertea. Nemathelminthes. Trochelminthes. Bryozoa. Brachiopoda. Phoronidea. Chaetognatha. Annelida. Arthropoda. Mollusca. Echinodermata. Chordata. List of authors. Glossary Index.

Note A manual for students of zoology containing descriptions f the common invertebrate animals by means of which their names and affinities can be determined. The book is intended mainly but not entirely for use in the eastern and central portions of the United States and Canada, and included in it are most of the common invertebrates, except insects, occurring in that region In addition to these, however representati species from the western and Pacific states are also included. Animals which inhabit the deep sea have not been included except in isolated cases. The use f scientific names follows the system adopted by the International Commission of Nomenclature. Line drawings and glossary help make the keys more meaningful for the student. The second edition brings certain nomenclatures up to date and introduces several additional species, particularly from the fauna of the Pacific Coast region.

RICKETTS EDWARD FLANDERS, AND JACK CALVIN

Between Pacific tides An account of the habits and habitats of some five hundred of the common conspicuous seashore invertebrates of the Pacific Coast between Sitka Alaska, and northern Mexico Third edition. Revised by Joel W Hedgpeth. Foreword by John Steinbeck Line drawings by Ritchie Lovejoy Stanford Stanford University Press, 1952 502 p illus (part col'd) 24 cm. $6.5 2335

Content About this book and Ed Ricketts, by J Calvin and J W Hedgpeth. Introduction. Protected outer coast Rocky shores Sandy beaches. Open coast Rocky shores. Sandy beaches. Bay and estuary Rocky shores. Sand flats. Eelgrass. Mud flats. [illegible] The Tomales Bay tidal flats. Wharf pilings Exposed [illegible] Protected piles. Plankton Marine plankton of the Pacific Coast. Intertidal zonation and related matters Newcomers to the Pacific Coast. Appendix Annotated systematic index and bibliography. Selected list of non-specific books and accounts. General index.

Note An outstanding book designed for amateur naturalists and laymen whose curiosity is aroused by the life forms hidden in the tidal waters f the north temperate Pacific Coast. It is written in an engaging style but is somewhat more advanced than the usual popularization of biological knowledge. The information that each creature is written in narrative style—not tabular—and usually covers habitat, appearance, reproductive cycle, and collecting techniques. The edition of 1948 was "admittedly an interim printing, since a large amount of wartime research was not yet accessible. In the 1952 edition the new editor taking account of information published since the original edition of 1939 has made corrections and changes to bring the book up to date. The text remains essentially as the original authors left it, though new paragraphs have been added here and there, and some old ones have been rewritten. Some f the photographs and drawings have been replaced and some new illustrations added

SHERBORN, CHARLES DAVIES

An index to the genera and species of the Foraminifera. Washington D C. Published by the Smithsonian Institution, 1955 485 p. 24 cm (Smithsonian miscellaneous collections Vol 132 (whole volume) Publication 4226) $3.50 2336

Note A reprint of a work originally published in two parts in 1893 and 1896 as Smithsonian Publications 856 and 1031. It provides literature references to all the genera and species of Foraminifera described in the international literature approximately to the close of 1889 Long out of print, it has been reprinted without change, except for new introduction and new title page. Reprinting was occasioned by the forthcoming publication of complementary index covering the Foraminifera described in the literature from 1890 to 1950 which has been compiled by Hans E. Thalmann.

SMITH, F G WALTON

Atlantic reef corals a handbook of the common reef and shallow water corals of Bermuda, Florida, the West Indies and Brazil. Photographs by Frederick M Bayer Coral Gables Fla. University of Miami Press 1948 112 p illus 22 cm. $3 75 2337

Content Distribution of coral reefs throughout the world. Manner of formation of reefs. The western Atlantic reefs. Structure and habits of the living coral. Associates of the living coral. Collection and preparation of corals. List of the western Atlantic reef corals. Description and identification of the western Atlantic reef corals. Descriptions of the western Atlantic reef corals. Appendices Glossary of principal technical terms used in coral taxonomy Taxonomic key to genera of western Atlantic corals. Selected bibliography Plates.

Note The purpose of this little volume is to assist collectors of coral, students of marine biology and interested laymen in the identification and recognition of the varieties of corals found in the reef waters of the western Atlantic. The first part of the book provides non-technical account of the life of the coral animal and the formation of coral rock. The second part consists of brief descriptions both popular and scientific, of fifty-two species of reef corals. In spite of its small size the volume contains several useful keys, selected bibliography glossary and some excellent close-up photographs of corals.

SNODGRASS ROBERT EVANS

A textbook of arthropod anatomy Ithaca Comstock Publishing Associates (a division

of Cornell University Press) 1957 363 p. illus. 24 cm. $6.00. 2335

Contents: Introduction. The Trilobites. Limulus. The Eurypterida. The Pycnogonida. The Arachnida. The Crustacea. The Chilopoda. The Diplopoda. The Pauropoda. The Symphyla. The Hexapoda. References. Indexes.

Note: Although labeled [illegible] textbook, this survey of the comparative anatomy of the arthropods merits reading by anyone interested in the subject whether he be [illegible] student or graduate. The author has made [illegible] contribution in bringing the scattered facts together and organizing them. The style is technical but not cryptic. [illegible] problems are mentioned frequently in each section [illegible]. Inasmuch as no other [illegible] head structure [illegible] with the exception of the Acarina, it becomes somewhat of [illegible] to understand how the [illegible] has been evolved from ordinary [illegible] parts. There are 88 figures, each of which contains from five to 13 [illegible] of drawings of good quality. The list of references runs to 12 pages.

Tattersall, Walter Medley

A review of the Mysidacea of the United States National Museum. Washington, D. C. Government Printing Office 1951 292 p. illus. 24 cm. (Smithsonian Institution. United States National Museum. Bulletin 201) $1.00. 2339

Contents: Introduction. Systematic [illegible]. Geographical distribution. History of American Mysidacea. Systematic [illegible]. Class Crustacea. Subclass Malacostraca. Division Peracarida. Order Mysidacea. Suborder Lophogastrida. Family Lophogastridae. Family Eucopiidae. [illegible] Suborder Mysida. Family Petalophthalmidae. [illegible] Family Mysidae. Subfamily Boreomysinae. Subfamily Siriellinae. Subfamily Gastrosaccinae. Subfamily [illegible]. Mysinae. Tribe Erythropini. Tribe Leptomysini. Tribe Mysini. Tribe Heteromysini. Species not represented in the collections of the United States National Museum. New genera, species, and varieties described herein. Literature cited. Index.

Note: A systematic description of 123 species of mysids, 39 of which are new and the majority of which are of American origin. The species are mostly from the collections of the United States National Museum. The work forms an introduction to the mysidacean fauna of the American continents. Under each species references to the literature are given, and the [illegible]-page bibliography lists all known [illegible] with American species.

Thorp, Raymond W., and Weldon D. Woodson

Black widow: America's most poisonous spider. With a foreword by Emil Bogen. Illustrations by the authors. Chapel Hill: University of North Carolina Press, 1945 222 p. illus. 21 cm. $3.00. 2340

Contents: Spider lore and legend. Tarantulas. Other poisonous spiders. Latrodectus around the world. Early reported cases of spider bite in the United States. Investigating Latrodectus [illegible]. Common medical reports. Spider bite as [illegible] entity. Experiments with Latrodectus on animals. Experiments with Latrodectus on man. Diagnosis and treatment. The black widow before the public. Latrodectus [illegible] in the natural scheme. The life cycle of the black widow spider. Diet of the black widow spider. Home-building [illegible]. Artificial control. Natural control. Appendixes: Tabulated medical reports. Lay [illegible]. Tables. Sources. Index.

Note: [illegible] of general interest, medical interest, and [illegible] of reference value. It deals with the [illegible] poisonous spider that [illegible] in the United States. The authors [illegible] the information that [illegible] collected from their own researches, the writings of other authorities, and from correspondence with physicians and other specialists. Many aspects of the subject are dealt with, but the major part of the book [illegible] concerned with the life habits of this spider, and with lay and medical opinions and experiences with its bite. Although the writing can readily be understood by general readers, the book is [illegible] sensational popularization.

Van Cleave, Harley J

Acanthocephala of North American mammals. Urbana: University of Illinois Press 1953 179 p. illus. 26 cm. (Illinois biological monographs Vol. 23 nos. 1–2) $5.00 2341

Contents: Introduction. Preparation of specimens for study. Morphology. General taxonomic section. Correlation of habitat with taxonomy. Accidental infections and normal host relationships. Reference [illegible] fauna of [illegible] continents. Review of the classification and keys. North American collections of Palaeacanthocephala of mammals. Analysis of the genus Corynosoma in North American mammals. Preliminary analysis of the genus Polymorphus in North American [illegible]. Collections of Archiacanthocephala from North American mammals. Analysis of the genera and species of the family Oligacanthorhynchidae found in mammals of North America. Analysis of the genera and species of the family Moniliformidae examined in this study. Unidentifiable Archiacanthocephala. Check list of the species of Acanthocephala from mammalian hosts in North America. References. Plates, with explanations. Index of Latin names.

Note: A general systematic study from the zoological viewpoint of the Acanthocephala, or thorny-headed worms, [illegible] of the [illegible] parasites of vertebrates. It was based on [illegible] study on the part of the author [illegible] his lifetime published many papers on the Acanthocephala [illegible] to the publication of this monograph. The primary emphasis is on taxonomy and taxonomic descriptions of genera and species. However, even in the chapters devoted to taxonomic descriptions of genera, there is much material which is not strictly taxonomic, such as discussions of hosts and host relations. The chapter on the preparation of specimens is [illegible] also, the author's discussions of collections and previous studies [illegible] be useful to anyone undertaking further study in the field. The list of literature references runs to eight pages. There are 133 figures which are printed on 13 plates.

Van Name, Willard Gibbs

The American land and fresh water isopod Crustacea. New York: American Museum of Natural History 1936 535 p. illus 24 cm. (American Museum of Natural History. Bulletin. Vol. LXXI) $4.00 2342

Contents: Introduction. Acknowledgments. The Isopoda. Nature and general distribution of the American land and fresh-water isopods. List of new species described. Regional distribution. Descriptions of species. Bibliography. Supplement. Index.

Note: This monograph presents [illegible] descriptions, with [illegible] of the land and fresh-water isopods known in North and South America and the neighboring islands, including the [illegible] species contained in the collection of the American Museum of Natural History as well as [illegible] others which have come to the author's attention. The material has purposely been kept within the limits of [illegible] handbook or manual and is intended to aid the specialist by bringing scattered information together in accessible form. A total of 314 terrestrial species, including several determined only generically by the authors reporting them, and 49 fresh-water species are dealt with. About [illegible] references are listed in the bibliography.

Van Name, Willard Gibbs

The North and South American ascidians. New York: American Museum of Natural History 1945 476 p. illus 27 cm. (American Museum of Natural History. Bulletin. Vol. 84 1945) $5.00. 2343

Contents: Descriptions of species. Order Aplousobranchia. Family [illegible]. Family Didemnidae. Family Polyclinidae. Order Phlebobranchia. Family Diazonidae. Family Cionidae. Family Perophoridae. Family Ascidiidae. Family Agnesiidae. Family Rhodosomatidae. Family Hypobythiidae. Order Stolidobranchia. Family Botryllidae. Family Styelidae. Family Pyuridae. Family Molgulidae. Ascidians too incompletely described for classification. Bibliography. Index.

Note: A descriptive treatise and catalogue for professional zoologists. It is illustrated with over 570 line drawings and with 31 plates reproduced from photographs. Literature references are given for each species previously described. The introduction provides [illegible] list of American species of ascidians, [illegible] short review of the related literature, and information on [illegible] structural details, classification and nomenclature, means of identification, and methods of collecting and preserving ascidians.

WARDLE, ROBERT ARNOLD, AND JAMES ARCHIE McLEOD

The zoology of tapeworms Minneapolis Published for the University of Manitoba by the University of Minnesota Press 1952 780 p illus 24 cm $12 50 2344

Contents (abridged) Part I General features Life cycle. Biology Origin and evolution. History and classification Part II Tapeworm classification. References. Index.

Note A large and detailed work by two University of Manitoba scientists who from the extensive literature of the subject and from their own observations, present the general history biology and taxonomy of the tapeworms of the world. All of the known families and genera and the majority of the known species are described in systematic order Identification keys and numerous illustrations are provided. The viewpoint is zoological and medical aspects are not covered. The bibliography runs to 104 pages.

WICHTERMAN, RALPH

The biology of *Paramecium* New York The Blakiston Division, McGraw Hill Book Company, Inc, 1952 527 p illus 23 cm $9 50 2345

Content History of the genus. Classification and species of *Paramecium* Morphology and cytology of *Paramecium* Ecology collection cultivation and sterilization of *Paramecium*. Physical and chemical properties of the protoplasm of *Paramecium* Metabolism—nutrition secretion, and growth of *Paramecium* and factors influencing growth. Metabolism—respiration excretion and the functions of the contractile vacuoles and cell surface. Movement and motor response (stimulation irritability) Reproduction, nuclear processes, and sexuality Genetics—the mating reaction, mating types, system of breeding relations and inheritance in the various species of *Paramecium*. Vitality studies and the life-cycle. Serologic studies of *Paramecium*. Organisms living in and upon *Paramecium*. Research technique in the study of *Paramecium* Usefulness of *Paramecium* in the study of fundamental problems in biology Bibliography Author index. Subject index.

Note A very comprehensive survey of the biological aspects of the protozoan animal *Paramecium*. In his preface the author states "The main purpose in writing this book is to present not only my own research but also the essential discoveries, results, and conclusions that are to be found in approximately 2 000 references from 1674 to the present whereby *Paramecium* has been used for the solution of biological and other problems The book is organized for use as a reference work and is very compactly written. The bibliography is 73 pages long The author Professor of Biology in Temple University is a well-known authority on *Paramecium*.

INVERTEBRATES (INSECTS)

ANNUAL REVIEW OF ENTOMOLOGY Volume 1 Edward A Steinhaus editor Ray F Smith associate editor Stanford Annual Reviews Inc in cooperation with the Entomological Society of America, 1956 466 p 23 cm $7 00 2346

Contents The physiology and biochemistry of diapause, by A. D Lees. Insect nutrition by H. Lipke and G. Fraenkel. The "language" and orientation of the honey bee by K. von Frisch and M. Lindauer The stability of scientific names, by R. L. Usinger Some aspects of geographic variation in insects, by T H. Hubbell. Arthropod resistance to chemicals, by W M Hoskins and H T Gordon. The mode of action of insecticides, by C. W Kearns. The chemistry of insecticides, by H. Martin Persisting insecticide residues in plant materials, by F A. Gunther and R. C Blinn Repellents, by V G. Dethier Soil insects and their control by J H. Lilly Stored product entomology by E. A. Parkin Apparatus for application of insecticides, by J L. Brann, Jr Ecology of forest insects, by S A. Graham Some recent advances in apicultural research, by C G. Butler Insect transmission of plant viruses, by F F Smith and P Brierley Nonbiting flies and disease, by D R. Lindsay and H. I Scudder Veterinary and medical acarology by H. S. Fuller Modern quarantine problems, by A. F Camp The fundamental theory of natural and biological control, by W R. Thompson. Effect of pesticides on balance of arthropod populations, by W E. Ripper Indexes.

Note The first volume published in a new review series which is organized similarly to other annual reviews issued by the same publisher The various chapters are essentially digests of current literature in which the gist of the individual articles is stated succinctly and a reference is given to the original publication. There is little of criticism or evaluation on the part of the authors of the papers on the other hand, the authors do select the articles to be reviewed Each of the papers in the current volume is a review of recent literature, but *none of the authors has limited himself to the literature of a single year* In fact, literature published as long ago as 1845 is cited in Butler's "Some recent advances in apicultural research. However this is not typical most of the authors have reviewed the literature of approximately a decade. The volume (and series) is directed to biologists and others with professional interests in pure and applied entomology

BAERG, WILLIAM J

Introduction to applied entomology Third edition, revised Minneapolis Burgess Publishing Company, 1948 191 p illus 28 cm $3 50 2347

Content Introduction. Phylum Arthropoda. Class Arachnida Araneae. Scorpionida. Acarina. Class Myriapoda Chilopoda. Diplopoda. Class Insecta External anatomy Internal anatomy Reproduction. Metamorphosis. Economic importance of insects. Artificial control measures Insect pest control. New insecticides (insects) insecticides. Fumigants. Repellents. Heat. Electricity Table of equivalent amounts. Biological control of insects. Orders of insects Thysanura. Collembola. Ephemerida. Odonata. Plecoptera Orthoptera. Isoptera. Dermaptera. Coleoptera. Strepsiptera. Thysanoptera. Corrodentia. Mallophaga. Anoplura. Embiidina Hemiptera Homoptera. Neuroptera. Trichoptera. Lepidoptera. Mecoptera Siphonaptera. Diptera. Hymenoptera.

Note A textbook for beginning students in applied entomology which covers the more common insects, some spiders and scorpions, and a few mites and ticks. The injurious species and the useful ones are given the major emphasis. The subject matter has been selected especially for students preparing for agricultural pursuits. Life history accounts and remedial and preventive measures are given in brief for the various families and species. Bibliographical references to other books and articles are included under the various subjects.

BARBER, HERBERT SPENCER

North American fireflies of the genus Photuris With preface and notes by Frank A McDermott. Washington D C The Smithsonian Institution, 1951 58 p illus. 24 cm (Smithsonian miscellaneous collections. Vol 117 no 1 Publication 4051) $0 50 2348

Contents Introduction Observations on adult behavior Nomenclature Species of *Photuris* Species here distinguished *Photuris* male genitalia. Table of species of *Photuris*. Addendum (by F A McDermott) Notes on some general characters of North American *Photuri* Results of the examination of Barber's specimens Literature cited.

Note A study of *Photuris* fireflies with special attention to the taxonomy of the genus. It was based upon field studies, many of them made in and around Washington D C. Described are 19 species and varieties, of which 11 are new Flashing conduct is considered as a means of species differentiation. A diagram is included to illustrate the flash intervals of the males of the different species of *Photuris* Prepared for publication after the death of the author by a friend and collaborator the work was published by the Thomas Lincoln Casey Fund.

BATES MARSTON

The natural history of mosquitoes. New York The Macmillan Company 1949 379 p illus 21 cm. $6 00 2349

Content Introduction. The environment of the adult. Survival and dispersal. The sexual behavior of mosquitoes. Food habits of the adult. Egg development and oviposition. Mosquito eggs. The larval environment. The physiology and behavior of larvae. The biological environment of the larva. The classification of larval habitats. The pupal stage Mosquitoes in relation to other organisms. Mosquitoes as vectors of viruses. Mosquitoes as vectors of plasmodia. The species problem. The classification of mosquitoes. The distribution

tion of mosquitoes. Technique in mosquito study. The anatomy of mosquito research. Appendix: Systematic list of mosquito species. Bibliography. Index.

Note: A comprehensive scientific account of mosquitoes viewed as living animals. All phases of the insect and its ecology are discussed except identification and control. The author is associated with the International Health Division of the Rockefeller Foundation at the time of writing. The book is of interest to biologists and also to public health workers. The bibliography is more or less limited to literature published between 19[illegible] and the date of writing; nevertheless, it runs to 44 pages.

BERNER, LEWIS

The mayflies of Florida. Gainesville University of Florida Press 1950. 267 p. illus 26 cm. (University of Florida studies. Biological science series Vol. IV no. 4) $5.50 2350

Contents: Introduction. Historical review. The order Ephemeroptera. Primitive and specialized characters. Families of mayflies. Wing venation of mayflies. Taxonomic characters. A comparison of Florida mayflies with the northern fauna. Zoogeography. Climatic features of Florida. Habitats of Florida mayflies. Key to Florida mayflies. Species of Florida mayflies. Annotated list of mayflies. References. Index.

Note: A comprehensive study of the Ephemeroptera occurring in Florida. It was based on extensive field studies during the course of which [illegible] specimens were collected and examined and several new species were discovered. The greater part of the volume is taken up with systematic descriptions arranged by genus and species. However, the descriptions are exceptionally full and often include excerpts of personal observations as well as conventional information on taxonomy, distribution, ecology, habitats, [illegible] history [illegible]. There are [illegible] plates based on original drawings.

BLACKWELDER, RICHARD ELIOT

The generic names of the beetle family Staphylinidae with an essay on genotypy. Washington, D. C. Government Printing Office, 1952. 483 p. 23 cm. (Smithsonian Institution. United States National Museum. Bulletin 200) $1.50 2351

Contents: Introduction. The names of genera—[illegible] [illegible] [illegible]. The principle of genotypes. Genotype determination—Methods of fixation of genotypes—[illegible] [illegible]. Original designation. Subsequent designation. [illegible]. List of generic names. Appendix of [illegible] names. Systematic list of [illegible]. List of new names proposed herein. Bibliography. [illegible]. Generic names of Staphylinidae. Appendix of [illegible]. Systematic key to [illegible]. List of new names proposed herein. Bibliography.

Note: An [illegible] history of the generic names of a large [illegible], widespread, and complex family of beetles. The list is preceded by an essay on the procedure surrounding the use of generic names. Matters covered in the essay include synonymy, homonymy, nomenclature, [illegible] [illegible] [illegible] [illegible], dates, authors and priority. The list itself which presents the basis of the establishment and subsequent use of all the names applied to genera and subgenera of Staphylinidae exceeds over 375 pages. The work concludes [illegible] [illegible] bibliography.

BORROR, DONALD J AND DWIGHT M DELONG

An introduction to the study of insects. New York Rinehart and Company 1954 1,030 p. illus 23 cm. $10.00 2352

Contents: Insects and their ways. The anatomy of insects. The development and metamorphosis of insects. Classification, nomenclature, and identification. The orders of insects. Subclass Apterygota: Protura, Thysanura, and Collembola. Order Ephemeroptera: mayflies. Order Odonata: dragonflies and damselflies. Order Orthoptera: grasshoppers, katydids, crickets, cockroaches, mantids, and walking sticks. Order Isoptera: termites. Order Plecoptera: stoneflies. Order Dermaptera: earwigs. Order [illegible]. Order Psocoptera: psocids. Order Zoraptera: zorapterans. Order Mallophaga: chewing lice. Order Anoplura: sucking lice. Order Thysanoptera: thrips. Order Hemiptera: bugs. Order Homoptera: cicadas, hoppers, psyllids, aphids, and scale insects. Order Neuroptera: nerve-winged insects. Order Coleoptera: beetles. Order Strepsiptera: twisted-winged parasites. Order Mecoptera: scorpionflies. Order Trichoptera: caddisflies. Order Lepidoptera: butterflies and moths. Order Diptera: flies. Order Siphonaptera: fleas. Order Hymenoptera: sawflies, ichneumons, chalcids, ants, wasps, and bees. Arthropods other than insects. The relation of insects to man. Insect control. Collecting and preserving insects. Activities and projects in insect study. Glossary. Index.

Note: A [illegible] textbook suited either to an introductory course in entomology or to an advanced course in insect taxonomy. It considers the study of insects from the biological and economic aspects with the [illegible] study from the [illegible] as emphasized. Families are described order by order, and keys are presented for all the families occurring in the United States. Selected bibliographical references are provided at the ends of the chapters. The following selected references appear at the conclusion of the final chapter: references on cages for insects, references on culturing Drosophila, references on rearing insects, references on mathematical treatments of taxonomic data, references on the techniques of biological drawing, references on general biological literature. The authors are professors of entomology at the Ohio State University.

BORROR, DONALD J

A revision of the libelluline genus Erythrodiplax (Odonata) Columbus The Ohio State University 194[illegible] 286 p. illus 23 cm. (Ohio State University Contributions in zoology and entomology No 4 Biological series) $3.00 2353

Contents: Taxonomy. Morphological characters of the genus Erythrodiplax. [illegible] structure in the genus Erythrodiplax. [illegible]. Geographic distribution. Affinities of the genus Erythrodiplax. Interspecific relationships in the genus. Key to species. Systematic account of the groups and species in the genus Erythrodiplax. Literature cited.

Note: In this revision of the genus, the fundamental criteria of species have been the characters of the male genitalia, [illegible] were found to show considerable intraspecific variation and very little intraspecific variation. The work is based on a study of about [illegible] specimens, about one-fourth of which are from collections in Europe and the remainder from collections in this country. Descriptions, measurements, variation, and distribution are given in the species list. The bibliography lists [illegible] articles and manuscripts relating to dragonflies and there are [illegible] plates of drawings and photographs.

BOVING, ADAM G AND F C CRAIGHEAD

An illustrated synopsis of the principal larval forms of the order Coleoptera. Merrick, N. Y. Brooklyn Entomological Society 1953 351 p. illus 24 cm. (Entomologica Americana a journal of entomology Vol XI (new series) 1930–1931) $5.00 2354

[illegible] The plates are the chief feature of this work. There are 125 of them, and most of them contain 12 or more separate drawings, with some plates containing as many as 25. All of the drawings but one were original with the authors; that is to say, they were drawn from actual specimens and not based on previously published drawings. Each plate is printed on a right-hand page, and the facing left-hand page is devoted to identifying captions. The adult insects are not shown. The plates are preceded by a short introduction and a detailed key designed to aid in the identification of larvae. The work was first published in 1930–31. The edition described here is a reprint issued in 1953 without change in text or illustrations.

BRUES, CHARLES THOMAS AND OTHERS

Classification of insects keys to the living and extinct families of insects and to the living families of other terrestrial arthropod Revised edition. By Charles T Brues A. L

Melander, and Frank M Carpenter Cambridge, Mass Printed for the Museum 1954 917 p illus 23 cm (Harvard College Bulletin of the Museum of Comparative Zoology Volume 108) $9 00 2355

Contents (abridged) Part I, Keys to recent Insects. Part II, Keys to recent families of other terrestrial Arthropoda. Part III Keys to extinct families of Insects. Part IV Glossary Index.

Note A standard reference book in systematic entomology used by advanced students and professional entomologists alike. It provides carefully worked-out keys for the identification and classification of the insects of the world, not only the adults but also the immature stages. In addition it provides references to the literature pertaining to each of the main groups. Some of these literature lists are very extensive for example that on Lepidoptera is 20 pages in length. The verbal descriptions are supplemented in this edition by 719 figures. The first edition was published in 1932 This second edition contains one entirely new part, the Keys to extinct families of Insects, and the other parts have been much augmented

BRUES, CHARLES THOMAS

Insect dietary an account of the food habits of insects Cambridge, Mass Harvard University Press, 1946 466 p illus 21 cm $5 00 2356

Content Introduction. The abundance and diversity of insects Types of food habits their relation to structure and environment Vegetarianism Herbivorous insects. Gall insects. Fungi and microbes as food symbiosis with microorganisms. Carnivorism Predatory insects. Parasitism. Blood-sucking insects and other external parasites. Entomophagous parasites and other internal parasites. Insects as food for man and other organisms. Index.

Note A useful addition to the literature of entomology because it is devoted to a phase of insect behavior which—although it is important in both economic and medical entomology—is necessarily given brief treatment in most books on insects The subject is covered comprehensively Literature that offers more detailed treatments of specific topics is cited in extensive bibliographies. Although written primarily for students and professional entomologists, the author's style is easy to read, and the book can be read with profit by persons trained in other scientific fields.

BRUES, CHARLES THOMAS

Insects & human welfare an account of the more important relations of insects to the health of man, to agriculture and to forestry Revised edition Cambridge Mass Harvard University Press 1947 154 p illus 22 cm $3 00 2357

Content Insects and the public health. Insects and the food supply Forest insects. Household insects. The outlook for the future. Index.

Note In simple mainly nontechnical language the author of this book tells the layman about some of the better-known insects, their life habits, geographic ranges, destructiveness as pests, roles as disease carriers, and the methods of controlling them. In this edition a number of changes have been made to cover new insecticides, new information on insects as disease carriers, and new insect pests.

BYERS CHARLES FRANCIS

A contribution to the knowledge of Florida Odonata. Gainesville University of Florida 1930 327 p illus 23 cm. (University of Florida publication Biological science series Vol 1 no 1) $1 50 2358

Content (abridged) Part I Introduction Part II Taxonomy Keys to Odonata of Florida. Descriptions of Florida Odonata. Part III Ecology Geology and physical geography of Florida Florida biotic areas. Ecological observations on species of Florida Odonata. Chorological notes on Florida Odonata Part IV Appendix Summary Bibliography

Note The author has listed 119 species of Odonata, or dragonflies, taken in or reported from the state of Florida Of these he has collected [illegible] species, consisting of 1,893 specimens. At least 20 of the 92 species have never been recorded from Florida before and three are new to the United States. Complete taxonomic descriptions, with figures, are presented for 47 genera and 1[illegible] species including males, females, and known nymphs. Detailed ecological observations on the habits, homes, and life h[illegible] of Florida Odonata are also recorded. Fifty-seven references of[illegible] text references are given in the bibliography

CALIFORNIA ACADEMY OF SCIENCES

Contributions toward a knowledge of the insect fauna of Lower California. 7 parts. San Francisco California Academy of Sciences 1942–43 illus 26 cm. (California Academy of Sciences Proceedings Fourth series, Vol 24, nos 1 to 7 incl., March 31, 1942 to February 4, 1943) $8 40 for the entire series 2359

Content Introductory account, by A. E. Michelbacher Coleoptera Cerambycidae, by E. G Linsley Coleoptera Buprestidae by E. C. Van Dyke. Neuroptera Myrmeleonidae, by [illegible] Symphyla, by A. E. Michelbacher Diptera Culicidae, by [illegible] G. Aitken. Coleoptera Tenebrionidae, by F. R. Blaisdell, Sr.

Note A collection of seven technical papers on various groups of the insect fauna of Lower California. With the exception of the Introductory account, the papers present systematic descriptions of species belonging to each of the orders and families mentioned in the contents, above. A considerable number of new species are described for the first time. Each paper contains a selected bibliography

CARPENTER, STANLEY J AND WALTER J. LACASSE

Mosquitoes of North America (north of Mexico) Berkeley University of California Press 1955 360 p illus 29 cm. $10 00 2360

Contents Life history Collecting. Preparing specimens for study External anatomy Internal anatomy of the female mosquito. Family Culicidae. Subfamily Culicinae. *Tribe Anophelini* Genus *Anopheles* Meigen. Tribe Toxorhynchitini Genus *Toxorhynchites* Theobald Tribe Culicini Genus *Wyeomyia* Theobald. Genus *Uranotaenia* Lynch Arribálzaga. Genus *Culiseta* Felt. Genus *Orthopodomyia* Theobald. Genus *Mansonia* Blanchard. Genus *Psorophora* Robineau-Desvoidy Genus *Aedes* Meigen. Genus *Culex* Linnaeus. Genus *Deinocerites* Theobald. Bibliography Systematic index. Plates.

Note. This comprehensive book for the specialist describes and pictures the known species of mosquito found in the United States and Canada. The first 24 pages contain general information on the collecting and preparation of mosquitoes and on their anatomy The remaining pages give keys to the genera and species, descriptions of the males, females, and larvae of the various species, accounts of distribution, and notes on the habits and medical importance of the species. The 127 full-page plates show females of 127 of the species in detail. Illustrations of male terminalia and larvae are presented in 288 line drawings in the text. The bibliography runs to [illegible] items.

CARPENTER, STANLEY J AND OTHERS

The mosquitoes of the southern United States east of Oklahoma and Texas by Stanley J Carpenter Woodrow W Middlekauff and Roy W Chamberlain. Notre Dame The University Press 1946 292 p illus. 24 cm (The American midland naturalist. Monograph series No 3 Theodor Just editor) $4 00 2361

Content (abridged) Bionomics and relation to disease Life history Medical importance Technique Collecting adults Collecting mosquito eggs Collecting larvae Characters used in identifying [illegible] Family Culicidae. Subfamily Culicinae Tribe Anophelini Tribe Megarhinini. Tribe Culicini. Bibliography Index.

Note The major part of this book is devoted to a catalogue of mosquitoes, arranged by tribe and genus. The distinguishing characteristics of the adult male female and larva of each species are given and notes concerning distribution bionomics, and medical [illegible]

[illegible] are included. There are 155 figures reproduced from well-executed line drawings. In order to make the book of practical value to entomologists and public health workers, brief instructions are given for collecting and studying mosquitoes.

CLARK AUSTIN HOBART AND LEILA F CLARK

The butterflies of Virginia (with 31 plates) Washington D C. The Smithsonian Institution, 1951 239 p. illus. (part col d) 24 cm (Smithsonian Institution Smithsonian miscellaneous collections. Vol. 116 no 7) $2.25 2362

Contents Introduction. Distribution of butterflies in Virginia. Keys to the butterflies of Virginia. Annotated list of butterflies of Virginia. Family Satyridae. Family Agapetidae. Family Nymphalidae. Family Argynnidae. Family Danaidae. Family Libytheidae. Family Riodinidae. Family Lycaenidae. Family Pieridae. Family Papilionidae. Family Hesperiidae. Erroneous records. Bibliography. Plates. Index.

Note A monograph describing in systematic fashion the distribution of 134 known butterfly species of Virginia. The work is based upon an intensive study by the authors over nearly two decades, during which period they devoted nearly all their spare time to the study, utilizing weekends and their annual vacations in visiting all the 100 counties in the state. Records were made personally in more than 400 localities, and these records were supplemented by [illegible] supplied by other collectors. Each species listed in the annotated list is illustrated among the plates. The notes for most of the species cover range, variation, occurrence, and habits.

COOLEY ROBERT ALLEN AND GLEN M KOHLS

The Argasidae of North America, Central America and Cuba. Contribution from the Rocky Mountain Laboratory Hamilton, Montana, Division of Infectious Diseases, National Institute of Health United States Public Health Service. Notre Dame University of Notre Dame 1944 152 p. illus. 24 cm. (The American midland naturalist monograph. No 1) $2.00. 2363

Contents (abridged) Introduction. The medical and veterinary importance of the Argasidae. Principal characters. Methods. Family Argasidae. Canestrini. Genus *Argas* Latreille. *Genus Ornithodoros* Koch. Genus *Antricola* Cooley and Kohls. Classified list of hosts. Geographical distribution of species. Bibliography. Index.

Note A systematic description of the Argasidae, or ticks, known in North America, Central America, and Cuba, including several species of known medical or veterinary importance. Citations of literature, detailed anatomical descriptions and measurements, distributions and hosts, and related facts of importance to the medical entomologist are included. There are 14 plates of photographs and 113 additional bibliographic references.

CREIGHTON WILLIAM STEEL

The ants of North America. With fifty seven plates. Cambridge, Mass. Printed for the Museum 1950. 585 p. illus. 22 cm. (Harvard College Bulletin of the Museum of Comparative Zoology Vol. 104) $10.00. 2364

Contents (abridged) *Introduction*. The present status of ant taxonomy and nomenclature. The history of ant taxonomy in North America. Family Formicidae. Subfamily Ponerinae. Subfamily Cerapachyinae. Subfamily Dorylinae. Subfamily Pseudomyrminae. Subfamily Myrmicinae. Subfamily Dolichoderinae. Subfamily Formicinae. Literature cited. Index.

Note This revision of the ants of continental United States of America and Canada recognizes 613 species and sub-species. The reduction in number of taxonomic entities from those described in previous revisions is based on an extensive study of the collections of the late Dr W. M. Wheeler. Discussions of the reasons for changes in taxonomic assignment are included in many of the species descriptions. Also included in most is a concise statement of range. On the other hand, literature references have been rigidly selected to include only those useful in elucidation of taxonomy; and in general, the species descriptions have been kept short, in order to keep the volume down to a convenient size for use in the field. The systematic descriptions are complemented by numerous keys to identification.

CURRAN, CHARLES HOWARD

Insects of the Pacific world New York The Macmillan Company 1945 317 p illus. 21 cm. (The Pacific world series) $4.00 2365

Content Foreword, by F. Osborn. Introduction. Insects and their relatives. True flies—order Diptera. Bees, wasps, and ants—order Hymenoptera, by H. F. Schwarz. Butterflies, moths and skippers—order Lepidoptera. Beetles—order Coleoptera, by J. C. Pallister. True bugs—order Hemiptera, by J. C. Pallister. Clear-wing bugs—order Homoptera. Dragon-flies and damsel-flies—order Odonata, by E. B. Klots. Nerve-winged insects—the neuropteroids. Grasshoppers, katydids, crickets, cockroaches, walking-sticks, and mantids—order Orthoptera. The "small" orders. Spiders, scorpions, ticks, and mites—arachnids and allies, by W. J. Gertsch. Insects and disease. Collecting, preserving, and shipping insects. Index.

Note A popular handbook. It is not written in the typical style of field manuals but is composed in narrative style. The information given was selected to aid in the observation of insect life, to promote an understanding of insects as part of the biological picture, and to encourage soldiers stationed in the Pacific area to collect and to preserve specimens for scientific institutions in the United States. The result is a readable book that will be useful to amateur naturalists and general readers who seek information on the insects of these regions. The series of which the book is a part was prepared under the auspices of the American Committee for International Wild Life Protection.

DALMAT HERBERT T

The black flies (Diptera, Simuliidae) of Guatemala and their role as vectors of onchocerciasis. With 44 plates. Washington D C. Published by the Smithsonian Institution 1955 425 p. illus. (part col d) 24 cm. (Smithsonian miscellaneous collections. Volume 125 no 1 Publication 4173) $5.00 2366

Contents (abridged) Importance of the Simuliidae. Epidemiology. Entomology studies in Guatemala. Taxonomy of the Guatemalan Simuliidae. Distribution of the Guatemalan Simuliidae. Life history. Ecology. Transmission of human onchocerciasis in Guatemala. Literature cited. Appendices. Plants associated with Guatemalan species. Fauna collected in region of San Pedro Yepocapa. Entomological [illegible]. Index.

Note A comprehensive monograph based on extensive laboratory and field studies. It was motivated by an interest in the Simuliidae as vectors in the transmission of human onchocerciasis, and there are extensive discussions of factors in the epidemiology of this disease. However, there are also included identification keys and species descriptions for the insects themselves, in addition to much information cast in the standard form of entomological literature on distribution, life history, ecology, etc. The 44 plates contain 479 figures, a large number of which are enlarged drawings of anatomical parts. Only the frontispiece is in color. The author is on the staff of the Laboratory of Tropical Diseases of the National Institutes of Health.

DE LA TORRE BUENO, JOSÉ ROLLIN editor

A glossary of entomology Smith's "An explanation of terms used in entomology" completely revised and rewritten Publication committee J R. de la Torre Bueno editor George P Engelhardt, and Carl George Siepmann. Brooklyn The Brooklyn Entomological Society 1937 336 p. 24 cm. $5.00 2367

Note Based on John B Smith's work, Brooklyn, 1906 this revision defines approximately 8 400 words and phrases used in entomology and in the related sciences of embryology cytology physiology morphology genetics, and ecology covering most terms which are met in general and special treatises on insects. A section of medical entomological terms is also included, and there are a few mathematical phrases which are used mainly in genetics. Pronunciation and derivation are omitted, but references to authorities are given in parentheses, and a list of 35 key works is provided. The stated purpose of the definitions as given is to fix a strict meaning for each term or word listed.

DEMEREC, MILISLAV, editor

Biology of Drosophila. New York John Wiley & Sons, Inc, 1950 632 p illus 22 cm $13 00 2368

Contents Normal spermatogenesis in Drosophila, by K W Cooper The early embryology of Drosophila melanogaster by B P Sonnenblick. *Histogenesis, organogenesis, and differentiation in the embryo of Drosophila melanogaster* by *D F Poulson*. The postembryonic development of Drosophila, by D Bodenstein. External morphology of the adult, by G. F Ferris. The internal anatomy and histology of the imago of *Drosophila melanogaster* by A. Miller Collection and laboratory culture, by W P Spencer Index of names. Subject index.

Note The purpose of this volume is to provide biologists with detailed and comprehensive description of the normal anatomy histology and development of an insect widely used in biological research. Photographs, diagrams, and anatomical drawings are used extensively to illustrate the various stages in organic development, and each chapter contains a two- to three-page bibliography The book represents the co-operative efforts and original research of seven specialists in this field of biological investigation.

ESSIG, EDWARD OLIVER, AND FRIEDA ABERNATHY

The aphid genus Periphyllus a systematic biological & ecological study Berkeley and Los Angeles University of California Press 1952 166 p illus 22 cm. $3 00 2369

Content Genus *Periphyllus* van der Hoeven 1863 Sycamore maple aphid, *Periphyllus aceris* (Koch) American maple aphid, *Periphyllus americanus* (Baker) Colorado maple aphid, *Periphyllus brevispinosus* Gillette and Palmer California maple aphid, *Periphyllus californiensis* (Shinji) Formosan maple aphid, *Periphyllus formosanus* Takahashi. Koelreuteria aphid, *Periphyllus koelreuteriae* (Takahashi) Japanese maple aphid, *Periphyllus kuwanai* (Takahashi) Norway maple aphid, *Periphyllus lyropictus* (Kessler) Box elder aphid, *Periphyllus negundinis* (Thomas) European maple aphid, *Periphyllus testudinacea* (Fernie) Literature consulted

Note The results of an intensive study of the aphid genus Periphyllus are reported in this work The genus is characterized by complex life history In reporting on *Periphyllus californiensis* (Shinji) the authors state, no less than 17 different forms or types of individuals are recognizable. The various forms are described in entomological terminology and many of them are shown in illustrations. The illustrations are all original and are of exceptionally high quality Both the text and the pictorial matter are based on intensive collecting and field studies. The work is of interest to professional entomologists.

ESSIG EDWARD OLIVER

College entomology New York The Macmillan Company 1942 900 p illus 24 cm $8 50 2370

Contents Metamorphosis of insects. An history of insects Classification of insects. Order Protura Order Thysanura Order Aptera. Order Collembola. Order Orthoptera. Order Grylloblattodea. Order Blattaria. Order Phasmida Order Mantodea Order Dermaptera. Order Diploglossata. Order Plecoptera Order Isoptera. Order Zoraptera Order Embioptera Order Corrodentia. Order Mallophaga. Order Anoplura Order Ephemerida Order Odonata Order Thysanoptera. Order Hemiptera. Order Megaloptera Order Neuroptera. Order Raphidiodea Order Mecoptera Order Trichoptera Order Lepidoptera Order Coleoptera Order Strepsiptera Order Hymenoptera. Order Diptera Order Siphonaptera General references. Index.

Note Designed as basic text for introductory college courses Written from a world point of view Species are chosen for treatment on the basis of their historical background, economic importance or unusual and interesting appearance Each order is treated separately and is provided with an historical review, a synopsis of characters, biologies of typical members, and numerous examples of genera and species.

FERNALD, H T, AND HAROLD H SHEPARD

Applied entomology an introductory textbook of insects in their relations to man Fifth edition New York McGraw Hill Book Company, Inc., 1955 385 p. illus. 24 cm (McGraw Hill publications in the agricultural sciences, R. A. Brink, consulting editor) $7 50 2371

Content Relation of insects to other animals External structure of insects. Internal structure and physiology of insects. Development of insects. Economic importance of insects—natural control. Applied control. Insecticides in general—inorganic insecticides. Organic insecticides. Classification of insects. Subclass Apterygota. Subclass Pterygota—order Ephemerida. Odonata. Orthoptera. Dermaptera. Plecoptera. Isoptera. Embioptera. Corrodentia. Zoraptera. Mallophaga. Thysanoptera. Anoplura. Hemiptera. Homoptera. Coleoptera. Strepsiptera. Neuroptera. Trichoptera. Lepidoptera. Mecoptera. Diptera. Siphonaptera. Hymenoptera. Animals other than insects. Index.

Note An introduction to the structure of insects, to their classification and to their control. Aspects of the field which are of interest in agriculture are emphasized The book has been used for many years as text in agricultural colleges in the United States of America and elsewhere. The first edition was published in 19 and the fourth edition in 1942 Although the organization of the fifth edition is approximately the same as that of the fourth edition the text has been very extensively rewritten, especially in the chapters on insecticides and control. The illustrations have been revised and many new ones added. A special feature is the inclusion of numerous photographs of insects, their eggs and even

FERRIS, GORDON FLOYD

Atlas of the scale insects of North America. Series I IV Volumes V VII Stanford Stanford University Press 1937–55 7 v illus. 25 cm $7 50 per vol 2372

Content (abridged) Series I–IV Family Diaspididae subfamily Diaspidinae tribes Diaspidini, Odonaspidini, Xanthophthalmini, Aspidiotini, and Phoenicococcinae Index Volume V The Pseudococcidae (Part) Volume VI The Pseudococcidae (Part) Index. Volume VII The families Aclerdidae Asterolecaniidae Conchaspididae, Dactylopiidae, and Lacciferidae. Index.

Note A complete atlas for the family Diaspididae It is reference work for zoological libraries and professional entomologists. Full-page reproductions of pen and ink drawings are special features, and there is one such for each species. The drawings are accompanied by entomological descriptions covering hosts, locality, habits, recognition characters, etc. and including literature references The first four parts were published in loose-leaf form and are called series With volume that format was abandoned in favor of bound volumes One more volume is planned to complete the series.

FISHER W S

A revision of the North American species of beetles belonging to the family Bostrichidae Washington D C Government Printing Office 1950 157 p 23 cm (United States Department of Agriculture Miscellaneous publication no 698) Gratis 2373

Content Introduction Key to the subfamilies and tribes of Bostrichidae Subfamily Dysidinae Subfamily Psoinae Tribe Psoini Subfamily Endecatominae Subfamily Dinoderinae Tribe Psoini Subfamily Endecatominae Subfamily Bostrichinae Tribe Dinapatini. Tribe Bostrichini Subfamily Bostrichinae Tribe Xyloperthini. Addenda. Index to species. Index to host plants and commercial products.

Note This publication about one of the most destructive of families of the Coleoptera treats all the species of Bostrichidae known to occur in America north of Mexico. Some foreign species known

... order. ... are thus included. In all, 32 genera and 92 species are considered. For each species are given bibliographical references to previous descriptions, technical description of male, [illegible] of female, length, ... type locality, distribution, and hosts. Eight species have not been previously described.

FOOTE, RICHARD H., AND HARRY D PRATT
The *Culicoides* of the eastern United States (Diptera, Heleidae) a review Washington, D C. Government Printing Office 1954 53 p. illus. 26 cm. (United States. Public Health Service Public health monograph no. 18) $0.40 2374

Contents: Introduction. Important literature dealing with *Culicoides* taxonomy. Biology. Seasonal occurrence. Control of *Culicoides* Larvae. Adults. Techniques of the study. Morphology. Key to adult female *Culicoides* of the United States east of the Continental Divide. Provisional key to adult female *Culicoides* based on structural characters. Key to male terminalia of *Culicoides* of the United States east of the Continental Divide. Discussion of the species. Bibliography.

Note: The insect genus *Culicoides* includes the pests known variously as biting midges, sandflies, "punkies," and "no-see-ums." In certain places they are so abundant and bothersome as to depress property values. Twenty-two pages of this Public Health monograph are devoted to discussion of 53 named species of the genus, each species is described under its scientific name, with information on its general appearance, color, distinguishing features, and areas [illegible] found. Eleven plates contain illustrations of female wings and male terminalia. The purpose of the publication [illegible] to assist in the identification and control of the insects.

GLEN, ROBERT
Larvae of the elaterid beetles of the tribe Lepturoidini (Coleoptera. Elateridae) Washington, D C The Smithsonian Institution, 1950. 246 p. illus 24 cm. (Smithsonian miscellaneous collections. Vol. 111 no. 11 Publication 3957) $1.65 2375

Contents: Introduction. Literature. Methods and procedure. [illegible] Preservation and rearing of material. [illegible] Discussion of material. Abbreviations used in [illegible]. [illegible] Morphology of [illegible] lepturoidine larva. Terminology. Morphology of the mature larva of *[illegible]* [illegible]. Keys and descriptions: [illegible] characteristics of the family Elateridae (with key to subfamilies). Larval characteristics of the tribe Lepturoidini (with key to genera). Genus [illegible] Eschscholtz (with key to species groups). Genus [illegible] Eschscholtz. Genus [illegible]. Genus [illegible] Boisduval. Genus *[illegible]* Eschscholtz. Genus *[illegible]* LeConte. Genus *[illegible]*. Genus *[illegible]* Eschscholtz. Genus [illegible] Stephens. Genus [illegible] LeConte. Genus *[illegible]* LeConte. Summary of taxonomic relationships. List of species studied. Literature cited. Figures 1 to 40.

Note: The Lepturoidini include important crop pests distributed throughout the world. The study presented in this publication of the larvae of these beetles arose from the need for greater knowledge of these pest species, which react differentially to factors of weather, soil, and culture. It [illegible] based upon investigations upon [illegible] [illegible] made at Saskatchewan, in the course of which the author concluded that true generic and specific characters of the *Elateridae* could be obtained only through an extensive comparative study [illegible] all available species of the group. It consists broadly of two parts [illegible] detailed treatment of [illegible] available [illegible] larvae of the world and [illegible] comprehensive survey of the larval morphology of the other genera of the Lepturoidini tribe. Only mature or nearly mature larvae are considered. Forty figures show parts of the larvae of various species in simplified sections. The work is [illegible] study [illegible] and [illegible] be used most conveniently by those familiar with the basic morphology of elaterid larvae.

HAGAN, HAROLD RAYMOND
Embryology of the viviparous insects. New York The Ronald Press Company, Inc., 1951 illus. 4 [illegible] p. 24 cm. $7.00 2376

Contents (abridged): Part I. General considerations. Female anatomy and embryogeny. Oviparity in the older embryo. The types of viviparity. Part [illegible]. Embryogenesis. Ovoviviparity—Thysanoptera, [illegible], Anoplura, Plecoptera, Homoptera, Lepidoptera, Diptera, Coleoptera, Hymenoptera. Adenotrophic viviparity—Diptera. Hemocoelous viviparity—Diptera (Cecidomyidae)—Strepsiptera. Pseudoplacental viviparity—Dermaptera—[illegible]—Corrodentia, Homoptera (Aphididae)—Hemiptera. Appraisal of viviparity. Bibliography. Index.

Note: A scholarly thoroughly documented monograph [illegible] surveys the embryology of insects [illegible] [illegible]. For each insect considered, the [illegible] presents an account of previous studies, [illegible] factual record of developmental processes, and suggests lines [illegible] future investigation. Previously unpublished research on *[illegible]*, *[illegible]*, *[illegible]* and *[illegible]* [illegible] is included. The work is meant to serve as [illegible] text, source book, and reference tool for advanced students of zoology and graduate entomologists, and research workers in such fields as public health. There are 180 illustrations. The [illegible] [illegible] is international in scope. The book [illegible] awarded an A. Cressy Morrison Prize in Natural Science by the New York Academy of Sciences.

HALL, DAVID G
The blowflies of North America. [Baltimore] 1948 4 [illegible] p. illus (part col d) 23 cm. (The Thomas Say Foundation publications. Vol. IV) $6.50 [To be ordered from J J Davis Department of Entomology Purdue University Lafayette Indiana] 2377

Contents: Introduction. History of the classification of the Calliphoridae. Importance of blowflies to man. Control of blowflies. Methods of collecting blowflies. Preservation of specimens. Explanation of terms. [illegible] Technique. Synonymy. Classification. Key to major taxonomic units of North American [illegible] flies. Family Calliphoridae. [illegible]. [illegible]. [illegible]. Calliphorinae. Polleniinae. Literature. Plates and explanations. Index.

Note: This volume presents [illegible] taxonomic account of the species of Calliphoridae now known to occur in continental North America north of the Panama Canal Zone and in the West Indies north of Jamaica. Eighty-three species belonging to twenty-seven genera are described, of which 11 species and six genera were not found previously recorded. The keys and illustrations, of which some are in color, were designed to assist in rapid determination of species. The work was prepared especially for the use of entomologists, public health officials, physicians, veterinarians, [illegible], and students.

HATCH, MELVILLE H
The beetles of the Pacific Northwest. Part I Introduction and Adephaga. Seattle University of Washington Press, 1953 340 p. illus 25 cm. (University of Washington. Publications in biology Vol 16) $5.00 2378

Contents: History of the study of Coleoptera in the Pacific Northwest. Acknowledgments. External anatomy of Coleoptera. The beetle collection. The Northwest beetle fauna. Geographical factors. Ecological relationships. Economic importance. The suborders of Coleoptera. Suborder Adephaga. [illegible] [illegible]. Family Carabidae. Family Haliplidae. Family [illegible]. Family Dytiscidae. Family Gyrinidae. Family [illegible]. Bibliography. Plates. Index.

Note: This is the first part of [illegible] planned descriptive analysis of the beetles that are known to inhabit British Columbia, Washington, Idaho, and Oregon. The author has described the work [illegible] purpose as follows: "The aim is to present in brief but adequate form and as concisely as possible the differential characteristics of the suborders, series, families, subfamilies, tribes, subtribes, genera, subgenera, species, subspecies and varieties into [illegible] which the beetles of the Pacific Northwest have been classified. At the level of the species [illegible], the plan is [illegible] combine with the citation of differential characters brief indication of the size, color and outstanding structural features. Following the length is given the Northwestern distribution, the habitat [illegible] here definable, and sometimes synonymy. Much space is devoted to the keys, which are dichotomous, and are followed by brief descriptions of taxa. The present volume contains 37 plates, all of [illegible] contain several illustrations, in some cases as many as [illegible]. Part II, Staphyliniformia, written in collaboration with M. W. Sanderson and G. A. Marsh, was issued by the same publisher in 1957 384 p. $7.00

HEINRICH, CARL

American moths of the subfamily Phycitidae Washington, D C Government Printing Office, 1956 581 p illus 30 cm. (United States National Museum Bulletin 207) $5 50 2379

Contents Introduction. Family Phycitidae Subfamily Phycitinae Group I, Hind wing with veins 3 and 4 both present. Group II, Hind wing with vein 3 present, 4 absent. Group III Hind wing with veins 3 and 4 both absent. Genera and species unplaced, unrecognized, or referred from the Phycitinae. Checklist of American Phycitinae. Figures. Index to the genera and species of Phycitinae. Index to species unknown misplaced, or unrecognized. Index to hosts.

Note This systematic work is based chiefly upon the collections in the United States National Museum and the Hulst collection, supplemented by material visited at or borrowed from other collections. With very few exceptions all species described were personally examined by the author Recognized and included in the classification are 194 genera, 619 species, and 21 subspecies, of which 60 genera, 81 species, and 8 subspecies are described as new For each species, so far as possible are given detailed physical description, type locality food plant, distribution, bibliographical references to earlier descriptions if any and miscellaneous notes and comment. Keys to the genera are provided to assist in identification. In the latter half of the volume are grouped the illustrations, 1 118 line drawings, chiefly of wing venation and genitalia in enlargements.

HOLLAND, WILLIAM JACOB

The butterfly book. A popular and scientific manual, describing and depicting all the butterflies of the United States and Canada New and thoroughly revised edition Garden City Doubleday Company Inc 1931 424 p illus (part col'd) 26 cm $12 50 2380

Contents (abridged) Lif history and anatomy of butterflies Capture, preparation and preservation of specimens. Classification of butterflies. Books about North American butterflies. Butterflies of North America north f Mexico brush-footed butterflies, milkweed butterflies, glassy wings, heliconians, nymphs, satyrs, snout-butterflies, metal-marks, hairstreaks, coppers, blues, sulphurs, whites, Parnassians, swallowtails, skippers. Index.

Note A manual intended to enable the amateur butterfly collector to identify name, and properly classify his collection and to prepare him for more advanced research. The work is confined to the fauna of North America north f the Rio Grande of Texas, and, though essentially popular in character it is based on the author' 70 years of collecting and upon the entire literature of lepidoptery Illustrated with 78 color plates and numerous line drawings. The revised edition covers about 300 more species than the original edition, which was first published in 1898

HOOGSTRAAL, HARRY

African ixodoidea. Volume I Ticks of the Sudan (with special reference to Equatoria Province and with preliminary reviews of the genera Boophilus, Margaropus and Hyalomma) Washington D C Government Printing Office 1956 1 099 p illus 26 cm (U S Department of the Navy Bureau of Medicine and Surgery Research report NM 005 050 29 07) $6 00 2381

Content Introduction Object and scope f this and related projects. History f this project. Lists f ticks reported from the Sudan. Species records manner of data presentation. Family Argasidae Argas Ornithodoros Family Ixodidae Amblyomma Aponomma. Boophilus Dermacentor Haemaphysalis. Hyalomma Ixodes. Margaropus. Rhipicephalus Animals and other sources f ticks Equatoria Province. Bahr El Ghazal Province. Upper Nile Province. Darfur Province. Kordofan Province. Blue Nile Province Kassala Province Khartoum Province Northern Province. Climatic and biotic features f the Sudan Climate. Floral districts. F unal districts and areas. Tick distribution. Appendix. Bibliography

Note The first volume published in a series on African ticks be completed in at least three more volumes. The author is head of the Department of Medical Zoology U S Naval Medical Research Unit Number Three, has based it both on a survey which he began in Equatoria Province of the Sudan in 1949 and on thorough study f the literature of the subject. Detailed descriptions of 62 known species of Sudanese ticks with keys are each followed by notes of distribution, host animals, key disease relations, identification, and remarks. The bibliography consists of 1,880 references.

HORSFALL, WILLIAM R.

Mosquitoes their bionomics and relation to disease. New York The Ronald Press Company 1955 723 p 24 cm $16.00 2382

Content Introduction. Culicinae Chaoboridae. Anopheles. Toxorhynchites. Trichoprosopon. Goeldia. Tripteroides. Wyeomyia. Limatus. Topomyia. Harpagomyia. Zeugnomyia. Uranotaenia. Culiseta. Orthopodomyia. Mansonia. Aedomyia. Psorophora. Opifex. Aedes. Haemagogus. Eretmapodites. Armigeres. Culex. Deinocerites. Glossary Techniques. Bibliography Index of genera and species General index.

Note This book, as implied in the title is not general text on the mosquito but rather comprehensive summary of the literature that pertains to the mutual relations between mosquitoes and their environment, including their part in the transmittal of human and animal disease. The author's purpose in compiling the information was to bring together in one place the results, otherwise scattered through almost countless volumes, of 75 years of research and reporting on the ecology of mosquitoes and of their epidemiology The arrangement f the book is by genera and species. Under the genera and species are described or tabulated types of information with literature citations, concerning distribution hybridization, egg, larva, pupa, and the adult. Comparatively more space is given to genera on which students have done most work, e.g., Anopheles (265 p.) Aedes (1?? p.) Culex (52 p.) than to lesser known genera, e.g. Topomyia (1 p.), Haemagogus (6 p.) Armigeres (4 p.) The bibliography covers 78 pages.

HUBBARD, CLARENCE ANDRESEN

Fleas of western North America their relation to public health Ames Iowa State College Press 1947 533 p illus. 24 cm. $7 50 2383

Contents Part I Students of western American fleas, their distribution. The medical importance of fleas. Field and laboratory technique. The anatomy of the flea in relation to its taxonomy Part II Preliminary The order Siphonaptera Family Hectopsyllidae family Pulicidae family Dolichopsyllidae family Hystrichopsyllidae family Ischnopsyllidae Part III Host index. The fleas of western rodent fleas The fleas of western carnivora. The fleas of western insectivora. The fleas of western bats The fleas from man The fleas of western birds. Selected bibliography Index

Note This catalogue of the fleas found in that part of North America lying west f the 100th meridian is based largely on the author's personal investigations and study Each entry for the fleas listed includes drawing and description of outstanding characteristics, area in which found, when first identified and by whom, the preferred host, and (when known) the medical and economic importance The catalogue proper is followed by scription of the various animal hosts and listing of the fleas found on each. The bibliography supplements W L. Jellison and N E. Good, *Index to the literature of Siphonaptera of North America*, Washington, D C 1942

HUBBELL THEODORE HUNTINGTON

A monographic revision of the genus Ceuthophilus (Orthoptera Gryllacrididae, Rhaphidophorinae) Gainesville University of Florida 1936 551 p illus. 26 cm (University of Florida publication Biological science series Vol II no 1) $4 00 2384

Content Introduction. The taxonomic position of the genus Ceuthophilus. Ceuthophilus Scudder Section I, Ceuthophilus s.s. der s.s. Utahensis series. Brevipes series. Maculatus series. Lapidicola series. Section II, Geotettix

[illegible] series. [illegible] series. [illegible] and [illegible] series. [illegible] Observations on life history, habits and relations to other organisms. Phylogeny and distribution. General conclusions. Literature cited. Index.

Note: A detailed, systematic description of the group [illegible], which comprises the majority of the North American species of the subfamily [illegible], group of Orthoptera commonly known as [illegible]. The present work undertakes to revise Scudder's *The North American* [illegible], Washington, 1894. Although the seven genera recognized are in the main those of [illegible] and Scudder's earlier works, only [illegible] being new. The primary concern is with Scudder's inadequate treatment of the characters found in the [illegible] structures of the male and his resulting incorrect grouping of species. Description of holotype or allotype including detailed measurements, coloration, variations, bionomics, distribution, and citations of the original literature are covered under each species treated. There are an additional bibliography of approximately 100 references, 39 plates of drawings, and an extensive index.

HUTCHINSON GEORGE EVELYN

A revision of the Corixidae of India and adjacent regions. New Haven Connecticut Academy of Arts and Sciences 1940. 135 p. illus. 24 cm. (Connecticut Academy of Arts and Sciences. Transactions. Vol. 33 p. 339–476) $2.50 2385

Contents: Introduction. Nomenclature of family and genera. [illegible] classification of the family. Taxonomic account. Ecological notes. Bibliography.

Note: This paper is based on the extensive collections of aquatic Hemiptera made during the course of the Yale North India Expedition in 1932 [illegible] the author had opportunity to collect not only in Kashmir, the Punjab, and in Indian Tibet, but also in southern India. In addition, he was able to study the collections of the Indian Museum and other material lent to him for this investigation. There are 31 plates showing 423 figures, chiefly line drawings, and photographs of the habitats of some of the species.

KLOTS, ALEXANDER BARRETT

A field guide to the butterflies of North America, east of the Great Plains. Illustrated with color paintings of 247 species by Marjorie Statham and 232 photographs by Florence Longworth. Boston Houghton Mifflin Company 1951 349 p. illus. (part col'd) 19 cm. (The Peterson field guide series) $3 75 2386

Contents: How to use this book. Collecting and preserving specimens. The butterfly and its environment. Life histories and growth. The adult butterfly. Butterfly classification. [illegible] butterflies and skippers. *Satyridae*: satyrs and wood nymphs. *Danaidae*: monarchs. [illegible]. *Nymphalidae*: brush footed butterflies. *Libytheidae*: snout butterflies. *Riodinidae*: metalmarks. *Lycaenidae*: gossamer winged butterflies. *Papilionidae*: swallowtails. *Pieridae*: whites and sulphurs. *Hesperiidae*: true skippers. *Megathymidae*: giant skippers. Casual and stray species and false or dubious records. Appendixes: Some principles of classification. Butterfly literature and collections. Checklist of butterflies and skippers. Indices: Technical terms. Food plants. Butterflies.

Note: An [illegible] guidebook to eastern American butterflies which may be used equally as an introduction to the study of butterflies and as [illegible] of identification of the species. Every species of importance [illegible]. Illustrated, color being used where important for identification. Information included in the descriptions includes descriptions of chief characteristics, notes on habits and habitats, condensed descriptions of the mature larva, number of annual broods, method of hibernation, average dates of appearance of spring adults, geographic range within the area, and type locality, range, and brief characterizations of each valid subspecies found within the area. Roger Tory Peterson states of the volume: "The special section on life zones and their indicator plants, an ecology on the [illegible] and whys of nomenclature, and the discussion of subspecies and geographic variation will be an enlightening to the serious bird [illegible] or [illegible] as to the insect collector for they will throw light on their [illegible]," and adds, "This guide [illegible] is key book in the *Field guide* series, for many of the general discussions will not be repeated elsewhere in the series.

LUGINBILL PHILIP SR., AND HENRY R. PAINTER

May beetles of the United States and Canada. Washington, D C. Government Printing Office 1953 102 p illus. 23 cm. (United States Department of Agriculture Technical bulletin no. 1060) $0 60 2387

Contents: Introduction. Economic status. Life history and habits. Distribution. Key to the species. Descriptions of the species. Class I. Class II. Class III. Addenda. Literature cited. Plates 1 78.

Note: In this bulletin are described 131 species of the genus *Phyllophaga*, the May beetles of the United States of America and Canada. For each species are given scientific name, bibliographical citations, descriptions of males and females, dates of appearance, and distribution. The illustrations on the 78 plates are reproduced from actual photographs, most of them showing genitalia and sections of adult beetles, to help in identification.

MARQUESAN INSECTS—I–III. Honolulu Hawaii Bernice P Bishop Museum 1932–39 3 v illus 25 cm. (Bernice P Bishop Museum. Bulletin 98 114 142 Pacific Entomological Survey publications 1 7 8) Vol. I $3.00 vol. II, $3.00 vol. III $3 00. 2388

Note: This series of taxonomic reports is based on material collected in 1929 and 1930. The committee administering the Survey chose the Marquesas Islands as the first region for intensive study because of the rapid changes known to be taking place in the flora and believed to be occurring in the fauna as well, and also because the history of this [illegible] archipelago seemed likely to be of great interest in the study of geographical relations. The material obtained has been reported on in various publications. A note on the insect fauna of the Marquesas appeared in Bulletin 94 of the Museum. A paper of more general scope was read before the International Congress of Entomology in Paris, in 1932. Bulletins 133 and 137 from the Museum contain general reports discussing in detail the origin, environment, and [illegible] relations of the known species.

MATHESON ROBERT

Entomology for introductory courses. Second edition. Ithaca Comstock Publishing Associates a division of Cornell University Press Inc., 1951 629 p. illus. 24 cm. $6 00 2389

Contents: Introduction. Phylum Arthropoda. The class Hexapoda or insects. The mouthparts of insects. Development and growth in insects. Classification of insects. The subclass Apterygota—orders Protura, Diplura, Thysanura and Collembola. The subclass Pterygota. Orders Orthoptera and Isoptera. Orders Dermaptera, Embioptera, Psocoptera and Thysanoptera. Orders Ephemeroptera, Odonata and Plecoptera. Order Anoplura. Order Hemiptera. Orders Neuroptera and Mecoptera. Orders Trichoptera and Lepidoptera. Order Coleoptera. Order Strepsiptera. Order Diptera. Order Siphonaptera. Order Hymenoptera. Insects in relation to human welfare. Glossary. Bibliography. Index.

Note: An outstanding work of its kind. Its primary purpose is to serve as a textbook in introductory courses in entomology at the college level. In addition, it has great value as a reference book for public health technicians, agricultural extension workers, farmers, and amateur naturalists. There is more emphasis on the biology, habitats, economic importance and on insects as carriers of disease, than on systematic entomology. Nevertheless, more than half of the space is devoted to the systematic accounts of taxa. The illustrations are well done and numerous. The first edition was published in 1944. In this second edition, [illegible] revisions and [illegible] have been made in various chapters in both text and illustrations, but the organization and general scope of the book are unchanged.

MAYNARD ELLIOTT ALLEN

A monograph of the Collembola or springtail insects of New York State. Ithaca Comstock Publishing Company Inc., associated

with Cornell University Press 1951 339 p illus (part col'd) 24 cm $7 50 2390

Contents Part Introduction New York State collection records. Phylogeny of the Collembola. Morphology of the Collembola external structure. Morphology of the Collembola internal structure. Life cycle. Habitat. Abundance. Food. Geographical distribution Economic importance Collection and preservation of Collembola. Reasons for taxonomic investigation of Collembola. Nomenclature and synonymy Literature pertaining to the Collembola. Types of new species. Part II, Systematic account Order Collembola. Key to the suborders of Collembola. Suborder Arthropleona. Key to the superfamilies of Arthropleona. Superfamily Poduroidea. Key to the families of Poduroidea. Family Poduridae. Key to the subfamilies of Poduridae. Family Onychiuridae. Key to the New York genera of Onychiuridae. Superfamily Entomobryoidea. Family Isotomidae. Family Entomobryidae. Key to the New York subfamilies of Entomobryidae. Suborder Symphypleona. Family Sminthuridae. Key to the subfamilies of Sminthuridae. Glossary Bibliography of the Collembola of the world. Index.

Notes A general and systematic account of the 200 species and varieties of Collembola found in New York state. In the systematic part are detailed descriptions of the various suborders, superfamilies, families, subfamilies, tribes, genera, subgenera, and species, with generous keys to the New York species. The typical descriptions of the species include bibliographical references, length, color head, thorax, abdomen, clothing, discussion and distribution. Distribution is indicated by towns in New York state where found and the dates of collection and is also indicated for other states of the United States of America and for foreign countries where recorded or known. Five of the plates reproduce water-color drawings of springtails in full color The author indicates his belief that this group of primitive wingless insects is responsible for some of the annual hidden loss of crops in the United States. The book is a necessary tool for all persons interested in the study of Collembola.

MICHENER, CHARLES DUNCAN, AND MARY H MICHENER

American social insects a book about bees ants, wasps, and termites New York D Van Nostrand Company, Inc, 1951 267 p illus (part col'd) 22 cm (The new illustrated naturalist editorial advisory board, William Beebe and others) $6 95 2391

Contents (abridged) Part I, The nature of social insects What are social insects? Sensations and behavior Learning and behavior What determines cast ? How insects became social Subsocial insects. Part II, The hornets and other wasps. Part III, The bees. Part IV The ants. Part V The termites. Part VI Societies and their parasites Uninvited guests. Societies of insects and men. Appendix Insect structure and classification. Bibliography Glossary Index.

Note A popular account of the social insects and their behavior written by entomologists as an introduction for the reader without previous knowledge of the subject. While all the major species of bees, ants, wasps, and termites found in th United States are named and described, and some of the foreign representatives also are mentioned, the book is more a readable description of the lives of these insects than a guidebook for the identification of species. Especially noteworthy are the illustrations from photographs, 10 of them in color and over 75 in black and white.

MICHENER, CHARLES DUNCAN

Comparative external morphology phylogeny and a classification of the bees (Hymenoptera) New York American Museum of Natural History, 1944 169 p illus 27 cm (American Museum of Natural History Bulletin, Vol 82 article 6) $1 75 2392

[illegible] introduction. External morphology of *Anthophora* [illegible]. History Comparative external morphology of the bees [illegible] rec-biology) Phylogeny of the bees. A classification [illegible] Selected references (systematics) Index of [illegible]

[illegible] is divided int four parts, the first of [illegible] y of the terminology of structures which [illegible] bees and to many other groups of Hymenoptera [illegible] primarily record of differences among [illegible] certain suggestions as to how some of these [illegible] come about. In the third part, the characters described in previous sections are analyzed, with a discussion of the phylogenetic history of the bees. The classification, which is a by-product of this phylogeny is presented in the last part. The bibliography presented in two parts, contains 110 references American and European sources.

MUESEBECK, CARL FREDERICK WILLIAM, AND OTHERS, editors

Hymenoptera of America north of Mexico synoptic catalog prepared cooperatively by specialists on the various groups of Hymenoptera under the direction of C. F W Muesebeck, Karl V Krombein and Henry K Townes Washington D C. Government Printing Office, 1951 1 420 p 24 cm. (United States Department of Agriculture Agriculture monograph no 2) o p 2393

Contents Introduction. Order Hymenoptera. Suborder Symphyta superfamily Megalodontoidea. Superfamily Tenthredinoidea Superfamily Siricoidea. Superfamily Cephoidea. Suborder Apocrita superfamily Ichneumonoidea. Superfamily Chalcidoidea. Superfamily Cynipoidea Superfamily Proctotrupoidea. Superfamily Chrysidoidea. Superfamily Bethyloidea. Family Trigonalidae. Superfamily Scolioidea. Family Formicidae. Superfamily Vespoidea. Family Pompilidae. Superfamily Sphecoidea. Family Dryinidae. Superfamily Apoidea. Index to new names. Index to superspecific names. Index to trivial names.

Notes This large catalog brings together in systematic order the *names of several thousand recognized species of the Order Hymen*optera, which includes the saw flies, wood wasps, parasites of other insects used in biological control undertakings, bees, wasps, ants, gall wasps, and related forms, as found in the United States of America and Canada. For each genus and each species, and for many of the superspecific divisions, are given bibliographical citations to original descriptions in the literature of entomology. There are occasional annotations. The three-part index covers [illegible] double-columned pages. The following are noted as authors of the various sections W G Bodenstein, C E. Bohart, R. M. Bohart, D B. Burks, H. E. Evans, P D Hurd, K. V Krombein, [illegible] Linsley W R. M. Mason C. D Michener W W Middlekauff C. F W Muesebeck and L. M. Walkley (jointly) W D. [illegible] O. Peck, D T Ries, H. G. Rodeck, H. H. Ross, H. [illegible], M. R. Smith, L. J Stannard, H. K. Townes, M. Towner and L. H. Weld.

NEEDHAM, JAMES G, AND OTHERS

The biology of mayflies with a systematic account of North American species by James G Needham Jay R Traver and Yin-chi Hsu, aided by specialists in certain subjects. Ithaca Comstock Publishing Company Inc, 1935 759 p illus 24 cm $7.50 2394

Contents. Part I, Mayflies in general Introduction, the life of a mayfly the structure of a mayfly nymph, internal anatomy [illegible] post-embryonic development, eggs and oviposition, the life cycle [illegible] taxonomic character of the adult, wings and legs, the body and [illegible] of the thorax, the musculature of the thorax, nymphal structure and adaptations, mayfly phylogeny casualties and enemies of mayflies, values and uses of mayflies, collecting, preserving and [illegible] mayflies, the classification of mayflies. Part II, North American mayflies A systematic account of North American species in both adult and nymphal stages. Index.

Note The names, descriptions, and known distribution of [illegible] species of the Ephemeroptera of North America, with the delineation of the genera, have been brought together in the reference text Keys and identification tables are given for each family subfamily and genus, and there are numerous illustrations. The volume is intended to be of use to collectors, teachers, taxonomists, anatomists, and entomologists in general.

NEEDHAM JAMES G, AND MINTER J WESTFALL JR

A manual of the dragonflies of North America (Anisoptera) including the Greater Antilles and the provinces of the Mexican

Border Berkeley University of California Press 1955 615 p. illus (part col'd) 24 cm. $12.50 2395

Contents Part one Termites in general Introduction Field studies Function Part two Systematic classification Subfamily [illegible] Family [illegible] Family [illegible] Family Kalotermitidae Family [illegible] Family Rhinotermitidae Glossary [illegible] Index.

Note A comprehensive and authoritative reference book on the termites, including illustrations. It supersedes J. C. [illegible] and H. R. [illegible], Handbook of the termites of North America [illegible] and is a more complete book with more and better illustrations and keys. The first part, which is 60 pages long, is devoted to general morphological development of the order and suborder, to methods of collecting adults, nymphs and eggs, and to methods of preserving specimens. The systematic descriptions occupy the remainder of the volume. Here, the keys to families, subfamilies, genera and species are provided. An unusual feature is the inclusion of keys to nymphs as well as to adults. A photograph of the nymph is included for each genus. The species descriptions give literature references, describe morphology in detail, and [illegible] distribution in the United States of America and regions adjacent to the United States. There are 341 figures, about evenly divided between reproductions of photographs and of photographs. The book is designed primarily as an aid in identification, and is useful both to professional and amateur entomologists.

Oman Paul Wilson and Arthur D Cushman

Collection and preservation of insects Washington, D. C. Government Printing Office 1946 42 p. illus. 23 cm. (United States Department of Agriculture. Miscellaneous publication no. 601) $0.15 2396

Contents What to collect. Equipment and collecting methods. Nets. Killing bottles. Aspirator or suction bottle. Beating cloth, or umbrella. Sifters. Separators. Collecting at lights. Baits and bait traps. Treatment, storage, and handling. Rearing. How to kill and preserve specimens. Care and handling of unmounted specimens. How to mount insects. Labeling the specimens. Care of the collection. Packing and shipping specimens. References of general [illegible]. Coleoptera. Orthoptera. Isoptera. Plecoptera. Ephemeroptera. Odonata. Psocoptera. Mallophaga. Anoplura. Thysanoptera. Hemiptera. Coleoptera. Neuroptera. Lepidoptera. Mecoptera. Siphonaptera. Trichoptera. Lepidoptera. Diptera. Hymenoptera. Hymenoptera.

Note A manual in pamphlet form, this publication presents basic information on collecting and preserving insects and an outline of the general insect groups. It was prepared in response to numerous requests received by the Department of Agriculture from farmers, students, and others interested in obtaining first-hand knowledge of insects by collecting them.

Park, Orlando

A study in neotropical Pselaphidae. Evanston, Northwestern University 1942 403 p. illus 26 cm. (Northwestern University studies in the biological sciences and medicine No 1) $7.50 2397

Contents General considerations and the collecting of Pselaphidae. Preparation of Pselaphidae for study. Taxonomic and morphological considerations. Key to the tribes of neotropical Pselaphidae. Subfamily Pselaphinae [illegible] [illegible] tribes 1-9 [illegible] [illegible] tribes 10-1 [illegible] Subfamily Clavigerinae tribe 1. The undescribed species of [illegible]. Zoogeographic and ecological considerations. Selected bibliography. Genera index. Index to plates.

Note The systematic descriptions and key to species attempt to coordinate for the first time and to add to the information on the pselaphid beetles. [illegible] the Neotropic region. The work, which [illegible] summary of data preparatory to monographic study [illegible] many more genera insufficiently known and many type specimens as yet unexamined by the author, [illegible] where possible, [illegible] of the types of the new species have described are figured. Twenty-one plates of drawings by the author [illegible] particular morphology and taxonomy. The present paper [illegible] part of the accumulated information on the Pselaphidae which has been obtained during the 13 years between the present survey of this family [illegible] Raffray's Genera [illegible] 1908, 1924, and 1942.

Peterson, Alvah

Larvae of insects an introduction to nearctic species Part 1 Lepidoptera and plant infesting Hymenoptera. Third edition Columbus, O.. The author Ohio State University 1956 315 p illus 28 cm. $5.50 2398

Contents (abridged) Importance of larval [illegible] Equipment and instruction. Collecting, killing, clearing and preserving larvae. Rearing and returning larvae. Keys to orders for immature stages of insects: nymphs, larvae and pupae. Condensed key to orders for larvae of holometabolous insects. Selected general bibliography on nymphs and larvae of insects. Larvae of Lepidoptera. Key to families of Lepidoptera. Key to subfamilies Pyralidae. Family names of Lepidoptera. Descriptions of larvae of Lepidoptera. List of some common, important, or unusual species of Lepidoptera. Selected bibliography for larvae of Lepidoptera. Larvae of Hymenoptera. Key to families of plant infesting Hymenoptera. List of some common, important, or unusual plant infesting species of Hymenoptera. Selected bibliography for larvae of Hymenoptera. Glossary. Host index of Hymenoptera. Host index of Lepidoptera. General index.

Note This volume presents drawings, keys, and brief descriptions of the larval stages of two important orders of insects, as well as the introductory matter for the work as a whole. The book is a guide for students endeavoring to learn facts essential for identification of insect larvae. Illustrative drawings are both numerous and detailed. Altogether there are 84 plates of illustrations. Particular emphasis is placed upon larvae of economic importance.

—— Part II Coleoptera, Diptera Neuroptera, Siphonaptera, Mecoptera, Trichoptera. Second edition, Columbus O The author Ohio State University 1953 415 p illus 28 cm. $7.00 2398A

Contents Introduction. Methods. Larvae of Coleoptera, discussion. Key to families of Coleoptera. Family names of Coleoptera. Descriptions of larvae of common families of Coleoptera. List of some common, important or unusual species of Coleoptera. Larvae of Coleoptera with explanation. Selected bibliography for larvae of Coleoptera. Larvae of Diptera, discussion. Key to families of Diptera. Family names of Diptera. Descriptions of larvae of common families of Diptera. List of some common, important and unusual species of Diptera. Larvae of Diptera with explanation. Selected bibliography for larvae of Diptera. Larvae of Neuroptera, discussion. Key to families of Neuroptera. Larvae of Neuroptera with explanation. Larvae of Siphonaptera, discussion. Larvae of Siphonaptera with explanation. Larvae of Mecoptera, discussion. Larvae of Mecoptera with explanation. Larvae of Trichoptera, discussion. Key to families of Trichoptera. Larvae of Trichoptera with explanation. Selected bibliography of larvae of Neuroptera, Mecoptera, Siphonaptera and Trichoptera. Glossary for Part II. Food, host or habitat index for Coleoptera. Food, host or habitat index for Diptera. General index for Part II.

Note This volume contains drawings, keys, and brief descriptions of the larval stages of the Coleoptera and Diptera presented in the same complete fashion as the Lepidoptera and Hymenoptera are treated in Part I, and in briefer fashion presents the larvae of the Neuroptera, Siphonaptera, Mecoptera, and Trichoptera. Especial attention is given to larvae of economic importance. Detailed illustrations in enlargement cover [illegible] pages, with explanations on facing pages. The total number of pages devoted to the Coleoptera is 221, to Diptera, 131, to the other four orders, 25.

Pierce, George Washington

The songs of insects with related material on the production, propagation, detection, and measurement of sonic and supersonic vibrations. Cambridge, Mass. Harvard University Press 1948 329 p. illus. 24 cm. $5.00 2399

Contents Introduction and background. Preliminary experiments. Collection of insects located by sound. Mechanism of sound production by insects. Apparatus and methods. Tabulation of insects studied. Crickets [illegible]. Gryllidae [illegible]. Gryllinae, [illegible] subfamily Gryllinae, [illegible] Nemobiinae. Crickets subfamily Oecanthinae. Katydids [illegible]. Tettigoniidae, subfamilies Phaneropterinae and Pseudophyllinae. Katydids subfamilies Conocephalinae [illegible]

with Cornell University Press, 1951 339 p illus (part col'd) 24 cm. $7 50 2390

Contents Part I Introduction New York State collection records. Phylogeny of the Collembola. Morphology of the Collembola external structure. Morphology of the Collembola internal structure. Nomenclature and synonymy Literature pertaining to the Collembola. Types of new species. Part II, Systematic account Order Collembola. Key to the suborders of Collembola. Suborder Arthropleona. Key to the superfamilies of Arthropleona. Superfamily Podoroidea. Key to the families of Podoroidea. Family Poduridae. Key to the subfamilies of Poduridae. Family Onychiuridae Key to the New York genera of Onychiuridae. Superfamily Entomobryoidea. Family Isotomidae. Family Entomobryidae. Key to the New York subfamilies of Entomobryidae. Suborder Symphypleona. Family Sminthuridae. Key to the subfamilies of Sminthuridae. Glossary Bibliography of the Collembola of the world. Index.

Note A general and systematic account of the 200 species and varieties of Collembola found in New York state. In the systematic part are detailed descriptions of the various suborders, superfamilies, families, subfamilies, tribes, genera, subgenera, and species, with generous keys to the New York species. The typical descriptions of the species include bibliographical references, length, color head, thorax, abdomen clothing, discussion and distribution. Distribution is indicated by towns in New York state where found and the dates of collection and is also indicated for other states of the United States of America and for foreign countries where recorded or known. Five of the plates reproduce water-color drawings of springtails in full color The author indicates his belief that this group of primitive wingless insects is responsible for some of the annual hidden loss of crops in the United States. The book is a necessary tool for all persons interested in the study of Collembola.

MICHENER, CHARLES DUNCAN, AND MARY H MICHENER

American social insects a book about bees ants, wasps and termites New York D Van Nostrand Company, Inc. 1951 267 p illus (part col'd) 22 cm. (The new illustrated naturalist editorial advisory board William Beebe and others) $6 95 2391

Contents (abridged) Part I, The nature of social insects What are social insects? Sensations and behavior Learning and behavior What determines caste? How insects became social. Subsocial insects. Part II, The hornets and other wasps Part III, The bees. Part IV The ants. Part V The termites. Part VI Societies and their parasites Uninvited guests. Societies of insects and men. Appendix Insect structure and classification. Bibliography Glossary Index.

Note A popular account of the social insects and their behavior written by entomologists as an introduction for the reader without previous knowledge of the subject. While all the major species of bees, ants, wasps, and termites found in the United States are named and described, and some of the foreign representatives also are mentioned, the book is more a readable description of the lives of these insects than a guidebook for the identification of species. Especially noteworthy are the illustrations from photographs, 30 of them in color and over 75 in black and white.

MICHENER, CHARLES DUNCAN

Comparative external morphology phylogeny and a classification of the bees (Hymenoptera) New York American Museum of Natural History 1944 169 p illus 27 cm (American Museum of Natural History Bulletin Vol 82 article 6) $1 75 2392

Contents Introduction External morphology of *Anthophora edwardsii* Cresson. Comparative external morphology of the bees Literature cited (morphology) Phylogeny of the bees A classification of the bees Selected references (systematics) Index of taxonomic names

Note This monograph is divided into four parts, the first of which includes a summary of the terminology of structures which is applicable to all bees and to many other groups of Hymenoptera. The second part is primarily a record of differences among various genera, with certain suggestions as to how some of these differences may have come about. In the third part, the characters described in previous sections are analyzed, with a discussion of the phylogenetic history of the bees. The classification, which is a by-product of this phylogeny is presented in the final section. The bibliography presented in two parts, contains 150 references to American and European sources.

MUESEBECK, CARL FREDERICK WILLIAM, AND OTHERS, editors

Hymenoptera of America north of Mexico, synoptic catalog prepared cooperatively by specialists on the various groups of Hymenoptera, under the direction of C. F W Muesebeck, Karl V Krombein and Henry K Townes Washington, D C. Government Printing Office, 1951 1 420 p 24 cm. (United States Department of Agriculture Agriculture monograph no 2) o p 2393

Contents Introduction. Order Hymenoptera, suborder Symphyta superfamily Megalodontoidea, Superfamily Tenthredinoidea Superfamily Siricoidea. Superfamily Cephoidea. Suborder Apocrita superfamily Ichneumonoidea. Superfamily Chalcidoidea. Superfamily Cynipoidea. Superfamily Proctotrupoidea. Superfamily Chrysidoidea. Superfamily Bethyloidea. Family Trigonalidae. Superfamily Scolioidea. Family Formicidae. Superfamily Vespoidea. Family Pompilidae. Superfamily Sphecoidea. Family Dryinidae Superfamily Apoidea. Index to new names. Index to supraspecific names. Index to trivial names.

Notes This large catalog brings together in systematic order the names of several thousand recognized species of the Order Hymenoptera, which includes the sawflies, wood wasps, parasites of other insects used in biological control undertakings, bees, wasps, ants, gall wasps, and related forms, as found in the United States of America and Canada. For each genus and each species, and for many of the supraspecific divisions, are given bibliographical citations to original descriptions in the literature of entomology. There are occasional annotations. The three-part index covers 146 double-columned pages. The following are noted as authors of the various sections: W G Bodenstein C E. Bohart, R M Bohart, D B Burks, H. E. Evans, P D Hurd, K. V Krombein, F G Lindsey W R. M. Mason C. D Michener W W Middlekauff C. F W Muesebeck and L. M. Walkley (jointly) W D. Murray O. Peck, D T Ries, H. G. Rodeck, H. H. Ross, H A. Scullen, M. R. Smith, L. J Stannard, H. K. Townes, M. Townes, and L. H. Weld.

NEEDHAM, JAMES G AND OTHERS

The biology of mayflies, with a systematic account of North American species by James G Needham Jay R. Traver and Yin-chi Hsu, aided by specialists in certain subjects. Ithaca Comstock Publishing Company, Inc. 1935 759 p illus 24 cm $7 50 2394

Contents Part I Mayflies in general Introduction, the life of a mayfly the structure of a mayfly nymph, internal anatomy post-embryonic development, eggs and oviposition, the life cycle taxonomic character of the adult, wings and legs, the body-segments of the thorax, the musculature of the thorax, nymphal structure and adaptations, mayfly phylogeny casualties and enemies of mayflies, values and uses of mayflies, collecting, preserving and rearing mayflies, the classification of mayflies. Part II, North American mayflies. A systematic account of North American species in both adult and nymphal stages. Index.

Note. The names, descriptions, and known distribution of the species of the Ephemeroptera of North America, with characters for the delineation of the genera, have been brought together in this reference text. Keys and identification tables are given for each family subfamily and genus, and there are numerous illustrations. The volume is intended to be of use to collectors, teachers, taxonomists, anatomists, and entomologists in general.

NEEDHAM, JAMES G AND MINTER J WESTFALL JR.

A manual of the dragonflies of North America (Anisoptera) including the Greater Antilles and the provinces of the Mexican

tribution, biology and relation to malaria. Prepared for the Preventive Medicine Division, Office of the Surgeon General U.S Army Philadelphia The American Entomological Society The Academy of Natural Sciences, 1943 152 p illus. 23 cm. $2.00 foreign countries $2 10 2405

Contents Introduction. Mosquito identification. Anophelines of Canada, United States and northern Mexico. Anophelines of Central America and the Caribbean region. Anophelines of South America. Anophelines of Europe, North Africa, and Near East. Anophelines of South and Central Africa. Anophelines of Asia, except the Philippines. Anophelines of the Philippines. Anophelines of Australian region. Important vectors of malaria. References. Index to specific and subspecific names.

Note Undertaken to provide the United States Medical Department with information leading to the control of disease-bearing mosquitoes throughout the world wherever military personnel are stationed, this publication presents keys to the identification of various species of anopheline mosquitoes by geographical distribution. Description, distribution, biology (including habits, activity) and relation to malaria are given for most species. There are 102 references in the selected bibliography.

SANDHOUSE, GRACE ADELBERT

The North American bees of the genus Osmia (Hymenoptera Apoidea) Washington, D C. Entomological Society of Washington, 1939 167 p. illus. 26 cm. (Entomological Society of Washington. Memoirs. No 1) $3 00 2406

Note A descriptive catalogue of the genus, whose species are chiefly palearctic and nearctic and which exhibit as great diversity in type of nests as any other genus of bees. Of approximately 250 names which have been proposed for species of Osmia in the nearctic region, about 120 are listed as synonyms in the present work, and 30 are transferred to other genera, leaving 150 names in the genus. The collection of Osmia in the United States National Museum has served as basis for this systematic study, being supplemented by material from other institutions and private collections. Under each species following the original reference are cited only those references which contain information additional to locality records. The distribution given is only for material actually seen by the author. There are 78 figures and general index.

SCHOOF HERBERT FREDERICK

The genus Conotrachelus Dejean (Coleoptera, Curculionidae) in the north central United States. Urbana University of Illinois Press, 1942 170 p. illus 26 cm (Illinois biological monographs. Vol XIX, no. 3) $1.50 2407

Contents (abridged) Introduction. Review of literature. Materials and methods. The removal, study and preservation of the male genitalia. Measurements. Studies of collections and types. Organization of distributional data. The morphological characters of taxonomic importance. The body regions and their appendages. Color and vestiture. Characters for sex determination. The male genitalia. Nomenclature. Classification. Keys to groups and species. Addendum. Conotrachelus [illegible] Summary. Glossary. Literature cited. Plates.

Note Keys to, and descriptions of, 77 species of Conotrachelus in the area studied, including five new species, with an evaluation of the taxonomic importance of various morphological structures. The description of [illegible] sixth new species, [illegible], not found in the area studied, is presented as an addendum.

SMITH CLYDE FUHRIMAN

The Aphidiinae of North America (Braconidae Hymenoptera) Columbus The Ohio State University 1944 154 p. illus. 23 cm. (Ohio State University Contributions in zoology and entomology No 6) $3.50 2408

Contents Preface. Introduction. Methods. General biology of the Aphidiinae. Taxonomic characters of the Aphidiinae. The subfamily Aphidiinae. Host index. Bibliography. Plates. Index to Aphidiinae.

Note This treatise describes the Aphidiinae subfamily (family Braconidae superfamily Ichneumonoidea) one of the primary parasites of the aphid. The species of Aphidiinae, of which 77 are here described, play an important economic role in reducing the aphid populations on truck and other crops.

SNODGRASS ROBERT EVANS

Anatomy of the honey bee Ithaca Comstock Publishing Associates a division of Cornell University Press 1956 334 p illus. 24 cm. $6.00 2409

Contents. From germ cells to adult. The body wall and the muscles. The head. The organs of feeding. The thorax. The legs. The wings. The abdomen. The alimentary canal. The circulatory system. The fat body, urate cells, and oenocytes. The respiratory system. The nervous system and the sense organs. The endocrine organs. The reproductive system. References. Index.

Note An outstanding account of the anatomy of the honey bee covering not only the adult, but also the egg, larva, and pupa. A well-organized and detailed descriptive text is complemented by a remarkable series of illustrations. There are 107 figures, most of which contain reproductions of several drawings. The majority of drawings are in large scale with an occasional important one, such as that of the reproductive organs and sting of the queen, occupying a full page. The list of references is 11 pages long and is international in scope. This book supersedes the author's *Anatomy and physiology of the honey bee*, New York, 1925.

SNODGRASS, ROBERT EVANS

The feeding apparatus of biting and sucking insects affecting man and animals. Washington, D C. The Smithsonian Institution 1944 113 p. illus. 24 cm (Smithsonian miscellaneous collections. Vol 104 no. 7 Publication 3773) $0.50 2410

Contents Introduction. The cockroach. The biting lice and book lice. Orders Mallophaga and Corrodentia. The elephant louse. The sucking lice. Order Anoplura. The flies. Order Diptera. The fleas. Order Siphonaptera. The thrips. Order Thysanoptera. The sucking bugs. Order Hemiptera. References, and textbooks on medical entomology.

Note A monograph for medical entomologists which discusses the structure and physiology of those insects which obtain their food either with a pair of jaws working against each other or by means of a sucking apparatus. No previous knowledge of insect anatomy or anatomical nomenclature is assumed. A detailed study of the anatomy of the cockroach is introduced early in the text to serve as a basic model of the insect head and feeding organs. There is a 31-page section covering the piercing and sucking apparatus of mosquitoes. Ninety-eight references appear in the bibliography and there are 39 text figures.

SNODGRASS ROBERT EVANS

Insect metamorphosis. Washington D C. Smithsonian Institution, 1954 124 p. 23 cm (Smithsonian Institution. Miscellaneous collections. Vol 122 no. 9) $1.20 2411

Contents: Metamorphosis and classification. Hormones and metamorphosis. Apterygota. Pterygota. Ephemeroptera. Odonata. Hemiptera. Thysanoptera. Oligoneoptera. Larval heteromorphosis. The pupal transformation. Muscle attachments and the nature of the pupa. References.

Note A broad study of the main features of insect metamorphosis. Essentially it surveys the state of knowledge at the time of writing, covering both the general aspects and the special features of metamorphosis exhibited by individual groups of insects. Gaps in the knowledge are pointed out. The list of references cites the pertinent international literature and includes some publications issued as recently as 1952.

phorinae, Conocephalinae, and Decticinae. Locusts family Acrididae, subfamilies Tryxalinae and Oedipodinae. Cicadas family Cicadidae Calculation f wing resonance Birds and bats. Appendix performance of the apparatus.

Note In this book, the results of an extensive series of investigations with special apparatus devised for the purpose ar presented The experiments were conducted from the standpoint f extending the knowledge of acoustics, especially f radiation in the frequencies just above audible sound but there is included necessarily good deal f information on the sound organs f insects. The more than 240 figures include some photographs of insects and their sound organs and many eproductions f photographic recording f their songs.

Richards, Albert Glenn

The integument of arthropods the chemical components and their properties the anatomy and development, and the permeability Minneapolis University of Minnesota Press 1951 411 p illus 24 cm. $6 00 2400

Contents Introduction. Section I The chemical components, their combinations, their properties Glucosamine, N-acetylglucosamine, *chitobiose, and chitin Chitin derivatives and metabolic sources. The* detection and estimation of chitin. The distribution f chitin in the animal and plant kingdoms. The decomposition of chitin and cuticle in nature. Proteins. Polyphenols and enzymes. Mixed polymers. Pigments. Lipids. Inorganic constituents and calcification. The percentages of cuticular components. Unknown chemical components. The physical properties of cuticle and cuticular components. Section II The microanatomy and development f the integument The general structure Historical and taxonomic résumé. The epicuticle or nonchitinous cuticle. The procuticle, or chitinous cuticle. Differentiation of the procuticle. Physical colors. The epidermis. The oenocytes, blood cells, and basement membrane. Molting. Muscle attachments, tendons, and apophyses. Wings, gills, epidermal glands, etc. The tracheal system. Sculpturing, setae, and miscellaneous structures. Section III, The permeability of the cuticle General emarks on the permeability f the cuticle. The penetration of water and gases. The penetration f electrolytes, nonelectrolytes, and insecticides. Bibliographical index of authors Subject index.

Not A comprehensive well-organized and completely documented account of the arthropod integument, which will be of chief interest to entomologists, zoologists, and chemists. It is synthesis of the literature of the subject for the use of other scientific workers. The uthor as entomologist, gives the other classes of arthropods less attention than the insects, but points out that more work has been done with the integument of insects than with that of other arthropods. The bibliography runs to 77 pages.

Roeder, Kenneth D editor

Insect physiology New York John Wiley & Sons Inc 1953 1 100 p illus 24 cm. $15 00 2401

Content Structure and function of the integument, by A G Richards. Chemical and physical properties f cuticle by A. G. Richards. The penetration of substances through the cuticle, by A. G. Richards. Respiratory mechanisms, by G A Edwards. Respiratory metabolism, by G A. Edwards. Physical properties and chemical composition of insect blood, by J B Buck The internal environment in regulation and metamorphosis, by J B Buck. The hemocytes, pericardial cells, and fat body by S. C. Munson. Circulation by R. L. Beard. Structur f the alimentary system, by *M. F Day and D F Waterhouse Functions* f the alimentary system, by M F Day and D F Waterhouse The mechanism f digestion by *M F Day and D F Waterhouse. Function* of the gut in absorption excretion and intermediary metabolism, by D F Waterhouse and M F Day Nutrition, by W Trager Excretion, by R. L. Patton. The biochemistry of muscle by *D Gilmour* Electric activity in nerves and ganglia, by K D Roeder Reflex activity and ganglion function by K D Roeder Vision by V G Dethier Mechanoreception, by V G Dethier Chemoreception by V G. Dethier The motion of the wings, by L E Chadwick. Aerodynamics and flight metabolism by L. E. Chadwick. The flight muscles and their control, by L E Chadwick. Basic problems in the nature f insect behavior by T C Schneirla. Insect behavior in relation to its setting, by T C. Schneirla Modifiability in insect behavior *by T C* Schneirla. Collective activities and social patterns among insects, by T C Schneirla. Embryonic development by D Bodenstein. Postembryonic development, by D Bodenstein. Regeneration, by D Bodenstein. The role f hormones in molting and metamorphosis, by D Bodenstein. Bibliography—author index. Index.

Note An important survey of the accumulated results of experimental research on insects. It is composed of the chapters the authors and titles are listed above. Generally speaking, each chapter is concisely written and is intended as summary and review the pertinent literature bearing on its particular topic. The treatment is at a graduate level, and the book is addressed to biologists and other scientists working in the field or having special interest in it. The combined bibliography and author index runs to 108 pages. Entries include abbreviated English titles. The subject index is a ery detailed one.

Ross, Herbert Holdsworth

A generic classification of the nearctic sawflies (Hymenoptera, Symphyta) Urbana. University of Illinois Press, 1937 173 p. illus. 26 cm (Illinois biological monographs. Vol. xv no 2) $2 00 2402

Content Introduction Methods. Materials. Morphology Head and appendages. Thorax and appendages. Abdomen and appendages Phylogeny The superfamilies of sawflies. Family groupings. Hypothesis of genealogy Larval characters. Biology Summary of phylogeny Taxonomy Superfamily Tenthredinoidea. Superfamily Megalodontoidea. Superfamily Siricoidea. Superfamily Cephoidea. Bibliography Plates. Index.

Note Classification f sawflies on the basis of the comparative morphology f the body and its appendages rather than on only those characters which may be seen without dissection. The taxonomic portion of the study is based on an examination of over 50,000 sawflies, including 90 per cent f the types of nearctic species.

Ross, Herbert Holdsworth

A textbook of entomology Second edition New York John Wiley & Sons, Inc., 1956 519 p illus 23 cm. $7 75 2403

Content Growth of North American entomology Arthropods—insects and their allies. External anatomy Internal anatomy Physiology The lif cycle. The orders of insects Geological history of insects. Ecological considerations. Control considerations. Index.

Note A general introduction to the fundamental aspects of the subject from which specialized information has been largely omitted so as to afford view f entomology as biological science The first chapter provides an interesting historical sketch of the development of the science, and the chapter on geological history traces the evolution of insects. The volume is well illustrated, and there are lists of books and articles for further reading. In addition to its intended use in college classes, it has value for amateur entomologists as a supplement to the conventional manuals on collecting and identification. The first edition was published in 1948. Chapter titles are the same in this edition, and there has been no change in scope or organization. However new information has been added on insect evolution, physiology and ecology, and of the illustrations also are newly added.

Russell, Louise May

The North American species of whiteflies of the genus *Trialeurodes* Washington. D C Government Printing Office 1948 85 p illus 23 cm. (United States Department of Agriculture Miscellaneous publication no. 635) $0 25 2404

Content Introduction Host associations. Characters of value Terminology Illustrations. Genus *Trialeurodes* Cockerell. Key to species of *Trialeurodes* Treatment of species. A species erroneously assigned to *Trialeurodes* Species treated and their synonyms. Literature cited. Index to host plants. Index to whiteflies.

Note This pamphlet describes and illustrates type specimens of 33 North American species of *Trialeurodes*, with the purpose of assisting in their recognition indicating synonymy recording the hosts and distribution of the insects examined, and discussing other information about the genus. The work is based primarily upon morphological study of the fourth instar the stage commonly known as the pupa case or pupa.

Russell, Paul Farr and others

Keys to the anopheline mosquitoes of the world with notes on their identification, dis-

ties. Chicago Chicago Natural History Museum 1950. 231 p. 21 cm. (Fieldiana Zoology memoirs. Vol. 1) $4.00 2419

Contents (abridged) Part Descriptions of new genera and species. Part II, The comparative morphology of the Aedeagus of [illegible] from Mexico and Central America. Part III, References [illegible] Index. List of abbreviations.

Note Although 35 new species and sub-species and two new genera are described in this work, the author has not attempted a comprehensive description of the fauna of Central America and Mexico. He points out that such a monograph could not be prepared because of the many lacunae in the knowledge of the fauna of that region. His main interest was in the possible taxonomic value of the Aedeagus. Part [illegible] is therefore the most important section of the book. There are 34 plates, each of which contains several drawings pertaining to comparative morphology of the fauna of this geographical area.

Usinger, Robert Leslie

Aquatic insects of California, with keys to North American genera and California species, by W C. Bentinck H. P Chandler W C. Day D G Denning, K. S Hagen S. G Jewett, Jr., W H Lange Jr., Ira La Rivers J D Lattin H B Leech, A E. Pritchard D B Scott, Jr R. F Smith, Alan Stone R. L. Usinger and W W Wirth Berkeley University of California Press 1956. 508 p. illus. 29 cm $10.00 2420

Contents Introduction to aquatic entomology—principles and practices, by R. L. Usinger. Introduction to aquatic entomology equipment and techniques, by J. D. Lattin. Structure and classification, by W. C. Bentinck. Aquatic Collembola, by D. B. Scott, Jr. Ephemeroptera, by W. C. Day. Odonata, by A. E. Pritchard and R. F. Smith. Aquatic Orthoptera, by I. La Rivers. Plecoptera, by S. G. Jewett, Jr. Aquatic Hemiptera, by R. L. Usinger. Megaloptera, by H. P. Chandler. Aquatic Neuroptera, by H. P. Chandler. Trichoptera, by D. G. Denning. Aquatic Lepidoptera, by W. H. Lange, Jr. Aquatic Hymenoptera, by K. S. Hagen. Aquatic Coleoptera, by H. B. Leech and H. P. Chandler. Aquatic Diptera, by W. W. Wirth and A. Stone. Glossary by W. C. Bentinck. Index, compiled by J. [illegible]

Note A unified collection of sixteen original monographs dealing with the aquatic insects of the streams and lakes of California. As an illustrated reference volume of the subject, the book should be of value to entomologists everywhere, for it is a unique publication. Its purpose is "to point out the central role of insects in aquatic [illegible], to bring to bear on insects the basic concepts and tools of limnology and to provide keys and illustrations to aid in the identification of aquatic insects." The opening chapters on the practices and techniques of underwater entomology cover 45 pages and provide a general illustrated introduction. Each of the 13 chapters dealing with the aquatic orders of insects known to California contains keys for the identification of North American genera, keys for the identification of California species, line drawings to assist in identification, and bibliographical references.

Usinger, Robert Leslie

The genus Nysius and its allies in the Hawaiian Islands (Hemiptera Lygaeidae, Orsillini) Honolulu Bernice P Bishop Museum 1942 167 p. illus. 25 cm. (Bernice P Bishop Museum. Bulletin 173) $2.50. 2421

Contents (abridged) History Material, method, explanation of terms. Taxonomy Phylogeny Distribution, geographical, [illegible] Host relationships. Life history and developmental stages. Natural enemies. Economic importance. Summary. Characteristics of the environment, of the bugs, evolution. Bibliography. Systematic index.

Note The Hawaiian species of the tribe Orsillini have been studied from three different points of view (1) as the best known though commonest insects from sea level to the tops of the mountains on introduced and native plants; (2) as an fauna of primitive and modern forms comprising half of the known orsilline fauna of the world, and (3) as the best case of tremendous proliferation of Nysius in insular areas, which presents possibilities of experimental analysis. An attempt has been made to elucidate the general subject along these three lines, stressing the taxonomic, phylogenetic, biological, and philosophical sides of the problem.

Van Dyke Edwin C

The Coleoptera of the Galapagos Islands. San Francisco California Academy of Sciences 1953 181 p 26 cm. (California Academy of Sciences. Occasional papers no XXII) $3.50 2422

Content Introduction. Family Cicindelidae. Family Carabidae. Family Dytiscidae Family Gyrinidae Family Hydrophilidae. Family Staphylinidae. Family Histeridae Family Lycidae Family Cantharidae. Family Melyridae Family Cleridae Family Ostomatidae Family Mordellidae Family Meloidae Family Elateridae Family [illegible] Family Dermestidae Family Ostomidae Family Nitidulidae. Family Cucujidae Family [illegible] Family Colydiidae Family Languriidae Family Coccinellidae Family Alleculidae. Family Tenebrionidae. Family Anobiidae. Family Bostrichidae. Family Scarabaeidae. Family Ptinidae Family Cerambycidae. Family Chrysomelidae. Family Bruchidae. Family Anthribidae Family Curculionidae Family Platypodidae. Family Scolytidae. References. Plates. Index.

Note Described in this monograph are the Coleoptera collected on an expedition to the Galapagos Islands in 1905 and 1906. The beetles collected were intensively studied by the author over a period of years and in many instances were compared with type specimens in the British Museum. All are now described, and some species found on the Galapagos Islands by other collectors but not represented in the collection of the California Academy of Sciences also are described. In these cases it is stated that the California Academy of Sciences has no specimen. The descriptions of the morphology of the species studied by Dr. Van Dyke are very detailed. There are seven plates, each of which contains 7 to 9 drawings.

Wenzel, Rupert Leon

On the classification of the histerid beetles. Chicago Chicago Natural History Museum 1944 104 p illus. 24 cm. (Chicago Natural History Museum. Publication 545 Zoological series Vol. 28, no 2) $1.00 2423

Note A systematic classification of the coleopterous family Histeridae which aims to correct certain generic assignments and subfamilial and tribal definitions of earlier writers. Types, [illegible], paratypes, description, measurements, and related data are given for each species presented, many of which are new and here described for the first time. There are also plates of anatomical drawings.

West Luther Shirley

The housefly its natural history medical importance and control Ithaca Comstock Publishing Company Inc., associated with Cornell University Press 1951 584 p illus. 24 cm. $7.50 2424

Contents Flies and man. Introductory and historical. External morphology Internal morphology physiology behavior Life history of the fly Taxonomy and nomenclature. Geographical distribution. Food requirements. Temperature and humidity Miscellaneous ecological factors. Parasites, predators, symbionts, and commensals. Flies and human disease. Public health relations. Myiasis. Are flies beneficial? The fly as an experimental animal. Field, museum, and laboratory techniques. Emergency control. Planned control. Newer insecticides: uses and dangers. Bibliography. Index.

Note A monograph in which all phases of the subject—morphology physiology behavior life history taxonomy distribution, relation to disease, techniques in the laboratory and in nature, techniques in the field, museum, and laboratory, control measures, and bibliography—are covered. It is the first comprehensive treatment of the housefly in book form since 1914. It is substantial enough to be valuable to such professional workers as entomologists and public health specialists, but the style is not too technical for interested laymen and others not accustomed to scientific terminology. The bibliography extends over 33 pages.

SNODGRASS, ROBERT EVANS

Principles of insect morphology New York McGraw Hill Book Company Inc., 1935 667 p illus. 23 cm (McGraw Hill publications in the zoological sciences, A F Shull, consulting editor) $12 00 2412

Contents Introduction. General organization and development. The body wall and its derivatives. Body regions, sclerites and segmentation. The segmental appendages of arthropods. The head. The head appendages. The thorax. The thoracic legs. The wings. The abdomen. The organs of digestion. The alimentary canal. The organs of distribution conservation and elimination. The respiratory system. The nervous system. The sense organs. The internal organs of reproduction The organs of copulation and oviposition References. Index.

Not A comprehensive text, primarily for college courses in the subject. The author has attempted t give in each chapter a coherent morphological view of the structure or organs under discussion and has not hesitated to use generalizations to this end. The list of references, although it is limited mainly to works cited in the text, runs to about 600 entries.

SNYDER, THOMAS ELLIOTT

Annotated, subject heading bibliography of termites, 1350 B C to A.D 1954 Washington, D C The Smithsonian Institution 1956 305 p 24 cm. (Smithsonian miscellaneous collections Volume 130 (whole volume) Publication 4258) $4 00 2413

Contents Introduction. List of subject headings. Subject headings. List of authors and titles. Index.

Note The author formerly on the staff of the United States Bureau of Entomology began compiling this bibliography in 1909 and continued it until his retirement in 1951 after which he prepared the work for publication. It consists of 3 624 references to termites, arranged in two ways first, under 73 appropriate subject headings and, second, by author alphabetically Taxonomic articles published before 1949 are omitted from the lists, as they are listed in the author' publication of that year entitled *Catalog of the termites (Isoptera) of the world* (Smithsonian Miscellaneous Collections. Volume 112 (whole volume) Publication 3953)

SNYDER, THOMAS ELLIOTT

Catalog of the termites (Isoptera) of the world. Washington, D C The Smithsonian Institution, 1949 490 p 23 cm (Smithsonian miscellaneous collections Vol 112 (whole volume) Publication 3953) $3 00 2414

Contents Introduction. List of the families, subfamilies, genera, and subgenera. Catalog of the termites (Isoptera) f the world Living termites Family Mastotermitidae. Family Kalotermitidae. Family Hodotermitidae. Family Rhinotermitidae. Family Termitidae Not identified as to species. Not classified Not termites, or f doubtful position. Fossil termites Family Uralotermitidae Family Mastotermitidae. Family Kalotermitidae. Family Hodotermitidae Family Rhinotermitidae. Family Termitidae Of uncertain or doubtful position. *Fossils not termites. Descriptions of ew genera. Index* to species. Bibliography on the taxonomy of the termites f the world On living termites. On fossil termites.

Not A complete catalogue, systematically arranged, f all known species of termites, divided into 138 living genera, 12 fossil genera no longer living, and 17 fossil genera still living. Excepting for new genera, descriptions are not given f the species, genera, and families, but references indicate where in the literature f the subject such descriptions appear For each species are given the geographical area where found and, when *possible the present location of* type specimens.

SOCIETY ISLANDS INSECTS Honolulu Bernice P Bishop Museum 1935 156 p illus 25 cm. (Bernice P Bishop Museum Bulletin 113 Pacific Entomological Survey publication 6) $2 00 2415

Not This bulletin contains 31 papers by various authors on the insects of the Society Islands and Tahiti. Information concerning the expedition and its results, part of which is here reported, may be found in the note on *Bulletin*

SWAIN, RALPH BROWNLEE

The insect guide orders and major families of North American insects. Illustrated by SuZan N Swain Garden City Doubleday & Company, Inc., 1948 261 p. illus. (part col'd) 20 cm $3 95 2416

Contents (abridged) About insects in general. Order and key. Roach, grasshopper and cricket order (Orthoptera) Termite order (Isoptera) Bug, aphid and scale order (Hemiptera) Nerve-winged insects (Neuroptera) Moth and butterfly order (Lepidoptera) Beetles (Coleoptera) Wasp ant and bee order (Hymenoptera) Fly order (Diptera) Collecting, preserving and studying insects. Index.

Note A pocket-sized field book in which are described and pictured the common insects of the United States and Canada. It is designed for naturalists, accordingly the language is as nontechnical as possible. Of the nearly 200 illustrations, approximately [illegible] are in full color Description of a typical insect includes the [illegible] size and color f adults and young, its habits, habitat, geographic range, and the economic importance, if any There are [illegible] f carefully selected references.

SWEZEY, O H , AND OTHERS

Insects of Guam, I–II Honolulu Published by the Museum 1942–46 2 v 25 cm (Bernice P Bishop Museum Bulletin 172, 189) $3 00 per vol 2417

Contents (abridged) I Odonata. Thysanoptera. [illegible] Neuroptera. Lepidoptera. Coleoptera. Strepsiptera. Hymenoptera. Diptera. Index. II: Orthoptera and related orders. Isoptera. [illegible]optera. Homoptera. Lepidoptera. Diptera. Hymenoptera. [illegible] to Volume I. Index.

Note. This work consists of individual signed papers [illegible] are studies of insects collected on Guam. Most of the [illegible] were made in the course of an entomological survey in [illegible] papers are contributions to the literature of scientific [illegible] Although some of the insects described are agricultural pests, the [illegible] aspect of the subject is not covered There are 21 papers in the first number of the series and 12 in the second.

TEALE, EDWIN WAY

Grassroot jungles a book of insects. Revised edition. Illustrated with one hundred and thirty photographs by the author New York Dodd Mead and Company 1953 24[illegible] p illus 25 cm. $5 00 2418

Contents Exploring at home. Insect A B C's. Winged [illegible] the dragonflies. The mystery of the Monarch. A garden [illegible] the praying mantis. Living pastures—the aphides. The [illegible] Polyphemus the giant. Two legs too many—the spiders The [illegible] [illegible] of the bumblebee. Insect Lilliput. A six-legged Rip van Winkle [illegible] Beauty and the beast. The old man of the garden. Wisdom of the [illegible] wasps. Ant lore. The first fiddler Flying rainbows The [illegible] ladybug. Night singers. *How to photograph insects.* [illegible] Bibliography Entomological epilogue. Index.

Note Not systematic book but collection of interesting [illegible] about insects and insect life. The author's style is readable, and his treatment is aimed at the nature-loving layman. A special feature is the reproductions of photographs, most of them showing insects considerably enlarged from their natural size. In the revised edition, the author has incorporated some textual changes for greater accuracy or clarity He has also enlarged the bibliography of popular books on insects to 54 titles and has added an "entomological epilogue," herein are listed the scientific names of most of the insects mentioned in the book.

TRAUB, ROBERT

Siphonaptera from Central America and Mexico, a morphological study of the Aedeagus with descriptions of new genera and spe-

[illegible] Eels (Anguillidae, Congridae, [illegible]). Lancetfishes ([illegible]) [illegible] Flying fishes (Exocoetidae) [illegible] John Dories (Zeidae) [illegible] Mullets (Mugilidae) [illegible] Trumpet fishes [illegible] Mackerels (Scombridae) [illegible] Dolphins (Coryphaenidae) [illegible] Sea basses (Serranidae) [illegible] Porgies (Sparidae) Croakers, drums, and weakfishes (Sciaenidae) [illegible] Scorpion fishes (Scorpaenidae) Sculpins and sea ravens (Cottidae and Hemitripteridae). Alligatorfishes (Agonidae) Lumpfishes (Cyclopteridae). Sea snails (Liparidae) Sea robins or gurnards and armored sea robins (Triglidae and Peristediidae) Flying gurnards (Dactylopteridae) [illegible] Remoras (Echeneidae) Sand launces (Ammodytidae) [illegible] Wrymouths (Cryptacanthodidae). Wolffishes (Anarhichadidae) Ocean pouts and wolf eels (Zoarcidae) Cusk eels (Ophidiidae). Toadfishes (Batrachoididae) Triggerfishes (Balistidae) Filefishes (Monacanthidae) Puffers and porcupine fishes (Tetraodontidae and Diodontidae) Ocean sunfishes or headfishes (Molidae) Anglers (Lophiidae) [illegible] fishes (Antennariidae) Deep sea anglers (Ceratiidae) Bibliography Index to common names. Index to scientific names.

Note Totals of 33 species of cartilaginous fishes and 194 species of bony fishes are described and illustrated in this excellent book. [illegible] scientific accuracy and keys are provided for all species as further aid to identification. Habits, general range, occurrence and abundance in the Gulf of Maine, and commercial importance are summarized for each species. References are given to other works in which the species are more fully described. The work, [illegible] of Bulletin 40, Part 1, of the United States Bureau of Fisheries, published in 1925 by the same authors, is based upon many years of study of the coastal fishes found in the waters off the northern New England coast.

BIGELOW HENRY B., AND OTHERS

Fishes of the western North Atlantic. Part one Lancelets, cyclostomes sharks New Haven Sears Foundation for Marine Research, Yale University 1948 576 p illus. 31 cm. (Sears Foundation for Marine Research. Memoir number 1) $10 00 2432

Contents. Introduction, by John Tee-Van, editor-in-chief Lancelets, by Henry B. Bigelow and [illegible] Class Leptocardii. Order Amphioxi. Cyclostomes, by Henry B. Bigelow and William C. Schroeder Class Agnatha [illegible] Order Myxinoidea. Order Petromyzonida. Sharks, by Henry B. Bigelow and William C. Schroeder Class Chondrichthyes. [illegible] Index of common names Index of scientific names.

Note Fishes of the western North Atlantic is the title of [illegible] series of [illegible] volumes being published by the Sears Foundation for Marine Research under the direction of an editorial board whose editor-in-chief is John Tee-Van. When completed the set is intended to present [illegible] comprehensive scientific account written by various authors of the fish fauna of the Atlantic Ocean from Hudson Bay southward to the mouth of the Amazon River. The accounts of the various species and groups are to be uniform in style and arrangement and to be published in systematic order. The text [illegible] original research, and critical reviews of existing information. In the present volume, the accounts of the lancelets and cyclostomes cover fifty-eight pages, while the account of the sharks extends from page fifty-nine through page 546. Under each species is [illegible] detailed description, together with [illegible] discussion of its distinguishing characteristics, color, size, general habits, abundance, range, and relation to man—economic importance, danger, sporting qualities. Bibliographical references are given for each species under the heading "Synonyms and references," and there are additional references included in the text. The illustrations, of which there are 106, are line drawings [illegible], detail, or [illegible] as well as head, [illegible]

and teeth forms of the different species. The primary purpose of the work as [illegible] is to bring together and synthesize scattered ichthyological information and "to make it available to both the public and to marine biologists. Since the set is intended for the use of lay persons as well as ichthyologists, highly technical words and phrases are being avoided as far as possible.

BLANCHARD FRANK NELSON

The ring-neck snakes, genus Diadophis. Chicago Chicago Academy of Sciences, 1942 144 p illus. 24 cm (Chicago Academy of Sciences. Bulletin. Vol 7 no. 1) $2.50 2433

Contents. Foreword, by H. K. Gloyd. Description of the genus Diadophis. Key to the species and subspecies. Abbreviations used [illegible] The Amabilis group. The Mexican [illegible] *Diadophis* [illegible]. The Regalis group. The Punctatus group. General summary. Literature cited in the text. Index.

Note A descriptive monograph giving structural and [illegible] details, habitat and habits, range, variation and affinities and related data for all species or type specimens examined by the author. The bibliography lists 147 papers and monographs published between 1842 and 1942.

BOGERT CHARLES M., AND RAFAEL MARTÍN DEL CAMPO

The Gila monster and its allies the relationships habits and behavior of the lizards of the family Helodermatidae. New York American Museum of Natural History 1956. 238 p illus. 27 cm. (American Museum of Natural History Bulletin Vol 109 art 1) $4.00 2434

Contents Introduction Classification and distribution of the beaded lizards. Key to the fossil and recent lizards of the genus *Heloderma*. [illegible] in *Heloderma*. Food and feeding habits. Bodily functions, behavior and activities. Life history. Ecology. The venom apparatus and the venom and its effects. Bites inflicted on human beings. Man and the helodermatids. Bibliography.

Note A comprehensive study based on both an examination of the literature and [illegible] study of numerous specimens, including live specimens, specimens preserved in alcohol, and skeletons. Forty-four pages are devoted to taxonomic and morphological aspects and to the identification key. Very full discussions are included of feeding habits, physiology, behavior, ecology etc. More than 50 pages are devoted to the venom and to case histories of bites inflicted on human beings. The bibliography is comprehensive. There are 35 figures in the text and 20 plates, containing [illegible] somewhat larger number of illustrations, reproduced from photographs. The work is of interest both to zoologists and to non-zoologists who are interested in this animal.

BRECKENRIDGE WALTER JOHN

Reptiles and amphibians of Minnesota. Minneapolis University of Minnesota Press 1944 202 p. illus. 23 cm. $2.50 2435

Contents Introduction. History of Minnesota herpetology. Tales about reptiles and amphibians. The distribution of amphibians and reptiles in Minnesota. Field methods. Care of reptiles and amphibians in captivity. Venomous snake bites and their treatment. Preservation of specimens. Classification. Use of keys. Keys for use with Minnesota amphibians and reptiles. Hypothetical list. Amphibians and reptiles of Minnesota: Amphibians: Salamanders. Toads and frogs. Toads. Tree frogs. Frogs. Reptiles: Lizards. Snakes. Turtles. Glossary. Bibliography. Index.

Note An illustrated manual designed primarily for teachers and amateur naturalists. Typical information for each species: popular and scientific names, description, range, habits, habitat, food, breeding habits, and selected references to literature. Maps show distribution and range of the various species.

BREDER, CHARLES M., JR

Field book of marine fishes of the Atlantic coast from Labrador to Texas being a short

WHARTON, GEORGE WILLARD

A manual of the chiggers, the biology, classification, distribution, and importance to man of the larvae of the family Trombiculidae (Acarina) Aided by H S Fuller Washington, D C Entomological Society, 1952 185 p illus 26 cm (Entomological Society of Washington Memoirs No 4) $6 00 2425

Contents Introduction. Public health. Behavior Life cycles. Anatomy Classification The distribution of Trombiculids. Appendix. Literature cited. Index.

Note Although the chapter on classification is longer (46 pages) than any other this book is a reference manual of the whole subject, rather than a systematic description of the Trombiculidae. The available knowledge on life cycles, physiology and ecology is summarized. Also, the public health aspects are adequately utilized. The bibliography is comprehensive

WHEELER, WILLIAM MORTON

Check list of the ants of Oceania Honolulu Bernice P Bishop Museum, 1935–36 56 p 23 cm (Bernice P Bishop Museum. Occasional papers Vol XI, no 11, 1935) $0 50 2426

Note For the purposes of this check list Oceania covers the groups of small central Pacific islands and in addition the Bismarck Archipelago, the Solomon and Santa Cruz Islands, New Caledonia, Lord Howe and Norfolk Islands and New Zealand, and in the eastern Pacific the Galapagos Archipelago, Cocos Island, and the small islands off the coast of Mexico and southern California. All the subfamilies of the Formicidae are represented in Oceania with the exception of the Dorylinae and Leptanillinae. The whole fauna comprises, so far as known 560 forms (339 species, 108 subspecies, and 113 varieties) The list gives the complete known geographical range for each form.

WHEELER, WILLIAM MORTON

Colony founding among ants, with an account of some primitive Australian species Cambridge, Mass Harvard University Press 1933 179 p illus 20 cm $2 00 2427

Note An unexpected and very primitive method of colony-founding behavior observed by the author among the famous bull-dog ants, while he was accompanying the Harvard Zoological Expedition in Australia, leads him to undertake a general technical review of all the known methods of colony propagation among the ants and other social insects. The work also contains taxonomic data and natural history notes on a number of little-known species of bull-dog ants and certain other primitive Australian genera. Bibliography and index

WHEELER, WILLIAM MORTON

Revised list of Hawaiian ants. Honolulu Bernice P Bishop Museum 1934 21 p 23 cm (Bernice P Bishop Museum Occasional papers Vol X no 21) $0 50 2428

Note The material on which this paper is based consists of the collections in the Museum the Sugar Planters Experiment Station and the Federal Quarantine Station in Honolulu, together with specimens obtained by the author during his visit to the islands in 1930 This revised list comprises 35 species, showing an accession of 12 items since the publication of Gulick's list in 1913. It is a meager ant fauna for an area as large as Hawaii, possessing tropical climate but is undoubtedly more nearly complete than the ant list of any other group of islands in the Pacific.

VERTEBRATES (EXCEPT BIRDS AND MAMMALS)

AXELROD, HERBERT R, AND LEONARD P SCHULTZ

Handbook of tropical aquarium fishes New York McGraw Hill Book Company, Inc., 1955 718 p illus. (part col'd) 26 cm. $10 00 2429

Contents Ichthyology The aquarium and its management. Plants in the home aquarium. Diseases of fishes and their care by C van Duijn, Jr Catalogue of fishes. Glossary Selected references. Index.

Note A comprehensive, fully illustrated reference book on fishes of interest to amateur fanciers who maintain small aquariums, usually in their homes. At the beginning of the volume 133 pages are devoted to general topics, including elementary ichthyological information descriptions of small aquariums, aquarium equipment, and plants suitable for growing in aquariums. Beginning with page 155 and continuing to page 675 the space is devoted to fish descriptions. Each description includes identification of particular genus or variety of fish, data on its natural range, size, color temperament, temperature requirements, morphological differences between the sexes, and a few paragraphs of general information on such points as rarity breeding habits, etc. Each description includes one or more illustrations. A considerable number of the illustrations are reproduced in color Following the catalog are glossary selection of literature references, and a full index. The first-named author is editor of *Tropical fish hobbyist* magazine, and his colleague is Curator of Fishes on the staff of the United States National Museum.

BARNHART, PERCY SPENCER

Marine fishes of southern California. Berkeley University of California Press, 1936 209 p illus 26 cm $4 00 2430

Contents Introduction. Note on the description of fishes. Families of fishes described. Figures of fishes described. Glossary Bibliography Index to the common names of the fishes. Index to the scientific names of the fishes.

Note From many papers and books, descriptions have been gathered together in one volume making it a convenient means of identification of the fishes of this region. Three hundred seventy species, all those reported from southern California waters from Point Conception on the north to the Mexican border on the south, have been included. The book is intended for students and laymen.

BIGELOW, HENRY B AND WILLIAM C SCHROEDER

Fishes of the Gulf of Maine First revision. Contribution no. 592 Woods Hole Oceanographic Institution Washington, D C. Government Printing Office 1953 577 p illus 26 cm. (United States. Fish and Wildlife Service. Fishery bulletin 74) $4 25 2431

Contents Introduction. Use of the keys Key to Gulf of Maine fishes. The Cyclostomes (class Agnatha) Hagfishes and lampreys (families Myxinidae and Petromyzonidae) Cartilaginous fishes (class Chondrichthyes) Sharks, torpedoes, skates, and rays (subclass Elasmobranchii) Sharks (order Selachii) Sand sharks (Carchariidae). Mackerel sharks (Isuridae) Basking sharks (Cetorhinidae) Thresher sharks (Alopiidae) Cat shark (Scyliorhinidae) Smooth dogfishes (Triakidae) Requiem sharks (Carcharhinidae) Hammerhead sharks (Sphyrnidae) Spiny dogfishes (Squalidae) Gurry sharks (Dalatiidae) Bramble sharks (Echinorhinidae) Torpedoes, skates and rays (order Batoidei) Torpedo or electric rays (Torpedinidae) Skates (Rajidae) Whip-tailed sting rays (Dasyatidae) Cow-nosed rays (Rhinopteridae) Devil rays (Mobulidae) Chimaeroids (subclass (Holocephali) Chimaeras (order Chimaerae) Family Chimaeridae Bony fishes (class Osteichthyes) Sturgeons (Acipenseridae) Herring and tarpon tribes (Clupeidae Dussumieriidae and Elopidae) Anchovies (Engraulidae) Salmons (Salmonidae) Smelts (Osmeridae) Argentines (Argentinidae) Lanternfishes (Myctophidae) Pearlsides (Maurolicidae) Viper fishes (Chauliodontidae) Hatchetfishes (Gonostomidae and Sternoptychidae) [illegible]

ptychidae) Eels (Anguillidae, Congridae, Simenchelyidae, Synaphobranchidae, Nettastomidae, and Ophichthyidae) Lancetfishes (Alepisauridae) Mummichogs or killifishes (Poeciliidae). Billfishes (Scomberesocidae) Halfbeaks (Hemiramphidae) Needlefishes (Belonidae) Flying fishes (Exocoetidae) Silver hake and cod family (Merlucciidae and Gadidae) Grenadiers (Macrouridae) Opah (Lampridae) Flounders and soles (Hippoglossidae, Pleuronectidae, Bothidae, and Achiridae) John Dories (Zeidae) Boarfishes (Caproidae) Sticklebacks (Gasterosteidae) Pipefishes and seahorses (Syngnathidae) Trumpet fishes (Fistulariidae) Mackerels (Scombridae) Escolars (Gempylidae) Cutlassfishes (Trichiuridae) Swordfishes (Xiphiidae) Spearfishes or marlins and sailfishes (Istiophoridae) Dolphins (Coryphaenidae) Butterfishes or harvestfishes (Stromateidae) Bluefishes (Pomatomidae) Pompanos and jacks (Carangidae) Sea basses (Serranidae) Porgies (Sparidae) Croakers, drums, and weakfishes (Sciaenidae) Tilefishes (Branchiostegidae) Rockfishes (Scorpaenidae) Sculpins and sea ravens (Cottidae and Hemitripteridae) Alligatorfishes (Agonidae) Lumpfishes (Cyclopteridae) Sea snails (Liparidae). Sea robins or gurnards and armored sea robins (Triglidae and Peristediidae) Flying gurnards (Dactylopteridae) Cunner tribe or wrasses (Labridae) Remoras (Echeneidae) Sand lances (Ammodytidae) Blenny-like fishes (Lumpenidae, Pholidae, and Stichaeidae) Wrymouths (Cryptacanthodidae) Wolffishes (Anarhichadidae) Ocean pouts and wolf eels (Zoarcidae) Cusk eels (Ophidiidae) Toadfishes (Batrachoididae). Triggerfishes (Balistidae) Filefishes (Monacanthidae) Puffers and porcupine-fishes (Tetraodontidae and Diodontidae) Ocean sunfishes or headfishes (Molidae) Anglers (Lophiidae) Sargassum fishes (Antennariidae) Deep sea anglers (Ceratiidae) Bibliography Index to common names. Index to scientific names

Note: Totals of 33 species of cartilaginous fishes and 144 species of bony fishes are described and illustrated in this revised book. Descriptions are "as little technical as is compatible with scientific accuracy" and keys are provided for all species to further aid in identification. Habits, general range, occurrence and abundance in the Gulf of Maine, and commercial importance are summarized for each species. References are given to other works in which the species are more fully described. The work, a revision of Bulletin 40, Part 1 of the United States Bureau of Fisheries, published in 1925 by the same authors, is based upon many years of study of the ocean fishes found in the waters off the northern New England coast.

BIGELOW HENRY B AND OTHERS

Fishes of the western North Atlantic. Part one Lancelets, cyclostomes, sharks. New Haven Sears Foundation for Marine Research, Yale University 1948 576 p. illus. 31 cm. (Sears Foundation for Marine Research. Memoir number 1) $10.00 2432

Contents: Introduction, by John Tee-Van, editor-in-chief. Lancelets, by Henry B. Bigelow and Isabel Pérez Farfante. Class Leptocardii. Order Amphioxi. Cyclostomes, by Henry B. Bigelow and William C. Schroeder. Class Agnatha. Subclass Cyclostomata. Order Myxinoidea. Order Petromyzonida. Sharks, by Henry B. Bigelow and William C. Schroeder. Class Chondrichthyes. Subclass Elasmobranchii. Order Selachii. Suborder Notidanoidea. Suborder Chlamydoselachoidea. Suborder Heterodontoidea. Suborder Galeoidea. Suborder Squaloidea. Suborder Pristiophoroidea. Suborder Squatinoidea. Index of common names. Index of scientific names.

Note: *Fishes of the western North Atlantic* is the title of a projected series of modern volumes being published by the Sears Foundation for Marine Research under the direction of an editorial board whose editor-in-chief is John Tee-Van. When completed the set is intended to present a comprehensive scientific account written by various authors of the fish fauna of the Atlantic Ocean from Hudson Bay southward to the mouth of the Amazon River. The accounts of the various species and groups are to be uniform in style and arrangement and to be published in systematic order. The text is to contain facts and information based upon new research, original research, and critical reviews of existing information. In the present volume, the accounts of the lancelets and cyclostomes cover fifty-eight pages, while the account of the sharks extends from page fifty-nine through page 546. Under each species is a detailed description, together with a discussion of its distinguishing characteristics, color, size, general habits, abundance, range, and relation to man—commercial importance, danger, sporting qualities. Bibliographical citations are given for each species under the heading "Synonyms and references," and there are additional references included in the footnotes. The illustrations, of which there are 106, are line drawings showing lateral, dorsal, or ventral aspects, as well as head, fin, and tooth forms of the different species. The primary purpose of the work as a whole is to bring together and synthesize scattered ichthyological information and to make it available to both the public and to marine biologists. Since the set is intended for the use of lay persons as well as ichthyologists, highly technical words and phrases are being avoided as far as possible.

BLANCHARD FRANK NELSON

The ring neck snakes genus Diadophis Chicago Chicago Academy of Sciences, 1942 144 p illus. 24 cm (Chicago Academy of Sciences Bulletin. Vol 7 no 1) $2 50 2433

Contents: Foreword, by H. K. Gloyd. Description of the genus Diadophis. Key to the species and subspecies. Abbreviations used with reference to museum specimens. The Amabilis group. The Mexican ring-neck *Diadophis dugesii*. The Regalis group. The Punctatus group. General summary. Literature cited in the text. Index.

Note: A descriptive monograph giving structural and anatomical detail, habitat and habits, range, variation and affinities, and related data for all species or type specimens examined by the author. The bibliography lists 117 papers and monographs published between 1842 and 1942

BOGERT CHARLES M, AND RAFAEL MARTÍN DEL CAMPO

The Gila monster and its allies the relationships, habits, and behavior of the lizards of the family Helodermatidae New York American Museum of Natural History 1956 238 p. illus 27 cm. (American Museum of Natural History Bulletin Vol. 109 art 1) $4.00 2434

Contents: Introduction. Classification and distribution of the beaded lizard. Key to the fossil and recent lizards of the genus *Heloderma*. Claws in *Heloderma*. Food and feeding habits. Bodily functions, behavior and activities. Life history. Ecology. The venom apparatus and the venom and its effects. Bites inflicted on human beings. Man and the helodermatids. Bibliography.

Note: A comprehensive study based on both an examination of the literature and a study of numerous specimens, including live specimens, specimens preserved in alcohol, and skeletons. Forty-four pages are devoted to taxonomic and morphological aspects and to the identification key. Very full discussions are included of feeding habits, physiology, behavior, ecology, etc. More than 50 pages are devoted to the venom and to case histories of bites inflicted on human beings. The bibliography is comprehensive. There are 35 figures in the text and 20 plates, containing a somewhat larger number of illustrations reproduced from photographs. The work is of interest both to zoologists and to non-zoologists who are interested in that animal

BRECKENRIDGE, WALTER JOHN

Reptiles and amphibians of Minnesota. Minneapolis University of Minnesota Press 1944 202 p illus 23 cm. $2.50 2435

Contents: Introduction. History of Minnesota herpetology. Tales about reptiles and amphibians. The distribution of amphibians and reptiles in Minnesota. Field methods. Care of reptiles and amphibians in captivity. Venomous snake bites and their treatment. Preservation of specimens. Classification. Use of keys. Keys for use with Minnesota amphibians and reptiles. Hypothetical list. Amphibians and reptiles of Minnesota. Amphibians: Salamanders. Toads and frogs: Toads. Tree frogs. Frogs. Reptiles. Lizards. Snakes. Turtles. Glossary. Bibliography. Index.

Note: An illustrated manual designed primarily for teachers and amateur naturalists. Typical information for each species: popular and scientific names, description, range, habits, habitat, food, breeding habits, and selected references to literature. Maps show distribution and range of the various species.

BREDER, CHARLES M JR.

Field book of marine fishes of the Atlantic coast from Labrador to Texas being a short

description of their characteristics and habits with keys for their identification With 8 plates by W S Bronson, and 403 other illustrations Revised edition New York G P Putnam's Sons, 1948 332 p illus 18 cm $5 00 2436

Contents Introduction Definition of fishes and their manner of life. The geographic range and types of environment included. The identification of fishes. Key to the orders of marine fishes of the Atlantic coast. The lancelets (Class Leptocardii) The lampreys (Class Marsipobranchii) The true fishes (Class Pisces) The sharks and rays (Subclass Elasmobranchii) The chimaeras (subclass Holocephali) The bony fishes (Subclass Teleostomi) Glossary of technical terms. Bibliography Index.

Note A compact guide to the identification of fishes found along the eastern coast of continental United States of America and Canada. Called a "field book to indicate its relationship to other books of similar character issued by the same publisher It is produced in a small format that makes it convenient to carry on fishing trip. Short, preliminary discussions of habits and geographic range of fishes are followed by keys to identification and descriptions of species. The species descriptions which cover such points as occurrence food habits, range, and length are supplemented by small but clear line drawings.

BROWN, WALTER C

The amphibians of the Solomon Islands Cambridge, Mass Printed for the Museum 1952 64 p illus 23 cm (Harvard college Museum of Comparative Zoology Bulletin Vol 107 no 1) $1 00 2437

Contents Introduction. Distributional chart showing known ranges of the species within the Solomons. Systematic discussion Key to families. Bufonidae. Hylidae. Ranidae. Bibliography Plates.

Note A preliminary revision of the amphibian fauna of the Solomon Islands, a geographical region of considerable zoological interest in the study of amphibians and reptiles It was based on the literature and an extensive study of specimens in museum collections. Eighteen species and subspecies are described. The systematic accounts emphasize morphology and are exceptionally detailed. Information is included on range. They are preceded by an historical survey of earlier work a gazetteer of collecting stations, notes on geology and geography of the Solomon Islands, and general discussion of the nature and distribution of the amphibian fauna of these islands. There are eight plates containing 50 drawings, of which a majority are drawings of amphibian heads.

CAHN, ALVIN ROBERT

The turtles of Illinois with 31 plates 20 maps and 15 text figures Urbana University of Illinois Press 1937 218 p illus 26 cm (Illinois biological monographs Vol XVI nos 1–2) $3 00 2438

Contents Illinois topography and hydrography Historical review Key to the families of Illinois turtles Chelydridae. Kinosternidae. Testudinidae. Trionychidae Family Chelydridae Genus Macrochelys. Genus Chelydra. Family Kinosternidae Genus Sternotherus. Genus Kinosternon. Family Testudinidae Genus Clemmys Genus Emys. Genus Terrapene. Genus Graptemys. Genus Chrysemys. Genus Pseudemys Family Trionychidae Genus Amyda. Hypothetical list Bibliography Glossary

Note Detailed descriptions of the adult and young eggs, habits, economic importance food habits, sex differentiation and parasites The identification keys and photographs are designed to be intelligible to readers who are not professional herpetologists.

CARLANDER KENNETH D

Handbook of freshwater fishery biology A publication of the Iowa Cooperative Fishery Research Unit, sponsored by the Iowa State Conservation Commission and the Industrial Science Research Institute of Iowa State College Dubuque Wm C. Brown Company 1951 281 p. 22 cm $6 50 2439

Contents Introduction and instructions for reading the tables: Lengths, Ages. Calculated lengths. Length-weight relationship. Condition index. Fecundity Suggestions for conducting a simple age and growth study Life histories (by species) Population data. Conversion tables. Literature cited. Index. Appendix Alinement charts and nomographs.

Note A useful compilation of data and literature references. The author has stated An effort has been made to cover as completely as possible all data on the growth, length, weight, and various length relationships on all species of fresh water fishes found in the United States and Canada. Data on these points are tabulated for each species or other form. The data are stated specifically making reference to the original literature unnecessary for many readers nevertheless, references to the source literature are carefully given Data on fecundity that is, number of eggs per female are given for some species. In the much shorter section entitled Population data Information is collected on catch of fish per hour for various species and locations, annual yield per acre for ponds, lakes etc. These data are much less complete than those in the "Life history" section. A printing with the *First Supplement* was issued in 1953.

CARR, ARCHIE, AND COLEMAN J GOIN

Guide to the reptiles, amphibians and fresh water fishes of Florida. Gainesville University of Florida Press, 1955 341 p. illus 23 cm. $7 50 2440

Contents (abridged) Introduction. Fishes. Amphibians. Reptiles. Appendix. Selected references. Index.

Note The richness of the vertebrate fauna of Florida is indicated by the fact that 355 species, divided as follows, are described in this book 33 turtles, 35 lizards, 40 snakes, 1 crocodile, 1 alligator 39 salamanders, 26 frogs, and 154 fresh-water fishes. The book is designed primarily as an aid in identification, and the species descriptions are largely non-technical. These descriptions cover such points as scientific name local vernacular name, general appearance, distinguishing characteristics, morphological description, distribution, range within Florida, and habitat. The verbal descriptions are supplemented by a few drawings, but the majority of them have been made from photographs. Most plates contain more than one illustration. Glossaries and identification keys are included.

CARR, ARCHIE

Handbook of turtles the turtles of the United States Canada and Baja California. Ithaca Comstock Publishing Associates a division of Cornell University Press 1952 542 p. illus 24 cm (Handbooks of American natural history Albert Hazen Wright, advisory editor) $7 50 2441

Contents. Part I, Introduction Turtle functions and capacities Respiration. Circulation. Excretion Digestion Reproduction Senses, behavior and intelligence. Size growth and age Turtle adaptation Turtles and men Economic uses. Methods of collecting turtles. The inscrutable turtle Terminology of turtle structures. Revised terminology Parts of the bony shell Epidermal laminae The bones of the skull Shell abnormalities and their meaning Part II Accounts of species Key to the families Suborder Thecophora Family Chelydridae, the snapping turtles. Family Kinosternidae, the musk and mud turtles Family Emydidae fresh water and marsh turtles Family Testudinidae, the land tortoises Family Cheloniidae, the sea turtles Family Trionychidae the soft-shelled turtles. Suborder Athecae, the leatherback marine turtles Family Dermochelidae. Bibliography References for states and provinces. Index

Note An illustrated handbook describing 79 species and subspecies of turtles native to North America north of the Rio Grande The major species are illustrated with photographic plates, and distribution maps and are described under the following heads range distinguishing features, physical dimensions, habitat, habits, breeding, feeding, and economic importance The bibliography extends to 69 pages and is followed by an index by states and provinces.

COCHRAN DORIS M

Frogs of southeastern Brazil Washington, D C Smithsonian Institution 1954 423 p. illus 23 cm (United States National Museum Bulletin 206) 2442

Contents (abridged) Introduction. Family Brachycephalidae. Family Bufonidae. Family Crotaphatrema[?]. Family Hylidae—subfamily Hylinae. Subfamily [illegible]. Family Leptodactylidae. Family Microhylidae. Statistical analyses. Bibliography. Index.

Note A study based on a large number of specimens collected by the author and by Dr. Adolpho Lutz and on material from a number of museum collections in the United States of America and abroad. The species accounts are outstanding for their detailed descriptions of morphology and for their critical measurements. The morphological diagnoses sometimes run to more than one page. The measurements cover head and body (total length), head length, head width, femur, tibia, foot, and hand. Color in life and color in alcohol are described. Variations in morphology and color are discussed, and, at most accounts, there is a paragraph or two of miscellaneous remarks on such matters as voice, special features that distinguish the species from species similar in appearance, etc. A list of specimens examined is usually included. The 34 plates are all reproductions of photographs of specimens. The bibliography includes some literature published as recently as 1931.

Cunningham, Bert

Axial bifurcation in serpents; an historical survey of serpent monsters having part of the axial skeleton duplicated. Durham, Duke University Press, 1937. 117 p. illus. 23 cm. (Duke University publications) $2.50 **2443**

Contents Foreword, by Raymond L. Ditmars. Introduction. Types of axial duplication. Description of specimens according to type [illegible] specimens, [illegible] specimens (anterior dichotomy, anterior dichotomy, posterior dichotomy, complete dichotomy). General discussion: comparisons of the early theory of axial duplication in serpents, geographical distribution of specimens, causes of duplicate monsters. Bibliography. Index.

Note This book presents a compilation of all available data on two-headed, two-tailed, and Siamese twin snakes. It contains not only the names and descriptions of the snakes taken from the sources, but also any published figures which accompanied the original description. The 124 illustrations include photographs of the external appearance and X-ray photographs of the bony structure of specimens previously described, where known. A considerable number of the 100 specimens described are here described and figured for the first time. The snakes are grouped according to the kind and degree of duplication found in the skull and vertebral column, and are then discussed in chronological order. The data available on geographical distribution have been collected in one chapter, and another chapter is given over to discussion of probable causal factors.

Daniel, John Franklin

The elasmobranch fishes. Third edition, revised. Berkeley, University of California Press, 1934. 332 p. illus. (part col'd) 26 cm. $5.00 **2444**

Contents Introduction. External form. Integument. Endoskeleton. Musculature. Digestive tract. Respiratory tract. Circulatory system. Nervous system. Special senses. Urogenital system.

Note The elasmobranch fishes are unsurpassed as material on which to study the fundamental plan of the vertebrate body. In addition to his own work, the author has collected and studied the work done by many workers on the various types. The combined studies are presented as a guide for undergraduate students of college grade and as a book of reference on the entire subject. A bibliography is added to each chapter.

Ditmars, Raymond Lee

A field book of North American snakes. Garden City, Doubleday and Company, Inc., 1939. 305 p. illus. (part col'd) 21 cm. $4.50 **2445**

Contents Part I, The snakes of North America. A reptile survey of North America. Habits of North American snakes. How to identify snakes. Part II, The snakes of northeastern North America. Key to the snakes of northeastern North America. The northeastern nonpoisonous snakes. The northeastern poisonous snakes. Part III, The snakes of southeastern North America. Key to the snakes of southeastern North America. The southeastern nonpoisonous snakes. The southeastern poisonous snakes. Part IV, The snakes of western North America. Key to the snakes of western North America. The mildly poisonous rear-fanged snakes. The poisonous snakes of western North America. Part [illegible]. Treatment of snake bite. Classified list of North American snakes. Bibliography. Index.

Note An introduction to the field study of North American snakes, mainly those of the United States. It emphasizes on how to distinguish the non-harmful and harmful species. Descriptions, size, form, pattern, scalation, coloration, markings, range, peculiarities, and habits are given for each species treated. The work provides an introduction to the larger and more formal books about North American reptiles and is intended for the layman rather than the specialist. Forty-eight plates of photographs, colored frontispiece, and a short bibliography are included.

Ditmars, Raymond Lee

The reptiles of North America; a review of the crocodilians, lizards, snakes, turtles and tortoises inhabiting the United States and northern Mexico. Eight plates in color and more than four hundred photographs from life. Garden City, Doubleday and Company, Inc., 1936. 476 p. illus. (part col'd) 26 cm. $5.00 **2446**

Contents (abridged) Part I, The crocodilians. Part II, The lizards. Outline of the lizards and classification. The geckos. The American chameleons. The iguanas. The [illegible]. The spotted lizards. The swifts. The horned lizards. The plated lizards. The [illegible] lizards. Part III, The snakes. The worm snakes and dwarf boas. The ground snakes. The [illegible] snakes. The small swamp snakes and brown snakes. The racers. The flat-nosed snakes. The king snakes. The sharp-nosed snakes. The hog-nosed snakes. The rear-fanged snakes. The elapine poisonous snakes. The marine snakes. The crotaline snakes. The moccasins. The rattlesnakes. Part IV, The turtles and tortoises. Classification. The sea turtles. The snapping turtles. The musk and mud turtles. The large terrapins. The smaller terrapins. The box turtles. The tortoises. The soft-shelled turtles. Bibliography. Index.

Note While this work is scientifically accurate throughout, the emphasis has been upon simplifying the identification of the North American reptiles, thus assisting the beginner in herpetology and the general reader seeking scattered points of information about reptile life. The descriptions avoid complicated references to structure, since the author has depended upon the numerous excellent color and black-and-white photographs to cover most descriptive details. Synonymy is excluded, and although genera and species names of approved scientific standing are given, systematic classification is omitted. The notes on habits, particularly those [illegible] for the snakes, are of considerable interest, and represent a summary of the author's long experience with reptiles. The photographs contribute largely to the [illegible] of the work. Numerous titles are listed in the bibliography. The present volume represents a revision of the author's *The reptile book*, New York, 1907.

Ditmars, Raymond Lee

Snakes of the world. With illustrations from life. New York, The Macmillan Company, 1931. 207 p. illus. 27 cm. $4.95 **2447**

Contents The serpents' world. The scope of the class. Distribution of snakes. General habits. General classification. The giant serpents. The New World harmless snakes. The Old World harmless snakes. The rear-fanged snakes. Poisonous snakes of North America. Poisonous snakes of Central and South America. Poisonous snakes of Europe and Asia. Poisonous snakes of Africa. Poisonous snakes of Australia. Index.

Note The arrangement of the poisonous snakes of the world in geographical chapters gives this account particular significance for prospectors, explorers, scientists, and sportsmen. The emphasis is upon developing a quick means of distinguishing the poisonous snakes through coloration, scalation, habits, and other characteristics. The author has also included numerous other details and anecdotes from his long experience in collecting and handling snakes which make interesting reading for the amateur naturalist and layman. No attempt is made at systematic classification, but scientific names of families, subfamilies, genera, and species are given. An important feature of the work is the excellent collection of 150 photographs of snakes arranged in order of non-venomous, mildly poisonous, and dangerously poisonous varieties.

EDDY, SAMUEL, AND THADDEUS SURBER

Northern fishes with special reference to the Upper Mississippi valley Revised second edition Minneapolis University of Minnesota Press, 1947 276 p illus (part col d) 23 cm $4 00 2448

Contents A fisherman's luck. Fishing technique. Lake dynamics. Fish populations. Management of waters for fish production. Improvement of lakes and streams. Laws and propagation. Parasites of fishes. The structure of fishes. Classification and origin of fishes. Artificial key to families of common fishes. The cyclostomes. Petromyzonidae (the lamprey family) The osteichthyes or bony fishes. Polyodontidae (the paddlefish family) Acipenseridae (the sturgeon family) Lepisosteidae (the gar family) Amiidae (the bowfin family) Hiodontidae (the mooneye family) Clupeidae (the herring family) Osmeridae (the smelt family) Coregonidae (the whitefish family) Salmonidae (the salmon and trout family) Catostomidae (the sucker family) Cyprinidae (the minnow family) Ameiuridae (the North American catfish family) Umbridae (the mudminnow family) Esocidae (the pike family) Anguillidae (the eel family) Cyprinodontidae (the killifish family) Percopsidae (the troutperch family) Aphredoderidae (the pirateperch family) Serranidae (the sea bass family) Percidae (the perch family) Centrarchidae (the sunfish family) Atherinidae (the silverside family) Sciaenidae (the drum family) Cottidae (the sculpin family) Gasterosteidae (the stickleback family) Gadidae (the codfish family) Bibliography Index.

Note An interesting and useful combination of fisherman's lore and zoological information. All of the species and subspecies that are native or have been introduced into the lakes and streams of Minnesota and nearby territory are described, and pictures of many of them are included. In this edition, the text of the first 30 pages has been rearranged and expanded a few illustrations have been added, and a few additional fish records have been included. The book is suitable for amateur naturalists, conservation workers, and sportsmen who are interested in the habits and life histories of the fish they catch.

FISH MARIE POLAND

The character and significance of sound production among fishes of the northwestern Atlantic New Haven Peabody Museum of Natural History Yale University 1954 109 p illus 23 cm. (Yale University Peabody Museum of Natural History Bingham Oceanographic Collection. Bulletin, vol 14 art. 3) $1 65 2449

Contents (abridged) Abstract. Problem and procedure. Types of sound production among fishes. Biological significance of sound making. North Atlantic species studied for sound production in the present investigation. Discussion and conclusions. Acknowledgements Literature cited.

Note This work is the report of an experimental investigation of sound production by 54 species of North Atlantic coastal fishes. The techniques of the investigation are described and the results are presented in detail for each of the species with particular attention to the frequencies and other properties of the sounds produced, the stimulations that lead to sound production and the mechanisms of sound production. A bibliography of related literature is included.

FOWLER HENRY WEED

The fishes of the George Vanderbilt South Pacific Expedition 1937 Philadelphia The Academy of Natural Sciences of Philadelphia, 1938 349 p illus 27 cm. (The Academy of Natural Sciences of Philadelphia monographs No 2 forming Part III of the Zoological results of the George Vanderbilt South Pacific Expedition 1937) $3 50 2450

Contents Introduction. Itinerary Balboa, Canal Zone. Pearl Islands, Panama. Malpelo Island. Colombia. Galapagos Archipelago. Marquesas Islands. Tuamotus. Society Islands. Line Islands. Hawaiian Islands. Regional discussion of species. Summary Index

Note A report on the collection of specimens obtained from the Vanderbilt expedition in the tropical eastern and southern Pacific seas. About 10,000 enumerated specimens representing 310 genera and 434 species are described. The work presents systematic annotated classification arranged by locality including detailed anatomical descriptions and measurements. There are 12 plates of line drawings and an extensive index.

FOWLER, HENRY WEED

The fishes of Oceania. Honolulu Published by the Museum 1928 540 p illus. 32 cm (Bernice P Bishop Museum. Memoirs Vol x) $10 00 2451

—— Supplements 1–3 Honolulu Published by the Museum 1931–49 3 v 32 cm. (Bernice P Bishop Museum. Memoirs. Vol. XI, No 5–6 Vol XII, No 2) Suppl. 1 $2.00 Suppl. 2 $2 00 Suppl 3, $4 00 2452

Note The original monograph in this series was based primarily on an examination of some 14,000 species in the Bishop Museum and other collections in the Museum of Comparative Zoology at Harvard University in the United States National Museum and the Academy of Natural Sciences in Philadelphia, and secondarily on the literature. The supplements have been based on additional specimens and more recent literature. The viewpoint of the work is essentially faunal however the original reference type locality synonymy and morphology are listed and described for each form when it is first entered in the study Records of distribution also are given and considerable part of the material in the supplements consists of additional distributional records for species previously described. However many new species also are listed in the supplements. In the original monograph, there are [illegible] text figures and 49 plates.

FOWLER HENRY WEED

The marine fishes of West Africa, based on the collection of The American Museum Congo Expedition 1909–1915 New York American Museum of Natural History 1936 2 v illus 24 cm (American Museum of Natural History Bulletin. Vol LXX parts 1–2) Vol 1 $5 00 vol 2 $7 00 2453

Contents (abridged) Part I, Branchiostomidae to Polynemidae Introduction. Explanation of external characters. Bibliography Descriptive account of classes families, genera, and species. Part II Scombridae to Acerathidae Appendix. Bibliography to appendix Addenda. Index.

Note A comprehensive descriptive account of the fishlike vertebrates known from the coast of western tropical Africa, including also the outlying islands of the Madeiras, Canaries, and Cape Verde groups, the Azores, Ascension Island, and St Helena The major part of the work is devoted to the descriptions, in which the generally accepted technical name is given first, followed by that of the original describer The synonymy consists of the original reference and only such others as are embraced in the region under discussion. The range and remarks on the materials are also given, but where no materials are available, the descriptions are quoted from other authors. Five hundred sixty-seven outline drawings by the author accompany the descriptions. There are detailed index of 120 pages and bibliography listing 170 references to the world literature of the subject.

GLOYD HOWARD KAY

The rattlesnakes genera Sistrurus and Crotalus a study in zoogeography and evolution. Chicago Chicago Academy of Sciences 1940 266 p illus 24 cm (The Chicago Academy of Sciences Special publication no 4) $5 00 2454

Content Introduction Historical. Materials and procedure. Acknowledgements. A key to the species and subspecies of rattlesnakes. The rattle. Genus Sistrurus. Genus Crotalus. General summary The rattle. Size

and fauna. Distribution. Coloration. Specialization. Center of origin and dispersal. Bibliography. Index. Plates.

Note: This comprehensive study of the two rattlesnake genera had the following objectives: to review and revise the systematics of the rattlesnakes; to define and describe the species and subspecies; to bring together information concerning the distribution and variation of each form; to indicate the probable genetic relationships of the species and subspecies of the genus Sistrurus and [illegible] portion of the genus Crotalus, and to point out the most conspicuous evolutionary tendencies among the rattlesnakes and the probable center of origin of the group as a whole. The work is illustrated with 31 plates containing photographs and drawings and with 22 maps showing geographical distribution of species.

GORDAN JOAN

A bibliography of pagurid crabs, exclusive of Alcock, 1905 New York American Museum of Natural History 1956 100 p. 27 cm. (American Museum of Natural History Bulletin. Vol. 108 art. 3) $1.25 2455

Note: A bibliography of all publications concerning pagurid crabs except those publications listed in A. Alcock, *Catalogue of the Indian decapod crustacea in the collection of the Indian Museum Part II Anomura, fasc. 1 Pagurides*, 1905. The main part consists of a list of works arranged under authors' names. This is followed by an index by genera and species, and a subject index.

GREY MARION

Catalogue of type specimens of fishes in Chicago Natural History Museum. Chicago Chicago Natural History Museum, 1947 109–205 p. illus 23 cm. (Fieldiana Zoology Vol. 32 no. 3) $1.25 2456

Note: "The list recorded in this catalogue comprises all types, cotypes, and paratypes of fishes in the reference collection of Chicago Natural History Museum. About one-third of these types come from the collections of Central American fresh-water fishes described by Meek, and the Panama fishes described by Meek and Hildebrand. The types of the fresh-water species in the Panama collection are deposited in Chicago Natural History Museum, and the types of marine forms are in the United States National Museum." In the main part of the publication the arrangement is alphabetical by scientific name of species. The main list is followed by a list arranged by families.

HILDEBRAND SAMUEL FREDERICK

A new catalogue of the fresh-water fishes of Panama. Chicago Chicago Natural History Museum, 1938. 145 p illus. 24 cm. (Chicago Natural History Museum. Publication 425 Zoological series. Vol. XXII no. 4) $2.25 2457

Contents: Introduction. Notes on the origin and distribution of Panama fishes. Introduction of fishes. New and abandoned localities. Acknowledgments. New species described. Catalogue of species. References.

Note: A paper embodying the results of a study based mainly on specimens and data collected by the author during 1935–37 and supplemented by information gained from the examination of small collections made by others. Only those species which live more or less constantly in fresh water are included. Wherever recently proposed changes in nomenclature of families and genera have not been followed, the reasons are stated. A total of 127 species are described. There is a bibliography of 33 papers and studies.

HUBBS CARL LEAVITT AND KARL F LAGLER

Fishes of the Great Lakes region. Bloomfield Hills, Mich. Cranbrook Institute of Science 1947 186 p illus. (part col d) 24 cm. (Cranbrook Institute of Science. Bulletin no 26) $ 2458

Contents: Anatomical features, terms and methods of counting, measuring, collecting and preserving. Key to the families. Keys and species accounts: Lamprey family. Paddlefish family. Sturgeon family. Gar family. Bowfin family. Mooneye family. Herring family. Salmon family. Whitefish family. Grayling family. Smelt family. Sucker family. Minnow family. North American catfish family. Mudminnow family. Pike family. Freshwater eel family. Killifish family. Livebearer family. Cod family. Troutperch family. Pirate-perch family. Bass family. Perch family. Sunfish family. Silverside family. Drum family. Sculpin family. Stickleback family. List of references. Halftone plates. Index.

Note: A standard guide for both amateur and professional zoologists to the identification, range and ecology of the fishes of the Great Lakes drainage basin. It is an expansion of the author's *Guide to the fishes of the Great Lakes and tributary waters*, Bloomfield Hills, Mich. 1941; and this edition has been improved with many more illustrations, with popular accounts of the various families, with additional information on ranges. There are now twenty-six color plates and 251 illustrations in black and white. A new edition was in press in 1957.

JORDAN DAVID STARR AND OTHERS

Check list of the fishes and fishlike vertebrates of North and Middle America north of the northern boundary of Venezuela and Colombia. By David Starr Jordan Barton Warren Evermann and Howard Walton Clark. Washington, D C. Government Printing Office 1955 670 p. 23 cm. (U S Fisheries Commission. Report 1928 Part II) $3.00. 2459

Note: When first published in 1930, this work was a comprehensive list of all the fishes and fish-like vertebrates known to occur in the waters of North and Middle America, more specifically all of continental America north of the Isthmus of Panama, and the outlying islands, including the West Indies, the Greater and the Lesser Antilles, Greenland, Iceland, and the islands of the Pacific coast of Central America, Mexico, United States, and Alaska. The salt-water species on the northern coasts of Colombia and Venezuela have been included. Oceanic species in general within the 1,000-fathom curve have been admitted, although it is not always easy to draw the line. The list gives the scientific and vernacular names for each species and sub-species, the known geographic distribution of each species, a literature reference to the original description, and a reference to every real synonym. The arrangement is by systematic order with alphabetically-arranged indexes to common and scientific names. It was first published in 1930 as Part II of the Report of the United States Commissioner of Fisheries for the fiscal year 1928, and has been reprinted without change by United States Fish and Wildlife Service.

KLAUBER LAURENCE MONROE

Rattlesnakes their habits, life histories and influence on mankind. Published for the Zoölogical Society of San Diego Berkeley University of California Press 1956 2 v illus. (part col d) 27 cm. $17 50. 2460

Contents (abridged): Volume I: Classification and identification. Paleontology and phylogeny. Morphology. Physiological summary. Color and pattern. The rattle. Bodily functions. Growth and longevity. Skin shedding. Locomotion. Senses. Behavior: Temporal activity and limitations. Physiological temperature limitations. Temporal variations in habits. Defensive and warning behavior. Climbing proclivities. Swimming ability. Populations and ecology. Food. Reproduction. Volume II. Poison apparatus. The fangs. Venom. The bite and its effects: Snake-bite statistics. Symptoms and aftereffects. Susceptibility, resistance, and immunity to rattlesnake venom. Treatment and prevention of the bite. Control and utilization: Economic advisability of control. Methods of control. Commercial utilization of rattlesnakes and their by-products. Enemies of rattlesnakes: Mammals and marsupials. Bird enemies. Reptile and amphibian enemies. Parasites and diseases. Indians and rattlesnakes: Religion, superstition, and folklore. Protective measures. Sucking and cauterization. Snake-bite treatment. Rattlesnake charmers and ornamental curse. Post-Columbian knowledge of rattlesnakes. Myths of venom and snake-bite. Folklore remedies derived from rattlesnakes. Protective methods and devices. Miscellaneous beliefs and folklore. Bibliography. Index.

Note A complete zoological and ecological study of the rattlesnake its classification, habits and life history its bite and its poison and its place in folklore. The author does not exaggerate when he states in his preface that "In a way this book is an encyclopedia of the rattlesnake," for it would be hard to find a single fact about rattlesnakes which could not be located through the index at the end of Volume 2 The publication will be valuable both to the herpetologist and others for reference and to the layman interested in knowing more about rattlesnakes. Some idea of the magnitude of the work may be gained from knowing that the bibliography covers 140 pages and the index 72 double-columned pages.

LAGLER, KARL F

Freshwater fishery biology Second edition Dubuque Wm C Brown Company, 1956 421 p. illus 24 cm $6 75 2461

Contents Natural history and ecology Freshwater fishes of North America, north of Mexico. Identification of fishes and other aquatic organisms. The literature of fish and fisheries. Fish anatomy Fish embryology Life history stages following hatching. Food. Age and growth. Length-weight relationship and condition. Fish populations. Yield. Fish pathology Pollution. Laws. Fish culture. Fishery surveys of lakes, ponds, and impoundments. Improvement of lakes, ponds, and impoundments. Stream surveys. Stream improvement. Creation of new fishing waters. Freshwater commercial fisheries. Freshwater recreational fisheries. Appendixes Scales of common and representative families of American freshwater fishes. Blank forms for recording data in fishery surveys. Abbreviations for words used in the names of technical journals and periodic publications. Clinical aspects of certain fish diseases with special reference to those encountered in trout culture. Conversion tables. Checklist and economic classification of common and representative fresh water fishes of North America, north of Mexico. Index.

Note. A documented text and reference book for fishermen, students, teachers, and professional workers. There is some bias toward topics of interest to those with professional interests in the biology or culture of fish. Techniques of studying fish are especially well covered. However all aspects of the subject are discussed, and practically all readers with mature interests in fresh-water fish can find something of value in it. The volume is well arranged and well illustrated. Noteworthy is a separate chapter on the literature of fish and fisheries. In addition, bibliographical references pertinent to the subjects of other chapters are included in those chapters. The first edition was published in 1952. In this second edition, the book has been considerably revised and its length increased by approximately 50 pages. New literature has been added to the bibliographies, and there has been some revision of the illustrations. The author is Chairman of the Department of Fisheries in the School of Natural Resources in the University of Michigan

LONGLEY, WILLIAM HARDING, AND SAMUEL F HILDEBRAND

Systematic catalogue of the fishes of Tortugas, Florida, with observations on color, habits, and local distribution Edited and completed by Samuel F Hildebrand. Washington, D C. Carnegie Institution of Washington 1941 331 p illus 25 cm. (Carnegie Institution of Washington. Publication no 535 Papers from Tortugas Laboratory Vol XXXIV) o p 2462

Contents (abridged) The Tortugas islands New genera and species. Bibliography of publications by William H. Longley based on his studies at Tortugas. Systematic catalogue. Index.

Note A classification of the various kinds of fishes studied at Tortugas over a period of 25 years. Measurements, habitat, food, and in some cases references to literature are included There are 34 pages of photographs.

LOVERIDGE, ARTHUR

Australian reptiles in the Museum of Comparative Zoology Cambridge Mass Museum of Comparative Zoology 1934 143 p illus. 24 cm (Harvard College Museum of Comparative Zoology Bulletin Vol. LXXVII, no 6) $1 00 2463

Note The collection on which this report is based consists of 2,091 specimens, representing 267 species or races, comprising 1 of crocodilians, 8 of chelonians, 111 of snakes and 133 of lizards. More than half of the reptiles were taken in the field by members of the Harvard Expedition of 1931 1932 Other specimens had been obtained on earlier expeditions, while still others have been presented to the Museum by individuals and other agencies. The systematic results of the study are stated under each species so that they may be available to Australian herpetologists. The name by which each species is now known is followed by the original citation and type locality and the registration number in the departmental catalogue is given followed by the locality

LOVERIDGE, ARTHUR

Reptiles of the Pacific world New York The Macmillan Company, 1945 259 p. illus. 21 cm (The Pacific world series) $3 75. 2464

Contents Island reptiles and how they got there. What is a reptile?—The tuatara. Turtles, terrapins, and tortoises. Gavial and crocodiles. Lizards. The nonpoisonous snakes. Poisonous land snakes of the cobra family Poisonous sea-snakes. Poisonous land snakes of the viper family Snake bite and first aid treatment. Economic aspects of reptiles and need for protection. A brief survey of the Pacific amphibians. Suggestions for safe shipment of living reptiles. Hints on collecting specimens when on active service. Chart showing distribution of reptiles and amphibians. Useful English works on Oriental herpetology Index to, and systematic list of, species mentioned.

Note A handbook of general information about reptiles and amphibians to be found in the Pacific area, especially those occurring in the lands west of New Guinea from the Dutch East Indies to Japan. The abundant and conspicuous forms have been selected for special description, and interesting facts are given concerning their temperament, breeding habits, favorite food, and the nature of their enemies and defense. Like other volumes in the series it is addressed primarily to amateur naturalists.

MARTOF BERNARD S

Amphibians and reptiles of Georgia, a guide Athens University of Georgia Press, 1956 94 p illus 21 cm $2 00 2465

Contents Introduction. Key to the major groups of amphibians and reptiles. Key to the salamanders. Key to the frogs and toads. Key to the turtles. Key to the crocodilians. Key to the lizards. Key to the snakes. Protection against snake bite. Preservation of specimens. Checklist. Glossary References

Note An inexpensive reference manual designed to aid in the identification of the herpetofauna of Georgia The keys and the check list occupy most of the space. There are 32 figures and all are reproductions of line drawings of morphological features useful in identification.

MORRIS, PERCY A

Boy's book of snakes how to recognize and understand them New York The Ronald Press Company 1948 185 p. illus. 24 cm. (Humanizing science series) $3.50 2466

Contents What is a snake? False lore of snakes. Harmless snakes of garden and barnyard. Harmless snakes of field and pasture. Harmless snakes of wooded areas. Harmless snakes of ponds and marshes. Poisonous snakes of the United States. Nonpoisonous snakes of other lands. Poisonous snakes of other lands. The care and feeding of snakes. List of authorities cited. Books for further reading Classification of United States snakes. Classification of foreign snakes Index

Note A well-illustrated book that describes in simple language the appearance life habits, geographic range, and the principal points for recognition of the world's important snakes. The author explains which snakes are beneficial to man and which are injurious. He further tells how to catch harmless snakes, how to keep them as pets, and he mentions what to do in case of snakebite from a venomous snake. Although intended mainly for juvenile readers the book is suitable also for adults who desire elementary information on snakes.

NEWMAN HORATIO HACKETT

The phylum Chordata biology of vertebrates and their kin. A revision of Vertebrate zoology New York The Macmillan Company 1939 477 p. illus. 22 cm. $6.25 2467

Contents Characteristics, content, and classification of the phylum Chordata. Principles and factors of vertebrate evolution. Primitive chordates (Protochordata) Class Cephalochordata. Class Urochordata. The Hemichordata and the phylogeny of the chordates. The most primitive vertebrates Monorhina (Agnatha) Introduction to the class Pisces (gnathostome fishes) Chondrichthyes (shark-like fishes) The anatomy of the dogfish (an example of generalized vertebrate) Bony fishes (Osteichthyes) Teleost fishes (order Teleostei) The class Amphibia (their origin and early career) Living Amphibia. Anatomy of a salamander (an example of generalized tetrapod) Class Reptilia (introduction). The fossil pedigree of the reptiles. Modern reptilian orders. Class Aves (birds) Birds of today Embryonic development of the bird. Class Mammalia (general and historical). Monotremes and marsupials. Orders of placental mammals. The development of mammals. Index

Note. A textbook intended for introductory college courses in comparative anatomy or vertebrate zoology in which the laboratory and lecture parts of the course are essentially independent though supplementary The book presents the subject-matter of the lecture part of such a course, together with considerable additional material for supplementary reading, and is a revision and enlargement of the author's earlier work, Vertebrate zoology New York, 1932 Brief descriptions of the salient anatomical and physiologic characteristics of the various classes, orders, suborders, and families are presented, with detailed descriptions and drawings of [illegible] type specimens.

NICHOLS JOHN TREADWELL, AND PAUL BARTSCH

Fishes and shells of the Pacific world. New York The Macmillan Company 1945 201 p. illus 21 cm. (The Pacific world series) $4.00 2468

Contents Part I, General review of the fishes, by John T Nichols Origin and distribution of Pacific fishes. Different kinds of fishes. Collecting specimens. Part II. Fishes of particular interest, by John T Nichols Sharks and rays. Important fish groups. Perchlike fishes. Ocean-fishes. Part III, Shells, by Paul Bartsch Characteristics of shells. Systematic review Instructions for collecting mollusks Reference works. Index for fishes. Index for shells Explanation of plates.

Note Part I of this pocket handbook consists of a general discussion of the kinds of fishes to be found in the Pacific area and their outstanding characteristics There are simple line drawings to assist the observer in placing the fish he encounters. Part II [illegible] for reference than general reading and gives scientific names and means of identifying the specimens of salt water shellfish, that are widely distributed and most likely to attract attention Part III, which is devoted to shellfish, reviews their general characteristics, distribution, and classification and describes those most commonly found. Photographic illustrations of many varieties of shells will aid in identification There is an index for both fishes and shells which includes common and scientific names and refers to illustrations as well as textual material

NICHOLS JOHN TREADWELL

The fresh-water fishes of China. With 143 figures in the text 10 colored plates, and 1 map. Ruth Tyler editor New York The American Museum of Natural History 1943 322 p illus. (part col d) 27 cm. (Central Asiatic expeditions. Natural history of Central Asia. Vol. IX) $10.00. 2469

Contents (abridged) Introduction Systematic account of the fresh-water fishes. Bibliography Index

Note Descriptions of the various known genera and species of the fresh-water fishes of China proper. The information is based upon the collections in the American Museum of Natural History No attempt is made to cover marine species or brackish-water species with marine affinities.

NICHOLS JOHN TREADWELL

Representative North American fresh water fishes Illustrated by Andrew R. Janson New York The Macmillan Company 1942 128 p. illus. (part col d) 10 cm $1 75 2470

Note This pocket guide contains illustrations in black and white and in color of 60 representative North American freshwater fishes, each accompanied by a page of descriptive text, written mainly for the angler or amateur naturalist rather than the student of ichthyology Such questions as the names of fish, the difference between pike and muskalonge, nesting habits of the blackbass, migration, identifying characters, and adaptability are discussed briefly Important facts about the place of certain fish in evolutionary development, their ability to see and hear and similar data appear in the notes. There is a brief index of subjects.

NOBLE, G KINGSLEY

The biology of the amphibia. New York Dover Publications Inc., 1954 577 p illus 20 cm. $2 98 2471

Contents Part I, Their structure and functions. The origin of the amphibia. Development and heredity The modes of life history Speciation and adaptation. Sex and secondary sex characters. The integument. The respiratory system. The circulatory system. The digestive system. The skeleton. The muscular system. The urogenital system. The endocrine glands. The sense organs and their functions. The nervous system Instinct and intelligence The ways of amphibia. The relation of amphibia to their environment. Geographic distribution and economic value Part II, Relationships and classification. Order 1 Labyrinthodontia. Order 2 Phyllospondyli. Order 3, Lepospondyli. Order 4 Gymnophiona. Order 5 Caudata. Order 6, Salientia. Index.

Note Although originally published in 1931 this work is still considered a standard monograph on the frogs, toads, salamanders and other amphibia. The primary emphasis is on structure and function. In fact, the part devoted to these topics accounts for 3/4 of the pages in contrast to the 83 pages devoted to classification. There are 11 figures and rather extensive lists of literature references. However no recent literature is listed. As mentioned, the book was first published in 1931 The edition described here is an unabridged reprint, unchanged from the original text except for the addition of a three-page biographical note on the author

OLIVER JAMES A.

The natural history of North American amphibians and reptiles. Princeton D Van Nostrand Company Inc., 1955 359 p. illus 24 cm. $6 95 2472

Contents Folklore Economic values, Classification, North American amphibians. North American reptiles. Occurrence of amphibians and reptiles. Locomotion and movements. Activity Relation to environment Food and feeding Reproduction Growth, size, and longevity Amphibians and reptiles as pets. Glossary Recommended references. Index.

Note An illustrated volume describing the general ways and life habits of amphibians and reptiles for the naturalist and student of herpetology in America north of Mexico It is not a handbook or field guide but is a readable work for the general reader The author is Curator of Reptiles, New York Zoological Society

PICKFORD GRACE E., AND OTHERS

Fish endocrinology New Haven Peabody Museum of Natural History Yale University 1953 116 p. illus. 23 cm. (Yale University Peabody Museum of Natural History Bingham Oceanographic Collection Bulletin Vol. 14 art. 2) $1 75 2473

Contents A study of the hypophysectomized male killifish *Fundulus heteroclitus* (Linn.) by G. E. Pickford. A note on the effects of hypophysectomy on the [illegible] pathway in *Fundulus*, by S. L. Foley The response of hypophysectomized male *Fundulus* to injections of purified beef growth hormone, by G. E.

Pickford. Toxic effects of thiourea on the liver of the adult male killifish, *Fundulus heteroclitus* (Linn.) by H A. Chambers. Experimental differentiation of basophil cell types in the transitional lobe of the pituitary of a teleost fish, *Astyanax Mexicanus*, by E. H. Atz.

Note. A detailed presentation of research investigations on the endocrinology of fishes. The experimental techniques are described, the results are presented in a narrative text and in tables, and literature references are given.

PICKWELL, GAYLE

Amphibians and reptiles of the Pacific States Stanford Stanford University Press, 1947 236 p. illus (part col'd) 26 cm. $4 00 2474

Contents Introduction. Amphibians of the Pacific States. Reptiles of the Pacific States. Life habits of amphibians of the Pacific States. Lif habits of reptiles of the Pacific States. Collecting, handling and care of amphibians and reptiles. Plates I-LXIV Amphibians and reptiles. Appendix Keys to the amphibians and reptiles. Glossary Bibliography Index.

Note A well-written manual of the amphibians and reptiles which are found in the states of Washington Oregon, and California. Most of the descriptions are based on direct observations of the author or his students, and most of the illustrative material also is original. The book is semi-popular in the sense that it can be understood and will be useful to amateur naturalists. However the keys and the information on habits are of interest to the professional herpetologist as well. Identification and habits are emphasized. The bibliography includes both the popular and the scientific literature.

PIETSCHMANN, VICTOR

Hawaiian shore fishes Honolulu Bernice P Bishop Museum, 1938 55 p illus 25 cm (Bernice P Bishop Museum. Bulletin 156) $2 50 2475

Contents Introduction. Descriptions of species. Literature cited. Index.

Note This study is based on material collected in 1927–28 in the waters off many of the Hawaiian islands, including uninhabited coral islands and atolls. The citation of many new localities for species found hitherto only on some, or one, of the islands shows that the fish fauna of these islands is uniform. The material collected consisted of adult specimens, young stages, and larval forms. The young stages are included in the present study but the larval forms will be treated in another paper

POPE, CLIFFORD HILLHOUSE

The reptile world a natural history of the snakes lizards turtles and crocodilians New York Alfred A Knopf 1955 338 p illus (part col'd) 24 cm. $7 50 2476

Contents (abridged) Reptiles (Class Reptilia) Crocodilians (Order Crocodilia or Loricata General account Account by species —Family Alligatoridae—Family Crocodylidae—Family Gavialidae. Bibliography Tuatara (Order Rhynchocephalia) Bibliography Turtles (Order Chelonia) General account. Account by families —Snapping turtles (Family Chelydridae)—Musk and mud turtles (Family Kinosternidae)—Famil Dermatemydidae—Big-headed turtle (Family Platysternidae)—Fresh-water turtles (Family Emydidae)—True tortoises (Family Testudinidae)—Sea turtles (Family Cheloniidae)—Side-necked turtles (Family Pelomedusidae)—Snake-necked turtles (Family Chelidae)—P tted-shelled turtle (Family Carettochelydidae)—Soft-shelled turtles (Family Trionychidae)—Leatherback turtle (Family Dermochelidae) Bibliography Snakes (Suborder Serpentes) General account Account by families—Blind snakes (Families Typhlopidae and Leptotyphlopidae)—Boas and pythons (Family Boidae)—Colubrid snakes (Family Colubridae)—Cobras, coral snakes, and their allies (Family Elapidae)—Sea snakes (Family Hydrophiidae)—Vipers (Family Viperidae) Bibliography Lizards (Suborder Sauria) General account Account by families—Geckos (Family Gekkonidae)—Iguanids (Family Iguanidae)—Agamids (Family Agamidae)—True chameleons (Family Chamaeleontidae)—Skinks (Family Scincidae)—Teiids (Family Teiidae) Bibliography Index.

Note. An inclusive book that deals not only with the reptile world but also with the reptiles of the world. It is not comprehensive in the sense that all known reptiles are described. On the other hand, it does contain some information on most of the groups and species in which the nonspecialist is likely to be interested. Habits, sizes, courtship and mating, and other facts of fairly general interest are emphasized. The illustrations are an outstanding feature There are 221 figures, and most of them are reproductions of photographs. The book is an excellent one for home libraries and the personal libraries of biological scientists who are interested in a general rather than a professional way in reptiles. The author was formerly Curator of the Division of Amphibians and Reptiles of the Chicago Nat ral History Museum.

POPE, CLIFFORD HILLHOUSE

The reptiles of China turtles crocodilians snakes, lizards With 78 illustrations in the text, including a map, and 27 plates at end. New York The American Museum of Natural History, 1935 604 p illus. 28 cm. (Central Asiatic expeditions. Natural history of Central Asia. Vol x) $10 00 2477

Contents (abridged) General introduction. Systematic account by species and sub-species. Résumé of the natural history of Chinese snakes. Annotated check list of Chinese lizards. List of localities. Bibliography Index.

Note This work brings together a vast amount of information concerning the habits, classification, and distribution of reptiles in China and adjacent countries. The known forms of Chinese turtles, crocodilians, and snakes are taken up one by one and treated with equal emphasis on description, distribution, ecology and synonymy Keys to all families, genera, and species are included The bibliography is extensive.

POPE, CLIFFORD HILLHOUSE

Snakes alive and how they live. Illustrated with photographs and including an illustrated key for the identification of the snakes of the United States. New York The Viking Press, 1937 238 p illus. 22 cm $4 00 2478

Contents A lover of snakes. Usefulness. Size Age and growth. Senses and intelligence. Feeding. More about feeding. Reproduction Locomotion. Defense. Enemies. Where snakes live. Hibernation. Popular beliefs. Snakes as medicine. Snake hunting. Snakes as pets. Venoms. Snake-bite and its treatment. Classification. Appendix: How to identify the snakes of the United States Index.

Note. The author uses his wide knowledge of reptiles to point out the usefulness, intelligence and good qualities of many snakes, the technique of handling them, and even their possibilities as pets for the children in the home. Venomous species are also described, and the appendix contains a key to the identification of all specimens of snakes found within the United States of America. The book is for the lay reader and amateur naturalist.

POPE CLIFFORD HILLHOUSE

Turtles of the United States and Canada. Illustrated with 99 photographs. New York A. A Knopf 1939 343 p illus 22 cm. $5 00. 2479

Contents (abridged) Turtle beginnings and ways. Identification of American turtles. The musk and mud turtles The snapping turtles. Spotted, wood, Pacific and Muhlenberg's turtles. Blanding's turtle and the box turtles. Diamond-back terrapins Map turtles Painted turtles. Pseudemyd turtles. Chicken turtles. The desert, Berlandier's, and gopher tortoises. The sea-turtles. The soft-shelled turtles. Bibliography Lists f turtles with common and scientific names. Index

Not Written for the general reader Turtles in general are discussed, and then the various species found in the United States and Canada are described, with notes on their characteristics, habitats, habits, etc. Directions are given for the car of baby turtles kept as pets.

RANEY EDWARD C , AND OTHERS

The striped bass, *Roccus saxatilis* New Haven Peabody Museum of Natural History, Yale University, 1952 177 p. illus. 23 cm. (Yale University Peabody Museum of

Natural History Bingham Oceanographic Collection. Bulletin, vol. 14 art. 1) $3.00 2480

Contents: The life history of the striped bass, *Roccus saxatilis* (Walbaum), by E. C. Raney. Spawning grounds of the striped bass or *Roccus saxatilis* (Walbaum) in Virginia, by E. F. Tresselt. Variation in the feeding habits of the striped bass, *Roccus saxatilis* (Walbaum), in Chesapeake Bay by E. H. Hollis. Studies of the striped bass, *Roccus saxatilis* (Walbaum), with special reference to the Chesapeake Bay region during 1936-1938, by V. D. Vladykov and D. H. Wallace.

Note: The striped bass is an important sport and food fish along the Atlantic coast of continental North America from North Carolina to Maine and also on the Pacific Coast. The studies presented in this volume were detailed investigations of its life history, spawning and feeding habits and the results are presented in much detail. Raney's paper which [illegible] the longest one in the volume, includes comprehensive bibliography of the significant literature.

ROSTLUND ERHARD

Freshwater fish and fishing in native North America. Berkeley University of California Press 1952 313 p. illus 25 cm. (University of California. Publications in geography Vol. 9) $3.50. 2481

Contents: Part I. The fish resource. Food value of freshwater fishes. Principal species in the fish resource. The quantitative aspect of the fish resource—productivity of fresh waters. Rating of the fish resources by regions. Part II. Aboriginal fishery and fishing methods. Introduction to Part II. Fish nets. Weirs and traps. Fish spears. Fishhooks. Fish poisoning. Miscellaneous minor fishing methods. The preservation of fish. Summary of the utilization of the fish resource. Summary of culture-historical inferences. References to aboriginal fishing methods. Literature cited. Maps. Index.

Note: Both [illegible] contribution to anthropology and to zoology, this work [illegible] study of the fish resources available and the methods of fishing of the Indian tribes on the North American continent. The period [illegible] "contact time," or in other words [illegible] that period in history when native fish and fishery had not yet been severely disturbed by the invasion of Europeans. Freshwater and anadromous species of fish are covered, shellfish and marine species are not. The list of literature cited [illegible] 34 pages long and, in addition, the "References to aboriginal fishing methods" which is [illegible] detailed reference list to mentions of fishing equipment and methods in the literature, area by [illegible] region. Included are 35 maps showing the native range of individual genera of fish, the distribution of specific fishing methods, the quantities of fish available in fresh waters of native North America by region, etc.

RUGH, ROBERTS

The frog: its reproduction and development. The McGraw-Hill Book Company Inc. 1951 336 p. illus 24 cm. $5.00 2482

Contents: Introduction. General introduction to the embryology of the leopard frog, *Rana pipiens*. Reproductive systems of the adult frog. Fertilization of the frog egg. Cleavage. Blastulation. Gastrulation. Neurulation and early organogeny. A survey of the major developmental changes in the early embryo. A survey of the later embryo or larva. The germ layer derivatives. The endodermal derivatives. The mesodermal derivatives. Appendix. Chronological summary of organ anlagen appearance of *Rana pipiens*. Glossary of embryological terms. Bibliography for frog embryology. Index.

Note: A detailed and fully illustrated textbook on the embryology of the leopard frog, *Rana pipiens*. Normal embryological development [illegible] described but the importance of this frog in experimental embryology is indicated. A 3-page glossary and 12-page bibliography are unusual features for an undergraduate textbook of this kind. The author is [illegible] member of the faculty of Columbia University.

SCHMIDT KARL P., AND D DWIGHT DAVIS

Field book of snakes of the United States and Canada. With four colored plates and 103 drawings by Albert A. Enzenbacher and 82 photographs from life. New York G. P Putnam's Sons 1941 365 p. illus. (part col'd) $4.50. 2483

Contents: Introduction. The place of snakes in nature. Folklore of snakes. History of the study of snakes in the United States. Definitions and classification. External characters and coloration. The poison apparatus and treatment of snake bite. Habits and behavior. Collection, preservation, and the study of snakes. Systematic account of the snakes of the United States and Canada. Key to the genera of the snakes of the United States and Canada. The blind snakes—family Leptotyphlopidae. The boas—family Boidae. The harmless snakes—family Colubridae. The coral snakes—family Elapidae. The sea snakes—family Hydrophiidae. The pit vipers—family Crotalidae. References. Index.

Note: An outstanding example of nature handbooks addressed to such readers as amateur naturalists. It is authoritative and well organized. The first part, on snake folklore, snake habits and behavior, snake bite, etc., occupies 77 pages and provides the general [illegible] information on snakes needed by amateurs and beginning students of herpetology. The systematic accounts occupy most of the remaining space. Included in this part are identification keys, distribution maps, and accounts of species and related forms. The accounts of species give the common name and scientific names, description of physical appearance, range, size, food, and breeding habits. The drawings that accompany them are of good quality. In addition to the drawings in the text, there are 34 plates, most of which are reproductions of photographs of snakes and their eggs. The list of references is as extensive one [illegible] book of this kind.

SCHULTZ LEONARD PETER, AND OTHERS

Fishes of the Marshall and Marianas Islands. By Leonard P Schultz and collaborators Earl S Herald Ernest A. Lachner Arthur D Welander and Loren P Woods. Volume 1 Families from Asymmetrontidae through Siganidae. Washington, D C. Government Printing Office, 1953 685 p. illus 24 cm. (United States. National Museum. Bulletin 202) o p. 2484

Contents: Introduction. Phylum Chordata, subphylum Acrania, class Cephalochordata, order Branchiostomida. Subphylum Craniata, superclass Gnathostomata, class Chondrichthyes (cartilaginous fishes), subclass Selachii, superorder Selachoidei (sharks), order Lamnida. Superorder Rajoidei (skates and rays), order Rajida. Class Osteichthyes (bony fishes), subclass Teleostomi, superorder Teleostei, order Isospondylida. Order Anguillida (eels). Order Synentognathida. Order Berycomorphida. Order Anacanthinida. Order Syngnathida. Order Percomorphida. New genera and species. Index.

Note: A descriptive catalog of the fishes collected in the Marshall Islands in connection with, and after, the atom-bomb tests of Operation Crossroads, 1946. In addition, it includes material from the southern Marianas Islands and contains descriptions of new species and of new genera from various other areas of the tropical Indo-Pacific region, "wherever these new forms were found and were needed in the clarification of the species of fishes encountered in the central area under investigation." Most of the local collections and studies were made in 1946 and 1947. The principal author, who is Curator of Fishes at the United States National Museum, Smithsonian Institution, and his collaborators (whose individual contributions are identified in the text) examined over 50,000 specimens from the northern Marshall Islands and over 13,000 from the southern Marianas Islands in preparing the catalog. The descriptions of the species are detailed and include keys to the species and date and place of the capture of type specimens. Volume [illegible] is illustrated with line drawings in the text and with [illegible] plates reproducing photographs of specimens.

SCHULTZ, LEONARD PETER, AND EDITH M STERN

The ways of fishes. New York D Van Nostrand Company Inc., 1948. 264 p. illus. 24 cm. $5 75 2485

Contents: Migration. Locomotion. Hibernation and estivation. Fishes dangerous to man. Feeding habits. Association with other animals. Fighting fishes. Mass fish mortality. Electricity and luminescence. Sound and voice. Ocean beach spawners. Growth and death. Nest builders in streams. Fishes controllable by man. [illegible] A B C's. Fishes suitable for aquaria. Appendix—Classification of fishes. General index. Index of scientific names.

Note: The strange ways of fishes are the subject of this book, written by the Curator of Fishes of the Smithsonian Institution. It was not the authors' intention to present an orderly study of fish behavior but rather to describe instances of seemingly bizarre

Pickford. Toxic effects of thiourea on the liver of the adult male killifish, *Fundulus heteroclitus* (Linn.) by H. A. Chambers. Experimental differentiation of basophil cell types in the transitional lobe of the pituitary of a teleost fish *Astyanax Mexicanus* by E. H. Atz.

Note A detailed presentation of research investigations on the endocrinology of fishes. The experimental techniques are described, the results are presented in a narrative text and in tables, and literature references are given.

PICKWELL, GAYLE

Amphibians and reptiles of the Pacific States Stanford Stanford University Press 1947 236 p illus (part col'd) 26 cm. $4 00 2474

Contents Introduction. Amphibians of the Pacific States. Reptiles of the Pacific States. Life habits of amphibians of the Pacific States. Life habits of reptiles of the Pacific States. Collecting, handling, and care of amphibians and reptiles. Plates I-LXIV Amphibians and reptiles. Appendix Keys to the amphibians and reptiles. Glossary Bibliography Index.

Note A well-written manual of the amphibians and reptiles which are found in the states of Washington, Oregon, and California. Most of the descriptions are based on direct observations of the author or his students, and most of the illustrative material also, is original. The book is semi-popular in the sense that it can be understood and will be useful to amateur naturalists. However the keys and the information on habits are of interest to the professional herpetologist as well. Identification and habits are emphasized. The bibliography includes both the popular and th scientific literature.

PIETSCHMANN, VICTOR

Hawaiian shore fishes Honolulu Bernice P Bishop Museum 1938 55 p. illus 25 cm (Bernice P Bishop Museum. Bulletin 156) $2 50 2475

Contents Introduction Descriptions of species. Literature cited Index.

Note This study is based on material collected in 1927–28 in the waters off many of the Hawaiian islands, including uninhabited coral islands and atolls. The citation of many new localities for species found hitherto only on some or one of the islands shows that the fish fauna of these islands is uniform. The material collected consisted of adult specimens, young stages, and larval forms. The young stages are included in the present study but the larval forms will be treated in another paper

POPE, CLIFFORD HILLHOUSE

The reptile world a natural history of the snakes lizards, turtles, and crocodilians New York Alfred A Knopf 1955 338 p illus (part col d) 24 cm $7 50 2476

Contents (abridged) Reptiles (Class Reptilia) Crocodilians (Order Crocodilia or Loricata General account. Account by species —Family Alligatoridae—Family Crocodylidae—Family Gavialidae Bibliography Tuatara (Order Rhynchocephalia) Bibliography Turtles (Order Chelonia) General account. Contents: [illegible]

Note: [illegible]

and curious habits or physical characteristics of certain fishes. The book can be read with enjoyment by students of natural history, aquarium visitors, general readers with a flair for curious knowledge and even by professional ichthyologists.

SHIMADA, BELL M

An annotated bibliography on the biology of Pacific tunas Washington D C Government Printing Office 1951 58 p 26 cm (United States Fish and Wildlife Service Fishery bulletin 58 From Fishery bulletin of the Fish and Wildlife service volume 52) $0.30 2486

Content Introduction Annotated bibliography Abbreviations used. Index by subjects.

Note This bibliography covers chiefly the literature on the black skipjacks or little tunnies (*Euthynnus alletteratus, E. lineatus* and *E. yaito*) the oceanic or common skipjack (*Katsuwonus pelamis*) the albacore (*Thunnus germo*) the bluefin or black tunas (*Thunnus maccoyi T orientalis* and *T thynnus*) the big-eyed tunas (*Parathunnus mebachi* and *P sibi*) the yellowfin tuna (*Neothunnus macropterus*) and the frigate mackerels of the genus *Auxis* inhabiting the Pacific Ocean, including the waters contiguous to the Indo-Australian Archipelago. The bibliography is arranged alphabetically by author Date title, publication data and brief annotation are indicated for each item. Japanese references are included.

SMITH, HOBART MUIR

Handbook of amphibians and reptiles of Kansas Second edition Lawrence University of Kansas, 1956 356 p illus 23 cm (University of Kansas Museum of Natural History Miscellaneous publication 9) $4 00 2487

Contents (abridged) Treatment of species. History Composition of fauna. Venomous species. Collecting. Care of live individuals. Preservation of specimens. Identification Key to classes. Class Amphibia Salamanders, order Caudata. Anurans (frogs and toads) order Salientia. Class Reptilia Turtles, order Testudines Lizards, suborder Sauria. Snakes, suborder Serpentes. Pit vipers, family Crotalidae. Species and subspecies of probable but unverified occurrence. Glossary Literature cited. Index.

Note. A popular handbook directed primarily to amateur naturalists and students. Inasmuch as it contains considerable information on range in the state of Kansas and continental United States of America of the genera and species described, it is of some interest to professional herpetologists also. The species descriptions include both common and scientific names, the literature reference to the original description and type locality record of distribution by county within Kansas, and small map showing range in continental United States of America nontechnical description of morphology statement on recognition characters description of habits and habitat and other miscellaneous information. The introductory matter includes, among other topics, discussion of venomous species and some advice on collecting

SMITH, HOBART MUIR

Handbook of lizards lizards of the United States and Canada Ithaca Comstock Publishing Company 1946 557 p illus 24 cm (Handbooks of American natural history edited by Albert Hazen Wright Vol vi) $6 00 2488

Content Part I Introduction Zoological position Characteristics Distribution. Major groups Fossil history Structure Habitats Life history Habits Folklore Economic importance In captivity Collecting. Preserving American saurologists Problems Part II Accounts of species Key to families Family Gekkonidae Family Iguanidae Family Xantusiidae. Family Scincidae Family Lacertidae Family Teiidae Family Amphisbaenidae Superfamily Anguoidea Family Anguidae Family Helodermatidae Family Anniellidae Distribution maps. General literature State lists of species and literature Literature cited Index

Note A comprehensive manual of general and scientific information on American lizards The species treated include all native forms recorded, all exotic species established, and a few species never authentically reported but possibly occurring For each species is given so far as possible common name scientific name photograph range size color scalation, recognition characters, habits and habitat problems, bibliographical references. There are 41 distribution maps and three separate bibliographies. The photographic illustrations, which number in the hundreds, are mostly from photographs taken over many years by Dr Albert Hazen Wright and Mrs. Anna Allen Wright.

SMITH, HOBART MUIR

The Mexican and Central American lizards of the genus Sceloporus. Chicago Chicago Natural History Museum, 1939 398 p. illus. 24 cm (Chicago Natural History Museum. Publication 445 Zoological series Vol 26) $6 00 2489

Content Introduction. Geographical trends in variation Biotic provinces of Mexico. Regional lists. Method of treatment. Definition of the genus. Arrangement of the species in groups. Key to the groups of Sceloporus. Systematic list. Bibliography Index.

Note A summary of the results of the author's studies based on a collection of 17,500 specimens of lizards of the iguanid genus Sceloporus which form one of the largest and most recent groups among the reptiles of the New World. Authors who have dealt with the genus as a whole have disagreed to a surprising extent in their arrangement and evaluation of the species. The present work attempts to reconcile some of these differences, based on a more detailed study of a larger variety of species than hitherto possible. Original references, distribution, diagnosis, description, variation, relationships to other species, habits and habitat, and locality records are given for species or subspecies listed. There are 31 plates of photographs and a bibliography of approximately 300 articles and monographs.

STEBBINS, ROBERT CYRIL

Amphibians and reptiles of western North America. Illustrated by the author New York McGraw Hill Book Company Inc., 1954 528 p illus 24 cm $8.50 2490

Content Introduction Amphibians (class Amphibia): Salamanders (order Caudata) Frogs and toads (order Salientia) Reptiles (class Reptilia): Turtles (order Testudinata) Lizards and snakes (order Squamata) Glossary Index.

Note An elementary reference book designed primarily to aid in the identification of amphibians and reptiles in the western portion of the United States of America and Canada Methods of collecting and techniques for preservation of specimens are outlined in the introduction. Most of the space in the volume is devoted to descriptions (including pictures) of animals and to maps showing areas of distribution of the various species. Keys to families and genera are included. The descriptions of species and subspecies include information on occurrence morphology and habits. One or more references to literature are usually given for each species The illustrations are organized as 104 plates, most of which contain several pictures or maps.

STEBBINS ROBERT CYRIL

Amphibians of western North America. Berkeley University of California Press 1951 539 p illus (part col d) 24 cm $7.50 2491

Content Introduction. Class Amphibia. Salamanders Order Urodela Family Salamandridae Family Ambystomidae Family Plethodontidae Frogs and toads Order Anura Family Ascaphidae Family Pelobatidae Family Leptodactylidae Family Bufonidae Family Hylidae Family Ranidae Family Microhylidae Eggs and larvae Habitats Distribution maps. Glossary Bibliography Index

Note A wide range of information on the external form, coloration habits and distribution of the species of salamanders, frogs and toads inhabiting the 11 western states of the United States and Alaska, and the three western provinces of Canada is contained in this work. It is based on comprehensive coverage of the pertinent literature unpublished data, and the author's personal observations. The species of salamanders numbering 33 and the species of frogs and toads, numbering 29 are described in systematic order. The following information about species is generally given: range, type locality description, habitat behavior food, reproduction, and

[illegible] All species and some subspecies are shown in [illegible] ... the animals of each group are [illegible] ... in the drawings, the salamanders shown in dorsal and ventral views, the frogs and toads in three-quarter view. [illegible] the forms of eggs, larvae and typical habitats. A series of 44 sketch maps indicate locations of reported specimens of various species. The book is useful both to zoologists and to amateur naturalists who are interested in the fauna of the region covered.

Vertebrates (Birds)

University of Oklahoma. Biological Survey

Researches on the Amphibia of Oklahoma By Arthur N. Bragg, A. O. Weese, Harold A. Dundee, Helen Talley Fisher, A. Richards and Carol Bergthold Clark. Norman, University of Oklahoma Press 1950 154 p. illus. 23 cm. $1.00. 2492

Contents: Part I, Papers on taxonomy. The identification of Salientia in Oklahoma, by A. N. Bragg. Keys to frogs and toads of Oklahoma, by A. N. Bragg. A key to the adult salamanders of Oklahoma, including the forms likely to occur in the state, by H. A. Dundee and A. N. Bragg. [illegible] ... by A. N. Bragg. Part II, Papers on ecology. [illegible] ... by A. N. Bragg and A. O. Weese. [illegible] ... in Oklahoma, by A. N. Bragg. [illegible] ... by A. N. Bragg. Part III, Papers on sex cycles. [illegible] ... by H. T. Fisher and A. Richards. A comparison of the ovaries of two species of Bufo with different ecological requirements, by C. B. Clark and A. N. Bragg. Index.

Note: Studies made by staff members of the University of Oklahoma Biological Survey are published in this volume. Although the studies were made on amphibians occurring in the state of Oklahoma, they have [illegible] ... [illegible] ... in the amphibians.

Wright, Albert Hazen and Anna Allen Wright

Handbook of frogs and toads of the United States and Canada. Third edition. Ithaca, Comstock Publishing Company, Inc. 1949 640 p. illus. 24 cm. (Handbooks of American natural history. Albert Hazen Wright, advisory editor) $6.50 2493

Contents: General account. Common names. Proper classification. Scientific names. Specific evaluation of our North American forms. Range. Habitat. Size. General appearance. Color. Structure. Voice. Vocal sacs. Color of throat. [illegible] ... Breeding [illegible] ... Eggs. Synopsis of eggs of United States frogs. Tadpoles. Synopsis of United States tadpoles. Development and transformation. Journal notes. Authorities' corner. Keys. Families: Ascaphidae. Scaphiopodidae. Bufonidae. Hylidae. Leptodactylidae. Ranidae. Brevicipitidae. Accounts of species: Ribbed toads, Ascaphidae. Spadefoots, Scaphiopodidae. Toads, Bufonidae. Tree frogs, Hylidae. Robber frogs, Leptodactylidae. Frogs, Ranidae. Narrow-mouth toads, Brevicipitidae. Bibliography. Index.

Note: From its second to the third edition this standard hand book has been increased in size from 286 pages to 640 pages. While the new edition [illegible] on the same general plan as its predecessors, both the introductory general account and the specific descriptions have been greatly expanded. Including the keys, the general account now occupies 180 pages, with additional [illegible] ... One hundred species and subspecies are now included, and the descriptions run to 450 pages in contrast to 90 pages in the second edition. The number of plates was increased from [illegible] in the second edition to [illegible] in the third. In addition, the third edition includes 37 maps of distribution of species [illegible] ... The work [illegible] complete manual of American frogs and toads. It [illegible] written so that it may be used by amateur naturalists and teachers, as well as by professional workers. The illustrations are exceptionally good.

Allen, Arthur Augustus

Ornithology laboratory notebook for recording observations made in the field and studies made in the laboratory on the birds of North America with drawings by L. A. Fuertes, M. D. Pirnie and William Montagna. Fifth edition. Ithaca, Comstock Publishing Company, Inc., 1947 256 p. illus. 27 cm. $4.00 2494

Contents (*abridged*): Directions. Reference work to consult in completing the [illegible] ... and identification charts. [illegible] ... of the bird—Feather tracts of the bird—Parts of the feather—Skeleton of the bird. Diagrams. Feather types. Key to orders of North American birds. Keys to the families of birds found in North America. Identification of bird skins to the order and family. Orders of North American birds and their distinctive characters. Key to the nests of the commoner [illegible] ... birds. [illegible] ... North America. Summer and [illegible] ... of North American birds. Life history charts. [illegible] ... of egg shapes. Check list of birds of eastern North America.

Note: The intended purpose of this book is for use in organized courses in elementary ornithology such as are offered at Cornell University. Approximately half of the space is occupied by outline life history charts for the student's [illegible] ... observations and data on common species. However, the book is [illegible] useful home study guide for amateur ornithologists. It is well illustrated with line drawings and reproductions of photographs. In this edition the scope has been extended to include all North American birds.

Allen, Durward L.

Pheasants in North America. Frontispiece and drawings by Bob Hines. Harrisburg, Published by The Stackpole Company and the Wildlife Management Institute, Washington, D. C., 1956 490 p. illus. (part col'd) 24 cm. $7.50 2495

Contents: Pheasants and pheasant people [illegible], by F. B. Dale. [illegible] ... by J. B. Lauckhart and J. W. McKean. The pheasant in California, by C. M. Hart and others. Pheasants in the arid Southwest, by L. E. Yeager and others. Pheasants of the plains and prairies, by J. W. Kimball and others. Ringneck pheasants in the Great Lakes region, by R. A. McCabe and others. Pelee Island pheasants, by A. R. Baker. The pheasant in the northeastern states, by A. T. Studholme and D. Benson. The management outlook, by D. L. Allen. Literature cited. Index.

Note: Written from essentially the same viewpoint as W. L. McAtee edited *The ring-necked pheasant and its management in North America*, Washington, D. C., 1945 described below, this book is the work of [illegible] different team of authors. What they have written reflects much additional research on the ring-necked pheasant since the earlier volume was written. Emphasized are such topics as factors that affect the size of the pheasant population and the effects of stocking and of hunting in the geographical regions under discussion. One of the interesting facts brought out is that there is [illegible] relationship between soil fertility or [illegible] ... and the population of ring-necked pheasants it will support. The bibliography, although limited to writings cited in the text, runs to 16 pages. The book is of interest to sportsmen who are interested in conservation and to state and other officials who are concerned with wildlife management.

Allen, Elsa Guerdrum

The history of American ornithology before Audubon. Philadelphia, The American Philosophical Society 1951 387–591 p. illus. 30 cm. (American Philosophical Society. Transactions. New series—vol. 41, part 3) $2.00 2496

Contents: Ancient bird lore. Aristotle [illegible] ... of birds and the Middle Ages. Continental bird lore and the encyclopedists. Early bird lore in England. Early bird lore in the Western World. Early Colonial bird observation in America. The mid-seventeenth and early

eighteenth centuries. Mark Catesby founder of American ornithology American ornithology under European compilers. Bird observation resumed in America. Early ornithological observation around Hudson Bay and other boreal regions. Bird lists of the latter eighteenth century Bartram, Abbot, and Vieillot. Alexander Wilson father of American ornithology Bibliography Index.

Note A scholarly work based largely on a study of source materials in American university libraries and museums. It is thoroughly documented. The 14-page bibliography includes citations of not only the pertinent literature on ornithology but also biographical and historical writings. The [illegible] illustrations include portraits of scientists and reproductions of ornithological drawings manuscripts, etc.

ALLEN, ROBERT PORTER

The flamingos their life history and survival With special reference to the American or West Indian flamingo (Phoenicopterus ruber) New York National Audubon Society, 1956 285 p illus (part col'd) 27 cm (National Audubon Society Research report no 5) $3 95 2497

Contents Distribution and migration. Numbers. Food habits and ecology The breeding cycle. Conservation—limiting factors and the protection problem. Bibliography Appendices Some vernacular names of flamingos. Average and extreme measurements of flamingos. *A note for photographers. Further data on nesting.* Index.

Note A comprehensive study carried out primarily to provide scientific base for conservation measures. It contains some material on the Greater flamingo of Europe Africa and Asia, but is primarily concerned with the West Indian flamingo of the *Bahamas* and the Caribbean islands. It is based on extensive field study as well as a comprehensive survey of the literature. Historical aspects are covered, ranging from an account of the fossil record to excerpts of writings of early observers of this bird. Much information is included on behavior To cite an example, the chapter on the breeding cycle is 77 pages long. The bibliography is comprehensive.

ALLEN, ROBERT PORTER

The whooping crane New York National Audubon Society 1952 246 p illus (part col'd) 27 cm (National Audubon Society Research Report No 3) $3 00 2498

Content (abridged) Introduction. Part I, Distribution. Part II, Abundance. Part III, Migration. Part IV Food habits. Part V Winter life. Part VI, The breeding cycle. Part VII, Molt, plumages and anatomy Part VIII, Survival—protection and conservation. Appendix Local and foreign common names for the whooping crane. List of scientific names of plants and animals mentioned in the text Bibliography Index

—— A report on the whooping crane s northern breeding grounds A supplement to Research report no 3 *The whooping crane* New York National Audubon Society 1956 60 p illus 27 cm. $2 50 2499

Content I troduction. The search (1945–1953) The discovery Exploration. The nesting area The breeding population. Summary Appendixes Flora. Fauna. Bird lists. Mammals Bibliography Index.

Not Because of extensive publicity in recent years, hundreds of thousands of people know that the hooping crane, *Gru americana*, is threatened ith extinction The tw reports listed here resulted from joint project of the U ited States Fish and Wildlif Service and the National Audubon Society The project's aim as t *gather fund of knowledge* about this bird that could serve as the basis of conservation measures that would favor its survival The original report is comprehensive one based on extensive field study combined with study of the literature. The discussion of distribution, *for example* covers not *only recent* times but goes so far back as the author could find any records. In the part on survival, the author discusses the usual hazards and, also, unusual ones such as drilling for petroleum on the birds winter range, and low flying airplanes. *Much of the information* in the part on the breeding cycle is based on observation, made by others before the birds became so scarce, and partly on observations of captive pair The bibliography in this report is comprehensiv one. The supplement, published *four years after the original report*, records the culmination of 10 years intensive search for the northern breeding grounds. The discovery was first made in 1954 and as confirmed, and the area was explored in 1955 The supplement describes the discovery and exploration in detail and contains a bibliography supplementary to the one in the original report.

AMERICAN ORNITHOLOGISTS' UNION

Check list of North American birds. Prepared by a Committee of the American Ornithologists Union Fourth edition Constituting the 'Systema Avium" for North America north of Mexico Lancaster Pa. American Ornithologists Union, 1931 526 p 23 cm 2500

Content (abridged) Preface to the fourth edition. Check-list *Gaviiformes. Colymbiformes. Procellariiformes. Pelecaniformes.* Ciconiiformes. Anseriformes. Falconiformes. Galliformes. Gruiformes. Charadriiformes Columbiformes. Psittaciformes. Cuculiformes. Strigiformes. Caprimulgiformes. Micropodiformes. Trogoniformes. Coraciiformes *Piciformes. Passeriformes.* Hypothetical list. Summary of changes, additions, and eliminations. Fossil birds of North America. Index to check-list umbers. Index.

Not At the time of riting of this note (1937) this was the current edition of the standard reference list of birds known to occur on the North American continent north of Mexico and including Greenland. The first edition of it as published in 1886, the second edition in 1895 and the third edition in 1910 This fourth edition as prepared by committee of ornithologists all of whom had attained eminence as specialists on the birds of the North American continent. The list includes not only native species, but also accidental casual and introduced species. The accepted scientific and vernacular names are given for all the forms listed. The vernacular names have been carefully selected and might fairly be described as the vernacular names recognized by professional ornithologists. *Local names are not included* unless, *of course*, they coincide ith the accepted vernacular names A verified and carefully designated literature reference is given to the first description or type of each form, and type localities are referenced with the same care. The account of each form includes also *statement of* range. Throughout the book there are footnotes which contain explanatory comments, supplementary literature references, etc. The Index t check-list numbers" toward the end of the volume enables users of this fourth edition to correlate accounts of species and subspecies in it with those in previous editions here each account was prefaced by number. A fifth edition as published in 1957 691 p $8 00

AMERICAN ORNITHOLOGISTS' UNION

Fifty years progress of American ornithology 1883–1933 Revised edition. Lancaster, Pa. American Ornithologists Union 1933 249 p illus 24 cm. $1 00 2501

Contents I troduction. A brief history of the American Ornithologists' U ion, by T S. Palmer American ornithological literature, 1883–1933 by W Stone. Fifty years of bird migration, by W Rowan Bird banding, by F C. Lincoln. The theory of territorialism and its development, by M. M. Nice Advances in life history work, by H. Friedmann Economic ornithology by W L. McAtee Collections of birds in the United States and Canada study collections, by J L. Peters. Exhibition collections, by F M. Chapman. History and progress of bird photography in America, by A. O Gross. Fifty years of progress in American bird-art, by G. M. Sutton. Fifty years of bird protection by A. A. Allen. Fossil birds, by A. Wetmore Appendix Meetings and membership of the Union. Chronology of the American Ornithologists Union

Note This collection of papers does not pretend to cover the entire field of study and activity in ornithology in America Rather emphasis is placed on the progress in the science as it is shown by collections, literature and illustrations, and the information valuable for educational ork in the fields of migration bird banding, lif histories, territorialism economic ornithology and paleontology

Bent, Arthur Cleveland

Life histories of North American wood warblers, Order Passeriformes. Washington, D.C. Government Printing Office, 1953. 34

p illus 24 cm (Smithsonian Institution United States National Museum Bulletin 203) $4 50 2509

Note One of an extensive series of publications on families of birds of the North American continent, this publication follows the established pattern. Its subject, as noted in the title is the life histories, not the taxonomy or morphology of the North American wood warblers (family Parulidae) The monographic essays on the individual species cover such points as breeding range, migration nesting, number of eggs, behavior during incubation, plumages, song, food, and general behavior In many instances, these topics are discussed at length, and sometimes there are quotations of some length from the works of other authorities. The list of cited literature is an extensive one. The 83 plates are mostly reproductions of photographs of birds, nests and eggs in natural habitats.

BLAKE, EMMET REID

Birds of Mexico a guide for field identification by Emmet Reid Blake. Illustrated by Douglas E Tibbitts Chicago University of Chicago Press 1953 644 p illus 19 cm (A contribution of the Chicago Natural History Museum The University of Chicago Committee on Publications in Biology and Medicine Emmet B Bay and others) $6 00 2510

Contents Tinamous—Tinamidae. Loons—Gaviidae. Grebes—Colymbidae. Albatrosses—Diomedeidae. Shearwaters, fulmars, and petrels—Procellariidae. Storm petrels—Hydrobatidae. Tropic-birds—Phaëthontidae. Pelicans—Pelecanidae. Boobies and gannets—Sulidae. Cormorants—Phalacrocoracidae. Snake-birds—Anhingidae. Frigate-birds—Fregatidae. Herons and bitterns—Ardeidae. Boat-billed herons—Cochleariidae. Storks—Ciconiidae. Ibises and spoonbills—Threskiornithidae. Flamingos—Phoenicopteridae. Ducks, geese, and swans—Anatidae. New world vultures—Cathartidae. Hawks, eagles, and allies—Accipitridae. Ospreys—Pandionidae. Falcons and caracaras—Falconidae. Curassows, guans, and chachalacas—Cracidae. Quails and partridges—Phasianidae. Turkeys—Meleagrididae. Cranes—Gruidae. Limpkins—Aramidae. Rails, gallinules, and coots—Rallidae. Sun-grebes—Heliornithidae. Sun-bitterns—Eurypygidae. Jacanas—Jacanidae. Oystercatchers—Haematopodidae. Plovers and allies—Scolopacidae. Avocets and stilts—Recurvirostridae. Phalaropes—Phalaropodidae. Thick-knees—Burhinidae. Jaegers—Stercorariidae. Gulls and terns—Laridae. Skimmers—Rhynchopidae. Auklets and allies—Alcidae. Pigeons and doves—Columbidae. Parrots and macaws—Psittacidae. Cuckoos—Cuculidae. Barn owls—Tytonidae Owls—Strigidae. Potoos—Nyctibiidae. Nightjars and allies—Caprimulgidae. Swifts—Apodidae. Hummingbirds—Trochilidae. Trogons—Trogonidae. Kingfishers—Alcedinidae. Motmots—Momotidae. Jacamars—Galbulidae. Puffbirds—Bucconidae. Toucans—Ramphastidae Woodpeckers—Picidae. Woodcreepers—Dendrocolaptidae. Spinetails, ovenbirds, and allies—Furnariidae. Antbirds—Formicariidae. Cotingas—Cotingidae. Manakins—Pipridae. Tyrant flycatchers—Tyrannidae. Larks—Alaudidae. Swallows—Hirundinidae. Crows and jays—Corvidae Titmice—Paridae. Nuthatches—Sittidae. Creepers—Certhiidae. Wrentits—Chamaeidae. Dippers—Cinclidae Wrens—Troglodytidae. Thrashers and mockingbirds—Mimidae Thrushes—Turdidae. Gnatcatchers and gnatwrens—Sylviidae. Kinglets—Regulidae. Wagtails and pipits Motacillidae. Waxwings—Bombycillidae. Silky-flycatchers—Ptilogonatidae Shrikes—Laniidae. Pepper-shrikes—Cyclarhidae. Shrike-vireos—Vireolaniidae. Vireos—Vireonidae. Honeycreepers—Coerebidae. Wood warblers—Parulidae. Weaver finches—Ploceidae. Blackbirds, troupials, and allies—Icteridae. Tanagers—Thraupidae. Grosbeaks, finches and buntings—Fringillidae. Index.

Note An illustrated manual in English for the identification of birds found in Mexico. Arrangement is by families with keys to the species of each of the families. For each of 967 species, the following are included English name scientific name, size description of color and appearance, distribution, racial varieties (if any) and remarks in nontechnical terms. The book is especially intended for American scientists, travelers, and residents in Mexico who desire a field manual of Mexican birds. It may also be used by those in Guatemala and elsewhere in the northern part of Central America. The illustrations are from line drawings.

BOND, JAMES

Check list of birds of the West Indies Fourth edition Philadelphia The Academy of Natural Sciences 1956 214 p. 23 cm $5 00 2511

Contents Podicipitiformes. Procellariiformes. Pelecaniformes. Ciconiiformes. Anseriformes. Falconiformes. Galliformes. Gruiformes. Charadriiformes. Columbiformes. Psittaciformes. Cuculiformes. Strigiformes. Caprimulgiformes. Apodiformes. Trogoniformes. Coraciiformes. Piciformes. Passeriformes. Subfossil birds. Birds known from hearsay Introduced species. Index.

Note A standard reference on the occurrence of birds in region which includes the Bahama Islands, Greater Antilles, Lesser Antilles (south to Grenada) the Cayman and Swan Islands and the Colombian Islands of San Andrés and Providencia. It is directed to persons with a knowledge of systematic ornithology The arrangement is order family species and subspecies. For each form, information is provided on range and apparent status as in the following typical account: "Breeds in North America. Winters south to Argentina and Chile. In the West Indies the species is a common transient and winter resident (July 9–May 23)" The work was first published in 1940 and has been revised frequently since then Inserted in this fourth edition is an eight-page "First supplement" published April, 1956.

CHAPIN, JAMES P

The birds of the Belgian Congo New York The American Museum of Natural History, 1932–54 2 v in 4 pts. illus (part col'd) 24 cm (American Museum of Natural History Bulletin Volumes 65, 75) Vol 65 $8 50 vol. 75, $4 50 vol 75A $10 00, vol. 75B, $10 00 2512

Contents (abridged) Part I General survey of the country and its bird life Topography and geology Climate. Faunal relations and subdivisions. Bird distribution in the Congo and its ecological aspects. Typical cases of geographic variation. Breeding seasons of birds. Bird migrations. Evolution and relations of the Ethiopian fauna Systematic list of species and races, with notes on distribution, habits, and food Struthioniformes. Colymbiformes Procellariiformes. Pelecaniformes. Ciconiiformes. Phoenicopteriformes. Anseriformes. Falconiformes. Galliformes. Turniciformes. Index. Part II. Ralliformes. Gruiformes. Charadriiformes. Lariformes. Columbiformes. Cuculiformes. Psittaciformes. Coraciiformes. Strigiformes. Caprimulgiformes. Coliiformes. Trogoniformes. Piciformes. Index. Part III Passeriformes. Index. Part IV Passeriformes (concluded) Additional species of known or probable occurrence. Gazetteer of African localities mentioned in Parts 1 to 4 Bibliography for Parts 1 to 4 Index to Part 4

Note A systematic description of the birds recorded in the Belgian Congo and mandated territory covering an area of approximately 932 000 square miles. Preceding the systematic list is a rather detailed account of the general conditions of the country and of its avifauna. In the descriptions of individual species, scientific names and synonyms, literature citations, distribution, morphological description, habits, habitat, and related data, are given. Illustrations are numerous and include reproductions of black-and-white line drawings of anatomical details, photographs of birds in habitat scenes and maps. A record of specimens taken at various collecting stations is included in some of the species descriptions. The gazetteer is available separately

CRUICKSHANK, HELEN GERE

Flight into sunshine bird experiences in Florida. Photographs by Allan D Cruickshank New York The Macmillan Company, 1948 132 p illus 26 cm $5 00 2513

Contents Florida, mecca for naturalists. Brown pelicans at Daytona. Louisiana herons at Hormachea. Florida cranes on the Kissimmee prairie. Vultures Glossy ibises on King Bar White ibises at East Shark River Wood ibises at Cuthbert Lake Snowy egrets at East River rookery Anhingas at Paradise Key American egrets at Duck Key Great white herons in Florida Bay

Note. An excellent account of adventures in bird-observing in Florida. It is intended for amateur naturalists and others who enjoy reading sensitively expressed literature about nature. There are 111 reproductions of remarkable photographs, most of which show cranes, herons, pelicans, vultures, and other birds native to this region in their natural habitat.

Annotated list of birds of Barro Colorado Island, Panama Canal Zone. Washington, D. C., The Smithsonian Institution, 1952. 62 p. 25 cm. (Smithsonian miscellaneous collections Vol. 11[?] number 5 Publication 4059) $0.45. 2518

Contents: Introduction. Literature and abbreviations. Ecological conditions. Ornithological work relating to Barro Colorado Island. The annotated list. [illegible] Index.

Note: A systematic listing with brief annotations of the [illegible] species of birds found on Barro Colorado Island in Gatun Lake in the Panama Canal, administered by the Smithsonian Institution [illegible]

Forbush, Edward Howe

Natural history of the birds of eastern and central North America. Revised and abridged with the addition of more than one hundred species by John Richard May. Illustrated in color by Louis Agassiz Fuertes, Allan Brooks and Roger Tory Peterson. Boston, Houghton Mifflin Company, 1939. 554 p. illus. (part col'd) 29 cm. $[?].50. 2519

Contents (abridged): [illegible] Index.

Note: This work is based on Forbush, Birds of Massachusetts and other New England states, Boston, 1925–29. [illegible] There are 97 colored plates of drawings.

FRIEDMANN, HERBERT

The honey guides Washington D C Smithsonian Institution 1955 292 p illus (part col'd) 23 cm (United States National Museum Bulletin 208) 2520

Contents (abridged) Biological considerations Evolution and relationships. Phylogeny of brood parasitism. Mandibular hooks of nestlings. The guiding habit. Cerophagy The species of honey guides Genus *Indicator* Stephens. Genus *Melichneutes* Reichenow Genus *Melignomon* Reichenow Genus *Prodotiscus* Sundevall References. Index.

Note The family of birds which is the subject of this monograph is noted for its parasitism and for its habit of guiding ratels and men to wild bees' nests. The author has integrated the available knowledge in a critical manner and has indicated gaps in it. He has assembled wide range of information from the writings of ornithologists, the observations of amateur observers, the study of museum specimens, and his own field studies, and has presented most of it in minute detail His analysis of the evolution of the guiding habit is of special interest ot only to scientists but also to laymen whose curiosity is aroused by this extraordinary behavior trait. About two-thirds of the space in the volume is devoted to the accounts of species. Although these accounts contain the customary references to the scientific literature, they are primarily concerned with habits. There are 20 monochrome plates reproduced from photographs of habitat scenes and specimens of the birds, and five plates in color all of which are reproductions of paintings by Walter A. Weber and were previously published in the *National geographi*

GABRIELSON, IRA NOEL, AND STANLEY G JEWETT

Birds of Oregon Corvallis Ore. Oregon State College, 1940 650 p illus (part col d) 23 cm (Oregon State monographs Studies in zoology No 2) $5 00 2521

Content Foreword. Preface. Check-list of the birds of Oregon. Something about birds as group Topography and life zones of Oregon. Federal bird refuges in Oregon. History of Oregon ornithology List of birds originally described from Oregon. Annotated list of the birds of Oregon Hypothetical list. Bibliography Index.

Note An extensive work compiled by the authors over period of 40 years. The central core of the book is its annotated list describing the Oregon species of 18 orders of birds together with distributional historical, and other notes about each species. It is illustrated ith photographs and colored folding map of the Lif zones of Oregon, by Vernon Bailey The bibliography covers 40 pages

GRISCOM, LUDLOW

The birds of Concord. Cambridge, Mass Harvard University Press 1949 340 p illus 21 cm. (New England bird studies II) $5 00 2522

Content (abridged) I troduction Description f the area. Methods of treatment. Part I, Population trends Basic factors geology climate vegetation civilization and its disturbences. Birds as class General summary some fluctuations in mammals, fluctuations in birds. Population declines and increases bird population densities, cycles and periodicity general principles f population trends. Lists of birds which have increased or declined. Part II Birds f the Concord region General features migration routes, seasonal bird-lif statistical summary Systematic list. Bibliography Index.

Note Records relating to the bird population f the Concord region of Massachusetts ha been kept by naturalists and ornithologists since the middl of the 19th century These data, together with information compiled by the author over period of 13 years, form the basis for this laborate investigation of vifauna in specific and limited area Half f the book consists of tabulation f the birds seen in the Concord area, with an indication of the increase or decrease in each species during the past century The other half discusses the factors causing the fluctuations in bird population. The work is study of potential interest to amateur and professional ornithologists and ecologists.

GRISCOM, LUDLOW, AND JAMES C GREENWAY, JR.

Birds of Lower Amazonia. Cambridge Mass The Cosmos Press, Inc. 1941 261 p 24 cm (Harvard College. Museum of Comparative Zoology Bulletin Vol LXXXVIII no 3 June) $2 25 2523

Contents Introduction. Principal collections. Geographical notes. Ecological and distributional notes. Migrants or winter visitants. Systematic list. Bibliography

Note This identification of a collection of birds from Amazon River valley acquired by the Museum of Comparative Zoology and totaling 4,023 skins, furnished the incentive for writing this paper The collection proved to contain a few novelties, many rarities, and umerous range extensions. The large Klages collection at the Carnegie Museum in Pittsburgh was also studied, and specimens and supplementary information from this source are included in the report. The area covered is defined as the lowest quarter of the main Amazon and its tributary rivers to the degree to hich they have been ascended by ornithological collectors. It represents mere fraction of the drainage system of the main Amazon. The authors call attention to the occurrence of two distinct faunas in Lower Amazonia, the principal one being the Guiana-Amazonian fauna, while a totally different fauna is encountered in the higher campos" of central Brazil or the more arid coast of Ceará and Maranhão. This, they explain is due to the presence of natural savannahs in the sea of primeval rain forests, for ecological factors are of primary importance in the distribution of birds.

GRISCOM, LUDLOW

Modern bird study Cambridge, Mass. Harvard University Press, 1945 190 p. illus. 20 cm $3 00 2524

Contents Development of field ornithology Capacity and intelligence of birds. Adaptability of birds. Migration causes and origin Migration: factors and routes. Distribution general. Distribution South America. Distribution Central America. Distribution North America. Classification and the species concept. Index.

Note. Based on series f lectures delivered at the Lowell Institute in 1944 this book provides good insight into the methods and some of the fields of interest f present-day ornithology It is addressed to laymen particularly the growing army of bird watchers who have scientific interest in the hobby and one of its objects is to show how these amateurs can assist professional ornithologists in the solving f many problems. Accounts of some of the author personal observations and experiences with birds are included.

HAUSMAN, LEON AUGUSTUS

Field book of eastern birds. With six plates containing ninety four birds and bird heads in full color and over four hundred drawings by Jacob Bates Abbott New York G P Putnam s Sons 1946 659 p illus. 18 cm. $4 50 2525

Contents A letter to the reader Field key to the bird families. Key to the birds seen about the house grounds. Loons. Grebes. Shearwaters and fulmar Storm petrels. Tropic-birds. Pelicans Gannets and boobies. Cormorants. Darters. Man-o'-war birds Herons, bitterns, and egrets. Storks and wood-ibises. Ibises and spoonbills. Flamingos. Swans, geese ducks, and ducklik birds. Birds of prey Vultures. Kites, hawks, and eagles. Caracaras and falcons. Grouse and ptarmigans Quails and partridges. Pheasants. Turkeys. Cranes Limpkins. Rails, gallinules, and coots. Oyster-catchers. Plovers and turnstones. Woodcock snipes, sandpipers, etc. Avocets and stilts. Phalaropes. Jaegers and skuas. Gulls and terns. Skimmers. Auks, murres, and puffins. Pigeons and doves. Cuckoos. Owls. Goatsuckers. Swifts Humming birds Kingfishers. Woodpeckers. Flycatchers. Larks Swallows. Crows, jays, and ravens. Titmice Nuthatches. Creepers. Wrens Mimics. Thrushes, robins, and bluebirds. Kinglets Pipits. Waxwings. Shrikes. Starlings. Vireos. Wood and gnatcatchers Pipits. Waxwings. Shrikes. Starlings. Vireos. Wood warblers. Weaver finches. Blackbirds. Tanagers. Finches. Bibliography Index.

Note A popular guide to the birds of North America east of the Mississippi River and Hudson Bay For each bird, the following is given concisely common name scientific name length, picture other names, field marks, field description, characteristic habits

nests, habitat, range. Throughout the text are field keys to the different groups and families to assist in the differentiation of the species

HEADSTROM RICHARD

Birds' nests, a field guide. An identification manual to the nests of birds of the United States east of the one hundredth meridian. New York Ives Washburn Inc., 1949 128 p. illus. 19 cm. $3 00 2526

Contents Index of birds. Introduction. How to use this book. Nests on or in the ground In fields or pastures. In woods. In marshes. On or near seashore and lake beaches. In burrows in the ground On rocks or rocky ledges. Nests above the ground Hanging or semihanging Covered on outside with lichens and saddled on branch. Felted nests of cottony materials. Containing layer of mud. Made chiefly of bark, fibers, twigs, and rootlets. Made chiefly of grasses, rootlets, leaves, and straw. Containing twigs or sticks. In holes in trees or stumps, in birdhouses or similar places In or on buildings.

—— Birds nests of the West, a field guide An identification manual to the nests of birds of the United States west of the one hundredth meridian. New York Ives Washburn, Inc., 1951 177 p illus 19 cm. $3.00 2527

Contents Nests on or in the ground In fields, pastures, or prairies. In woods and wooded hillsides In marshes, bogs, swamps, and streams. On or near seashore and lake beaches. In burrows in the ground. On rocks or rocky ledges. In caves. In deserts. On alpine summits. Nests above the ground Hanging or semihanging. Covered on outside with lichens and saddled on branch. Felted nests of cottony materials. Containing layer of mud. Made chiefly of bark, fibers, twigs, and rootlets. Made chiefly of grasses, weeds, rootlets, leaves, and straw. Containing twigs or sticks. In holes in trees or stumps, in birdhouses or similar places. In or on buildings. Index

Note The purpose of these manuals ... indicated in the subtitles. The nest descriptions include statements on the materials of which the nest ... usually made and of the range of the bird in the United States. Each volume contains 16 pages of reproductions of excellent photographs of birds' nests in their natural sites

HELLMAYR, CHARLES E. AND BOARDMAN CONOVER

Catalogue of birds of the Americas and the adjacent islands in Field Museum of Natural History including all species and subspecies known to occur in North America, Mexico Central America, South America, the West Indies and islands of the Caribbean Sea, the Galapagos archipelago and other islands which may be included on account of their faunal affinities. ... H J

... bird watching With illustrations ... and ... ee Jaques and bird tracks by Charles A Urner New York Oxford University Press, 1943 262 p illus 22 cm. $4 75 2543

Contents How to begin bird study The lure of migration watching. Adventures in bird counting Explorations in bird distribution. The romance of bird banding. The art of bird watching Appendixes An introduction to bird tracks. Some results of breeding-bird censuses. Outline for a life-history study An annotated list of bird books. Bird clubs in Canada and the United States. Index.

Note A well-written book for the amateur ornithologist and bird lover The author has included what he believes is of interest to the average reader of this type. He has not attempted to summarize the bird literature on this subject, nor has he devoted much space to the subject of bird behavior

Hochbaum, H Albert

Travels and traditions of waterfowl. Minneapolis The University of Minnesota Press, 1955 301 p illus 26 cm. $5 00 2544

Content Part I, Travels of waterfowl Patterns of local movement. Learned response to the environment. The visual world. The function of memory The aerial environment. Awareness of time and space. Part II, Migrations of waterfowl The cycle of migration. Flight trails south. Homeward migration. The characteristics of waterfowl travel. The dimensions of travel. The influence of bad weather Overseas migration. Magnetic and radio fields. Awareness of direction. Part III Traditions of waterfowl: Inbred traditions. Building new traditions. Tradition and racial integrity. Broken traditions. Bibliography Nomenclature of birds. Index of authorities. Subject index.

Note For many years the author of this book has been director of the Delta Waterfowl Research Station in Manitoba, Canada In the book he has organized and presented his observations of the habits of water birds native to North America. The primary subject is migratory habits, and the author offers a number of hypotheses and ideas on the still unsolved problems of bird migration The book is addressed both to amateur ornithologists and to professionals, and it may be read either for its keen observations of bird behavior or for the author's contributions toward the understanding of migration.

Jewett, Stanley G and others

Birds of Washington state, by Stanley G. Jewett Walter P Taylor William T Shaw and John W Aldrich Published in cooperation with the U S *Department* of the Interior Fish and Wildlife Service, Washington D C Seattle University of Washington Press 1953 767 p illus (part col'd) 25 cm $8 00 2545

Content Systematic classification of Washington birds. Introduction. Annotated list of Washington birds, by orders. Hypothetical list Geographic localities. Bibliography Index.

Note This large volume describing the birds of the state of Washington opens with a list of birds in systematic order and contains a general introduction of 47 pages, followed by 622 pages devoted to detailed treatment of the individual species. For each species are noted common name scientific name other names, status in the state, description, distribution, and annotation. Some of the annotations are extensive discussions concerning the species and its records in Washington Breeding distributions for selected species are shown in 51 small maps of the state. Aside from 99 photographic illustrations in black and white, there are also 11 plates from drawings and a folded map of "Life zones in Washington" in color The book can be described as a model of its kind and should be equally useful to amateur and to professional ornithologists concerned with the birds of the state of Washington

Kendeigh, S Charles

Parental care and its evolution in birds. Urbana University of Illinois Press 1952 356 p 26 cm (Illinois University) Illinois Biological Monographs Vol XXII, nos. 1–3) $4 00 2546

Contents (abridged) Introduction. Methods of study. Attentive behavior of the house wren. Attentive behavior of miscellaneous species. Evolution of parental care. Phylogeny and dynamics of evolution. Literature cited and author index. Species index.

Note: The results of an extensive study of nesting behavior in birds, carried out at the former Baldwin Bird Research Laboratory, are presented and evaluated in this work. The study was made with the use of automatic instruments which recorded all visits of parent birds to the nests under observation. The majority of the observations were made on the house wren, *Troglodytes aedon*, but observations were made of several other species also. In addition to the field observations, an extensive review of the pertinent literature was made. The author classified as "attentive behavior" all such activities as singing, nest building, incubating, brooding, feeding the young, and guarding enemies, and as "inattentive behavior" the bird's feeding of itself, bathing, preening and resting. The rhythm in these activities is analyzed. Diagrammatic illustrations of the Thermograph and the Tensograph, the automatic instruments used in the observations, 52 tabulations of data, and an extensive bibliography are included.

KOFORD CARL B

The California condor New York National Audubon Society 1953 154 p illus (part col'd) 27 cm. (National Audubon Society Research report no. 4) $3.00 2547

Contents: Introduction. Distribution and numbers. Population and survival. General activities. Perching and roosting. Flight. Feeding habits. Food supply. Drinking and bathing. Mating. Nests and eggs. Behavior of nesting adults. Behavior of nestlings and juveniles. Attendants at nests and roosts. Conservation. Appendix. Literature cited.

Note. This monograph is the report of an exceptionally thorough study in the field and in the literature, of a bird now known to be the third rarest bird on the North American continent. The ultimate purpose of the study was to provide information that could be used as a foundation for conservation measures. Such aspects as feeding and roosting habits were studied largely by personal observation, and are reported in intimate detail. The 31 plates are mostly reproductions of photographs of adult and young birds at rest and in flight, and roosting sites. All are in monochrome except the frontispiece which is in color. The bibliography is comprehensive.

LINCOLN FREDERICK C

Migration of birds. Illustrated by Bob Hines. Garden City Doubleday & Company 1952 102 p. illus. 18 cm. $1.50 2548

Contents: The mystery of migration. Advantages of migration. The origin of migration. When birds migrate. How birds migrate. Where birds migrate. Routes of migration. Evolution of migration routes. Vertical migration. Vagrant migration. Perils of migration. Influence of the weather on migration. Problems of migration. Conclusion. Appendixes. List of birds mentioned in the text. Bird banding. Bibliography. Index.

Note A simple and valuable account of bird migration. It is based primarily on publications of the United States Fish and Wildlife Service and is addressed to sportsmen and other laymen who are curious about the theories and facts pertinent to the subject. Maps showing migration routes and breeding and winter ranges of various migrating birds on the North American continent are included.

LOWERY GEORGE H. JR.

Louisiana birds. Illustrated by Robert E. Tucker Baton Rouge Published for the Louisiana Wild Life and Fisheries Commission by Louisiana State University Press, 1955 556 p. illus. (part col'd) 23 cm. $5.00 2549

Contents Introduction. Louisiana as a place to see birds. History of Louisiana ornithology. The Louisiana State University Museum of Zoology. How to identify birds. Feathers, plumages, and molt. The bird skeleton. Migration. Economic value of birds. Conservation and wildlife management. Attracting birds. Ornithological societies and bird clubs. Accounts of the species. Loons—Order Gaviiformes. Grebes—Order Colymbiformes. Petrel-like birds—Order Procellariiformes. Pelicanlike birds—Order Pelecaniformes. Heronlike birds—Order Ciconiiformes. Ducklike birds—Order Anseriformes. Hawklike birds—Order Falconiformes. Fowl-like birds—Order Galliformes. Cranelike birds—Order Gruiformes. Shore birds and allies—Order Charadriiformes. Pigeonlike birds—Order Columbiformes. Parrots—Order Psittaciformes. Cuckoolike birds—Order Cuculiformes. Owls—Order Strigiformes. Goatsuckerlike birds—Order Caprimulgiformes. Swifts and hummingbirds—Order Apodiformes. Kingfisherlike birds—Order Coraciiformes. Woodpeckerlike birds—Order Piciformes. Perching birds—Order Passeriformes. Summary of seasonal occurrence. Bibliography. Index.

Note The state of Louisiana is especially rich in bird fauna, and this reference book on the birds found in the state is one of the outstanding publications of its kind. It is addressed to nonspecialists particularly to residents of Louisiana and visitors to that state who are interested in bird life. Its primary purpose is to aid in the identification of birds. Most of the space is devoted to accounts of individual species, and these are written in a nontechnical style. Illustrations include 40 plates and 155 text figures.

MAYR ERNST

The birds of Timor and Sumba. New York American Museum of Natural History 1944 65 p. illus 27 cm. (American Museum of Natural History Bulletin Vol. 83 article 2) $0.65 2550

Contents Introduction. The birds of Timor. The birds of Sumba. Taxonomic notes on the birds of Timor and Sumba. Annotated literature on Timor. Notes on the zoogeography of Timor and Sumba. Bibliography.

Note A systematic discussion of the species found in these two islands of the Malay Archipelago which hitherto have been little known by ornithologists. It is based on a collection of [illegible]31 bird skins from Timor and 405 from Sumba. Notes on the colonization of the islands by birds and the regional zoogeography as related to the origin of the avifauna are also included. Twenty-four papers and monographs on the subject are listed.

MAYR ERNST

List of New Guinea birds a systematic and faunal list of the birds of New Guinea and adjacent islands. New York American Museum of Natural History 1941 260 p illus 23 cm. $2.00 2551

Note This is a comprehensive and carefully prepared list of 303 genera, [illegible] species, 1307 forms, giving their respective geographic ranges. No descriptions, however, are given of the birds themselves.

MURPHY ROBERT CUSHMAN AND DEAN AMADON

Land birds of America. Photographed by Eliot Porter and others New York Published with the cooperation of the American Museum of Natural History McGraw Hill Book Company Inc., 1953 240 p. illus. (part col'd) 31 cm. $5.95 2552

Contents Introduction. Birds of prey. Upland game birds. Plovers and sandpipers. Owls. Pigeons and doves. Cuckoos. Goatsuckers. Swifts. Hummingbirds. Trogons and kingfishers. Woodpeckers. Flycatchers. Larks. Swallows. Jays, magpies, and crows. Titmice. Nuthatches and creepers. Kinglets and gnatcatchers. Wrens. Mockingbirds and thrashers. Thrushes. Pipits and wagtails. Shrikes. Waxwings and phainopeplas. Starlings. Vireos. Wood warblers. Blackbirds and orioles. Tanagers. Finches, cardinals, and sparrows. Notes on bird photography by E. Porter. Index of birds, including scientific names.

Note A handsome volume illustrated entirely with reproductions of photographs. Of the 244 photographs, 221 are reproduced in color. The birds are shown in natural poses and in natural surroundings. The accompanying text is written in a charming style and conveys many interesting facts about birds. However there are no scientific descriptions in the traditional pattern of systematic zoology. The book is addressed to general readers, but professional ornithologists also will find the pictures of interest. The authors are associated with the Department of Birds of the American Museum of Natural History, and the second-named author is currently head of the Department.

—— Part vi By Charles E Hellmayr Chicago Chicago Natural History Museum, 1929 264 p 24 cm (Chicago Natural History Museum Fieldiana Zoology Vol xiii part vi) $3 50 2537

Contents (abridged) Part vi Oxyruncidae. Pipridae Cotingidae Rupicolidae. Phytotomidae.

—— Part vii By Charles E Hellmayr Chicago Chicago Natural History Museum 1934 532 p 24 cm (Chicago Natural History Museum Fieldiana Zoology Vol xiii, part vii) o p 2538

Content (abridged) Part vii Corvidae. Paridae. Sittidae. Certhiidae. Chamaeidae. Cinclidae Troglodytidae Prunellidae. Mimidae. Turdidae. Zeledoniidae. Sylviidae.

—— Part viii By Charles E Hellmayr Chicago Chicago Natural History Museum 1935 542 p 24 cm (Chicago Natural History Museum Fieldiana Zoology Vol. xiii, part viii) $7 50 2539

Contents (abridged) Part viii Alaudidae. Hirundinidae. Motacillidae. Bombycillidae. Ptilogonatidae. Dulidae. Vireonidae. Vireolaniidae. Cyclarhidae. Laniidae. Sturnidae Coerebidae. Compsothlypidae.

—— Part ix By Charles E Hellmayr Chicago Chicago Natural History Museum 1936 464 p 24 cm (Chicago Natural History Museum Fieldiana Zoology Vol xiii part ix) o p 2540

Content (abridged) Part ix Tersinidae. Thraupidae.

—— Part x By Charles E Hellmayr Chicago Chicago Natural History Museum 1937 234 p 24 cm (Chicago Natural History Museum Fieldiana Zoology Vol xiii, part x) $3 00 2541

Contents (abridged) Part x Icteridae.

—— Part xi By Charles E Hellmayr Chicago Chicago Natural History Museum 1938 662 p 24 cm. (Chicago Natural History Fieldiana Zoology Vol xiii part xi) $8 00 2542

Content (abridged) Part xi Ploceidae Catamblyrhynchidae. Fringillidae

Note This detailed descriptive catalogue was projected and partly produced by Charles B Cory but, upon his death in 1921 the work was revised and continued by Charles E. Hellmayr and Boardman Conover In the synonymies of this work, the references are largely confined to the original descriptions (with type localities) the *Catalogue of birds of the British Museum* Ridgway's *Birds of North and Middle America, Washington D C., 1901–41* monographs of families and genera, works containing colored plates of the various species, and important papers in relation to geographical distribution A slight departure from the orthodox method is that of always giving the reference to the accepted original description first, so that the type locality which follows it in parentheses, may be noted at a glance. Diagnostic descriptions are given of all species and subspecies not included in the standard works, Ridgway' catalogue mentioned above and the British M seum catalogue

HICKEY JOSEPH J

A guide to bird watching With illustrations by Francis Lee Jaques and bird tracks by Charles A. Urner New York Oxford University Press, 1943 262 p illus. 22 cm. $4 75. 2543

Contents How to begin bird study The lure of migration watching. Adventures in bird counting. Explorations in bird distribution. The romance of bird banding. The art of bird watching Appendixes An introduction to bird tracks. Some results of breeding-bird censuses. Outline for life-history study An annotated list of bird books. Bird clubs in Canada and the United States. Index.

Note A well-written book for the amateur ornithologist and bird lover The author has included but he believes is of interest to the average reader of this type. H has not attempted to summarize the bird literature on this subject, nor has he devoted much space to the subject f bird behavior

HOCHBAUM, H. ALBERT

Travels and traditions of waterfowl Minneapolis The University of Minnesota Press, 1955 301 p. illus 26 cm $5 00 2544

Contents Part i, *Travels of waterfowl* Patterns of local movement. Learned response t the environment. The visual world. The function of memory The aerial environment. Awareness of time and space. *Part ii, Migrations of waterfowl. The route of migration.* Flight trails south. Homeward migration. The chronology of waterfowl travel. The dimensions of travel. The influence of bad weather *Overseas migration. Magnetic and radar fields.* Awareness f direction. Part iii, Traditions of waterfowl Inherent traditions. Building new traditions. Tradition and social behavior *Broken traditions. Bibliography* Nomenclature of birds. Index of authorities. Subject index.

Note For many years the author of this book has been director of the Delta W terfowl Research Station in Manitoba, Canada In the book he has organized and presented his observations of the habits of water birds native to North America. The primary subject is migratory habits, and the author offers umber of hypotheses and ideas on the still unsolved problems of bird migration. The book is addressed both to amateur ornithologists and to professionals, and it may be read either for its keen observations of bird behavior or for the uthor' contributions toward the understanding f migration.

JEWETT, STANLEY G, AND OTHERS

Birds of Washington state, by Stanley G. Jewett Walter P Taylor, William T Shaw and John W Aldrich Published in cooperation with the U S Department of the Interior Fish and Wildlife Service Washington, D C. Seattle University of Washington Press 1953 767 p. illus (part col d) 25 cm $8 00 2545

Contents Systematic classification of Washington birds. Introduction. Annotated list of Washington birds, by orders. Hypothetical list. Geographic localities. Bibliography Index.

Note This large volume describing the birds of the state of Washington opens with a list of birds in systematic order and contains a general introduction of 47 pages, followed by 622 pages devoted to detailed treatment of the individual species. For each species are noted common name, scientific name other names, status in the state, description distribution, and annotation. Some of the annotations are extensive discussions concerning the species and its records in Washington. Breeding distributions for selected species are shown in 81 small maps of the state. Aside from 99 photographic illustrations in black and white, there are also 12 plates from drawings and folded map of "Life zones in Washington in color The book can be described as a model of its kind and should be useful to amateur and to professional ornithologists concerned with the birds of the state of Washington

KENDEIGH, S CHARLES

Parental care and its evolution in birds Urbana University of Illinois Press, 1952 356 p 26 cm. (Illinois University Illinois Biological Monographs. Vol xxii nos 1–3) $4 00 2546

Contents (abridged): Introduction. Methods of study. [illegible] behavior of the house wren. [illegible] Evolution of parental care. [illegible] Literature cited and author index. Species index. [illegible]

Note: [illegible]

Koford Carl B

The California condor New York National Audubon Society 1953 154 p illus (part col'd) 2? cm. (National Audubon Society Research report no. 4) $3.00 2547

Contents: Introduction. Distribution and numbers. [illegible]

Note: [illegible]

Lincoln Frederick C

Migration of birds. Illustrated by Bob Hines. Garden City Doubleday & Company 1952 102 p. illus 18 cm. $1.50 2548

Contents: The mystery of migration. Advantages of migration. [illegible]

Note: A simple and reliable account of bird migration. [illegible]

Lowery George H., jr.

Louisiana birds. Illustrated by Robert E Tucker Baton Rouge Published for the Louisiana Wild Life and Fisheries Commission by Louisiana State University Press 1955 556 p. illus (part col'd) 23 cm. $5.00 2549

Contents: Introduction. [illegible]

Note: [illegible]

Mayr Ernst

The birds of Timor and Sumba. New York American Museum of Natural History 1944 65 p. illus 2? cm. (American Museum of Natural History Bulletin. Vol. 83 article 2) $0.65 2550

Contents: [illegible]

Note: [illegible]

Mayr, Ernst

List of new Guinea birds a systematic and faunal list of the birds of New Guinea and adjacent islands New York American Museum of Natural History 1941 260 p illus 23 cm. $?.00 2551

Note: [illegible]

Murphy Robert Cushman and Dean Amadon

Land birds of America. Photographed by Eliot Porter and others New York Published with the cooperation of the American Museum of Natural History McGraw Hill Book Company Inc., 1953 240 p illus (part col'd) 31 cm. $5.95 2552

Contents: Introduction. [illegible]

Note: A handsome volume [illegible]

—— Part VI By Charles E Hellmayr Chicago Chicago Natural History Museum, 1929 264 p 24 cm (Chicago Natural History Museum Fieldiana Zoology Vol XIII, part VI) $3 50 2537

Contents (abridged) Part Oxyruncidae. Pipridae. Cotingidae. Rupicolidae. Phytotomidae

—— Part VII By Charles E Hellmayr Chicago Chicago Natural History Museum 1934 532 p 24 cm (Chicago Natural History Museum Fieldiana Zoology Vol XIII, part VII) o p 2538

Contents (abridged) Part VII Corvidae. Paridae. Sittidae. Certhiidae. Chamaeidae. Cinclidae. Troglodytidae. Prunellidae. Mimidae. Turdidae. Zeledoniidae. Sylviidae.

—— Part VIII By Charles E Hellmayr Chicago Chicago Natural History Museum 1935 542 p 24 cm (Chicago Natural History Museum Fieldiana Zoology Vol XIII part VIII) $7 50 2539

Contents (abridged) Part VIII Alaudidae Hirundinidae. Motacillidae. Bombycillidae. Ptilogonatidae. Dulidae. Vireonidae. Vireolaniidae. Cyclarhidae. Laniidae. Sturnidae. Coerebidae Compsothlypidae.

—— Part IX By Charles E Hellmayr Chicago Chicago Natural History Museum 1936 464 p 24 cm (Chicago Natural History Museum Fieldiana Zoology Vol XIII part IX) o p 2540

Contents (abridged) Part IX Tersinidae. Thraupidae.

—— Part X By Charles E. Hellmayr Chicago Chicago Natural History Museum 1937 234 p 24 cm (Chicago Natural History Museum Fieldiana Zoology Vol XIII part X) $3 00 2541

Contents (abridged) Part X Icteridae.

—— Part XI By Charles E Hellmayr Chicago Chicago Natural History Museum 1938 662 p 24 cm (Chicago Natural History Fieldiana Zoology Vol. XIII part XI) $8 00 2542

Contents (abridged) Part XI Ploceidae Catamblyrhynchidae Fringillidae

Note This detailed descriptive catalogue was projected and partly produced by Charles B Cory but, upon his death in 1921 the work was revised and continued by Charles E Hellmayr and Boardman Conover I the synonymies of this work, the references are largely confined to the original descriptions (with type localities) the *Catalogue of birds* of the British Museum Ridgway's *Birds of North and Middle America*, Washington, D C 1901–41 monographs of families and genera, works containing colored plates of the various species, and important papers in relation to geographical distribution A slight departure from the orthodox method is that of always giving the reference to the accepted original description first, so that the type locality which follows it in parentheses, may be noted at a glance. Diagnostic descriptions are given of all species and subspecies not included in the standard works, Ridgway's catalogue mentioned above, and the British Museum catalogue

HICKEY JOSEPH J

A guide to bird watching With illustrations by Francis Lee Jaques and bird tracks by Charles A Urner New York Oxford University Press, 1943 262 p illus. 22 cm. $4 75 2543

Contents How to begin bird study The lure of migration watching. Adventures in bird counting. Explorations in bird distribution. The romance of bird banding. The art of bird watching Appendixes An introduction to bird tracks. Some results of breeding-bird censuses. Outline for a life-history study An annotated list of bird books. Bird clubs in Canada and the United States. Index.

Note A well-written book for the amateur ornithologist and bird lover The author has included what he believes is of interest to the average reader of this type He has not attempted to summarize the bird literature on this subject, nor has he devoted much space to the subject of bird behavior

HOCHBAUM, H ALBERT

Travels and traditions of waterfowl Minneapolis The University of Minnesota Press, 1955 301 p illus 26 cm $5 00 2544

Contents Part I, Travels of waterfowl Patterns of local movement. Learned response to the environment. The visual world The function of memory The aerial environment. Awareness of time and space. Part II, Migrations of waterfowl The cycle of migration. Flight trails south. Homeward migration. The character of waterfowl travel. The dimensions of travel. The influence of bad weather Overseas migration. Magnetic and radio fields. Awareness of direction. Part III, Traditions of waterfowl. Inherited traditions. Building new traditions. Tradition and social behavior. Broken traditions. Bibliography Nomenclature of birds. Index of authorities. Subject index.

Note For many years the author of this book has been director of the Delta Waterfowl Research Station in Manitoba, Canada In the book he has organized and presented his observations of the habits of water birds native to North America. The primary subject is migratory habits, and the author offers a number of hypotheses and ideas on the still unsolved problems of bird migration The book is addressed both to amateur ornithologists and to professionals, and it may be read either for its keen observation of bird behavior or for the author's contributions toward the understanding of migration

JEWETT, STANLEY G , AND OTHERS

Birds of Washington state, by Stanley G. Jewett, Walter P Taylor, William T Shaw and John W Aldrich. Published in cooperation with the U S Department of the Interior, Fish and Wildlife Service Washington D C Seattle University of Washington Press 1953 767 p illus (part col'd) 25 cm $8 00 2545

Contents Systematic classification of Washington birds. Introduction. Annotated list of Washington birds, by orders. Hypothetical list. Geographic localities. Bibliography Index.

Note This large volume describing the birds of the state of Washington opens with a list of birds in systematic order and contains general introduction of 42 pages, followed by 642 pages devoted to detailed treatment of the individual species. For each species are noted common name scientific name, other names, status in the state, description, distribution, and annotation. Some of the annotations are extensive discussions concerning the species and its records in Washington. Breeding distributions for selected species are shown in 51 small maps of the state. Aside from 99 photographic illustrations in black and white there are also 11 plates from drawings and folded map of "Life zones in Washington" in color The book can be described as model of its kind and should be equally useful to amateur and to professional ornithologists concerned with the birds of the state of Washington

KENDEIGH, S CHARLES

Parental care and its evolution in birds. Urbana University of Illinois Press 1952 356 p. 26 cm (Illinois University Illinois Biological Monographs Vol XXII nos. 1–3) $4 00 2546

Sutton. New York Oxford University Press 1953 709 p. illus. 19 cm. $6.50. 2558

Contents: Arizona, Arkansas, California, Colorado, Idaho, Iowa, Kansas, Louisiana, Minnesota, Missouri, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington, Wyoming. Suggested reference material. Index.

Note: A companion volume to the author's *A guide to bird finding east of the Mississippi*, described above. It is addressed to professional and amateur ornithologists, especially the latter, and it provides, state by state and city by city, information on localities and "spots" where the bird life and the environment are particularly suitable for bird watching. Wildlife refuges and parks are described when they exist, but the localities mentioned include also numerous unprotected areas. Other information of interest to bird watchers is included; for example, if the city under discussion is the site of a university or museum which has a bird collection, this fact is mentioned and the collection briefly described. The volume is fully indexed, both for localities and species of birds.

PETTINGILL, OLIN SEWALL, JR.

A laboratory and field manual of ornithology Illustrated by Walter J Breckenridge Third edition revised. Minneapolis Burgess Publishing Company 1956 379 p illus. 28 cm. $5.00. 2559

Note: Designed primarily for use in ornithological study and research at the college and university level, this laboratory and field manual of ornithology presupposes a college course in general zoology or biology. Each of its sections includes an outline of basic information, directions for making detailed observational studies, and bibliographical references for further inquiries on a specific topic.

PITELKA F A.

Speciation and ecologic distribution in American jays of the genus Aphelocoma. Berkeley University of California Press 1951 p. 195-464 illus. (part col d) 26 cm (University of California. Publications in Zoology Vol. 50 no. 3) $3.00 2560

Contents (abridged): Materials. Methods of analyzing characters. Survey of the genus Aphelocoma. Variation and interrelationships among races of *Aphelocoma coerulescens*. Variation and interrelationships among races of *Aphelocoma ultramarina*. Variation and interrelationships among races of *Aphelocoma unicolor*. Discussion of variation. Phylogeny. Interspecific limits. Distribution in relation to ecological and historical factors. Summary. Appendix: Taxonomy and nomenclature. Literature cited.

Note: As much a contribution to evolution as it is to ornithology, this noteworthy study was based on the examination of 4,817 specimens of the genus Aphelocoma. The specimens were examined for racial and specific differences. The analysis includes a qualitative study of plumage characters and a statistical study of measured characters. Also included are data on the distribution of each race and species and critical discussions of nomenclature and taxonomy. The study was a detailed one, and the data collected are presented in a series of 67 tables and discussed in the text. There are 21 text figures and 1 plates, one in color.

POUGH RICHARD HOOPER

Audubon bird guide eastern land birds. With illustrations in color of every species by Don Eckelberry Sponsored by National Audubon Society Garden City Doubleday & Company Inc. 1946 312 p illus. (part col d) 19 cm. $3 95 2561

Contents: Pheasant family. Cuckoo family. Barn owl family. Typical owl family. Goatsucker family. Swift family. Hummingbird family. Kingfisher family. Woodpecker family. Cotinga family. Tyrant flycatcher family. Lark family. Swallow family. Jay family. Titmouse family. Nuthatch family. Creeper family. Wren family. Thrasher family. Thrush family. Old world warbler family. Pipit family. Waxwing family. Shrike family. Starling family. Vireo family. Honey creeper family. Wood warbler family. Weaver finch family. Blackbird family. Tanager family. Sparrow family. Index.

Note: A field book of the land birds found in the eastern portion of the North American continent. It is addressed primarily to the [illegible] A foreword gives general facts about birds and their [illegible] etc. [illegible] habits and suitable [illegible] observing them. The species descriptions average one page in length and cover these points: common and scientific names, identification (length, shape, plumage, other distinctive features, sex differences, etc.), habits, voice, nest and eggs, and range. The colored illustrations are a special feature. The book concludes with a selected bibliography.

POUGH RICHARD HOOPER

Audubon water bird guide water, game and large land birds Eastern and central North America from southern Texas to central Greenland Color illustrations by Don Eckelberry line drawings by Earl L. Poole Sponsored by National Audubon Society Garden City Doubleday & Company Inc., 1951 352 p 19 cm. $3 95 2562

Note: A bird guide of interest to both amateur and professional ornithologists. The number of species described is [illegible]. The descriptions cover such points as identification characteristics, habits, nest or eggs, and range. There are 415 [illegible] color illustrations printed on [illegible] plates and more than 100 drawings rendered in black and white. The author is [illegible] of the American Museum of Natural History.

RAND AUSTIN L.

Social feeding behavior of birds Chicago Chicago Natural History Museum 1954 71 p illus 23 cm (Chicago Natural History Museum. Fieldiana Zoology Vol 36 no. 1) $1.00 2563

Contents: Introduction. Individuals of one species in relation to food. Birds of one species associating [illegible] (not necessarily food) in feeding. Many species of birds feeding together. Discussion. Summary. References.

Note: A study in some detail of the social behavior of birds as manifested in finding food, in cooperating in obtaining [illegible] form of prey, in pilfering or robbing of one species by another, etc. It is based on the literature, including the author's own published papers, and includes numerous [illegible] quotations from the observations of naturalists and ornithologists.

RICHDALE, LANCELOT ERIC

Sexual behavior in penguins. Lawrence University of Kansas Press 1951 316 p illus. 24 cm. $5.00 2564

Contents: Scope of the study. An analysis of types of behavior. Pair formation. Sex differences, arrangements, and [illegible]. Sexual behavior in [illegible] later. The prenest stage. Unemployed birds. Incubation. Chick stage. The molt. Appendices. Literature cited. Index of subjects. Index of species. Index of bands.

Note: An unusual work based primarily upon ten seasons of intensive field work. The birds studied were banded by the author so as to make possible a continuous study of the behavior of individuals over the period of study. The observations made are presented in detail, with individual birds identified. Although the primary source was the author's own observations, pertinent information in the published literature also is presented. The book is of interest to amateur and professional ornithologists and to specialists in animal psychology.

ROMANOFF ALEXIS LAWRENCE, AND ANASTASIA J ROMANOFF

The avian egg. New York John Wiley & Sons Inc. 1949 918 p illus. 24 cm $18.00 2565

Contents: Part I, Morphogenetic expression. Mode of laying. External characteristics. Structure. Formation. Anomalies. Part II, Biophysicochemical constitution. Chemical composition. Physicochemical properties. Biological properties. Part III, Bio-economic importance. Food value. Preservation. Industrial uses. Bibliography. Index.

NAUMBURG, ELSIE MARGARET (BINGER)

The birds of Matto Grosso Brazil, a report on the birds secured by The Roosevelt Rondon Expedition, with field notes by George K Cherrie. New York American Museum of Natural History, 1930 432 p illus (part col'd) 25 cm (American Museum of Natural History Bulletin Vol LX) $5 00 2553

Content Narrative of the expedition The state of Matto Grosso. Interrelations of Campo and Amazonian faunas. Pelzeln's localities within Matto Grosso limits. Distributional analysis of bird life and endemic species and subspecies of Matto Grosso. A list of the endemic species and subspecies of Matto Grosso. List of families. List of *distinctively North American birds wintering* in Brazil. Birds common to North and South America and breeding in Brazil. List of birds in the Roosevelt collection from Paraguay only *Localities of the Roosevelt expedition Itinerary of the* expedition Ornithological bibliography of Matto Grosso. Distributional list of species and subspecies. Addenda. Index.

Note A comprehensive annotated catalogue based primarily on the collections secured during the expeditions headed by Colonels Roosevelt and Rondon between 1913 and 1916 Original description, type locality list of specimens, ranges, genera, and comparative measurements are given for each species dealt with, and there are many photographs and color drawings of type specimens. A total of about 1,000 species are described.

PALMER, RALPH S

*Maine birds Based largely on data gath*ered by Arthur Herbert Norton. Cambridge Mass Printed for the Museum 1949 656 p *24 cm* (Harvard College Museum of Comparative Zoology Bulletin Vol 102) $5 00 2554

Contents Preface Introduction Acknowledgements. Annotated list Recapitulation Literature cited. Index.

Note A comprehensive report of birds recorded in the state of Maine. It is based largely on data collected throughout a lifetime by the late Arthur H Norton which data are supplemented by further extensive research by Palmer The aim was to include "all known birds of the state, including fossil, extinct, extirpated, and introduced species. Most of the space in the volume is given to the annotated list which is arranged by family and species. In the *accounts of species, the scientific name is given but references to* descriptions in the systematic literature are not given. In most of the accounts the following points are covered status, i whether common or uncommon transient or summer resident, etc dates of spring and fall migrations flight years, that is, years when there were unusually large flights habits during various seasons of the year habitat, and miscellaneous remarks from the observations of ornithologists, both professional and amateur These accounts are written in the common rather than the professional language. The list of literature cited runs to 63 pages.

PETERS, JAMES LEE

Check list of birds of the world Cambridge Mass Harvard University Press 1931–48 6 v *23 cm* Vol IV $4 00 vol. VI $6 50 *2555*

Content (abridged) Volume Subclass Archaeornithes. Order Archaeopterygiformes Subclass Neornithes Superorder Odontognathae Superorder Palaeognathae Superorder Neognathae Order Ciconiiformes Order Anseriformes. Order Falconiformes New name proposed in Volume *Index Volume II Order Galliformes Order* Gruiformes Order Diatrymiformes Order Charadriiformes. Index Volume III Order Columbiformes Order Psittaciformes Index Volume IV Order Cuculiformes, plantain-eaters, cuckoos. Order Strigiformes, owls Order Caprimulgiformes, oil-birds, goatsuckers Order Apodiformes swifts, hummingbirds. *Index Volume* Order Apodiformes Suborder Trochili—family Trochilidae. Order Coliiformes Family Coliidae Order Trogoniformes Family Trogonidae Order Coraciiformes—suborder Alcedines Superfamily Alcedinoidea —family Alcedinidae. Superfamily Todoidea—family Todidae Superfamily Momotoidea—family Momotidae. Suborder Meropes—family Meropidae. Suborder Coracii—family Leptosomatidae, family Coraciidae Family Upupidae. Family Phoeniculidae Suborder Bucerotes Family Bucerotidae. Index. New names proposed in Volume v Volume VI Order Piciformes Suborder Galbulae Superfamily Galbuloidea. Family Galbulidae, jacamars. Family Bucconidae, puff birds. Superfamily Capitonoidea Family Capitonidae barbets. Family Indicatoridae, honey-guides. Superfamily Ramphastoidea. Suborder Pici Family Picidae. *Subfamily Jynginae wry*necks. Subfamily Picumninae piculets. Subfamily Picinae woodpeckers. Index. New names proposed in Volume VI.

Note A basic reference work for systematic ornithologists. Essentially it supersedes Richard Bowdler Sharpe's *Handlist of the genera and species of birds*, London 1899 The information supplied covers the following points verified references to the original publication of all scientific names the exact indication of the type localities and, in the case of genera, of the type species; synonyms published since 1900 geographic range references to the more recent literature pertaining to each genus. Physical descriptions of *the birds are not included.* Volumes I, II, III and V are out of print.

PETERSON, ROGER TORY

A field guide to the birds giving field marks *of all species found east of the Rockies.* Second revised and enlarged edition. Sponsored by National Audubon Society Boston *Houghton Mifflin Company, 1947* 290 p. illus (part col'd) 19 cm $3 95 2556

Content (abridged) How to use this book. Loons—Gaviidae Grebes—Colymbidae. Shearwaters and fulmars. Storm petrels. Tropic birds. Pelicans. Gannets and boobies. Cormorants. Darters. Man-o'-war-birds. Herons and bitterns. Storks and wood ibises. Ibises and spoonbills. Flamingos. Swans. Geese. Tree-ducks. Surface-feeding ducks. Vultures. The names of hawks Kites. Buteos, or buzzard hawks. Eagles. Ospreys. Falcons. Grouse. Quails, partridges, and pheasants. Turkeys. Cranes. Limpkins. Rails, gallinules, and coots. Oyster-catchers. Plovers and turnstones. Woodcock snipe, sandpipers. Avocets and stilts. Jaegers. Gulls. Terns. Skimmers. Auks, murres, and puffins. Pigeons and doves. Owls. Goatsuckers. Swifts. Hummingbirds. Kingfishers. Woodpeckers. *Flycatchers.* Larks. Swallows. Crows and jays. Titmice. Nuthatches. Wrens. Mockingbirds and thrashers. Thrushes, robins, bluebirds, etc. Gnatcatchers and kinglets. Pipits. Waxwings Shrikes Starlings Vireos. Wood warblers. Weaver finches. Meadowlarks, blackbirds, and orioles. Tanagers. Grosbeaks, finches, sparrows, and buntings. *Accidentals.* Subspecies. Home reference suggestions. Index.

Note The sight identification of birds under field conditions is the subject of this useful guide for bird-watchers, amateur naturalists, and ornithologists One thousand illustrations, of which 500 are in full color provide pattern details, silhouettes, and prominent markings, while accompanying pages of text explain the plates and give information such as range, habitat, and manner of flight. In this edition all of the illustrations are new sections have been added on similar species, and there are few other changes.

PETTINGILL, OLIN SEWALL, JR.

A guide to bird finding east of the Mississippi With illustrations by George Miksch Sutton. New York Oxford University Press *1951 659 p illus 19 cm* $6 50 2557

Note An unusual addition to ornithological literature It is a guide to opportunities for observing birds, or more specifically a guide to localities known to be frequented by particular species The main arrangement is by state, with the material under states arranged by locality Under each locality there is an interesting narrative discussion of the birds that can usually be observed. The index contains both the names of places and the names of birds. The work was based largely on extensive correspondence with amateur and professional ornithologists throughout the United States of America.

PETTINGILL OLIN SEWALL JR

A guide to bird finding west of the Mississippi With illustrations by George Miksch

STORER, JOHN H

The flight of birds analyzed through slow motion photography Bloomfield Hills Mich Cranbrook Institute of Science 1948. 94 p. illus. 24 cm. (Cranbrook Institute of Science. Bulletin no. 28) $2.00 2571

Contents (abridged) The bird and the air Developing lift. Pressure distribution. Tip vortex. Aspect ratio. Factors that affect lift and drag. Slots and their purposes. Flaps to increase lift. The bird's flying equipment. Feathers. The wing. The propeller. Wing adaptations. Flight: Balance and control. Devices for the take-off. Landing. Soaring and gliding. Air currents. Formation flying. Flight speed. Maneuverability. Backward flight. Glossary. References. Index.

Note The author became interested in the mechanism of bird flight when he observed that motion pictures taken with a slow-motion camera showed birds' wings in positions that were not visible when flight was observed with the unaided eye. He studied many such pictures and also consulted experts in both ornithology and aeronautics. This book is a nontechnical summary of his findings. The section on flight presents detailed studies of aspects of the flight of various birds and accounts for about half of the book length. Analogies to the airplane are drawn. There are 176 illustrations, most of which are reproduced from motion picture films.

STRONG REUBEN MYRON

A bibliography of birds with special reference to anatomy behavior biochemistry embryology pathology physiology genetics ecology aviculture economic ornithology poultry culture evolution, and related subjects. Chicago Chicago Natural History Museum, 1939–46 3 v 24 cm. (Fieldiana Zoological series Vol. 25 parts 1–3) $15.50 2572

Contents Part [illegible] Rules and symbols employed. Key list of abbreviations for periodicals cited. List of periodicals not cited but referring to birds. Author catalogue of references, A to J. Part II: Author catalogue of references, K to Z. Anonymous publications. Part III: Rules and symbols employed. Bibliographies. List of periodicals containing abstracts and reviews of publications referring to birds.

Note This comprehensive bibliography of birds, 20 years in preparation, consists of an author list in two parts, followed by a subject index. It lists books, periodical articles, and other publications under each author chronologically. Authors are listed regardless of their nationality or the language in which they wrote, and full names of authors are given when known. The period of coverage is from the beginning up to 1926 when Biological Abstracts began, although selected references are included up to as late as 1938. The entries are especially complete for the subjects mentioned in the title. The following fields of ornithology are not exhaustively covered, chiefly because they are represented in other bird bibliographies, which are named, but even in these fields the more important contributions are listed: distribution, migrations of birds, paleontology, parasitology, poultry economics, taxonomy. The detailed analytic index in Part 3 under 119 major headings with many subheadings and cross-references provides a complete subject approach to the contents of Parts [illegible] and 2. The work is an essential tool for any advanced investigator in the field of ornithology.

STURKIE, PAUL D

Avian physiology Ithaca Comstock Publishing Associates a division of Cornell University Press 1954 423 p. illus. 23 cm. $6.00 2573

Contents Blood—formed elements, hemoglobin, physical characteristics. Chemical constituents of the blood. Circulation, blood pressure, and blood volume. Contraction and conduction in the heart. Electrocardiography. Respiration. Transport of the blood gases. Regulation of body temperature. Energy metabolism. Alimentary canal—anatomy, prehension, deglutition, passage of ingesta, motility, digestion, absorption, secretion of gastric juice, pH. Carbohydrate metabolism. Kidneys and urine. The special senses—eye and vision, hearing, taste, smell. Reproduction in the female and egg formation. Reproduction in the male, fertilization, and early embryonic development. Hypophysis. Gonadal hormones. Thyroids. Parathyroids, thymus, pancreas. Adrenals. Index.

Note A pioneering survey of the physiology of birds. A broad general in viewpoint it—as are the works [illegible] [illegible]—deals mainly with the chicken, the duck, and the pigeon because most of the research has been conducted on these species and they represent species of economic importance to man. The author's style is lucid, but readers need a basic knowledge of biology and physiology for easy comprehension of the book. Fairly extensive literature references accompany each chapter, and references to them are embedded in the text proper. The book is addressed to such readers as advanced students and teachers, poultry science research workers in animal husbandry and veterinary medicine and specialists in avian biology. It is illustrated with 33 figures (photography, charts, and drawings) and [illegible] tables.

SUTTON GEORGE MIKSCH

Mexican birds. First impressions based upon an ornithological expedition to Tamaulipas Nuevo León and Coahuila. With an appendix briefly describing all Mexican birds Illustrated with water-color and pen and ink drawings by the author Norman University of Oklahoma Press 1951 282 p illus (part col d) 25 cm $10.00 2574

Note The main part of this book consists of 11 autobiographical chapters of impressions of Mexican birds written by an ornithologist on his first trip to Mexico. The chapters are presented as a connected story with dates and places named and species identified. The remaining third of the book describes 55 families of birds found in Mexico, with notes on each of the principal species. The illustrations include attractive drawings of 16 species in color and pen-and-ink drawings of 40 more species. The volume is not intended as a handbook of Mexican birds. It is best suited as an informal introduction to the subject for bird students visiting Mexico for the first time.

SWARTH HARRY SCHELWALD

The avifauna of the Galapagos Islands San Francisco California Academy of Sciences 1931 299 p. illus 25 cm. (California Academy of Sciences Occasional papers Vol. XVIII) $3.00 2575

Contents Introduction. Scope of this report. Historical. Features of the Galapagos avifauna. Check-list of Galapagos birds. Accounts of the species. Literature cited. Index.

Note This monograph considers every bird species with a valid claim to inclusion in the Galapagos list, together with the four resident land birds of Cocos Island, Costa Rica. Manner of treatment is as follows: (1) the accepted name of the species; (2) synonymy, not intended to be complete, but giving citations to such publications as contain first-hand facts; (3) data regarding type specimens, including all forms previously described for this region; (4) habitat; (5) number of specimens collected. There are a number of statistical charts and tables and several maps. The list of references covers about 143 titles from 1837 to 1930.

WALKINSHAW LAWRENCE H.

The sandhill cranes. Bloomfield Hills Mich. Cranbrook Institute of Science 1949 202 p illus. 24 cm. (Cranbrook Institute of Science Bulletin no 29) $2.50 2576

Contents Introduction. Molts and plumages. Voice. Crane behavior. Food and feeding habits. Pairing and territory. Nesting. The young. The cranes from fall to spring. History of North American crane populations. Literature cited. Appendices: Key to the cranes of the world. Sandhill crane distribution records (with bibliography). Index.

Note In this book an amateur ornithologist of exceptional devotion has recorded the results of observations covering 13 years and 70,000 miles of travel in North America and Cuba. The life cycle and habits of the sandhill crane (*Grus canadensis*) were minutely observed. The author's own observations were then supplemented by reports in the published literature to produce an exceptionally detailed study of a species that is gradually disappearing. There are 33 photographs—most of which show birds in their natural habitat—31 tables of data, and an extensive bibliography.

Note An encyclopedic presentation of the accumulated knowledge of the bird egg in general and the chicken egg in particular. It does not deal with the egg as an element in reproduction but rather with the biological process of egg production, the physical and chemical properties of eggs, and the food and industrial uses of eggs. Although essentially a reference book, the work is easy to read and contains much information of interest to the nonscientific reader as well as to the scientist. The authors claim to have reviewed more than 15,000 publications in the course of the book's preparation. Those from which information was abstracted are cited in the text and in the bibliography where references are given to approximately 2,800 books, patents, and articles. There are 474 figures.

SAUNDERS, ARETAS ANDREWS

A guide to bird songs, descriptions and diagrams of the songs and singing habits of land birds and selected species of shore birds Revised edition. Garden City Doubleday and Company Inc, 1951 307 p illus 19 cm $3 00 2566

Contents How to identify bird songs. Key to bird songs. Descriptions of bird songs. New material. Index.

Note A field manual designed to aid in the identification of birds by means of their songs. The songs are diagrammed, not in conventional musical notation, but in what the author designates as musical shorthand. They are also rendered as combinations of consonants and vowels, for example, coolee coolee coolee for the gathering call of the bob white. The first edition was published in 1935. In this edition, descriptions are given of many songs that were not represented in the first edition. The added material runs to about 30 pages.

SCHORGER, A W

The passenger pigeon its natural history and extinction. Madison University of Wisconsin Press 1955 424 p illus 23 cm $7 50 2567

Contents Early accounts. Behavioral characteristics. Food. Movements. Roosts. Nesting. Utilization. Methods of capture. Decrease and extinction. Description. Anatomy and physiology. Nomenclature. Distribution. Migration. Late records. Evaluation of illustrations.

Note A fully documented account of a bird which became extinct in the present century although in the 19th century and earlier it existed in such large numbers in eastern and central North America that hunters were able to capture thousands of birds a day. It is written for general reading, but is of interest also to professional ornithologists and scientists and others who are professionally concerned with the conservation of wild life. As the chapter titles indicate the account is a broad one. It is also detailed. The chapter on nesting—to cite an example—is 42 pages long. The book was based on an extensive search of the literature, including the scientific literature of ornithology—of which there was little that was pertinent—and popular periodicals, newspapers, the journals of explorers, etc. Sources are carefully cited, and the section, "References and notes," in which they are fully listed is more than 100 pages long. The 17 figures are reproductions of habitat scenes, hunting scenes and photographs of museum specimens.

SPRUNT ALEXANDER JR.

Florida bird life Based upon and supplementary to *Florida bird life* by Arthur H Howell published in 1932 Color plates from original paintings by Francis Lee Jaques and John Henry Dick New York Published by Coward McCann Inc and the National Audubon Society with the cooperation of U S Fish and Wildlife Service and Florida Game and Fresh Water Fish Commission 1954 527 p illus (part col d) 25 cm $12 50 2568

Contents Recent history of Florida ornithology. The Florida Audubon Society. The Tropical Audubon Society. Bird protection in Florida by J H. Baker. Note on the author by J H. Baker. Physiographic features and regions. The birds of Florida. Literature cited. Index.

Note A lavishly produced, semi-popular reference work on the birds recorded in Florida. The species accounts are written to aid in identification and to supply other information of interest to amateur observers and students. They include scientific and local names, short descriptions of morphology, a statement on range in continental United States of America, and a paragraph headed "Florida status" in which a number of observations indicative of distribution and habits in Florida are condensed. The book is a successor to Howell's *Florida bird life* but does not completely supersede it. The descriptions of plumage and ranges are, for the most part, quoted from Howell. His accounts of "Florida status" are revised and supplemented, those providing a record of changes in abundance, range, etc. The colored plates that appeared in Howell's book have been carried over to this one, and new ones from paintings by John Henry Dick have been added to make a total of 53. Howell's work contained accounts of 423 taxa in contrast to 413 described in the present work.

SPRUNT, ALEXANDER, JR.

North American birds of prey Based upon and supplementary to *The hawks of North America* by John Richard May Color plates from original paintings by Allan Brooks and others black and white illustrations by Roger Tory Peterson. With a foreword by Roger Tory Peterson New York. Published under the sponsorship of the National Audubon Society by Harper & Brothers 1955 227 p. 24 cm $5 00 2569

Contents Vultures. Kites. Accipiters. Buteos. Eagles. Harriers. Ospreys. Caracaras. Falcons. Owls. Appendix: State and provincial laws relating to birds of prey by K. D Morrison. Bibliography.

Note Undoubtedly the primary purpose of this book is to disseminate information about the birds of prey described in its pages and thus to encourage their protection and preservation. Both the Foreword and the Introduction contain strong pleas for conservation. The body of the book consists of descriptions of species and subspecies. These descriptions include common names and zoological names, data on color, size, nesting habits, number and appearance of eggs and range. Also included for many of the birds are descriptions of the food and feeding habits and miscellaneous information of interest to bird watchers. Most of the illustrations are reproductions of color paintings. May's *The hawks of North America* referred to in the title of this book was published in 1935 and is out of print.

STODDARD HERBERT L

The bobwhite quail its habits preservation and increase New York Charles Scribner's Sons 1931 559 p illus (part col d) 26 cm $10 00 2570

Contents Types of southeastern quail territory. Life history of the bobwhite. Miscellaneous habits of the bobwhite. Development, plumage and sex ratio of the bobwhite. Bobwhite's vocabulary. The food and feeding habits of the bobwhite by C O. Handley and C Cottam. Movements of bobwhites as determined by banding studies. Mortality in the bobwhite. Internal parasites and parasitic diseases of the bobwhite by E B Cram and others. External parasites of bobwhites. Non-parasitic diseases of bobwhites. Quail population and their fluctuations. The relation of agricultural activities to the bobwhite. Quail preserve development and management by H L. Stoddard and C O. Handley. The use and abuse of fire on southern quail preserves. Control of natural enemies of the bobwhite. Methods of capturing bobwhites. Artificial propagation of the bobwhite by W B Coleman and H L. Stoddard. Use of Texas bobwhites or Mexican quail in restocking. Some popular beliefs and attitudes in regard to bobwhites. Appendix. Index.

Note A comprehensive study written primarily from the conservation viewpoint. In the years since it was first published, it has attained the status of a classic. In addition to well written, detailed text, there are 31 tabulations of data. The illustrations include figures in the text reproduced from drawings, and 69 plates, many of which are reproduced from photographs. Much of the information included is also applicable to the conservation of other species of game birds.

ZIMMER, JOHN TODD

Birds of the Marshall Field Peruvian expedition, 1922–1923 Chicago Chicago Natural History Museum 1930 250 p illus. 24 cm. (Chicago Natural History Museum. Publication 282 Zoological series. Vol XVII, no. 7) $1.50 2583

Note A report and descriptive catalogue of Peruvian birds secured during the course of the expedition [illegible] work, with comparative notes on allied species or subspecies from other parts of Peru or from adjoining countries. Eight new forms are described. The work is based on [illegible] study of the 1,[illegible] specimens collected by the author at altitudes varying from 1,100 feet to 13,[illegible] feet. In the descriptions, capitalization of the names of colors indicates direct comparison with Robert Ridgway *Color standard and color nomenclature*, Washington D.C., 1912 There are indexes of genera and species.

MAMMALS (EXCEPT MAN)

ALLEN GLOVER MORRILL

A checklist of African mammals. Cambridge Mass. Museum of Comparative Zoology at Harvard College 1939 763 p 24 cm (Harvard College Museum of Comparative Zoology Bulletin. Vol LXXXIII) $10.00 2584

Note A complete checklist of the names applied to African mammals, intended to include all those currently regarded as valid as well as all synonyms through July 1938, as far as possible. The majority of the references have been carefully checked with the originals and the citations of names are as [illegible] given, with their type localities following each. The area covered is the continent of Africa west of the Suez Canal, with the inclusion of Madagascar and the Mascarene Islands and the seas adjacent to the continent. Domesticated animals, unless feral, and the human race are purposely omitted, but with these exceptions the list is purported to include all species known to have lived within historic times. There are numerous cross-references in the detailed index.

ALLEN GLOVER MORRILL

The mammals of China and Mongolia. New York The American Museum of Natural History 1938–40. 2 v in 2 illus 28 cm (Central Asiatic expeditions. Natural history of Central Asia. Vol. 11) $10.00 2585

Contents (abridged) *Part 1, General introduction* Systematic account Insectivora, Chiroptera, Primates, Carnivora, Pinnipedia, Cetacea, Rodentia, Lagomorpha. Complete bibliography Part [illegible] Systematic account (continued) Rodentia, Artiodactyla, Perissodactyla, Sirenia. Complete index.

Note A summary of available knowledge of the mammalian fauna of China and Mongolia. Keys are provided for the identification of the various orders, families, genera and species. For each species or order, the work gives the accepted Latin name, important synonymy [illegible] description of the external and cranial characteristics, measurements, notes on nomenclature, known facts of occurrence and habits within the area treated, and [illegible] list of localities from which specimens have been examined by the author.

ANTHONY H. E.

Field book of North American mammals descriptions of every mammal known north of the Rio Grande, together with brief accounts of habits, geographical ranges etc With 32 coloured plates and 175 photographs pen-and-ink sketches and maps Boston Houghton Mifflin Co. 1918 625 p illus (part col'd) 16 cm. $6.00. 2586

Note Although published 30 years ago and not revised since this book still holds [illegible] place [illegible] useful guide to the mammals of the North American continent. It is directed primarily to amateur naturalists, but is useful to anyone [illegible] is concerned with observing and identifying mammals in the field. There are 135 figures in the text, and [illegible] plates. Many of the latter are in color. Indexes are included both [illegible] scientific names and to common names.

ASDELL, SYDNEY ARTHUR

Patterns of mammalian reproduction. Ithaca Comstock Publishing Co Inc., 1946 437 p illus 24 cm $5.00 2587

Contents Part 1, The [illegible] Introduction Sex determination and differentiation Puberty and sexual maturity The hormones concerned in reproduction The estrous cycle Pregnancy Factors influencing the [illegible] spermatozoa The male accessory organs Part II, The [illegible] Monotremata Marsupialia Insectivora Chiroptera Primates Carnivora Pinnipedia Cetacea [illegible] Xenarthra Tubulidentata Lagomorpha Rodentia Hyracoidea Proboscidea Sirenia Artiodactyla Perissodactyla Index of Latin names Index of vernacular names. General index.

Note A reference book on selected [illegible] of the reproductive physiology and behavior of mammals. Quantitative aspects, such as age of puberty, frequency of estrus, length of [illegible] period, and number of young in the litter are emphasized but there is also considerable information on histology and physiology and relatively less on behavior. Part [illegible] contains [illegible] generalized summary of the knowledge of mammalian reproduction. Part [illegible] presents species by species the particulars of knowledge that has been reported in the literature and gives references to the original publications.

BENEDICT FRANCIS GANO

The physiology of the elephant Washington D C. Carnegie Institution of Washington 1936 302 p illus 25 cm (Carnegie Institution of Washington. Publication no 474) o p 2588

Contents (abridged) Elephants [illegible] Chronology of the research Techniques employed. Duration of [illegible] length of life [illegible] Temperament [illegible] Physical characteristics Respiration [illegible] Vital capacity of lungs Heart rate Body temperature Food Rate of food passage through intestines Nitrogen balance Gaseous metabolism Factors extending the physiology of the elephant. Bibliographies. Index

Note A report of observations made on [illegible] body length, body girth, body weight, muscular activity temperament, and habits of [illegible] female Indian elephant. Careful measurements were obtained of the respiration rate volume [illegible] ventilation of the lungs, heart rate and body temperature (feces and urine temperatures) The unique feature of the investigation [illegible] of the respiratory exchange (oxygen consumption, respiratory quotient, methane production and [illegible] vapor output) in [illegible] specially constructed respiration chamber

BOLE BENJAMIN PATTERSON JR. AND PHILIP N MOULTHROP

The Ohio recent mammal collection in the Cleveland Museum of Natural History Cleveland Cleveland Museum of Natural History 1942 98 p. 23 cm (Cleveland Museum of Natural History Scientific Publications Vol V no. 6) $1.00 2589

Note A systematic catalogue giving descriptions of every species of recent mammal recorded for the state with but [illegible] exception, based on the museum's collection of 2,800 specimens. Scientific name, common name, name of original describer and publication in which original description appeared, type locality description, and specimens examined are listed. There are no illustrations. Forty-five references are given in the bibliography

BOLE, BENJAMIN PATTERSON JR.

The quadrat method of studying small mammal populations. Cleveland Cleveland Museum of Natural History 1939 62 p. illus.

WALLACE, GEORGE J

An introduction to ornithology New York The Macmillan Company, 1955 443 p illus 23 cm $8 00 2577

Contents Part I, The history and current status of bird study The bird a preliminary sketch. External features and their adaptations. Internal features and their function The sense organs and behavior of birds. The annual cycle I Arrival, territory courtship mating, and song—II Nests, eggs, incubation and hatching—III Postnatal life. The migration of birds. The distribution of birds. Food habits and economic relations. Conservation and management. Part II Classification and nomenclature. The fossil record. Ornithological methods. Ornithological organizations and their journals. Bibliography Index.

Note Planned specifically for the instruction of college students this book provides a general introduction to the study of birds. The primary emphasis is on general aspects, such as anatomy behavior and conservation The second part, devoted largely to the systematics of the subject, is much shorter than the first part. The book is not intended as an aid in identification but it does contain a wide range of information that is potentially of interest to bird watchers and amateur ornithologists and which is not to be found in the usual "field books."

WELKER ROBERT HENRY

Birds and men American birds in science art literature and conservation 1800–1900 Cambridge Mass The Belknap Press of Harvard University Press 1955 230 p illus 25 cm $5 75 2578

Contents New lands, new birds. Pioneer and prophet, Alexander Wilson. The American ornithology A meeting of consequence. Fulfilling genius, John James Audubon. Bird art and Audubon. Literary birdmen, Henry David Thoreau. Emerson and other worthies. John Birds, John Burroughs. American bird poetry Whitman and others. End-of-the-century prose The beginnings of conservation Federal and state bird books. Educating a wider public. Boys, pot hunters, and women, enemies of birds. Rescue at hand. Bibliography Index.

Note This book is a semiformal historical account of the attitudes toward wild birds in the United States of America from the beginning of the settlement of America to the foundation of societies and the passing of laws to protect birds. It contains accounts of the work and influence of Alexander Wilson Audubon Thoreau and others. It traces skillfully the change in public sentiment from times when birds were wantonly destroyed for feathers and meat, to times when the need for protection was generally accepted by the public. The selected bibliography is arranged in accordance with the chapter arrangement.

WETMORE ALEXANDER, AND BRADSHAW H SWALES

The birds of Haiti and the Dominican Republic Washington D C The Smithsonian Institution 1931 483 p illus 25 cm (Smithsonian Institution United States National Museum Bulletin no 155) Gratis 2579

Contents Introduction. Physiography Historical account of ornithological investigations. Discussion of the avifauna. Recommendations regarding further studies. Acknowledgments Method of treatment Annotated list Colymbiformes. Procellariiformes Pelecaniformes. Ciconiiformes. Anseriformes. Falconiformes. Galliformes. Gruiformes Charadriiformes. Columbiformes. Psittaciformes Cuculiformes. Strigiformes. Caprimulgiformes. Micropodiformes. Trogoniformes. Coraciiformes. Piciformes. Passeriformes Bibliography Index.

Note An annotated systematic description of the avifauna of the region. With each of the forms treated there is given the current scientific name with the authority followed by the usual English name and the names current locally in Hispaniola in Spanish French and Creole where these are known. A brief synonymy is given for each species described, together with a brief statement as to its characteristics and occurrence There are 26 plates, of which nine are reproductions of drawings.

WETMORE, ALEXANDER

A revised classification for the birds of the world. Washington D C The Smithsonian Institution 1951 22 p 24 cm. (Smithsonian miscellaneous collections Vol 117, no. 4 Publication 4057) o p 2580

Note A work which is primarily of interest to professional ornithologists. The first half of this new revision is devoted to a discussion of the newer knowledge which has made advisable certain changes in and additions to the various groupings of families, superfamilies, suborders, and orders of the class Aves The second half presents the new classification in systematic arrangement, including English names alongside the scientific names. The list includes fossil groups as well as living groups of birds. The new classification reflects particularly the results of increased knowledge of the birds of Australia and New Zealand on the one hand and of fossil forms on the other

WING, LEONARD W

Natural history of birds a guide to ornithology New York The Ronald Press Company 1956 539 p illus 23 cm. $6 75 2581

Contents The place of birds in nature. Classification and nomenclature Bird adaptations. Body structure and operation. The basis of life Egg and embryo. Plumage. Age and sex in the bird. Evolution in bird life. Bird distribution. Ecological relations of birds Territorial relations of birds. Social relations and social behavior Bird abundance Bird flight—migration—song. Courtship and nesting habits. Young birds and their care. Heredity in the bird. Death in wild birds. Rise of bird protection. Economic relations of birds Bird study afield. Appendixes References. Bird orders and families of the world. Official state birds. Glossary Index.

Note A cyclopedic treatment of bird biology organized as shown in the above contents. Essentially it is an assembly of the scientific information about birds that is of interest to advanced amateur ornithologists, college students of biology and writers of popular natural history It is well organized and is written in semitechnical style suitable for the intended readers There are numerous tables of data and many illustrations. Literature references are included both in the form of short lists of "Suggested reading" and systematic bibliography

WOLFSON ALBERT editor

Recent studies in avian biology Published under the sponsorship of the American Ornithologists Union Urbana University of Illinois Press 1955 479 p illus 26 cm $7.50 2582

Contents Concepts and problems of avian systematics in relation to evolutionary processes, by A H. Miller Recent revisions in classification and their biological significance by H Friedmann Paleontology by A. Wetmore. Avian anatomy 1925–1950, and some suggested problems, by H. I. Fisher The study of behavior in birds, by J T Emlen, Jr Bird navigation, by D R. Griffin The seasonal stimulus for migration—experimental and physiologic aspects, by D S. Farner Direct studies of nocturnal bird migration, by G. H. Lowery Jr and R. J Newman. Breeding biology of birds by D E Davis. Recent advances in knowledge concerning the role of hormones in the sex differentiation of birds, by L. V Domm Some American population research on gallinaceous birds, by J J Hickey Birdbanding in the study of population dynamics, by D S Farner Diseases of birds, by C. M. Herman. Index

Note Although survey volumes such as this one are common in many fields of science they are uncommon in ornithology As shown above the book is composed of signed chapters on selected areas of avian biology The contributors include some of the leading authorities on birds in the United States of America Generally speaking, each of the authors devotes most of his attention to recent advances and to some problems that are still unsolved However the span of time covered—25 years and more in some cases—is considerably longer than is usually covered in such surveys All of the papers are addressed to persons with considerable scientific knowledge such as advanced students of biology and graduate biologists. All are accompanied by extensive lists of literature The volume has an adequate subject index but lacks an index to authors. However each of the separate bibliographies is arranged alphabetically by name of author The dates of completion of the individual papers range from 1952 to 1955

Zimmer, John Todd

Birds of the Marshall Field Peruvian expedition, 1922–1923 Chicago Chicago Natural History Museum 1930. 250 p. illus. 24 cm. (Chicago Natural History Museum. Publication 282 Zoological series Vol. xvii no.) $1.50. 2583

Note A report and descriptive catalogue of Peruvian birds secured during the course of the expedition [illegible] with comparative notes on [illegible] species or subspecies from other parts of Peru or from adjoining countries. Eight new forms are described. The work is based on [illegible] of the 1,497 specimens collected by the author at altitudes varying from 1,200 feet to 12,250 feet. In the descriptions, [illegible] of the names of colors [illegible] comparison with Robert Ridgway Color standards and color nomenclature, Washington, D.C., 1912 There are indexes of genera and species.

MAMMALS (EXCEPT MAN)

Allen, Glover Morrill

A checklist of African mammals Cambridge Mass. Museum of Comparative Zoology at Harvard College, 1939 763 p 24 cm (Harvard College Museum of Comparative Zoology Bulletin. Vol. lxxxiii) $10.00 2584

Note A complete checklist of the names applied [illegible] African mammals, intended to include all those currently regarded as valid as well as all synonyms through July 1 [illegible] so far as possible. The entirety of the references have been carefully checked with the originals and the [illegible] are as originally given, [illegible] their type localities following each. The area covered is the continent of Africa [illegible] with the inclusion of Madagascar and the Mascarene Islands and the area adjacent to the [illegible]. Domesticated animals, unless feral, and the human [illegible] are purposely omitted, [illegible] the list [illegible] to include all species known to have lived [illegible] times. There are extensive cross-references to the detailed index.

Allen, Glover Morrill

The mammals of China and Mongolia. New York. The American Museum of Natural History 1938–40. 1 v in 2 illus 28 cm. (Central Asiatic expeditions. Natural history of Central Asia. Vol. 11) $10.00 2585

Contents (abridged) Part 1, General introduction. Systematic account. Insectivora. Chiroptera. Primates. Carnivora. Pinnipedia. Cetacea. Xenarthra. Lagomorpha. Complete bibliography. Part [illegible] Systematic account (continued) Rodentia. Artiodactyla. Perissodactyla. Fauna. Complete index.

Note A summary of [illegible] knowledge of the mammalian fauna of China and Mongolia. Keys are provided for the identification of the various orders, families, genera and species. For each species or order the work gives the accepted Latin name [illegible] synonymy [illegible] description of the external and cranial characters, measurements, notes on nomenclature, known facts [illegible] occurrence and habits within the area covered, and [illegible] list of localities from which specimens have been examined by the writer.

Anthony, H. E.

Field book of North American mammals descriptions of every mammal known north of the Rio Grande together with brief accounts of habits, geographical ranges etc. With 32 coloured plates and 175 photographs pen-and-ink sketches and maps. Boston Houghton Mifflin Co., 1918 625 p. illus (part col'd) 16 cm. $6.00 2586

Note Although published 30 years ago and not revised since this book still holds [illegible] place as [illegible] guide to the mammals of the North American continent. It is directed primarily to amateur naturalists, but is useful to anyone [illegible] concerned [illegible] observing and identifying mammals in the field. There are 153 figures in the text and 47 plates. Many of the latter are in color. [illegible] included both [illegible] names and in common names.

Asdell, Sydney Arthur

Patterns of mammalian reproduction. Ithaca Comstock Publishing Co Inc., 1946 437 p. illus 24 cm $5.00 2587

Contents Part 1. The [illegible] of reproduction [illegible] Puberty and sexual maturity. The hormones concerned in reproduction. The [illegible] cycle. Pregnancy. Factors influencing the [illegible] The male accessory organs. Part II. The [illegible] Monotremata. Marsupialia. Insectivora. Chiroptera. Primates. Carnivora. Pinnipedia. Cetacea. [illegible] Xenarthra. Tubulidentata. Lagomorpha. Rodentia. Hyracoidea. Proboscidea. Sirenia. [illegible] Perissodactyla. Index of Latin names. Index of [illegible] General index.

Note A reference book on [illegible] of the reproductive physiology and behavior of mammals. Quantitative aspects, such as age at puberty, frequency of [illegible] length of gestation period, and number of young [illegible] are emphasized but there is [illegible] information on histology and physiology and relatively less on behavior. Part [illegible] summary of the knowledge of mammalian reproduction. Part [illegible] presents species by species the part of the knowledge that has been reported in the literature and gives references to the original publications.

Benedict, Francis Gano

The physiology of the elephant. Washington, D C Carnegie Institution of Washington, 1936 302 p. illus 25 cm. (Carnegie Institution of Washington. Publication no 474) o.p. 2588

Contents (abridged) [illegible] Chronology [illegible] Techniques [illegible] Dimensions of [illegible] and height of [illegible] Temperament. Breeding [illegible] Physical appearance. Physical characteristics. Respiration [illegible] of [illegible] Body temperature. Feed [illegible] of food [illegible] Nitrogen balance. Gaseous [illegible] facts regarding the physiology [illegible] elephant. 72 [illegible] Index.

Note A report of observations made [illegible] body girths, body weights, muscular activity, temperament, and habits of [illegible] female Indian elephant. Careful measurements were obtained [illegible] of the heart rate and body temperature [illegible] The unique feature of the investigation [illegible] of the respiratory exchange (oxygen consumption, respiratory quotient, carbon [illegible] production, and [illegible] output [illegible] constructed respiration chamber.

Bole, Benjamin Patterson jr., and Philip N. Moulthrop

The Ohio recent mammal collection in the Cleveland Museum of Natural History. Cleveland Cleveland Museum of Natural History 1942 98 p. 23 cm. (Cleveland Museum of Natural History Scientific Publications. Vol. v no. 6) $1.00 2589

Note A systematic catalogue giving descriptions of every species of recent mammal recorded for the state with but one exception, based on the museum [illegible] collection of 1,000 specimens. Scientific name, common name, name of original describer and publication in which original description appeared, type locality, description, and specimens examined are listed. There are no illustrations. Forty-five references are given in the bibliography.

Bole, Benjamin Patterson jr.

The quadrat method of studying small mammal populations Cleveland Cleveland Museum of Natural History 1939 62 p illus.

WALLACE, GEORGE J

An introduction to ornithology New York The Macmillan Company, 1955 443 p illus 23 cm $8 00 2577

Contents Part I, The history and current status of bird study The bird a preliminary sketch. External features and their adaptations. Internal features and their function. The sense organs and behavior of birds. The annual cycle, I, Arrival, territory courtship, mating, and song—II, Nests, eggs, incubation, and hatching—III, Postnatal life. The migration of birds. The distribution of birds. Food habits and economic relations. Conservation and management. Part II, Classification and nomenclature. The fossil record. Ornithological methods. Ornithological organizations and their journals. Bibliography Index.

Note. Planned specifically for the instruction of college students, this book provides a general introduction to the study of birds. The primary emphasis is on general aspects, such as anatomy behavior and conservation. The second part, devoted largely to the systematics of the subject, is much shorter than the first part. The book is not intended as an aid in identification, but it does contain a wide range of information that is potentially of interest to bird watchers and amateur ornithologists and which is not to be found in the usual "field books.

WELKER, ROBERT HENRY

Birds and men American birds in science, art, literature, and conservation, 1800–1900 Cambridge, Mass The Belknap Press of Harvard University Press, 1955 230 p illus 25 cm $5 75 2578

Content New lands, new birds. Pioneer and prophet, Alexander Wilson. The American ornithology A meeting of consequence. Fulfilling genius, John James Audubon. Bird art and Audubon. Literary birdmen, Henry David Thoreau. Emerson and other worthies. John o' Birds, John Burroughs. American bird poetry Whitman and others. End-of-the-century prose The beginnings of conservation. Federal and state bird books. Educating a wider public Boys, pot-hunters, and women, enemies of birds. Rescue at hand. Bibliography Index.

Note This book is a semiformal historical account of the attitudes toward wild birds in the United States of America from the beginning of the settlement of America to the foundation of societies and the passing of laws to protect birds. It contains accounts of the work and influence of Alexander Wilson Audubon, Thoreau and others. It traces skillfully the change in public sentiment from times when birds were wantonly destroyed for feathers and meat, to times when the need for protection was generally accepted by the public. WETMORE ALEXANDER, AND BRADSHAW H SWALES

The birds of Haiti and the Dominican Republic. Washington D C The Smithsonian Institution 1931 483 p illus 25 cm. (Smithsonian Institution United States National Museum. Bulletin no 155) Gratis 2579

Content Introduction. Physiography Historical account of ornithological investigations. Discussion of the avifauna. Recommendations regarding further studies. Acknowledgements. Method of treatment. Annotated list Colymbiformes. Procellariiformes. Pelecaniformes. Ciconiiformes Anseriformes. Falconiformes. Galliformes. Gruiformes. Charadriiformes. Columbiformes. Psittaciformes. Cuculiformes. Strigiformes. Caprimulgiformes. Micropodiformes. Trogoniformes. Coraciiformes. Piciformes. Passeriformes Bibliography Index.

Note An annotated systematic description of the avifauna of the region With each of the forms treated, there is given the current scientific name with the authority followed by the usual English name and the names current locally in Hispaniola in Spanish, French, and Creole, where these are known A brief synonymy is given for each species described, together with a brief statement as to its characteristics and occurrence. There are 26 plates, of which nine are reproductions of drawings.

WETMORE, ALEXANDER

A revised classification for the birds of the world. Washington, D C The Smithsonian Institution, 1951 22 p 24 cm. (Smithsonian miscellaneous collections Vol 117, no 4 Publication 4057) o p 2580

Note A work which is primarily of interest to professional ornithologists. The first half of this new revision is devoted to a discussion of the newer knowledge which has made advisable certain changes in and additions to the various groupings of families, superfamilies, suborders, and orders of the class *Aves*. The second half presents the new classification in systematic arrangement, including English names alongside the scientific names. The list includes fossil groups as well as living groups of birds. The new edition reflects particularly the results of increased knowledge of the birds of Australia and New Zealand on the one hand and of fossil forms on the other

WING, LEONARD W

Natural history of birds a guide to ornithology New York The Ronald Press Company 1956 539 p illus 23 cm. $6 75 2581

Contents The place of birds in nature. Classification and nomenclature. Bird adaptations. Body structure and operation. The laws of life. Egg and embryo. Plumage. Age and sex in the bird. Evolution in bird life. Bird distribution. Ecological relations of birds. Territorial relations of birds. Social relations and social behavior Bird abundance. Bird flight—migration—song. Courtship and nesting habits. Young birds and their care. Heredity in the bird. Health in wild birds. Rise of bird protection. Economic relations of birds Bird study afield. Appendixes References. Bird orders and families of the world. Official state birds. Glossary Index.

Note A cyclopedic treatment of bird biology organized as shown in the above contents. Essentially it is an assembly of the scientific information about birds that is of interest to dedicated amateur ornithologists, college students of biology and writers of popular natural history It is well organized and is written in a semitechnical style suitable for the intended readers There are numerous tables of data and many illustrations. Literature references are included both in the form of short lists of "Suggested reading" and a systematic bibliography

WOLFSON, ALBERT, editor

Recent studies in avian biology Published under the sponsorship of the American Ornithologists' Union Urbana University of Illinois Press 1955 479 p illus 26 cm. $7.50. 2582

Content Concepts and problems of avian systematics in relation to evolutionary processes, by A H. Miller Recent revisions in classification and their biological significance, by H Friedmann. Paleontology by A. Wetmore. Avian anatomy 1925–1950, and some suggested problems, by H. I. Fisher The study of behavior in birds, by J T Emlen, Jr Bird navigation by D R. Griffin. The annual stimulus for migration—experimental and physiologic aspects, by D S. Farner Direct studies of nocturnal bird migration, by G. H. Lowery Jr and R. J Newman. Breeding biology of birds by D. E. Davis. Recent advances in knowledge concerning the role of hormones in the sex differentiation of birds, by L. V Domm Some American population research on gallinaceous birds, by J. J Hickey Birdbanding in the study of population dynamics, by D. S Farner Diseases of birds, by C. M. Herman. Index

Note Although survey volumes such as this one are common in many fields of science, they are uncommon in ornithology As shown above the book is composed of signed chapters on selected areas of avian biology The contributors include some of the leading authorities on birds in the United States of America. Generally speaking, each of the authors devotes most of his attention to recent advances and to some problems that are still unsolved. However the span of time covered—25 years and more in some cases—is considerably longer than is usually covered in such surveys. All of the papers are addressed to persons with considerable scientific knowledge such as advanced students of biology and graduate biologists. All are accompanied by extensive lists of literature. The volume has an adequate subject index but lacks an index to authors However each of the separate bibliographies is arranged alphabetically by name of author The dates of completion of the individual papers range from 1952 to 1955

Mammals

EINARSEN ARTHUR SKOGMAN

The pronghorn antelope and its management. Harrisburg, Pa. The Stackpole Company and the Wildlife Management Institute Washington, D. C., 1948 238 p. illus. (part col d) 23 cm. $4.00. 2596

Contents: History, distribution, and abundance. Characteristics and life history: Physical characteristics; behavior; food habits; disease and mortality; life history. Pronghorn antelope in relation to civilization. Management of the antelope resource. How to hunt antelope. Epilogue. Appendix: Acknowledgments. A short sketch of the 1943 restricted pronghorn season in Oregon. Systematic descriptions. Literature cited. Index.

Note: Based upon field studies in the four states of Oregon, Idaho, Nevada, and California at all seasons of the year this volume is a scientific account of the pronghorn, only member of the family *Antilocapridae* of which it is the sole living representative. All phases of the life and ecology of the animal are described. Researches leading to the publication were carried on over a period of about 11 years under the direction of the Oregon Cooperative Wildlife Research Unit, formed at Oregon State College by several national and state agencies. Among the illustrations are 75 reproductions of photographs of the pronghorn and its habitat.

ENGLE, EARL THERON editor

The problem of fertility proceedings of the Conference on Fertility held under the auspices of the National Committee on Maternal Health. Princeton Princeton University Press, 1947 254 p. illus. 22 cm. $3 75 2597

Contents: Patterns of estrous cycles, by S. A. Asdell. Ovulation and estrus in sheep and goats, by R. W. Phillips and others. Induction of ovulation and subsequent fertility in domestic animals, by L. E. Casida. The induction of ovulation in domestic animals, by J. Hammond. The ovary at the time of ovulation, by G. W. Corner. Hormonal control of ovulation, by H. H. Cole. Cervical mucus and the menstrual cycle, by W. T. Pommerenke and Ebenezer Viergiver. Spermatozoa and cervical mucus, by A. E. Abarbanel. Glycolysis, motility and fertility of bovine spermatozoa, by G. W. Salisbury. Metabolism and motility of human spermatozoa, by J. MacLeod. Fertilizing capacity of rabbit spermatozoa, by M. C. Chang. Biology of equine spermatozoa, by F. L. Bertram. Artificial insemination of dairy cattle, by J. W. Bartlett. The corpus luteum in sterility [illegible], by F. A. Simmons. The effect of synthetic thyroprotein on fertility in bulls, by E. P. Reineke. Methods for determining the time of ovulation in domestic animals, by J. Hammond. List of members of the Conference on Fertility.

Note: The papers and discussions presented in this volume provide an over-all picture of the present status of research concerning the patterns of reproduction in mammals. Although various aspects of human fertility are discussed, the majority of the papers deal with the processes of reproduction in domestic animals. For this reason the book will be of interest to professional animal breeders as well as to biologists and physicians. Several of the papers include extensive bibliographies.

GOODWIN GEORGE G

Catalogue of the type specimens of recent mammals in the American Museum of Natural History New York American Museum of Natural History 1953 211–411 p. 26 cm. $2.50 2598

Contents (abridged): Order Marsupialia Family Didelphidae. Family Dasyuridae Family Peramelidae. Family Caenolestidae Family Phalangeridae Family Macropodidae Order Insectivora. Family Erinaceidae. Family Macroscelididae. Family Soricidae. Family Talpidae Order Chiroptera Family Pteropidae. Family Emballonuridae Family Nycteridae. Family Rhinolophidae Family Phyllostomatidae Family Natalidae Family Vespertilionidae. Family Molossidae Order Primates Family Tupaiidae. Family Lemuridae. Family Cebidae Family Callithricidae Family Cercopithecidae. Order Edentata Family Myrmecophagidae Family Bradypodidae. Order Pholidota Family Manidae. Order Lagomorpha Family Ochotonidae. Family Leporidae. Order Rodentia Family Sciuridae. Family Geomyidae. Family Heteromyidae. Family Castoridae. Family Anomaluridae. Family Cricetidae. Family Muridae. Family Gliridae Family Zapodidae Family Dipodidae Family Hystricidae Family Erethizontidae Family Caviidae Family Dasyproctidae. Family Dasyproctidae Famil Capromyidae Fam. Thryonomyidae Order Cetacea. Family Ziphiidae Family Delphinidae Famil. Physeteridae Order Carnivora Family Canidae Family Ursidae Family Procyonidae Famil Mustelidae Family Viverridae Famil Hyaenidae Family Felidae Order Pinnipedia Family Phocidae Order Tubulidentata Family Orycteropodidae Order Proboscidea Family Elephantidae Order Hyracoidea Family Procaviidae Order Perissodactyla Family Tapiridae Order Artiodactyla Family Tayassuidae. Family Cervidae. Family Bovidae Missing type specimens. Geographical guide to type localities. Collectors of type specimens in the American Museum of Natural History Index.

Note: A systematic catalogue of 944 type mammal specimens in the American Museum of Natural History. The nature of the specimen—e.g. skin—is stated and measurements are given in addition to the customary information on names, type references, etc.

GOODWIN GEORGE G

Mammals of Costa Rica. Dedicated to Cecil F Underwood. New York American Museum of Natural History 1946 473 p. illus 27 cm. (American Museum of Natural History Bulletin. Vol. 87 article 5) $7.50 2599

Contents (abridged): Class Mammalia, Subclass Eutheria. Order Marsupialia—Family Didelphidae. Order Insectivora—Family Soricidae. Order Chiroptera—Family Emballonuridae—Family Noctilionidae—Family Phyllostomidae—Subfam. Chilonycterinae—Subfamily Phyllostominae—Subfam. Glossophaginae—Subfamily Stenoderminae—Family Desmodontidae—Family Vespertilionidae—Family Molossidae. Order Primates—Suborder Anthropoidea—Family Cebidae—Subfamily Alouattinae—Family [illegible]—Family [illegible]. Order Edentata—Suborder Xenarthra—Family Dasypodidae—Family Bradypodidae—Family Myrmecophagidae. Order Lagomorpha—Family Leporidae. Order Rodentia—Family Sciuridae—Family Heteromyidae—Family Cricetidae—Subfamily Cricetinae—Family Muridae—Subfamily Murinae—Family [illegible]—Family Erethizontidae. Order Carnivora—Family Procyonidae—Family Mustelidae—Subfamily Mustelinae—Subfamily Mephitinae—Family Canidae—Family Felidae. Order Pinnipedia—Family Phocidae. Order Sirenia—Family Trichechidae. Order Artiodactyla—Family Tayassuidae—Family Cervidae—Subfamily Cervinae. Order Perissodactyla—Family Tapiridae. Bibliography. Index.

Note: A comprehensive description for professional zoologists of all species known to occur in Costa Rica and in adjacent regions of Nicaragua and Panama. The information on each species covers the following points: location and history of the type specimen, geographic range, generic characters, description, measurements and a brief summary of what is known about the animal's habits. The work is based chiefly on an examination of collections made by Cecil F. Underwood, which are now located in the American Museum of Natural History and other North American museums.

GREGORY WILLIAM KING editor

The Henry Cushier Raven memorial volume. The anatomy of the gorilla. The studies of Henry Cushier Raven and contributions by William B Atkinson Herbert Elftman, John Eric Hill, Adolph H. Schultz, William L. Straus Jr., and S. L. Washburn. Arranged and edited by William King Gregory A collaborative work of the American Museum of Natural History and Columbia University New York American Museum of Natural History 1950 259 p. illus. 32 cm. $15.00 2600

Contents (abridged): Part I, Henry Cushier Raven (1889–1944) by W. K. Gregory. Scientific papers of Henry Cushier Raven. Part II, Regional anatomy of the gorilla, by H. C. Raven, with additions by J. E. Hill. Part III, Thoracic viscera of the gorilla, by S. L. Washburn. The abdominal viscera of the gorilla, by H. Elftman and W. B. Atkinson. Female reproductive system of the gorilla, by W. B. Atkinson and H. Elftman. Part IV The microscopic anatomy of the skin of the gorilla, by W. L. Straus, Jr. Part V Morphological observations on gorillas, by A. H. Schultz. Index.

Note: Considerably more than half of the space in this volume is devoted to reproductions of original drawings, made under Henry Cushier Raven's direction, of his own dissections of the gorilla. The drawings are remarkably clear and are reproduced in large size.

23 cm (Cleveland Museum of Natural History Scientific publications Vol v no 4) $0 50 2590

Contents Introduction. Quadrat work of investigators from Cleveland Museum. Field methods. Composition of the yields of different sizes and types of quadrants. Discussion. Populations (annotated list with preliminary discussion) List of references.

Note Quadrats, which are used as a means of determining the abundance of animals in ecological studies, consist of squares of land of known area over which traps are set, the number varying according to the needs of the terrain from the yield obtained per quadrat the number of animals per acre, per square mile, or any other larger area may be computed statistically The present paper is an account of the results obtained by the Cleveland Museum over a period of years.

BURT, WILLIAM HENRY

The mammals of Michigan Illustrated by Richard Philip Grossenheider Ann Arbor University of Michigan Press, 1946 288 p illus. (part col'd) 26 cm $7 50 2591

Content (abridged) Earlier accounts. Faunal position of Michigan. *Economic importance of mammals. Adaptive radiation* (divergence) Home ranges and territories. Populations. Collecting and preparing specimens. Artificial key to Michigan mammals. Classification of the mammals of the world. The mammals of Michigan. Appendix Table summarizing measurements (in mm.) and life history data. Index.

Note The author staff member of the Museum of Zoology of the University of Michigan, bases the statements in this book as far as possible upon materials (specimens and field notes) in the Museum. The pen drawings and colored plates which illustrate the volume are mostly from life. The purpose of the volume is twofold first, to summarize present knowledge of the mammals of Michigan and to make it available for use secondly to point out areas needing further investigation in order to encourage research in the field. For each species, there is a description covering size, physical characteristics, habitat, habits, distribution and economic status, and also an illustration of the species and a distribution map, showing (1) distribution in Michigan and (2) distribution in North America bibliographical references also are grouped with the species descriptions. A slightly revised edition was published in 1948.

CAHALANE, VICTOR HARRISON

Mammals of North America. With drawings by Francis L. Jaques New York The Macmillan Company 1947 682 p illus 24 cm $5 95 2592

Contents (abridged) The wild pig The deer family—elk—whitetail deer—moose—caribou. The heliographer—antelope. Original American livestock—buffalo—muskox—bighorn—mountain goat Survivors of ancient orders—opossum—armadillo. The insect hunters—mole—shrew The flyer—bat. The bears. The bear's small cousins—raccoon—coati—ringtail. The musk-carriers—marten—fisher—weasel—mink—wolverine—the otter—striped skunk—hog-nosed skunk—spotted skunk—badger The wild dogs—red fox—gray fox—coyote—wolf The cats—the cougar—jaguar—ocelot—lynx. The finfeet—fur seal—sea lion—sea elephant—walrus The chucks and ground squirrels The chipmunks and squirrels. Chisel-teeth (Part I)—pocket gopher—kangaroo rat—beaver—harvest mouse—cotton rat. Chisel-teeth (Part II)—lemming—meadow mouse—muskrat—house rat—mountain beaver—porcupine. The hares and rabbits. The vanishing mermaid—the manatee. Two seafarers—the whale—dolphin. List of references. Index.

Note A popular book which is outstanding for its scope and readability The land mammals, both large and small, are described rather completely but the sea mammals and the bats are given relatively less space because they are not readily accessible to the layman for observation. The descriptive matter deals largely with range, physical characteristics, life histories, and habits. The author is assistant director of the New York State Museum

COLBERT, EDWIN HARRIS

Siwalik mammals in the American Museum of Natural History Philadelphia American Philosophical Society 1935 401 p illus 30 cm. (American Philosophical Society Transactions New series, Vol 26) $5 00 2593

Contents (abridged) Part I, Introduction Previous publications dealing with American Museum Siwalik vertebrates. Historical review Part II, Geological considerations Geography of the Siwalik Hills and the Salt Range. General geologic considerations of the Siwalik beds. Part III, Mammalian faunas of the Siwalik area. Part IV American Museum Siwalik fossil localities. Part V, Systematic descriptions and discussions. Primates. Rodentia. Lagomorpha. Carnivora. Tubulidentata. Proboscidea. Perissodactyla. Artiodactyla. The migrations of certain mammals to and from the Siwaliks. Part VI, General summary and conclusions. Bibliography Index.

Note The collection of Siwalik mammals in the American Museum of Natural History on which this study is based, was made by Dr Barnum Brown in two regions of the Punjab, one in the Siwalik Hills between the Sutlej and the Jumna rivers, the other in the Salt Range between the Indus and the Jhelum rivers. In the present work the author's purpose was to make a thorough study of certain of the mammalian orders which comprise the bulk of this collection, not only by means of his own researches but also by correlating his work with that of other authors. Studies of the Proboscidea from this collection by Professor Henry Fairfield Osborn, of the three species of *Dryopithecus* which it contains by Dr William King Gregory and Dr Milo Hellman, and of the Bovidae by Dr Guy E. Pilgrim, have been summarized, although attention has been directed chiefly to all the other mammalian groups in this collection The several Siwalik faunas contain an abundant assemblage of mammalian genera and species. From the field studies of Dr Brown, it was possible to make a careful record of the geographic position and the stratigraphic level of nearly all of the fossils in the collection and this record has been of great aid in the study of the faunal sequences and in the formation of views as to the phylogenetic relationships of the various Siwalik mammals.

DAVIS, WILLIAM B

The recent mammals of Idaho. Caldwell, Idaho The Caxton Printers, Ltd. 1939 400 p illus 23 cm (Contribution from the Museum of Vertebrate Zoology, University of California) $5 00 2594

Contents Geography of the state. Floral provinces. Distributional areas in Idaho. Problems of distribution in Idaho. Museums containing type specimens. Type localities in Idaho. Gazetteer of localities. Mammals of Idaho by groups. Plan of procedure in species accounts. Lists of counties in Idaho. Accounts of species Insectivora. Chiroptera. Carnivora. Rodentia. Lagomorpha. Artiodactyla. Abstract. Literature cited. Index.

Note Mainly a systematic description of the families, genera, and species of the six orders of mammals indigenous to Idaho, with classification description, distribution, scientific and common name, and record of occurrence for each type specimen included

DURRANT, STEPHEN D

Mammals of Utah taxonomy and distribution Lawrence University of Kansas. 1952 549 p illus 23 cm (University of Kansas Museum of Natural History Publications Vol 6) 2595

Contents Introduction. Aims. Treatment. Topography and climate. Check-list of mammals of Utah. Accounts of species and subspecies. Order Insectivora Order Chiroptera. Order Lagomorpha. Order Rodentia. Order Carnivora. Order Artiodactyla. Type Localities. Hypothetical list. Addenda. Faunal areas Physiography and speciation. Literature cited Index

Note A comprehensive systematic report of the mammals of a state which is noted for its variety of topography and climate. As noted in the title the emphasis is on taxonomy and distribution. Occurrence within the state was the criterion for inclusion of each currently described species or other form, and of the 247 kinds of mammals, 244 are represented by specimens in collections. Most of the space is devoted to the systematic accounts of individual species and subspecies. These accounts cover scientific name synonymy, literature references to occurrences in Utah, a description of morphology, statement on range within the state, discussion and evaluation of other pertinent information such as tabulation of cranial measurements, in some instances. The 19-page discussion of physiography and speciation is of special interest. There are 59 figures.

Mammals

HARTMAN CARL GOTTFRIED
Possums. Austin University of Texas Press, 1952 174 p. illus. 29 cm. $6.00 2607

Contents: Introduction. Europeans meet the opossum. The opossum down under. The [illegible] and the age of credulity. The opossum gets [illegible]. What manner of beast is this. The opossum at home. And [illegible]. Chicken thief. Playing possum. Opossum embryology in pictures. Birth of the opossum. Journey to the pouch. [illegible] Journey to the pouch [illegible]. Birth of the kangaroo. The [illegible] pouch in nature. The pouch young. Opossum and bear. A butterfly painter starts [illegible] legend. Four centuries of opossum pictures. Possum hunting. Possum capes and red garters. Possums and [illegible]. Appendix. Possum rhymes and folklore. Bibliography. Index.

[illegible] A large volume [illegible] both in text and pictures, the lore and science of the opossum (Didelphis virginiana Kerr). The author has made [illegible] study of the subject for over [illegible] years and has written this book largely on the basis of his observations and experiments. The scientific information combined with the author's humorous style makes the book interesting reading both for zoologists and for nature-lovers in general. The chapters on the development of the embryo and birth of the young and migration to the pouch are noteworthy.

HAYES CATHY
The ape in our house. New York Harper & Brothers, 1951 247 p. illus. 22 cm. $3.50 2608

Contents (abridged): Part 1. The first eighteen months: We adopt [illegible] baby. [illegible] Grandma visits the creature. [illegible] [illegible] Guess what Viki did today! Teaching an ape to talk. [illegible] Viki's second Christmas. The very strange case of the imaginary pulltoy. Viki and the child. Part 2. The [illegible] and eighteen months. Viki and the caged ape. [illegible] [illegible]. The [illegible]. [illegible] don't need talking [illegible]. Part 3. In answer to your questions— [illegible] [illegible] What [illegible] Actions and words. The nature of the beast. [illegible] only the beginning. Author's note—[illegible]

Note: An account of the first three years in the development and growth of Viki, [illegible] female chimpanzee adopted at birth by [illegible] [illegible] and her [illegible] and reared in their home in Orange Park, Florida, in much the same manner as [illegible] human baby would be raised in a similar environment. The results are of interest to the lay reader as well as to the zoologist and psychologist.

INGLES LLOYD GLENN
Mammals of California and its coastal waters. Stanford Stanford University Press 1954 396 p. illus. 24 cm. $6.00 2609

Contents: Introduction to mammals. Mammals of long ago. Why we study mammals. How to study mammals. Accounts of the species: Marsupialia. Insectivora. Chiroptera. Carnivora—Fissipedia—Pinnipedia. Rodentia. Lagomorpha. Perissodactyla. Artiodactyla. Cetacea. Appendix: How to collect and make up study skins. Dental formulae of the genera of land mammals of California. An artificial [illegible] key to the skulls of California mammals. [illegible] [illegible] of some mammalian genera. Principles of zoological classification. Classification and check list of native and introduced species of recent mammals of California (according to Grinnell). Suggested references. Index.

Note: This book may be viewed as [illegible] second edition or as [illegible] to the author's Mammals of California, 1947. Much of the text of the earlier work has been carried over to [illegible] and considerable material has been added. Among the new material are "pictorial keys" which are actually reproductions of small, carefully detailed drawings of mammals with the characters that distinguish species made clear. An artificial generic key to skulls has also been added. As was true of the earlier work, the book [illegible] addressed primarily to beginning students of California mammalogy. It contains, however, rather extended accounts of habits, many of which are based on the author's own observations, and these are particularly of interest to advanced students of mammalogy. The book contains [illegible] large number of photographs, many of them made by the author, and maps showing ranges within the state of California.

LINSDALE JEAN MYRON AND LLOYD P TEVIS JR.
The dusky footed wood rat a record of observations made on the Hastings Natural History Reservation. Berkeley University of California Press 1951 664 p. illus. 24 cm. $7.50 2610

Contents: Introduction. Habitat. Houses. Area. [illegible] Behavior. Food. Reproduction. Morphology. Population. Conclusion. Literature cited. Index.

Note: A detailed scientific study of Neotoma fuscipes, the dusky-footed wood rat, [illegible] characteristically nocturnal pack rat native to parts of Oregon, California, and Baja California. It is based upon [illegible] observations made at the Frances Simes Hastings Natural History Reservation in the northern Santa Lucia Mountains [illegible] Monterey county California, over [illegible] 10-year period. The photographic illustrations depict the rat and his [illegible] [illegible] include [illegible] and graphs presenting [illegible] of individual specimen studies.

LINSDALE, JEAN MYRON AND P QUENTIN TOMICH
A herd of mule deer a record of observations made on the Hastings Natural History Reservation. Berkeley and Los Angeles University of California Press 1953 567 p illus 24 cm. $8.50 2611

Contents: Introduction. Structure. Communication. Movements. Relations to other animals. Habitat. Activity. Food. Reproduction. Population. Literature cited. Index.

Note: This book is the report in detail of [illegible] study of [illegible] group of deer inhabiting [illegible] small area in [illegible] protected reservation. Aside from the feature of protection from hunters, the deer were living under natural conditions in [illegible] natural environment. The study was conducted from the viewpoint of ecology or the responses of the observed deer to [illegible] rather wide range of environmental situations. Anatomical and physiological studies of the observed deer could not be made; however, the book contains an extensive [illegible] on structure in which aspects of anatomy are discussed. The chapters that follow that on structure are composed largely of the detailed records of observations made in the field. The authors conclude: "Our conclusion [illegible] respect to the deer on the Reservation is that many factors, rather than [illegible] few, affect survival and determine the size of the population [illegible] the population we observed has developed and is being maintained at its present high level because of many favorable circumstances rather than [illegible] response to any one element or small group of elements.

MILLER, GERRIT S JR., AND REMINGTON KELLOG
List of North American recent mammals. Washington D C. Government Printing Office 1955 954 p 23 cm. (United States National Museum. Bulletin 205) o.p. 2612

Contents: Introduction. Order Marsupialia. Order Insectivora. Order Chiroptera. Order Primates. Order Edentata. Order Lagomorpha. Order Rodentia. Order Cetacea. Order Carnivora. Order Pinnipedia. Order Sirenia. Order Perissodactyla. Order Artiodactyla. Type localities. Index.

Note: A classified list of North American mammals summarizing the results of taxonomic studies of recent mammals of North America up to January 1, 1951, and indicating the forms represented in the collections of the United States National Museum. Under each order are listed recognized suborders, superfamilies, families, genera, species, and subspecies. The total number of forms (species and subspecies) listed of North American recent mammals is 3,[illegible] (by way of comparison the 1923 list issued by the Museum under the same title contained 2,[illegible] forms). An asterisk is placed after the name of each form represented in the Museum collections, all except [illegible] being so represented. Under the Latin name of each species and subspecies, reference is made to the first publication of the specific or subspecific name, to which, if necessary, is added reference to first use of the current binomial or trinomial name and occasionally additional information. The type locality of each form is stated [illegible] all possible exactitude and, in revised genera, the ranges are given, so far as practicable.

MURIE OLAUS JOHN
The elk of North America. Harrisburg The Stackpole Company and the Wildlife

The chapters and parts of the work supplied by other contributors supplement Raven's work which was left unfinished at his death and are in themselves notable contributions based largely on original studies. The work is a major contribution that greatly extends the knowledge of the anatomy of the gorilla.

GUNDERSON, HARVEY L., AND JAMES R. BEER

The mammals of Minnesota. Minneapolis The University of Minnesota Press, 1953 190 p illus 23 cm (Minnesota Museum of Natural History Occasional papers No 6 Paper no 2869 of the Scientific journal series Minnesota Agricultural Experiment Station) $3 50 2601

Content The study of mammals. The geography of Minnesota. A systematic catalog of the mammals of Minnesota. Selected references. Index.

Note A systematic description of the mammals native in a state which is rather rich in mammalian fauna. It is intended primarily for the use of residents of Minnesota as a guide to collecting and identification. Systematic descriptions of species are supplemented by photographs. Another feature is the inclusion of small maps showing the range of each species in the United States of America and Canada.

HALL, EUGENE RAYMOND

American weasels Lawrence University of Kansas 1951 466 p illus (part col'd) 23 cm (University of Kansas publications Museum of Natural History Vol 4) 2602

Content Introduction. Paleontological history. Skeleton and dentition. Disparity in number of males and females. Materials, acknowledgments and methods. Variation. Variation with age. Secondary sexual variation. Individual variation. Seasonal variation. Variation in color and molt. Variation of taxonomic worth. Distribution and speciation. History of classification. Chronological list (annotated) of specific and subspecific names. Check list of American species and subspecies of the genus Mustela. Artificial key to American species of the genus Mustela. Diagnosis of the genus. Explanation of systematic treatment. Systematic accounts of species and subspecies. Mustela erminea. Mustela rixosa. Mustela frenata. Mustela africana. Explanation of cranial measurements. Table of cranial measurements. Literature cited. Plates. Index.

Note A general and systematic treatise on the weasels of North America, with some coverage of those of South America. The first 80 pages include the general description of the weasels and their variation and distribution. The next 315 pages contain the systematic accounts of the species (including type, range, characters for ready recognition, character of the species, geographic variation, behavior, enemies, food, reproduction) and of the subspecies (type, range, characters for ready recognition, size, color, skull, sex differences, remarks, specimens examined). The remainder of the book includes the tables of cranial measurements of specimens and the 39 plates each containing photographic views of 9 or 10 skulls. The work is based upon more than 15 years of study of the weasel and visits to 104 zoological collections in the United States, Canada, and Europe.

HALL, EUGENE RAYMOND

Handbook of mammals of Kansas. Contribution from the State Biological Survey of Kansas. Lawrence University of Kansas Museum of Natural History 1955 303 p illus 23 cm. (University of Kansas Museum of Natural History Miscellaneous publication 7) $4 00 2603

Contents (abridged) Purpose and scope. Materials. Key to order of mammals of Kansas. Species of unverified occurrence. Reference books and literature on mammals. Names—vernacular and zoological. Suggestions for collecting. Glossary. Index.

Note A reference manual intended primarily for students and amateur naturalists. The accounts of species emphasize the living animal and its habits. For each, there is a small drawing of the whole animal in a natural pose and, in addition, one or more drawings of the skull. Both scientific and common names are given. Maps of distribution within the state and of range in continental United States of America and Canada are included.

HALL, EUGENE RAYMOND

Mammals of Nevada. Contribution from the Museum of Vertebrate Zoology, University of California, Berkeley. Berkeley and Los Angeles University of California Press, 1946 710 p illus (part col'd) 24 cm. $7.50 2604

Content Aims. Methods. Plan of treatment. Topography. Climate. Floral belts. Life-zones. Occurrence of mammals in Nevada. Faunal areas. Factors responsible for geographic distribution and speciation. Clines. Speciation. Desert character of mammalian fauna. Check list of mammals. Key to species of Nevada mammals. Accounts of species and subspecies. Hypothetical list of mammals. Type localities. Names changed since book was written. Gazetteer. Glossary. Literature cited. Index.

Note The major portion of this volume is an account, species by species, of the mammals found in Nevada by the author and his many co-workers in expeditions from the University of California Museum of Vertebrate Zoology between 1909 and 1941. Maps of distribution, tables of measurements of specimens, cranial diagrams, records of occurrence, and other remarks accompany the accounts of the species and subspecies. Mammals are abundant in Nevada, especially small mammals. The aims in preparing the account of them are set forth in detail as follows: to find out what species of mammals occur in Nevada; to ascertain the geographic range of each and the kinds of places in which it lives; to ascertain and then catalogue the geographic variation in each species; to provide such information on habits as would be incidentally obtained in pursuit of the previous aims; to appraise the economic relation to man of the badger, coyote, pocket gopher and beaver; to provide a key with descriptions and illustrations, by means of which a person without special zoological knowledge can identify kinds of mammals.

HAMILTON, WILLIAM JOHN, JR.

American mammals their lives, habits, and economic relations. New York McGraw-Hill Book Company, Inc. 1939 434 p illus. 23 cm. $6 50 2605

Content The ancestry of mammals. Classification. Some characters of mammals and their uses. Adaptations. Food. Storage. Reproduction and early life. The home of mammals. Hibernation. Migration. Mammal populations. Behavior. Distribution. Useful mammals. Injurious mammals. Game mammals. Fur-bearing animals. Predatory mammals.

Note Instead of giving specific accounts of each species, the book offers an ecological approach, illustrating how mammals are adapted to their environment and discussing their characters, distribution, habits, economic relations, and esthetic value. The treatments of ancestry, adaptations, food, storage, reproduction and early life, homes of mammals, hibernation, migration, etc., are thorough.

HAMILTON, WILLIAM JOHN, JR.

The mammals of eastern United States, an account of recent land mammals occurring east of the Mississippi. With thirty portraits by Earl L. Poole. Ithaca Comstock Publishing Company Inc 1943 432 p illus 24 cm. (Handbooks of American natural history edited by A. H. Wright. Vol. II) $4 50. 2606

Contents. Introduction. Key to orders of eastern mammals. Chiroptera (bats). Marsupialia (opossums). Insectivora (moles and shrews). Carnivora (flesh eaters). Rodentia (rodents or gnawing mammals). Lagomorpha (hares and rabbits). Artiodactyla (deer, sheep, etc.). Xenarthra (American edentates). Literature of mammalogy. Index.

Note A guidebook which describes and gives a brief life history of each of the land mammals found in the entire area east of the Mississippi. Two hundred fifty-three species and subspecies are covered. The numerous maps outline the distribution of various mammals in the area covered. Of interest to the layman as well as to the professional zoologist.

RAT QUALITY A CONSIDERATION OF HEREDITY DIET AND DISEASE. Proceedings of the Symposium held at Columbia University College of Physicians and Surgeons, New York New York January 31 1952 New York The National Vitamin Foundation Inc. 1953 138 p. illus. 23 cm. $2.50 2619

Contents: Introduction to the first session, by M. K. [illegible] Growth criteria, by L. M. Zucker. The natural history of chronic respiratory disease in the albino rat, by J. B. Nelson. Development of inbred strains and their use in research, by W. E. Heston. Problems in breeding for quality by T. F. Zucker. Some studies of growth and exercise [illegible] which influence uniformity in laboratory animals, by E. P. Morris. History and information concerning the rat colonies in the animal section of the National Institutes of Health, by E. M. Palley. The use of inbred strains in biological research, by G. E. Jay Jr. Introduction to the second session, by O. Kearns. Evaluation of commercial rat diets, by C. A. [illegible] Experience with fresh-purified diets as stock rations, by H. Kraske. Bibliography

Note The symposium of which this book is product was concerned with the rat as an experimental laboratory animal. Two scientists associated with medical schools and other institutions, where the rat is in constant use in experimentation and biological assay delivered the papers, which were then discussed by other participants in the symposium. Both papers and discussions have been reprinted in this volume. The tone of all the papers is somewhat informal, and they can fairly be characterized as sharing of experience, rather than reports of planned research. Nevertheless, the volume contains information of potential value to most biological and medical researchers who make use of laboratory rats or who are responsible for the care of rat colonies.

ROSCOE B JACKSON MEMORIAL LABORATORY

Biology of the laboratory mouse. Edited by George D Snell. New York Dover Publications, Inc., 1941 497 p. illus. 25 cm. $6.00 2620

Contents: The early embryology of the mouse, by G. D. Snell. Reproduction, by G. D. Snell. Histology by E. Fekete. Spontaneous neoplasms in mice, by A. M. Cloudman. Gene and chromosome mutation, by G. D. Snell. The genetics of spontaneous tumor formation, by C. C. Little. The genetics of tumor transplantation, by C. C. Little. Endocrine secretion and tumor formation, by W. V. Woolley. The milk influence in tumor formation, by J. J. Bittner. Inbred and hybrid animals and their value in research, by W. L. Russell. Parasites, by W. E. Heston. Infectious diseases of mice, by J. M. Dengle. Care and recording, by J. J. Bittner. Index.

Note The very extensive use of the mouse as an animal for scientific experimentation originally prompted the writing of this volume. The primary emphasis is on basic biological information, but laboratory care and handling are accorded strong secondary emphasis. There are 71 figures, numerous tables and extensive literature lists. This edition is an unaltered reprint, issued in 1956, of the original edition published in 1941.

SANBORN COLIN CAMPBELL

Catalogue of type specimens of mammals in Chicago Natural History Museum. Chicago Chicago Natural History Museum 1947 293 p illus. 24 cm. (Fieldiana zoology Vol. 32 no 4) $1.00 2621

Note A catalogue of types, cotypes, and lectotypes of specimens of mammals known to be in the Chicago Natural History Museum on July 1, 1947. The author curator of mammals in the Museum, has used Simpson's classification for orders and families, while placing the genera, species, and subspecies in alphabetical order. The data comprise museum number parts of specimen collected, sex, age, place of origin, date of collection, and name of collector along with a description of the condition of each specimen. The items also contain information as to where the specimen has been described. In an additional list, the same type specimens are arranged by locality. An index serves to facilitate the use of the catalogue.

SETON ERNEST THOMPSON

Lives of game animals an account of those land animals in America, north of the Mexican border which are considered "game" either because they have held the attention of sportsmen or received the protection of law. In four volumes. With 50 maps and 1,500 illustrations by the author. [Newton Centre Mass Charles T Branford Company] 1925–28 4 v illus 28 cm. $60.00 2622

Contents (abridged): Volume I, Cats, wolves and foxes. Volume II, Bears, coons, badgers, skunks, and weasels. Volume III, Hoofed animals. Volume IV, Rodents, etc.

Note A work that has become a recognized classic of writing about wild animals. Written by an author-artist whose life was dedicated to the study of these animals, it is probably the most leisurely account of small groups of animals ever written. [illegible] work planned to describe most of the mammals of continental North America, [illegible] pages are devoted to the cougar alone.) The taxonomic data that would be expected in a scientific work are given, including the scientific name, synonyms, and popular names, literature references to the first scientific description, and a statement of the type locality. The remainder of each description—and all of them are lengthy—is concerned largely with life habits and consists of quotations and paraphrasing of the notes and comments of many observers, both scientific and amateur, on the animal's life habits. These observations are arranged under such headings as "Interesting records," "Present numbers and distribution," "Habits," "Home range," "Harlan custom" [sic], "Courtship," "Young," and "The mother's love." Supplementing the text are many reproductions of photographs and drawings by the author showing not only the animals but also their tracks, habitat scenes, etc. A good deal of anecdotal and unscientific material is included. On the other hand, in no other work have the reports of so many direct observations of these animals been assembled. This is a reprint from the plates of the original edition published by Doubleday Doran & Company 1925–28.

SIMPSON GEORGE GAYLORD

Horses the story of the horse family in the modern world and through sixty million years of history New York Oxford University Press 1951 24 p. illus 23 cm. $7.50 2623

Contents (abridged): Introduction. Part I, Living horses: What is a horse? A look at Equus. Horses and history. Ancient breeds. Some European breeds in America. American breeds and their forerunners. Part II The history of the horse: Time-scale of horse history. Forerunners of the horses. The little Eohippus. Other Eocene horses. Early three-toed horses. Later three-toed horses. The horse relatives. False horses. Part III, Horses and evolution: How horses changed. Patterns of evolution. Explanations of evolution. Appendices: Where to see fossil horses. Where to read more about horses. Index.

Note In this book for lay readers the main emphasis is on the evolution of the horse but information on many other topics is also included. Examples of the supplementary topics are a discussion of the inheritance of color and a description of the work of Edward Muybridge in photographing the gaits of horses. There are about 80 illustrations reproduced on 32 plates, a directory of museum collections of fossil horses, and a selected, annotated bibliography. Though a popular treatment, the book merits reading by anyone with mature interests in the subject. The author is Curator of Fossils and Birds in the American Museum of Natural History.

SIMPSON GEORGE GAYLORD

The principles of classification and a classification of mammals. New York American Museum of Natural History 1945 350 p. 27 cm. (American Museum of Natural History Bulletin, Vol. 85) $3.50. 2624

Contents (abridged): Part I, The principles of taxonomy: Phylogeny. Classification. Nomenclature. Part II Formal classification of Mammals. Explanation of the detailed classification. Detailed

Management Institute Washington, D C, 1951 376 p illus 25 cm $6 50 2613

Contents Introduction The name Origin of the American wapiti. The American forms of elk Early elk distribution in America. Elk habitat. Life zones. Migration Physical characters. Reproduction. Natural enemies. Accidental deaths. Parasites. Disease. Varied opinions on the "elk problem. Food habits. Elk habits. The elk population. Elk hunting. Elk management. Bibliography Index.

Note A comprehensive treatise written on the basis of many years of field study among the Yellowstone elk herds and checked by field studies on all other major elk herds. It is one of a series of books on practical wildlife management published by the Wildlife Management Institute. The book is of particular interest to persons concerned with wildlife management and conservation and is also a source of information for the general reader

MURIE, OLAUS JOHN

A field guide to animal tracks Illustrated by the author Boston Houghton Mifflin Company, 1954 374 p illus 19 cm. (The Peterson field guide series, edited by Roger Tory Peterson) $3 95 2614

Contents (abridged) Key to tracks. My life list. What has happened here? Opossum family—Didelphidae Armadillo family—Dasypodidae. Mole family—Talpidae Shrew family—Soricidae Bats—Chiroptera. Bear family—Ursidae Raccoon and ringtail families—Procyonidae and Bassariscidae Weasel family—Mustelidae Dog family—Canidae. Cat family—Felidae Seals—Pinnipedia. Rodents—Rodentia. Rabbit and cony families—Leporidae and Ochotonidae. Hoofed animals—Ungulata. Birds. Amphibians and reptiles. Insects and other invertebrates. Tips and limbs. Bone and horn chewing. Bibliography Index.

Note A comprehensive reference manual directed primarily to amateurs but of some interest also to professional zoologists. The principal subject is the tracks in soil and snow of mammals and some other animals which occur in the wild state in Central America, Mexico, and continental North America. The subject is covered with unusual fulness, and, in addition, the book describes the tracks of a few birds, amphibians, reptiles, insects, and invertebrates, such as earthworms. Also included are droppings, animal signs on trees, such as gnawing of the bark and tips, etc. There are 196 figures, most of which are reproductions of drawings of good quality. Identification of animals by means of tracks and scats is discussed in a text which takes approximately as much space in the volume as the illustrations.

ORR, ROBERT THOMAS

The rabbits of California. Joint contribution from the Museum of Vertebrate Zoology of the University of California and the California Academy of Sciences San Francisco California Academy of Sciences 1940 227 p illus. 25 cm. (California Academy of Sciences Occasional papers No 19) $3 50 2615

Contents Introduction. Materials. Measurements and weights. Geographical variation. Analysis of characters. Secondary sexual variation. Pelage. Abnormal coloration. Molts Life history Diagnostic key to the Leporidae of California Species accounts. Literature cited

Note Both systematic and life studies of the seven species of the family Leporidae which are known to occur in California are presented in this monograph. Speculations concerning reasons for racial trends or specific constancies as related to the topographic, climatic, and vegetational conditions of the area are offered for further study The work is based on the study of 1 158 specimens and upon the literature of the field. The list of citations contains 113 references to pertinent world literature published between 1836 and 1936.

OSGOOD WILFRED HUDSON

The mammals of Chile. Chicago Chicago Natural History Museum 1943 268 p illus 24 cm. (Chicago Natural History Museum Publication 542 Zoological series. Vol 30) $1 75 2616

Contents Introduction. Acknowledgments. History Physiography and climate Zones and faunal areas. Derivation of Chilean mammals. Endemism. Insular faunas. Collections in Chilean National Museum Methods. List of mammals of Chile. Key to orders of Chilean mammals. Annotated and descriptive list of species. Introduced species. Species erroneously attributed to Chile. Unidentifiable names. Chilean mammals listed in the order of their discovery. Type localities in Chile. Bibliography Index.

Note An annotated and descriptive list of Chilean mammalian species, exclusive of cetaceans, based on specimens collected by the author and Colin C. Sanborn in 1923 and 1939–40, together with those in the Museo Nacional at Santiago. Identification keys and brief descriptions have been included, as well as the line drawings of the skulls of most of the species. The bibliography contains about 300 references to the world literature published between 1782 and 1943

PALMER, RALPH S

The mammal guide mammals of North America north of Mexico Color illustrations, maps and drawings by the author Garden City Doubleday & Company Inc., 1954 384 p. illus 19 cm $4 95 2617

Contents (abridged) How mammals are named. Opossums (Didelphiidae) Moles (Talpidae) Shrews (Soricidae) American leaf-nosed bats (Phyllostomidae) Typical insect-eating bats (Vespertilionidae) Bears (Ursidae) Raccoons, coatis, and allies (Procyonidae) Weasels, skunks, and allies (Mustelidae) Foxes, wolves, and dogs (Canidae) Cats (Felidae) Eared seals (Otariidae) Hair seals (Phocidae) Marmots, squirrels, and chipmunks (Sciuridae). Pocket gophers (Geomyidae) Beaver (Castoridae) Mice, rats, voles, and lemmings (Cricetidae) Porcupines (Erethizontidae) Pikas, hares, and rabbits (Leporidae) Deer (Cervidae) Cattle, sheep, and goats (Bovidae) Armadillos (Dasypodidae) Manatees (Trichechidae) Bottle-nosed or beaked whales (Ziphiidae) Sperm whales (Physeteridae) Typical dolphins (Delphinidae) True porpoises (Phocoenidae). Finback whales (Balaenopteridae) Whalebone or Baleen whales (Balaenidae) Index.

Note A reference handbook designed to aid in the identification of mammals native to the North American continent and to convey information about them on habitat, reproduction, habits and economic status. It is addressed to laymen and to amateur naturalists. It is well illustrated with pictures, in color of the animals, maps showing geographical distribution of the various species, drawings of footprints, etc. The author is State Zoologist on the staff of the New York State Museum.

POOLE, ARTHUR JAMES, AND VIOLA S SCHANTZ

Catalog of the type specimens of mammals in the United States National Museum including the Biological Surveys collection. Washington, D C The Smithsonian Institution 1942 705 p 23 cm. (Smithsonian Institution United States National Museum. Bulletin no 178) Gratis 2618

Contents Introduction. Order Artiodactyla even-toed ruminants. Order Carnivora. flesh-eaters. Order Cetacea whales, porpoises. Order Chiroptera. bats. Order Dermoptera. flying lemurs. Order Hyracoidea hyraxes. Order Insectivora insect eaters Order Lagomorpha hares, rabbits, pikas. Order Marsupialia marsupials. Order Perissodactyla odd-toed ungulates. Order Pinnipedia seals, walruses. Order Primates lemurs, marmosets, monkeys, apes, man. Order Rodentia. rodents. Order Xenarthra edentates (sloths, armadillos, anteaters) Missing type specimens. Geographical guide to type localities. Collectors of the type specimens of mammals in the United States National Museum, including the Biological Survey collection. Index.

Note A systematic catalogue of the type specimens of recent mammals in the United States National Museum collection, recording a total of 2,874 specimens. A strictly alphabetical order of arrangement is used and applied alike to orders, families, genera, species and subspecies. The name of each genus, subgenus, species, and subspecies is recorded as in the original description, followed by a reference to the place and date of its publication References are added wherever changes have been made by subsequent authors. These are followed by catalogue number, nature of specimen, i.e., whether skin or skull, etc., age and sex, locality date of collecting, name of collector and original number of specimen from collector's field catalogue.

literature and is comprehensive [illegible] the subject [illegible] indicated in its title through 1937 and includes also [illegible] few work published in 1938 and 1939.

YOUNG STANLEY PAUL, AND EDWARD A. GOLDMAN

The wolves of North America. Part I Their history life habits, economic status and control. Part II, Classification of wolves. Harrisburg: Stackpole & Company 1944 636 p illus. (part col'd) 22 cm $6 00 2629

Contents: Part I, Their history, habits, economic status, and control, by S. P. Young: Introduction. Distribution of the wolf in North America, past and present. Habits and characteristics. Natural checks, parasites, and diseases. Economic status. Measures used in wolf capture and control. Brief history of wolf depredations and cooperative Federal wolf control. Part II, Classification of wolves, by E. A. Goldman: Introduction. History. General characters. Pelage and molt. Variation. Explanations. List of North American species and subspecies, with type localities. Canis lupus and subspecies. Canis niger and subspecies. References and selected bibliography. Index.

Note: A study of North American wolves, indicating their characteristics, distribution, and importance. The various species and subspecies are discussed and described, with illustrations of representatives of some species. The study is based on specimens in the United States National Museum and other museums.

COMPARATIVE ANATOMY AND EMBRYOLOGY

ADAMS LEVERETT ALLEN AND SAMUEL EDDY

Comparative anatomy: an introduction to the vertebrates. New York John Wiley & Sons, Inc., 1949 520 p. illus. 24 cm. $6 00 2630

Contents (abridged): Part I, A review of the vertebrates: Classification. Superclass Pisces or fish-like vertebrates. Superclass Tetrapoda. Embryology. Part II, Comparative anatomy of the vertebrates: Integumental system. Axial skeleton. Appendicular skeleton. Muscular system. Circulatory system. Respiratory system. Urogenital system. Nervous system. Sense organs. Endocrine glands. Bibliography. Glossary. Index.

Note: A successor to Adams' *Introduction to the vertebrates*, second edition. It is designed for use in college courses, and two-thirds of the space is devoted to the comparative anatomy of various organ systems. Some chapters have been shortened, but others have been considerably expanded; hence, the number of pages has been increased by about 40. There are now 344 figures.

BAILEY PERCIVAL AND OTHERS

The isocortex of the chimpanzee. By Percival Bailey, Gerhardt von Bonin and Warren S McCulloch. Urbana University of Illinois Press, 1950 440 p. illus. (part col'd) 28 cm. $8.50 2631

Contents: Introduction. Materials and methods. General considerations. Fissural pattern. Cytoarchitecture. Survey by serial sections. The brain map. Physiological neuronography. Motor responses to electrical stimulation. Suppression. Relations with deeper structures. Interrelations of cortical areas. Correlation with *Macaca mulatta*. Epilogue. Bibliography. Plates.

Note: A monographic report of techniques and results of an extensive series of experiments carried on in the Laboratory of Neurophysiology at Yale University and continued in the laboratory of the Illinois Neuropsychiatric Institute at the University of Illinois. Mapping of the main functional areas in the isocortex of the chimpanzee was the chief object of the experiments. Although the experiments were not carried to their conclusions, the results reported are of substantial interest to other researchers in neuroanatomy.

BARTH LESTER GEORGE

Embryology. Revised and enlarged edition. New York The Dryden Press Inc. 1953 516 p. illus 24 cm $6 00 2632

Contents: Embryology—problems and scope. Oogenesis—its control by hormones and light. The unfertilized egg and its organization [illegible] development. Fertilization—the [illegible] of the stimulus for development. Development of the amphibian egg. The early gastrula: its presumptive values. Gastrulation in relation to the organizer. The neurula and self-differentiation. The embryo and [illegible]. [illegible] Internal [illegible] of developing structures. The development of the chick embryo. The nervous system. The circulatory system. The digestive tract. The somites, nephrotome and lateral mesoderm. Regeneration. Growth and reduplication. Hormones and the growth of the mammalian embryo. Mammalian development. Sex differentiation. Comparative embryology of vertebrates. Selected readings. Index.

Note: A textbook for use in introductory college courses, it has several novel features. The customary description of successive stages in the development of embryos is not emphasized. Principles and patterns of embryonic development are emphasized at least equally with the anatomy of embryos. A good deal of material from experimental zoology is incorporated. The first edition was published in 1 [illegible]. Although there has been no change in the book's purpose—and, in fact, the chapter titles are almost identical in the second edition—the original treatment has been considerably revised and augmented in both the verbal text and the illustrations. The book is 1 6 pages longer, has one new chapter and many revised sections in other chapters. A novel feature of the chapter on comparative embryology of vertebrates is the printing of the text and illustrations on perforated pages. The perforations permit the pages to be separated into three sections and thereafter manipulated so as to facilitate comparative study of various stages of the embryos. The author is a member of the faculty of Columbia University.

BONIN GERHARDT VON

The cortex of Galago: its relation to the pattern of the primate cortex. With 22 figures. Urbana University of Illinois Press 1945 55 p. illus. 27 cm. (Illinois monographs in the medical sciences Vol v no. 3) $1.50 2633

Contents (abridged): Part I, Introduction: The problem of morphology. The pattern of the primate cortex. The theory of similitude. Part II, Description of the cortex of Galago: Material and technique. Biological notes. Gross anatomy. Cytoarchitecture of the cortical areas. Part III, Comparisons: Peculiarities of Galago. On cortical structure and function. Part IV: Concluding remarks and summary. References.

Note: A systematic study of [illegible] concrete morphological problem whether the pattern of the cortex of the primate brain is similar from the lowest to the highest forms. A lemur, *Galago demidovii*, with a brain weight of about 3 grams, was selected for the study and most of the text of the monograph is concerned with a description of the gross anatomy and cytoarchitecture of its brain. Related facts reported previously in the literature are worked into this description; thus, a key is provided to all the pertinent literature. The text proper is supplemented by about 23 reproductions of line drawings and microphotographs. The work also contains discussions bearing on the aim and method of comparative morphology, the concept of morphological pattern, and the theory of similitude as applied to comparative physiology.

BONIN GERHARDT VON AND PERCIVAL BAILEY

The neocortex of Macaca mulatta. Urbana University of Illinois Press, 1947 163 p. illus. (part col'd) 27 cm (Illinois monographs in the medical sciences. Vol v no 4) $4 00 2634

Contents: Introduction—Materials and methods. General considerations—Growth of the brain—Brain weight and body weight. The fissural pattern—The primary sulci—The secondary sulci. The architectural types—The heterotypical cortex—The homotypical cortex—Allocortex. Survey by serial sections. The brain map. Interrelations of areas. Epilogue. Selected bibliography. Plates.

classification. Part III, Review of mammalian classification. Bibliography Index to technical names. Index to vernacular names.

Note An important work which contains, as the title indicates, both discussion of the principles of mammalian classification and a systematic classification. The classification itself occupies more than one-third of the volume and contains all of the supergeneric groups, all well-defined genera, and many doubtful but probably valid genera. However the author has omitted names which he believes to be invalid. In addition to the systematic arrangement of groups, there is much supplementary information which includes designation of the hierarchic category the preferable technical name for each group author of the name bibliographical citation, geological or geographic range, synonyms, and vernacular names for some of the genera. There are many learned notes on inconsistencies and conflicts in the earlier literature. The third part of the work is made up of discussions of special points and problems in the classification of various groups.

STORER TRACY I, AND LLOYD P TEVIS, JR.
California grizzly Berkeley and Los Angeles University of California Press, 1955 335 p illus 24 cm $7 50 2625

Contents The record of grizzlies in California. Physical features of the grizzly Habits of California grizzlies. Grizzlies and Indians. Grizzlies and Spaniards. Bear-and-bull fights. Grizzlies and Americans. Grizzly hunting in California. Grizzly Adams. Captive grizzlies—some famous. Grizzly lore. The California grizzly as an emblem. Appendixes. Known specimens of California grizzly Last records of grizzlies in California. Indian names for bears tribes and tribal territories. Sources of information. Bibliography Early newspaper articles on the California grizzly Index.

Note Scientific information material from mythology adventures of travelers, exploits of hunters and animal trainers, and even folklore, have been combined in this semi-popular account of the California grizzly *Ursus arctos californicus* which was common in California as recently as the middle of the 19th century but probably became extinct in that state in 1920. Full and scientifically accurate descriptions of the physical features and habits of this bear are presented in the second and third chapters. The nature of the contents of some of the other chapters is apparent from their titles. The chapter entitled Grizzly Adams" is compact account of the personality and activities of James Capen Adams, hunter who made business of capturing, dealing in, and exhibiting live animals, and had many exploits in capturing and training specimens of the California grizzly The chapter entitled "The California grizzly as an emblem discusses the use of representations of this animal on the California flag and elsewhere and the use of "grizzly" in place names. The book was based on comprehensive search of both the scientific and the popular literature including local newspapers. The bibliography is comprehensive one.

TATE, GEORGE HENRY HAMILTON
Mammals of eastern Asia. New York The Macmillan Company 1947 366 p illus 21 cm (The Pacific world series) $4 50 2626

Contents (abridged) What is mammal? The home territories of eastern Asiatic mammals. Descriptions f east Asiatic mammals. Glossary Index f common names. Index of scientific names.

Note. A handbook for the interested observer rather than the scientist. It describes mammals found on the mainland of eastern Asia from northeastern Siberia through Manchuria, China, Burma, and Indo-China to the Malay Peninsula, and including Japan and Formosa. In these regions made up as they are f deserts, forests, mountains, and plains, and extremes f temperature there is great diversity of animal lif ranging from shrews, bats, hares, gibbons to pandas, gazelles, wild cattle, elephants, and dolphins. I formation given on each species includes size and general appearance, habitat, relationship with other animals, lif histories, and outstanding behavior characteristics.

TAYLOR, WALTER P, editor
The deer of North America the white-tailed, mule and black tailed deer genus Odocoileus their history and management. Editorial committee Walter P Taylor chairman Arthur S Einarsen and others Color plates by Walter A Weber Drawings by Wallace Hughes Color plates and drawings courtesy of the Frederic C. Walcott Memorial Fund of the North American Wildlife Foundation Harrisburg The Stackpole Company and the Wildlife Management Institute Washington, D C 1956 668 p. illus. 23 cm. $12 50 2627

Contents The deer the Indians, and the American pioneers, by S. P Young. The white-tailed deer What and where are the white-tails? by R. Kellogg. Life and times of the white-tailed deer, by C. W Severinghaus and E. L. Cheatum. Management of the white-tailed deer in its environment, by N W Hosley Hunting the white-tail, by H. D Ruhl. The mule deer and the black-tailed deer What and where are the mule and black-tailed deer? by I. M. Cowan. The mule deer Lif of the mule deer by A. S. Einarsen. Management and relation t habitat of the mule deer Forage, food habits, and range management of the mule deer by R. R. Hill. Productivity—the annual crop of mule deer by W L. Robinette. Methods of estimating numbers of mule deer by R. McCain and W P Taylor Management of the mul deer by G. N Hunter and L. E. Yeager. Hunting mul deer by J W Spencer The black-tailed deer: Life and times of the coast black-tailed deer, by I. McT. Cowan. Literature cited. Index.

Note A semi-popular ork directed t such readers as sportsmen who wish to read about the lives of the animals that they hunt, and conservation officials who need the information contained in it in connection with the management of deer in the wild state. The authors of the signed chapters are recognized authorities in wildlif and most of them are associated with wildlife research and management in the United States of America. The chapters cover such matters as lif histories, behavior in the ild state, diseases and parasites, and hunting of the animals They are based on wide range of literature, including the observations of both amateur and professionally trained naturalists. The source literature is cited, and the bibliography runs to more than 30 pages. Most of the illustrations are pictures of animals in their natural habitats.

YERKES, ROBERT M, AND ADA W YERKES
The great apes, a study of anthropoid life New Haven Yale University Press, 1929 652 p illus 27 cm $12 50 2628

Contents (abridged) Part I, Historical Ancient knowledge of the anthropoid apes. Knowledge of the anthropoids through the Middle Ages to the end of the seventeenth century Progress of acquaintance with the anthropoid apes during the eighteenth century The emergence of the gorilla. Part II, Gibbon The habitat and lif history of gibbon. Affectivity and its expression in gibbon. Part III, Orang-outan Structural appearance, species, distribution, and habitat of orang-outan. Mode of life of orang-outan. Capture, lif in captivity and diseases of orang-outan. Social relations and lif history of orang-outan Affective behavior and speech in orang-outan. Nervous system and receptivity of orang-outan. Intelligence of orang-outan—perception endowment, and acquisition—experimental studies. Part IV Chimpanzee Structural appearance, species, distribution, and habitat of chimpanzee. Manner of life, locomotion, nesting, and capture of chimpanzee. Habits of eating and drinking, hygiene, and care in captivity of chimpanzee. Social relations of chimpanzee. Lif history of chimpanzee. Affective behavior of chimpanzee. Nervous system and receptivity of chimpanzee. Perceptual processes of chimpanzee. Intelligence of chimpanzee. Part V Gorilla. Structural appearance, races, distribution, and habitat of gorilla. Mode of life, locomotion, and handedness of gorilla. Nesting and feeding activities in gorilla. Hygiene, health, and care in captivity of gorilla. Social relations of gorilla. Life history of gorilla. Affective behavior of gorilla. Nervous system and receptivity of gorilla. Observational ability and perceptual processes in gorilla. Opinions concerning intelligence of gorilla. Methods of studying behavioral adaptivity in gorilla. Concerning memory, insight, and foresight in gorilla Part VI, Comparisons and conclusions. Comparison of anthropoid types. Comparison of primate types. Bibliography for natural history and psychobiology of the anthropoid apes to 1928. Subject and author index.

Note Though published in 1929 this book is still recognized as basic and useful summary of the accumulated knowledge on the habits and behavior of the anthropoid apes to the close of 1928. The social and psychological facets of anthropoid behavior are emphasized but other aspects are discussed also, as the chapter titles indicate. Much information gained in experimental investigations of anthropoid behavior has been incorporated. Taxonomy anatomy and physiology are not covered. The book is based on the published literature, including the authors' own writings, and includes many direct quotations. The bibliography covers the world

HYMAN LIBBIE HENRIETTA

Comparative vertebrate anatomy Chicago University of Chicago Press 1942 544 p illus. 25 cm. $5.00 2641

Note The author's *Laboratory manual for comparative vertebrate anatomy* was widely used in American college laboratories for many years. This second edition [illegible] changed title includes 144 pages of new material and is designed for use as [illegible] text as well as [illegible] laboratory manual. The thorough revision is based on recent literature and on the author's own research

INTERNATIONAL UNION OF BIOLOGICAL SCIENCES

Genetic neurology problems of the development, growth, and regeneration of the nervous system and of its functions. Conference sponsored by the International Union of Biological Sciences subsidized by UNESCO Paul Weiss, editor Chicago University of Chicago Press 1950. 239 p. illus. 24 cm. (The University of Chicago Committee on Publications in Biology and Medicine) $6.50. 2642

Contents [illegible]

Note [illegible]

KENDALL JAMES IRVING

The microscopic anatomy of vertebrates Third edition, thoroughly revised. Illustrated with 223 engravings. Philadelphia Lea and Febiger 1947 354 p illus 24 cm. $6.00 2643

Contents Introduction The epithelial tissues. The connective tissues. The blood. [illegible] Index

Note A text for [illegible]

[illegible] by an additional description of the type [illegible] in smaller print. Directions for the preparation of slides for [illegible] are also included. The bibliography is arranged in order of subject. The second edition was published in 19[illegible]. This third edition contains minor revisions in the text and a new [illegible]

KENT GEORGE C JR.

Comparative anatomy of the vertebrates New York The Blakiston Division Mc Graw Hill Book Company Inc., 1954 530 p illus. 24 cm $6.50 2644

Contents Vertebrate characteristics. Protochordates. Parade of the vertebrates. Early vertebrate embryology. Integument. Skeleton Vertebrae, ribs, sternum, heterotopic bones—skeleton of the head—appendicular skeleton. Muscular system. Digestive system. Respiratory system. Circulatory system. Urogenital system. Nervous system. Sense organs. Endocrine glands. Abridged classification of the vertebrates. Selected readings. Index

Note An introduction to comparative vertebrate anatomy designed for the instruction of undergraduate college students. It is organized on the plan of emphasizing the basic pattern of each organ system, then discussing its modifications in the different groups of vertebrate animals. Thus the first system discussed in [illegible] chapter is usually one of relative simplicity to which the more complex variations taken up later in the chapter are related in the discussion. The book is illustrated with more than 400 well-executed figures, many of which are original

KRIEG WENDELL J S

Connections of the frontal cortex of the monkey Illustrated by the author Springfield Ill. Charles C Thomas, 1954 299 p illus. 27 cm. $10.50 2645

Contents Introduction. The motor area. The premotor cortex. The prefrontal and orbital areas. Significance. Appendix. Fiber direction of the frontal region.—Chart reconstructions of [illegible] of frontal origin. References.

Note An important contribution to neurology. It is based on [illegible] program of research on the part of the author which had as its purpose the establishment of [illegible] knowledge of frontal cortical structure. The technique used was that of making numerous lesions in the frontal lobe and then studying the ensuing degeneration in serial sections stained by the Marchi technique. Most of the 117 figures in the volume are reproductions of [illegible] drawings that illustrate the results of the lesions as they appeared in the serial sections. The accompanying discussions are primarily anatomical. The author is Professor of Anatomy in the Medical School of Northwestern University

LILLIE, FRANK RATTRAY

Lillie's Development of the chick an introduction to embryology Revised by Howard L. Hamilton Advisory editor B H Willier Third edition New York Henry Holt and Company 1952 624 p illus. 22 cm. $8.50 2646

Contents (abridged) Introduction. Part I, The early development to the end of the third day. The egg. The development prior to laying. Outline of development, [illegible] Part II, The fourth day to hatching—organogeny [illegible] The skeleton. Appendix. Index.

Note An introductory but exceptionally detailed description of embryological development. Its original purpose (and still the primary one) was to serve as a textbook for college students taking first courses in embryology. Gradually (the first edition appeared in 1908) it has taken on the status of a classic. In the present extensively revised edition, much material has been added, including [illegible] information not published elsewhere. The chapter on the development of the integument has been added, and several other chapters have been thoroughly rewritten. There are now 283 figures, 14 plates and [illegible] bibliography

Note This monograph presents a detailed anatomical study and description of the cortex of th brain of the macaque monkey Based on an examination of a series of sections, it provides data which may be compared with similar areas in the brain of man. The brain charts and excellent photomicrographs constitute an important part of the study

CARNEGIE INSTITUTION

Contributions to embryology Volume 35, nos 231 to 241 Washington, D C Carnegie Institution of Washington, 1954 237 p. illus 29 cm (Carnegie Institution of Washington. *Publication No 603*) *$12 00* *2635*

Contents Early abnormal embryos of the rhesus monkey by G. W Corner and [illegible] W Bartelmez. Studies in the development of the baboon—a description of two presomite and two late somite stage embryos, by C. Gilbert and C. H. Heuser The formation of neural crest from the primary optic vesicle in man, by G. W Bartelmez, with the collaboration of M P Blount. Observations on regional circulation times in the lamb under fetal and neonatal conditions, by S. R. M Reynolds and others. Androgen-induced female pseudohermaphroditism in the monkey (Macaca Mulatta)—anatomy of the reproductive organs, by L. J Wells and G. van Wagenen. Development of the human diaphragm and pleural sacs, by L. J Wells. Architecture of distended and nondistended human umbilical cord tissues, with special reference to the arteries and veins, by A. W Chacko and S. R. M. Reynolds. Venous drainage of the placenta of the rhesus monkey by E. M. Ramsey The early development of the human nephros, by T W Torrey On the preimplantation stages of the human ovum—a description of four normal and four abnormal specimens ranging from the second to the fifth day of development, by A. T Hertig and others. Localization of the erythrocyte-forming areas in the early chick blastoderm cultivated in vitro by G. W Settle.

Not The papers collected in this volume are part of a continuing series which has been published at intervals since 1915 The series presents technical papers summarizing the results of recent research carried out in the Department of Embryology of the Carnegie Institution of Washington. Both human and animal embryology is covered in the series. Most of the papers are illustrated and contain bibliographies.

COSTELLO, DONALD PAUL, AND OTHERS

Recent studies in the mechanisms of embryonic development Consulting editor Roberts Rugh New York New York Academy of Sciences 1948 206 p illus 24 cm (New York Academy of Sciences Annals Vol. 49 p 661–866, 1948) $3 50 2636

Content Oöplasmic segregation in relation t differentiation by D P Costello The organization f the amphibian egg during fertilization and cleavage, by G Fankhauser Significance f the cell membrane in embryonic processes, by J Holtfreter Prospecti areas and differentiation potencies in the chick blastoderm, by D Rudnick. Biochemical differentiation during amphibian dev lopment, by E J Boell. Form changes during pre-gastrular development, by J S. Nicholas. The role of nerves in amphibian limb regeneration, by S. M Rose. Quantitative studies on locomotor responses in *Amblystoma* larvae following surgical alterations in the nervous system, by S. R. Detwiler *Functional polarization in developing and* regenerating retinae of transplanted eyes, by L. S Stone.

Not The original papers comprising this volume were first presented at conference held in January 1947 sponsored by the *New York Academy of Sciences. They report the methods and findings of investigations carried out by the authors regarding various* aspects f the mechanism and physiology of embryonic development. In most cases the related work of other investigators is *briefly reviewed. The majority f the papers include lengthy bibli*ographies. There is no index.

DAVISON ALVIN

Davison s Mammalian anatomy with special reference to the cat Revised by Frank A Stromsten. Seventh edition New York McGraw Hill Book Company Inc 1947 349 p illus (part col'd) 23½ cm $5 00 2637

Contents Introduction General structure. Skeleton. Joints. Muscles. Organs of digestion. Vascular system. Respiratory system. Excretory and reproductive systems. Nervous system Glossary Index.

Note A long-established textbook which has served as an introduction to anatomy for beginning students for 45 years. Compared to the sixth edition published in 1937 this revision has not improvements which include 92 new figures, six of which are *reproduced in color from dissections by Professor Stromsten;* new bibliographies and glossary and letter-press printed from newly reset type.

EDINGER, TILLY

Evolution of the horse brain. New York. Geological Society of America, 1948. 178 p. illus 25 cm. (The Geological Society of America. Memoir 25) $2 00 2638

Contents Abstract. Part I, The brains of the Equidae: Introduction endocast-endocranium relations in the Equidae. Lower Eocene (Wasatchian)—Eohippus. Middle Eocene (Bridgerian)—Orohippus. Upper Eocene (Uintan) Middle Oligocene (Orellan)—Mesohippus. Upper Oligocene (Whitneyan)—Miohippus. Miocene I—Parahippus. Miocene II—Merychippus. Pliocene I (Late Lower Clarendonian)—Pliohippus. Pliocene II (Pontian, Clarendonian)—Hipparion and Neohipparion. Quaternary—Equus. Part II, Brain evolution in the Equidae Medulla oblongata. Cerebellum. Mesencephalon. Pituitary body Cerebral size relations. Neencephalon. Fissuration. Translation. Rhinencephalon. Ontogeny and phylogeny Summary Bibliography Index.

Note. A morphological study based on endocranial casts of the evolution of the horse brain through 55,000,000 years. The author found that brain development was "not in every phase linked with either increase in body size or skeletal specialization, but he did find that the increase in size was confined chiefly to the cerebral hemispheres, thus validating one portion of Marsh's law The text is supplemented by about 40 figures including four plates of photographs of endocranial casts. There is comprehensive bibliography

HAMBURGER, VIKTOR

A manual of experimental embryology Chicago University of Chicago Press, 1942. *213 p illus 24 cm $3.50* *2639*

Contents (abridged) Part I, Equipment and instruments Part II Experiments on amphibian embryos. Part III, Experiments on the chick embryo. Part IV Regeneration (reconstitution) Part V, *The gradient theory*

Note This book presents the major problems and experiments f experimental embryology It is designed for laboratory courses in experimental embryology and it may be used also for the preparation of demonstrations and classroom experiments in general biology and general embryology After discussing the instruments used in experimental embryology the author describes procedures in amphibians, deals with experiments on the chick embryo which includes the techniques of chorioallantoic grafting, vital staining f the early blastoderm, as well as limb transplantation and melanophore experiments, then the regeneration experiments on planaria and amphibian larvae, and Child' gradient theory The standard stage series for the salamander prepared by Professor R. G. Harrison of Yale as well as the stage series for *Rana sylvatica* and for *Rana pipiens* are included in the appendix

HUETTNER ALFRED FRANCIS

Fundamentals of comparative embryology of the vertebrates Revised edition. New York The Macmillan Company 1949 309 p illus 26 cm $6 00 2640

Content (abridged) History and theories of development. Protoplasm and the cell. Development of sex Chromosomes in development. Gametes, fertilization and parthenogenesis. The embryology of amphioxus. The embryology f the frog The embryology of the chick The embryology f the mammal. Index.

Note An introductory textbook for college courses. It offers descripti rather than functional exposition. Seven chapters are devoted t the embryology of the chick, apparently because this animal is so easily studied in the laboratory Four chapters on mammalian embryology lead up to detailed description of human development. The illustrations are exceptionally clear and are reproduced in large scale. I this edition chapter has been added on the embryology of the pig, and there are other changes.

Philosophical Society 1940 219 p. illus. 23 cm. (American Philosophical Society Memoirs. Vol. XVI 1940) $2.00 2653

Contents: Introduction. Reproductive system and germ cells [illegible]. Material and methods used in the embryological investigation. Development of Urechis. Gastrulation and shifting of [illegible] and axes. Organogenesis. Comparison of the development of Urechis and that of other echiuroids. Comparison of echiuroid development with that of other invertebrates. The [illegible] portion of the Echiuroidea. Bibliography. Index.

Note: This monograph presents [illegible] study of the normal and typical embryology of Urechis, covering the development of the animal from the germ cells and their union in fertilization, the [illegible] of the cells and the rise of the various organs of the larva and adult forms. The value of this work lies in the fact that the Urechis is very suitable for experimental work in embryology so that the normal development of this species as described here [illegible] provide [illegible] standard with which to compare experimental results. The work [illegible] based on [illegible] summary of the literature of the field and upon original research by the author.

PATTEN, BRADLEY MERRILL

Embryology of the pig. Third edition. With colored frontispiece and 186 illustrations in the text (containing 412 figures) of which 6 are in color. New York McGraw-Hill Book Company Inc., 1948. 352 p. illus. (part col'd) 24 cm. $5.00 2654

Contents (abridged): The reproductive organs [illegible]. The sexual cycle—fertilization. The process of cleavage and the formation and early differentiation of the germ layers. The early development of the body form and the establishment of the organ systems. The structure of embryos from nine to twelve millimeters in length. The development of the nervous system. The development of the digestive and respiratory systems and the body cavities. The development of the urogenital system. The development of the circulatory system. The histogenesis of bone and the development of the skeletal system. Bibliography. Index.

Note: A standard, rather widely used textbook designed for college students who are beginning the study of mammalian development. Fundamental embryological principles and phenomena are stressed, rather than aspects which are peculiar to the pig. The book [illegible] outstanding for its clear illustrations. An unusual feature is the comprehensive bibliography which [illegible] thorough enough to be of value to advanced research workers. The chief change in the present edition is the adoption of [illegible] larger page and [illegible] [illegible] of [illegible] ber of the illustrations in larger size.

PINCUS, GREGORY

The eggs of mammals. New York The Macmillan Company 1936 160 p. illus. 22 cm. (Experimental biology monographs) $6.75 2655

Contents: Introduction. The origin of the definitive ova. The growth of the ovum. The development and [illegible] of [illegible] ova and the problem of ovarian parthenogenesis. Methods employed in the experimental manipulation of mammalian ova. The tubal history of unfertilized eggs. Fertilization and cleavage. The [illegible] of unfertilized eggs. The growth and implantation of the blastodermic vesicle. Summary and recapitulation. Bibliography. Author index. Subject index.

Note: This monograph [illegible] presentation of experimental investigations dealing with the behavior of mammalian eggs during the various stages of their development in the ovaries, fallopian tubes, and uterus. A critical account of [illegible] followed by an examination of the physiological factors governing growth, maturation, and atresia of ovarian eggs. The relation of these processes to the follicular apparatus and the gonad stimulating hormones of the anterior pituitary [illegible] discussed in some detail. The history of tubal ova is given, with an account of the comparative behavior of fertilized and unfertilized eggs in vivo and in vitro. This includes an inquiry into the nature of parthenogenetic activation and fertilization, and [illegible] description of the intrinsic and extrinsic factors affecting the cleavage process. The development of blastodermic vesicle [illegible] treated chiefly on the basis of the hormonal control of growth and implantation during this stage. An account is given of recently developed techniques for the experimental manipulation of living ova.

PRINCE, JACK H

Comparative anatomy of the eye. Springfield Ill. Charles C Thomas 1956 418 p. illus. 23 cm $8.50. 2656

Contents: Orbit and eye position. The [illegible] structure in vertebrates. Special receptors. Fovea and macular areas. Fundus patterns. The optic nerve and fibers. Vertebrate visual centers. The nictitating membrane and true eyelids. The spectacle or brille. The cornea. Iris structure. Pupillary patterns and function. Crystalline lens. Accommodation mechanisms. The [illegible] and lens. Tapeta. The pecten and conus papillaris. Scleral ossicles. Eye size and shape. Extra-ocular muscles. The lacrimal and Harderian glands. Ocular fibers. Pineal and parietal eyes. Invertebrate eyes. Comparative ocular dissection. Bibliography. Glossary of animal names used in text. Index.

Note: An introductory textbook for students which is also of interest to graduates engaged in research work. In [illegible] spirited and relatively simple style it covers [illegible] wide range of knowledge including some previously unpublished knowledge from the author's own researches. Except for the fact that there are few references to the eye of man, the viewpoint is comparative [illegible] [illegible] [illegible]. There are 1?? entries in [illegible] the glossary of animal names used in the text. The 151 figures include reproductions of drawings, photographs, and micro-photographs. Most of the originals, both drawings and photographs, were made by the author. Techniques of dissection, specimen preservation, staining, etc., applicable to the laboratory study of comparative eye anatomy are described in the terminal chapter. The author is [illegible] member of the staff of the Department of Ophthalmology of the University Hospital of Ohio State University.

QUIRING, DANIEL PAUL

Functional anatomy of the vertebrates. New York McGraw-Hill Book Company Inc., 1950 624 p illus 24 cm. (McGraw-Hill publications in the zoological sciences E. J Boell, consulting editor) $7.00. 2657

Contents: Form and structure. Classification. The integument. The skeleton. The musculature. The nervous system. The sense organs. The digestive system. The respiratory system. The circulatory system. The excretory and reproductive systems. The endocrine glands. Anthropology. Functional anatomy. Appendix. Glossary. Index.

Note: A compact introductory [illegible] [illegible] the [illegible]—the main emphasis is on function. In most chapters, considerably more space is given to the anatomy of man and the [illegible] [illegible] than to simpler forms. The high proportion of reference data is unusual in an introductory text. Included is [illegible] long table [illegible] Body and organ [illegible] of [illegible] vertebrates [illegible] gives comparative [illegible] of organs by [illegible] animals and [illegible] based on field [illegible] made by George W. Crile and Gene McBride [illegible]. The author is Head of the Anatomy Department of the Cleveland Clinic Foundation.

ROMER, ALFRED SHERWOOD

Man and the vertebrates. Third edition. Chicago University of Chicago Press, 1941 405 p. illus. 23 cm. $6.50. 2658

Contents: Vertebrate beginnings. Modern fishes. The conquest of the land. The frog. The origin of reptiles. Existing reptiles. The origin of birds. The origin of mammals. Varied [illegible] types. Flesh-eating mammals. Hoofed mammals. More [illegible]. [illegible] variety of mammals. Primates: lemurs, monkeys, apes, man. Human origins. Human races. The human body. Development of the human body. A synoptic classification of vertebrates. Phylogenetic charts of the vertebrates.

Note: The scientific story of the evolution of man and of the [illegible] forms of life which contributed to the development of the body of man. A University of Chicago "New plan" text. This third, revised edition is considerably enlarged, with new material, including two important chapters on human origins and human races, [illegible] new chapter on the frog, and [illegible] new section on glands of internal secretion.

ROMER, ALFRED SHERWOOD

The vertebrate body. Second edition. Illustrated. Philadelphia W B Saunders Company 1955 644 p. illus. 24 cm $7.00 2659

McEwen, Robert Stanley

Vertebrate embryology Third edition New York Henry Holt and Company, 1949 699 p illus 22 cm 2647

Contents (abridged) Part I, The germ cells and early development of amphioxus. Part II, The development of the frog. Part III The Teleosts and Gymnophiona. Part IV The development of the chick: The adult reproductive organs, and the development of the egg previous to gastrulation. Gastrulation and development through the first day of incubation Development during the second day of incubation. Development during the third day of incubation. Development during the fourth day of incubation. Development during the fifth and subsequent days. Part V The development of the mammal The early development of the mammal and its embryonic appendages. Development of the pig to the ten millimeter stage. The later development of the pig. The skeleton teeth, hair hoofs and horns. Index.

Note A standard textbook for introductory college courses in vertebrate embryology The third edition is changed from the second edition (1931) in the following respects the subject matter and the bibliographies have been brought up to date certain passages have been clarified and simplified the sections dealing with the Amphibia and the chick have been revised to incorporate experimental material along with descriptive facts, the embryology of the pig has been added and the general discussion of the cell has been shortened. A fourth edition was published in 1957 701 p. $6.50

Messer, Harold Madison

An introduction to vertebrate anatomy Revised edition New York The Macmillan Company 1947 475 p illus 22 cm $6 00 2648

Contents. Introduction. The chordates. The protochordates. The vertebrates. Early vertebrate development. The integument. The skeleton. The muscles. The digestive system. The respiratory system. The circulatory system. The excretory system. The reproductive system. The nervous system. The sense organs. The ductless glands. The origin and evolution of the vertebrates Bibliography Glossary Index.

Note A college textbook planned for use in one-semester courses. In the present revision the author has improved and increased the number of illustrations, and has added new text and modernized the remainder The work is now approximately 10 per cent longer than before.

Meyer, Arthur William

The rise of embryology Stanford Stanford University Press 1939 367 p illus 23 cm $6 00 2649

Contents Aboriginal ideas of reproduction Early historic ideas of generation. Spontaneous generation Epigenesis. Preformation Pangenesis. Panspermia or panspermatism. The search for the mammalian ovum. The discovery origin and meaning of the spermatozoon. Changing ideas of impregnation or fertilization The role of the "milt" The problem of malformation. Early visual and other technical aids. The growth of morphology Early experimental embryology Bibliography Index

Note. A history of leading older beliefs regarding reproduction and genesis and the development of these ideas carried to the modern viewpoint. The words of many scholars are quoted at some length to reveal the intellectual atmosphere of their times.

Miner, Roy Waldo editor

Molecular events in differentiation related to specificity of cell type Conference chairman and consulting editor H Clark Dalton New York Published by the Academy 1955 965–1160 p illus. 22 cm (New York Academy of Sciences Annals Vol 60 art 7) $3 50 2650

Content Introduction by H. C. Dalton. Part I Patterns of synthesis in differentiation The molecular basis of the first heart beats, by J D Ebert and others. Events associated with the development of nerve and hepatic cells, by L B. Flexner Substrate utilization in cell differentiation, by C. L. Markert. The role of phenylalanine in the differentiation of neural crest cells, by C. E. Wilde, Jr. Part II, Immunobiological approach to problems of differentiation. The role of genes and cytoplasmic particles in differentiation, by E. Caspari. Development in the presence of antibodies, by G. W. Nace. The reaggregation of dissociated sponge cells, by M. Spiegel. The cell nucleus in relation to the problem of cellular differentiation, by A. M. Schechtman and T. Nishihara. Part III, Problems of structural organization: Tissue disaggregation in relation to determination and stability of cell type, by C. Grobstein. Limb regeneration and differentiation of "overt behavior" in urodeles as studied by means of their response to chemical agents, by A. G. Karczmar. Specific inhibition during differentiation, by S. M. Rose.

Note Papers first presented at a conference held by the Section of Biology of the New York Academy of Sciences in October, 1954 have been issued in this publication. Their titles and authors are listed above. The conference was concerned with events at the molecular level of "aspects of differentiation which can be related to the origin and stabilization of cell types. In most of the papers results of recent research are combined with a survey of the literature. The individual papers are accompanied by literature references and in most instances by a transcript of discussion.

Neal, Herbert Vincent, and Herbert W Rand

Comparative anatomy With 540 illustrations McGraw Hill Book Company, Inc, 1936 739 p illus. (part col d) 23 cm. $7.00 2651

Contents The animal kingdom. Reproduction. Histology The skeletal system. Muscular system. Digestive system. Respiratory system. Vascular system. Urogenital system. Endocrine organs. Nervous system. Sense organs. Head problem. Ancestry of the vertebrates. Glossary Index.

Note A textbook for college courses. The discussion of each system and organ is divided into three parts: phylogenesis, ontogenesis, and anatomy The facts of comparative anatomy are given interest and meaning in terms of human phylogenesis.

Nelsen, Olin E

Comparative embryology of the vertebrates With 2057 drawings and photographs grouped as 380 illustrations. New York The McGraw Hill Book Company Inc, 1953 982 p illus 23 cm $8 50 2652

Contents (abridged) Part I, The period of preparation The testis and its relation to reproduction. The vertebrate ovary and its relation to reproduction. The development of the gametes or sex cells. Part II, The period of fertilization Transportation of the gametes (sperm and egg) from the germ glands to the site where fertilization normally occurs. Fertilization. Part III, The development of primitive embryonic form The chordate blastula and its significance. Gastrulation. Tubulation and extension of the major organ-forming areas—development of primitive body form. Basic features of vertebrate morphogenesis. Part IV Histogenesis and morphogenesis of the organ systems: Structure and development of the integumentary system. Structure and development of the digestive system. The skeletal system. The muscular system. The circulatory system. The excretory and reproductive system. The nervous system The development of coelomic cavities. The endocrine glands and their possible relation to definitive body form ... tion and the differentiation of sex. Part The care of the developing embryo. Index.

Note A fully illustrated work designed as a textbook for advanced undergraduate college students. Although the main topic is comparative embryology it contains, also, much information on the comparative anatomy and comparative physiology of the vertebrates. The material presented has been well selected. The typical chapter is a concise treatment, in which compactly written text is supplemented by numerous illustrations and an extensive bibliography The latter enables readers who need fuller treatment of specific topics to find them in the literature. The author is a member of the faculty of the Department of Zoology of the University of Pennsylvania.

Newby, William Wallace

The embryology of the echiuroid worm, *Urechis caupo* Philadelphia The American

Hamburger Philadelphia W B Saunders Company 1955 735 p. illus 26 cm. $15.00 2665

Contents: Section I, Problems, concept and the history by J. M. Oppenheimer. Section II, Methods and techniques, by J. M. Oppenheimer. Section III, Cell structure and activity. Cell structure, by F. O. Schmitt. Cellular metabolism, by H. B. Steinbach and F. Moog. Cell division, by H. Ris. Section IV. The nucleus and cytoplasm in development. The role of nucleus and cytoplasm, by G. Fankhauser. Gene action, by C. Stern. Section V, Embryogenesis—preparatory phase. Gametogenesis, fertilization and parthenogenesis, by A. Tyler. Cleavage, blastulation and gastrulation, by D. P. Costello. Section VI, Embryogenesis—progressive differentiation. Amphibians, by J. Holtfreter and V. Hamburger. Teleosts and birds, by D. Rudnick. Selected invertebrates, by R. L. Watterson. Insects, by D. Bodenstein. Section VII, Special vertebrate organogenesis. Nervous system (neurogenesis), by P. Weiss. Eye, by T. Twitty. Ear and nose, by C. L. Yntema. Limb and girdle, by J. S. Nicholas. Heart, blood vessels, blood, and entodermal derivatives, by W. M. Copenhaver. Urogenital system, by R. K. Burns. Teeth, by L. Schour. Skin and its derivatives, by M. E. Rawles. Section VIII, Energy exchange and enzyme development during embryogenesis, by E. J. Boell. Section IX, Ontogeny of immunological properties, by A. Tyler. Section X, Ontogeny of endocrine correlation, by B. H. Willier. Section XI, The determination of size, by S. J. Twitty. Section XII, Metamorphosis, by W. Etkin. Section XIII, Regeneration. Invertebrates, by L. Barth. Vertebrates, by J. S. Nicholas. Section XIV, Teratogenesis, by E. Zwilling. Index.
